united to you, O Creator [i.e., God the Father], through the tasting of your body, O Lord [i.e., the Communion bread of God the Son]"; in his *Ban **xratu **vasn utit **hawatoy ew mak'ur varuc' arak'inut'ean* ("Logos of counsel on the orthodox faith and a pure and virtuous mode of life"), the economy of the wisdom of the Word of God is called *hac' i yerknic' ijeal kerakur hogwoc'* "bread come down from Heaven as the food of souls".⁴ Narekac'i's formula, found in a text meant to induce religious vision, has physical effect, phonetic and semantic marking, theological background and density, and poetic acrophony. It emerges from the sole — and principal — living *Chrétienté* of the Iranian world. This parallel from a related tradition of like poetic sophistication may at least strengthen the perception that, whether or not Kartīr's performance was done with mirrors and its drama heightened by catalepsy, his *ewēn mahr* was an Avestan ritual formula of three words, its sounds and meaning emerging from the fountainhead of Zoroastrian faith.

4- S. Grigor Narekac'i, *Matean otbergut'ean ew ayl erkasirut'iwnk'*, hazarameaki hratarakut'iwn, Ant'iliias: Tparan Kat'otikosut'ean Hayoc' Meci Tann Kilikioy [St. Gregory of Narek, *The Book of Lamentation and Other Works*, Millennium Edition, Antelias, Lebanon: Press of the Armenian Catholicate of the Great House of Cilicia], 2003, p. 683. There is a multilayered play in this clause on the consonants of ethereal *erkink'* "heaven", where the transcendent Father is, and earthly *kerakur* "food" — the bread of the Son. The Armenian ear hears with *erkink'* its partner, *erkir* — "earth". The words were originally conceived, it would seem, as halves of a whole, or as a pair, each containing the element of *erku* "two". *Kerakur*, itself a reduplicative form from the aor. stem *ker-* "eat", morphologically underscores duality; and phonetically it resumes and completes duality: kERaKUṛ> ERKU "two"!

THE RIME OF THE BOOK OF THE DOVE (*STIKH O GOLUBINOI KNIGE*): FROM ZOROASTRIAN COSMOLOGY AND ARMENIAN HERESIOLOGY TO THE RUSSIAN NOVEL.

By James R. Russell,
Harvard University.

PREFACE.

Some years ago the late Byzantinist Alexander Kazhdan noted with the typical lightness, even casualness, that makes his profound insight and encyclopaedic learning so delightful to read, that Vladimir Nabokov's ekphrastic description in *Ada* of a woman's face and body observes the formal canons of Byzantine prose.¹ Nabokov in an interview long before had slighted his own Byzantinism; and since the master often did such things to conceal his magician's hand and put all but his prized Good Reader off the track, one thought it imperative, on the very basis of his denial, carefully to uncover the mediaeval strata in his work. One had already examined in some detail in an earlier study Nabokov's employment of the ancient Russian epic of Prince Igor²; so when preparing a presentation of *Podvig* (translated as *Glory*), one noted with care the use of an image from another monument of the Slavic past, the old Russian poem of the Book of the Dove.³

2- RUSSELL 2005.

3- The preliminary findings out of which this essay has grown were presented at a Mather House Seminar on Nabokov and subsequently in a lecture to the Literary Study Group in the Davis Center for Russian and Eurasian Studies at Harvard on 11 April 2008. A magical trip to Great Novgorod in the summer of 2007 with my friend and generous host of many years, Oksana Fyodorovna Nikolskaia of St. Petersburg, inspired one's interest in Novgorodian traditions; and this study is dedicated to her. It is a pleasure to thank my old friend, the great scholar of Russian poetry Sonia Ketchian, for her invitation, and her co-chair Edythe Haber, whose own work on the folkloric elements of *Glory* have been a source of inspiration. Conversations with Dinsha Mistree of MIT and Daniel Schulte of Harvard College added to the pleasure of one's research. I am indebted also to Kirill Rets of the State Hermitage Museum, St. Petersburg, for his generous provision of texts and studies at the very outset, without which one's work would have

The spiritual ballad or poem (the Coleridgean “rime” works perhaps better in this case) on the *Book of the Dove* (Rus. *Golubinaia kniga*, *Stikh o golubinoi knige*) exists in a number of transcribed oral variants, most of which were collected in northern and northwestern Russia—emanating most likely from Great Novgorod. “Dove” (*golub*’) in the name, referring presumably to the Holy Spirit, may have been a *narratio facilior* for an original “depth” (*glub*’, hence **Glubinnaia kniga*), since the poem relates the deep secrets, that is, the ones that concern cosmology. A great book falls from Heaven and the first Christian monarch of Rus’, Prince Vladimir, asks King David to read it. But it is sealed; so David, answering Vladimir’s questions, tells him from memory of what is in the book concerning the “mothers” and “fathers”—the chiefs—of various creations. This first and longest part of the poem is a question and answer list. Then David explains a dream Vladimir has had: it is the primordial struggle between *Pravda* (“truth, straightness”) and *Krivda* (“falsehood, crookedness”). The former won and reigns in Heaven; so the Lie reigns on earth till the end of days. With this second part the poem ends; and were one simply to reverse the order of the two parts, they would comprise a fair summary of the contents of the Zoroastrian book of Creation (*Bundahišn*), also called *Zand āgāhīh*, “Knowledge of the *Zand*”: *Zand* is the interlinear translation and commentary in the Middle Persian or Pahlavi vernacular on the sacred text of the Avestan scriptures.

Lists are common in ancient texts and in early and late oral literature, cosmology is an important concern of Jewish and Christian canonical and apocryphal texts (as particularly profound knowledge and a potential source of heresy it aroused anxiety and the orthodox tried to keep it secret), and the cosmic dualism of good and evil in Iranian religion left a passing impression on Second Temple Judaism but an indelible imprint upon nascent Christianity. With those caveats, the specificity of the Book of the Dove still suggests an Iranian source; and in the Byzantine period the route of transmission would have been Armenia; its vector, the oral teachings, transmitted by itinerant preachers and minstrels, of the adherents of heterodox sects. The fifth-century divine Eznik of Kolb in his *Refutation of the Sects* (Arm. *Elc alandoc*’; Western editors and translators have preferred to designate the text *De Deo*) provides an account of the Zoroastrian dualist cosmology based in part on the accounts of earlier Syriac and Greek writers but also on the presumably oral narratives of local Zoroastrians in Armenia itself. Focussing on the idea that the Lie holds sway in this world, he noted scornfully that although Mazdeans and Manichaeans professed enmity towards each other, they were really the same. As Christianity took hold, the older religion went underground and lost social status: in the eighth century Yovhannēs Mayragomec’i in a series of homilies attacked the *gusan-k*’ “minstrels” and *xelkatak-k*’ “jongleurs” who had once been the living books and theatre of the royal court, as disseminators of pagan and obscene doctrines. Zoroastrianism maintained for many centuries a shadowy existence in Christian Armenia: in Armenian communities of Anatolia, from Mardin in the remote southeast to Merzifun in the Turcophone west, the little community

progressed far more slowly; and to Professor Valentina Izmirlieva of Columbia University, whose brilliance and learning have shamed me into making this article much longer than it was intended to be. I owe special thanks to Rebecca Stengel, Michael Grossman, and Sgt. Martin Fay: three guardian angels.

of the *Arewordik*⁴, the Children of the Sun, survived down to modern times;⁴ whilst the country became the source of various heresies branded by the Church as Manichaean that spread west to the Balkans to become the teaching of the Bogomils and Cathars. There may be specifically Armenian folk and mythological elements in the Rime of the Book of the Dove that could attest to such a vector of transmission from Iran, across Byzantine Anatolia, and into the Balkans. Should the doctrines in the Book of the Dove have been thus transmitted to southeastern Europe, the *kaleki perekhozhie* “itinerant blind minstrels” and *skomorokhi* “jongleurs”, whose activities and position in Kievan Rus’ can be closely compared, *mutatis mutandis*, to those of their Armenian counterparts, brought the poem to Russia. Old Russian apocryphal literature contains unusual, striking Iranian features attesting to a reception of Zoroastrian material; so in context the suggestion that the Book of the Dove has an Iranian component should not require special pleading.

Although the minstrels and their art seem to have suffered suppression in the south of the country (the Ukrainian *dumy*, however, retaining something of the tradition), the Book of the Dove, and the great corpus of *byliny*, “ballads”, survived in the freer conditions of the republic of *Velikii* (“Great”) Novgorod and in the Russian north. There may be connections of some traditions about submarine kingdoms in the Book of the Dove (perhaps Armenian, and related to Zoroastrian concepts of a world-sea as well), to the cycle of *byliny* about the Novgorodian minstrel Sadko. The epic poem *Slovo o polku Igoreve*, “Song of Igor’s Campaign”, which deals with the war of 1185 fought by Rus’ against the invading Polovtsy, is the great monument of ancient Russian literature in the south. The spiritual songs and ballads are the corresponding treasure of the north; and the latter half of this study deals with the use of this tradition in the work of the great twentieth-century Russian-American poet, novelist, and literary scholar Vladimir Nabokov. Nabokov was born in St. Petersburg and read Slavonic studies as a student at Cambridge following his family’s flight from Russia after the Revolution. He worked for decades on the Igor’ epic, and published a translation and commentary in 1960 in which he underscored the similarity of the work to *Ossian*. At the time most readers still shared the views of Samuel Johnson, who had dismissed the latter as a forgery—it is now generally accepted that Macpherson in fact recast much traditional, oral material in the language of late 18th-century Romanticism—and some scholars still doubt the authenticity of the Igor’ epic. Nabokov presciently considered the similarities between the two works as an indication of *Ossian*’s authenticity, though in the novel *Pale Fire* (1962) he plays upon the possible falsity of both epics as part of the larger theme of mirror worlds and contingent realities.

In both his commentary on the Igor’ epic and *Pale Fire*, Nabokov just as importantly perceived—and, in the novel, proceeded to construct by means of fictional Zembla—a cultural bridge spanning the Baltic and North Seas, linking Britain and Russia, northern

4- See the final chapter of RUSSELL 1987(a); on the endurance of Armenian sectarian communities in Western Anatolia down to modern times, see RUSSELL 1995-1996, on Bob Lion (b. Aslanian) a self-described Paulician born in Divrig (Gk. Tephrikē), the town that had been in Byzantine times the stronghold of the movement.

Russia in particular. There seem to have been two motivations for this, aside from the considerations of literary-historical scholarship: the first is the desire of the exile to transcend the barrier between himself and his homeland. Clandestine, even magical returns to Russia, or imaginary countries like the *Estoty* of Ada that de-Sovietize Russia and rejoin it to the free world, are a perennial theme in Nabokov's work and belong to the general concerns of the émigré intelligentsia. The second is more particular: the tendency of Western intellectuals to accept tyranny in Russia as practically a law of nature enraged Nabokov, not only because as a true liberal who believed in the absolute universality of human and civil rights he recognized the pernicious falsehood of such smug cultural relativism. He also knew that such views of Russia were superficial, and failed to take into account both the ancient republican traditions of Novgorod and of other places in his beloved Russian north and the vigorous democratic culture of the pre-Revolutionary Russian opposition that the Bolsheviks distorted, presented as their own, and largely destroyed. So in his novel of 1932 *Podvig* (lit. "campaign, [heroic] exploit", which he translated as "Glory"; *Romanticheskii/Zolotoi vek* "The Romantic/Golden Age" were other working titles) the maternal surname of the hero, Martin, is Indrikov. In the Book of the Dove the father or mother of all beasts is the *indrik*—a debased form of *edinorog*, "*monokeros*, unicorn". There is no question that Nabokov knew this work at least as well as the Igor' epic: it was very popular, and most existing editions and studies of it belong to the mid- and late nineteenth century. It is the topic of Alexander Blok's first important poem; and Viacheslav Ivanov wrote a short poem about it in 1915.⁵ The theatrical set designer and painter Nicholas Roerich, who lived just down Bol'shaia Morskaia street from the Nabokovs in St. Petersburg, produced two paintings called "The Book of the Dove" illustrating the themes of the poem. So the Book of the Dove is a poem whose echoes and reflections in graphic art Nabokov might well have encountered in his youth, even before fleeing Russia. The cosmology of the Book of the Dove is viably alternative to the canonical one and undeniably heretical—on both counts it breathes the air of liberty and of that freedom of the imagination particularly dear to an artist. The novel *Glory* itself was slighted by the critics upon publication, for its blandness of theme and flatness of form; but it would seem that the author employed such shortcomings deliberately, in order to evoke the background of the banality and limitation of life in exile in which Martin suffers. Just as the fabulous *indrik*, a creature belonging to heroic and mythological time, can travel through the hidden deep caverns of earth, purifying the waters, so Martin, kind and pure of heart, a hero lost in a world without nobility, will travel clandestinely to his mythologized Russia, only to be killed. The Book of the Dove belongs, not only to the ancient stratum of Russian culture in which Nabokov grounds his character again the dreary present, but also to the traditions of freedom for which Martin, with noble disregard for his own safety, will fight, a knight of the golden age.

5- MUR'IANOV 1996.

1.

The poem on the mythical *Golubinaia kniga* was early recognized as special and unusual in the corpus of Russian folk poetry.⁶ Jagić called it the “pearl of the Russian mythological epic”; M.V. Trofimov, who accepted the “dove” as a *narratio faciliior*, called it “The Lay of the Deep [i.e., *glubinnoi*] Book” and suggested vaguely (but in my view, correctly) that there were “Iranian and other mythological parallels” in it, especially in the questions and answers about the whale (Rus. *kit*).⁷ Those parallels were noted, negatively: though a version of the poem exists in the collection of Kirsha Danilov (probably Siberia, 18th century, most likely collected from a settler of North Russian origins), Kallaidovich omitted it from his publication of Danilov’s MS because he regarded of “the crude mixture in it of the Christian and pagan” (*grubago smesheniya v nei khristianskago i yazycheskago*).⁸ In Scripture, the Wisdom of Solomon 7.17-20 declares that God has given “knowledge that is not lying about things that are, to comprehend the components of the world and the action of natural forces” (*o sushchikh poznanie ne lozhnoe poznati sostavlenie mira i deistvie stikhii*); and 3 Kings 4.33 enumerates the topics of Solomon’s books. A probable Christian source that exerted influence on the shaping and contents of the poem, discussed at length by Mochul’skii, is the popular apocryphon “Discourse of the Three Prelates” (*Beseda trëkh sviatitelei*); and another source, belonging like the Book of the Dove to the genre of question-and-answer, is “The Questions of John the Theologian on Mount Tabor” (*Voprosy Ioanna Bogoslova na gore Tavorskoi*). In the *Beseda*, the list of questions answered includes the first worshipper of God (Enoch), the first to study a book (Methuselah), the first builder of a church (Solomon), the first Patriarch of Jerusalem (Jacob), and the first archdeacon (Stephen). The places, people, and animals that are *chiefs* of their categories in Creation is a special concern of the Book of the Dove; and the *Beseda* deals with this. As for the other peculiarities of the poem, such as the explanation of the existence of truth and falsehood, Speranskii suggested they derive “from... some ‘Book of Creation’, but not a canonical one, that has not come down to us” (*iz... kakoi-to ne doshedshei do nas “knigi Bytiia”, no ne kanonicheskoi*), the apocrypha of Adam, etc. In the view of N.S. Tikhonravov, the battle described in the Rime between Truth and the Lie—*Pravda* and *Krivda*— with accompanying speculation about the beginning and end of days, reflects a general anxiety in 15th-century Russia about the impending seventh, “sabbatical” millennium.⁹ While it is undoubtedly the case that apocrypha (Rus. *otrechënnnye knigi*) were such a major source, as in other Eastern Christian folk cultures, the formulation is still somewhat vague.¹⁰ The argument from millenarianism for a presumptive *terminus* for the poem seems weak also, since preoccupation with the apocalypse is a perennial con-

10- SPERANSKII 1917, pp. 371-372.

cern of Christian literature; and texts of an esoteric nature in particular are rife with such cosmological secrets.¹¹ It has been proposed that a more secure and plausible *terminus ad quem* in the early 16th century may be provided by the mention of the White King (*Belyi Tsar* ' in most all variants of the text: he is in all probability the Muscovite Basil III.¹²

The structure of the Rime may be analyzed in five parts: 1. The Book appears, in most versions falling from heaven in a storm. 2. People gather around the book in hierarchical order: kings, princes, nobles, and peasants: some versions add the minstrel-reciters (*kaleki*) themselves to the list. 3. One of the nobles, usually the first Christian ruler of Rus', Prince Vladimir of Kiev, questions— rather anachronistically!— the “king most wise (*premudryi tsar* '), David son of Jesse”, on the contents of the book; and David says the book is sealed and too heavy to lift besides, but he will speak of it from “memory of old”. 4. Vladimir asks David about how the world came into being, and what its chief geographical features and creations are. David answers the questions. 5. Vladimir has had a dream of two hares or other beasts, one gray, one white, fighting (in a few versions, the contestants are two youths); and he asks David to interpret it. David explains that this is the primordial battle between Truth (*Pravda*) and the Lie (*Krivda*). In most versions Truth wins and claims Heaven; so the Lie is left to rule the earth, hence the human predicament of lawlessness and injustice. In a few variants, though, it is the Lie that defeated (*odolela*) Truth and will therefore rule the world till the apocalypse. Either way, the Lie holds sway over our world for the term of its present existence, and Truth is enthroned in Heaven.

The body of the poem— the numbingly repetitive fourth part— is essentially a list in question and answer form. This is an appropriately ancient form of revelation: in his Hymns (*Gāthās*, *Yasna* 44) the Prophet Zarathustra addresses such a list of cosmological questions to the Creator God Ahura Mazdā. Unlike in the poem of the Book of the Dove, the answers are not recorded (presumably since the questions are rhetorical and anticipate the response “I did”). But Zoroastrian tradition still affirms that God and the Prophet spoke together,¹³ and their colloquy is called the *spəntō frašnā* “holy questions”. Though

11- A good example of the ubiquity of the millenarian theme is the category of Armenian mathematico-magical literature that goes under the name of *Vec' hazareak*, “The [Book of] the Six Thousand”, six millennia being considered the term of duration of this world. It is possible that St. Mesrop Maštoc', the inventor of the Armenian alphabet, was interested himself in Pythagorean mathematics and Christian eschatology, since one way of writing 6000 using the letters is *zr*, i.e., 6x1000, the two letters being the 6th and 28th ordinally, and, thus, both rare perfect numbers as well (the other way is the letter *c* = 6000). This could be the “great treasure hidden in Armenia” of which Anania Širakac'i, 7th century, to whom is attributed the first mathematical table called *Vec' hazareak*, spoke in a suitably guarded and cryptic manner: see J.R. Russell, “Maštoc' the Magician,” forthcoming in S. La Porta and T. Van Lint, eds., *Festschrift* for Michael Stone, forthcoming; and RUSSELL 1989 with refs.

12- MOCHUL'SKII 1887, p. 368. Here too, though, one must be cautious, since “white” became at some undetermined point a standing epithet of the Russian monarch in folk poetry and by itself is no indicator of the age of a text. In the folk song *Kak vo gorode vo Ustiuzhine* (“Once upon a time in Ustiuzhin town”) peasants flee to the forests to escape the cruelties of serfdom and send a petition to the “white Orthodox tsar” — in St. Petersburg, a city founded centuries after Basil's reign! (See REEDER 1993, pp. 9, 107.)

13- For instance, in the Zoroastrian credo, the *Fravarānē*, *Yasna* 12.6: *aθā aθā čōiθ Zaratuštrō daēvāiš sarəm vyāmrvītā vīspaēšū frašnaēšū vīspaēšū hanjamanaēšū, yāiš apərəsaētam Mazdāsčā Zaratuštrasčā...*

it is certainly true for some genres of the Hellenistic period that “an organized thematic list is the result of a scholarly way of thinking”, and thus reflects a literate sophistication,¹⁴ it is equally true that a list can be pre- or non-literate. For it is just as much the soul of oral literature to employ a list, whether as a bardic *tour de force* like Homer’s catalogue of ships in the *Iliad*, or simply in fulfillment of the necessary function of encyclopaedic transmission of knowledge that oral literature had to serve before writing and the consequent creation of archives and other forms of storage and retrieval of knowledge, or both.¹⁵ The list is not only *Listwissenschaft*, that is, a kind of genre reflecting the ordered thinking and erudition of its author; it provides a pattern of order with which the reader or listener can structure his world-view and activity. An audience that accords authority and social recognition to the reciter of such a list whose contents are of importance— of religious, cosmological significance, in the case of the Rime— are investing him with their trust, a kind of “fiduciary capital” on which they expect a profitable return: the creation of a social reality for them that works. In the tradition of Eastern Orthodoxy, the exemplar for the genre of the list is the Pseudo-Dionysian corpus, with its enumeration, for example, of the angelic orders. Another salient feature of Christian *Listwissenschaft*, of relevance to the Rime of the Book of the Dove studied here, is what Prof. Valentina Izmirlieva calls Biblical onomatocentrism, an obsession with the magically powerful names of God and their localization to Jerusalem and its Temple.¹⁶

In the case of the Book of the Dove, the list is recited, but its source— the Book itself— is placed at an additional remove from the audience: the great tome remains sealed, its tantalizing mysteries thus both concealed and imparted,¹⁷ and king David must oral-

“Just as Zarathustra anathematized association with the demons at all questionings, at all meetings, at which Mazda and Zarathustra conferred [so I do the same].”

14- COHEN 2000, pp. 55-66: the author notes Hellenistic lists of the famous or best representatives of categories including lawgivers, painters, sculptors, architects, wonders of the world, large islands, the highest mountains, the greatest rivers and seas, etc.; the lists might be more narrowly curious, as for example those of Hygienus in Latin, 2nd cent., on people who ate their sons at a meal, others who were eaten by dogs, and others still who were crushed by a boar.

15- BERMAN 2007, esp. pp. 74-76, points out that with the invention of writing there becomes possible differentiation in the functions of literature: it is no longer burdened, as when limited to orality, with the necessary function of serving as a factual historical record and encyclopedia of transmissible knowledge.

16- See IZMIRLIEVA 2008, pp. 7-8, 27.

17- The allure of secret knowledge would have been a powerful aspect of the popularity of the Rime. Here is a practical and striking example of how secrecy and mystery can operate: After the American Civil War, several soldiers of the Confederacy formed a band they named the Ku Klux Klan (from Gk. *kyklos*, “circle”)— a terrorist organization whose aim was the restoration of slavery. The KKK was linked most notoriously to the crime of lynching; but there is in fact no correlation between the number of recorded lynchings and the growth of Klan membership. The major draw of the organization for new recruits was the attraction of secret passwords, tokens of recognition, rituals and liturgical terminology, and the like; and when, thanks to the efforts of a Southern dissident named Steven Kennedy the KKK was infiltrated and its diverse mysteries were broadcast on national radio, applications for membership plummeted. It was the trappings of secrecy, more than its actual power, from which the Klan acquired its glamour and terror. See LEVITT AND DUBNER 2006, p. 58. It is thus interesting that the Rime of the Book of the Dove manages to deploy the attraction of secrecy while at the same time revealing at least some of the

ly recount its contents from “old” memory. The action of transmission and reception is likewise placed at one remove from the audience: instead of the minstrel imparting the mysteries of the Book of the Dove to the audience directly, he reports king David doing so to prince Vladimir and his host, who are themselves arranged, as noted above, in an orderly, hierarchical list, from nobility down to peasantry. In the systematic listing of features of sacred geography and of the aspects of Creation, Biblical toponyms predominate: Jerusalem and mount Zion there, mount Tabor of the Transfiguration to the north, the river Jordan of the Baptism of Our Lord, and so on. Some *onomata mystica* heighten the esoteric appeal of the list: the stone *alatyr* (“altar”), the beast *indrik* (“unicorn”), the bird *strafil* (“ostrich”).¹⁸ Yet there are also some Russian *loci* and features connected to the sacred aspects of Scripture and the Land of Israel: though Ocean is the greatest of seas, the greatest lake is Il’men’ (although a lake of the same name in the Holy Land, perhaps Tiberias, seems here to be the prototype of the historical Il’men’ of Great Novgorod). And the greatest of kings is not David or Solomon, but the White Tsar. And in the Rime, Moscow is not the Third Rome—Russia is the new Holy Land itself. So the curious feature of placing both information and imparter at one remove in the narrative strategy of listing in the rhyme may be intentional, paralleling the two planes of sacred phenomena themselves—Biblical, in the background, and Russian, in the foreground where the actual audience are. Thus, the Rime transforms the Orthodox genre of the listing-ballad, with its Biblical and Pseudo-Dionysian material, from straightforward enumeration to a third-person narrative, with the superaddition of non-Biblical mythological material.

It is reasonable to suggest that the poem of the Book of the Dove may be indebted in equal measure to the sources in apocryphal written literature studied by Mochul’skii, Veselovskii, and others, and to others in oral tradition reflected in written accounts of sectarians and their teachings, in its employment of question and answer and its conveyance of knowledge in lists. Though much of the material in these lists is clearly to be explained from sources within Christian tradition, there are other aspects that have specifically Zoroastrian affinities; and the closest correspondences are to the Mazdean cosmology as described by non-Iranian informants in the Sasanian era (*ca.* fifth century A.D.), principally the Armenian Eznik of Kolb (see Text 3 *infra*), and the two principal sources of ancient Iranian cosmology: the Hymns of Zarathustra and the Middle Persian (Pahlavi) book of Creation, the *Bundahišn* (see Text 2.2). The latter begins—rather than ending, as here—with an account of the primordial contest between the forces of good and evil. The account of that battle in the Middle Iranian text does not allude to its having been seen in a dream-vision, as is the case with Prince Vladimir; but Zarathustra’s own revelation in the *Gāthās* (*Yasna* 30: see Text 2.1) of the battle, and of the beginnings of the dualistic cosmos, specifies this. It is difficult indeed to imagine how a human being might otherwise than in a dream or the like be witness to cosmogonic events; but when both dream and

“mysteries” supposedly locked beneath seven seals!

18- That is, *strufokamil*, OCS. *str’kokamil*; some variants have instead the Phoenix.

dualism are mentioned together, one is justified in proposing the great revelatory moment of Iranian scripture as an ultimate source. That is, there may be intermediary oral and written teachings both, interposed between the written teachings of the Persian books and the oral narratives of the Russian *kaleki*,¹⁹ but the closing of the Book of the Dove strongly suggests that the Iranian cosmogony is a principal substratum.

The question of transmission of a text that may have such distant and non-Christian roots is of obvious importance: how did a modified Iranian cosmology reach northern Russia? One proposes this route: features of the cosmological teachings of the *Bundahišn* and related material, principally “Zurvanite”, from northwestern Zoroastrian Iran, reach Armenia in the Sasanian period. After the fall of the Sasanians, the Armenian Paulician and T’ondrakite sectarians learn it from local Armenian Zoroastrians, the Children of the Sun, and incorporate aspects into their own speculations. As they migrate into the Balkans, the material reaches the Slavic, Bogomil milieu. It is carried north by minstrels belonging to the sect into Kievan Rus’— and the remoter its bearers from Orthodox and imperial authority, the more of it, and the more detail, survives. The Rime was chanted by itinerant *kāleki*, that is, blind minstrels, cripples (*kalēki*; a proposed derivation from Latin *caligae*, “boots”, seems unnecessary, though a loan from that term also exists in Russian),²⁰ evoked by Radishchev as the paupers for the sake of Christ who recited also such standard narratives of Christian folk literature as the *Life* of Alexis the Voluntary Pauper. It is worthwhile to note that Armenian Christian *gusans*, “mistrrels”, also recited this popular *Vita*. The Assyrian Aramaic novel that became a Biblical apocryphon— the Wisdom of Aḥiqar— was also very popular in Armenian folk literature, so much so that *xikar* became a common adjective meaning “wise”.²¹ In Russia, again, the precepts of *Akir premudryi* (i.e., “Aḥiqar the most wise”: note that the same epithet is used of David in the Rime) were well known. So material coming into Christian Russia from Christian Armenia would have been anything but an exotic and alien importation to be greeted with hesitation— rather, it was entering a familiar, even kindred milieu offering no barriers to its reception and assimilation. Although the Russian minstrels and their corpus were studied at first hand only in the last two centuries, these *kaleki* are known from as far back as the eleventh century, when they were organized into traveling bands (*druzhiny*): the greatest of Russian folklorists and philologists of the pre-Revolutionary period, A.N. Veselovskii,

19- Such intermediary texts colored by contact with the Iranian cosmogony might include, for example, the *Poimandres*— the Pymander of the Middle Ages— in the *Corpus Hermeticum*. The narrator begins by describing how once when his thinking soared and his bodily senses were restrained, as in one heavy with sleep, an infinite being called Poimandres appeared to him and answered his request to know the things that are, their nature, and God by granting him an endless vision of clear and joyful light in which then darkness arose separately. See COPENHAVER 1992, p. 1. Though the text combines Egyptian (the enigmatic name Poimandres may be a Hellenization of the Coptic *p-eime nte-Rē* and mean “intelligence of [the sun god] Ra”, see KINGSLEY 1993), Neoplatonic, and other elements, the effect of what is most likely an Iranian-inspired *incipit* is palpably dramatic.

20- See VASMER 1953, vol. I, pp. 508-509, s.v. From the frontispiece illustration, Plate 1 *infra*, to the work of Bezsonov on the *kāleki*, it is clear they were blind— *kalēki*.

21- See RUSSELL 1987(c), Ch. 6 on Alexi(ano)s; on *xikar*, 64 n. to line 31.

proposed that they were originally itinerant Bogomil preachers; and Anichkov, in agreement, compared them to Western analogues with Cathar connections, the jongleurs who accompanied pilgrims and sang the *chansons de geste*, to which he likened the Russian *byliny*.²² There is no reason to contest these arguments, and none has been advanced: the present study supports them.

The Bogomil heresy arose, evidently in part on Anatolian, Armenian foundations, in the Balkans: following the migrations of Slavs into the region in the 6th and 7th centuries, the Byzantine emperor Constantine V Copronymus beginning in 759 sent Paulician colonists to settle in Thrace, on the western approaches to the imperial capital. The Paulician heresy was Armenian in origin; and there is strong evidence that some adherents of the sect lived in its ancient center, Tephrikē (Tk. Divriği), down to the outbreak of World War I and the Armenian Genocide. Anatolia since Achaemenian times had been steeped in Iranian religion and cultural tradition; and although the Hellenization and Christianization of the region led to the extinction of most of the indigenous languages,²³ and to the severe diminution of the local Zoroastrian communities, there is documentary evidence of the survival of small communities of adherents to the Iranian faith—and it is quite possible that much more escaped written notice, as the pressure of Church and Caliphate necessitated a clandestine worship.²⁴ So in the 4th century St. Basil of Caesarea described the *magousaioi*, i.e., “Magians” of Cappadocia as worshipping Zarnouas, i.e., *Zurvān*. It is noteworthy that both practitioners of the faith, and Christians describing it, in the Sasanian period afford prominence to the god of infinite Time; for evidence of Iranian religion in the far north of Russia reflects the same emphasis. Zoroastrian Armenians at Marsovan (Tk. Merzifun), T’lkuran, and elsewhere in Anatolia who called themselves *Arewordik*’, “Children of the Sun”, endured down to modern times; so such sectarians and non-Christians would have preserved cosmological myths of precisely the kind reflected in the poem of the Book of the Dove.²⁵ Though the T’ondrakite heresy, a successor in many ways to the Paulicians, possessed a written text, the Armenian *Banali čšmartut’ean*, “Key of Truth”, *Arewordi* doctrines were passed on by word of mouth. The bards and minstrels of ancient Armenia bore the Iranian designations *gusan* (“reciter”) and *xelkatak* (“jester”). In recent centuries the term *ašul*, from Arabic *‘ašūq*, cf. Tk. *aşık*, “lover”—for that subject is the principal burden of his songs—has replaced *gusan*. And in polemical sermons of the 8th century these secular entertainers are reviled as propagators of pagan and heretical doc-

22- SOLOSHCHENKO AND PROKOSHIN 1991, pp. 7, 14, 17.

23- See the chapter “Eve of the Turkish Conquest” in VRYONIS 1971; and HOLL 1908.

24- In my research, I learnt of the survival down to 1915 of the Armenian Zoroastrian “Children of the Sun” only because a French Armenian woman responded by letter to my call for information in the Paris paper *Yaraj* “Forward”; just as fortuitously, an Armenian friend in San Diego happened to know a nonagenarian Paulician named Bob Lion (*né* Aslanian), whom I interviewed shortly before his death. Yet it would seem the reasonable norm for discoveries of religious tradition kept deliberately secret to have this fortuitous aspect.

25- On the Paulician survivals, see RUSSELL 1997; on the *Arewordik*’, RUSSELL 1987(a).

trines.²⁶ Though these invectives are attributed to the 5th-century Catholicos Yovhannēs Mandakuni, it is more likely that they belong to the pen of Yovhannēs Mayragomec‘i, who lived three centuries later—just at the time, that is, when Paulicians were posing a real threat to the Empire and some of them were settling in Thrace to seed the nascent Bogomil religion.

The heretical views of the Bogomils of the Balkans exhibit an overtly dualist flavor; and one dualist cosmological myth entered the Slavonic and Romanian apocryphal literature, most likely by the vector of Bogomil minstrelsy. According to it, an ornithomorphic Satanael (usually a duck, Russian *gogol’*) dove to the bottom of the primal sea to fetch the grain of earth from which God might create the world. The myth is found in various forms among the Finno-Ugrian peoples of Russia who live in contact with the dominant East Slavic population: in Cheremis myth the diving duck is named Keremet, younger brother of the highest god, Yuma. Keremet also makes the mountains. This detail is of interest: in the Zoroastrian cosmology, the primordial earth was a flat disk riding upon the waters in the stony cosmic egg. When Ahreman attacked from beneath, the earth fled; and the funnel-like area voided became hell, while the displaced earth formed the ring of mountains to stabilize the shaking earth. Keremet’s role may be a distant echo of that part of the cosmogony. Although dualist systems possibly independent of Iranian influence existed in both the ancient Balkans and, it would seem, in Siberia, it is at any rate certain that they furnished a substratum hospitable to the reception of subsequent Zoroastrian and Manichaean ideas.²⁷ So it is noteworthy that in the Cheremis version the evil spirit is the younger brother of the supreme god, cf. the relationship of Ahreman and Ohrmazd in the 5th-century Armenian version presented by Eznik of Kolb of the “Zurvanite” Iranian cosmogony. Eznik also mentions another aspect of the cosmological myth that is not preserved in the Zoroastrian canon but is derided in a Middle Persian Manichaean hymn as having been part of it: that a demon named Māhmī heard from Ahreman how to create light—by the performance of consanguineal intercourse—²⁸ and betrayed the knowledge to Ohrmazd (see Text 2.2 and n.).²⁹ Compare God’s inability to create the earth without Satanael’s help! These details point to a specifically Zoroastrian influence, whatever the pre-existing dualism that might have served as a hospitable substrate for the narrative. A.N. Veselovskii’s remarks on this score are instructive: “Let us first of all dismiss any ap-

26- See MANDAKUNI 1860, esp. *Vasn arbec ‘olac’ anawrēnut ‘eanc’* “On the lawlessnesses of drunkards” and *Vasn anawrēn t’aterac’ diwakanac’* “On the lawless theaters of the demonic ones”. To a certain degree the Christian accusations of paganism against secular entertainers are stereotypical: Soviet Armenian anti-clerical scholarship tended to take Ps.-Mandakuni at face value, elevating the *gusans* to the stature of folk heroes in a class war; but non-Soviet scholars perhaps exaggerate in the opposite direction by failing adequately to appreciate the survivals of Iranian religion in Armenia of which oral entertainment was a vector, and thus according too little credence to the literalism of his statements.

27- On the Balkan data, see STOYANOV 2000, pp. 128-133.

28- That is, the Zoroastrian *xvaētyadāba-*: the practice endured until recent times in the Parsi community of India, and in remoter parts of Armenia.

29- See ZAEHNER 1972, pp. 438-439.

parent divergence of views: folk (Finnish, Slavic) vs. imported, Bogomil-Christian myth. One viewpoint does not exclude the other, no matter how contradictory they may seem. Bogomilism was not a self-sufficient religious movement: its dualism goes back to the teaching of the Manichaeans and Paulicians; its cosmological myth recalls ancient Iranian representations about the mutually hostile creative activity of Ohrmazd and Ahreman [*o sovmetnom, vrazhdebnom drug drugu tvorchestve Ormuzda i Arimana*], but the outer forms of the myth could be of local, folk origin.”³⁰

If the Cheremis myth, cited by Stoyanov in his research on dualist beliefs amongst the Slavs, appears in a general sense to be related to Iranian conceptions, though, the details of a more complex Mordvinian one agree so closely with the Zoroastrian myth of creation involving Zurvan as transmitted by Eznik, with overtones also of the Book of the Dove, as to remove any doubt of an Iranian source, for which the vector of transmission would have been Russian minstrels (*kaleki*) and adherents of dissident sects (*raskol'niki*). Such a hypothesis, of a dissident Christian vector, would be supported by the presence in Mordvinian folklore, for instance, of a version of the apocryphal *Cheirograph of Adam*, a Christian work that could have come only from a Russian source.³¹ Here, then, is the Mordvinian myth: Once upon a time, when there was only water, the god Cham-Pas was floating on a stone. He lamented that he had no brother or friend with whom to take counsel; and at these words he spat in despair into the sea [*on pliuul s dosady v more*]. The spittle became a great mound [*bugor*] and floated after him. Cham-Pas struck at it with his scepter [*zhezlom*], at which point Shaitan (that is, the Arabic Shaytān, “Satan”) leapt out of it and said, “Lord, you regret you have no brother or friend with whom to think and take counsel. I’ll be happy to be your brother.” Cham-Pas grudgingly accepted Shaitan as a friend, but not as a brother; and asked, “Let’s create the earth. What shall we make it from? For there’s nothing but water.” Shaitan didn’t know, and fell silent, so Cham-Pas then commanded him to dive to the bottom of the sea and fetch some sand, calling upon the name of God. Twice Shaitan dived, invoking his own name instead, at which a flame burnt him. At the third dive he mentioned God and was able to retrieve the sand. But when he came up he kept some in his cheek, intending to create his own world, too. That made his head swell; so Cham-Pas struck him with his scepter—the wet, unformed sand burst out into God’s delicate, newly-created universe and disrupted it, forming the mountains. Thereafter Shaitan was condemned to dwell in the nether fire; but not before he managed to spoil the creations of Cham-Pas by adding negative characteristics to them. For instance, while man’s body lay yet inanimate, guarded by a dog, Shaitan attacked, causing the dog to sprout shaggy fur and the man to become sick with disease. Cham-Pas then endowed man with a soul.

The first striking detail of the Mordvinian myth is the floating stone: this recalls the white, energy-imbued stone of the Book of the Dove which floats upon water or air, brings

immortality to those who touch it, and stands at the navel of the world, in Jerusalem, or in the cathedral beneath the ocean where the Virgin Mary bathes and the relics of St. Clement are interred. Its name, Rus. *(a)latyr*’, seems to be a deformation of “altar”; and Moses Gaster long ago suggested that some of the features of this miraculous object are to be traced to Jewish myths about the foundation stone (Heb. *even shetiya*) on the Temple Mount at Jerusalem from beneath which the abyssal waters of the submundane ocean boiled up when king David incautiously moved it.³² The detail of the *scepter* of Cham-Pas must call to mind Eznik’s mention of the ritual bundle of *barsom*-twigs employed by Zurvan in the thousand-year sacrificial liturgy (*yasna*) performed for the birth of Ohrmazd. Eznik of Kolb, para. 186, explains the Iranian loan-word in Armenian, *barsmunk*’, i.e., *barsom*, as *gawazan* “scepter, crozier” (lit. “cow-goad”): it is to be supposed that over the century that had elapsed between the baptism of the Armenian Arsacids and his writing, some Iranian ritual terms, even those secondarily armenized, had become obscure even to a learned reader, hence the gloss. This is, one would venture, perhaps too specific a correspondence for it to have been a merely fortuitous coincidence. More likely, as the myth traveled from Iran through Armenia and westwards, the more generic “scepter”, originally a gloss, replaced the obscure *barsom*. The refusal of Cham-Pas to accept Shaitan as his *brother* echoes the only explicit condemnation in the Zoroastrian Pahlavi literature— in the eighth book of the *Dēnkard*— of any feature of the Zurvanite cosmology, the suggestion that Ohrmazd and Ahreman are brothers. It seems to have been the intention of the Zoroastrian divines to affirm that the twinship of the two spirits means nothing more than a parallelism in their temporal manifestation.³³

The form of the Rime of the Book of the Dove: a list of the chiefs of the creations, followed by a dream vision of the confrontation between good and evil— neatly inverts the order of the *Bundahišn*. This obviates the need to enumerate both the creations of the good God and the noxious counter-creations— the *xrafstarān*, or stinging, biting, destructive living things, the smoke of fire, the salt in sea water, and so on— of the evil spirit which is reflected, as we have seen, in the Mordvinian cosmological myth, since the encounter of Truth and the Lie is left to the end of the narrative. Thus the list of important beings and places in the Rime fits more comfortably into Christian tradition, which has no category of *xrafstarān* in its system, than it might otherwise have done; and that would have pleased most of the *kaleki*-reciters and their listeners, one thinks. But the dualist features of this text still remain prominent; and those aspects and textual and oral features of traditions contiguous to that in which the Rime developed demonstrably have more in common with what has been called the Zurvanite “heresy” than they do with the doctrines of the Pahlavi books themselves. Although the rather crude myth of Zurvan and the birth of the twins Ohrmazd and Ahreman is presented by contemporary foreign sources: Syriac, Armenian, and Greek— as the common belief of the Sasanian adherents of the correctly-named *dēn*

ī mazdēšn, the Religion of Mazdā-worship (the term “Zoroastrian” was rare then and has become common in latter days on analogy with “Christian”, though the adherents of the ancient Iranian faith still find the designation closer to accuracy than Muslims can with “Mohammedan”), it is absent from the Pahlavi literature, whether as dogma to be accepted or as a heresy (like those of Mānī or Mazdak, for instance) to be refuted. It would seem that some thinkers proposed that infinite time must have pre-existed the “twin” spirits of Yasna 30; so in some sense they originated from it. That position never affected the ethics or religious ritual of the Zoroastrians; so Zurvanism, never a movement on its own, was never targeted by such sacerdotal and political zealots as Kirdēr, the scourge of Manichaeism, or Ādurbād ī Amahraspandān and Mihrnarseh, the persecutors of Christians.³⁴ The theory seems to have been an attempt to solve a philosophical problem, rather than a religious one: any manifestation must be temporal, therefore sequential; and sequence necessitates difference, hence duality. Duality realizes the potential of difference, of opposition—hence of dualism. Happening needs time; so if there were no time, none of Creation could have happened. Of course an infinitely pre-cosmic time in which nothing happens is not measurable, so for Iranians this was *akanārag*, “boundless”, like the Greek *apeiron*, in distinction to the finite and therefore measurable age of the cosmos, the time characterized in Avestan and Pahlavi as that of the “long dominion”. Eznik notes this distinction in his own way: Ohrmazd’s time is a heavenly eternity of imperishable youth (*yawitenakan*), while Ahreman’s is circumscribed by a limit, subject to change and decay (*žamanakean*).³⁵

The precise time and manner of the transmission of these Iranian myths to Slavic Europe is uncertain. Sasanian and Central Asian silver vessels and other objects have been found in the Russian north and east, and in the Baltic region; the artistic forms of the Thracian and Pannonian cultures bear an Iranian imprint; and Sogdians settled on the northern coast of the Crimea.³⁶ So Slavs and Iranians very likely encountered each other at various

34- *Ibid.*

35- Cited by ZAEHNER 1955, p. 243. Arm. *yawēt*, used in Christian formulae (*yawiteans yawitenic* = *saecula saeculorum*, cf. Pers. *jāvedān*), derives ultimately from Av. *yavāeta-*, whose base is the same word for “young” from which we have modern Persian *javān*. Arm. *žamanak*, also an Iranian loan, cf. Pers. *zamān*, has the shade of temporality, thus flux and decay, as in the myth of the alternating light and dark of *žuk-žamanak*. PIRSIG 2005, pp. 35-36, presents a conundrum similar to, probably related to the question of time with which the Sasanian and earlier philosophers were grappling. Before minds existed to conceive of laws; and before matter existed for gravity to be manifest, was there a law of gravity? That is, did gravity, or any other principle or form for that matter, exist in any way one rationally can employ the term, in the pre-infinity of unmanifestation? Pirsig concludes, with an ominous playfulness, that gravity is a *ghost*. Cf. “Two spirits came to be heard of, in a dream vision...”

36- A total of 82 silver vessels from Iran proper and Central Asia (Sogd, Khwarazm, etc.) have been found in the forested regions of the Kama river basin, half of them datable to before A.D. 700. A small Buddha statuette of Kashmiri type was found at Helgö, a mediaeval commercial center on an island off the Swedish coast; and Arab coins nearby date to A.D. 742-833. Constantine the philosopher—St. Cyril, evangelizer of the south Slavs—lists “peoples who know the Scriptures and who praise God, each in its own language: the Armenians, the Persians, the Abkhazians, the Iberians, the Sogds [i.e., Sogdians], the Goths, the Avars, the Turks...” From their place on the list it seems the Sogdians mentioned were to be encountered in the Crimea; he probably gained this knowledge during a mission of 861 to the Khazars. Though the derivation of Sogdaia/Sudak from “Sogdian” has been disputed, there was found nearby on the Taman’ peninsula nearby the handle of an earthenware vessel inscribed in Sogdian with the name →

points in the centuries before the former could have been making written records: loans into Slavic such as *simargl*, perhaps from an Eastern Iranian pronunciation of Persian *simorγ*, a magic bird of Iranian myth, suggest that Slavs acquired Iranian religious lore in those times. But it is at least plain from the early written Slavic texts that dualist doctrines were being conveyed orally far into the northern fastnesses of Kievan Rus' around the same time as the Christianization of the realm or soon thereafter; and they endured. The *Povest' vremennykh let* ("Primary Chronicle") records for the year 1071 the interrogation by Ian, a boyar emissary of prince Sviatoslav, of two *volkhvs* ("magicians") who had come to Beloozero in the far northeast, apparently scaring the living daylight out of the locals: when he asks how man was made, they tell him God washed himself in the bath, perspired, dried himself with straw and threw it down to earth from Heaven. He and Satan then quarreled (*raspresia*) over who should create man out of it. In the end it was the devil that made the body of man, but God put a soul in him; so at death the body goes to earth while the soul returns to God. When Ian asks the *volkhvy* whom they worship, they reply that their god is Antichrist in the abyss.³⁷ There are some obvious similarities discernible even in this concise and prejudiced narrative, both to the Mordvinian cosmogony and to that of the Rime of the Book of the Dove. In a monograph on the Russian jester-minstrels called *skomorokhi*, a word of uncertain origin, R. Zguta regards the episode in the *Primary Chronicle* as *prima facie* evidence that bards brought dualistic and other teachings considered heretical by Orthodoxy and current amongst the Balkan Bogomils to Rus' by word of mouth. They gradually moved northward after suppression by the Church authorities in the Kievan regions to the freer environs of Novgorod— the locus also of most *byliny* and of the oral variants of the Rime of the Book of the Dove— where they thrived till the late 16th century, being formally banned only in 1648.³⁸

Since one has proposed Armenia as the logical intermediary for the transmission of Iranian cosmological ideas through Byzantine Anatolia and the Balkans into Kievan Rus', it is perhaps apposite to mention here a curious correspondence between an Armenian tradition and one recorded in the *Primary Chronicle* mentioned above. According to the latter "There were three brothers: one's name was Kii, the other, Shchek, and the third, Khoriv, and their sister was Lybed'. Kii sat on a mountain where now is the district Borichev, and Shchek sat on the mountain now called Shchekovitsa, and Khoriv sat on the third mountain, which came to be called after him, Khorevitsa. And they made a city in

→ of its owner, Šāfnōšak ("Believer in immortality"); so the presence of the Sogdians and other Iranians around the time of the conversion of the Slavs, in various parts of the Russian land, is amply documented. The Melkites of Khwarazm retained the language of the Soldains— as Het'um called the Sogdians in 1307— as a Christian liturgical tongue into the 14th century. See DE LA VASSIERE 2005, pp. 245-250, 257, and plate I.3 opp. p. 178.

37- On the contest: "*I raspresia sotona s Bogom, komu v nem' stvoriti cheloveka. 38- See ZGUTA 1978, pp. 7, 15-23.

the name of their eldest brother, and called it by the name Kiev.” The Novgorod chronicle adds that the three were pagans, and, like the other Slav *Poliane*, sacrificed to lakes, wells, and groves.³⁹ An 8th-cent. Armenian historian, Ps.-Zenob Glak, tells a somewhat similar tale: During the period of the conversion of the Armenians to Christianity in the 4th century by St. Gregory the Illuminator, the prince of Siwnik⁴⁰ went from the temple of Gisanē to the town (*awan*) of Kuaf and persuaded the soldiers of that village (*giwl*) to be baptized. They proceeded with St. Gregory into the Aycsan valley, east opposite Kačkon that is the fortress Astlonk⁴¹. Demetr and Gisanē, the author explains, were two Indian princes who came to Aštišat and built a city called Višap. The Armenian king Vālaršak killed them and gave the principality to their three sons, Kuaf, Meltēs, and Xof/Hof. Kuaf built a town and named it after himself; Meltēs built another, which he named Melti; and the youngest, going to the province (*gawar*) of Palunik⁴², built a town and named it Horeans/Xorni.⁴⁰ The two foundation myths have in common three brothers, all pagans, on three hills, who found three towns.⁴¹ The proper names of the first and third brother are somewhat similar. D.S. Likhachëv thought the Armenian account an echo of the Slavic legend, taking *Poluni* (sic!) to be a rendering of *Poliane*.⁴² But one thinks that if the two myths are in fact related, the Armenian one is probably of greater antiquity and more likely to be the source of the Slavic: Palunik⁴³ is not the rendering of a foreign toponym, but a province of Armenia whose name is ancient Anatolian. The name of the middle brother, Meltēs, is probably ancient Anatolian, too: cf. Melid-Kummanu, Gk. Melitēnē (modern Malatya) on the Euphrates. An early designation of the Armenians themselves in Gk. is *Melitēnioi*. The village of Mekhdi still stands, in the district of Muš. Gisanē, from Iranian *gēs*, “long hair”, is a cult attribute of the Heracles-like divinity Vahagn, Avestan *Vərəθraγna*, whose temple stood near Muš at Aštišat, lit. “happy in sacrifices”, where St. Gregory early in the fourth century (according to the account of Agathangelos) dedicated a church to St. John the Baptist that became one of the two most sacred places of pilgrimage in the country: *Čangli diwan Mšoy Sult’an Surb Karapet*, “The court of the bells, king of Muš, Holy Forerunner” stood

39- LIKHACHËV AND ADRIANOVA-PERETTS 1999, p. 9: *I bysha 3 brat'ia: edinomy imia Kii, a drugomu Shchek, a tret'emu Khoriv, i sestra ikh Lybed'.* *Sediashe Kii na gore, gde zhe nyne uvoz Borichev, a Shchek sediashe na gore, gde nyne zovetsia Shchekovitsa, a Khoriv na tret'ei gore, ot nego zhe prozvasia Khorevitsa. I stvorisha grad vo imia brata svoego stareishago, i narekosha imia ego Kiev.* On their paganism, p. 456: *Biakhu zhe pogane, zhrushche ozerom i kladezem i roshcheniem, iakozhe prochi pogan.*

40- See AVDOYAN 1993, p. 86 f.

41- The pattern is general and congenial, of course, in ethnic foundation myths: Biblical Shem, Ham, and Japheth; and Iranian Iraj, Turaj, and Salm. In folktales, the same three brothers appear, with the lazy, somewhat stupid, guileless, happy-go-lucky youngest one, Ivan of course, the hero who gets the Firebird's (cf. the Simurgh's!) feather and so on.

42- LIKHACHËV AND ADRIANOVA-PERETTS 1999, p. 390 n. It is interesting that Professor Roman Jakobson of Harvard did not share this opinion: in a lecture on the importance of Armenian studies and its relevance to Slavica delivered at a symposium of the National Association for Armenian Studies and Research on 11 June 1955, he stated that the foundation legend of Kiev was purely derivative from the Armenian tradition of Ps.-Zenob (recording in the NAASR archive, Belmont, MA, provided by Marc Mamigonian).

till the eve of the Armenian Genocide. Vahagn was renowned as a slayer of dragons, Arm. *višap*, from Iranian, hence the mention of nearby Višap(-ak'alak') "Dracontopolis"—the sudden storms that vex the great lake Van, some fifty miles to the east of Muš, were explained in folklore, long into the Middle Ages, as Vahagn wrestling an aquatic *višap* out of the water when it had grown great enough to swallow the world, and casting it into the sun to burn.⁴³ So it can be seen that various details of the Armenian myth in the *History of Tarawn* are related and belong to the pre-Christian, Zoroastrian and Anatolian culture and topography of the country, corroborated by other Classical Armenian sources, all of which predate by centuries the Slavonic ones, where the tradition of Kii, Shchek, and Khoriv is actually rather isolated.

If the two myths are related, then, it would seem that the Armenian one, native to the region of Muš and the great lake of Van (at the eastern end of the plain of Muš, about fifty miles from the town), was partially adapted by the Slavs as the foundation-legend of Kiev. The detail in the Novgorod chronicle connecting the three brothers with sacrifices to lakes could have been, then, an adaptation of the web of myths about lake Van to the vast Novgorodian lake Il'men'—a feature of some importance, as will be seen presently, in the poem of the Book of the Dove. One can but speculate as to why this particular myth might have found its way into the Russian *Primary Chronicle*. Perhaps the motive force was the slight similarity of the toponyms Kuaf and Kiev. The *topos* of three brothers is commonplace in Indo-European myth and folklore, making adaptation a simple matter. In any case, the Russian chronicle, in which we find evidence of a dualism that is perhaps of an Armenian-tinged Iranian type, seems to reflect in the Kievan foundation myth the evidence of yet another ancient Armenian source.⁴⁴

In the Rime of the Book of the Dove the enumeration of the chiefs of the creations is strongly informed by Biblical legend: so the greatest of mountains is Tabor, the mount of the Transfiguration; and Jerusalem is the chief of all cities. The parent of all fishes is the whale (Rus. *kit*, from Gk. *kētos*): the earth sits upon it and will end when it turns over. Though the obvious *locus classicus* for Christian mythography here is the book of Jonah (which also partly shaped the balladic cycle of Sadko, to be considered presently), the earliest attestation of this particular *topos* is the Zoroastrian legend of the epic hero Kərəsāspa

43- See RUSSELL 1987(a), Chapter 6, on Vahagn.

44- One additional reason this particular foundation-myth might have had particular significance may be tentatively suggested: though the middle name of the two triads is different, the first and third may contain (or have been thought to contain) the Iranian elements *kavi-* and *xvarənah-*. The first is a designation of the heroic dynasty of Iran that ended with the reign of king Vištāspa, the royal patron of Zarathustra. The word becomes *kay* in Persian; and it is found frequently as a compound, Pers. *kayānfarr*, with the second term, attested as Arm. *p'ark'*, Pers. *farr*, *khorrāh*—divinely-bestowed glory. Zenob's mention of India is rather mysterious: though the 10th-cent. historian T'ovma Arceruni mentions travelers from distant Zaplastan, i.e., eastern Iranian Zābol, for instance, and the "fire-temple" of Baku was visited by Panjābi travelers, there seems no particular reason to associate Zoroastrian traditions in Armenia of a divine pair named Demeter (most likely a Hellenization originally as "Earth Mother" of the name of Vahagn's female consort Astlik, "Little Star", cf. the Astlonk' fortress mentioned in Zenob's account) and "Shaggy" Vahagn with India, unless this is a garbled memory of Parthia and Eastern Iran.

in the Avestan hymn *Yasna* 9: he landed on an island and began to cook his meal. The island was the back of the Horned Dragon, Aži Srvara, who got burned and dived: this yarn, attractive to sailors, was received into Jewish folklore in Arsacid and Sasanian Babylonia, where we find it in a narrative of Rabba bar Bar Hanna, whose tall tales are studded with Iranian names. But the motif is very common, and its farthest western type is the legend of St. Brendan of Ireland.⁴⁵ The chief of the birds in our Rime is the suitably exotic and big *estrafıl*, or ostrich: it is associated with both Ocean and the axial white stone called (*a*)*latyr*, i.e., the “altar”, and it causes shipwrecks. The bird can be compared to the giant Čamruš, a mythical bird in the Zoroastrian text on creation, the *Bundahišn*, that is associated with Burz *yazad*, and thus, through the latter’s association with the waters, with the marine imagery of the Rime, too.⁴⁶

The greatest of lakes in the Rime is Il’men’ (Armen, in some variants). This is the name of the vast lake on whose shores Great Novgorod stands; but its prototype is supposedly located in the Holy Land. The poem mentions also a cathedral church in the ocean containing the relics of St. Clement that periodically manifests itself above the waters; and some versions add that the Holy Mother of God can be seen there, shining in all her glory. The locus of the Russian shrine is the Black Sea, off Chersonesus where Clement was martyred and his bones were cast into the sea.⁴⁷ But the association of the shrine with the Virgin, the Queen of Heaven, calls to mind the principal sacred place of the Armenian folk epic of Sasun: the submarine shrine of the Holy Mother of God (Arm. *Surb Astuacacin*) of Marut’a in lake Van. Any Armenian minstrel would have known all or part of the epic, whose roots are extremely ancient: there are hundreds of recorded recitations, attesting to its great popularity; and the influence of the Armenian Artaxiad cycle— a major source of the Sasun epic— upon the Ossetic epic of the Narts attests to the wide diffusion of Armenian oral heroic epic literature.⁴⁸ There is a second shrine in Sasun to the Virgin on Covasar, i.e., “Sea-mount”: for this and because she is Queen of Heaven she bears the additional epithet in epic *banjrik*, i.e. standard Arm. *barjr* “high” with the affectionate/diminutive suffix *-ik*. But it is noteworthy that in the *Bundahišn* the divinity Burz *yazad* (i.e., the “High”), mentioned above, is said to come up from the deeps of lake Arang when at intervals of three years the enemies of Iran mass on mount Alburz (another name with the element “high”; cf. the Arm. parallel of mountain and undersea shrine). The legend of St. Clement in Russia could thus have undergone some contamination by Armeno-Iranian sacred legend in oral epic, in the course of its transmission. The shrine of Clement is not the only undersea marvel of its kind in Russian lore: the sunken, living city of Great Kitezh in lake Svetloiar is much better known, yet one notes that there may be some legendary

Armenian connection to that town, too—for it was dedicated to Armenia's patron saint, a prominent figure in Orthodoxy, Gregory the Illuminator.⁴⁹

Any discussion of submarine legends with reference to the traditions that clustered around Great Novgorod must involve the great cycle of *byliny* about Sadko. The basic story is this: Sadko⁵⁰ was a rich merchant of Novgorod. But once all he had was his musical instrument—the *gusli*—that he played at feasts. So he was essentially a *skomorokh*. One day he was not summoned to perform, so he went and sat on the shores of lake Il'men' (greatest of all lakes!) on a "burning white stone" (*bel goriuch kamen'*—reminiscent of the (*a*)*latyr'*!) and played there. The water boiled (*voda vskolybalasia*; cf. the similar phrasing of the Rime), and he ran back to town. But, still without gigs to play, he came back to the lake, the water boiled once more, and the king of the sea appeared (*pokazalsia tsar' morskoi*). The latter liked Sadko's playing, and commanded him to return to town and, betting his own rash head (*buinu golovu*, a standard epithet in folk poetry and song for the brave hero's head) tell the merchants there was a fish in Il'men' with golden scales. He won the bet, became rich, went to sea, and one day there was a great storm. "Ah, brothers, brave band," exclaimed Sadko, "We've traveled the sea for an age/ And paid the king of the sea no tribute." They lowered riches into the water, to no avail: the king wanted a live head (*zhivoi golovy*), and when they cast lots, they kept coming up Sadko's. So he took his *gusli*, reclined upon an oaken plank in the sea, the ships sailed away, and he slept, waking "in the blue sea, on the very bottom" (*vo sinem more, na samom dne*). Sadko went into the king's "white stone chamber" (*palata belokamennaia*) and played for three days. The king danced, the waters of the sea boiled, and an old man advised Sadko to cut the strings of his *gusli* in order to stop. The king of the sea then offered Sadko a maiden in marriage: he must neither choose the first nine hundred offered, nor sleep with the last, dark (*chernavushka*) girl while in the sea—or he will never return home. Sadko slept then, and waked in Novgorod, with his rich trading ships lolling at anchor on the waves of the river Volkhov. He built a church to St. Mikola of Mozhaisk, and lived with his bride.⁵¹ The affinities of the core *byliny* of the Sadko cycle to the Rime are evident: the hero is

49- For the transcribed variants of the episode in Armenian see RUSSELL 2007; on Burz yazad, ANKLE-SARIA 1956, ch. 24.24= pp. 196-197. One of the nine cupolas of the Shrine of Basil the Blessed on Red Square in Moscow is also dedicated to St. Gregory the Illuminator; the central and tallest honors the Holy Mother of God.

50- Variants of the name include Sadke, Sadka, Sotko, and Sadok; perhaps the name may be related to the south Russian toponym Sugdaia/Sudak, i.e., **suyḏaka-*, "Sogdian", discussed *supra*, and the old designation of the Sea of Azov, Surozh, also "Sogdian". The Sogdians, whose homeland lay around modern Samarkand, were an Iranian people who traded on the Silk Road and sea-lanes, who professed no single established religion and whose cities have been compared to Italian mercantile republics. They would have been most congenial to the freedom-loving, mercantile Novgorodians; and excavations at Novgorod have yielded appliqué dragons of Central Asian type, as well as several *gusli*—one inscribed with a name appropriate to the bard who was the owner, *Slovishcha*, i.e., "Little Nightingale". See KOLCHIN 1985, pls. 23, 157, 159. For the bardic praise-singer and the nightingale (*solovei*) are related: the first gives voice to fame or glory (*slava*), and the name of the second embodies it.

51- See SMIRNOV AND SMOLITSKII, 1978, pp. 148-157. The volume has 27 variants of the Sadko ballad—more than on any other theme.

a minstrel himself, like the *kaleki*; the action takes place at lake Il'men' and on the open sea; there is a special stone identical in description to the *alatyr*'; the sea roils; there is a magical fish; and there is a magnificent palace on the sea-bottom. Just as the Rime owes details to various learned Christian texts, the narrative of the antient mariner (!) Sadko is indebted to the book of Jonah.

There are subsidiary narratives on the model of Sadko about the mysterious lake, as well; much as various Armenian legends cluster around the main epic theme of lake Van and its miraculous undersea chapel.⁵² Both the Armenian and Russian legends partake of the highly durable and intriguing human archetypal image of light in submarine darkness: see the Appendix to this study.

The chief of the beasts in the Book of the Dove is the unicorn, *indrik* (from the Russian calque *edinorog*, on Greek *monokerōs*). It is described as a creature who lives in the holy mountain, travels unhindered through the subterranean regions of the earth, does nobody any harm, and causes springs to well up; it also releases waters that are blocked— and these bring nourishment and healing to humanity. The *Physiologus*, second or third century, specifies that the unicorn's horn purifies water of a snake's venom. Again we find both an Iranian source and Talmudic echo, as well as famous scenes in European art.⁵³ The unicorn of the *Bundahišn* (see Text 2.2) is a three-legged ass that stands in the world-

52- In Armenia, the confluence of epic legend and hagiography produces a hybrid take about the submarine exploits of St. Gregory of Narek: see RUSSELL 2007. An example of the subsidiary narratives of the Sadko cycle may be adduced here, from SMIRNOV AND SMOLITSKII 1978, p. 242, *Muzh idët za zhenoi v Il'men'-ozero* ("A husband goes after his wife into lake Il'men'"): "A fine young man set off to fish at a faraway gulf of lake Onega, and a stiff wind kept him till daybreak on the islands. As it grew light, he saw three swans come flying, strike the ground, become girls and bathe in the bay, leaving their bird-skins on the shore. The young man crept up quietly and snatched one bird-skin away. When they were finished bathing, two of the girls came out on shore, put their skins on, struck the earth and then flew away as swans. But the third girl was looking for her skin and couldn't find it. At that moment the young man walked up to her and said, 'What will you give me for your skin?' 'Would you like a treasure, or gold beyond reckoning?' 'I need no treasure. Give me your self.' 'As you please,' she replied. 'I'll be your wife.' They made a vow to each other and became man and wife. Towards evening the wind died down. When they were about to board his boat, the young man handed her bird-skin over to his wife. 'Put it away,' he said, 'so it won't get dirty.' But his wife threw it over her, turned into a swan, and flew off into the sky. And in parting she only cried out to her husband in human speech, You couldn't hold and keep me; so you won't see me for three years. When three years are past, come to lake Il'men'. You'll see a washerwoman on the shore, and she'll lead you to me.' The young man went home all alone, and his life was sad: he missed his wife, for he had fallen very much in love with her. The appointed time came, so he went to Novgorod, to lake Il'men'. When he arrived there the sun was setting and he saw a washerwoman on the shore beckoning to him. 'Lead me,' he said, 'my dear, to my wife.' 'Why not take you? Let's go.' They walked along the shore and their path kept descending, and somehow it was getting colder. And they arrived in a big village, at a rich house. His conductor said to him, 'When you go into the house, make sure to say no prayer (*smotri ne molitis*').' And a huge man with a gray head, a gray beard, met them in the house. 'It's a long time,' said he, 'son in law, that we've awaited you!' Then the beautiful girl came out, holding by the hand a boy of three. 'Look,' said she, 'Ivanushka, at how your child has grown up!' 'Let him raise him,' said the old man. 'This good is needful for us.' The young man greeted his wife, and they lived happily together. And I visited them, drank their beer, and tasted sweet honey.'" (*I ia u nikh v gostiakh byl, pivo pil, sladkim mëdom zakusyval*: cf. the end, from the same stock phrase, of Pushkin's Prologue to *Ruslan and Liudmila*: *I tam ia byl, i mëd ia pil*, "And I was there, and I drank mead [= honey].")

53- The *locus classicus* is the second of the Unicorn Tapestries in the collection of the Cloisters Museum of the Metropolitan Museum of Art, New York: the unicorn dips his horn into a stream to rid it of poison; and a lion sits just behind him! See FREEMAN 1983, pp. 18-19 and Plate 6 *infra*.

ocean, purifying all the waters and fertilizing all the creatures by its urine; and it assists the divinity Tištrya to take needed water from the cosmic sea. Rabba again claims to have seen a creature like a three-year-old heifer he calls the *rydy*’, **ridyā*, that stands between the upper and lower waters of the universe and causes them either to pour down or spring up, thereby bringing the season of Spring to the world. It is likely that Rabba conflated the appearance of the equid or caprine unicorn, the monstrous size of the rhinoceros, and the Biblical *re’ēm*—originally a huge, dangerous buffalo hunted by the ancient kings of the Near East.⁵⁴ The kindly, beneficent unicorn of myth appears most often as either a goat or an equid or a combination of the two; the actual one-horned creature of ancient reports was, however, the giant and very dangerous rhinoceros (itself an object of artistic and mythographic interest in early modern Europe).⁵⁵ So it is from the latter that the *indrik* gets its huge size; from the former, its holy character.⁵⁶ In the Slavic world, the Khludov Psalter and the *Izbornik* of Sviatoslav of A.D. 1073 both contain drawings of equine unicorns of the Western mediaeval type (see Plates 4 and 5). In several versions of the Rime of the Book of the Dove, the animal more generally regarded as the king of the beasts—the lion—fights and defeats the *indrik*. One is reminded here of the reliefs at Persepolis depicting a lion attacking a great bull. The latter creature is shown in profile, and appears to have only one horn.⁵⁷ The noble appearance of the king of the felines ensured it a place in ancient Iranian art, as elsewhere; but in Zoroastrian theology it is a decidedly demonic being. So perhaps at Persepolis, but much likelier still in our Rime, the contest of lion and

54- See KIPPERWASSER AND SHAPIRA 2008; and POPE 1965, pp. 259-260, on Job 39.9.

55- See CLARKE 1986: travelers brought the first living specimens of the Indian rhinoceros to Europe early in the 16th century.

56- When Pliny the Elder (23-79 A.D.) spoke of unicorns, it was the formidable rhinoceros from India or Africa he had in mind; and it was believed to kill that other giant, the elephant, by impaling it from beneath with its horn. In Arabic, Persian, and Turkish, the word used for the equine-caprine unicorn is *kargadan* or *karkadan*; but the same word is applied, as in an illustration to the *Manāfi’-i ḥayawān*, to a rhinoceros—and this was the original meaning of the term, for the word is from Sanskrit *khadga-* or *khadgadhenu-*, “rhinoceros”. The Sufi poet Jalāl al-Dīn Rūmī in his *Dīvān-e Šams-e Tabrīzī* (FORUZANFAR 1367, stanza 920, p. 371) employs the image of mortal combat of these two: *Agar cū šīr šavī, ‘ešq šīr-gīr-e qavī-st/ Vā gar cū pīl šavī, ‘ešq karkadan bāšad*. “If you become a lion, love is a mighty lion-catcher; and if you become an elephant, love will be a unicorn.” Annemarie Schimmel, who studied these lines, suggests they portray a vision of Messianic peace in which elephant will lie down with unicorn (SCHIMMEL 1980, p. 107). Typically, the unicorn of Christendom is a white horse with a goat’s beard and feet—more caprine at first, more equine as one enters the high Middle Ages; and a long, narrow horn, sometimes baroquely spiralling, juts out of its forehead. This is how the creature appears, for instance, in the ninth-century Byzantine Khludov Psalter (illustrated in “The Paradigm of the Unicorn,” JUNG 1968, p. 444, p. 247); in an early-thirteenth-century Arabic manuscript of the *Na’t al-ḥayawān*, a pair of wings is added to a creature that is feline and caprine in appearance (see ETTINGHAUSEN 1950, pl. 7). In Christian exegesis, the one horn is an emblem of monotheism; the motif of the hunt symbolizes the persecution and sacrifice of Christ.

57- Schrader suggested a century ago that Ctesias, a Greek physician who served at the Achaemenian court in the fourth century B.C., saw this and thought it was a unicorn—hence his report that there are unicorns in India. But Ctesias also says that they are white-bodied, asinine creatures that run fast. Those who drink from the white, black, and crimson horn of the animal (i.e., a rhyton, the classic drinking horn of the Iranians) become immune to disease and the falling sickness; and the horn itself is an antidote to poisons. This is not the creature of the Persepolis reliefs.

horned beast may represent the battle between falsehood and truth—a battle in which the lie, here on earth in the present time, is the victor.⁵⁸ There is a Buddhist parable in which the unicorn, not the lion, embodies the power of death. It enjoyed wide diffusion, and was transmitted into Armenian theological poetry and Russian literature; but it is not reflected in the Rime.⁵⁹ There is no other instance in the Rime of one chief or paragon of the

58- ZAEHNER 1955, pp. 237-238, points out that in the *Bundahišn*, lions and snakes are called the worst creatures; and in the Pahlavi translation of the Ardibehešt Yašt, 3.8, lions are added to the list of dangerous, demonic beings: for Avestan *vāhrkō.čīθra-* “vulpine seed” we have Pahlavi *šēr ud gurg tōhm* “progeny of lion and wolf”. Thus the Mithraic symbol of a leontocephalous man around whom a serpent is entwined, designated *deus arimanius*, combines two of the evillest creatures of Zoroastrian cosmology. I have argued that the being represents death: the Mithraic initiate undertaking *Leo*, the fourth of the seven grades of initiation, thus undergoes a symbolic murder and resurrection not unlike the third degree of Freemasonry, which also has a particular leonine association in one detail of its symbolism. The *ariwcajew* “leontomorph” or “lion-slaying” Mher (=Mithra) of the Armenian Epic of Sasun reflects a source for such symbolism. In more recent times, the lion of English heraldry defeated the unicorn of the Scottish throne; but now, rampant and equal, they uphold the British royal escutcheon, as on the modern one-pound coin (Plate 7).

59-The story belongs to the famous book *Barlaam and Ioasaph*, versions of which exist in virtually every language of medieval Europe and the Near East. The ancestor of the text is the canonical life of the Buddha Sakyamuni, from India, that is known from the *Buddhacarita* of Aśvaghōṣa and the *Lalitavistara*; and the Biblical-sounding “Ioasaph” is in fact a corruption of *Bodhisattva*— the Buddhist term for a person who has come to enlightenment but elects freely to be reborn, in order to help other beings do the same and overcome suffering. The beginning of the career of the Buddha, which forms the frame narrative of *Barlaam and Ioasaph* also, may be summarized briefly. A king who had no son was granted one by the gods, and a sage informed him the boy would grow up to be either a world-conqueror or a great religious redeemer of all sentient beings. The king preferred the former option; so he saw to it that the growing boy was confined to a palace of earthly delights staffed entirely by comely young people. But curiosity about the world outside impelled him to visit the city beyond, where the gods, anxious to turn him to the path of a religious seeker, appeared to him in succession as a sick man, an old man, a corpse, and an ascetic. Thus he learned of life’s suffering and brevity, left his father’s house, and embarked upon the path to enlightenment. The story made its way to the Buddhist monasteries that in the early centuries of the Christian era lined the Silk Road, at the northern and southern edges of the Taklamakan Desert in Central Asia, present-day Chinese Turkestan: Fragments of the *Buddhacarita* have been found there. A few extracts from the prototype of *Barlaam and Ioasaph* in Manichaean Turkic from the same area are known; and there are yet other fragments, also in Manichaean script, but in New Persian translation (see HENNING 1962). The Armenian text, *Yovasap’ ew Baradam*, is a somewhat abbreviated translation of the Greek, following the latter in all essentials. The monk teaches his disciple through parables. The third of these presents “a man fleeing a unicorn (*ayr omn p’axuc’eal yeresac’ miejjerue*). But in his flight he fell into a great pit. Extending his hand, he grabbed hold of a tree that was in the pit, and he secured his feet on the ledge of the pit and figured he was well and secure. Looking up he saw two mice, one white and one black, who had the branch he was gripping, and were close to gnawing it through. Then he saw the floor of the pit— and behold there was an awful dragon (*višap*) with fire coming out of its mouth. And it opened up its mouth and waited for the man to fall in. Then he looked at the place where his feet were standing, and he saw four asps, that were striking at his heels. But a little sweet honey was dripping from the tree to which he was clinging. He gave up all his sorrow— the fear of the unicorn, the terror of the dragon who was waiting to swallow him, the mice gnawing away the branch, and the asps at his feet. He forgot all these sorrows and opened his mouth to the little drops of honey falling from that tree.” Then the monk explains the parable: “All who walk in the way of this world are like him. Now, the unicorn is the example of death, which drives the all the generations of Adam, from their birth to their end. And the dragon’s pit is this world, with all its evils and lethal snares. The branch the mice were eating is the lifetime of every man, which is worn out by day and by night and is close to breaking off. The four asps at his feet are the four natures of the body, striving to dominate each other, which weaken the body. The fiery-mouthed dragon is the belly of hell, which stands, waiting for all who accept the luxury of this life. And the sweet honey is the sweetness of this life, which permits no salvation to those who →

creations confronting and contesting another; so, given the symbolism of the unicorn in Zoroastrian and subsequent Christian tradition in which the creature is linked to the nourishment and healing of other creatures, it seems reasonable to suggest that in the variants of the Rime where the contest occurs, the two beasts take the place of the white and gray hares and the *indrik*, the unicorn, is none other than the embodiment of the spirit of good and truth itself, *Pravda*; while the *lev*, the lion, with its mythical linkage to the power of death, is *Krivda*, the incarnation of the Lie.

2.

The Rime of the Book of the Dove was part of the 18th century collection of Kirsha Danilov, published at Moscow in 1804 in the volume *Sbornik russkikh stikhov* ("A Collection of Russian Verses"), which was reprinted many times. Alexander Pushkin owned the 1818 edition—his friend and classmate at the Lycée at Tsarskoe Selo, Küchelbecker, read

love it." In the Georgian version of the parable, it is an elephant, not a unicorn, that chases the hapless man to the edge of the cliff; and the scene is illustrated thus to this day in editions of that narrative. (See ANTAPÉAN 1980, pp. 44-47, for the Armenian; and for the Georgian illumination the plate opposite p. 33 in ABULADZE 1962.) In Job 39.9, God boasts of the power of His creation, in contempt of man: *Et'ē kamic'i k'ez miej'urun ca'ayel, kam hang'e'el ar msur k'o*. "Will the unicorn wish to serve you, or to rest by your crib?" No he will not—unless, one supposes, you are a virgin girl—and the tenth-century Armenian mystic and theologian Grigor Narekac'i in his Commentary on Job stresses the creature's power. He returns to the image of the unicorn once more, in the 68th chapter of his *Matean o'tbergut'ean*, "Book of Lamentation". In a number of MSS., this chapter is given the title *Vasn araracoc' or en vrēxndir mardoys i dimac' Astucoy*, "Concerning the creatures which work vengeance upon man on God's behalf": "If I advance fearlessly amongst the weak, I am wasted by wasps;/ So what need for me of lions?/ If I survive the rending claws of bears,/ Midges, that thirst for blood, will come my way./ If I sit down somewhere without care,/ Vilest mosquitoes will roil round me like a rain of roaring fire./ If I flee, escaping the unicorn's horn,/ The tiny claws of wretched, whining gnats will flay me./ If I cower, floating in the cistern of a storeroom,/ The hideous, foul frogs will soil me./ If I stand in some open field,/ Massed flights of ticks will besiege me./ I neglect to mention locust and grub, the mighty host./ And the poisonous caterpillar and inanimate weevil./ With the watery-seeming hail, and the ruinous frost:/ To the eye these seem unarmed and humble./ But at God's indication, with grim strength eternally/ They struck, swept off, hounded the proud exaltation/ Of Pharaoh's iniquity's smiting rod, in victory./ These are the forms of the torments of passions concealed./ Unseen within the soul— Egyptian blasphemies/ Torturing the soul within, doing secret harm." (See XAC'ATRYAN AND ŁAZINYAN 1985, p. 519.) Though there is no mention of the other elements of the parable of the unicorn in Narekac'i's text, the poet flees (*p'ax-nuc'um*) even as the man in the parable did (*p'axuc'eal*); and in both cases one escapes something great, only to be overcome by something small—the biting gnats here, the mice of day and night in *Barlaam and Ioasaph*. Narekac'i might have known the parable of the unicorn, and the Armenian text would have followed the translation into Greek from Georgian ca. A.D. 900. It is characteristic of Narekac'i's typological vision that the mythological vision of the unicorn is followed by scenes culled from workaday farm life: one of the few photographs of the monastery of Narek we possess from the days before its devastation by Kurdish brigands and its final destruction shortly before the First World War shows peasants with oxen plowing a field directly beneath its walls (photograph by the ethnographer Eruand Lalayan, 1911, reproduced in KÉVORKIAN AND PABOUDJIAN 1992, p. 546, pl. 891). I visited Narek in June 1994: the site where the monastery stood is on a hill, but the land below, covering about 5 km to the shore of Lake Van at Gevaş, is low and marshy in places—a good breeding ground for insects. And the parable in Russia: L.N. Tolstói wrote in his *Confession* of a spiritual crisis, as a result of which he resolved to abandon the literary life, and to preach universal love and nonviolence. At that moment he remembered the "Oriental tale" (*vostochnaia basnia*) about the "traveler cornered on the steppe by an enraged beast". Tolstói wrote that the meager drops of honey of life no longer consoled him; and he concludes "And this is no tale, but the truth—true, unarguable, comprehensible to everyone!" (TOLSTOI 1963, pp. 27-28.)

the first edition in 1815—and its contents are reflected in the first great *poema* Pushkin wrote, *Ruslan and Liudmila* (1820).⁶⁰ The discovery of the spiritual songs, lyrics, and *byliny* (heroic ballads) of the folk by the Russian scholarly and literary world coincided with the publication of, and great interest in, the Igor' epic. Nabokov refers directly to Pushkin's *poema*, as will be seen, along with the Rime, in *Podvig*; and the Igor' epic was the object of his lifelong study. To study the life and letters of Pushkin's Russia, as Nabokov did, is to encounter the Rime in its context, then; and the Rime and related themes are prominent also in the Russian arts and letters of the years of Vladimir Nabokov's childhood in St. Petersburg and of his youth in emigration. The painter Nicholas Roerich, who lived before the Revolution down Bol'shaia Morskaia street from the Nabokovs, painted the *Golubinaia kniga* twice, in 1911 and in 1922-1923. The Book in both paintings is an Old Slavonic manuscript adorned with cryptic symbols and drawings of legendary beasts: it was undoubtedly modeled upon illustration noted above in the *Izbornik* of Sviatoslav of 1073 or a similar actual manuscript.⁶¹ He illustrated also the bard Boyan and other characters and episodes from the Igor' epic Nabokov studied, as well as the legend of the submerged city of Kitezh, which is related to the material of the Book of the Dove and which Nabokov mentions in his late novel *Ada*. Kitezh is famous also from the composer Rimskii-Korsakov's suite (the composer also set the legend of Sadko to music), and, a few years and unimaginable horrors later, from Anna Akhmatova's poem *Putëm vseia zemli*, "[Departing] along the way of all the world" (1940), in which she depicts herself as a woman of the drowned holy city (Rus. *kitezhanka*), returning bereaved down the sorrowful way of Russia's fate to her final home.⁶²

Viacheslav Ivanov's poem of 1915 on the Book of the Dove is so chromatic that it seems almost an ecphrastic evocation of Roerich's painting: "O golden writings/ Of the Book of the Dove:/ The depth of waves ethereal/ And the bottom a convolution serpentine,/ The dragon's secret cipher spied/ By eagle keen eyed." (*Zolotyie pis'mena/Knigi Golubinoi: / Voln efirnykh glubina, / Dno— uzor zmeinyi. / Zmiia tainopis' vidna/ Zorkosti orlinoi.*) Ivanov, both poet and philologist, plays artistically upon the scholarly variation of dove and depth, *golub'* and *glub'*; and his image of waves in the ether suggests the theme of heavenly sea. In 1903, Alexander Blok had dedicated what is perhaps his first major poem to the Book of the Dove, with the same play of dove and depth: "The queen [*tsaritsa*] gazed upon the letters of red gold leaf/ Upon the title page/ And prayed to the meek Theotokos./ Over the Book of the Dove flowed/ The blue nights of the queen:/ And to the princess white birds flew in/ From their columbine height./ The princess scattered grains/ And white wings beat./ Softly the doves cooed/ Into the chamber under the figured gate./ Ruddier, the princess than the queen,/ The queen in the book perusing every page/ And seeking meaning/ In the numbers gold and red./ High yawned open the cloud/ And down

60- Strongly dynamic verbs such as *vstrepenut'sia* and *kolykhat'sia*, found in the Book of the Dove, figure vividly in Pushkin's works, and may serve as one indication of his familiarity with the text.

61- See KOROTKINA 2001, p. 92 and DEETER 1989, p. 126; and Plates 2 and 3 in this article.

62- AKHMATOVA 1977, pp. 347-351.

fell the Book of the Dove./ And to the princess from the azure eye/ Flew forth the cooing bird./ To the princess, so sweet, so languorous/ As the icon lamp burned./ Blue musings of the queen./ The red and golden headings./ Bow down to the princess, O queen./ To the golden curls of her hair./ From your ancient profundity [*glubinnosti*]/ To meekness wise and dove-like [*golubinoi*]./ In profundity is your strength, O queen./ The gilded pages in your book./ But the princess' innocence alone,/ O queen, shall your ciphers overwhelm."⁶³ This interest of the Symbolists and poets and writers of the Silver Age in the old Slavonic and Constantinopolitan heritage was general: it would be surprising, indeed, were one *not* to find Nabokov, steeped in ancient Rus', a fellow-voyager sailing with Yeats to Byzantium.⁶⁴

The ideology of the early Soviet era stigmatized as subversive and reactionary the antiquarian, patriotic interest of writers and artists in Byzantium and Kievan Rus'. So the apocalyptic message of the Book of the Dove was co-opted to the theme of the Revolution in a poem of 1937 by Nikolai Zabolotskii,⁶⁵ rather as Soviet Armenian poets linked to the arrival of Communist revolution in Armenia the theme of the emergence from his cave at the end of days of the apocalyptic folk hero Mithra the Young (*P'ok'r Mher*) in the Sasun epic. Mher becomes a Red hero.⁶⁶ The version of the poem of the Book of the Dove that Zabolotskii recalls in his own verse is of the type in which the Lie has overwhelmed (*odolela*: the word found in the variants of the Rime where this happens) Truth and conquered the world: in most other versions, Truth wins and chooses Heaven. The former type, in which evil is temporally triumphant, resembles more closely the narrative of Eznik, in which the wicked spirit Ahreman temporarily defeats the good-natured Ohrmazd by exiting the womb first and, Jacob-like, falsely claiming the prerogatives of primogeniture; and it is closer also to the Manichaean cosmology, in which this world is wicked by nature. Perhaps the erstwhile poet of the avant garde OBERIU school, Zabolotskii, found

63- The translations are mine: Rus. text in MUR'IANOV 1996. He suggests the topic—and, one might add, the play on doves and depth comes from Andrei Belyi's lines "... this was the deep, speaking with the deep" (*eto glubina govorila s glubinoi*); and other sources might include Solov'ev's poem "My queen has a high palace" (1876) and "Song of the Ophites" (note the *zmei* of Viacheslav Ivanov's verses). But the text of the poem on the Book of the Dove mentions the queen of Heaven, *tsaritsa nebesnaia*; and even if Blok was inspired by contemporary poets to evoke a queen against whom he creates the princess, possibly a prototype of his *prekrasnaia dama*, the "lovely lady" of later verses, there surely can be no doubt that he read the folk spiritual poem too. Mur'ianov observes that Blok was writing in a Russian intellectual milieu that was intensely anti-religious: in the summer of 1903 the Russian Social Democratic Workers' Party (*RSDRP*, the kernel of the Communist Bolsheviks) passed a resolution "Concerning work among adherents of religious sects [*sektantov*]"—all of which actually gives some indication of the extent of interest in Russian sectarianism, mysticism, and folk religion and tradition at the time.

64- In his essay "On Language" ZAMIATIN 1970, pp. 180-181 notes the familiarity of Leskov, Tolstoi, Gor'kii, and especially Aleksei Remizov with Old Slavonic, Old Believer, and folkloric literature. The latter even used the pre-Cyrillic *glagolitsa* in the colorful, enigmatic documents and charters of his antic secret society of artists and writers, the *Obezvelvolpal* (a satire of the Soviet propensity for acronyms, for the "Great and Free Chamber of the Monkeys"), to which Zamiatin himself and V.N. Nabokov's cousin, the composer Nikolai Dmitrievich Nabokov (1903-1978) belonged (see OBATNINA 2001, p. 352).

65- See Text 4, *infra*.

66- See RUSSELL 1998.

it politic in the year of the Great Terror to prefer this version because it implies the Marxist imperative of focusing on the predicament of this world and waging revolution, rather than hoping and believing in the goodness and power of heavenly forces (though it can, more subversively, be read as a claim that Evil governs the rulers of this earth). It was also politically savvy to base a poem on a source presumed to be of oral, folk origin, since the anti-formalist cultural policy of the Stalinist régime encouraged the study and emulation of literature ostensibly unmediated by intellectual sophistication, by the practitioners of “art for art’s sake”. Of course the Book of the Dove, for all its orality, has a dense and sophisticated textual background— but that would not have mattered to Zabolotskii.

The Book of the Dove, and the related Sadko cycle with its kindred themes of watery beings and realms, survived and developed in the Novgorod region, further variants being transmitted from there to the Russian north and east. Vladimir Nabokov was a native of Russia’s northwestern capital, St. Petersburg; and the family estates were Batovo in nearby Vyra and Rozhdestveno. In his novels, his nostalgia is for the north of Russia: lakes in the northern reaches of a fictional New York State are called, in playfully diminishing size, Omega (i.e., “big O”), Ozero (Rus. “lake”), and Zero, with Omega a cunning, kenning homonymic stand-in for the north Russian lake Onega. If Nabokov played the joke once, it would be merely poignant; but he does it twice, making it a nostalgic *cri de coeur*. In the novel *Pnin* (1957), Onkwedo, the location of the hospitable dacha of Alexander Petrovich Kukol’nikov (cheerfully Americanized to Al Cook, a metamorphosis to which poor Pnin’s intractably Russian name is not susceptible), is located, the narrator informs us, on the latitude of lake Ohrida (note the link through the lake-shape and sound O) but looks like lake Onega. Ohrid is in Yugoslavia— that is, South, but still Slav. Why this longing for the north in particular? Is it only because home was there? One thinks not, because of a comment Nabokov slips into the mouth of one of Al Cook’s guests, Count Fyodor Nikitich Poroshin, who complains that his children Igor’ and Ol’ga are not interested in “most interesting, exciting things— for instance, about local, elective self-government in the Russian far north in the seventeenth century.”⁶⁷ And here is the point: Nabokov was enraged by the smug assumption of some Westerners that Russia’s unbroken tradition of autocracy doomed it to a dismal succession of tsars and commissars about whom there was nothing to be done. The elder Vladimir Dmitrievich Nabokov, as we know from *Speak, Memory*, was a liberal politician who wrote in favor of gay rights, spent time in a comparatively humane tsarist jail, nearly fought a duel with a reactionary editor, and died taking the bullet intended for his friend and fellow exile, the liberal parliamentarian Pavel Miliukov. Nabokov knew intimately a Russia with a vigorous democratic and liberal tradition; and moreover, that tradition had roots in the Middle Ages, in the Hanseatic republic of Novgorod. Indeed, the ghost of the executed Decembrist Ryleev haunted Batovo: he lived there and wrote a poem situated there in which an Old Believer-like priest instigates the son of Peter the Great to rebel and restore the lost freedoms and ancient ways of the Russians.

67- NABOKOV 1996, p. 382; on Onkwedo, see p. 383.

Just as Nabokov employed the Igor' epic to build an ethereal bridge to Scotland, so he inserts a single reference to the marvelous unicorn creature of the *Golubinaia kniga* to evoke the heroic past of Novgorod, whose symbol was not the imperial double-headed eagle, but the bell of liberty. Poroshin's comment comes at an important point in the novel: before the visit to the dacha Pnin is culturally and linguistically baffled, crippled, outgunned, isolated in the novel, at the mercy of his narrator's sarcasm. But not in Chapter Five: at the dacha, Pnin is one of *les artistes chez eux*: the guests are all Russian émigré scholars, liberals, Jews, Armenians who appreciate his disquisitions on the discontinuities and stretches of spiritual time in Tolstoy. This is a central concern in the metaphysics of the real Nabokov⁶⁸— and in Chapter Five the narrator, the cruel pseudo-Nabokov, is derided as an *uzhasnyi vydumshchik*, a “dreadful falsifier”. In the preceding chapters Pnin is tormented by the cruel and vulgar Liza; so it is in this chapter, too, that Pnin's true love, Mira Belochkina, emerges fully from memory, and one learns of her murder at the hands of the Nazis in the Holocaust. Her name contains Rus. *belka*, “squirrel”— a creature that appears at Pnin's moments near death, and also, through linguistic legerdemain, in the image of Victor's wonderful blue punchbowl.⁶⁹ Pnin arrives at Onkwedo by car: acquisition of the independence and mobility of one's own wheels is an emblem of the hero's triumph (the book begins with him passively boarding the wrong train), and at the end of the novel he will ride off in it into the sunset. Nabokov had meant to kill off Pnin first, but thankfully his friends at *The New Yorker* would not hear of it; hence the final chapter, which must be a subtle joke, a satire on the image of the *troika* at the end of Nikolai Gogol's *Dead Souls*, that poem in prose Nabokov studied so minutely. So Pnin's very arrival at Onkwedo/Ohrida/Onega is in an ennobling chariot, as it were: the whole human and spiritual world of the chapter is an ideally democratic north Russia in miniature, with Poroshin's hint embedded in the narrative; and towards the end, after the revelatory reverie on Mira Belochkina, the liberal theme is recapitulated in a coda suitable to Nabokov's *potustoronnost'*, his “otherworld-ness”: Pnin believes “in a democracy of ghosts”, not in “an autocratic God”. That is, his alternative, heterodox cosmology corresponds to his anti-monarchical, liberal political views!

In *Pnin*, with an inept main character who is more noble and decent than his narrator, Nabokov fleshes out, I think, a concept he adumbrates somewhat differently in *Glory*.

68- This concern pervades Russian criticism: Joseph Brodsky wrote “poetry is, in the final analysis, time reorganized, in relation to which dumb space is internally hostile. The former was personified by Mandelstam; the state made of the latter its weapon.” See GORDIN 2000, p. 7.

69- Pnin does not at first seem to connect with his son, Victor; but they dream intersecting dreams, and the boy sends Pnin a beautiful blue glass bowl that embodies the spiritual depth and love of the giver. Nabokov points out in the notes to his translation into English of the Igor' epic that Cinderella's slippers were *vair*, “squirrel”, cognate to Old Rus. *veveritsa*, “squirrel”, not *verre*, “glass”, the *lectio facillior*. In the Igor' poem, the vatic Boyan is said to travel through the air like an eagle, across the earth like a wolf, and through the trees like a *mysl'*, “thought”. Viacheslav Ivanov and others went through linguistic contortions to make the middle image an animal— a *mys'*, that is, a mouse, well, some sort of rodent, well, a squirrel! Nabokov let “thought” stand but compensated by dispatching legions of cryptically important squirrels across his pages.

There Martin, another intellectual émigré hero whose free and noble nature is rooted in the nearly mythological past of northwestern Russia, is imprisoned, not by a pompous and finally unreliable narrator (a strategy Nabokov takes to the extreme in *Pale Fire*), but by the plodding aridity of the very narrative and structure of the novel itself. It proved to be a dangerous strategy, since the critics generally did not understand that the very plainness, almost banality, of the novel itself might have been intentional, a foil for Martin's alien, luxuriant inner life, his intrinsic nobility. One senses the latter in the Russian title: the slightly archaic-sounding *podvig* means a knightly exploit or campaign; but in English "exploit" might be read, with stress on the *ultima*, as a verb with decidedly less-than-noble overtones. "Glory" properly translates Russian *slava*, a word of almost endless epic and artistic depths and resonant associations, in Russian culture generally and in Nabokov's *oeuvre* in particular, where it is the title of his *ars poetica*, his *Exegi monumentum*.⁷⁰

On the very first page of *Podvig* Nabokov introduces the heroic, mythological theme with reference to the most important and beneficent creature of the largest section of the poem of the Book of the Dove: "Edelweiss, Martin's grandfather, was, however funny it may seem, Swiss, a tall Swiss with a fluffy moustache, who had tutored in the 1860's the children of the Petersburg landowner Indrikov and had married the latter's youngest daughter."⁷¹ The encoded *indrik*, "unicorn", is mentioned two pages later, though never explained or rendered into modern Russian: "If the family name of Martin's grandfather blossomed in the mountains, then his grandmother's maiden name, differing by its magical⁷² origin from the Volkovs, Kunitsyns, and Belkins,⁷³ was related to the fauna of the Russian fairy tale. Marvellous beasts once upon a time trotted across our land. But Sofia Dmitrievna found the Russian fairy tale rather crude, evil, and impoverished; the Russian song, senseless; the Russian riddle, foolish— and had little faith in Pushkin's nanny, saying that the poet had dreamed her up together with her tales, knitting needles, and long-ing. Thus Martin in early childhood did not learn anything else that later on might have

70- See RUSSELL 2005 on the term with reference to Nabokov's poem and its echoes of Pushkin, and the telegraphic, concealed discussion of it in a footnote in his commentary on the Igor' epic.

71- NABOKOV 2001, p. 97, translation mine: for the Eng. tr. by the author's son, Dmitri Nabokov, where the word order has been changed, see NABOKOV 1971.

72- Rus. *volshebnyĭ proiskhozhdeniĭem*: Nabokov called himself as a *volshebnik* "magician, enchanter" and recognized in the word itself a partial anagram of his own name. The word is the title, also, of the Russian-language novel, translated into English as *The Enchanter*, that was the precursor to *Lolita*. The unnamed hero of *Volshebnik* invents an intricate fantasy-justification of his seduction of a young girl. But at his climax she cries out, the enraged neighbors mob the pervert, and he falls beneath a speeding truck. In *Glory*, Martin lives in the dream of Zoorland enveloped in the larger dream of his life, but is crushed by the reality of Soviet Russia.

73- Of course these zoöphoric surnames— Wolf, Marten, and Squirrel— are all of magical and folkloric importance. Marten echoes in English the name of the Anglophone hero, Rus. *Martyn*; one has already noted the otherworldly symbolism and epic connections of the ubiquitous squirrel in Nabokov's *Priglasenie*; and the wolf, usually *seryi* ("gray") in folk tales, is the helper of the third and youngest son, the hero. In Pushkin's long fairytale-epic poem *Ruslan and Liudmila*, to which Nabokov will allude presently, the wolf is *buryi* ("brown")— see RUSSELL [2009]. So in fact magic and enchantment lie beneath the overt narrative at every point.

added to his life, piercing the semi-precious wave of memory, one more enchantment; but enchantments there were in plenty anyway, and he had no occasion to regret that in childhood his imagination had been awakened, not by Eruslan but by Eruslan's brother.⁷⁴ And isn't it really all the same where the gentle push comes from, by which the soul is moved and takes off, doomed (*obrechënnaiia*) after it never to cease its movement?" Martin is doomed indeed to his heroic quest: he will cross secretly the closely guarded frontier of Russia under the Soviets and perish. The very next scene adumbrates the quest and crossing, employing imagery that harks back to the very *Ruslan and Liudmila* he is supposed not to have known: in Martin's childhood nursery hangs a watercolor picture painted by "Grandma Edelweiss, born Indrikova" (*Babushka Edel'veis, rozhdënnaiia Indrikova*) of a deep forest with a path winding into it.⁷⁵ While saying his evening prayers, first an English couplet, then the Paternoster in Slavonic, the young Martin hopes his mother will not notice the "seductive path" (*soblaznitel'noi tropinki*)⁷⁶ just above him. This is a foreshadowing of the lethal, clandestine path he will take back into Russia. Martin imagines in later years, "Did it not happen just that way?" (*Ne sluchilos' li i vpriam' tak*) that he had leapt into the picture from his headboard (*s izgolov'ia*)⁷⁷ and "Was this not the beginning of that happy and tormented journey (*schastlivogo i muchitel'nogo puteshestviia*) that all of his life had become?" He recalled "the strange dark air, full of fairytale possibilities" (*strannyi tëmnyi vozdukh, polnyi skazochnykh vozmozhnostei*).

Nabokov's theme gives voice to the dreams of many of his fellow émigrés to be invited home, to return: Ivan Bunin dreamed of receiving a postcard from Stalin; Nina Berberova, of being in a coffin shipped home to St. Petersburg; and in his story "The Visit to the

74- The "brother" is the Tristan or Tristram of Western epic lore, with whom Martin was to identify himself later on. The name Eruslan is a variant of the form Ruslan, used by Pushkin and noted above; but it is closer in form to an original Turkic *a(r)s(a)lan*, "lion"—the other father of all the beasts in the Book of the Dove. (Aslan is the name C.S. Lewis gave to his leonine Christ in the *Narnia* books.) And just as the Wolfs, Martens, and Squirrels are in fact fairytale beings, despite the narrator's assertion, in the very next passage the landscape of Pushkin's *Ruslan and Liudmila* will surreptitiously enter Martin's childhood despite the narrator's claim to the contrary.

75- NABOKOV 1971, p. 151 (=NABOKOV 2001, p. 208) mentions the name of a heroine of *Ruslan and Liudmila*, Naina. The temptation to enter a painting in the nursery is an autobiographical element: in *Speak, Memory*, the path in a beech wood brings Nabokov to his American safe haven (see DE VRIES AND JOHNSON 2006, pp. 17 and 182 n. 21). One notes the linkage of the seductive to the lethal in *Glory*; cf. the thematic correspondence, noted above, to *The Enchanter*, where the serpent (*zilan!*) of death coils round the forbidden sexual fruit.

76- NABOKOV 1971 has "tempting": that is fine and sufficiently diabolical for *soblazn*, but since the author was in *Pale Fire* to deploy Goethe's *Erlkönig* I have opted for stronger stuff, letting the forest path seduce the callow boy.

77- The pictures and wallpaper of Nabokov's own nursery were magical windows; and in *Bend Sinister* the talking guest room at the Maximovs' *dacha* reminds the waking Krug that they met yesterday and "those are windmills on the wallpaper". In *Pale Fire* Nabokov, cocking a snoot at the cave metaphor in the *Republic* of Plato, with its sustained attack on art, employs the conceit of having a fictional character move still a farther remove from formal narrative reality (the latter a word the writer insisted should properly be used only with inverted commas) by having the poet John Shade muse on life as prelude to a poem—his unfinished one, his dead daughter Hazel's unwritten one.

Museum” Nabokov has a magic door opening from a French provincial museum onto a snowy Moscow street. In the poem “Death by Firing Squad” (*Rasstrel*, Berlin, 1927), too, Nabokov writes of his bed sailing off in dream (cf. Martin’s headboard!), of having returned to Russia, only to be killed. He wakes from the nightmare in merciful exile but reflects how his heart still wanted to be home, with the ravine of the execution *ves’ v cherëmushke*, “with racemosa all abloom”. The delicate white *cherëmukha* flowers of the northern Russian spring appear in Nabokov’s writings as emblems of nostalgia.⁷⁸ The evocation of the prayer in Slavonic⁷⁹ and the reference to “fairytale” (*skazka*) both evoke mythology and the Russian past, thereby multiply stressing the mention of the *indrik* in its context. In another poem, “Dream Vision” (*Snovidenie*, Text 5.2 *infra*) that, like “Death by Firing Squad”, links the dream to a vision of death, Nabokov encounters a murdered friend. Thus there is a tightly associated complex of themes of dream states and dream visions, a return to Russia, and death and the dead that Nabokov adumbrates in poems and elaborates in novels, to which *Podvig* also belongs. In the latter, the hero’s dreams seem to be the crucial addition to a super-saturated solution of reality (an image, incidentally, that Zamiatin applies to the point at which the writer, who works in a semi-dreaming state, succeeds in creating a fiction): “[Martin] noted a certain peculiarity about his life: the property that his reveries had of crystallizing and mutating into reality, as previously they had mutated into sleep.”⁸⁰ In that narrative, though, Martin will not be able, as Pnin does, to make a viable life of exile— perhaps the younger Nabokov was not yet reconciled himself to such a necessity— and his circumstances conspire against any possibility of a future in Western Europe. He is in love with a girl, Sofia Zilanova, who will not return his affection: it has long been recognized that her surname contains the Turkic word for a serpent, *zilan*, that is encountered in the name of a mythical villain of the Russian *byliny*, or heroic ballads,⁸¹ and she is in love, in turn, with Martin’s Cambridge classmate Darwin, whose

78- On émigré nostalgia, see FRANK 2008, p. 52: the post-Soviet comedy film *Okno v Parizh*, “Window into Paris”, reduces the theme to a joke with a mawkishly sentimental ending, albeit less vulgar than the lion, witch, and wardrobe of C.S. Lewis in the Anglophone world. Nabokov engraved in the glass of Edmund Wilson’s guest room window the first couplet of the poem (NABOKOV 2002, p. 186): “There are nights when as soon as I lie down/ My bed sails off to Russia” (*Byvaiut nochi, tol’ko liagu, / V Rossiïu poplyvët krovat’*).

79- In the Russian: “at which we left somebody named Jacob to our debtors” (*prichëm kakogo-to Iakova my ostavliali dolzhnikam nashim*), a child’s misunderstanding of OCS. *iakozhe ostavliaem dolzhnikom nashim*, is lost in Dmitri Nabokov’s authorized translation, since the English reader will not get the reference, any more than a Russian might an American’s child’s hearing “Gladly the cross-eyed bear” for the words of the hymn “Gladly the Cross I’d bear” (this example courtesy, at a distance of over four decades, of one’s much loved sixth-grade teacher Mrs. Jeanne Oladele, an African-American from Texas).

80- NABOKOV 1971, pp. 108-109= NABOKOV 2001, p. 177: [*Martyn*] *podmechal nekuïu osobennost’ svoei zhizni: svoistvo mechty nezametno osedat’ i perekhodit’ v deistvitel’nost’, kak prezhde ona perekhodila v son*.

81- In folklore, the knight-hero (*bogatyr’*) Tugarin Zmeevich (lit. “Serpent-son”) and Krasa Zilantovna (HABER 1977, p. are the *ischad’ia* (“unholy offspring”— cf. *infra* Esenin’s use in the poem “Marfa Posadnitsa” of the word *ischaved’e* of the Antichrist, who helps the Muscovite king to conquer free Novgorod!) of the relations of fiery serpents with the daughters of men; cf. the Biblical Nephilim (lit., “Abortions”).

name calls up all the dry rationalism and materialism incompatible with the romantic soul of Martin, who is several times likened to Tristram⁸² (and who will become a literal-lyrical Ruslan). Martin speaks of stealing across the closely patrolled Soviet frontier; so Darwin proposes the banal solution of somehow obtaining a tourist visa instead (an alternative Nabokov himself considered, then rejected, in later life).

Russia for Martin is the Indrikova watercolor into whose forest paths he is to step, alighting in dream from the headboard-prow of his sailing bed, a magical track from a fairytale: this is the landscape of the prologue to Pushkin's *Ruslan and Liudmila*: "There on unknown paths/ The footprints of unseen beasts" (*Tam na nevedomykh dorozhках/ Sledy nevidannykh zverei*); "There wood and dale are full of visions" (*Tam les i dol videnii polny*).⁸³ It is a wholly mythological place, the heroic and free locus of a *bylina* outside the constraints of space and time, a return to the glory of childhood from the gray banality of exile. The mention of another magical road in the novel encodes the theme of ancient Rus'—the world of *indriki* and *byliny*—as well: in the Crimea, Martin sees "the sea with the Trail to Constantinople in the middle, a lunar trail" (*more s tsaregradskoi stezēi posredine, lunnoi stezēi*, using the old Russian word for Byzantium, meaning "City of the Emperor", that is found also in the Rime of the Book of the Dove: the translation published by Nabokov and his son has "the sea... with the full moon's wake, the 'Turkish Trail' spreading in the middle," losing the reference).⁸⁴ But this utopia has become a dystopia, too; so correspondingly to mythologize the latter Martin invents a satiric parody of the Soviet state, Zoorland: Nabokov, again, adumbrates this detail in a poem of April 1930, "Uldaborg" ("translated from the Zoorlandish", even: Text 5.1). The poem envisions the author's own execution, at which he laughs, suggesting a transition from the wretched everyday of life in a police state to the freedom of *potustoronnost'*, the Otherworld—a

82- See HABER 1977, from whose Homeric feast of insight, Aeschylus-like, I offer these crumbs. As NICOL 2002, p. 164, notes, in 1921, adumbrating the theme of Tristram/Tristan denied the fulfillment of love much as Martin is spurned, Nabokov wrote a poem containing the lines "I am a wanderer. I am Tristan. In dense copses did I sleep/ And slumber on a bed of ice" (*Ia strannik. Ia Tristan. Ia v roshchakh spal dushistykh/ I spal na lozhe izo l'da*). The words *strannik* ("wanderer") and "Tristan" (and "Martin" also, for that matter) are near anagrams in Russian (as are *vol'shebnik* "enchanter, magician" and "VI[adimir] Nabokov"); and *izo l'da* "made of ice" is an obvious encoding of Isolde. The style and structure of the poem remind one of Gérard de Nerval's *El Desdichado*, and thus hint at the theme of suicide, one which was to preoccupy Nabokov throughout his life. It may be argued that Martin's own *podvig* is as suicidal as it is intrepid.

83- See RUSSELL [2009] on the cosmological associations of this mythopoetic poem, which was apparently one of Nabokov's favorites in the Pushkinian corpus.

84- NABOKOV 1971, p. 20. Nabokov's own family sailed from the Crimea into exile, with Constantinople (as Istanbul was still then officially called) their first stopping place, as it is Martin's in *Glory*. And, quite beside the associations with Byzantium, one must stress the *actualité* of Constantinople for Russians at the time: even after the February Revolution, with the nation dissolving into chaos, the Russian government was still insisting that Britain and France allot the city to them as part of the spoils of victory. The liberal leader Pavel N. Miliukov was taunted in the spring of 1917 by Socialist anti-war demonstrators with the sobriquet "Miliukov-Dardanel'skii" for his particular insistence on Russian claims to the straits. (See IGNATIEFF 1998, p. 24.) The writer Nabokov's father Vladimir Dmitrievich Nabokov, also a liberal revolutionary, died trying to protect his friend Miliukov from a monarchist assassin's bullet in 1922.

theme developed by Nabokov in the novel *Invitation to a Beheading* (*Priglasenie na kazn'*), where at the moment of his execution the hero, Cincinnatus, steps out of the world into another where there are people like him. The invented language of Zoorland is fully Germanic: those of the unnamed country with its capital at Padukgrad, in *Bend Sinister*, and of Zembla, in *Pale Fire*, both English-language works of the American period, have a Slavic admixture.

Nabokov had some German ancestors, and read German well. In *Podvig* German and Russian engage more in a game of hide-and-seek than a war: Martin Edelweiss has a vulgar, materialistic uncle Heinrich (Rus. *Genrikh*), whose name may be a distorting mirror, as well as a close homonym, of the noble Indrik. But the writer always denied fluency in the German language; and especially after the rise of the Nazis to power German, already associated in his mind, with cruelty and vulgarity, became indelibly the accursed tongue of the murderer. After the defeat of Hitler, the only remaining tyranny was the Stalinist regime in the Soviet Union; and as Nabokov became a master of English prose in the United States, the great bastion of anti-Communism, he might have felt less diffident about allowing some Slavic into the made-up languages of his fairytale nightmare realms. So when Martin prepares for his secret return, the careful reader knows he travels as a fairytale unicorn, that is, moving freely through the subterranean caverns of earth, a creature beneficent and kind, the champion of *Pravda* against the forces of *Krivda*. But the latter, as we know from the Rime of the Book of the Dove, rules this world, hence its lawlessness and hatred. Martin's journey, then, is into a Soviet Russia that is the shoddy, paper-thin farce of Zoorland: ripping it open, and seeming to die, he will complete his return by emerging into the heavenly realm of Our Lord Jesus Christ Himself where *Pravda* is king: the *potustoronnost'* of the path and wood of the painting, the fairytale Russia of Pushkin, the *byliny*, and the *kaleki perekhozhie*, the itinerant blind minstrels who chanted the poem of the *Golubinaia kniga* with its *indrik*. The *podvig*, literally movement, and of course also exploit and campaign, is not the futile transit from Western Europe to Soviet Russia, then, but the defeat of Zoorland and the victorious return to Rus'. And where does Rus' now live, save in the *Slovo*, the Word, from the *Slovo o polku Igoreve* to Tolstoi, the life-giving stream of Russian letters that is Martin's— and Nabokov's— *slava*, literally "renown, being heard", *Glory*.

The title of this essay suggests that the Iranian cosmologies and their Armenian intermediaries lead, not modestly to a Russian novel— *Podvig*, a relatively obscure one at that— but to the Russian novel. Nabokov steadfastly denied any of his *romans* had a political *clef*; but he wished also to be remembered, perhaps paradoxically, as a moralist. This claim sounds strange, coming as it does from the author of *Lolita* and its precursors (which include, as usual, a poem, "Lilith" [*Lilit*, Berlin, 1928], in which the narrator, like Humbert Humbert, is already dead).⁸⁵ However if one reads that novel, as the late Prof. Richard Rorty did in his essay "The Barber of Kasbeam: Nabokov on cruelty," not as a heartlessly

85- NABOKOV 2002, pp. 221-223.

brilliant tour de force on sexuality, but as Nabokov's ultimate and heartbreaking exploration of the theme of cruelty that preoccupied him throughout his life, then the claim has validity.⁸⁶ *Podvig* is larger than its overt theme: a dreamy, nostalgic Russian youth cannot manage exile and returns home to what the reader must assume is a tragic death. Nabokov was a Russian liberal democrat whose father lived for that cause and died a martyr in its service; and it is in this light that one can also understand Martin, a free spirit who cannot make his peace with unfreedom and must do battle with it to the death. But there is more: with his explicit reference to the Rime of the Book of the Dove, understood in the wider context of his other novels, Nabokov evokes the Other Rus' of dissident sectarians and their diverse cosmologies at variance with the received version of Orthodoxy, of the cosmopolitan Novgorodian republic and its liberty bell broken by the tyrannical power of Moscow's Oriental despotism, of village traditions of self-government in the Russian far north. That is, Nabokov reminds his reader that liberalism is not an alien graft onto the tree of a Russian forest, an imported hothouse flower to be dismissed by political "realists" as inappropriate or immature. Russian liberal democracy has a native archaeology of its own, its roots as deep as those of the oak around which strolls Pushkin's Learned Cat reciting his *skazki*; its flowers as familiarly native as the vernal blossoms of the *cherëmushka*. The symbols he employs to his polemical purpose, although they are subtly deployed, are nonetheless immediately intelligible to a culturally literate Russian contemporary of the author. One need only cite the essay "*Skify li?*" ("Scythians?") by the writer and critic Evgenii Zamiatin (1884-1937). It begins with this dramatic evocation of freedom: "A solitary, savage horseman— a Scythian— gallops across the grass steppe, hair streaming in the wind. Where is he galloping? Nowhere. What for? For no reason. He gallops simply because he is a Scythian, because he has become one with his horse, because he is a centaur, and the dearest things to him are freedom, solitude, his horse, the wide expanse of the steppe."⁸⁷ And shortly thereafter, to describe the battle between freedom and slavery, Zamiatin cites the poem "Marfa Posadnitsa" by that north Russian peasant poet and free spirit, Sergei Esenin, on the confrontation between Novgorod and Moscow: "It is not a monk conversing with the Lord in his cell/ But the Muscovite Tsar summoning Anti-christ:/ Alas, Beelzebub, woe is me, woe!/ Novgorod the free will not kiss my feet./ Satan

86- See RORTY 1989, pp. 141-168. Rorty suggests Nabokov's work is best when it exhibits his inability to believe his own stated conviction that art is an intricate aesthetic and intellectual game played for art's sake alone. But I think that in making such statements Nabokov was reacting against the puritanical dogmatism of post-Chernyshevskii anti-formalist literary ideology. He spoke of himself as a moralist: this to him included, though, total freedom.

87- ZAMIATIN 1970, p. 21. When the emperor Peter, stifled by Moscow, moved his capital to a place where he might better imagine the cosmopolitanism and freedom of Amsterdam, did he not both open a window to European liberalism, and waken the nearer sleeping giant of Novgorodian liberty? For the ethnographers of the academy in the northern capital naturally focused their researches at first on what lay nearby; so it was northern tales with their air of freedom that Küchelbecker and Pushkin— who created the nation's modern literary voice and thereby gave Petersburg its second, cultural and spiritual, foundation— read in their youth at their northern lycée. Had the new capital been founded at another forward position of imperial expansion: facing Poland in the West, say, or Turkey, in the South— the *mise en scene* of modern Russia would inevitably have been different and more despotic.

slithers forth as a viper from behind the stove./ In his glowing walleyes, spawn of hell:/ 'Swear you will pledge your soul to me;/ Otherwise you'll have no joy of Novgorod.'"⁸⁸

Nabokov's evocation of an ancient and autochthonous liberalism native to the Novgorodian realms, the Russian north, is a riposte to the xenophobic charge of the Slavophiles, even as the vision of a Celto-Nordic bridge to a kindred Slavic tradition is a salutary response to the exaggerated self-denigration of Russia by the *zapadniki*, the Westernizers. These concerns are at the heart of the civil discourse that the classics of Russian literature provided to a nation denied by Tsarist and Soviet despotism free expression in any other sphere: the big, good book addressing the perennial, burning questions. In a recent book—a book-length polemical essay—the granddaughter of Nikita Sergeevich Khrushchëv, the Soviet leader who dethroned Stalinism, has argued that Nabokov, because he considered the free individual the beginning and end of civic virtue and insisted upon a highly personalized, even eccentric aesthetic on that basis of creative and imaginative autonomy, is the crucial Russian novelist for the nation to espouse in the 21st century, lest it succumb to the temptation to slide back into authoritarian patterns of rule.⁸⁹ It may be added that Nabokov found ennobling values of liberty in Russian culture a millennium ago, making any reversion to unfreedom neither an inevitability inviting the condescension of Russophobes, nor a cloak of tradition beneath which a new police state might conceal its falsehood (*krivda*) and lawlessness (*bezzakonie*). *Aša kaṭ θwā darāsānī* "O Truth, when may I behold thee?" In the realms of *Pravda*, Zarathustra perhaps admires the insight and defiance of the Russian novelist as akin to his own; and shares his determination that the Truth reign on earth, as it does in heaven. And the lore that enlivens the novel was enabled to accomplish its long journey, from ancient Iran to modern Russia by way, fittingly, of the westernmost of the Zoroastrian lands and the most ancient of the Christian realms, Armenia.

88- *Ne chernets beseduet s Gospodom v zatvore./ Tsar' moskovskii antikhrista vyzivaet./ "Oi, Viel'zevule, gore mne gore./ Novgorod mne vol'nyi nog ne lobyzaet."/ Vylez iz zapech'ia satana gadiukoi./ V lucheglazykh bel'makh ischaved'e ada./ "Pobozhisia dushu vydat' mne porukoi./ Inache ne budet s Novgorodom slada!"*

89- See COATES 2008, rev. of KHRUSHCHEVA 2008. Khrushchëva sees the "American" Nabokov as a model for 21st-century Russia because of his individualism—the quality that, she argues, made him a success in this country. But she derides what she calls his "contempt of the Russian tradition of socially minded literature" and claims, apparently on the sole basis of the dedication of the autobiographical *Speak, Memory* to the author's wife, Véra, that he "slammed the door shut" on his readers. His creation of Dolores Haze and Timofey Pnin, kind characters, convinces her that "generously, in the Russian way, [Nabokov] counterbalanced the indifference of democracy." Coates rightly disputes Khrushchëva's simplistic characterizations and shallow, tendentious dualism, concluding, "If Russians really need a prophet, they could surely do better than Khrushcheva's ugly American." I would argue that Khrushcheva makes the right point for the wrong reasons. Nabokov is socially minded, but his concern for his country arises from the foundation of an individual, free conscience that was formed, not by exile in America, but by a Russian liberalism he encountered in his Slavonic studies and whose ancient, native roots he explores in *Glory* and *Pnin*.

TEXTS.

1. THE RIME OF THE BOOK OF THE DOVE (*STIKH O GOLUBINOI KNIGE*):

1.1 OKSENOV 1908, PP. 304-311, TR. BY J.R. RUSSELL.

1.2. *SBORNIK KIRSHI DANILOVA*, MOSCOW 1977 ED., TR. BY J.R. RUSSELL.

1.3. FURTHER VARIANTS FROM BEZSONOV 1861.

1.1. "An awesome, night y st or m came up/ And down fell t he Book of t he Dove,/ And not a small one, but a great one,/ Wide was the book— forty fathoms,/ Across it was— twenty fathoms./ To that book divine/ Came round, rode nigh/ Forty kings with the heir to the throne,/ Forty princes and the prince's son,/ Forty priests and forty deacons,/ Many people, little folk,/ Orthodox Christians./ No one walks up to the book,/ Nobody to that book of God comes near./ The king most wise came up,/ The king most wise, David son of Jesse./ Up to the book of God he walks,/ Before him the book creaks open [*razgibaetsia*]/ All the sacred writing is declared to him./ Then there came up to the book prince Vladimir,⁹⁰ Prince Vladimir, Vladimir's son: 'You, king most wise, David son of Jesse,/ Tell, sire, teach us,/ Who wrote this book,/ Who sealed this book of the dove?'/ The king most wise made reply,/ The king most wise, David son of Jesse:/ 'Jesus Christ Himself wrote this book,/ Jesus Christ, the king of Heaven,/ The Prophet Isaiah himself read the book./ He read it for a full three years,/ He read a full three pages.'/ 'Well now then [*oi ty goi esi*],⁹¹ our king most wise,/ King most wise, David son of Jesse!/ Read, sire, the divine book,/ Declare, sire, the divine deeds,/ About our life, our holy Russian life,/ About our life in the wide, free world [*svetu vol'nogo*]/ From what did our wide, free world begin?/ From what comes our red sun,/ From what, our bright young moon,/ From what, the many stars,/ From what, our dark nights,/ From what, our morning dawns,/ From what, our winds tempestuous,/ From what, the many separate drops of rain,/ From what, our mind and sense,/ From what, our thoughts,/ From what, our peopled world,/ From what, our strong bones,/ From what, our bodies,/ From what, the red blood in our veins?/ From what have come our kings upon the earth?/ From what began the princes and the boyars,/ From what, the Orthodox peasants?'/ The king most wise begins to speak,/ The king most wide, David son of Jesse:/ 'Well now then, prince Vladimir,/ Prince Vladimir, Vladimir's son!/ I am not able to read the divine book./ I have the mind to read a book, but not to read this divine one:/ This book is not small,/ This book is great./ Try to hold it in your hands: you cannot support it./ Put it on a divine lectern: it will not lie there./ we cannot conceive this book with the mind,/ We cannot scan this book with the eye./ The great Book of the Dove!/ But according to my memory of long ago,/ I will relate to you, as though in writing:/ Our white, wide world was born by the judgment of God,/ The red sun, of the face of Christ./

90- An anachronistic reference to the tenth-century patron saint of Rus': the name is a Slavicized Waldemar. From the form Volodimir, some versions have even Malodumar, "He of Little Thought"—a fool and foil to David, the king most wise. He is conversely also called, as in text 1.2, Volotomon, a fusion of the saint's name with that of the paragon of esoteric knowledge and wisdom, David's son Solomon.

91- A typical formula of address in Russian *byliny*.

Of Christ Himself, the king of Heaven,/ The bright young moon, of His breasts,/ The many stars, of the garments of God,/ The dark night, of the thoughts of God,/ The morning dawns, of the eyes of God,/ The tempestuous winds, of the Holy Spirit,/ The drops of rain, from the tears of Christ,/ Of Christ Himself, the king of Heaven./ Our mind and sense are from Christ Himself,/ Our thoughts, from the clouds of heaven,/ Our peopled world, from Adam,/ Our strong bones, from stone,/ Our bodies, from the damp [*syroi*] earth,⁹²/ Our red blood, from the black sea./ From this came our kings on the earth,/ From the holy head of Adam,/ From this came the princes and boyars—/ From the holy relics of Adam,/ From this are the Orthodox peasants—/ From the sacred knee of Adam./ Prince Vladimir begins to speak,/ Prince Vladimir, Vladimir's son:/ 'King most wise, David son of Jesse!/ Tell us, teach:/ Which king is king over kings?/ Which land is the mother to all lands?/ Which head is the mother to all heads?/ Which city is father to cities?/ Which church is mother to all churches?/ Which river is mother to all rivers?/ Which mountain is mother to all mountains?/ Which stone is mother to all stones?/ Which tree is mother to all trees?/ Which plant is mother to all plants?/ Which sea is mother to all seas?/ Which fish is mother to all fish?/ Which bird is mother to all birds?/ Which beast is father to all beasts?'/ The king most wise begins to speak,/ The king most wise, David son of Jesse:/ 'Our White King is king over kings./ Why then is the White King the king over kings?/ He holds to the baptismal faith,/ The baptismal faith of worship of God./ He stands for the Christian faith,/ For the house of the Immaculate Mother of God./ That is why the White King is king over kings./ The holy land of Rus' is mother to all lands:/ In her they build apostolic churches,/ They pray to the crucified Christ,/ To Christ Himself, the king of Heaven./ That is why the holy land of Rus' is mother to all lands./ And the head that is mother to heads is the head of Adam./ The city of Jerusalem is father to cities./ Why is that city father to cities?/ Jerusalem is father to cities because/ In that city, in Jerusalem,/ Here is the center of the earth./ The cathedral church is mother to all churches. Why is the cathedral church mother to all churches?/ The cathedral church stands in the middle of the city of Jerusalem./ In that cathedral church/ Stands the divine throne./ In that tomb of white stone/ Rest the garments of Christ Himself,/ Christ Himself, the king of Heaven./ That is why the cathedral church is mother to churches./ Lake Il'men'⁹³ is mother to lakes:/ Not that Il'men' that is above Novgorod,/ Nor that Il'men' that is in Constantinople [*vo Tsaregrade*]/ But that Il'men' that is in the Turkish land,/ Over the chief city, Jerusalem./ Why is lake Il'men' mother to lakes?/ Little mother Jordan flowed out of it./ Why is the river Jordan mother to all rivers?/ Jesus Christ Himself was baptized in it/ With heavenly power,/ With the guardian angels,/ With the twelve Apostles,/ With John the light, the Baptist—/ That is why the river Jordan

92- In Russian mythology, *mat'syra zemlia* "damp mother earth" is a standard tripartite expression, recalling Iranian *arədvī sūrā anāhitā* "the damp powerful unblemished (goddess)".

93- In other variants, Irmen', Armen: Il'men' is the great lake near Novgorod that floods regularly areas up to a third of its area (oral information of a local guide, July 2007). If the variant Armen is of any real significance, it may refer to the great lake of Armenia, Van, which is 80 miles in length west to east and with which are associated legends of great antiquity strikingly similar to that of the undersea cathedral of the Virgin Mary here and to the Novgorodian cycle of Sadko.

is mother to all rivers./ Mount Tabor is mother to all mountains./ Why is mount Tabor mother to the mountains?/ Jesus Christ Himself there was transfigured./ Jesus Christ, king of Heaven, the light./ With Peter, with John, with Jacob./ With the twelve Apostles/ He showed His disciples glory./ That is why mount Tabor is mother to the mountains./ On a white altar [*na belom latyre*], on the stone/ Discoursed and kept his rest/ Jesus Christ Himself, king of Heaven./ With the twelve Apostles./ With the twelve teachers./ He affirmed the faith on that stone./ He dispersed [*raspushchal*] the Book of the Dove/ Throughout the earth, through all the universe./ That is why the stone altar [*latyr*'] is mother to all stones./ The cypress tree is mother to all trees./ Why is that tree mother to all trees?/ On that tree, on the cypress/ The life-creating Cross was made manifest to us./ On that life-creating Cross/ Jesus Christ Himself was crucified./ Jesus Christ, king of Heaven, the light./ That is why the cypress is mother to all trees./ The crying-plant [*plakun-trava*]⁹⁴ is mother to all plants./ Why is the crying-plant mother to all plants?/ When the Jews crucified Christ/ And spilled His holy blood,/ His mother, the Immaculate Mother of God/ Cried mightily over Jesus Christ./ Her son, her beloved one./ Spilled her tears most pure/ On damp mother earth./ From those tears most pure/ The crying-plant was born./ For the crying-plant is mother to all plants./ The sea of Ocean is mother to all seas./ Why is the Ocean the mother of all seas?/ In the midst of Ocean/ The cathedral church emerged./ The cathedral church of the worship of God./ Of St. Clement, Pope of Rome./ On that church the roofs are of marble./ On those roofs, the crosses are golden./ From that cathedral church./ From that cathedral of the worship of God./ Emerged the queen of Heaven [*Tsaritsa nebesnaia*]/ She bathed in the sea of Ocean./ In that cathedral church she prayed to God./ Therefore is the Ocean mother to all the seas./ The whale fish [*kit-ryba*] is mother to all fish./ Why is the whale-fish mother to all fish?/ The earth is founded upon three fish./ The whale-fish stands and does not swing back [*svorokhnětsia*]/ But when the whale-fish turns [*povorotitsia*]/ Then mother earth will be convulsed [*voskolybnětsia*]/ And then our wide white world will end./ That is why the whale fish is mother to all fish./ The ostrich bird⁹⁵ is mother to all birds./ Why is she mother to all birds?/ The ostrich bird lives on the sea of Ocean/ And brings forth her progeny on the sea of Ocean./ When at God's command the ostrich bird flutters [*vostrepenětsia*] her wings./ The sea of Ocean is convulsed:/ She sinks trading ships/ With their rich wares./ That is why the ostrich bird is mother to all birds./ Our unicorn⁹⁶ beast is father to all beasts./ Why is the unicorn beast father to all beasts?/ He goes in the ways beneath the earth [*po podzemel'iu*]/ Purifies the streams and channels [*prochishchaet ruch'i i protochiny*]/ Where the beast passes./ There a spring roils [*tuta kliuch kipit*]/ Wherever that beast turns./ All beasts to that beast bow down./ He lives in the holy mountain./ Drinks and eats in the holy mountain./ Wherever he wishes he travels, under the ground./ Like the sun, when it goes through under-heaven [*kak solnyshko po pod-*

94- Purple loosestrife, *Lythrum salicaria*.

95- Rus. *stratim*: in other variants, *strafil*, *strufokamil*, *str''kokamil*, i.e., "ostrich".

96- Rus. *indrik*, from *in''rog*/'*inorog*'> *edinorog*, a calque on Gk. *monokeros*, "unicorn".

nebes'iu]./ Therefore that unicorn beast of ours is father to all beasts./ Prince Vladimir spoke:/ 'Well now then, O king most wise,/ King most wise, David son of Jesse!/ Sire, I slept little last night,/ And in my dream [*vo sne*] I saw much:/ How from the eastern country,/ How from the other, the southern country,/ Two beasts came together,/ Two ferocious ones charged at each other,/ Fought and beat each other./ One beast wishes to overcome the other./ The king most wise spoke,/ The king most wise, David son of Jesse:/ 'Those were not two beasts that came together,/ Two ferocious ones that charged at each other./ That was the Lie clashing with Truth [*Eto Krivda s Pravdoi sokhodilisia*]/ Fighting and beating each other./ The Lie wants to defeat the Truth./ Truth bested [*peresporila*] the Lie./ Truth went up to Heaven./ To Christ Himself, king of Heaven./ But the Lie went among us, throughout the earth,/ Throughout the earth, throughout the Russian world./ Among all the Christian people./ Because of the Lie the earth was convulsed [*Ot Krivdy zemlia voskolebalasia*]/ Because of it all the people is enraged [*vozmushchaetsia*]/ Because of the Lie the whole people became wrongful [*nepravil'nyi*]/ Became wrongful and malicious [*zlopamiatnyi*]/ They wish to deceive each other,/ They wish to devour each other./ He who will not live by the Lie,/ He hopes upon the Lord,/ And that soul will inherit/ For itself the Kingdom of Heaven.'"

1.2. "Yes, from the beginning of the age of mortal life,/ God created the heavens with the earth./ God created Adam with Eve,/ Provided sustenance in bright Paradise,/ For them to live at their will in bright Paradise./ God laid upon them a great commandment:/ Adam was to live in bright Paradise/ But Adam was not to eat of one tree,/ That sweet fruit of the grape./ So Adam lived in bright Paradise with his Eve. For 333 years./ The snake under the well charmed them [*Prelestila zmeia podkolodnaia*]/ It brought berries from that one tree./ Adam and Eve tasted a single berry/ And knew between them an onerous sin,/ An onerous sin and great carnal transgression./ Adam sinned in bright Paradise,/ In bright Paradise with his Eve./ Here they stand in Paradise stark naked:/ Stark naked and barefoot they stood./ They covered their shame with the palms of their hands/ And came they to Christ Himself,/ To Christ Himself, the king of Heaven./ They went up on mount Tabor/ And called out and mightily cried,/ 'O king of Heaven, Jesus Christ!/ You heard your servants' prayer./ Lower me down to earth/ To dig the soil with plows,/ To sow the soil with plows,/ To sow seed in the first hour./' And the king of Heaven, light of mercy,/ Lowered him down to the hard earth./ And he dug the soil with plows,/ And in the first hour sowed the seed./ In the next hour the seed sprouted,/ And he reaped of the seed in the third hour./ He became sated by his labor,/ Clothed, and shod./ From that knee of Adam/ And that rib of Eve/ Came the Orthodox Christians/ Across all the land of the Russian world./ Adam lived, grew old,/ Grew old, passed on./ His holy head is buried./ After that flood of Noah's/ On that mountain of Zion/ By that holy head of Adam/ A cypress tree grew up./ Down to that cypress tree/ Fell the Book of the Dove./ From the heavens that book fell down./ In length that book is forty handbreadths,/ In width, that book is twenty handbreadths./ That book is thirty handbreadths thick./ On that mountain of Zion/ There gathered, came/ Forty emperors with the emperor's son,/ Forty kings with the king's son,/ And forty blind

bards [*kalik*] and a bard./ And strong and mighty knights./ They stood together in a circle./ King Volotomon spoke up./ King Volotomon, Volotomon's son./ Forty emperors with the emperor's son./ Forty kings with the king's son./ Forty blind bards and a bard./ And all the strong and mighty knights—/ They all prostrated themselves, bowed down/ To king David son of Jesse:/ 'O king most wise, David son of Jesse!/ Lift up the Book of the Dove,/ Lift up the book, remove the seals,/ Remove the seals, examine it,/ Examine it and read it./ From what began our wide white world?/ From what began the righteous sun [*solntse pravedno*]?/ From what began the bright moon?/ From what began the morning's dawn?/ From what began the dusk./ From what began dark night?/ From what began the many stars?/ The king most wise begins to speak./ The king most wise, David son of Jesse:/ 'You forty emperors with the emperor's son./ And forty kings with the king's son./ And you forty bards with a bard./ And all strong and mighty knights!/ The Book of the Dove is not small./ The Book of the Dove is great./ The book is forty handbreadths long./ The book is twenty handbreadths wide./ That book is thirty handbreadths thick./ Lift up the book in your hands— you cannot hold it./ Read it— you will not read it through./ I will tell you by my memory./ By my memory, my memory of old./ From what began our wide white world./ From what began the righteous sun./ From what began the bright moon./ From what began the morning's dawn./ From what the dusk began, too./ From what began dark night./ From what began the many stars./ The wide white world is from the face of God./ The righteous sun is from His eyes./ The bright moon is from His brow./ The dark night is from the nape of His head./ And dawn and dusk are from God's brows./ The many stars are from God's curly tresses./ All forty emperors with the emperor's son bowed down./ And forty kings with the king's son knelt./ And forty blind bards and a bard./ And all the strong and mighty knights./ King Volotomon speaks./ King Volotomon, Volotomon's son:/ 'You, O king most wise, David son of Jesse!/ You, tell please, by your memory./ By your memory of old./ Which king is king over kings?/ Which sea is father to all seas?/ And which fish is mother to all fish?/ And which mountain is mother to mountains?/ And which river is mother to rivers?/ And which tree is father to trees?/ And which bird is mother to all birds?/ and which beast is father to all beasts?/ And which plant is mother to all plants?/ And which city is father to all cities?/ The king most wise spoke./ The king most wise, David son of Jesse:/ 'The king of Heaven is king over kings./ King over kings, that is Jesus Christ./ The sea of Ocean is father to all seas./ Why is it father to all seas?/ It is father to all seas because/ All seas flowed out from it/ And all rivers submitted to it./ And the whale-fish is mother to all fish./ Why is that whale-fish mother to all fish?/ That whale-fish is mother to all fish because/ The earth is founded on seven whales./ The river Jordan⁹⁷ is mother to rivers./ Why is the river Jordan mother to rivers?/ The Jordan is mother to rivers because/ Jesus Christ Himself was baptized in her./ Mount Zion is mother to all mountains./ Cypress trees grow./ And their sap is taken to all churches./ To all churches to serve in place of incense./ The cypress tree is father to all trees./ Why is the cypress father to all

97- Rus. *Erdan*'.

trees?/ The cypress is father to all trees because/ Jesus Christ Himself was crucified upon it./ He who is heavenly king./ The mother of God cried, the Theotokos./ And wiped her face with the crying-plant./ That is why the crying-plant is mother to all plants./ The unicorn-beast [*edinorog-zver*'] is father to all beasts./ Why is the unicorn father to all beasts?/ The unicorn is father to all beasts because/ He goes also beneath the earth, / And the stone mountains do not hold him./ And those rivers of his are swift/ When he emerges from the damp earth./ He seeks an adversary then./ That ferocious lion beast./ He and the lion met in the clear field./ They, the beasts, began to fight./ They wanted to be king./ To be great over all the beasts./ And they fight for their greatness./ The unicorn beast is defeated./ Defeated by the lion beast./ And the lion is inscribed [*podpisan*]: he is to be king./ To be king over all the beasts./ And his tail is a little ring [*kolechik*]./ And the *nagai*-bird is mother to all birds./ She lives on the sea of Ocean/ And weaves her nest on the white stone./ Thither hastened trading mariners/ To the nest of the *nagai*-bird./ To her little chicks./ The *nagai*-bird flutters [*vostrepenëtsia*] her wings./ The sea of Ocean is convulsed [*voskolybaetsia*]./ The swift rivers overflow/ And drown many ships./ Drown many bright red painted ships./ And all hands are lost./ The city of Jerusalem is father to all cities./ Why is Jerusalem father to all cities?/ Jerusalem is father to all cities because/ Jesus Christ was crucified there./ Jesus Christ Himself, king of Heaven/ And support of Moscow's kingdom.”

1.3. P. 269, from the Serpukhov district: “From our *Aladyr*’./ And from that head of Adam’s./ In the middle of the Sarachinskii field/ The Book of the Dove fell down.” P. 273: “Our *Indrik* beast is mother to all beasts./ It lives in the holy mountain/ And prays to God for the holy mountain./ When this beast starts playing [*vozygraetsia*]./ It is like the clouds under heaven [*po podnébes’iu*].

From the Moscow region, p. 277: “And he, the (*Indrik*) beast walks under the earth [*po podzémel’iu*]/ Like the little sun under heaven [*Iako solnyshko po podnébes’iu*].”

From Tula, p. 280: “And he (*Indrik*) drinks and eats from the blue sea./ Does nobody any harm [*Nikomu *obidy on ne delaet*]./ And he goes by means of his horn [*rogom*] under the earth/ Like the sun under heaven./ When this beast turns with his horn./ All the earthly beasts bow down to him.”

From Mtsensk, p. 284: The *Vyndrik* beast “drinks and eats from the Holy mountain.”

From Povenetskii district, p. 290: The *Beloindrikh* [“white unicorn”] is mother to all beasts, and dwells in the mountains of Zion [*v gory Sionskiiia*]. P. 292: *Pravda* is a white [*bel zaiats*] hare; *Krivda*, a gray [*ser*] one; “It will be in the last time./ It will be in the eighth millennium./ That Truth will be taken by God from the earth to the sky/ And the Lie will walk about all the earth.”

There will then be “great lawlessness [*bezzakonie*]”.

From Petrozavodsk, p. 296, on the *Edinrog*: “He goes about under the earth,/ Purifies [*prochishchaet*] the rivulets and streams;/ Wherever the beast goes,/ There boils up a spring.”

From the Orlovskii region: p. 308, the beast is called *Indra*; p. 309, in Vladimir’s dream the battle of Truth with the Lie is “As though youths clashed together,/ Two young men battling” [*Budto iunoshi sokhodilisia*,/ *Dva mládye podiralisia*].

From the Pskov region, p. 313, on the white stone *Látyr*’, “From beneath the little stone, from beneath the white *Latyr*’/ Rivers flowed, rivers swift/ Throughout the earth, throughout the universe,/ To all the world for healing [*Vsemu miru na istselenie*]/ To all the world for nourishment [*Vsemy miru na propitanie*].” In this version it is the lion who is father of the beasts; *Krivdishcha* and *Pravdishcha* are two “little beasts” [*zveriushechki*], one gray, one white, and “the gray defeated [*odolel*] the white./ The Lie overcame Truth [*Krivda Pravdu odolela*].” So Truth went to Christ, while Falsehood goes about this world.

From the village of Pavlovskoe in the Zvenigorod district, p. 322: The *Indrik* beast “walks under the earth,/ Releases [*propushchaet*] rivers and chilly springs”.

From the village of Repiëvka in the province of Simbirsk, p. 327: Out of the cathedral church that is in the midst of the Ocean sea “Emerged the heavenly Queen:/ From the Ocean sea she bathed” [*Výkhodila Tsaritsa nebesnaia*;/ *Iz Okeana moria ona umyvalasia*]. In this version, the Lie wishes to defeat Truth; and Truth retreated [*otstupilasía*].

From the village of Saburovo of the Maloarkhangel’skii district, Orlovskii province, pp. 332-333: of both the cathedral church in Jerusalem and the cathedral church “on the sea of Ocean” [*na Kiëne na more*], “the white stone sepulcher stands on air” [*stoiť grobnitsa na vozdukhakh bela kamenna*]. In this version Truth bested [*peresporila*] the Lie and “... went to heaven./ The Lie remained on the damp earth;/ The Lie went amongst poor people,/ Amongst little orphans, little widows.” In another version of the Rime from the same locale, p. 338, the mother of stones is the *Karmaús* stone *Ilitor*, and any creature that brushes against it becomes immortal. The mother of the birds is the Phoenix [*Finiks*], a kind of Siren: “Her face is as a girl’s,/ And when she sings aloud/ And a man hears her songs,/ He will forget father and mother.”

The longest text published by Bezsonov is a Dukhobor sectarian recitation, p. 341 f., in many versions. In this one, unlike all the others, there is a dream at the **beginning** of the poem as well as the end. The first is a vision of a bird lighting on a sugar tree in a green garden, which proves to be a prophecy of the birth of children. There follows a list of sins that can and cannot be atoned for. King David then tells prince Vladimir that Christ, Isaiah, and John wrote the Book of the Dove, and released it [*raspushchali*] over all the world, all the universe. The white *Latyr* 'stone is mother of all stones; "The *Latyr* 'of the sea is father to all seas" (p. 367): the waters flow from it, bringing healing and nourishment to the world. The *Indra/ Indrik/ Vyndrik/ Beloandrikh/ Kondryk/ Edinrog/ Edinor* is the mother of all beasts, pp. 371-372: "He walked all over the wide white world,/ There was a drought [*zasúsheitsa*] in this world/ And there was no provender [*vospitaniitsa*] for good people,/ No provender and nothing to wash with [*obmyvaniitsa*]./ He dug damp mother earth,/ Dug out all the deep springs,/ Got all the boiling waters." He goes about under the earth like the sun under heaven, and both cleans [*prochishchaet*] and releases [*propushchaet*] the waters. "He lingers on the plains,/ Yet none can see him in the eyes" [*Vo stepiakh-to on prebyvaiuchi/ Nikto ego v glazy ne vidauchi*]. There follows the dream of Vladimir in which Truth and Falsehood, as either youths or hares, contest; and one or the other wins in different variants, but with the same result: "The Lie settled in secret hearts" [*Selilas ' Krivda na serdtsa na tainyia*] and people "wish to eat each other" [*drug druga poest ' khotiat*].

2. ZOROASTRIAN SOURCES:

2.1. THE *GĀTHĀS* OF ZARATHUŠTRA (INSLER 1975. p. 32): *YASNA* 30.

2.2 THE *BUNDAHIŠN*, ANKLESARIA 1956.

2.1. The *Gāthās*, or *Hymns*, are the poetic revelatory utterances of the Prophet Zarathuštra (Zarathustra, Zoroaster) himself and the core of the scripture of the Zoroastrians, the Avesta. My attempt at translation of this extremely complex text of the second millennium B.C., like others, will inevitably pose problems; but the section rendered here, *Yasna* 30, verses 2-6, is at least relatively clear—perhaps one reason, aside from the obvious importance of its contents, that it left discernible echoes where other strophes of the Prophet's revelation did not.

“Listen ye with ears to the best things;/ Regard ye with pure mind
On the two choices of decision,/ Each man for his own body,
Before the great tribulation,/ Being aware to declare for yourselves to Him.

Now those two spirits in the beginning/ Who are twin,⁹⁸ came to be heard⁹⁹ in a dream-vision.¹⁰⁰

In thought, word,/ And deed they are the better and the evil,
Of which the wise/ Chose rightly, not the foolish.

And when those two spirits/ First arrived¹⁰¹ they created
Life and not-life,/ So that at the end of the world will be
The worst for followers of the Lie;/ But for the follower of Truth,¹⁰² the Best Mind.

Of those two spirits chose/ the Liar to work the greatest evils;
The most Holy Spirit, Truth—/ He who clothes Himself in the adamantine stones—¹⁰³

98- The term “twin” implies that they are brothers; so in the speculation of the Zoroastrian informants of the Armenian heresiologist Eznik Kolbac’i and his sources, they have a common father Zurvān, Time.

99- Av. *asrvātəm*: the verbal base *sru-* “hear” gives us *sravah-* “renown”, cf. the Gk. and Rus. cognates *kleos* and *slava*, “glory”. The sense is at least that they were perceived; perhaps, that they were audible as well.

100- Avestan *xvaṭ(ə)na-*, “sleep, dream” is cognate to Persian *xwāb*, Latin *somnus*, and Russian *son*; the accompanying verb, from the base *sru-* “hear”, is cognate to Russian *shyshit’*. This would suggest that Zarathustra beheld the manifestation and confrontation of the primordial spirits of Truth and the Lie in a dream-vision, even as does Prince Vladimir in the Book of the Dove. The word is used in only one other place in the *Gāthās*, Y. 44.5, in the acc. sg. in the expression *xvaṭənamčā... zaēmāčā* “slumber and wakefulness”.

101- Arrived on the scene, confronted each other, clashed in combat: the verb is telegraphic.

102- A follower of the Mazdean faith, a good man, one who is blessed after death, is called *ašavan-*, a follower of *Aša*, “Truth, order, righteousness”; whilst a wicked person or non-Zoroastrian is termed *drəgvant-*, follower of *Drui*, the Lie.

103- The image here is of Ahura Mazda wearing the cape of crystalline Heaven as a garment. One recalls the initial lines of the cosmic Psalm 104: “Bless, O my soul, the Lord! O Lord my God, you are most great,

As will those who render grace¹⁰⁴ to the Wise Lord/ Ever with truthful¹⁰⁵ ethical actions.¹⁰⁶

Between these two not rightly chose/ The demons: when they debated such
Questions there came upon them/ The most Evil Mind, whom they chose
So they slithered forth in Wrath¹⁰⁷/ With which they have afflicted with illness the human
world.”

2.2. The text, a ninth-century Pahlavi (Zoroastrian Middle Persian) *zand*, i.e., translation and commentary upon an Avestan scriptural original no longer preserved (its other title is *Zand āgāhīh*, “Knowledge of the *Zand*”), advertises itself as conveying the *saxwanihā ī zōfr ud abd* “deep and miraculous utterances” that have been forgotten since the Arab conquest of Iran and the eclipse of the Sasanian dynasty and Zoroastrian state religion. It enlarges upon the Gāthic revelation concerning the creation (Phl. *bundahišn*) of the world, beginning with the confrontation of the Wise Lord, Ohrmazd, with the Frightful Spirit, Ahreman, whose meeting is likened to that of two men who agree to fight on a certain day. The two primordial spirits embody Truth (called *aša-*, *ahlaw* “right-ness”, corresponding to Russian *pravda*) and the Lie (*druj*, corresponding to *krivda* in the Book of the Dove). After a period of peaceful stasis lasting six millennia the epoch of mixture (*gumēzišn*) of good and evil ensues, following the onslaught (*ēbgad*) of Ahreman, at which the earth shakes. We live in the time of Mixture, which is to last six further millennia: in the year 12000 the forces of good will be victorious and the Separation (*wizārišn*) of evil from creation will eliminate death, lies, and suffering. The text enumerates the chief geographical features of earth, such as mount Alborz, which rings the world, with the axial Tērag in the middle, the sea Fraxwkard (Avestan Vourukaša-, lit. “of the wide bounds”) and the chieftainship of its various climes (*radīh ī kešwarān*, ch. 29=p. 252 f.): the Prophet Zarduxšt (Zarathustra) is thus the chief of all righteous men and of Xwanīras, the central clime of the world. Ch. 17 (=p. 152 f.) “concerns every particular about the chieftainship of men and beasts” (*abar radīh ī mardomān ud gōspandān, harw tis-ē*). In Ch. 24 (=p. 194 f.): “[Scripture] says concerning the three-footed ass, that it stands in the middle of the sea of Fraxwkard, and has three feet and six eyes, and nine mouths, and two ears, and one horn, and its head is dark blue, and its body is white, and it consumes spiritual food, and it is

you have clothed (*lavāštā*) yourself in honor and glory, donning (‘*ōtēh*) light as a garment, stretching out heaven like a curtain.”

104- Av. *xšnu-*, cognate with Gk. *xenos*, suggests a reverential or benevolent act of giving that is met with reciprocity.

105- Av. *haiθya-*, from the verb “to be”—truth in the sense of “the way things actually are”—corresponds to its cognates, Skt. *satyā-*, Rus. *istina*.

106- Av. *šyaoθana-*, “action”, from the base *šyav-* “go”, suggests action within the general way one goes, one’s ethics, cf. Heb. *halākāh*, “ethical/normative behavior”, lit. “going”.

107- Av. *aēšma-*, Pers. *xašm*, “anger”: personified as a demon (*daēva*), hence the Ašmedai (Lat. Asmodeus) of Tobit.

righteous... and when it stales in the sea, all of the water of the sea becomes purified” (*xar ī se pāy rā gōwēd, ku miyān ī zreh ī Fraxwkard estēd, u-š pāy se, ud čašm šeš, ud dahān nō, ud gōš dō, ud srōw ēwag, ud sar xašēn, ud tan spēd, ud mēnōg-xwarišn ud ahlaw... u-š ka andar zreh mīzēd, hamāg āb ī zreh yōždasr be bawēd*). If the unicorn three-legged ass failed to do this, the text adds, all life would perish. The *Bundahišn* describes also a great bird (pp. 196-197): When enemies gather on Alborz once every three years to attack Ērānšahr, the realm of Iran, the divinity Burz Yazad “comes up from that deep lake of Ārang” (*az ān ī zōfr war ī Ārang abar āyēd*) and summons the giant bird Čamruš, who dwells on a lofty mountain (*boland kōf*) to consume the enemy host like so many grains of corn.

3. EZNIK OF KOLB, *DE DEO* (MARIÉS AND MERCIER 1960, pp. 460-461), TR. BY J.R. RUSSELL.

The version of the Zoroastrian dualist cosmology received by the Armenian bishop Eznik, writing in the fifth century, derives in part from Greek and Syriac intermediary sources; but the style and abundance of Iranian-in-Armenian terms suggests that the author learnt also from oral informants of Mazdean teaching. Speculating, it would seem, on the description of the two primordial Spirits as “twins”, Zoroastrians elaborated the doctrines deriving ultimately from *Yasna* 30 into a myth that shares the features of the folklore type one finds in the Biblical story of Jacob and Esau— with the evil spirit playing Jacob’s role!

“When, they saw, there was nothing at all,¹⁰⁸ neither heaven nor earth nor any creatures that are in heaven or earth, there was a certain one named Zruan, which is translated fate or glory.¹⁰⁹ He performed sacrifice¹¹⁰ for one thousand years, so that there might be a son to him, whose name is Ormæzd, who might make heaven and earth and everything that is in them. And after a thousand years of performing sacrifice he began to ponder in his mind, and said, ‘Will this sacrifice I am performing be of any help, and will there be to me a son Ormizd, if I strive in vain?’ And while he was meditating on this, Ormizd and Arhmn were engendered¹¹¹ in the womb of their mother: Ormæzd, from the performance of sacrifice; and Arhmn, from the doubting. Then, when Zruan found out, he said, ‘There are two sons there in the womb: the one of them who reaches me first, him I will make king.’ And when Ormizd recognized the thoughts of his father, he declared them to Arhmn, saying, ‘Zruan our

108- “At all”: Arm. *bnaw*, inst. sg. of *bun*, “root, beginning”, a loan from Middle Persian: cf. *Bun-dahišn*, of which this is a paraphrase!

109- The Arm. terms, *baxt* and *p’ar-k’* (from OIr. **farnah-*), are themselves Iranian loans. Zurvān actually means “time”.

110- Eznik uses the Zoroastrian term, *yašt*, a loan into Arm.

111- Arm. *ylec’an*: that is, one became pregnant with them; the act of insemination is not directly implied. On the channel of seminal fluid possibly mentioned by Eznik, see RUSSELL 2004 (a).

father had the thought that the one of us who goes to him first, him will he make king.’ And when Arhmn heard this he punctured the womb, went out and stood before his father. And Zruan, seeing him, did not know who this might be, and asked, ‘Who are you?’ And he said, ‘I am your son.’ Zruan said to him, ‘You are not my son, my son is sweet-smelling and luminous, and you are dark and foul-smelling.’¹¹² And while they were speaking these things to each other, Ormizd, being born in his own hour, came and stood before Zruan. And when Zruan saw him, he knew that this was Ormæzd his son, for whose sake he had been sacrificing. And, taking up the bundle of twigs¹¹³ with which he had been performing the sacrifice, he gave it to Ormizd, saying, ‘Up till now I performed sacrifice for your sake, hereafter you will do it for mine.’ And as Zruan gave the bundle of twigs to Ormæzd and blessed him, Arhmn, coming up to Zruan, said to him, ‘Did you not promise¹¹⁴ this: Whichever of my two sons reaches me first, I will make him king?’ And Zruan, in order not to break his promise, said to Arhmn, ‘O false one and malefactor! Let the kingdom be given to you for nine thousand years, my having appointed Ormzd king over you, and after nine thousand years Ormæzd shall reign, and what he will then to do, he shall do it.’ Then began Ormizd and Arhmn to make the creations; and everything that Ormizd made was good and straight [*ulil*], and whatever Arhmn worked was evil and warped [*t’iwr*].”

The text goes on to insist that the doctrines of Mani are also dualistic (*erkarmatean*, lit. “double-root”), differing in forms (*kerparan-k*’, cf. Mlr. *kirb*) but not in actuality (*čšmar-tut* ‘*eamb*) and are in fact one teaching (*k’ēš*; cf. Av. *ḫkaēša-*) with those of the Mazdeans (paras. 146-150). Eznik later mentions (para. 187) that the Persians believe a demon named Mahmi taught Ormizd how to create light.¹¹⁵

112- For “sweet-smelling” Arm. has *anuša-hot*, with the Iranian loan meaning also “immortal”, implying that Ahura Mazda is not connected with death; for “foul-smelling”, *žanda-hot* encodes one of Angra Mainyu’s Middle Persian names, *Gannāg Mēnōg*, “Foul-smelling Spirit”.

113- Arm. acc. pl., *zbarsmunsn*, i.e., the Zoroastrian ritual fasces called *barsom*. In para. 186 (p. 470), Eznik describes the object as a *gawazan*, “ox-goad”, the word in Armenian Christian usage for “scepter”.

114- Arm. aor. 2 pers. sg., *uxtec* ‘*er*, with *uxt*, a loan from Middle Iranian with religious force: one Arm. popular etymology of the name of the Prophet Zarathuštra is *zawrawor uxt*, “powerful promise” (evidently based on a form like Zarduxšt). Eznik calls the Prophet Zradašt (para. 192, p. 472).

115- See RUSSELL 1987(b); for the transcribed text of the Manichaean hymn (M 28 I Rii), see SKJAER-VO 1995, p. 245: *ud gōwēnd ku Ohrmizd/ ud Ahrmēn brādar hēnd... zūr ud pādesāgī gōwēnd/ abar Ohrmizd/ ku-š Māhmī dēw hammōxt/ šahr rōšn kirdan* “and they say that Ohrmazd/ and Ahreman are brothers... vanity and contempt they speak/ concerning Ohrmazd/ that the demon Māhmī taught him to make the world light.” On written sources Eznik probably employed, see ZAEHNER 1972, pp. 419-421.

4. NIKOLAI ZABOLOTSKII, "THE BOOK OF THE DOVE," 1937 (ZABOLOTSKII 1965, pp. 97-98), TR. BY J.R. RUSSELL.

Many times in early childhood I heard
 My forefathers' half-forgotten tale
 Of a secret [*sokrovennoi*] book... beyond the river
 The dusk flamed red and dimmed
 And it was time for bed: from the river, chilling the heart,
 The white blanket of mist rolled in,
 And the poor world, forgetful of its sufferings,
 Was still at last— only a distant grasshopper,
 Tiny laborer of the universe,
 Sang at his work, demanding no attention,
 Alone, in his unknown tongue...
 O silent hour of night falling!
 The trees are in shadow; by the dark huts
 Hoary farmers, eyes half-closed,
 Seated on logs are speaking— barely a sound.

And through the nocturnal gloom
 I see when the bowl of a pipe momentarily flares,
 Now a tangled gray beard,
 Now the swollen sinews of tired hands.
 And I hear the familiar lay:
 Truth challenged Falsehood to a fight,
 But Falsehood won [*odolela*], and ever since
 The peasants are abused by fate.
 Yet far off on the Ocean sea
 On a white stone set in the waters' midst
 A book clasped in gold is gleaming,
 Its rays probing heaven's dome.
 From some frightful storm cloud plummeted that tome,
 Its letters overgrown with flowers now,
 And in it, written by our destinies' strong hand
 Is all the hidden truth about the world.
 Seven seals, though, are suspended therefrom,
 And seven beasts the book surround,
 And for it silence is decreed
 Until the seals into the depths break and fall.

But night burns above the quiet earth,
 The fields flooded with a tremulous light.

And high above my head in dark
 The misty poplars sail.
 The world is as tale: the sayings of the folk,
 Their wisdom dark and yet so dear,
 As strong and old as nature's force
 Took root in my soul when I was young.

Old man, my storyteller of the night,
 Where are you now? Did you dream
 Of the workers' truth, believing in the hour¹¹⁶ of redemption?
 I do not know, save that you died alone
 And bare, and above you in ferment
 Long since then the coming generations, roaring,
 Are rebuilding this grim world.

5. POEMS BY VLADIMIR NABOKOV.

5.1. "ULDABORG," APRIL 1930 (NABOKOV 2002, p. 350), TR. BY J.R. RUSSELL.

5.2. "DREAM VISION" (*SNOVIDEN'IE*), 1 MAY 1927 (NABOKOV 2002, p. 191), TR. BY J.R. RUSSELL.

5.1. *Uldaborg*

(Translated from Zoorlandish)

Laughter and music are banished. Frightful
 Is Uldaborg, this mute town.
 No gardens or markets or towers
 And the palace has become a prison now.

The meek mathematician sobs quietly;
 And there is the billiard champ.
 Nothing adorns the barbed wire fences
 Not even a wrought iron blossom.

Someone at least might give glory
 In song to the mess in the snow on the square
 When the woodcutter strongman from Thorwald
 Beheaded the royal children there.

116- Perhaps to heighten the crypto-Biblical, apocalyptic aspect, the poet uses the slightly archaic word *godina*, whose most immediate resonance to the Russian ear is the poem "Whether I wander down the noisy streets" (*Brozhu li ia vdol' ulits shumnykh*) in which Alexander Pushkin wonders "every day, every moment" (*den' kazhdyi, kazhduiu godinu*) what the date of his own death will be.

And some importunate beggar they say
 In this city of untimely ends
 Is in search of a dance-master still
 For his daughters, who are all stone dead.

But the last hanged himself long ago
 And the hangman burnt the last violin,
 And the last fiddler migrated to Germany
 In the tatters of a broken man.

And though all festivals are forbidden
 (The fireworks by the quayside in spring
 And in summer the Rathaus ball),
 A holiday, a big one, is in store.

On the right diamond Whatsberg, the mountains;
 On the left shines the azure sea.
 Stray whispers on the plaza:
 Uldaborg is speaking of me.

With furtive glances closer they crowd:
 How strange all their faces are!
 Wildly they strain to hear an impossible sound:
 I have returned, and this is my laugh:

In spite of the naked guild's bans
 And the laws of the deaf and the dumb,
 The empty rejection of laughing
 And my fellow citizens' fright.

I shall look at the familiar dunes
 And the diamond ridges in the sky,
 Shove my hands deeper still in my pockets
 And laughing ascend the scaffold to die.

5.2. *Dream Vision.*

I give the alarm clock a homework assignment till morning, and dismiss into the dusk
 My room, like a hot-air balloon, and relieved I embark upon sleep.
 Already within that sleep itself it seems a second slumber overtakes me.
 A table, indistinct: I do not see who's sitting there. We're all awaiting someone.
 From amongst the guests one trains a pocket flashlight, like a gun, upon the door,
 And a friend who was killed enters laughing, his face brighter, a little taller.

I speak with him alive without surprise and know I'm not deceived.
 The once-mortal wound upon his brow, as if it were light makeup, is wiped clean.
 We talk. I'm glad. But there's an unexpected hitch, a strange constraint:
 My friend conducts me to one side and whispers something in explanation.
 But I don't hear it. A ring, prolonged, back to the performance summons me:
 It's the alarm clock reciting its lesson; and the day interrupts my centuries.
 The world, looking just for a moment imprecise, lands like a cat all at once
 On all four feet, and stands there, familiar to my eyes and mind.
 But when you recall the dream, my God, by chance, in the daytime, in someone else's
 parlor,
 Or when upon a gun shop's window glinting it flashes on the memory,
 How grateful am I then to those unearthly powers that enable the dead to come in dreams;
 How proud of the dream, the nocturnal event, the soul is then, in its perturbation!

APPENDIX.

The image of something shining, living, and holy enduring in the terrifying depths of the dark waters that are the Biblical embodiment of chaos is of great symbolic importance across a range of cultures, from India to the East Christian world, where the submarine object is a shrine illuminated by the *Theotokos*, the Queen of Heaven. And there seems to be an equally archetypal parallelism of macro- and micro-cosmic structure worth particular exploration: even as her light shines in the upper depths of the dark sky— separated from the Divine radiance, in ancient belief, by a supermundane ocean, the opening of whose windows contributed to the Deluge— so it shines from its opposite and mirror image, the depth of the terrestrial seas. The esoteric human body, *speculum mundi*, can also be visualized as containing two wells, one with its aperture upwards; the other, looking down. Remizov and the philosopher Nikolai Berdiaev are known to have conversed on the *bezdna verkha* and *bezdna niza*— the “abyss of above” and “abyss of below”.¹¹⁷ In Indian Tantric tradition, *bāḍava*, lit. “belonging to the mare”, is the name of the submarine fire that emanated from the third eye of the god Śiva when he incinerated Kāma (the god of Desire). It dwells upon the ocean floor, and burns until it will dry up the sea and erupt to consume time itself. In medieval Siddha traditions this submarine fire becomes a symbol of the sexual power *kunḍalinī*: the *cakra* (level, lit. “wheel”) at the base of the spine called *vāḍavānala*, “submarine fire”. The fire is identified with *kālagṇi*, the fire that cooks creatures to death; and it can be overcome by *yogāgṇi*, the fire of yoga that destroys the deleterious power of time. In Siddha physiology the body has two wells, with the upper one inverted. There are two *bāḍava* fires, too: one that leads to death; the other, overcoming death.¹¹⁸

It is in the light of these highly potent religious symbols that I propose to approach a

117- See OBATNINA 2001, p. 21.

118- See KRIPAL 2001, p. 95; and WHITE 1996, pp. 232-234, 240-242.

text of the *Matean olbergut'ean* ("Book of Lamentation", referred to often simply as the *Narek*) of St. Gregory of Narek (Arm. Grigor Narekac'i). The 10th-century saint was a contemporary of the Byzantine St. Symeon the New Theologian, who elaborated a system of mysticism involving the experience of the divine light; and although there is no evidence the two met, their conceptions of the Christian spiritual journey are remarkably similar. Within the Armenian Church, the influence of the mystical teachings of Narekac'i was most strongly felt in the Cilician period, after a hiatus of about a century following his death, in the works of the spiritual poets and theologians St. Nersēs Šnorhali ("the Graceful") and Nersēs Lambronac'i: the writings of the latter will be referred to presently. The *Narek* consists of 95 prayers or meditations intended to assist the worshiper through the stages of repentance, purification, and illumination—in transit through an imaginal church, from porch to nave to altar. The 33rd chapter of the Book, opening the second of the three divisions of the book, contains the instruction to recite a certain section as a prayer until the celebrant of the Divine Liturgy (Arm. *patarag*) physically beholds an actual light coming down from above. The prayer, which is employed in the service book of the Armenian Church still for its stated purpose, contains a reference to the *loycn macuac*, "liquid solidified" of the "final veil": this seems to be a reference to the waters of the supra-mundane ocean, from beyond which the light is to come to transform the celebrant of the Christian mystery, even as the transubstantiation of the offerings is effected. This reference to the heavenly sea is of such marked importance that one looks for a prefatory discussion, as it were, of the light in the opposite, lower waters that are a parallel to the upper ones. It is to be found in the course of an extended, preparatory meditation towards the beginning of the Book, stretching across Chapters 10 and 11—¹¹⁹ a hymn to the first member of the trinity of divine virtues, Faith (Arm. *hawatk'*), Hope (*yoys*), and Love (*sēr*). The annotations to my translation discuss relevant points in detail. In summary, though: Faith is a beam of light, sent from above, that serves as a road for the soul to travel upwards from earthly life to repentance. It is at the same time provision to sustain one on that road; yet should one fall, through commission of sins, into the lowest and most confining depths of "wells of water", a relic of the beam still slumbers at the very bottom, a solid (*t'anjra-mac*) and tangible (*hpawor*) fire. The imagery is vivid and powerful in its own right; but, adumbrating as it does an esoteric and particular physiology, it seems to have exerted a powerful effect on subsequent generations of the Armenian folk in whose cult of the saint it is transformed: in a ballad about the miracles performed by the saint, we find Narekac'i offering a fire burning still at the bottom of a vessel of water as a parting gift to two priests sent to examine him for signs of heresy.¹²⁰ But then, the ballad only takes at face value the aspect of the fire's tangibility—and the Armenian minstrel scornfully ridicules the official Church inquisitors, even as, one thinks, his Bogomil or Russian *kaleka* counterpart might do!

119- Text from XAC'ATRYAN AND LAZINYAN 1985, pp. 281-285.

Ch. 10.

From the depths of hearts

Speech with God.

1. And now, truly both violent remorse and sin in abandon
Betray to perdition equally,
Since even though they are alien to each other and of differing kinds,
Still when one places them one beside the other— the forms of each—
They engender the selfsame progeny of despair.
For one is deficient in faith (*t'erahawatē*) in the hand of the Almighty, considering it powerless,
Whilst the other, in the manner of quadrupeds at pasturage,
Become insensate, severs the trace of hope.
Therefore, always gently inclined to the first, Satan rejoices,
Even as he is bloated with blood, as though with nourishment,
By the second, in the fashion of a devouring beast whose belly is hell (*džoxorovayn*).¹²¹

2. And now, as if thrashed with many blows of a cudgel
And arriving in the palm of the hand of death,
Yet receiving slight recovery of breath
And returning to the spirit of life,
I shall be restored, strengthened, fortified,
Rising from lifeless perdition,
Helped by the hand of Christ,
Who is in all things compassionate;
By the beneficent heavenly Father,
Bestowing the fruit of salvation and healing
Upon me, the sinner, the dissolute, the dead.
And of this supplication of lamentation
I shall erect the primary edifice of faith (*skzbnawor... zhawatoc 'n šinuac kaṛuc 'ic*).¹²²
For one of the ancients, armed with this,
Was instantly translated to his immortal lot on high:

121- The inferno is sometimes seen as a huge dragon; its maw, the gate that Christ forces open at the Harrowing of Hell— the event to which Christian exegesis considers the verse of Psalm 24, “Lift up your heads, O ye gates, and the king of glory shall come in” to refer. The formal source of the image, however, is the whale of Jonah; so here at the beginning of his meditation Gregory refers obliquely to the depths of the sea, the image he is subtly to develop later on.

122- Every poet wishes to be remembered and immortalized in his work; but for the Christian ascetic training himself in humility, *exegi monumentum* must have in mind, as Gregory often does, an *arjan*: the word is used generally with *mah-* (“death-”) to mean “gravestone”. But in Armenia as elsewhere that is a Cross, very often an elaborately engraved *xač 'k'ar*, “Cross-stone”. So the mystic through the Holy Sign links his death to the death, followed by resurrection and victory, of his Savior. Here the poet erects not merely an *arjan*, but the first part— the first third— of the imaginal church through which the reader is to progress: the porch, or *gawit*.

Taking the medicine (*del*) of penitence, through the provision (*t'ošak*) of repentance,¹²³
 He inherited the pledge of remaining unblemished while yet in this world.
 So he stand above those with whom he was sent,
 Who, fulfilling the contest for the prize on earth,
 Believed in future hope and heavenly things
 And were adorned in the splendor of the unseen.

3. Thus even one sinful unto death,
 And swallowed up (*ənkluzealn*) again in the demons' iron maws,
 Submerged (*suzealn*) in the abysses (*yandunds*) of evil,
 Has still this beam of life's salvation.
 So as to discover thereby the route of escape that is repentance.
 So the guilty one, by the rain pouring down from his eyes, by the mercies of the omnipo-
 tent One,
 Was discovered fertile ground again, dedicated to the Spirit of God,
 All-miraculous and abounding in flower.¹²⁴
 And recalling the exhortation, with this, of the worshipful Word of the Lord:
 Everything is possible for him who believeth—
 It is by having examined the measure of the goodness apportioned
 To the chosen ones pleasing to God, in this life,
 That we received this image of the Word: the anciently enthroned,
 Likewise to be clothed for the entry into sacred precincts.¹²⁵
 Without this the Lord of glory
 Did not even work among us His miracles of power—

123- The *panarion*, or “medicine chest”—the *Matean* is at the outset advertised as a powerful *spelānik*’ (“physic”) against the malaises of the soul—here is made also the *t'ošak*, or provisions for a journey that a traveler takes along with him. He speaks also of what he has in this world as a *grawakan* (“surety”): that is, property entrusted to him to be returned to its original owner—so the combined effect is to imagine the world as a road in stages, leading to eternal life, whether that be beatitude or damnation. One is entrusted with both provisions to consume, and a soul to cherish and deliver. Arm. *t'ošak* is a loan from Middle Iranian: we find in a verse of Sanā'ī the New Persian form of the word used in a context very similar to this: *Sāqiyā may deh ke joz-e may na-škanad parhīz-rā, / tā zamānī gom konam in zohd-e rang-āmīz-rā*; / *Dīn-e Zarduštī v' āyīn-e Qalandar čand čand / Tōše bāyad sāxtan mar rāh-e jān-āmīz-rā*. “Wine bearer, bring a draught, for without it abstinence abides unbroken—/ That for a time I may loose asceticism's subjective bond./ One needs a bit of each—Zoroastrianism, antinomianism—/ To prepare provision for the soul-compounded way.”

124- In the first half of this pericope the saint evokes multiple watery images of submersion and depth. The light from above reaching them is made into a road and an escape: cf. the imagery above of provision for the road, and, for escape, the allusions to the harrowing of hell, and, implicitly, to Jonah in the belly of the whale. The second half, connected by the theme of repentance to the first, neatly inverts the image of water: instead of the lower depths, the poet employs the image of tears as rain, falling down from heaven and nourishing the fields of the soul's cultivation of the Christian life on earth.

125- The image here is of sacerdotal vesting for the liturgy—the act preceding the entry into the sacred space of the church. Arm. *handerj*, “vestment”, has also semantic and lexical connections to the future (*handerjeal*)—i.e., to the end of the spiritual journey—and to the wisdom provided for the road (cf. the Middle Pers. *andarz* “counsel”, *darandarzbed* [=Arm *handerjapet*] “counselor at the royal court”).

Without first seeking to harness (*lcakic' xndreac'*)¹²⁶
 Our faith to His beneficence.
 Thus it [*scil.* faith] has the power to bestow life
 By its sovereign capability, its being alongside God,
 For: Your faith has revived you—
 Testified the mouth of God that is extolled in blessing.

4. For in truth clear vision
 And perfect wisdom
 And intimacy with God,
 And acquaintance with the Most High,
 Is the happy and chosen portion of faith,
 Which endures, extending ever, incorrupt, unencompassable,
 Sharing the honor of love and of hope.
 For if faith is sown
 In the smallest of its essence, its least measure, of a mustard seed,
 And it powerfully transports the massy mountains into the heart of the sea,
 Then truly we have received this same leading guide to the primary path of life (*skzb-našawil aṛajñord kenac'*)¹²⁷
 The service to God, with no divided mind (*anerkmit*),
 That beholds future things, and hidden ones,
 Without doubt (*erkbayut'ean*), in the soul's eyes.¹²⁸
 Faith! Honored by the glorious name of the Trinity,
 Ranked with love and with hope.
 For though the three be separated into discrete parts,
 You may know them by one and the same meaning:
 By them in God will you be forever magnified,
 Since if you believe in Him, then you love Him;
 And thereby you hope in His invisible gifts.
 Glory to Him forever,
 Amen.

126- Since I have suggested above that Narekac'i creates a spiritual map of the body in his construction of a spiritual discipline, even as is done in Indian Siddha and Tantric practice, it is apposite to note here that the image here of harnessing is, of course, the very same as Indian *yoga*, lit. "yoking" itself. That does not imply any connection; but it does bespeak a powerful parallel.

127- The image of the road (Arm. *šawil*, from Aramaic, cf. the Muslim religious use of the same word, *fi sabīl Allāh*, [to live/fight] "in the Way of God") resumes here, with Faith the leader of the caravan. Arm. *aṛajñord*, used now of the ecclesiastical office of the Primate, means literally one at the right hand, or ahead; thus to the image of leader is added perhaps another one potent to Armenians, and in the *Matean*: the powerful right hand of God.

128- Both words for doubt contain *erku*, "two". One recalls that Zurvān doubted; and that Zoroastrianism was called by Armenians, surely in a calque on Middle Iranian *dōbuništaḡīh*, *erkarmatean* "having two roots". Though Narekac'i wrote polemics against the T'ondrakite teaching, which evidently possessed dualistic qualities, this hymn to faith may have in mind only its essential power to overcome doubt and despair and act as a firm foundation.

Ch. 11.

From the depths of hearts

Speech with God.

1. And now I, the last of confessors, of good bereft,
 Gazing by the contemplation of my mind into my primeval entry into being,
 By the Maker's hand,
 Believe, in hope, for Jesus Christ to do what He wills.
 For I believed, on account of which I spoke, counseled by Paul and instructed by David,
 That even now their living supplications may come to me in visitation
 So as to know Him in faith
 And the power of His resurrection, according to the Apostle;
 Partaking in His sufferings
 And all else those words afterwards conveyed.
 Companion to these, and keenly like in type
 Is believing truly also in His renewing transformation,
 That is, from sin to repentance,
 And from maleficence to righteousness,
 And from uncleanness to purification,
 And from debts past requital for mortal transgressions, to bliss uncondemned,
 And from the fetters of servitude to heavenly freedom.

2. For surely, is there anything more beautiful than the word
 Shining clear even out of the darkness of the gloom of doubt,
 And the sinner's heart assisted, helped by God;
 So as it laughs in body, spiritually at the same instant it is lamenting;
 So that although even if in ascending to the height of the loftiest stations
 It is plunged down to the abyssal depth of the chasm of perdition's pit (*storasuzeal can-
 rut'eamb yandndayin vhin xorxorat gboyn gorcanman*)
 By the gravity of newfound sins indissoluble (*noragiwt melawk'n anj'relawk'*),¹²⁹
 He has yet a tangible relic of the beams of the salvation of life
 As a lightning-flash of radiance preserved in mind and soul,
 As a fire, made a sign and miraculously thickened and made solid,
 Compounded by the command of the Good,
 That slumbers upon the lowest bottom of the watery wells.¹³⁰

129- In the first line Narekac'i deploys almost every known Armenian word for depth, encoding "water" (*jur*) into the second line, after recording the phantasmagoric plunge of the sinner from his lofty station.

130- Arm.: *uni ew nšxar nšulic' p'rkut'ean kenac' hpawor/ orpēs zhurn nšanawor ew zarmanawor t'anjra-
 mac;/ hrašiwk' makardeal vehin hramani/ i yataks nerk'ins nirheal jrhoroc'n*. Here the lower well of
 the symbolic dark and confining waters inner, spiritual abasement, contains fire as a solid, somnolent at
 its bottom. The fire is waiting only to be brought up out of the water and, upon contact with air, to turn
 into a devouring flame that will destroy death and damnation, like the transformed *bāḍava* fire. → →

LIST OF PLATES.

1. Blind Russian minstrels guided by their Boy: frontispiece to BEZSONOV 1861.
2. Nicholas Roerich, “*Golubinaia kniga*,” 1911, illus. in KOROTKINA 2001, p. 92.
3. Nicholas Roerich, “*Golubinaia kniga*,” 1922-1923, in DEETER 1989, p. 126 pl.
4. Unicorn in the Khludov Psalter.
5. Unicorn in the *Izbornik Sviatoslava*, A.D. 1073.
6. The unicorn purifying the waters with its horn, the “Unicorn Tapestries”, late mediaeval Western European, Cloisters Museum, New York.
7. British pound coin.

The word *hpawor*, “tangible”, is of special resonance in the elaboration of Armenian mystical practice. Thus Nersēs Lambronac’i writes, “Through talking to God in prayer one touches (*hpi*) God through meditation in the mind, and reaches Him through understanding, and thus one’s clear mind comes to see God. And one’s faith shines more magnificently with the illumination of one’s reasoning faculty” (TANIELIAN 2007, p. 64 and para. 6). The editor of the text notes (p. 65) that Nersēs uses the phrase “to touch (*hpel*) God” very frequently, to describe the intimacy the worshipper seeks. One notes that here, as in the spiritual writings of other Cilicians—Nersēs the Graceful, Grigor *Tlay* (“Gregory the Boy”)—the celebratory features of illumination, of God’s close presence, have largely displaced the dark, penitential aspects of the *Narek*. So the latter, though the major native source of the technology of prayer of the following period, seems to have received in a wider context of Hesychasm.

ON AN ARMENIAN MAGICAL MANUSCRIPT

NEW YORK, JEWISH THEOLOGICAL SEMINARY,
MS 10558

by

JAMES R. RUSSELL

This paper examines some unusual features of a modern Armenian magical manuscript. The manuscript belonged to a Sephardic Jew, who annotated it, translating and transliterating some terms into Hebrew – a rare phenomenon in the Armenian context, since Armenia has no indigenous Jewish community, and the Armenians in the Ottoman Empire, a distinct *millet* (a defined religio-ethnic group), were often hostile to the Jews. The Jewish owner also inscribed an ancient spell known from Arabic magical literature at the beginning of the manuscript, and I shall explore its use and significance. The manuscript contains diverse spells, lists, magic squares and characters, and *vores mysticae*, with texts in Classical and Modern Western Armenian as well as in Armeno-Turkish. Representative portions of these are offered in translation, with commentary. I have translated in full, in an appendix, the mystical prayers employed from the tenth-century Armenian *Narek*; these are of interest insofar as they illustrate a nexus of canonical and folk religious concepts. The manuscript also contains a version of *Vec' hazareak*, 'The Book of the Six Thousand', a designation broadly employed to describe Armenian magical texts that often differ widely from each other. In a final appendix, I consider some reasons why the original of this book, a mathematical table, was of intellectual importance in the context of early Christian Armenia.

MS 10558 was acquired by the Jewish Theological Seminary of America, New York, in a lot from the bequest of the famous Hebraist and researcher

of manuscripts Prof. Abraham Katsh.¹ The other MSS in the lot are Jewish. I was asked some years ago by Dr. Jay Rovner of the JTSA Library to identify MS 10558, to which I returned only in the fall of 2007.

THE MANUSCRIPT AND ITS CONTENTS

The manuscript is a lined, hardbound school copybook, 24 × 17 cm in size and 36 pages in length, including the endpapers. The Armenian script is of a late italic or 'notary' type (Arm. *notgir*) encountered in the late nineteenth century.² The MS belonged to a Sephardic Jew: Pages 1 and 33–36 bear various notes in Judeo-Spanish (called Ladino or Judezmo by native speakers), in black ink, in the cursive *solitreo* hand and in square-character Hebrew script. Page 1 has a magical formula; p. 34, the Hebrew names of the signs of the Zodiac, with their Armenian equivalents transliterated into Hebrew characters; pp. 35–36, a list of accounts. The owner also added a few explanatory notes and translations of terms in minute *solitreo* script within the body of the text. On p. 35 appears the Jewish date 5653 (thus, in Western numerals), that is, 1892/3 CE.³ The copybook thus is modern, and the vernacular features of some phrasing within the classicizing parts of the Armenian text suggest that the MS was written by an Armenian around the same time that the unnamed Jewish owner acquired it. Indeed, it is not beyond the realm of possibility that the Armenian writer orally told the Jew who acquired the MS – most likely a purchaser rather than the recipient of a gift – the names of the Zodiacal signs, since the forms suggest that they were heard, not read and copied.

- 1 It is a pleasure to record here my gratitude to the Library of the Jewish Theological Seminary of America for provision of a scan of the text and permission to publish it, including the plates shown here, and for the very kind assistance of the Library's staff. For the decipherment of the *solitreo* characters I thank Mr. Avner Perez of Ma'ale Adumim, Israel, without whose expert assistance their reading would have presented an insuperable difficulty to me. I am grateful to the two anonymous readers of this article as well for their helpful and illuminating comments and corrections.
- 2 See, e.g., Erevan, Matenadaran, MS 10274, written by one Mirza Mirzabekian in Baku in 1876: Michael E. Stone et al., *Album of Armenian Paleography*, Aarhus: Aarhus University Press, 2002, no. 190, pp. 496–497. It is an astrological and calendrical text – thus similar in theme, too, to the JTS manuscript.
- 3 This date marked the four-hundredth anniversary of the expulsion of the Jews from Spain, among whom were my own ancestors. My grandmother Marguerite Sananes (née Saltiel, Salonica–New York, 1900–1997) remembered that neighbors belonging to the Abravanel family presented to the Ottoman Sultan a golden heirloom in token of thanks for Turkey's welcome to the Sephardic Jews.

The Arabic-Aramaic formula in Hebrew script, fol. 1r.

On page 1, in Hebrew square characters, is the formula *tm 's b 'd'n ysw 'd w 'd's nrm 'gds*. This is easily recognizable as an only slightly garbled form of the Aramaic spell in Arabic, *Tammāgis Bagdisawād Wagdās Nūfānāggādīs*. This spell is found in the Arabic *Ghāya al-ḥakīm*, 'Goal of the Wise Man', the vast magical compendium falsely attributed to the tenth-century Spanish scholar Maslama ibn Aḥmad al-Majrīṭī ('the Madrileño') and famed in the West under its Latin designation, the *Picatrix*. Indeed, much of the Armenian text of the MS derives from the *Ghāya*, allowing the possibility that the owner added the spell as the first part of the order of a magical ritual that he planned to perform. The *solitreo* note introducing the square-character formula begins with a banal series of equivalencies of kilograms, francs, liras and dirhams, in Judeo-Spanish; but immediately preceding the spell itself are these words, in Hebrew: *sha'aluni ḥakhme Yishma'el* [scil. *Yishma'el*] *perush elu hatevot*, 'The wise ones of Ishmael asked of me the explanation of these words'. This would suggest that the Jewish owner of the MS was something of a learned adept himself, enough to be consulted by Muslim sages about the meaning of a non-Arabic spell deriving from an Arabic book. However, he does not go on to provide the explanation – to say what the spell *does* mean. The *Ghāya* introduces the spell thus:

But the practical use and the knowledge of this science – may God strengthen you! – is accessible only to the one in whom its nature is established. Aristotle in his book *al-Isfāmāḥīs* refers to it when he says, 'The perfect nature is a power of the philosopher that augments his knowledge and wisdom'.

The spirit or Pneuma of one's perfect nature goes by the name of the spell, and one is to invoke it in an elaborate magical ritual when the Moon first enters Aries.⁴ In his *Muqaddima*, Ibn Khaldūn cites the *Ghāya* as calling

4 See Hellmut Ritter and Martin Plessner, '*Picatrix*': *Das Ziel des Weisen von Pseudo-Magīrīṭī* (German transl. from the Arabic), London: Warburg Institute, 1962, pp. 198–201.

the spell 'the dream word of the perfect nature'. One is to say its words while falling asleep and mention what one wants, and that thing will be shown to him in a dream. Ibn Khaldun adds that he has heard of a man who did this after a partial fast and several nights of *dhikr* exercises (i.e., in the trance-like state induced by a ritual of 'remembrance' of God through the continuous recital of sacred words and names), and a person appeared to him and identified himself as the man's 'perfect nature'.

Ibn Khaldun's rendering of the spell, *tamāghis ba 'dān yaswādda nawfanā ghādis*, is closer than that in the *Ghaya* to what we find in the Hebrew of MS 10558. Franz Rosenthal, in his commentary on the *Muqaddima*, suggests that these words are Aramaic in origin and might originally have been *temaggesh b'eddān swādh* (?) *waghalhash nawmthā ghādes*, 'You say your incantations at the time of conversation (?)', and the accident of sleep happens'.⁵ *Temaggesh*, the word he translates as 'say your incantations', is literally 'magianize' and comes from the Old Persian singular *maguš*, 'a magus', i.e., a Zoroastrian priest. Given the semantic range of the loan that became the verb *mageuō* in Greek, magianizing might involve a range of operations including sacrifice, not just saying incantations. Arabic *majūsī*, 'Zoroastrian', comes from this same form via Aramaic. This does not imply that a Zoroastrian ritual was employed or suggested. But the implication is possible: Dreams and their interpretation by Magi are a hallmark of Iranian epic, from the dream of the last Mede, Astyages, in the sixth century BCE, recorded in the *Histories* of Herodotus, to the dream of the last Parthian Arsacid, Ardavān, in the third century CE, recorded in the *Kārnāmag* ('Res Gestae') of Ardašīr son of Pāpak. *Rāzā*, 'secret', appearing as a Persian loan-word in Aramaic in the Book of Daniel, is indeed associated culturally with the specific secrets imparted in a dream and their interpretation, so closely that in Armenian the same loan, as *erazz*, becomes the standard word for a dream itself. If Rosenthal's reading is correct, a rather mundane statement about a ritual, as its words acquired a mystifying aspect, became the ritual itself, or at least its effective magical *mantra*.

The spell seems to have been well known down to very recent times in the Near East. William S. Burroughs used its words as the names of ancient Central Asian towns in *Cities of the Red Night*, the first volume of his trilogy *The Western Lands*, and he noted the particular power of the spell to induce a visionary dream. Burroughs was a Harvard man, and thanks in part to his thorough study of Shakespeare under the tutelage of the great Prof.

5 Ibn Khaldūn, *The Muqaddimah* (English transl. and commentary by Franz Rosenthal), I, Princeton: Princeton University Press, 1958, pp. 212–213 and note 311.

George Lyman Kittredge, he became the intellectual leader, as it were, of the other Beat writers – Allen Ginsberg, Jack Kerouac and others. But he was lonely in Cambridge; he did not join any student clubs, kept company with his pet ferret, and annoyed the other residents of Claverly Hall by practicing target shooting with live ammunition in the corridor. In later years he wrote that he detested Boston and wanted never to return. I wanted to know how Burroughs had come to know the spell, and, on 14 October 1995, I wrote him a letter asking him. But I feared he might not wish to write back to a Harvard professor. I therefore included a drawing from the enigmatic Voynich MS to spark his interest, and, knowing he was a cat lover, I mentioned that I had a cat. I received a reply, dated 1 November 1995. It reads, with typing errors corrected:

Dear Mr. Russell, Many thanks for your letter and the transcript. I had not heard of the Voynich manuscript and find the transcript fascinating. I think [it] is intended to be rotated and read in four directions. I have seen similar four way grids in Moroccan manuscripts. I did not know the source of city names. Brion Gysin, a painter who used the four way grid in his painting, gave me the names but did not know their source. Last night I had a dream of faces in shells which clearly derives from the transcript you sent. I now have six cats.
Sincerely, William S. Burroughs.⁶

Burroughs himself lived in Tangier in the mid-1950s.⁷

The owner of MS 10558 might thus have considered the performance of the spell and the consequent helpful presence of the hypostasis of one's perfect nature a prerequisite to the safe execution of further magical operations. (As to the induction of a dream vision, one finds on pp. 30–31 of our MS a spell in Armenian, translated below, invoking the angels Azrael, Gabriel, Michael and Israfil to produce the dream of one's desire. Since

6 The exchange of letters and the page from the Voynich MS are reproduced at the end of this brochure. Gysin was an artist and writer with whom Burroughs lived for years. Together they pioneered the 'cut-up' method of collage and writing; see Brion Gysin, *Turning In to the Multimedia Age*, London: Thames & Hudson, 2003. Gysin knew Arabic well and was interested in esotericism; he used the Isma'ili Assassins' slogan 'Nothing is true, everything is permitted' as his own.

7 See my article, 'The Epic of the Pearl', *Revue des Études Arméniennes (REArm)*, 28 (2001/2002), pp. 79–80, note 80, reprinted in J.R. Russell, *Armenian and Iranian Studies* (Harvard Armenian Texts and Studies, 9), Cambridge, MA: Harvard University Press, 2004 (henceforth: *AIS*), p. 1312.

there is no Hebrew annotation, though, there is no way of knowing whether the Sephardic owner of the MS knew of it, though he seems to have gone through the whole text.) It would seem that this spell was readily accessible in the Islamic world, and a Jew of nineteenth-century Constantinople or Salonica interested in magic could easily have learnt it on his own and added it to the magical MS he had acquired. Perhaps Muslim friends who also knew it suspected it might be Aramaic, as Rosenthal did, and questioned him about its meaning. But the Armenian who produced the MS could well have known it, too.

For it would seem that in Armenia, the practice of invoking an *angelus interpretans*, an interpreting angel, or one's perfect nature in connection with an informative dream, actually predated the composition of the *Ghaya* – if indeed the latter is a product of the tenth century – not to mention the translation of parts of the latter into Armenian. The formula we have, since it is Aramaic, would have predated, maybe indeed by centuries, the Arabic *Ghaya*. And in any case, the use in the latter of the daemonic embodiments of the decans in spells has precursors in India, and in ancient Greece before those.

In the seventh century, the Armenian astronomer and mathematician Anania of Širak wrote of his apprenticeship to Tykhikos, a Greek teacher at Trebizond who knew Armenian. The curriculum may have included the occult sciences; for Anania records that once, at chapel, he slept after prayer and subsequently met and questioned, presumably in the dream state, a Sun-like being who answered his question as to whether there is life in the Antipodes. Some scientifically-minded pagans, it is to be recalled, believed the earth is a sphere with people walking all over it, as flies walk around an apple without falling off the bottom. Others still held to an older view favored also by Christians: We live on a disc in the midst of the encircling stream of Ocean. The *angelus interpretans*, citing a passage in the book of Job which suggests that such remote climes are unpopulated, informed his Armenian interlocutor that there are no creatures, marsupial, Aboriginal or otherwise, down under; and did so, it would seem, with a mild reproach for the implicitly heretical character of the curious student's question.

Anania's account of his experience does not mention recitation of a formula; but when he related to his teacher what he had done, the Greek scholar was sufficiently alarmed to implore him not to tell anybody else.⁸ What

8 See my articles, 'The Dream Vision of Anania Širakac'i', *REArm*, 21 (1988/1989), pp. 159–170; and 'The Book of the Six Thousand: An Armenian Magical Text', *Bazmavēp*, 147/1–4 (1989), pp. 221–243; both reprinted in *AS*.

except suspicion of the practice of illicit magic could have impelled Tykhikos to enjoin such discretion? For however suspect Anania's question, he had received an irreproachably pious answer to it. And in fact Armenian tradition has always regarded Anania not only as an astronomer and mathematician, but also as a master of the occult. In particular, it attributes to him the authorship of the legendary magical text *Ħec' hazareak*, 'The [Book of the] Six Thousand', of which a long version is to be found in MS 10558 itself. Extraordinary importance is attributed to this magical work in Armenian tradition. It is basically a multiplication table; but in an appendix to this article I have proposed what sort of 'treasure' (to use Anania's own word, *ganj*) it conceals.

The reproduction of the spell from the *Ghaya* is of great interest, but the translation of Armenian into Hebrew is extraordinary. On p. 34, at the end of the little exercise book, the Jewish owner of the MS lists the names of the Zodiacal signs in Hebrew, together with their Armenian equivalents in square-character Hebrew transcription, with some vowel-points to facilitate pronunciation:

tale . . *hēyyin* [Arm. *xoyñ*, Aries]
shor . . *sūl* [Arm. *c'ul*, Taurus]
te'imim . . *yēzgawor* [Arm. *erkawor*, Gemini]
sartan . . *hēzqēdīn* [Arm. *xec'getin*, Cancer]
arye . . *aryūt* [Arm. *ariwc*, Leo]
betula . . *gūysī* [Arm. *koyz*, Virgo]
mozniayim . . *qīšīr* [Arm. *kīšr*, Libra]
akrav . . *garīj* [the *j* is rendered as a *gimel* with a dot above it, as in *solitreo*; Arm. *karič*, Scorpio]
keshet . . *agērnawoz* [the *v* is rendered as a *bet* with a dot above it, again as in *solitreo*; Arm. *alehnawor*, Sagittarius]
gedi . . *aygīsīgūr* [Arm. *aycelfīnwr*, Capricorn]
deli . . *gir'ō* [or *gir{o}š*, if the final character is read as a slightly defective *shin*; Arm. *jrhos*, Aquarius]
dagim . . *sūk* [Arm. *juk*, Pisces]

Since there is no reason to suppose that pronunciation of the names of the Zodiacal signs in Armenian was thought by anyone to possess particular efficacy – the *voces mysticae*, names of the lunar stations, decans, etc. in Armenian magical MSS themselves are usually in Arabic or pseudo-Arabic – it is likely that the list satisfied mere curiosity. One may be fairly certain that it was transcribed from hearing, not from a written source;

א צדק לעודע טך נאָרע פּרעס פּרעס
 עשענע ורליט . ורפּ יוס נער ל. ל. ל.
 נקס (א) כפּד נקס אפּי ורפּד שגנ

טלה	חויין
ישור	סולא
האומים	ייגאוו
סרשן	חיזקידין
ארדה	אריוט
בתולה	גויסי
מאזנים	קישיר
עקרב	גאריג
קשת	אגירנאבוס
גדיו	אייגיסגור
דלי	גירעו
דגים	סוק

The names of the signs of the Zodiac in Armenian in Hebrew transcription with their equivalents in Hebrew, fols. 33v-34r.

apart from the Western Armenian values of the consonants, the writer of Hebrew clearly twice (in nos. 3 and 9) misheard the soft Armenian *r*, probably as a 'sh', and transcribed it as a sibilant, *s* or *z*.

There are few additional notes by the owner in the book, but on p. 8 the Armenian notes to three grids of numbers are translated into Hebrew in *solitreo* script:

A(stuco)y ē, 'It is of God' = *min hashamayim*, 'from the heavens'.

Divakan [*sic!* for *dhwakan*] *ē*, 'It is demonic' = *mimazikim*, 'from demons'.

M(a)rdkanē ē, 'It is from men' = *mibene adam*, 'from the sons of Adam'.

Page 7 has a list of the Hebrew names of the planets (*Hama*, *Levana*, *Ma'dim*, etc.), translated from their Armenian equivalents. At the end of the MS, the owner makes some cursory remarks, again in Hebrew, about various cycles of time. In the same passage he writes out in square characters the Hebrew word AMT (*emet*, 'truth') and the magical word AGRP.

Though some Jews lived in the Armenian heartland in the nineteenth century – in the interior and eastern provinces of the Anatolian peninsula – and there was a substantial Armenian community in both the Sephardic stronghold of Salonica (modern Thessaloniki) and in the great port city of Smyrna, the place where there was most likely to have been any sustained interaction between members of the two Ottoman *millet*s (religio-ethnic communities), Jews and Armenians, was the capital itself, Constantinople. Storefront signs in Hebrew, Greek, Armenian and Ottoman Turkish Arabic script could be seen in the same narrow alley. But, there as elsewhere, friction rather than amicability between Greeks, Armenians and Jews seems to have been the general rule.

Armenian writers of the Classical period mention large Jewish communities in Armenian cities, brought there by Tigran II, the Great, in the first century BCE. Though it is possible that these formed the nucleus of an early Christian community in the country, there is no hard evidence for such a hypothesis. Many of the Armenian loans from Aramaic deal with commerce and have thus been attributed to Jews, but such an explanation seems informed more by invidious prejudice than by historical fact. In any case, many ecclesiastical terms in Armenian come from Aramaic as well, making the influence of contiguous Syriac-speaking communities, as well as survivals of Achaemenian *Reichsaramäisch*, seem more likely.

Armenian writers felt an unusually strong identification with the Macabees, who represented to them warriors of a holy people similarly beleaguered, but this empathy did not extend to living Jews. The latter, as

deicides, were now wanderers in darkness, bereft of their covenant through their willful blindness. As their co-religionists did elsewhere, Armenian Christians regarded their community and Church as *verus Israel*. The Armenian Bagratids claimed Davidic ancestry, but that has more to do, surely, with Christ's own Davidic line, and with the biblical figure to whom the authorship of the Psalms is attributed, than it does with Jews *per se*. Though the Classical Armenian literature is replete with traditional Christian anti-Jewish views, these are strikingly stereotypical and betray little direct acquaintance with Jews.

Armenians and Jews did come into contact in the early modern period, mostly in large cities outside the Armenian plateau. Eremia Çelebi Kömürçiyân's Armeno-Turkish novel *The Jewish Wife*, a tale of an Albanian baker named Dimo who falls in love with Marguerite, a Jewish girl, is bloodcurdling in its judeophobia. For their part, Jews referred to Armenians as descendants of the Amalekites, sometimes using the code word *Timkhe* for them, from God's injunction in Hebrew to blot out (*timhe*) Amalek from the face of the earth. The situation only worsened in late Ottoman times, when philanthropic initiatives like the Alliance Israélite Universelle led to rapid social and economic advancement, making the Jews competitors with their Christian neighbors. And new and virulent strains of racial anti-Semitism spread rapidly in the Near East: On the eve of World War I, for instance, the Armenian journal *Mehean* suggested approvingly that Christ was not a Jew but an 'Aryan'.⁹

So Jewish ownership and apparent practical use of an Armenian magical manuscript, with its suggestion of friendly association between members of the two communities, is unusual. On p. 7 of our MS, the names of angels are given as *t'ürk'*, *nasran* and *jafut* or *jhut* (pron. *čəfut*, *čəhud*), 'Turkish', 'Nazarene' (i.e., Christian) and 'Jewish'. The latter term, which the Jewish owner of the MS does not note, could just be standard Turkish, but it is frequently employed in a derogatory way. There is, at least, nothing to suggest that the copyist was a philo-Semite. Yet, as we have seen from the rendering of Armenian names with their vernacular phonetic peculiarities and the translation of Armenian words given in abbreviated form, it is plain that the owner was not working from a book but consulting a native speaker. The latter was perhaps the author/copyist himself, since the dating of the Hebrew text, 1892, would correspond closely to the time when the MS, with its modern Armenian features, was written in a modern copybook.

One may speculate that the Sephardi purchaser owned Muslim magical

⁹ See Benjamin Braude and Bernard Lewis (eds.), *Christians and Jews in the Ottoman Empire, I: The Central Lands*, New York: Holmes & Meier, 1982.

MSS as well – he claims learned Muslims ('Ishmaelites') consulted him. He was perhaps indulging an eclectic or catholic taste, in the hope of acquiring additional insights into the magical craft beyond what Hebrew and Arabo-Turco-Persian texts afforded him. Or perhaps he himself was a practitioner of a kind of rabbinic magic, consulting a *magid* (supernatural informant) or a *sar haTora* (master of the Law) like the angel Yofiel, as scholars from the age of the talmudic Sages down to Joseph Karo and later had done.¹⁰ If he lived in Constantinople, he would almost certainly have known some Greek; and the magical tradition in that language and milieu is incomparably vast and ancient. Armenians are less famed as magicians. But we know of an episode, some four centuries before, in which a Greek woman of Constantinople was possessed by an Armenian-speaking demon, and her relatives, evidently recognizing the language, were able to procure the services of an Armenian exorcist who performed a rite in his own tongue and cured her. Armenians thus seem to have enjoyed something of a reputation for proficiency in magic, and they might still have had it in the late nineteenth century. In attempting to explain the case of the possessed woman, I adduced parallel examples in which the language of possession is that of the nearest alien community, from amongst whose members some passive knowledge of a language unstudied, and probably also disliked or even feared, might be acquired.¹¹ Curiosity about the ubiquitous, nearest Other in the present case seems to require still less argument in justification.

What is curious is that the Jews, as a people of immemorial antiquity and evil reputation (one has in mind the theological prejudices endemic amongst Christians and Muslims, augmented by racial hatred), have historically been viewed as a *source* of magic – seals of Solomon, swords of Moses, Tetragrammaton and Sabaoth, amulets against Lilith, etc. – rather than as its recipients. References to Judaism are common in the magical literature of gentiles, but I know of no other evidence of Jewish interest

10 See Michael D. Swartz, *Scholastic Magic: Ritual and Revelation in Early Jewish Mysticism*, Princeton: Princeton University Press, 1996. Two useful publications on belief in spirit possession in Judaism down to recent times are J.H. Chajes, *Between Worlds: Dybbuks, Exorcists, and Early Modern Judaism*, Philadelphia: University of Pennsylvania Press, 2003; and Matt Goldish (ed.), *Spirit Possession in Judaism*, Detroit: Wayne State University Press, 2003. Hirsch Loeb Gordon, in *The Maggid of Caro* (New York: Pardes, 1949), approaches Joseph Karo's practices from the point of view, it would seem, of a believer. R.J. Zwi Werblowsky's work on this subject remains authoritative.

11 J.R. Russell, 'A Scholium on Coleridge and an Armenian Demon', *Journal of the Society for Armenian Studies*, 10 (1998/1999, 2000), pp. 63–71, reprinted in *ALS*.

in Armenian magic outside MS 10558, and transliterations of Armenian into Hebrew are few (see Note, p. 187), though numerous Armenian texts on astrology and similar subjects from the early Middle Ages on provide the Hebrew names of planets and Zodiacal signs, and explanations of the meanings of the names of angels and other biblical and apocryphal figures, places, things, etc.

How was a magical compendium and manual such as this actually used? Given the evident reliance of our MS at many points on the *Ghaya*, one may suppose that David Pingree's explanation of the understanding and use of the latter would be valid for the former as well:

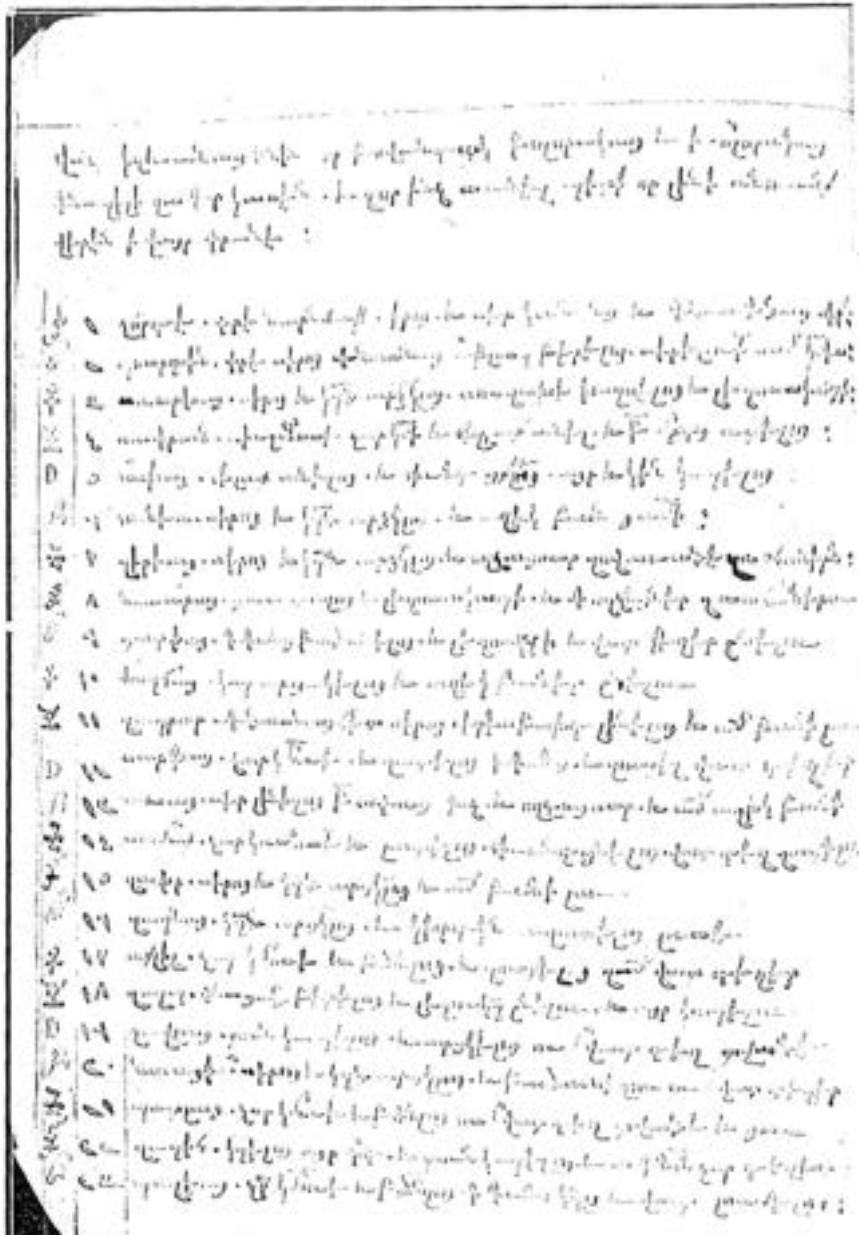

The ostensible object ... is to draw these celestial spirits down to earth and to induce them to enter into a material object (a talisman), which thereupon possesses well-defined magical powers. The rituals by which the drawing down is effected involve the use of terrestrial objects of mineral, plant, animal or compound natures appropriate to the spirit's celestial body; of images of either the celestial body or of the object of the operation; of words appropriate to the celestial body, either written with special inks or chanted; of incenses compounded of exotic substances; and sometimes of sacrifices of specified animals. Normally the ritual is performed at an astrologically determined time; in its most advanced form, the theory is that only at such moments does the ray of the celestial body penetrate directly into the talisman and permit the spiritual power to travel along it. And normally the magician must purify himself by austerities for the ceremony.¹²

But the MS contains heterogeneous material as well: It seems to have been a manual, a *grimoire* used for all kinds of magical and medical purposes. The astrological magic in the text has Greek, Indian and Muslim sources. But there are also prayers in the MS from a tenth-century Armenian mystical text, and others still invoke Christian saints. This is not at all uncommon in Armenian magical literature, but it seems most unlikely that a Sephardic Jew would have used Christian prayers. The owner was probably interested in the neutral, non-Christian parts of the MS and would have employed only those in any magical operations he undertook – unless his purchase and annotation of the book were meant merely to satisfy an intellectual curiosity.

12 David Pingree, 'Some of the Sources of the *Ghāyat al-Hakīm*', *Journal of the Warburg and Courtauld Institutes*, 43 (1980), p. 4.

I have translated below a few representative parts of the MS and have provided full translations of the chapters from the *Narek* that are invoked. The Armenian (Arm.) of the text is generally a mixture of Classical (Clas.), Middle (Mid.) and Modern (Mod.) Western (W.) forms in which the grammar is sketchy, the spelling inaccurate or inconsistent, and the grammar faulty or telegraphic. In short, the style of the Armenian is anything but elegant, and to polish the English would be misrepresentation. Armenian, well into the twentieth century, abounded in loan words from the languages of Muslim peoples: Arabic (Arab.) and Persian (Pers.) or New Persian (NPers.), filtered through spoken or literary Ottoman (Ott.) Turkish (Tk.) or borrowed without an intermediary. There is also an abundance of loans from Turkish itself; entire sections of MS 10558 are in Armeno-Turkish, which a Sephardic reader in the Ottoman Empire who had learnt the Armenian alphabet would have been able to read without much difficulty.

Transliteration is an issue for MSS such as this one. The so-called Hübschmann-Meillet system used by scholars was intended to render the pronunciation of Classical Armenian, whose sound system has largely been preserved in Eastern (E.) Modern Armenian. Here, however, one must take into account that the author, as a native speaker of Western Modern Armenian, would have pronounced unvoiced stops as voiced and vice-versa. He would also have used Classical Armenian diphthongs to render Turkish unlauded vowels, pronouncing as *müstakbel* the word he writes as *müvst'ak'pel*, 'future'. Turkish presents further problems: Where Redhouse's Ottoman dictionary lists a word as an Arabic (or Persian) loan and Hony's Modern Turkish dictionary of the reformed, post-Atatürk idiom does not, the word is cited as Ottoman, but Arabic and Persian words cited in their native forms are transcribed accordingly. There are also old loan-words in Armenian derived from older Iranian (Ir.) forms: Old Iranian (OIr.); Avestan (Av.), Middle Iranian (Mlr.), Parthian (Pth.); Pahlavi (Phl.); Sogdian (Sgd.); etc.

PARTIAL TRANSLATION

(Page 3)

Concerning the stations of the moon, which the entirety of the circuits and planets they call *minazilli lamer*,¹³ and whatever it is fit to do, the names are written from top to bottom.

[(Sign of) Mars] 1.¹⁴ *fordē*: write love spells;¹⁵ and the love of women and of prominent people love [...].

[Sun] 2. *piardir*: write for love of the rich and for bringing what you seek; being loved by whomever you wish.

13 Arabo-Pers. in Ott. Tk. *mandāl-i qamar*, 'stations of the moon'. These are given in the *Ghaya*; see Ritter and Plessner, '*Picatrix*' (above, note 4), pp. 14–21. The Armenian names appearing here are garbled (and, in line 1, abbreviated) forms of the Arabic ones found there. But the actions prescribed for the period of each mansion in the Armenian, mainly maleficent, do not correspond to those in the *Ghaya*. The lunar mansions, called *nakṣatras* in Indian astrology, are discussed in the letters of al-Kindī and are of importance also in the theurgic tracts of the Neoplatonist Ikhwān al-Ṣafā, the 'Brethren of Purity'. They were used for geomancy, weather forecasting and other purposes; see Emilie Savage-Smith (ed.), *Magic and Divination in Early Islam*, Farnham, UK: Ashgate (Variorum), 2004, esp. pp. 244–251.

14 The name of each mansion is preceded by the symbol of one of the seven planets and an Arabic number, evidently connecting it to one day of the four weeks of the lunar month. For the Armenian symbols of the planets see A.G. Abrahamyan, *Hay gri ev grē'ut'yan patmut'yan*, Erevan: Haypethrat, 1959, pp. 168–173.

15 Arm. *narēat*, i.e., Arab. pl. in Ott. *nirangāt*, from Pers. *nirang*. The original meaning of the word is 'power'; cf. Mod. Pers. *nirā*. In modern Zoroastrian usage a *nirang* is a short prayer recited for a specific purpose, consisting of a passage from the sacred scripture, the Avesta, enclosed between introductory and concluding passages, often in Pahlavi, with prescribed numbers (usually three or five) of repetitions of the two mantric prayers *Aham vohū* and *Ahuna Vairya*. Zoroastrian priests in India still write some *nirangs* for the laity to put on their doors for divine protection, but these prayers generally belong more to folk religion. They can still be purchased in Mumbai (Bombay), collected in small volumes printed in Gujarati or Perso-Arabic script. There are MSS of *nirangs* in Avestan script; see, e.g., *MS T3: Nirangs, Afrins, and Prayers* (Pahlavi Codices and Iranian Researches, 28), ed. Dastur K.M. Jamasp Asa, Shiraz: Asia Institute of Pahlavi University, 1976. After the Muslim conquest of Iran, the Persian term was borrowed into Arabic as *niranj* with pl. in -āt, with the derogatory connotation of an impiously magical spell.

[Venus] 3. *sureay*: for love and for releasing one bound;¹⁶ for freeing¹⁷ from hell¹⁸ and a binding of the tongue.

[Mercury] 4. *sap'ran*: for the enmity¹⁹ of an ill wisher and for killing;²⁰ and for making two men hate each other.

[Moon] 5. *haxay*: for killing and making sick; and for binding a man and a woman.

[Saturn] 6. *hanxa*: to release from love or binding, and a good thing in all.

[Jupiter] 7. *ziray*: to release from love or binding, and cure a person who is on his deathbed (?).²¹

[Mars] 8. *nasaray*: for giving pain and binding the tongue; and do not cure a person who is on his deathbed (?).

[Sun] 9. *tarfay*: for dividing (people) from one another; and for binding the tongue and making bad potions.

16 That is, by a binding (*kap*) spell. A common form of spell is that used to bind wolves (*gaylakap*), to whose natural harms Armenians and Iranians added the supernatural dangers of the werewolf. Such charms go back to the Avesta. In the 66th chapter of the tenth-century mystical prayerbook *Matean otbergut'ean* ('Book of Lamentation'), St. Gregory of Narek echoes the words of a contemporary *gaylakap* formula; see Appendix I.

17 Arm. *xalseloy*, from Arab. *khalās*, 'release'. Psalm 91 is employed in exorcism by Jews and by Christians, including Armenians. It is possible that the writer of MS 10558 read his Psalms in the popular Arm.-Tk. version as well as in Clas. Arm. If so, he would have encountered the words *Zira ǝ sēni ančēman tuzalutan, mūrhlīk' t'a'ntan xēlas ǝǝčēk' t'ir* [= Mod. Tk. *halds edecektir*] ('For he will deliver you from the ensnaring trap, from devastating pestilence') in verse 3. Lines 14, 15 and 16 also contain *xēlas*, as a compound verb and a noun. Admittedly the loan, as *alas*, *halas* and *xalas*, is not unusual even in Mid. Arm. In a ballad, St. Gregory of Narek and his inquisitors are said to 'leave for the sheep' (*alas kenir oč'xarin*) a wolf as shepherd – one more miracle for the holy man; see J.R. Russell, *Yovhannēs T'ikuranc'i and the Mediaeval Armenian Iyric Tradition* (University of Pennsylvania Armenian Texts and Studies, 7), Atlanta, GA: Scholars Press, 1987, p. 155, note to l. 64). But given the magical associations of the psalm, the use of the term is still worthy of note. I thank Murat Çankara of Bilkent University, Ankara, for providing me with the Arm.-Tk. text. In Chap. 66 of the *Narek*, which employs magical terminology in abundance (see Appendix I), ll. 106 and 110 contain the Arm. term from Middle Iranian *arjak-*, 'release'.

18 Arm. *tuzaxē*, cf. Pers. *dūzak*, 'hell'. Standard Arm. *džoxē* derives from a Mlr. form of the same word.

19 Arm. *thēlmanut'e[an]*, from the Tk. pronunciation of Pers. *dādman*, 'enemy', for which standard Arm. has a loan, from a Mlr. form with devoiced first stop and metathesis of the cluster *man-*, *t'mami*.

20 Arm. *hellak' anel*, compound verb with Arab. *halāk*, 'perdition'.

21 Arm. *zōhaxern*. The next line has *z'ahaxeru*; both are corrupt acc. pls., perhaps of Oit. *rahāyūn*, 'doomed to die'. But the word may derive from Arab. *ruh* and have to do with the spirit – vapors or the like.

- [Venus] 10. *ēazhay*: for releasing (from a) binding (spell) and for doing good things.
- [Mercury] 11. *zaprar*: for love of the rich, being lucky, and everything good.
- [Moon] 12. *sarḡay*: for enmity; and dividing (people) from one another; and for compounding bad potions.
- [Saturn] 13. *away*: for love happening between 2 people; and do healing; and for every good thing.
- [Jupiter] 14. *samak*: for enmity and division; for making ill; for compounding an evil potion.
- [Mars] 15. *lafr*: for love and for releasing one bound and good for every thing.
- [Sun] 16. *zapmay*: for releasing one bound; and for freeing one bewitched²² it is good.
- [Venus] 17. *ak'ilil*: for enmity and division; and for compounding all evil potions.
- [Mercury] 18. *zalp*: to bring back what has gone away and to make a tongue-binding (spell); and to bind a male.
- [Moon] 19. *šavla*: to bind sleep; and to release someone to whom a bad potion has been given.
- [Saturn] 20. *naḡyim*: for love and releasing (from a) binding (spell); and for *healing²³ one to whom bad potions [were given].
- [Jupiter] 21. *patlay*: for enmity; and for *healing²⁴ one to whom bad potions have been given, and pain.
- [Mars] 22. *zapih*: for binding a male person; and for binding a house; and all evil potions.
- [Sun] 23. *palxay*: for enmity and for dividing (people) from one another, for binding and for evil compounding [potions].
- [Venus] 24. *savut*: for love and releasing (from a) binding (spell), and to heal one to whom a bad potion was given.
- [Mercury] 25. *axbiay*: for love and reconciliation; and do not make against a man the enmity you wish.
- [Moon] 26. *muladēm*: goodness and wickedness – whichever one you want, do it.
- [Saturn] 27. *muccar muvaxur*: for love and every good thing.

22 Arm. abbreviation for *kraḡn*, for *kavardakam*, 'relating to witchcraft'.

23 Arm. *baḡaneloy*, 'dividing', probably a scribal error – occasioned by frequent reference above to separating couples! – for *baḡeloy*, 'cure'.

24 See no. 20 and note 23.

[Jupiter] 28. *raṣay*: for love and for releasing (from a) binding (spell) and for doing all good things.

From the first degree²⁵ of Aries to the first degree of Libra is called the northern.²⁶ The first degree of Libra till the first degree [*sic*] is called southern.²⁷ That which is northern is better and stronger than the southern. And whatever is standing built in the north, and those constellations²⁸ that are in the north, are taller than the constellations of the south; but the constellations of the south are low and strengthless. For from the first degree of Cancer to the first degree of Capricorn, the sun declines and descends low; and from the first degree of Capricorn to the first degree of Cancer, the sun rises to its height, and zenith is better than nadir. When the moon is found at its height, whatever people do, whether it be spells [*narnēat*'] or other kinds of things, all are powerful and swift; and know that the opposition of a star is dangerous,²⁹ which is oppression³⁰ and sorrow, and *hput*' means descent;³¹ and the (meaning) of *šērēf*³² is height or kingship. Thus a star's *šērēf* is strong, like a king; but its *hput*' is sick and of little power. *Šērēf* is translated as kingdom and greatness and joy: just as a king in his castle and amongst his armies is powerful, so is the star in its *šērēf*. Then whatever you request will be swiftly accomplished, with incense and spiritual influence.³³

25 Arm. *tērēčē*, a loan via Tk. from Arab. *darajfa*.

26 Arm. *hēwšezayin*, for *hēwšayin*.

27 Arm. *harafayin*, for *haravayin*.

28 Arm. *purē*, from Arab. *burj*, lit. 'tower', in astrology a sign of the Zodiac and the part of the sky ruled by that sign.

29 Arm. *mukalip(n)*, from Arab. in Ott. Tk. *mukallibā*; Arm. *wapil*, from *wabil*, 'dangerous'.

30 Arm. *moxēl(n)*, perhaps from Arab. in Ott. Tk. *malyūl*, 'fettered'.

31 Arm. *e'acut'ir*, here rendering Arab. *habūt*, 'descent'.

32 Arab. in Tk. *šaraf*, 'honor, elevation'. Present-day Iranians particularly esteem the *šaraf* of four planets: *šaww*, 'Sun', *qamar*, 'Moon', *zohreh*, 'Venus', and *šar'at*, 'Jupiter'. A sacred stone in my possession, inscribed on the 27th day of Ramadan, is meant to invoke all four *šarafs*: there are four registers, with the sacred number 786 at the top followed by five Arabic h's; then two lines of magical symbols in red; then at the bottom in green the letters w h š m. A metal magic bowl also in the author's possession, the *kāre-ye Yā Šin* (named after the letters of mystical significance preceding a favored chapter of the *Qur'ān*), contains the *šaraf-e šaww* (to be said twice), the four verses beginning with *Qul* ('Recite!'), and *Mā šā Allāh* ('As God wishes!') It is chanted 1,000 times a day from the 1st of the month Rabi' I to the 18th. Both items and their explanations were given to me by Dr. Azhideh Moqaddam of the University of Tehran.

33 Arm. *rōhamiat* ('oven' (inst. sg. with def. art.), from Arabo-Pers. in Ott. Tk., *rūhamiyat*. This presumably would refer to the influx of spiritual influence of the celestial body in a position of power in the sky at the time of a magical ritual. I translate here as 'incense' Arm. *cux*, 'smoke'; the reference is most likely to suffumigation.

But if it is in *hput'* or danger, which is descent from the constellation (and) sorrow, then it is bad, and whatever you seek will not be accomplished. For it has departed from its house and *šērēf*, and is away from home.³⁴ And the *hput'* is that which is its house. Whose *šērēf* is six constellations, which is 180 degrees, the opposite is its *hput'*. Here is an example for you: The Sun in Aries, the 19th degree is its *šērēf*; and opposite, the 19th degree of Libra is its *hput'*. For Venus, the *šērēf* is 17th Pisces; and its *hput'* is 17th Virgo. Mercury's *šērēf* is 15th Virgo; and its *hput'* is 15th Pisces. The Moon's *šērēf* is 3rd Taurus; and its *hput'* is 3rd Scorpio. Saturn's *šērēf* is 21st Libra; and its *hput'* is 21st Aries. Jupiter's *šērēf* is 15th Cancer; and its *hput'* is 15th Capricorn. The *šērēf* of Mars is 28th Capricorn; and its *hput'* is 28th Cancer. The *šērēf* of the [ascending node of the Moon] is 3rd Gemini; and its *hput'* is 3rd Sagittarius. The *šērēf* of the [descending node of the Moon] is 3rd Sagittarius; and its *hput'* is 3rd Gemini. The ascending node³⁵ is hot and good for desire(?)³⁶ over the rich and powerful. And the Moon rises up from it: Then they say the ascending node adds good to what is already good but makes what is bad, worse. And it is male and of the daytime. And the descending node³⁷ is windy and bad: The Moon goes down because of it, and they say it causes what is good to be less so, whilst (adding) worse to bad. And it is female and nocturnal. And whatever star is in the constellation, its nature changes that nature, as its helper, and every *mut'alit'a*³⁸ is *hput'*, and an end of 3, that is, five bounded and boundary-keeping stars and three band [*goti*].

(Page 4)

Concerning the conversion of difficult names to plain ones.

İlimay which is to connect or bring to agreement; *ziran* which is like *išimay*; *lut'up*³⁹ *bēvē mut'alit'a* which is a sign of the Zodiac; *vef* and *yēf* a girdle; *numun*⁴⁰ a star; *k'ervik'eap* is erratic; *čavzayr* the head of the

34 The word *larip*, Arab. in Tk. *gharīb*, has the sense of a wanderer; in folk songs, a poor man forced to seek his bread in an alien clime (Arm. also uses the older, more 'native' – actually a Mlr. loan – *paḏaxr*). On this extended image of a ruler in his fortress and its resonance with a medieval prayer, see Appendix I.

35 Arab. in Tk.: *ras* or *tax*, lit. 'head'.

36 Unclear: Arm. *teš'il* or *tešil*, perhaps for *teš'al*.

37 Arm. *taḡazūn*, perhaps a corruption of Pers. *āmbāll*, 'belonging to the tail'.

38 See the copyist's Glossary on p. 4 of the MS, *infra*, for the explanation of this term.

39 Arab. *qayūb*, pl. of *qayb*, 'pole star, axis'.

40 The word seems to be a corruption of **nygūm*, the broken pl. of Arab. *nyjm*, 'star'.

dragon;⁴¹ *htavut*⁴² means boundaries; *mmlalip*⁴³ means movements; *t'epit*⁴⁴ means fixed; *nučimtan* is two signs suddenly in conjunction (?);⁴⁵ *mazi*⁴⁶ is past; *hai*⁴⁷ means now; *miwst'ak'pel*⁴⁸ means new coming; *mevčivt*⁴⁹ is *hazar*; ⁴⁸ *mativm* is *layiwp*; ⁵⁰ *k'evg* means exhausted; *zint'a* is living; *miwrt* is dead;⁵¹ *suka*⁵² is small; *miwfret*⁵³ is *far*; ⁵³ *muzacavac*⁵⁴ is a pair; *na-zar*⁵⁵ means looked, which is sight and recognition; *nut'ē*⁵⁶ is a term which means to listen and converse; *int'isa*⁵⁷ is connecting, reaching and conjoining; *infisal*⁵⁸ is completing, prohibiting and stopping.

The calendrical dates of the Armenians.

The calendrical system of Greater Armenia is movable. And from the departure of Adam from paradise till the flood is 2242 years; and from the flood to the tower [of Babel], 525 years; from the tower to Abraham, 15 years; from Abraham to the departure of Moses from Egypt, 495 years; from the Exodus to the construction by Solomon of the First Temple, 380 years; from the First edifice to the Second, 511 years; and from then till the birth of Christ, 518 years; whose composition is according to the Septuagint, of

41 This is plainly Arab. *jawzah*, Phl. *gōzihr*. Phl. *gōzihr sar* ('head') is the ascending node of the moon; *damb*, 'tail', is the descending node.

42 This renders Arab. *ḥudūd*, pl. of *ḥadd*, 'boundary, limit'.

43 Ott. Tk. from Arab. *munqalib*, 'turning', a word important to astrologers: *burj-i munqalib* is a sign of the Zodiac into whose first point the sun enters at the change of a season; and *munqalib wa khārīj* in geomancy is the designation of a figure in which fire or air takes the other's place (Redhouse).

44 Arm. *layiten*, perhaps a verb, pres. 3 pers. pl.; cf. MidArm. *layt'anel*, 'to form a string or chain', from Tk. *ghaytan*; **myām-dām*, with Pers. suffix, would be a 'container of stars'.

45 Tk. from Arab. *mazi*, 'past'.

46 Tk. from Arab. *ḥāḏā*, 'now'.

47 Tk. from Arab. *mūstakbel*, 'future'.

48 Tk. from Arab. *mevcud*, 'present'.

49 Tk. from Arab. *hazir*, 'present (place or time)'.

50 Tk. from Arab. *maḥwū*, 'nonexistent', *ḥayb* 'hidden'.

51 NPers. In Tk. *zinda* / *murd*, 'living' / 'dead'.

52 Tk. from Arab. *suḡra*, 'small'.

53 Both Tk. from Arab.; *mūfred* is a participle of *fard*, 'individual, separate'.

54 Ott. Tk. from Arab. *mūzevviḡ*, 'paired, coupled'.

55 Tk. from Arab. *nazar*, a very common loan in MidArm., often used specifically of the evil eye.

56 Perhaps from Tk. from Arab. *nutuk*, 'speech'.

57 Ott. Tk. from Arab. *ittiḡāl*, 'connection'.

58 Tk. from Arab. *infisal*, 'separation'.

Adam till the one in Christ, 8 and 198.⁵⁹ From Alexander to Christ is 351 years; from the Nativity of Christ to the emergence of [St. Gregory] the Illuminator from [Xor] Virap is 276 years; from St. Gregory to the invention of the Armenian script is 116 years; from the invention of the script to the Armenian dating [system] is 130 years; from the Nativity of Christ till the Council of Nicaea is 325 years; and from then till the Council of Constantinople is 74 years; and from then till the Council of Ephesus is 50 years; and from then till the second Council of Ephesus is 24 years;

(Page 5)

from then till the evil Council of Chalcedon is 27 years. From the Nativity of Christ till the Armenian dating [system] is 532 years, some say 553; from Adam till the Armenian dating [system] according to *Sep'ix* is 5711 years; and according to the five-hundred-year cycle, from Adam to us take 7976. Add the Great Armenian date and it is this: have 6289; and take the Great Armenian date, it is that of the Hebrews that they use, have 5751. And add the Great Armenian date from the *Sep'in* and you have 862; and add the Great Armenian date from the Alexandrian and you have 2000; and add the Great Armenian date from the Andreasian and you have 51; and add the Great Armenian date to that of the Creator of life and you have 303; and add the Great Armenian date to that of the Romans; add the Great Armenian date 76 and take the Assyrian from the Greek; add 76 to the Great Armenian date and you have the Assyrian one ...

Concerning enemies.

If you wish to harass your enemy, so that he may not cause you harm but be driven off by you instead, first you must repeat seven times the first stanza of the [prayer] 'I confess in faith'.⁶⁰ Then, from the second stanza till 'You who

⁵⁹ According to the tabulation, the total number of years, from Adam to Christ, is 4686. The Arm. letters representing 8 and 198 are incomprehensible as a coherent date, unless the initial *shva* be read as a corrupt *hshen*, equaling 7000, yielding 7198. If, however, at some point 198 was written with the separate letters for 1, 9 and 8, and that for 9, the aspirate *t* was a misreading of the similarly shaped *b*, i.e., 2, then the numbers 8, 1, 2, 8, put together, could represent the 'perfect' number 8128, on which see p. 177.

⁶⁰ See J.R. Russell, 'The Credo Poem *Hawratov xostovanim* ('I confess in faith') of St. Nerses the Graceful', in J.J. van Ginkel et al. (eds.), *Redefining Christian Identity: Cultural Interaction in the Middle East since the Rise of Islam* (Orientalia Lovanensia Analecta, 134), Leuven: Peeters, 2005; the translation of the prayer is on pp. 233–236.

care for the creations' go once; when you take 'You who care ...'⁶¹ in hand, recite it 40 times. Then recite thus: Make my enemies flee, and banish those hateful to me. Say this 40 times. After it say this: My God, make them like a wheel, and like a reed before the wind, like fire that burns the forests, like flame that consumes the mountains, so banish N.⁶² With your storm and by your anger bring N. distress. Fill their faces with dishonor; and may he seek your name, O Lord, and be abashed and vexed for ever and ever and perish full of shame. May he know your name is the Lord, and you alone reign high over all the earth. Say this 40 times. Then say: Come, Lord, arrive, Lord, and confound him in his life. [This say] 99 times. At last say once: Glorified Lord, accept the supplications of your servant, and fulfill for good my request by the intercession of the Holy Mother of God, till the end, say it: It suffices. If you wish, take some water, put a little mercury in it, with one measure⁶³ of soil of a corpse,⁶⁴ seven matches⁶⁵ and one measure of olive oil;⁶⁶ put them all in the water, then read above it and blow on the water. Take it to that man and spill it on the road over which he will pass. Then see how that man is, or say, I send him out.

(Page 6)

Keep a little of the water. Take it over to where he goes outside and walks and scatter it there.

[In Armeno-Turkish:

Sana bir kapı ki allahca ve gınahın af olur; bu niyazı itmeğilen, ve aklın bazı yer ider. Daha başlamadan ki beyandır ibtida yedi gece üçer kere Narekin yirmi yedinci kluxı ki Meghann p'oxı denilir okuyasın. Andan başla Narekin seksen dokuz kluxunu yedi gece doksan beşer defa her gece oku. Lakin ilk başladığın gece cuma akşamı başla ki 3(a)b(a)t' ağıarır. Ama ilk

61 That is, appositely, stanza 14: 'You who care for the creations, keep my soul and body by the sign of your Cross from the snares of sin, the tests of demons, and from unjust men, and from all the perils of soul and body. And have mercy upon your creatures and upon me, of multitudinous sins'. Note the invocation of the Cross here, as a possible high point of the spell; and compare the use of the sign of the Cross at the apex of the recitation in the Armenian folk religious practice of the *Kiprimoz*, discussed in the notes to Appendix I.

62 Ar. in Tk. *filan*.

63 Pers. in Tk. *dag*.

64 Arm. *me'eli hoł*, i.e., soil dug up over a grave in a cemetery.

65 Tk. *kibrit*.

66 Tk. *zeytin yağı*.

me'. Our Lord Jesus Christ commanded, saying with his divine mouth: Let the power be given ye of the 24 Prophets, the twelve Apostles, draw ye the bow [drawing of bow in text] of fire and dispel that pain from here (?),⁷² saying, Our Lord Jesus Christ 9 months dwelt in the womb of the Virgin, 8 days dwelt on the river Jordan, 7 days created the world, was crucified on the 6th day, harrowed hell, bound Satan: By those bonds we bind that aged infirmity of the lower back of this servant of God. The name of the Father and the Son and the Holy Spirit now [*scil.* add: and forever and unto ages of ages] [magic symbols] [large round drawing of a demon]. We beseech you, O saints of God, receive somewhat and do not ignore my supplication: I bound by your name, the doctors who take no fee,⁷³ Kozma and Damianos,⁷⁴ I being unworthy. Saint of God, receive somewhat. Our Lord Jesus Christ binds the evil *dadar xami* or evil cramps. He bound the evil demon, the evil pain *t'at'ar xami* of cramps against this servant of God in the name of the Father and the Son and the Holy Spirit now and forever and unto ages of ages, Amen.

72 Unclear: Arm. *ays pe[z]jen t' [ē]*.

73 Arm. *anarcat'*, 'without silver', a calque of Gk. ἀνάρπαξ and a standard epithet of these two saints in Arm. and Gk. (cf. the standard Classical Armenian dictionary, *Nor Bərgirk' Haykazean Lezmi*, I, 116, s.v.).

74 The twins Cosmas and Damian, who were physicians, lived in Cilician Aigeia during the reigns of Diocletian and Maximin. Refusing to abjure their Christian faith, they were imprisoned with Anthimos – who is invoked in Armenian spells along with them – and others, then martyred. Their feast day in the Eastern Churches is 27 October. In prayers collected in *Hay hmayakan ev zolovrdakan alat'k'ner* (*Armenian Incantations and Folk Prayers*), ed. Sargis Harat'yanyan, Erevan: Erevan State University, 2006, pp. 44, 88, 99 and 241 n., they are invoked to cure *xos-nok* (a stomach ailment) and toothache. One prayer, no. 68, can be translated thus: 'Ant'imos, Kozmas, / Damianos and Bakos / Came together / And by their will pulled teeth / And threw them in the sea / And asked of God, / If a person write / Our name on bread / And genuflect to God 12 times / And eat that bread / His tooth will not ache again' (Erevan, Matenadaran, MS 8428). These saints were venerated for other activities elsewhere in the East Christian world: In a Russian folk ballad (*bylina*), Kuz'ma and Dem'yan are wandering minstrel-clowns (*skomorokhi*) who come to the home of a widow to ask that her son Vavilo, who is out tilling the fields, leave and join them and make sport of the infidel king Dog (*tsar' Sobakr*). Unlike others who rebuff their summons and are punished, she wisely 'sees these here are no simple folk, / no simple folk at all, but saints' (*vidit, lyudi tut da ne prostye, / ne prostye lyudi-te, svyaty*). For instance, she offers them a roast chicken, but the bird comes to life and flies up to the rafters – a miracle attributed variously to Christ, Muhammed and the Armenian mystic St. Gregory of Narek. On the ballad, see Yu. I. Smirnov and V.G. Smolitskii (eds.), *Novgorodskie byliny*, Moscow: Nauka, 1978, p. 301, no. 70.

If a woman is barren take 2 drams of Venetian treacle⁷⁵ 7 mornings; she will sleep and be with child.

For when you start (?) to do something and finish it, but they tell you it cannot be accomplished, do not fear. Go to one field in the wild⁷⁶ and in one place go into a cave,⁷⁷ strip naked⁷⁸ so that not a shred of clothing remains, then turn your back to the moon so that your shadow is in front of you. Cry out in a loud voice, saying: *Ea melik' asvar azambiw alēyk'ē*⁷⁹ 3 times. Again say this: *yazambu va alēyk' iwm bi ismil lahiw til gahar ew ma alar*⁸⁰ and one vellat 'in vē pi ismi azam fi xat'emi siwleyman izni tavur⁸¹ they come and say to thee do not fear, readers.

This prayer is holy and has and gives the power of 12 things; this is the prayer: *imšima tančera apačiaman ōriraša abur suir tašača k'alt'ēn hazar hačapin i ōti ašata xašata e'an šr šattavel arsadaēl ačosia milam pamlač xoyš tačaxia melayay siča ayiunays ašiwčaxia melapalu ayčay i amaniōn muik'a ašimēša vula iwlpatin axaripn amudia axin ēlšpat t'ēalatanxi tanč'u lat'i vred ea musayil.*⁸² By God the binding [spell] is loosed.

Again in your dream they tell what you desire,⁸³ they come to you. Write the names of these four angels, take in your hand

(Page 31)

and go to sleep: *ea azrail, ea čibrail, ea mik' ēail, ea israfil ak pir yunifi mēnay mepiy oriš ēsrarim.*⁸⁴

If you wish to be free of fear of your enemy, pass four times by his door or

75 Arm. *t'breax varax*, Ar. in Tk. *tryšig fūriq*, 'reputed a sovereign remedy', declares Redhouse, s.v.

76 Arm. *eapan eazi*, Tk. *yabon yazi*.

77 Tk. *mağara*.

78 Arm. inchoative 2 pers. sg. imp. *ē'ipxe'ir*, from Tk. *çıplak*, 'naked'.

79 A much-garbled Muslim prayer, perhaps to be rendered: *Yā malik anvar, azzam bu aleyk*, 'O king of enclosures, greatness upon thee!'

80 Perhaps: *Azzam bu wa Bismillāh* [In the Name of Allah]... *ma'ara*(?).

81 Perhaps: *Wāfi al-Dīn wa bismi Azzam fi hātīm-i Süleyman ibn Dāwūd*, 'Master of the Faith! And in the name of the magnificent One, in the seal of Solomon son of David'.

82 On such voces mysticæ in Arm., see my article, 'Language of Demons, Language of Men', in S. La Porta and T. Van Lint (eds.), *Festschrift for Michael Stone* (in press).

83 Arm. *myuad*, cf. Pers. *myāz*.

84 The four angels, Azrael, Gabriel, Michael and Israfil, are invoked in their Muslim forms; the spell ends with the words 'a white ... my secrets' (Ar. in Tk. *aznir-imi*).

near him and say out loud for all to hear and blow in his face. He will swell up and bloat. This is it: *alubugal amielah t'amar gular hmin zari maxašax amlat' aravay para xarapisinē tivšmann twzerisinayē filančənə*.⁸⁵ If you wish to make him released⁸⁶ write this prayer and hang it on his house or from the wall; give [it] with your right hand and he will be released by God.

For this write 7 names on an apple and give it to him to eat or wash it in water and have him drink the water. Say thrice the things to be read: *mama hovinay istaki orpazi asanaki ušanay ərətion*.⁸⁷ It will be, by God.

...

APPENDIX I: CHAPTERS OF THE NAREK

The *Matean olbergut'ean* ('Book of Lamentation'),⁸⁸ by the tenth-century monk, theologian and mystic St. Gregory of Narek (Arm. Grigor Narekac'i), is a compilation of 95 penitential prayers, often referred to simply as the *Narek*. Its extravagant imagery, powerful alliterative patterns and repetitive litanies are meant to induce the emotional abreaction of tears, arouse spiritual awareness and effect prayerful repentance, to enable the worshipper to come close to God and plead with Him for salvation. Folk balladry accords numerous miracles to the saint, and hagiographical legends about him may be found in the epic cycle of Sasun.⁸⁹ Parts of the *Matean* have entered the Armenian liturgy, and we may fairly say that amongst the Armenians, down to modern times, it was the book most often commented upon and used for private devotions after the Gospel and the Psalter.

The *Matean* was often employed for magical purposes and as a protective talisman against the powers of evil. The text itself deployed the imagery and vocabulary not only of a millennium of Christian scriptural and

85 The final words are garbled Tk.: *dizman *əzerisine filančnu*, 'onto him, the enemy, N'.

86 Arm. causative 2-pers. subj. *xaləc'nes* < **xalas-ec'nes*.

87 This spell seems pseudo-Greek, with the words ending in diminutive *-aki* and the final **rhodion*, 'easier' (7).

88 Grigor Narekac'i, *Matean olbergut'ean*, eds. P.M. Xəč'atryan & A.A. Lazinyan, Brevan: Academy of Sciences of the Armenian SSR, 1985 (=M).

89 See my introduction to Grigor Narekats'i, *Matean olbergut'ean* (facsimile reprint of the Buenos Aires 1948 edition), Delmar, NY: Caravan Books, 1981; on Narekac'i in the Sasun epic, see J.R. Russell, 'The Shrine beneath the Waves', *Res: Anthropology and Aesthetics*, 51 (Spring 2007), pp. 136–156.

mystical tradition, but also of Armenian folk belief. According to J.-P. Mahé, for instance:

D'une façon extrêmement curieuse, c'est au 66-ème chapitre du *Livre du lamentation*, dans une méditation sur l'agonie du Christ et l'outrage de la Passion, que Grigor Narekac'i trouve des accents très proches des formules traditionnelles de *gaylakapi alôt'k'*.⁹⁰

The latter 'wolf-binding prayer' must remind one of the numerous binding (Arm. *kap*) spells in our text; and indeed the very first line of Chap. 66 seemingly alerts the reader both to the images of Christ's body to be invoked and to the magical vocabulary to be manipulated in the poem, containing as it does the familiar and oft-employed term of magical texts, *del*, 'potion'. At the beginning of the *Matean*, in an introduction whose cruciform shape contains key words at the points where the correspondingly symbolic parts of the body of our Lord would be,⁹¹ St. Gregory advertises his work as *spelanič*, 'cures', and *delk'*, 'medicines' against sin and harm. There are numerous lists, in both manuscripts and printed books, of the chapters of the *Matean*, describing their contents or prescribing them as prayers to be recited for particular purposes. Some call Chap. 66 *Vasn gerezmani*, 'For (or: Concerning) the grave', or *Ogevari*, 'For the deathbed'. Others are more detailed: *Netajgut' iwn yeress diwin netiwk' ē'arē'aranac'n K'ristosi*, 'Shooting the demon in the face with the arrows of the torments of Christ', or *Menamartut' iwn and Beliaray ē'arē'aranōk'n K'ristosi*, 'Single combat with Beliar by means of the torments of Christ'.⁹²

A general strategy of Christian typology is to take a symbol of corruption and death and show how by the divine economy it is made a means of healing and life. The Cross, an instrument of execution made of wood from the tree that caused the fall of Adam, is the most obvious example, and Narekac'i employs it in this poem. Armenians venerated the Cross, though,

90 Jean-Pierre Mahé, 'Échos mythologiques et poésie orale dans l'oeuvre de Grigor Narekac'i', *Revue des Études Arméniennes*, NS 17 (1983), p. 261. Sargis Harut'yunyan collected and edited several *gaylakap* spells in *Hay hmayakan* (above, note 74), pp. 147–151.

91 *M*, p. 245; on the structure of the text-picture of these introductory *drut' hrnk'*, 'Theses', see J.R. Russell, 'Bedros Tourian's Cruciform Prayer and Its Antecedents', *Journal of Armenian Studies*, 6/2 (2000–2001), pp. 27–45, reprinted in *AJS*.

92 *M*, p. 1075.

to a degree that suggested idolatry to their scandalized neighbors;⁹³ and it is correspondingly prominent. But the author's purpose in the deployment of typological strategies here is specifically to undermine magic and witchcraft; so the several invocations of the powers of the Cross may perhaps also be viewed with reference to a little prayer book popular among Armenians, where there are explicit references to magical practices. This is the *Kiprianos*, or Life of the early fourth-century St. Cyprian of Antioch. The latter began his career as a pagan magician; but his *defixiones* were powerless against the Christian girl Justine whom his client Acladius desired. Satan explained to Cyprian that the Cross was more powerful than the forces of evil – and at this point in the text, which is meant to be recited aloud, a large Cross is depicted. The story is known across the Christian world and contributed to the formation of the legend of Faust. A long recension of the Life of Cyprian exists in good Classical Armenian; so although the oldest known prophylactic magical scrolls (Arm. *hmayil*, from Arab.) come from half a millennium after the *Narek*, it may be argued from the existence of an old version of the text and the importance of the narrative that Gregory could have known of such a talismanic use of it among Armenian common folk and accordingly alluded to it here.⁹⁴

The saint prays that in the event of his untimely or sudden death, Christ will protect his unshriven soul from demonic assault and the devilry of witchcraft; and *Narekac'i* invokes in particular the protective power of the Cross – the holy Sign (Arm. *nšan*). The idea that the soul upon death is beset by the malign spells of sorcerers and the assaults of supernatural beings recalls more the milieu of the Tibetan Book of the Dead than the picture of the afterlife common among Armenian Christians; it seems incompatible, for instance, with the complex of folk beliefs about Gabriel, the angel of death. The Armenian author of JTS MS 10558 would undoubtedly have known the *Narek*, and this chapter, steeped in magical terminology, might well have been of particular interest to him. Both MS 10558, p. 3, and *Narek*, Chap. 66, ll. 91–94, employ somewhat similarly the extended metaphor of a nobleman defended within his fortress.

93 See J.R. Russell, 'The Armenians, the Holy Cross, and Dionysius Bar Salibi', *St. Nerses Theological Review*, 8 (2004), pp. 1–12.

94 See J.R. Russell, 'The Credal Poem *Ħanvatov xostovanim* ('I confess in faith') of St. Nerses the Graceful', in J.J. van Ginkel et al. (eds.), *Redefining Christian Identity: Cultural Interaction in the Middle East since the Rise of Islam* (*Orientalia Lovaniensia Analecta*, 134), Leuven: Peeters, 2005, p. 225 and note 61, for an analysis of the typical contents of a *Kiprianos*.

CHAPTER 66⁹⁵

Again, an addition to the same supplication of a chapter of prayer, of the repeated lament of the same vigilant one.

From the depths of hearts, speech with God.⁹⁶

I.⁹⁷

- Now, whosoever may take up the potion (*def*) of prayer
 Of this humble book and plead by its means,
 If the one making the offering be from amongst sinners,
 Then let me be by my word joined in partnership to him;
 5 But if the one stepping forward be from amongst the righteous
 Then let me be found by this the same, with him, given mercy by
 its means.
 But if this kind of person be rendered blessed by virtue of himself,
 And wretchedness be ascribed to me alone,
 Then I testify by myself to this.
 10 Still let him recall Solomon and the words of the same by the soul
 inspired:
 Who will be certain he has a pure heart,
 Or, Who yet will boast he is clean of sin?
 For there has not risen an earthborn man free of interrogations,
 Or one chosen by means of the self-locomotion of his own courings,
 15 Not even if he be raised in flight by the lifting of his arms,
 So may he be cautious, doubly in fear,
 Even if he is firmly established on rock, learning from Paul.
 Perhaps fallen to earth,
 He may come to resemble the shaper of this canon weighed in true
 judgment.
 20 But let him take up this clean rebuke, the stuff of diadems,
 In order not to descend in imprudence from a height unattainable,

95 *M*, pp. 506–512.

96 This is the common heading of each chapter. The plural 'hearts' may allude to the use of the prayers by many of the faithful; or it may imply one's innermost self, one's heart of hearts; or it may have reference to the five senses and other multiple groups of mental and spiritual faculties encompassed by the heart; or all or several of the above.

97 The chapters are traditionally divided into subchapters marked by alphabetic Armenian numeration (a, b, g, d...), which I replace with Arabic numbers.

- And the one condemned to punishment make it the occasion of
liberation,
By means of which, rising up from the destruction
Of spiritual death, he may live in hope.
- 25 And may the message of this logos be for me
An incised monument, entirely indelible,
That in place of my own wretched mortal self,
By the ceaseless sounding of tearful lament
Ever resounds, never to be still.
- 30 For my dismembered bones
In the earthen sheath of the cloak of the grave,
May there be confession of this in soundless voice;
And for my body dissolved in the ground may there reach
You, seer of the hidden, in strengthless speech this same
supplication.
- 2.
- 35 Lord of mercies, spring of compassions, gifts of good things,
Son of the most high, Lord Jesus Christ,
Have mercy, spare, love mankind,
Look upon my peril, take notice of my broken state,
Incline to me in my misfortune,
- 40 See the misgiving of my extreme agony.
Arrive to be with me, the lost, in my need.
Touch as a physician my most ignoble malady,
Incline sweetly your ear to my piteous groans,
Listen to my soundless moaning from the depths of the abysses of
the tomb of death.
- 45 May there enter the ear of your hearing, you who are hearer of all,
The sound of the pleas of my ruined limbs.
And since the bestowal of my life is imperishable,
May your compassion be likewise unchanging.
Be a partner in meekness to my vicious frailty.
- 3.
- 50 Preserve no enmity towards my perished image,
Enter not into inquisitive judgment against my form bereft of
breath,
Do not multiply the blows rained upon me, tortured to death,

- Do not make strong battle with me, a broken clay vessel,
 Do not redouble fury against me, already beaten down by decree,
 55 Do not deliver punishment to me, a destroyed edifice,
 Do not cast stones at me, a slain dog,
 Do not thunder ferociously against me, a crushed louse,
 Do not mutter menacingly against my dishonored soul as though I
 were arrogant,
 Do not summon me, who am rejected ash, to a judgment of choice,
 60 Do not regard my scattered dust as your opponent in war,
 Do not consider my foul mud as an opponent,
 Do not vanquish me, disgusting and pitiable, as though I were a
 fighter,
 Do not save me, a rejected stumbling block, as firewood for
 Gehenna:
 To me, rebuked in all these multitudinous words,
 65 Do not attach accusation anew.

4.

- These are for the most wretched and dark-confining (*xawarargel*)
 grave here
 The heartbroken and multiply sorrowful entreaties
 (*argahatur 'iwnek*).⁹⁸
 Let your word, O blessed One, be established firm and unchanging,
 In accord with my entreating heart.
 70 For even now whilst still alive I speak,
 I am dead to you, inaccessible one,
 Just as even at the perdition of death, of destruction,
 I am incorruptible in faith, at your omnipotent command.
 Now I beseech you, Lord Jesus Christ,
 75 Look upon me in compassion,
 And do not abandon me to be the housemate of Beliar;
 And that death-declaring herald of the tomb,
 Of lifeless thud and piteous interment,

98 Note Narekac'i's parallel use of two verbal homonyms with positive and negative connotations, as a phonetic signature of his rhetorical oppositionalism: Arm. *arg-*, 'value' (positive), and *argel-*, 'confine' (negative). Cf. in ll. 103 and 120 the double *yawt'k*, 'fecund' (positive) vs. *yaw'ur'k*, 'talismans' (often beads) used in conjuring (negative).

- The clamour of the voices of sobs and cries of those entreating you⁹⁹
 80 Do honour to heed, sole beneficent one,
 Lover of the soul, powerful one, lover of mankind (*Hogesēr*,
hzawr, *mardasēr*),¹⁰⁰
 And may your good spirit dwell with me,
 Making for me light in the darkness.
 Let there remain by me your life-creating Passion's revered
 relics,
 85 So that they may offer them to me as the consignment of a treasure
 kept in you
 For the renewal of life.
 Let them be furnished to me as equipment of imperishable arms,¹⁰¹
 Stones of the slings of spiritual contrivances (*hmaric*)¹⁰² ever
 beside me
 To repel the legion (*zgunnd*) of the evil one.¹⁰³
 90 The attacker that is against me by you, Lord, be repelled;
 For if he rise up against me in war,
 Seeing the city empty of its armies,

- 99 In ll. 78–79 Narekac'i evokes by alliteration (*t' nahnant t' hnarnt t' alman*) the sound of steady spadefuls (cf. Arm. *t' i*, 'shovel') of earth falling upon the coffin whilst the troupe (Arm. *jayd*) of 'mothers of mourning' (*eleramark*) wails.
- 100 The triad may encode Holy Spirit (*hogt*), Father (*hzawr*, 'powerful', and without the *z* the gen. of *hoyr*), and Son (*mard*, 'man'), joined together at beginning and end by *sēr*, 'love' (the latter implicit in the middle member only in the continued alliteration of the *r*, God the Father being the sternest in judgment of the Trinity).
- 101 Arm. *mčark* '... *zōmc*', a pair of loan words identical to the compound expression *sēr abzār* of Pahlavi and New Persian.
- 102 This word has overtones of evil and the magical world: *hmark* are evil spirits who lie in wait under bridges to lure people into the water and drown them – not unlike *Ricakli*, the malign undines of the Slavs, or the *Lorelei* that stalks the cliffs above the Rhine. See J.R. Russell, *Zoroastrianism in Armenia* (Harvard Iranian Series, 5), Cambridge, MA: Harvard University Press, 1987, p. 456 and note 177.
- 103 The association of the forces of evil with darkness, and their description as 'legion', are standard features of Christian demonology, and their appearance here is to be expected. Such characterizations are as old in Armenia as Christianity itself: The demons routed by St. Gregory the Illuminator when he destroyed the Zoroastrian temple at Aštisat are called (Arm.) *sewagund*, 'black legion', by Ps.-Yovhannēs Mamikonean in his *History of Taron*. See J.R. Russell, 'Truth Is What the Eye Can See: Armenian Manuscripts and Armenian Spirituality', in T. Mathews & R. Wieck (eds.), *Treasures in Heaven: Armenian Art, Religion, and Society*, New York: Pierpont Morgan Library, 1998, p. 161, note 15 (=AIS, p. 923).

And the sentries warning of the fight bereft of their voices,¹⁰⁴
 I have you, Lord, as an eternal and unslumbering protector
 (*pahapan*).¹⁰⁵

5.

- 95 For if even now, earlier hastening forth than the day of fulfillment
 Death's scourge prepare for me a place of confinement (*argelan*)
 with no path [out] (*anšaviš*).¹⁰⁶
 I dispatch the dominical prayers towards him,
 And if he contrive to strike me down,
 Then may my fall be a genuflection to the Maker.
 100 If a hand make me fall into the ash of earth,
 Then may the impress of the face of God upon the same repel him.
 If he contrive for me the hard labors of pains,
 Then may the fecund (*yivt'i*) sweat, with blood compounded,¹⁰⁷
 Of the Saviour of the world cause him vexation.
 105 If he take hostage my breath away from running to do good,
 Then let the bonds (*kapank'*) of the Creator of all release
 (*arjakesc'ē*) me.
 If he force me to renounce the gifts of the light,
 Let the patience shown to abuse by God's enemies
 Silence (*karkesc'ē*) those same, along with him.¹⁰⁸
 110 If he release (*arjakesc'ē*) against me the strikes of arrows of
 weapons drawn in secret,

104 Arm. *ēw zardolakanac' n gorci apvjaym*. Here I take *gorc*, 'work', as a calque on Pers. *kār* in the sense of 'war'.

105 God is the never-sleeping guardian of Israel; cf. Ps. 121 (Arm. 120).

106 In Chap. 2, Narekac'i speaks of the *amemagraw nlin soskali*, 'the awful road that takes all' upon which the soul must set forth at death, hoping that an angel of God's peace will meet him there.

107 Ll. 102 and 103 appear to contrast the sweat of hard work – the curse put upon the sons of Adam – with the blood of our Saviour in Gethsemane.

108 The reference to the bonds (*kapank'*) of Christ, which are endowed with positive powers to release one from the magical *kap*, 'binding (spell)', leads the poet to imagine the imposition of the *lezvakap*, 'tongue-binding (spell)', often mentioned together with the general *kap* in our MS and elsewhere. On releasing a bond (Arm. *arjak-*, l-w from Arab., (*x/h*)*al(a)s-en*) see note 17 above, on Arm. *xalrelay* and its use in the Armeno-Turkish version of Ps. 91. It is noteworthy that in the Narek, *arjak-* is used in a positive sense, in connection with Christ, and in a negative sense, of the arrows of the enemy (line 110) – another example of Narekac'i's rhetorical oppositionalism.

- Let the trap of the contrivances (*hmaric* ') of the bow (*alelan*) of the glory of the Father from his quivers meet the same.¹⁰⁹
 If in the mask of light of the tenebrous one he come shameless into my eye's sight,¹¹⁰
 May the striking of his head wrapped in its cowl
 Torment him till the fullness of all.
 115 If he stray to bind the sureness of my hands,
 May the reed offered to the right hand of the Creator of being
 Torment and muzzle him.¹¹¹
 If he mock¹¹² me with the strokes of contempt,
 Let the forbearance of ridicule by the Omnipotent deride him.
 120 If by some spells (*bžžanawk* ') of talismans (*yurt* 'ic ')¹¹³ he craftily
 bewitch (*kaxardel*) me,

- 109 The magical associations of the bow and arrow are extremely ancient. In passages of the Zoroastrian hymn to Mithra that evidently are derived from older spells, Yašt 10.20–24, the god repels the worshipper's enemy, stops his horses and chariots, turns back his thrown spear and keeps him from hitting 'with thrusts of far-flying arrows' (Av. *nōt̥ t̥haōš para paθivatoš ava aθnaōti tanuaoγō*); see Ilya Gershevitch, *The Avestan Hymn to Mithra*, Cambridge, UK: Cambridge University Press, 1967, pp. 82–85. In Islamic magical MSS, a drawing of a small bow often concludes the text of a spell; a tiny drawing of a bow follows the word for bow in the admonition to Sts. Cosmas and Damian, *k'ašec 'ēk' alelu hrešēnt*, 'Draw ye the bow of fire', on p. 30 of our MS. Arrows are mentioned in Ps. 91:5 – the Psalm employed in exorcism. See the comment *supra* on *kap*. The bow here may also be the bow set in Heaven by God for Noah as a sign of the first covenant with man, after the Ark rested upon the mountains of Ararat (Gen. 9:13, 14, 16).
 110 Presumably, Lucifer.
 111 The reed offered in mockery as a scepter to our Lord by his tormentors here becomes the magic wand of a magician releasing a man from a spell's paralyzing effect. The other incidences and instruments of the Passion are enumerated in the lines following.
 112 In Arm., the (*xel*)/*katak*, clown or jester, is condemned as a bearer of satanic and pagan falsehood in the sermons attributed to the fifth-century Catholicos Yovhannēs Mandakuni (though probably three centuries newer).
 113 The *locus classicus* in Armenian literature for this word is the myth of Ara the Beautiful in Movsēs Xorenac'i, *History of the Armenians*, I:15–18: Queen Semiramis (Arm. Šamiram, Akkadian Šammuramat) tried to revive the dead Ara by sorcery (*dhot* 'ut 'eamb vhušut 'ean) but later threw her magic implements (*zyuwt* 's), which were beads (*alunk* '), into Lake Van – a short distance from the hill where Narekavank' was to be built, so this is a local legend that Gregory could easily have known. In Chap. 93:18 (*M*, p. 632), he hails the holy chrism as *xap'aušē' yurt* 'ic ' , *k'aktiē' huayekac* ' , *nahanšic* ' *jetnacnac* ' , *xaytar'aktiē' kaxardac* ' , *gšid* ' *alawdic* ' , *hpnaxoyean dhnac* ' , 'canceller of charms, destroyer of spells, banisher of conjurers, disgracer of witches, discoverer of heresies, strong opponent of demons' (*knayekac* ' is the *lectio difficilior* but probably an original scribal error). In

- Let the slap to the face of mighty God
Mightily shame him.
If at the gloom of nightfall
He strive against me, emboldened to deceit by the dark,
125 May he be disgraced, O Lord, by the rays of light of your
appearance.¹¹⁴
If by the trials of the midday heat
The destroyer on the hot wind, who incinerates with sun-flare,¹¹⁵
Think to shake me from my roots,
By the power of your Sign (*nšaniḏ*) of light,¹¹⁶ may he be torn up
and wither.
130 If he contrive to render me barren of the breath of grace,
Then let the spittle that the Lord of the Cherubim accepted with
me, a sinner,
Rebuke him.
6.
If he bare to me devouring fangs,¹¹⁷
May the silence of the mouth of the heavenly one strike him dumb.

75:10 (*M*, pp. 552–553), the *yur'ut'k'* are not little talismans fingered by witches, but the stuff of idolatry itself – the steles or statues (*arjank'*) of demonic deception (*dīwaparār*). These idolatrous steles are to be contrasted to the stele of the Cross-stone (Arm. *xac'k'ar*), the *mah-arjan*, 'grave monument', that St. Gregory intends his own book to be. Realia of the Van region may have inspired this conceit: Steles inscribed in Urartean cuneiform, as well as the huge, cigar-shaped *višap* ('dragon') stones, were re-used by Armenians as *xac'k'ura*.

- 114 Chap. 12 of the *Narek* is often employed as a talismanic prayer to protect the home at night. See J.R. Russell, 'Grace from Van: A Micro-Historiola', *Journal of the Society for Armenian Studies*, 7 (1994), p. 42 (= *AS*, p. 616).
115 Cf. Ps. 91:6: *Midever bā'ofel yahalokh, miqetev yāšād pāhārāyim*, rendered in Armenian (Ps. 90) as *Yirē (!) or šrji i xawari, i kayē'akht' enē dīwān i hasarak anur*. Biblical Heb. *dever*, here misunderstood as *davar*, 'thing', and translated into Armenian as *ir*, is of course 'pestilence'; see Karel van der Toorn et al., *Dictionary of Deities and Demons in the Bible*, Leiden: Brill, 1995, col. 438 f.
116 That is, the Cross: Cf. line 143 and the note there. *Via Crucis, via lucis*; but Armenians regard the Cross as literally luminous: Images of the Cross often depict not the body of Christ, but a sunburst (*čac'and'*) at its centre. Christ himself is regularly hailed in the Hymnal as *aregakti ardarut'ean*, 'Sun of righteousness'.
117 Arm. *Er'ē žanik' caxoḏk' inj c'uc'awic'ē*: Some MSS have *xacoḏk'*, 'biting' (*M*, p. 1076, note), which is equally apposite (and cf. *xacmouts* two lines down!), since the devil and his minions are generally likened to ravening beasts (Arm. *gazan*, 'beast', is itself a loan from a Mlr. act. part. meaning 'biting, stinging', and the

- 135 If he sway my soul with sweet bites,
 Let the blows to the nails hammered into the Maker of all from
 naught¹¹⁸ grieve him.
 If he make me stray into the paths of iniquities of thoughts,
 Let the nails driven into the feet of the unapproachable One bind
 him (*kapesc* 'ē).
 If he give me abominable potions of attraction to imbibe,¹¹⁹
 140 Let the vinegar mixed with gall given to the beneficent One to drink
 Embitter him.
 If he discover me by the first tasting of the tree,
 Then let him be utterly condemned, encompassed by the awful
 mystery of the Cross.¹²⁰
 If to be stiff-necked against obedience
 145 To the command of the Lord he teach my soul,
 Let the burden carried by the neck of the undefinable One destroy
 him.

association is as much Zoroastrian as Christian, and indisputably more anciently so). However with the act. vb. one would expect an acc. pl. *šanis xacotē*; so the MS tradition probably reflects a late misunderstanding of the ending -k' as the nom. sg., perhaps of a *pluralis tantum*.

- 118 Arm. *hastol būnēc*: *būn*, 'basis, essence' (cf. Mlr. *būn-dahēn*, 'creation'), in the inst., means 'at all', in modern Arm. with the overtone of a negative. Taken as a substantive pl. here and elsewhere by Narekac'i, it could have the overtone of creation *ex nihilo*. It would be enticing to surmise that the Arm. usage retains an echo of the Phl. sense of *būn* in the specific context of the Zoroastrian cosmogony. One recalls that Gregory was writing scarcely a century after the Pahlavi *Zand āgādh*, or *Bundahīšn*, had been written in the form that has come down to us.
- 119 Arm. *šrapoyr*(k'), 'charm', here as a magical potion designed to affect the victim given it to drink. The term appears in Agathangelos, always with the sense of misleading one towards an evil act; E. Benveniste, in 'Études iraniennes', *Transactions of the Philological Society* (TPS), 44 (1945), p. 73, derives it from Mlr.: Olr. **fra-pawda-*, 'attract', verbal base **pād-*; cf. Pth. *pōd-*, 'marcher, courier'. Perhaps this is also the derivation of NPers. *frōyān*, 'deceive'. It is somewhat ironic that in latter centuries people variously afflicted might be given to drink water in which a page of the *Narek* had been dissolved.
- 120 The wood of the Cross, called in aretalogies the *p'ayt kenac*, 'Tree of Life', is traditionally believed to have come from a tree grown outside the walls of Jerusalem (where the medieval Georgian Monastery of the Cross now stands, in the valley below the Israeli Knesset) from a seed of the tree in Eden where the first human couple sinned. Here the pattern of standard Christian typology, in which divine economy makes an evil thing into an instrument of good, reinforces Narekac'i's own thematic strategy.

- If he vanquish and wound me with death and perdition,
 Let the hard lance,¹²¹ the weapon penetrating
 The side of the Creator of Adam, repel him.
- 150 If he surround me with the pangs of hellish griefs
 Let the cloth of the winding sheet of Him who holds existence
 contain him.
 If he contrive wickedly to observe me upon death's floor,
 Let the dwelling of the living One in the rock of death slay him.
 If he laugh aloud at my human failing,
- 155 Let him be lost again, impotent in will,¹²²
 When the undying God, risen in glory,
 Renews¹²³ with Him all who ever have died.
 If he rejoice at the loosening of slight millennial bonds,¹²⁴
 Let him tremble, stilled again indeed in the final chains
- 160 Of the terror of indissoluble captivity in the severest place of
 unending torment.
 If he labour under the first blow,
 Then let the woe of perdition at the final destruction of
 inextinguishable Gehenna
 That is prepared for him and for his angels,
 Be recounted to him, that is on the great day of the great Judgment.

121 Arm. *hēg*; also called *gelard*, it was kept by the Armenians as a prized relic in the 'Cave Monastery' *Ayrvank*.

122 The Arm. is an alliterative figure, *karkameal kamose*.

123 Arm. *norogean'*, aor. indic., probably a scribal error from original aor. subj. *norogean'ē*, a form indeed found in some MSS (*M*, pp. 857–858).

124 Arm. *Et'ē and lucanel p'ok'r kapanae' hazaramēdic' berkrese't*: The strophe refers, presumably, to the release of the Antichrist from his six-thousand-year imprisonment during the tribulations of the end times. An Armenian employing this chapter for magical purposes would obviously have noted this strophe for its resonance with the magical text *Fēe' hazarean* itself, a version of which is to be found in our MS. In Armenian belief, there are two rather ambiguous apocalyptic beings chained in rock caves till doomsday: King Artawazd, in the chasm of Greater Ararat, at whose chains dogs gnaw; and Mithra the Younger (P'ok'r Mher – cf. Narekac'i's p'ok'r, perhaps an indirect reference to a local epic figure!), behind the blind portal *Mheri durn*, Tk. *Meher kapur*, 'Mithra's Gate' at Van, a few miles from Narekavank' (cf. the Zoroastrian designation of a temple where rituals are performed as Pers. *dar-e Mehr*). The first is known from the *History of Movses Xorenac'i*; the second, from the oral epic of Sasun.

7.

- 165 But as for me, taking my refuge in you, Lord Jesus,
Sole king, monarch, mighty One,
Creator of heaven and earth
And of every adornment therein,
I who await your coming,
- 170 And hope expectantly in your mercy, O Savior,
Fall at your feet and kiss the tread of your footsteps,
Confess my guilt and advertise my sins.
I am pelted with stones of rebuke and scorched by the groans of
my heart,
My conscience is wounded to the quick,¹²⁵ and the acrid smoke¹²⁶
of my breath aflame consumes me.
- 175 I burn with the salt dew of my tears and am inflamed with the
ardour of my vitals.
I dry in air emptied of hope and wither in the bitter blast of the wind,
Tremble with my supplicating word and shake with cries and
groans,
Suffer in severe agony and shiver in my soul's fever,
Rock in a storm of sobbing; and totter, buffeted by waves.¹²⁷
- 180 I am terrified by the fullness of my reputation, lost in the memory
of terror.
I melt at the images of the judgment and die at your threats, great
One:
Hear! You of multitudinous mercies, atoner, lover of mankind,
generous One,
Ineffable sweetness, day of grace and longed-for dawning,
For you are capable of every thing.
- 185 Of great salvation even at the departure of my last breath.
And to you with the Father, by your Holy Spirit, glory eternal.
Amen.

125 The Arm. is an alliterative figure, *i xēt' xēlīs xoc'otim*.

126 Arm. *čēnčēr* refers to the acrid, thick stench of burning flesh: In the first chapter of the *Matean*, St. Gregory contrasts this unpleasant odor of the sacrifices rejected by God to the incense-like aroma of a prayer received in heaven.

127 Chap. 25 expands upon this image of the soul as a ship imperiled by a storm. See J.R. Russell, 'A Shipwreck Awesome and Marvellous: Chapter 25 of the Lamentations of Narekatsi', *Raft: A Journal of Armenian Poetry and Criticism* (1988), pp. 57-63, reprinted in *AIS*.

The recitation of Chapters 27 and 89 of the *Narek* is recommended in an Armeno-Turkish text on p. 6 of our MS. The number nine is stressed in the magical practice: a text is to be read nine times, or ninety-five; one chapter is to be recited eighty-nine times; the other, the even more potent 27 (= $3 \times 3 \times 3 = 3 \times 9$). The Slavonic adaptation of the treatise on poetic figures by the Byzantine author Choïroboskos contains 'definitions, subdivisions and illustrations of twenty-seven fundamental poetic devices: three to the third degree – the Triple Trinity': Russian MSS beginning with the Codex of Svyatoslav of 1073 contain that text,¹²⁸ and perhaps the rhetor Narekac'i knew of it as well. At any rate, he stresses his numeration (*zdrut' hwn t' uoc's yarmarec' i*) in line 2 of Chap. 27.

CHAPTER 27

Again, an addition to the same supplication of a chapter of prayer, of the repeated lament of the same vigilant one.
From the depths of hearts, speech with God.¹²⁹

1.

And since to the poems in a voice of lamentation offered above
I harmonized the placement of these numbers,
Moans and sobs, groaning with cries,
A crying of bitterness and a song of tears,
5 I shall begin again this oration of supplications
In the manner of a confession, in a mode of penitence,
Declaring in plain speech what is hidden in concealment,
For by beginning referring back, and by words conclusive,
The same style unified into one plea of prayers to the same One
10 For soul-sustaining humility shall I here set down.

128 See Roman Jakobson, 'The Puzzles of the Igor' Tale', in idem, *Selected Writings*, IV: *Slavic Epic Studies*, The Hague: Mouton, 1966, p. 382.

129 *M*, pp. 349–352. The chapter sometimes bears the heading *Melanac' n*, 'The one of sins'; and accordingly Erevan, Matenadaran, MS 5650, fol. 362a, notes with reference to line 6 that this chapter is a point of transition: *mine' e' ayžu olbaverēn asac' i, ard p'oxem zbars xostovanarēn, zi mela-n xostovanut' hwn ē*, 'till now I spoke in the manner of a lament; here I change my words to the form of confession, for "I have sinned" is confession'. The Armeno-Turkish text in our MS similarly calls this chapter *Melay p'ox*. Its overtly repetitive character as a confessional litany suits it well to the kind of self-hypnosis required by the magical rite.

2.

I have sinned against your great beneficence, I, unworthy, have sinned;

I have sinned against your dawning rays, I, the dark, have sinned;

I have sinned against your grace of uncountable bounties, truly I have sinned;

I have sinned against your love of supernal mercy, I have openly sinned;

15 I have sinned against you who received me out of nothingness, verily I have sinned;

I have sinned against your supreme caresses' encompassing embrace, endlessly I have sinned;¹³⁰

I have sinned against the enjoyment of your undimming light, I, the deceitful, have sinned;

I have sinned against the tasting of your ineffable life, I have multiply sinned;

I have sinned against the free bestowal of your unapproachable gifts, daily I have sinned;

20 I have sinned against your praiseworthy body, O God, to death's measure I have sinned;

I have sinned against your worshipped blood, O Creator, in truth I have sinned.

3.

Behold, verily, blessed is the part of these words

Of a heart placing its hope in this 'I have sinned'.

This is the very precious trust (*awand*), the unforgettable precept,

25 Paternal gift, custom of the primordial fathers,

Provision (*t'adzak*) given to all, irrefutable word,¹³¹

Powerful response, bridge of life,

Savoured by the One on high, beloved of the saints,

130 The Arm. is an alliterative figure: *gerunak gogoyd grganac*."

131 The *awand* or *grawakan* is a thing given in trust: the soul, to the body, for the ten of life, to be returned to its Maker at death. Narekac'i in his prayers often associates this image with the parable in the Gospels of the talent entrusted by a master to his servant. The idea is, thus, that the gift is transitory. Similarly, Arm. *t'adza*, an Iranian loan (cf. Pers. *tdle*), means provisions for a journey – again, with its overtone of transit, of the temporary.

- Bond not to be severed (*anxzeli kap*),¹³² wondrous speech,
 30 Irreversible cause, longed-for petition,
 Desired table,¹³³ heartbroken call,
 Means of impossible things, vanquisher of hardness,
 Definition of the worshippers of God, book for the heathens,
 Canon of olden times, intimate to Christians,
 35 Victorious for creation, mighty bulwark,
 Awful separator, art of the highest,
 Immeasurable depth, vision of rapture,
 Sealed mystery beyond which there is naught for anyone to pass,
 Unless he perceive this one of the swiftness of thought ungraspable,
 40 Fortunate, miracle-bearing voice
 That was not memorialized at the sealing of the final judgment of
 the rank cast away:
 Maybe by the same irrevocably cutting (*xzeal*)
 The vengeful decree against the one reaching death
 From whom election has been revoked as useless,
 45 He will break down the eternal boundary.
 Adornment of the glory of greatness,
 Wherewith He himself, divinity, is diademed in luster!

4.

For who, turning to and taking the horns of this altar of holiness,
 And not for a brief time escaping punishment, was found without
 blemish?¹³⁴

- 50 And if Achan the Zarhite,¹³⁵ Saul of Kish¹³⁶ and Judas son of Simon,¹³⁷

132 For the user of this text for magical purposes, the word *kap*, used of a binding spell, will stand out; cf. the intentional use of it by Narekac'i in a sequence of magical terminology, in Appendix I above. In line 42, though, Narekac'i will employ the same verb *xzem*, 'cut', in a complex passage suggesting that God by His grace can sever for the penitent the very bond of damnation at the Judgement, while similarly breaking down (*k'aktesc'ē*) the barrier between heaven and hell behind which the 'castaway rank' of the rebellious and fallen angels is confined eternally.

133 This presumably refers to the altar on which the body of Christ is offered and taken in spiritual nourishment.

134 Cf. 1 Kings (= Arm. 3 Kings) 2:28 f, on the death of Joab.

135 Arm. Ak'ar Zamrean, in Josh. 7:18 f.

136 Arm. Sawul Kisean, in 1 Sam. 9.

137 The first of these three sinned by theft; the second, by violence; the third, by betrayal: All were caught out and forced to confess their transgressions.

All saying the same, were not justified,
 And I bear witness, truthfully confessing this measure of speech,
 That for those constrained against their will love is not perfected,
 Hence neither is salvation entire.

5.

- 55 But I kiss by my own will, again repeating
 That which is intimate to my own baptism of your happy word:
 I have sinned by forgetting your gifts (*eraxteac* 'd), once more I
 have sinned;
 I have sinned by raising the body's hand against the soul, a fool, I
 have sinned;
 I have sinned in perfidy against your life, verily and verily have I
 sinned;
 60 I have sinned by slighting your word (*apaxt arneloy*), savagely
 have I sinned;¹³⁸
 I have sinned on the day of destruction, by myself compelled, I,
 the meanest, have sinned;
 I have sinned, I who am condemned to a death without revival,
 worthy of castigation, I have sinned;
 I have sinned without feeling rebuke before your highness, I,
 repulsive, have sinned.

6.

- Redoubled spiritual pity be my end,¹³⁹
 65 For it appeared to me for perdition and for destruction,
 For I was routed without the possibility of turning back,

138 The same juxtaposition, as an alliterative and pseudo-etymological figure of *eraxt-* (line 57) and *apaxt-* (presumably understood as *aperaxt*), occurs in the fifth-century *Epic Histories* of P'awstos Buzand, 3:14: *p'oxamak eraxteac'n apaxtis hafic 'ēk*, 'in return for benefit you repaid me with neglect'. Its appearance here more likely rests upon a deep pattern in Armenian poetics than upon intentional borrowing, however.

139 Arm. *axrav*, 'mourning, lamentation, complaint' (Bedrossian); but as the word derives from Pth. *axad*, 'mercy', now cf. also Bactrian *aš(a)ra*, 'grace, indulgence', in Nicholas Sims-Williams, *Bactrian Documents from Northern Afghanistan*, Oxford: Oxford University Press, 2000, p. 184. I have opted for a gentler shade of meaning in the English rendering, as 'pity'.

- For I, the son, was inscribed an enemy,
 For I was cast down from the heights of heaven,
 For I heaped up the tares of my life's harvest.
- 70 And yet more lament with this resounds,
 For I dishonored my self by my self,
 For I was discovered a pagan altar of the destroyer.¹⁴⁰
 Some other grief there is still to my savage heart,
 For they take me for what I am not:¹⁴¹
- 75 An outwardly shapely cup, unclean,
 A whitewashed wall, plastered with dung,
 Adorned in my vain pride,
 My light turned to gloom,
 My eye, carrying its beam, unfortunate,
- 80 My torch of glory put out.
 Harmful am I, in every matter, in all things, in every way,
 Towards the dispositions of the Lord,
 Towards revelations of the divine,
 To the manifestations of the Creator's scripture,
- 85 To humiliations stricken by fear,
 To that which I beheld with my very own eyes,¹⁴²

140 Arm. *bagin*, from OIr. **bagina*-, 'place of the god', is a common designation of shrines of the pre-Christian faith, where images of the Zoroastrian divinities, the *yazatas*, were worshipped.

141 The editors of *M*, on pp. 1025–1026, propose that this is an autobiographical statement. They compare it to Chap. 71, ll. 83–89: 'I am ranked in the circles (*par*; the word also means 'dances') of the meek, and perform the lewd partridge dance (*k'ak'araw*) with demons (*ayrs*); / I am praised by men, but You, who see, condemn me'; and Chap. 72, ll. 62–64: 'I am called a master of instruction (*pet waršic*'; cf. the nearly identical title *wardapet*, a celibate priest of high rank), whilst a prosecutor within myself; / I was named "Rabbi, rabbi!" but to God refuted this praise of mine'.

142 Dr. Xač'ik Rštuni suggests that this passage refers to Narekac'i's vision of the Blessed Virgin holding the Christ Child, above an islet in Lake Van. When she called to him 'Accept thy Lord!' (*Aš xTēr k'o*), he replied: *Aš, Tēr, zayn lu*, 'Take, O Lord, my soul!' Popular etymology and tradition explain thus the name of *Aštēr* island; on this legend, see Russell, 'The Shrine' (above, note 89). The editors of *M*, on p. 1026, cite this tradition, as well as another according to which Mary appeared to him in his cave and told him who she was. Since he doubted this, she returned the next day with Christ in her arms. The saint fell to his knees and on the spot composed his famous lyric, *Meledi enulean*, 'Melody of the Nativity': *Aš k'u cov i cov cicalaxit caralanayr yarananum erku p'aylakajew aregakan mian*, 'Her eyes, sea into laughing sea, dilated in the dawn like two lightning-formed suns'. For a translation and study see J.R. Russell, 'A Poem of Grigor Narekac'i', *REArm*

- 90 To which greater is my responsibility,
 Than to all that is the Gospel
 Of marvels and ecstasies,
 Consuming cares, impossible concerns,¹⁴³
 Uncountable enumerations of thoughts,
 Uncompleted departures, uncertain descents,

NS (1985), pp. 435–439, reprinted in *MS*, pp. 31–35. The image is widely diffused through Armenian poetry and is reflected in Alexander the Great's description of his own *ac'ers im covacinal*; see the fifth-century Armenian translation of the Alexander Romance, *Patmut' hyn Alek'sandri Makedonac' woy, haykakim xmbagrut' yomer*, ed. Hasmik Simonyan, Erevan: Armenian Academy of Sciences, 1989, p. 352. Chap. 20, ll. 70–71, may also refer to this vision: 'I even saw you, worrying about me, / Which cannot be written here (*zor d'ē ast greli*), yet I was not ashamed'. Narekac'i, for all his candour about his own failings, shuns mention of the specifics of such experiences, perhaps because they might detract from the pure intentionality of his prayers, in which the soul approaches Christ with only one earthly or historical backdrop: the *Heilsgeschichte* of Scripture. Chap. 2:2, in which Narekac'i prays for God to grant him completion of 'this Book (*matean*) of prayers of Lamentation (*olbergut'ean*) begun', even naming the title of his text (l. 48), includes a powerful litany (ll. 83–93; *M*, p. 252): 'Let it not be for me to labour (*erknel*) and not give birth (*cnanel*), / Lament, and not shed tears, / Meditate (*xorhēf*), and not sigh (*harac'el*), / Cloud over, and not rain down, / Run, and not attain, / For me to call, and for you not to hear, / To plead, and to remain unseen, / To moan (*kolkolēf*), and not to be pitied (*oformil*), / To plead, and not to be helped at all, / To be sacrificed, and not give off smoke, / To see you and depart empty (*zē'ez tesanel ew datark elanel*)'. The various images of trying and not attaining remind one forcefully of the prayer-like Part Five of T.S. Eliot's poem 'The Hollow Men' (1925), where verses of the Paternoster are interspersed between repetitive strophes with the burden 'Between the idea and the reality ... falls the Shadow'. Narekac'i's images of labour and birth, and of rain, may distantly echo the Armenian song of the birth of Vahagn, while the other parallelisms rely partly on semantics and partly on phonetic patternings: *XorHēf-Harac'el, kolkolēf-OLormil*. Though the poet fears remaining unseen by God (*antes ninal*), his greatest fear, kept to the last, crushing line, is to behold God himself and be unmoved by the experience. Since, as seen above, there is every reason to be certain that Chap. 2 was composed for the beginning of the *Matean*, had the author then not yet had his vision of the Virgin and child, as it would overtly seem? Does he deliberately put it in the future, since the rest of the book is still ahead? Or does he anticipate another vision entirely, perhaps in the afterlife? One may exclude the latter possibility, since it seems unlikely that an enfranchised soul vouchsafed the full radiance of the Divine could or would depart from it, much less depart empty. Of the first two suggestions, the former is likely to be right if St. Gregory composed the chapter early in his life and did not reshape it when assembling the prayer book.

[43] Arm. *audac'mmē*, acc. pl. of *audac'mm*, from Mlr.; cf. Phl. *hamdāxtan*, *hamdāz*, 'consider'.

Fitting despairs,
 Suitable rebukes, proper castigations,
 95 Just anathemas, curses deserving to be meted out.
 Now, these are the reproaches against me, a sinner,
 Tortures whose blows I mete out to myself.

7.

And since you can forgive all these debts
 And cure all the stings of death,
 100 Lord of mercies, God of all,
 Christ the king, Son of the lofty Father,
 Creator, merciful, beneficent,
 Blessed, munificent, rich,
 Awesome, mighty, compassionate,
 105 Guardian, helper, sustainer,
 Reviver, curer, restorer,
 Generous in thought, never vengeful, refuge,
 Physician, praised, heavenly,
 Ineffable, light, life,
 110 Resurrection, renewal, repentance.

8.

If you look in your love of mankind,
 According to which are your accustomed ways,
 Looking at you, I cry.
 If you hear, I sigh.
 115 If you bring your ear close, I plead.
 If you heed, I petition.
 If you pardon, I beg.
 If you turn to me, I praise you;
 But if you leave me unseen, I am ruined.
 120 But if you despise me, I weep;
 If you do not grant me sustenance, I die;
 But if you show your awful face, I am slain.
 And if you chastise me, I tremble.
 If you look at me with aversion, I am terrified;
 125 If you are severe, I am frightened.
 If you banish me, I groan;
 If you beat me down, I am rejected;
 If you take not the flame of my despair, I am fevered;

- If you are angry, I flee.
 130 Then if you threaten, I fall;
 If you examine, I am fit for stoning;
 If you scrutinize, I plummet.
 If you do not preserve me, I am cast out;
 If you do not summon, I am held in distrust;
 135 If you do not fix your eyes on me, I am abashed;
 If you give voice, I fear –
 Having betrayed the gift of good,
 Abandoned beatitude,
 Deserted grace, scattered the covenant,
 140 Forgotten the life entrusted,
 Lost the certainty of courage,
 Enraged you, creator of my essence,
 Despised the ineffability of your grace,
 And distorted the likeness of honor.
- 9.
- 145 But if to this death-choked cry of pain
 You arrive to me, in love of man, Lord Jesus Christ,
 To be fullness in me of the Scripture proclaimed;
 If healing bring a halt to the mightiest sins,
 Whereby in most abundant sweetness conjoined to you
 150 Your likeness of light on the spirit portrayed,
 Again found, I will be strengthened, atoned for and remade
 For the salvation of immortal and incorruptible life:
 And to you, with the Father and your Holy Spirit glory forever,
 Amen.

CHAPTER 89

Again, an addition to the same supplication of a chapter of prayer, of the repeated lament of the same vigilant one.
 From the depths of hearts, speech with God.

- God and Lord, life and maker,
 Merciful, compassionate, light, generous in thought,
 Never vengeful, loving mankind, most pitying, giver of gifts,
 Savior, blessed, praised, glorified,
 5 Strong fortress, secure rampart,

- Goodness without deceit,
 Beam of light without darkness,
 Atoner of sins, healer of wounds,
 Contrivance of impossible things,
 10 Tangible of things unapproachable,
 Escape from hopelessness,
 Your name is confessed as the Son of God,
 And to your Father with you, powerful and awesome,
 And to your omnipotent Spirit and to you, to whom I bow down,
 15 Glory and worship of thanksgiving forever,
 Amen.

APPENDIX II: MAŠTOC⁴ THE MAGICIAN

Maštoc', His Milieu and the Creation of the Armenian Alphabet

The late Prof. Morton Smith of Columbia University wrote a book, *Jesus the Magician*, in which he sought to situate Christ in the context of contemporary thaumaturgists. Since many of the latter were mountebanks and quacks, there is some irreverence, no doubt intentional, in the author's choice of the title of his book.¹⁴⁴ More importantly, Smith's study underscores the need to understand the place of a literary work or other creation of the intellect in the culture and thought of its time. In the following pages, I explore the relevance of late antique esoterica to the appreciation of St. Mesrop Maštoc', inventor of the Armenian alphabet, and to the manner in which Anania of Širak (Širakac'i) employed that alphabet. In particular, I am interested in the

144 Morton Smith, *Jesus the Magician: Charlatan or Son of God?*, San Francisco: Harper & Row, 1978. Prof. Smith's scholarly and popularizing books on Clement of Alexandria and the 'Secret Gospel' of Mark (both published in 1973) suggest there may have been amongst some early Christians a belief that Christ had initiated young male disciples into the mysteries of the kingdom of Heaven by having sex with them overnight. The publications created a scandal that has not abated; even after his death, some writers have accused him of forgery – of faking the Greek document he translated and of intentionally misleading his colleagues, out of resentment, malice or playfulness. Prof. Guy G. Stroumsa, who edited *Morton Smith and Gershom Scholem: Correspondence 1945–1982* (Leiden: Brill, 2008), observes that Smith approached his old and revered friend in Jerusalem in private letters with candid, searching questions about aspects of the text of the 'Secret Gospel' over many years. He concludes, persuasively, that this rules out imposture. None of this means that he did not necessarily want *épater les bourgeois* – but that can be accomplished rather easily with facts.

genesis and meaning of the mathematical table based on the number 6,000, attributed to Anania, that forms the basis of the heterogeneous magical texts called *Vec' hazareak*, a fairly long version of which is in MS 10558. In addition to Manichaean and Indian considerations, I will investigate in particular a roughly contemporary Jewish work, the *Sefer Yetsira*.

The life of Maštoc' has hitherto been studied mainly in the context of Christian hagiography; it was the genre his disciple, Koriwn, would have known best and considered suitable to employ in his encomiastic 'Life of Maštoc'', the *Vark' Maštoc' i*. Most studies of the alphabet Maštoc' invented to write Armenian have tended, correspondingly, to look westward to Greek and Christendom, seldom southeast to Syria and Iran, and never to pagan magic, Manichaeism, Jewish mysticism and science. However, Maštoc' fits poorly into the Procrustean bed of sainthood: Though he was guided by divine inspiration, he did not perform miracles, nor was his earthly career 'perfected' by martyrdom at its end, though Koriwn pointedly calls him a 'perfected man' (*ayr katareal*) – a term replete with meaning for early Christians, with their concept of the *theios anēr*, the godly or divine man. Of course, Maštoc' was a preacher, liturgical poet and theologian, but it was the invention of a new alphabet and the immediately following creation of a school of translators (collectively canonized by the Armenian Church) that was his great achievement.

Maštoc' had learned Greek as a boy and then served as a secretary in the chancellery of the royal court – a job that would also have required some proficiency in Middle Persian and Syriac. One thinks of St. Augustine's housemates of a century before, ambitious young men on the make in the imperial service. Maštoc' was also a well-trained soldier. He subsequently left secular life 'for the service of God, Who loves mankind', becoming an effective and charismatic preacher, and at the end he practiced *askesis*. But that seeming trajectory of the early Christian warrior saint or anchorite – the successful career of service, followed by retreat from the world or martyrdom – is deceptive. Maštoc' embarked upon the religious life in the company of pupils and founded a school. He did so not to dedicate his days to worship, but for the practical purpose of creating an alphabet for Armenian and translating the Holy Scriptures and other books of immediate need into the language. He secured royal patronage for his project, and this suggests political acumen, not otherworldliness, especially in an age when acrimonious relations between Armenian divines and their secular lords had become a *topos*. When he had accomplished his mission, he returned with the goods to the capital, Vałaršapat, rather like a modern academic after a productive sabbatical term. Though he settled down to dwell in a cave, he never retired from his work.

Maštoc⁴ created the alphabet through a mixture of research, linguistic acuity and inspirational vision achieved through mortification of the body. But he was an aesthete, too: He evinced a sensitivity to design, as he sought to create a type of script with the *gravitas* of the best imperial epigraphy and a Greco-Roman appearance. This shows that the subtleties of political thinking at court had not deserted him.

In order better to understand this most important of men in Armenian history, it is necessary to construct a picture of his intellectual context beyond the customary *topoi* of the genre of hagiography. Thus, one seeks to locate in his era a type encompassing callings that may now seem somewhat incongruous: religious practitioner and mystic, linguistic scientist and *mathematicus* (magician and mathematician – in antiquity, the two were often considered identical). Such a type exists in the Pythagorean who was also a kabbalist, the linguist who was also a mystic, shaman and magician. By examining aspects of the proto-kabbalistic *Sefer Yetsira*, 'Book of Creation', with its linguistic and cosmological theories, and the mathematics of the Pythagorean school, I will try to enlarge the scene within which the intellectual activity of Maštoc⁴ is to be viewed. Then we will observe some of the inner workings of his alphabet through the eyes of the man who was perhaps his sole intellectual equal and kindred spirit in ancient Armenia, the seventh-century *hamarol* (*mathematicus*), astrologer, astronomer, theologian and preacher Anania of Širak.

Without Maštoc⁴, it is most unlikely that Armenia would have endured as a Christian nation, or perhaps even as an ethnic entity at all. The fourth century and much of the fifth witnessed a struggle between forces that were often rather evenly matched: Iran and the ancient traditions (*hayreni awrenk*) of better than half of Asia, as against the Roman Empire and Hellenistic culture, with the developing Christian civilization of the Mediterranean basin. In the fourth century, many Armenians were abandoning Christianity. The *naxarars*, or hereditary dynastic houses, were divided on the new faith, a division that persisted through the mid-fifth century, as Elišē vardapet's list of the opposing parties in the war of 451 shows. Either way, the Armenians would have been partially or wholly assimilated into a larger, metropolitan culture – as the Phrygians and Cappadocians were Hellenized, and the Parthians and Medes, Persianized. The creation of a script, the swift transformation of a highly developed oral literature into a sophisticated, scholastic written one, the translation of a critical mass of texts and the rapid shaping of an indigenous corpus, gave the nation, in essence, an impermeable cultural self-sufficiency. The same factors also decided Armenia's paradoxical fate: to survive and to stand alone, not only as a Christian island in the rising Muslim sea, but also as an isolate in the Christian *oikoumene*.

In all these respects, Maštoc' completed and augmented the missions of the Apostles and of St. Gregory (insofar as one can glean something of historical value about them out of a mass of mythological storytelling). The legend of the latter seems to have taken shape only around Maštoc's time.¹⁴⁵ And if, as I have suggested, the name of Maštoc' means 'good tidings', from a Middle Iranian form deriving from Avestan *mīzda-*, 'recompense, reward', then he may stand behind the mysterious Messenger of Good (Tidings), the Agathangelos, whose *History* gave literary shape to the legend of the Illuminator, relocating the Cappadocian missionary in the context of the royal Armenian Arsacid epic.¹⁴⁶ But this hypothesis cannot be conclusively proven on present evidence; nor do we know what the name Mesrop means or why it was later added to Maštoc'. Perhaps it is, via Greek *mastoubios*, a secondary deformation of his original name, or else it is a reverential epithet from Syriac. If Maštoc' was the Mastoubios to whom Theodore of Mopsuestia dedicated his work refuting Persian 'magic' and religion,¹⁴⁷ then we may at least suppose the interests of

145 The Armenian legend of an Apostolic mission is early, allowing for its recasting by the Manichaeans: See J.R. Russell, 'A Manichaean Apostolic Mission to Armenia?', in N. Sims-Williams (ed.), *Proceedings of the Third European Conference of Iranian Studies*, I, Wiesbaden: Reichert, 1998, pp. 21–26, reprinted in *AIS*, pp. 893–898. It also absorbed aspects of the Armeno-Alan epic cycle of the Artaxiad era: See J.R. Russell, 'Scythians and Avesta in an Armenian Vernacular Paternoster and a Zok Paternoster', *Le Muséon*, 110 (1997), pp. 91–114, reprinted in *AIS*, pp. 785–808.

146 See J.R. Russell, 'On the Name Mashtots', *Annual of Armenian Linguistics*, 15 (1994), pp. 67–78, reprinted in *AIS*, pp. 597–608: from an Iranian form; cf. Av. *mīzda-*, 'recompense, reward' (with Gk. *mīsthas*, OCS *m'zda*, Rus. *mešt'*, vozmezdě, etc.), Phl. *mīzday*, NPers. *mōzda(-gan)*, 'good tidings', with an Arm. ending *-ots*; and the name is attested also as *Mašdōc*. As Artashes Martirosyan reminded us in his important monograph *Maštoc'* (Erevan: Academy of Sciences of the Armenian SSR, 1988), the image of the Illuminator in the *History* of the Agathangelos is late and largely a construct of legend. And one may add to this, following the insights of Prof. Nina Garsolian, that the legend belongs to the corpus of Arsacid epic. Martirosyan derives the name from Iranian *mazda-*, 'wisdom', the second word of the name of the Zoroastrian Creator God, Ahura Mazdā, 'Lord Wisdom', Arm. *l-w* Aramazd. But a change of *z* to *zh* is not found in other attestations of a theophoric name with this element: (Atr-)Ormīz, Hořmazdyar, Mazdak, etc. (For further epic aspects of the legend of Tiridates the Great in particular, see J.R. Russell, 'The Scepter of Tiridates', *Le Muséon*, 114/1–2 [2001], pp. 187–215, reprinted in *AIS*, pp. 1135–1163.)

147 *Peri tes en Persidi magikes*, 'Concerning the Magic in Persia', epitomized by Photius and possibly enlarged by Maštoc's pupil, Eznik Koghbaç'i, in his own work *Elc ałandoc* ('The Refutation of Sects', also called *De Deo* in recent scholarship,

Maštoc' himself to have included such matters. Since Koriwn reports that he evangelized backsliders from the Christian faith in the region of Golt'n, some practical knowledge of Iranian beliefs would have been useful for polemical purposes, since some kind of Zoroastrianism was undoubtedly what the poor souls were sliding back into.

As for the hagiography written by his pupil Koriwn, its genre is hybrid, and the division of its chapters bears the unusual term *elanak* ('mode'¹⁴⁸). Comparisons of the inventor of the Armenian alphabet to Daniel and Moses adhere to the usual rule, formulated by Abraham Terian, of 'Armenian X is better than the non-Armenian precursor Y'.¹⁴⁹ The flattery is pleasurable and ingeniously formulated, but perhaps Koriwn also betrays a fundamental uncertainty about the category to which his hero should belong. Moses received tablets – in modern Armenian sculpture and painting, the 36 letters of Maštoc' replace the Ten Commandments, on one round-topped tablet, though they could have evenly occupied two, with 18 characters apiece – and Daniel read a divine inscription on a wall. Moses beheld the wicked impiety of the Israelites and smashed his stones; Daniel read a cryptic sentence of doom. By contrast, the Armenians greeted Maštoc' with holy reverence; his letters clarified rather than obscuring; and the message they spelled out brought good tidings (cf. Agathangelos!), not evil ones. But both Moses and Daniel were obedient servants and messengers, as saints should be; and neither was the inventor of a system of writing. There is no such person, no such inventor, in Scripture – but

which I think misses the essentially practical, polemical purpose of the treatise). See R.C. Zaehner, *Zarvan: A Zoroastrian Dilemma*, New York: Biblo & Tannen, 1972, pp. 419–420. The Persian religion is magical in the circular sense that its priests were the Magi, after whom magic was named, though what were then termed 'magical practices' were largely alien to Zoroastrian doctrine, which is ethical and does not countenance the selfish manipulation of nature for personal gain, far less – with its uncompromisingly dualistic abjuration of demons – any truck with supernatural maleficence. The Persian nocturnal rites involving blood and *omous* mentioned by Plutarch in *De Iside et Osiride* are culturally Iranian but as repugnant to Zoroastrians as the Black Mass is to Roman Catholics. The 'ash trick' (Gk. *planē tōn anthrakōn*) of the Magi of the Byzantine period, with its overtones of sleight of hand, seems rather to reflect the practice still common amongst Parsis of keeping glowing embers in a bed of ash in a fire-chalice (Gujarati *gfar-ganyar*, Pers. *āteshān*) and then feeding them fuel and oxygen to set ablaze the flame needed for ritual prayer.

148 Other early usages for 'chapter' (*kēphalaion*, cf. the literal rendering *ghex*, 'head') include *draug*, 'episode', and *čivl*, 'branch' (in epic).

149 See Abraham Terian, *Patriotism and Piety in Armenian Christianity: The Early Pamegyrics of St. Gregory*, Crestwood, NY: St. Vladimir's Seminary Press, 2005.

the Bible does not concern itself with human creativity in any case. The invention of the Hebrew alphabet is attributed by most scholars to the pagan Phoenicians, about whose ostensible achievement Scripture is silent, despite the appearance there of such Tyrian notables as Hiram and Jezebel. The Greeks attributed the invention of their alphabet to various people with Punic connections – Cadmus and Linus.

The Iranians of the Arsacid and Sasanian periods had writing: It, too, goes back to Aramaic (the so-called *Reichsaramäisch* of the Achaemenian chancellery scribes) and ultimately to the Semitic prototype. But they disliked and distrusted it as harmful to the art of memory and inferior to the actual sound of the chanted sacred word, the *mantra*. The latter, it was believed, possessed an intrinsic power and truth content that the written word, without sound or visible, living speaker, was less likely to have. That is why Armenian, steeped in such pre-Christian tradition, uses the loan *margarē*, derived from Old Iranian **manthra-kairya-*, ‘*mantra*-maker’, for ‘prophet’. So even though Old Persian cuneiform, which is more alphabetic than syllabic (and rather resembles Ugaritic in this respect), is ingenious and suitable to its purpose, it did not come to be widely used, and nothing is known of its creator. It did not endure past the collapse of the Achaemenian state. Instead, Parthian, Middle Persian, Zoroastrian Book Pahlavi and Sogdian employed a far more difficult, heterographic, Aramaic-based shorthand.¹⁵⁰

A much more easily legible alphabetic system invented for the transcription of the holy books in Avestan around the fifth century shows, beyond reasonable doubt, the influence of Armenian. But the use of this superior alphabet was severely restricted to its original, sacerdotal purpose; and

150 An easy example of English heterography is the ampersand symbol ‘&’, which is a rapid cursive form of Latin *et*, but which we read and pronounce ‘and’. In ancient Iran, the king might dictate in Persian to his Aramaic-speaking scribe, who wrote a letter in Aramaic, with some Persian names and terms. The Sogdian or Parthian satrap who received it would have it read out to him, in his own language, by his Aramaic-speaking scribe. Any reader of a Beijing newspaper in Guangdong today is doing the same thing without the middleman. When the Achaemenian empire fell and the scribes went home, their script, and many of their words, remained: imagine a written English in which more than half the symbols were ampersand-like constructions. So in Middle Persian one wrote *lakhmā* and *mukā* but read *mayn*, ‘bread’ (modern Pers. *nān*, Arm. *nganak*), and *šāh*, ‘king’. The oft-heard suggestion that Arabic script emerged victorious in Iran because Pahlavi was difficult makes little sense: The Latin alphabet of English has not replaced Chinese or Japanese Kanji. The decisive factor in the Iranian case was more likely the extreme violence of the Arab conquest and the ruthless totality of the imposition of Islamic rule.

even after the Muslim conquest in the seventh century, when it was used to transcribe some Pahlavi books (this is the so-called Pazand), it still did not become popular. There is no evidence to suggest that the Sasanians, who used heterography, intended to restrict literacy to a priestly caste, as has sometimes been suggested; that suggestion seems to be a corollary of the twin fictions that Sasanian society was priest-ridden and that the Muslim Arab invasion was somehow liberating or culturally stimulating. But the Pahlavi papyri from Egypt and elsewhere were scrawled by soldiers, merchants and administrators, and, except for the latter, few are likely to have been Magi. The Arsacid Parthians had used such a heterographic system, too; and unless the labeling of wine jars in one's cave was an esoteric priestly code, or only certified Magi could write graffiti, the wide usage of that script, beyond sacerdotal confines, is also plain. The Sogdians had no centralized government, never mind a centralized priestly caste: Buddhists, Zoroastrians and others used an old heterographic form of writing like that of Pahlavi or Parthian, whilst Christians and Manichaeans employed the Estrangela Syriac and Manichaean alphabets. And Iranophone Jews used Hebrew script.

One must observe, however, that the alphabet of Maštoc' was so lucid and easily learnt as to become current, widely and instantaneously, across the social and economic boundaries of Armenian society in the fifth century: Soldiers scribbled it on papyri, pilgrims scratched it on rocks. It immediately evolved cursive forms. It became permanently inseparable from the essential components of Armenian identity: Armenian was never again to be written otherwise, and even Armenians who spoke alien tongues used their own script to write them. The overall effect was at least as galvanizing and dramatic as the outcome of the mass literacy campaigns of modern revolutionary societies.

As for the inventors, subsequent to Maštoc', of alphabets for languages employed by Christians, none enjoyed quite the same exalted, legendary reputation with which Armenian tradition swiftly endowed him. Not only did Bishop Wulfila, or Sts. Cyril and Methodius, never found or guide schools to rival the scope of the Armenian Golden Age (*askedar*); but, useful as their Gothic and Slavonic creations were, their receptors also did not face the existential crises that confronted the Armenians, for whom the alphabet and its rapid employment meant national and religious salvation. Maštoc' is not just unusual; he is very prominent and comes at a critical time.

If Maštoc' did not create the Georgian and Ałuan ("Caucasian Albanian") alphabets himself, as Koriwn claims he did, then unknown clerics of those nations simply imitated his model – so closely similar are their systems – and did so almost at once. The shape of the Georgian letters was gradually

changed from forms closely resembling Armenian to a more rounded, cursive style that does not require thick verticals – possibly an accommodation to the styles of writing used by Muslims. The script of the Caucasian Albanians fell into disuse, and no manuscript in it was known until the fortuitous discovery a decade ago of a palimpsest in the library of St. Catherine's monastery in Sinai. These scripts devised for (or by) Armenia's closest Transcaucasian neighbors were not the only ones; as noted above, a fully alphabetic script was invented around the same time in Iran for Avestan. Several striking features of the latter – the doubling of *u* to make the *v*, and the addition of a subscribed hook to lengthen a vowel – were most likely copied from Maštoc's system, where, for example, two *hims* (*w*) make a *vev* (*v*), two *res* form a *ra* (the trilled *r*), and a line added to *ech* (*e*) gives us the long *ē*.¹⁵¹ Maštoc's innovation was so ingeniously useful that it immediately affected every nation, large and small, on Armenia's borders, to the north, east and south.

Where, then, are we to seek the inspiration for Maštoc's invention? Followers of ancient dogmas disliked innovation; and the only thing worse than doing something new was following an evil precedent. So if Maštoc was to some degree inspired by the founder of the Manichaean religion, a creed feared and detested by Christians and Zoroastrians alike as a peculiarly insidious heresy, we can scarcely expect Koriwn or anybody else to mention such an inconvenient influence.¹⁵² A century before Maštoc, the

151 This is not to say that such an approach was unique to Armenian, only that the Armenian case is most proximate to Western Iran. In India, both the Brahmi and Kharosthi scripts, which are also of Semitic origin, attach short horizontal bars to vowels for the purpose of lengthening.

152 The Manichaeans offered a Docetist Christology together with a Gnostic formulation of cosmology that neatly inverted the essence of Zoroastrian doctrine: Mani preached not that a good God was the author of a valid, though defiled, Creation, in which and for the sake of which we are manfully to struggle against wickedness, but that the Creator was a deceitful demon; his cosmos, an intrinsically evil prison; and man's sole possible spiritual masterpiece, escape by means of the acquisition and use of esoteric knowledge – gnosis. This knowledge is esoteric precisely because it is in the interest of the Demiurge that we swallow the lies of the Torah, Bible, Avesta, and so on, and abide as fattened victims of his parasitism and predation. This sort of cosmology is appealing to men embittered by resentment and fascinated by conspiracy theory, never an unusual mix, especially in the Near East. So the teachers of the life-affirming, canonical faiths had their hands full coping with Manichaeism. The word then came to be applied indiscriminately in Christendom to any sort of heretical doctrine; and the same thing happened in Iran and later in the Dar al-Islam, where Arabic *zandīq*, from Pahlavi *zandīg* '(mis-) interpreter', i.e., Manichaean, becomes the brand of every fatalist and freethinker.

religious visionary Mani had adapted the Aramaic alphabet to the purpose of writing Persian phonetically, adding both vowels and new consonants to the twenty-two bare bones of the old script. He did this specifically in order to propagate his new revelations – *evangelyonig*, as they were termed in Middle Persian – through books. He was a masterful politician and a skilled orator. He was also a famous painter in his own right and recognized the efficacy of the illuminated manuscript (his great didactic painting called the *ardahang*, remembered as the *aržang* in classical Persian literature, is lost, though a written commentary on it survives). Manichaean iconography in various media, including codices and scrolls, is very rich.¹⁵³

The Manichaeans, like their Christian rivals, were also most attentive to the advantages the relatively new form of the codex offered over the more cumbersome scroll. Mani addressed two epistles to the Armenians; and other evidence, such as the Manichaean recasting of an Apostolic legend whose locus is a Christianized Armenia, suggests that his movement had considerable impact there. In the legend, the Christian rulers convert to Manichaeism, backslide at Easter, but are returned to the Manichaean fold, thanks to the ministrations of one of Mani's Apostles. In a world accustomed to Christian evangelistic vigor, such vacillations may seem strange; but we know from documents discovered in Egypt that it was not unusual in the fourth century for members of a single family to convert from Manichaeism to Christianity and back again. St. Augustine just did it one way.

Mani's script is written right to left and cursively, with most letters joined – much like later Arabic and Persian-in-Arabic. The horizontals are thick; the verticals, thin. Maštoc', though helped in the actual shaping of the letters by a scribe named Ruphanos, combined artistic and political craftsmanship in much the same proportions as his heresiarch precursor. For Mani's writing system has an 'Oriental' feel calculated to please proselytes in the

Since I am about to propose that aspects of grammar and cosmology in the *Sefer Yetsira*, and, in parallel, in Maštoc's work and its interpretation by the scientist Anania of Sirak, are exotic in the Near East but commonplace in India, it may be apposite to suggest a Manichaean vector, among others. One recalls St. Ephrem, *Contra haereses*, 3:7: *wa-šlat be-Mani, tubbi, šugra de-sin Hindu*, 'And it has attained domination through Mani, again – the Lie, from India'.

- 153 As I have argued elsewhere ('Soteriology on the Silk Road,' lecture at the University of Toronto, 7 October 2005), a funerary bas-relief from the tomb of a Sogdian who passed away in China in the sixth century is also likely to be Manichaean. I believe it depicts the tragic predicament of the soul immediately after death, as described in the funerary hymn cycles *Augud rāšnān* and *Huyōdagmān*.

East; in the West, the Apostle's teachings were transmitted in Latin, Greek, and Coptic anyway. Maštoc', though, was concerned to re-orient Armenia westward in every way, so his letters are written left to right and are not connected. The verticals are thick; the horizontals, thin, just like in the Greek and Latin scripts. Where Maštoc' used the Aramaic letters *yod*, *waw* and *het* to make *i* (*ini*), *w* (*hiwn*) and *x* (*xe*), he attached each to the right side of a thick vertical bar. Thus, Armenian manuscripts have the look and feel of Western Christian ones, and the gracefully spaced, rounded letters of Armenian epigraphy remind one of the finest Greek and Roman official inscriptions.

Predictably, the biography of Maštoc' has nothing to say about any Manichaean precedents; but Mani himself wrote mainly in Aramaic, and that language, especially its Syriac dialect, was well known in Armenia and had long been employed in inscriptions. Some of these might have been heterographic; at the very least, Armeno-Iranian names like Artaxias and Zariadres were transcribed in them.¹⁵⁴ In the Middle Ages and later, one finds examples of Armenian written in Syriac script.¹⁵⁵

The enigmatic 'Danielian' letters Maštoc' examined, and rejected as inadequate, were probably some form of 22-letter Aramaic. The comment of Koriwn that they 'happened to be from other literatures, buried and resurrected' (*yayloc' dprut'eanc' t'alealk' ew yaruc'ealk' dipec'an*),¹⁵⁶ evokes the image of an Artaxiad boundary stone dug up with its Aramaic inscription, containing, perhaps, a transcribed Armenian royal name. Did the finders of such an object then attempt to write Armenian using the characters inscribed upon it? It would seem that this might have been the case. One recalls that the writing style of Hebrew in the learned community of Egypt was affected by the scribal style of the few Dead Sea scrolls discovered around the tenth century. If these had the prestige of sacred texts, the boundary-markers, if such the sources of the Danielian script were, might have reminded Armenians of the legendary archives of the *mehean*-temples of Artaxias I and his successors. At any rate, the late Artashes Mat'evosyan, in his restoration of the correct order of the text of Koriwn's biography, established that Maštoc' himself, with his expert eye, did not experiment with the Danielian script for long, but abandoned it almost immediately.

154 See Russell, *Zoroastrianism in Armenia* (above, note 102), Chap. 3.

155 See J.R. Russell, 'On Armeno-Iranian Interaction in the Medieval Period', in R. Gyselen (ed.), *Au carrefour des religions: Mélanges offerts à Philippe Gignoux* (Res Orientales, 7), Louvain: Peeters, 1994, pp. 235–238, reprinted in *ALS*, p. 593, note 1; and idem, 'The Epic of the Pearl' (above, note 7), p. 1301 and note 67.

156 Koriwn, *Verk' Maštoc'*, ed. Manuk Abelyan, Erevan 1941, § 6, l. 3.

The Manichaean script, however, could have influenced the Armenian researcher. Notably, Mani adopted the Coptic letter *djandja* to represent the sound *j*, which Aramaic does not have, and Maštoc's letter *ē* is the same. To the best of our knowledge, the first sentence written in Armenian was Prov. 1:1, and *ē* was the first letter of its first word, *ēmaē'el*.

Another figure who comes to mind when one considers the life of Maštoc' is that saint of ancient scientists and magicians, the great Pythagoras, the essential features of whose *Vita* come as close as the career of a pagan can to the life of a Christian holy man. He wandered and studied in foreign lands for twenty years, and then lived for some time in a cave, in prayerful meditation. After these peregrinations, Pythagoras founded a school at Croton under the patronage of Milo, the local ruler, where he and his disciples studied the mysteries of mathematics, harmonics and speech. Substitute Syria and Byzantium for Egypt and Babylon; and Viamšapuh for Milo – but save the cave, the disciples and the miraculous insights. There will presently be more to say of Pythagoras.

So if Maštoc' did have technical and literary precursors in the contemporary Near East and the classical tradition, they were rather inconvenient to the aims of Christian hagiography. For all practical purposes he was an innovator, for whom no precise precedent might be found in biblical and Christian tradition. He combined the characteristics of the intense, driven holy man, the visionary, with those of the inspired, creative intellectual, the linguistic scientist. It is an odd combination, but there is a telling though distant parallel in Silas John, the nineteenth-century Apache shaman who saw hieroglyphs in a dream and copied them down upon waking, in order to write down hymns of spiritual power to help his beleaguered nation. In the era and region of Maštoc', the closest one can come to a model that combines mystic and scientist, within the monotheistic religions, is that of the proto-kabbalistic mystic in Judaism. Indeed, one recent scholar has used the model of Siberian and Native American shamanism to reconstruct the character, activities and psychology of the practitioners of ascent to the *Hekhalot*, the divine Palaces, and descent to the *Merkava*, the divine Chariot.¹⁵⁷ The linguistic theories of these prac-

157 See James R. Davila, *Descenders to the Chariot: The People Behind the Hekhalot Literature* (Supplements to the *Journal for the Study of Judaism*, 70), Leiden: Brill, 2001. I am indebted for this reference to Prof. Maria Subtelny of the University of Toronto. She proposes to derive Arabic *Sufi* from Hebrew *tsafe*, 'seer of a vision', and to explain the vexatious term *yerida*, 'descent', by analogy to an Arabic term for the singing of a litany. These brilliant hypotheses, whether or not they are susceptible of conclusive proof, underscore the importance and the

tioners are of particular interest when one seeks to set *Maštoc*⁴ in an intellectual context. They, in turn, have affinities outside the boundaries of Judaism and Christianity with various sorts of magicians, especially those who display Gnostic characteristics; and, farther afield, with the linguistic and mathematical thinkers of Greece and even of Hindu and Buddhist India.

Letters, Sefirot and the Sefer Yetsira

The proto-kabbalistic *Sefer Yetsira*, the 'Book of Creation' (henceforth: *SY*), datable perhaps to the third century CE at the earliest, the sixth at the latest,¹⁵⁸ is an extremely concise work. On the basis of the doctrine that God created the world in ten utterances (Mishna *Avot* 5:1; cf. BT *Hagiga* 12a) – an idea probably Pythagorean in its ultimate origin, reflected in Gnostic thought of the second century¹⁵⁹ – *SY* presents ten *sefirot* that define the universe. The word *sefira* (pl. *sefirot*) appears in this form in the Hebrew language for the first time in *SY*, but its root clearly is *sfr*, from which are formed the verbs *safar*, 'count, number', and *siper*, 're-count, relate'. A parallel to the semantic connection between the two may

prominent visibility of early Jewish mysticism and esoteric learning to the adherents of other religions in the Late Antique Near East. The Jewish theoreticians of divine language and related matters did not operate in isolation: as we shall see presently, there were very close Armenian parallels, though it is harder to say at this stage whether the latter also benefited from interaction and cultural contact.

- 158 Pace Steven M. Wasserstrom, 'Further Thoughts on the Origins of *Sefer Yetsira*', *Aleph: Historical Studies in Science and Judaism*, 2 (2002), pp. 201–221, who argues for a dating to the Islamic period on the grounds that the book would have been anomalous in the intellectual context of the (post-)Second Temple period, while the approach of *SY* to numerology as a key to language is familiar to esoteric Muslim thinkers such as the above-mentioned Brethren of Purity (see above, note 13). But such thought has Pythagorean and Platonic sources for the Mediterranean region that long predate Islam. There are books that are written long before their time, disappear from currency and are 'buried and resurrected', if you will, when the need for them arises and the new religious, scientific or aesthetic context is right. Otherwise what are we to do, postdate Herman Melville's *Moby Dick* by a century, since his contemporaries could not and did not appreciate his epic, as Prof. Francis O. Matthiessen was to do long after the writer's death? Must one further conclude that all texts are in step with their age, and there are none that are anomalous, audacious, unique?
- 159 Cf. the Gnostic ten *logoi*; Hippolytus cites one Gnostic to the effect that the Son of Man is both a monad (literally, the title of an iota, i.e., a Hebrew *yod* – a point) and a decad; see Moshe Idel, *Kabbalah: New Perspectives*, New Haven: Yale University Press, 1988, pp. 113–114.

be discerned in the mention by Movsēs Khorenac'i of Arm. *t'neleac' ergk'*, the 'songs of (re)countings' – most likely historical narratives – of the pre-Christian bards, the *gusank'*. The word *sefira* might have been coined because it sounded similar to Greek *sphaira*, 'sphere', or else the fortuitous correspondence was swiftly noted (and, since the ancients were more craftsmen of the word than systematic philologists in any modern sense, the correspondence might have been welcomed as serendipitous even if it was regarded as fortuitous).¹⁶⁰ For the ancients, whose sense of etymology welcomed the hide-and-seek game of poetics and punning, such a similarity of sound could indicate deeper resonances.

Let us examine the character of the *sefirot* and the qualities and symbolism of the *sphaira*. The word *sefirot* in *SY* is always accompanied by the

160 Gershom Scholem notes that Moritz Steinschneider, in *Mathematik bei den Juden*, argued long ago 'that the original term [*sefira*] acquired its specific kabbalistic meaning as a result of similarity to the Greek word [*sphaira*]'. He insists this has not been borne out, though, and argues that the new term, in place of the expected *mispar*, 'number', indicates not ordinary numbers but metaphysical principles (*Origins of the Kabbalah*, Philadelphia: Jewish Publication Society, 1987, pp. 26–27). It is likely that Gk. *sphaira* is unrelated to Heb. *sefira*. It probably derives from Proto-Indo-European **sp(h)er-*, 'hasten'; cf. Av. (*fra*)*sparaiti*, 'hastens' (Pokorny, *Indogermanisches Etymologisches Wörterbuch*, I, p. 992). In *Odyssey* 6:10, the *sphaira* is a ball to play with (*paizein*); the Pythagoreans and Anaximander, followed by Plato (who first proposes a spherical earth in *Phaed.* 97D), lend the ball a cosmological seriousness. But the adoption of a playing ball is itself interesting. Consider the famous fragment of the pre-Socratic philosopher Herakleitos of Ephesus: *Aion pais esti, paizon, pessonon: paidos he basileia*, 'The aeon is a child playing with knucklebones: the kingdom is of a child' (XCIV, D. 52, M. 93, apud Hippolytus, *Refutatio* IX.9.4). The editor, Charles H. Kahn, understands the aeon to be the period of vitality or of a human life, in which living and dying, youth and age, and sleeping and waking all follow rules of transposition in a kind of board game played with dice (Kahn, *The Art and Thought of Heraclitus*, Cambridge, UK: Cambridge University Press, 1979, p. 228). This ingenious explanation of the hermetically enigmatic fragment perhaps fails adequately to take account of the lightness of this cosmological idea. The whole kingdom, of all time, is literally child's play. Hindu cosmology regards this entire universe and epoch as the game (*lila*) of Rama; the vast epic *Mahabharata*, which chronicles a total war leading to the end of a world, begins with a game of dice. One may see in Herakleitos' dictum, then, not just the idea of a game played with rules, but also the sense that it is just a game, that the veil of illusion should not be taken to be all that serious – or even real. The sphere as the perfect form is also the type and prototype of others, it would seem. Grigoriĭ Perelman, the Russian Jewish mathematician who recently solved Poincaré's conjecture, puts it thus: *Est li trekhmernaya poverkhnost' v chlenno pakhozha na sferu, to ee možno raspavit' v sferu*, 'If a three-dimensional surface is in some respect similar to a sphere, then it can be resolved into a sphere'.

qualifier *belima*, which should signify 'closed' or 'limited' (thus Sa'adya Ga'on, in the tenth century, renders these two words as *a'dad* and *mah-zura*, 'numbers with a limit'), though it has also been understood very often by way of *einheimische Volksetymologie* as *beli ma*, 'without anything', i.e., void, spaceless (like a geometrical point).¹⁶¹ Scholem suggests that the qualifier is a translation of an unidentified Greek term, perhaps *horos*, 'limit'. In Valentinian Gnosticism, the *horos* bears the important mystical name IAO, a Greek vocalization of the Tetragrammaton, God's unpronounceable name in Hebrew, YHWH. Horos/lao is the force that drives Sophia-Akhamoth away from the Pleroma – the true Heaven – when she pursues Christ. Akhamoth is a Greek rendering of the plural of Hebrew *hokhma*, 'wisdom', translating Greek *sophia*. The ten *sefirot* have names, and *hokhma* is the name of the second, which is closest to the first divine *sefirah*, *Keter*, 'the Crown', in the Tree of Life of developed Lurianic Kabbalah. That is, the *horos* is the active being that acts as a definitive limit Heaven, or, in Pythagorean arithmetical terms, the barrier between the first nine numbers and the divine tenth; it could also be visualized as the point at which the sphere of perfection touches the lesser geometry of the world. This cosmological scheme echoes some of the doctrines of Plato and carries over into mediaeval cosmology: At the centre of the cosmos is the habitable world of the four elements.

Scholem understands the *sefirot*, these limited, mathematical quanta of the divine qualities at work in Creation, as 'living numerical beings'. On the style of SY, he offers this summation: 'The author finds concrete and appropriate designations for notions that, until then, Hebrew did not know how to render in adequate terms'. The book, in his view, is a work of Jewish Gnosticism.¹⁶² The *sefirot* in SY represent the ten 'directions' of the universe, the spatial 'infinities' of up, down, South, North, East and West, as well as the temporal directions of beginning and end and the moral ones of good and evil. The ten *sefirot* are presented together with the 22 fundamental letters, which are divided into three primary (*yesod*) ones, seven double ones (*kefulot*) and twelve simple ones (*peshutot*): 'God engraved 32 ways of wondrous wisdom; He created His world in three books: *sfr*, *sfr* and *sfr*'. Sa'adya interpreted the latter as *khata*, *a'dad* and *nutq*: writing, numbers and speech. As we noted above, Maštoc' also constructed the letters of his new

161 A. Peter Hayman, in *Sefer Yesira: Edition, Translation, and Text-Critical Commentary* (Texts and Studies in Ancient Judaism, 104), Tübingen: Mohr Siebeck, 2004, translates *belima* on p. 64 as 'basis'.

162 Scholem, *Origins of the Kabbalah* (above, note 160), pp. 28, 32–33.

script systematically, with a category of perceived phonetic doubles represented graphically as well: the letter v (vav) is composed of two w's (hivv), y (hu) can be seen as two i's (ini), and rr (ra) is made of two joined r's. The second half of *SY* explains the origins of language. The roots of words are the 231 possible two-letter combinations of the 22 letters in the Hebrew alphabet, arbitrarily generated by the symmetrical motions of two wheels. At the conclusion of these revelations, Abraham, to whom they were vouchsafed, understands the secrets, and when he reaches that sublime degree of comprehension, God embraces and loves him. As Prof. Joseph Dan argues in his brilliant summation, the author of *SY* presents his theses with no attempt at revelatory, pseudepigraphic or even hermeneutic foundation in pre-existing tradition. The original text of the book, insofar as it can confidently be established, contains no mention of Israel, or of ritual, prayer or sacrifice; no religious ethics, messianism or redemption; and it refers to no change or purpose in Creation. No human or communicative purpose is essential to the view of language in *SY*. Binary divergences, like the human sexual divergence of male and female and even that of good and evil, are merely the result of a pre-existing structure of duality:¹⁶³ a cosmic binary system!

Dan's apophatic catalogue is chilling, if one is predisposed to view *SY* as a traditionally religious Jewish book. It describes an amoral, mechanistic cosmos. Were it not, indeed, for its assertion of God's existence as prime mover, it would be a nihilistic composition. Abraham appears without any of the spiritual virtues of the heart, the self-sacrifice, obedience, piety and faith that animate his biblical persona; all that matters to God is the Patriarch's intellect. This is not the God whom the biographer of Maštoc⁴ hails as *mardasēr*, *philanthrōpos*, but the God of Spinoza, whose definition rules out love of mankind. However, if one views *SY* as a scientific treatise containing some religious aspects, the omissions are less disturbing, and the book looks more like an exposition of the ideas of *mantra* and *yantra* adapted to Jewish use, with some of the grammatical methods of

163 Joseph Dan, 'The Language of Creation and its Grammar', in Christof Elsas et al. (eds.), *Tradition and Translation: Festschrift für Carsten Colpe zum 65. Geburtstag*, reprinted in Joseph Dan, *Jewish Mysticism, I: Late Antiquity*, Northvale, NJ-Jerusalem: Aronson, 1998, pp. 142–150. Hayman, in *Sefer Yesira* (above, note 161), pp. 34–35, echoes this characterization: In the earliest, and briefest, recension of *SY*, the number 12 alludes to the Zodiac, not to the Twelve Tribes of Israel; and the mention of men and women has to do with humans (*nefesh*), not specifically with Jews. Later recensions contain pious interpolations that bring *SY* into the rabbinic, ethnocentric mainstream.

the Sanskrit grammarian Panini added. These concepts in Indian thought are all related to religion, but can be explicated without reference to it – as science, or magic.

SY seems to have been intended from the start to be put to magical use: According to the Talmud, Rabbis Hanina and Oshaya studied the '*halakhot* [customary laws] concerning Creation' and by means of these created a calf, which they ate.¹⁶⁴ The dual combinations of letters correspond to, describe and have power over the various dual organs of the human body (hands, feet, eyes, ears, nostrils, buttocks, testicles, lungs, ventricles, etc.), even as the Zodiacal signs and hours have power over times and destinies. They can therefore be manipulated to good or evil ends.

There are palpable Indian affinities. The use of sound in *SY* must remind one of the practical exploitation of *mantra*. Prof. Shlomo Pines suggests that there were originally seven *sefirot*, and that the system was modified to ten by the introduction of Indian mathematical ideas; and he determines the classification of the letters in *SY* to be Indian as well.¹⁶⁵ The number ten, *inter alia*, is most significant in the kabbalistic context, where the first of the ten *sefirot* is divine and qualitatively different from the others, and is thus closest to the Pythagorean scheme of the *tetraktys*, where the tenth number of the decad, completing the triangle described by the array of the ten as points, corresponds to divinity. Moshe Idel compares the techniques of visualization of colors, circles and letters employed by later kabbalists in contemplation of the *sefirot* to the Hindu and Buddhist theory and practice of *mandala* ('circle').¹⁶⁶

I would add another consideration from the Indian context to the cosmology of *SY*. Mahayana Buddhism, the kind in currency in Iran, northern India and Central Asia down to the tenth century, postulates a cosmos in which

164 Scholem, *Origins of the Kabbalah* (above, note 160), p. 31, citing BT *Sanhedrin* 65b and 67b. Presumably the calf materialized already cooked, since kindling a fire on the Sabbath, when these meetings are said to have taken place, is forbidden. This would place the legend in the category of St. Gregory of Narek's magical roast pigeons, and similar miracles worked by Jesus and Mohammed; see my Introduction to Grigor Narekats'i, *Matean olbergut'ean* (above, note 89), p. xxi and note 45. Jewish tradition prohibits the teaching of certain topics, including the Work of Creation (*ma'ase bereshit*), to callow youths, lest they fall into esotericism and heresy.

165 Shlomo Pines, 'Points of Similarity between the Doctrine of the *Sefirot* in the *Sefer Yezira* and a Text of the Pseudo-Clementine Homilies', *Proceedings of the Israel Academy of Sciences and Humanities*, VII/3, Jerusalem: The Israel Academy of Sciences and Humanities, 1989, pp. 63–142.

166 Idel, *Kabbalah* (above, note 159), pp. 107–108.

good and evil may be seen as binary dimensions along with the others of the cosmos, since the heavens and hells above the axial cosmic mountain, Mt. Meru, and below this world, which is defined as the clime of Jambudvīpa, are simply the vertical expression of the results of actions in the entire world of contingent being, generated by the acts resulting from the consciousness of sentient beings. However, neither heaven nor hell, neither the bliss of a god nor the anger of a demon, has any more permanence or reality than any other phenomenon: All are relative, even illusory, and with enlightenment they are extinguished in the oneness of reality, which is permanent and undivided Buddha-nature and enlightenment. Good and evil, if one understands them in this context, are not the transcendent, irreconcilable elements of the Zoroastrian cosmology, or even the two great moral categories whose creation Deutero-Isaiah attributes, perhaps in response to the dualist Magi, to the sole and transcendent God. They are just directions on a compass to a temporary heaven or hell, different genders of cosmic speech. Gender is no less arbitrary and relative.¹⁶⁷

What appears uncanny against the background of Judaism becomes philosophically obvious and commonplace in the context of Indian thought – in this case, Buddhism. When one considers the capacity of the yogic practice of *bhakti*, 'devotional worship', and *advaita*, 'non-duality', to neutralize the moral dilemmas of Arjuna in the *Bhagavad Gita*, then the ideas of *SY* are cognate to Indian religion more generally. There is nothing particularly unusual about the presence of Indian thought in a work of Late Antiquity from the Eastern Mediterranean basin, though the persistent efforts of the Rabbis to make a fence (*seyag*) around the Torah perhaps insulated Jews more than others from such intellectual interchange. That, perhaps, is why *SY* seems so isolated and alien a book.¹⁶⁸

167 In the *Vimalakīrtinirdeśasūtra*, a Mahayana text very popular across Asia, from China and Tibet to Sogd, a disciple of the Buddha who had been attached to his masculinity as though it were an actual identity is miraculously transformed into a woman.

168 One vector of transmission into Judaism in the Second Temple period and later might have been esoteric sectarian movements. Justin Taylor suggests that Jews in Alexandria might have adopted aspects of Pythagoreanism and incorporated these into their own movements in the Land of Israel proper; see *idem*, *Pythagoreans and Essenes: Structural Parallels* (Collection de la Revue des Études Juives, 32), Paris-Louvain: Peeters, 2004, p. 106. An Alexandrian Jewish philosopher, Aristobolus, who probably flourished in the reign of Ptolemy VI Philometor (180–145 BCE), views Moses as having been followed by Pythagoras, Socrates and Plato in their contemplation of the arrangement of the universe, and claims that Pythagoras 'transferred many of our [i.e., the Jews'] doctrines and integrated them

Cosmic Spheres

We have noted the symbolic importance and special properties of sphere (*sphaira*, **sefira*) and circle in the cosmic esotericism of ancient philosophizing about language. The circle, of course, is the two-dimensional figure from which a sphere is generated in three dimensions. Let us consider the ancient traditions concerning spheres, their transmission and their specific relevance to the theory of language. The sphere belongs to the realm of solid geometry, hence mathematics; and, as Richard Feynman said, 'The glory of mathematics is that we do not have to say what we are talking about'.¹⁶⁸ An oft-reproduced painting of antiquity portrays the Seven Sages sitting in rapt contemplation of a sphere. They are not equipped with captions to tell us what they might have been talking about; but maybe they did not need to say anything, because they shared a tacit understanding about the object of their musing. Ourania herself, Muse of epistemology and wisdom, is shown in the House of the Vettii at Pompeii pointing to a sphere.¹⁶⁹ Why? What is so interesting about it? What are they not talking about as they mathematicize?

Plutarch has one of the Seven Sages, Thales of Miletus, answer nine questions that spell it out:

Ti presbytaton? Theos. Ti megiston? Topos. Ti kalliston? Kosmos. Ti sophotaton? Khronos. Ti koinotaton? Elpis. Ti ophelimotaton? Arete. Ti blaberotaton? Kakia. Ti iskhurotaton? Ananke. Ti rhaston? To kata physin. (*Septem sapientium convivium* 9.153c)

into his own system of beliefs'; see idem, *Proep. Evang.* 13.12.1, 4, cited by David Dawson, *Allegorical Readers and Cultural Revision in Ancient Alexandria*, Berkeley: University of California Press, 1992, p. 79. The Renaissance humanist Pico della Mirandola, a student of esoteric doctrines, saw it the other way around. Referring to the Kabbalah, he declared: 'In those matters that regard philosophy, you may really hear Pythagoras ...'; in S.K. Heninger, Jr., *The Cosmographical Glass: Renaissance Designs of the Universe*, San Marino, CA: The Huntington Library, 1977, p. 90. Either way, Pythagoras and ST and the subsequent Kabbalah are intellectually kindred, and aspects of the Hebrew and Hellenic philosophies of antiquity were considered to be related.

169 Quoted by Gregory Benford, 'Effing the Ineffable', in G.F. Slusser and E.S. Rabkin (eds.), *Aliens: The Anthropology of Science Fiction*, Carbondale, IL: Southern Illinois University Press, 1987, p. 19.

170 The Philosopher Mosaic, Rome, Villa Albani; Urania, Pompeii, Casa dei Vettii.

What is oldest? God. What is greatest? Space. What is most beautiful? Order. What is wisest? Time. What is most common? Hope. What is most useful? Virtue.¹⁷¹ What is worst? Evil. What is most powerful? Necessity. What is easiest? That which is according to nature.

Diogenes Laertius adds:

Ti hediston? To epitynkhanein. Ti to theion? To mete arkhen mete te-leuten. (*Thales* 35)

What is sweetest? Good fortune. What is the divine? That which has neither beginning nor end.¹⁷²

This series of superlative maxims is cosmological, proceeding from the One God of Xenophanes and the basic coordinates of space through wisdom and intellection to necessity and nature. It resembles the enumeration of the *sefirot*. It also suits the contemplation of the perfect, divine figure, the *sphaira*: Otto Brendel has argued that each question can be answered with one or another characterization of the sphere. The sphere, for instance, is the most beautiful (*kalliston*) of figures, the point at which *kosmos* in the senses of 'world' and of 'ornament' coincide.¹⁷³ Aristotle (*De caelo* 286 b 11) praises the sphere as 'the primary shape in nature' – a formulation important, *inter alia*, to speculations about origins, about Creation. Beauty is truth, truth beauty – and both are definable as a perfect, perfectly symmetrical mathematical entity.

171 Gk. *kosmos* can mean both 'order, adornment' and 'universe'; the word *arete*, cognate to Skt. *ṛta*, Av. *aša*, Arm. *ard*, *ard-ar*, etc., is clearly different from 'order' in the Greek understanding, though excellence in the performance of a craft, or moral excellence, could not be chaotic. The semantic direction of the word is towards righteousness, excellence of moral character, as is, I think, the case with Avestan *aša*. Recent translations of *aša* as 'order', or of the possessive *ašavan* (cf. Pth. *aršun*, below, note 174) as 'orderly' or 'upholder of order', avoid the moral attributes of truth and righteousness at the heart of the Zoroastrians' own perceptions of blessed *ašavans* vs. accursed *dragvants* ('followers of the Lie'). But the history of German fascism in the twentieth century shows that order and evil are very compatible indeed. These renderings seem not to take adequately into account that Zoroastrianism is a religion.

172 See Otto J. Brendel, *The Symbolism of the Sphere: A Contribution to the History of Earlier Greek Philosophy* (EPRO, 67), Leiden: Brill, 1977, pp. 14, 19.

173 Heninger, in *Cosmographical Glass* (above, note 168), p. 7, notes that Plutarch attributed to Pythagoras the use of the word *kosmos* as a term 'to express the beauty and the orderliness of the created world'.

Frēstag ō ardaw pad andarwāz wast. Wāxt, Če burzistar? Ardaw wāxt, Man ispēr.¹⁷⁴ Frēstag wāxt, Mas, až im če wuzurgistar; wāxt ku Zamīg.

ke harw čiš bard. Mas wāxt ku, Až imīn če wuzurgistar? Ardaw wāxt ku *āsmān... wāxt ku až im če wuzurgistar? Wāxt ku, Mihr ud Māh. Mas če rōšnistar? Wāxt ku... žīrīft. Ažyān Tūrān Šāh wāxt ku, Až imīn harwīn tō wuzurgistar ud rošnistar ay, če pad rāštīft tō wxad Būt ay.

The Apostle [Mani] led the righteous one into the air. He said, 'What is highest?' The righteous man [i.e., the departed spirit] said, 'My sphere'. The Apostle said, 'Then, what is even greater than that?' He said, 'Earth, for it bears every thing'. Then he said, 'What is greater than these?' The righteous one said, 'Heaven(?)'. ... He said, 'What is greater than that?' He said, 'The Sun and Moon'. 'Then what is still more luminous?' He said, 'The wisdom [of the Buddha]'. Thereupon the king of Turan said, 'You are greater and more luminous than all of these, for in Truth you are yourself the Buddha'.¹⁷⁵

In this text, one is to imagine the concentric spheres of the cosmos, and their superlative qualities.

Except for that of the wisdom (Pth. *žīrīft*, cf. Arm. loan-word *žir*, *žira-čan*, etc.) of the Buddha, the spheres correspond to those of the mediaeval cosmos: The lowest region is our world, compounded of the four elements; above it, in concentric, unchanging, crystalline spheres, are: (1) Moon, (2) Mercury, (3) Venus, (4) the Sun, (5) Mars, (6) Jupiter, (7) Saturn, (8) the Zodiac, (9) the ranks of the Angels, and (10) God. All of these, as they move, make a celestial music, to which, as Anthony Grafton memorably put it, the sublunar world dances. The study and prediction of the steps in the dance is astrology.¹⁷⁶ God Himself is symbolically to be conceived of as an infinite sphere: *Deus est sphaera intelligibilis cuius centrum ubique circumferentia nusquam*. As an infinite figure, the crowning (cf. Heb. *keter*) sphere of the Divine is thus qualitatively different from the nine inferior

175 For a discussion of this text, see Hans-Joachim Klimkeit, *Gnosis on the Silk Road*, San Francisco: Harper, 1993, pp. 206–208. Simon Magus was the first false prophet to levitate and was brought down with a bang. On Mani's levitation, see also Eugenia B. Smagina, 'Die Reihe der Manichäischen Apostel in den koptischen Texten', in G. Wiessner and H.J. Klimkeit (eds.), *Studia Manichaica*, Wiesbaden: Harrassowitz, 1992, pp. 361–362, who discusses a negative reference to 'Terebinthos-Buddha' trying to do it. The latter is taken to be an episode colored by the career of the despised Simon Magus in *Acts*. The Manichaeans were necessarily at pains to refute Christian claims that they were magicians and heretics.

176 See Anthony Grafton, *Cardano's Cosmos: The Worlds and Works of a Renaissance Astrologer*, Cambridge, MA: Harvard University Press, 1999, p. 7.

spheres of Creation. That is the Christian reflex of a Pythagorean idea that we have already noted.

The geometry of the sphere lends itself well to the imagining of infinitude and incommensurability: The only way a sphere can touch any other plane or solid, for instance, is at a point – a literally spaceless yet manifest location. And man, created in God's image, attains the fullness of that image in the resurrected state, when he is, according to Origen, *sphairoeides*, 'spherical in form'.¹⁷⁷

I wish to stress the currency of these esoteric ideas in late antiquity. The doctrine of the *sefirot* in a Hebrew text on the origins of language and the cosmos and a Manichaean conversion legend involving levitation into the cosmic spheres both find a source in the esotericism of the Pythagorean schools, with their meditations on the geometric sphere. This is the intellectual world Maštoc' inhabited: one in which men who speculated mystically upon language believed letters were generated by interlocking circles

177 Brendel, *Symbolism of the Sphere* (above, note 172), p. 32. The Zoroastrians believe that the first human, Gayōmard, was a spherical androgyne whose divine oneness and perfect form was destroyed by the archdemon Ahreman at the time of his deleterious incursion into the universe: Gayōmard was split into male and female halves. In his playful but quite serious discourse in the *Symposium*, Aristophanes retells the Zoroastrian myth, but with a Hellenic twist: It is the gods who envy the self-sufficiency of the happy, wheel-like first humans, and who break primal unity into evil duality. The humans come in three types: male, female and abnormally androgynous. After division, everyone seeks his or her other half, and that is how love begins: Men look for other men; women, for women. But the poor androgynes become heterosexual. Americans innocent of the Bundahishn and Plato will know this myth from the song on the origin of love from the musical play and movie 'Hedwig and the Angry Inch', with its animated cartoon – a kind of latter-day Manichaean cosmological serial and narrative painting, an *aržang*. In the *Bṛihad-aranyaka Upaniṣad*, I.4.3.4, the Self (*atman*) desired delight (*rajan*) and so made himself into the form of a man and woman locked in erotic embrace. He then divided this pleasure-body in twain; so the body became half of the self. The male half then pursued the female half, and the latter fled, assuming different forms: When she was a cow, he became a bull; when she was a mare, he became a stallion. They all mated, and the diversification and multiplication of species proceeded from there. As is often the case, the Indian idea – one of several cosmological possibilities mulled over in the Upanishadic literature – presents multiple ideas, of which the Greek and even Iranian expressions are but facets. Oneness makes duality-in-oneness out of desire; duality engenders desire, the temporary earthly return to oneness in coitus; and the outcome is the serial generation of earthly life, in which beings ponder the primordial, blissful, divine, *advaita* oneness. *Fırkatın sonu vâsilettir*, 'The end of separation is union', promises the Turkish mystical proverb.

in Heaven that are in turn to be associated with spheres. These letters had numerological and cosmic significance. Spheres are symbols of perfection, bearers of circles, and hypostases of divine qualities. Now let us turn to the letters themselves.

Letters and Numbers

The original order of the 22 letters of the Semitic alphabet and those derived from it, including Greek and Latin, was held to be unchangeable and even sacred. The letters all by themselves, written in their proper order, were sufficient to form a spell. Of the major alphabets whose ultimate origin is Hebrew/Phoenician, Aramaic and Greek, only the Indian scripts, which are organized on linguistic principles, and Arabic, which is ordered by letter-shapes, have a different order. And in Arabic the older order of alpha, beta, gamma, delta, referred to by the acronym *abjad*, is used in any case, whenever the letters themselves are required to bear mystical or magical importance. Maštoc' held to this order in general for the earlier letters in his alphabet: *ayb, ben, glm* – but thereafter the order of the whole register of 36 characters was up to him.¹⁷⁸

That there was method in the order Maštoc' decided upon is obvious. To take an easy example, the final letter of the Armenian alphabet is *k'ē*, which is simply the Chi-Rho symbol of Christ's name, affirming the Lord's declaration that He is both Alpha and Omega. This is the point at which, if one accepts that Maštoc' might have taken arithmetical symbolism seriously, it may become possible to uncover a certain intellectual affinity to Pythagoras – and to other thinkers of his stripe, such as the unknown author of *SY* with his mixture of cosmological and linguistic speculations. *SY*, as it seems, did not find a known receptive readership until at least several centuries (as many as seven) after the time of its composition. Similarly, one must look beyond the time of Maštoc' to the seventh century – only two

178 The number 36 was itself arbitrary: For instance, Maštoc' could have added an individual letter for the u sound, but he preferred, on the model of Greek, to employ a diphthong, o + w (cf. Gk. omicron + upsilon). It would seem that he was determined to have thirty-six letters, no more, no less. The number is overtly symbolic of completion and entirety. It is of great astrological and calendrical significance. The total number of decans – the lunar mansions – into which the 360-day year was divided for divinatory purposes is 36. It was believed in antiquity that the members of the human body corresponded in number to the days of the year: 360 or (with intercalary days) 365. The Upanishads correspondingly count 72,000 veins in the body ($2 \times 36 \times 1,000$).

centuries, though still a hiatus of generations – to discover another kindred mind in Armenia that was sufficiently insightful and audacious to extract a most elegant cosmological scheme from the seemingly random order of the latter half of the Armenian alphabet. But to understand what Anania Širakac'i found, it is necessary first to do a little math homework.

Pythagoras and his disciples were interested in plane and solid geometry – the line, triangle, circle and sphere – and in the properties of numbers. Spheres are interesting, as we have seen: Aristotle noted in his *Categories* (4b25–26) that the difference between discrete and continuous quantities is that the latter have, and the former lack, 'a common boundary at which their parts join together'. And the parts of a continuum have no actual existence until a division into them is made (*De generatione et corruptione*, I2, 317a4–13). Since a true sphere can touch anything else only at a point, and a point is not space, the sphere does and does not join at a boundary – a geometrical expression of the asymptotic relation of the Creator to His creation, as it were. The idea in *SY* of the *sefirat belima*, noted above, probably also bears a relationship to these Greek mathematico-mystical observations about the properties of the sphere. The three-dimensional sphere generates the two-dimensional figure of perfection, the circle; and we have seen how twinned circles, as expressions of emanation out of perfection, bear the 22 sounds of the alphabet, which, when paired, make words.

Pythagoras rightly regarded numbers with mystical reverence. Though numbers are invisible – you can see five things, but nobody has ever seen 'five' itself – they are everywhere the same, whether one is a Persian, a Greek or a Martian. They also have discoverable properties, much as a person you get to know has traits that you can gradually discover. But what is special about numbers is that these traits are everywhere and always unchanging, and they can be educed by proofs. In the material world, we may perform scientific experiments; for an experiment to be deemed to have yielded a successful theory, the experimental result must be repeatable. However, as discovery in the world of matter yields new physical evidence, theories are subject to revision and change. None of this is the case with mathematical proofs: They are right once, or they are not; and numbers by definition do not change.

This is of interest to a mystic, because it is the form of thought closest to the idea of the world inhabited by an invisible, unchanging, perfect and profound being called God. Numbers are already perfect in their way; but there are particular, rare numbers defined as 'perfect' by Pythagoras and his school, and they are of very great interest to his followers. A perfect number is one equal to the sum of its divisors. Thus, $6 = 1 + 2 + 3$; and $28 = 1 + 2 + 4 + 7 + 14$. (The next perfect numbers in the series are 496 and 8,128.)

Perfect numbers lead to all sorts of other interesting discoveries: Euclid, for instance, proved that perfect numbers are multiples of two numbers, one of which is a power of two; the other, the next power of two minus one. Thus, $6 = 2^1 \times (2^2 - 1)$, and $28 = 2^2 \times (2^3 - 1)$. The perfect number 28 was of enduring interest to cosmologists and esotericists (who were, more often than not, the same people). Nicolas LeFèvre, for instance, divides the three worlds into triads with three parts each. This is the world-soul, the cube of three: 27 . (Pinax of Thebes, a Neoplatonist of ca. first cent. AD, defined 27 stations in human life.) God, who is One, stands above and outside: the perfect sum, $27 + 1 = 28$. LeFèvre writes: 'Cette suite de nombres procedant de 1 a 28, second nombre parfait & cube du 3 declare le secret & mystere de l'ame & du monde descript & demonstre par Platon au Timee'. (Plutarch had also, in his discussion of Pythagoras, alluded to the *Timaeus* of Plato.)¹⁷⁹

You will notice that Euclid's proof illustrates another aspect of arithmetic of very great interest to the Pythagoreans: the extremely interesting properties and qualities of binary numbers and of duality – of the number two.¹⁸⁰ That is not surprising, since unity is a static and otherworldly kind of state – a primordial state, as we have seen in the myth of the spherical first man – but a great many worldly things, here in this broken, dualistic cosmos, come in twos, or at least are most usefully defined in a binary fashion: day and night, yes and no, left and right, up and down, male and female, life and death, and, of course, good and evil. The perfect numbers, by the way, are all divisible by two. We recall that in *SY*, the divine language is generated by two rotating wheels, which, when they touch, throw off double combinations of the twenty-two letters. Though most Semitic verbs have triliteral roots, one might propose that the theory in *SY* relates not to all possible roots producible by the 22-letter alphabet (in which case, why stop with three-letter ones?), but to those of the exact minimum number of letters needed to fulfill the linguistic requirement of mutability, by way of conjugation and declension. You cannot do much of anything linguistic with a single letter: As with human relations, the fun begins with two.¹⁸¹

179 Heninger, *Cosmographical Glass* (above, note 168), p. 92 and pl. 55 on p. 93.

180 Interest in problems involving the qualities of two begins with Pythagoras and continues down to the most profound reasoning in modern mathematics. In the seventeenth century, Pierre de Fermat proposed his last theorem: There are no whole-number solutions to the equation $x^n + y^n = z^n$ for any n greater than 2. Fermat's last theorem is based on Pythagoras' most famous one: In a right-angled triangle, the square of the hypotenuse is equal to the sum of the squares on the other two sides, i.e., $x^2 + y^2 = z^2$.

181 In *Bṛihad-aranyaka Upaniṣad* 1.2.4, the addition of speech (*vāc*) to mind produces

To return to the script of *Maštoc'*, it seems that Armenia's greatest ancient scientist indeed perceived in it a powerful numerical symbolism. In the seventh century, the mathematician, astronomer, astrologer, linguist, scientist and esotericist¹⁸² Anania Širakac'i (b. 610, d. ca. 685) compiled a division table called 'The Six Thousand' (*Vec' hazareak*). In later centuries, that name was applied to a magical text around which various superstitions cluster to this day. As Anania wrote, the library of the Greek scholar Tykhikos, with whom he studied at Trebizond, contained a wealth of books both exoteric and esoteric (*yaytnik' ev gatnik'*). Tykhikos' energetic and inquisitive Armenian pupil learned both theology and the sciences of the pagans, from mathematics, astronomy and grammar to astrology, mythology and magic. He knew Pythagorean numerology and mathematics, for he cites the *Phwt'agoreank'*, the Pythagoreans, in his treatise on numbers.¹⁸³

Of his table of division, Anania boasted: 'Ganj ē cackeal i yerkins Hayoc' ew akn t'aguc'eal i tann T'orgomay, zi mayr e amenayn aruestic' handerj amenayn bažanmamb', 'It is a treasure hidden in this land of the Armenians and a precious jewel concealed in the house of Togamnah, for it is the mother of all arts, together with every division'.¹⁸⁴ It might seem difficult to appreciate why a table of a simple arithmetic operation should be the object of such hyperbolic acclaim – unless the numbers themselves have particular symbolic significance. In the treatise bearing, in MSS, the title *Anania Hayoc' vardapeti saks bac' ayaytut' ean t' uoc'* ('Anania, doctor of the Armenians, concerning the exposition of numbers'), Anania speaks

the year, i.e., sequential temporality, and the capacity of the being to conceive of time. The first word spoken by the being, as death attacks it, is the exclamation *bha*. The latter is a formal construction of a labial plus a, the root *bha-*, 'speak'. Cf. the Arm. cognate *ba-* > *ban*, 'word, logos', *bay*, 'verb'.

- 182 In the Renaissance, astrologers, cosmologists and other savants interested in occult matters defended their preoccupations against charges of sorcery and heresy by citing Scripture. Particularly popular for this purpose was Ps. 19:1 (MT 19:2): 'The heavens declare the glory of God and the firmament sheweth His handiwork'; see Heninger, *Cosmographical Glass* (above, note 168), p. 8. Interestingly, Anania invoked the same verse, apparently for the same purpose: 'Asac' Dawit', t'ē erkink' patmen zp'at's Astucoy', 'David said, "The heavens declare the glory of God"'. In *Anania Širakats'u Matenagrat'yuma*, ed. A.G. Abrahamyan, Erevan: HSSR Matenadaran hratarakē'ut'yun, 1944, p. 238, l. 17.

- 183 *Anania Širakats'u* (above, note 182), p. 241.

- 184 See Russell, 'Book of the Six Thousand' (above, note 8), p. 222 (*MS*, p. 320). In Erevan, Matenadaran MSS 8098 and 699, too, we find: 'Ays e arhest Z-R-eakin, or govē Anania Širakac'in ew asē: ganj cackeal ēir yerkins Hayoc'', 'This is the craft of the Book of the Six Thousand, which Anania Širakac'i praises, saying, "Thou wert a treasure hidden in this land of the Armenians"'.

approvingly of the role of numbers in cosmogony and the shaping of the created things: 'Since the secrets concealed in this are most sublime and divine, and so very brilliant, that some of the wisest of the pagans consider it to be the container of these material beings; some even say the world has come into being by means of number'.¹⁸⁵

The number 6,000 itself was of very great cosmological importance to religious believers and remains so to this day. Christians expecting the Parousia in the time immediately following Christ's Crucifixion, Resurrection and Ascension had eventually to reconcile themselves with the obvious. Though obliged by faith to believe that He would come again, some reason had to be discovered why that Second Coming was not going to be any time soon. The Zoroastrians assign six millennia to the world as we know it, and the Christians adopted this ready-made chronology. The *Book of Revelation* accordingly was introduced into the New Testament canon. It provides a detailed guide to the destruction that is to come upon the world on Doomsday, at the close of the sixth millennium, and of the grim tribulations of the long reign of the Antichrist before the Second Coming. There will be signs of the end, and the faithful who perceive and heed them will be abstracted to Heaven and saved from the suffering to be endured by those left behind.

If only one knew when exactly that will be! Apocalypticists have been at work calculating it for two millennia, and various dates (1666, for example, which incorporates the number of the Beast) have been selected. Inevitably, disappointment followed; but religious faith persists, and so does apocalypticism.¹⁸⁶ For the Zoroastrians, the present six millennia are but the second half of a 12,000-year-long cosmic epoch, the first part of which ended with the incursion of evil into what had been a perfect but static cosmos. The *Agathangelos* uses this 12,000-year schema (§§ 295, 667–671), and it is reflected in the *Vêc' hazareak* as well; but most Christians keep just the six millennia, rationalized as expansions of the six days of Creation. The end-times are thus a kind of cosmic Sabbatical.¹⁸⁷

185 *Annamia Širakats'u* (above, note 182), p. 237: 'Ew zi barjragoyñ astuacayin gon cackeal xorhurdk' i sma, ew aynê'ap' paycatagoyñk', minê'ew cek' i het'anosac' imastagoyñk' êin, zsa kareel gol balkac'ue'iê' niwt'akan goyite's, minê' asel omanc': i t'uoy goyanal zašcarhs'.

186 The readers of this article will in all likelihood be unaware that America's best-selling books are not the novels of Philip Roth or Paul Auster, but the serial volumes of T.F. LaHaye's *Left Behind* (1995–2007). At the start of the end-times, the Christian elect will be bodily assumed to Heaven in the Rapture. Everybody else will be – you guessed it – left behind to enjoy Armageddon.

187 The Zoroastrians pointedly call the seven sacred creations of Ahura Mazda good.

Perhaps the key to Anania's treasure, like the purloined letter of fiction, has been placed right before our eyes. For numbers, to him, have an intrinsic relationship to letters that they ceased to possess when mathematicians began adopting the Indian system of mathematical notation universally employed today. In Anania's system, as in that of *SY* and as in ancient Greece and Rome, numbers are represented by letters of the alphabet – in his case, the alphabet invented by Maštoc', of course. It is thus appropriate to try to discover some of the same important properties in the letters that the Pythagoreans discerned in numbers. And, given the importance of the order of the letters, a number's ordinal position is worth considering in this respect.

Since Maštoc' had to determine for himself the order of the letters in his alphabet after the Classical 22, it is particularly those ordinal numbers and their corresponding letters, if they indeed possess some significance, that may reflect their inventor's own knowledge of esoterica and his intentions. Anania's special number, 6,000, can be written in two ways in Armenian. One is simply the 33rd letter, *ts'o*. Thirty-three is an interesting and significant number all by itself: The Pythagorean tetraktys, a pyramid of 9 – i.e., 3×3 – dots, capped by a separate tenth one, is also used by esotericists to denote a century: $33 \times 3 = 99$; $99 + 1 = 100$. *Ts'o* is the expression used in Anania's table, which is divided into columns of three letters, thus:

<i>a ts' ts'</i>	1 6,000 6,000	(i.e., $6,000 + 1 = 6,000$)
<i>b v ts'</i>	2 3,000 6,000	(i.e., $6,000 + 2 = 3,000$)
...		
<i>k'g ts'</i>	9,000 3 6,000	(i.e., $6,000 + 9,000 = 3$ [?] ¹⁸⁸)

The other, and frequent, way of writing 6,000 in Armenian is Z-RR, $6 \times 1,000$ – that is, *za*, the sixth letter, which is also the letter 6, followed multiplication-wise by the letter for 1,000, the trilled *r*, *ra*. Anania's table, for instance, includes the formula *z r c'*: 6 1,000 6,000, i.e., $6,000 \div 6 = 1,000$.

As Prof. David Sperling has observed to me in conversation, God's characterization of the six works of His first week as good or very good, in Genesis, a late book, is unusual and may be Persian. The chapter fits ill: Why would God regret creation later on in the book, when He rains on His own parade, drowning all save Noah and his company, if at first He had declared it all good? But then, the later offshoot of Judaism, ostensibly a religion of love, guarantees catastrophes still more horrific than the Deluge.

188 Perhaps for 2/3; this is not the only formula in the table whose result is inexact.

This table is given in Erevan, Matenadaran, MS 4066, 9b, as the *Vec' haz-areak*. The editor, Abrahamyan, argues that this is the original text, the magical texts by the same name being ignorant distortions whose authors took advantage of Anania's learning and reputation. Abrahamyan notes that the magical texts differ from this 'primary' version in that they are not arithmetical and are called *k'erakanut'ivn*, 'grammar', or *k'ert'olakan*, 'rhetorical, poetical'.¹⁸⁹ Neither of these objections holds up: The magical texts do prescribe the performance of arithmetical operations; and we have already seen that it is the soul of linguistic speculation in antiquity to connect the generation of language and the order of grammar to the operations of numbers. Part of this objection may arise from a cultural prejudice of the modern age, one that imposes a myopic view of the past. There is in fact nothing intellectually disreputable, in the context of antiquity or the Renaissance, in esotericism. Isaac Newton had his mystical side. As proof of Anania's hostility to magic, Abrahamyan cites his criticism, in his polemic *Ar xostac'ealsn*, of believers in fate and astrology; but that did not stop Anania from composing guides to astrology. It may be that the stars do not determine our destiny; but it seems to be Anania's position that, as natural phenomena, they affect our lives much as do climate, national origin and other variables that operate according to systems we can study and work with.

The letter *ra* is actually made of two *re*'s fused together: It is a double letter. *Za*, the sixth letter, represents six. (In Armenian, the mystic number seven is the next and seventh letter, long *e*, corresponding both to Greek *eta* and to the Armenian third-person verb of being, *E*, 'He is', which is a designation of God; cf. Greek *ho ón*, 'the being', for Christ. Maštoc' received all seven vowels in a vision. Pagan mystics and *mathematici* used the Greek heptad as spells.) But *ra*, a thousand – the Millennium, if you please – is well outside the old 22-letter alphabet and has no Greek or other equivalent, so Maštoc' was free to put it anyplace he wanted. And he made it the 28th letter, 28, as you will recall, being the next Pythagorean 'perfect' number after 6, and the one symbolizing the World Soul plus God, that is, the perfection of the *kosmos*. So 6,000 is formed in Armenian by combining the two letters corresponding to the only two Pythagorean perfect numbers ever likely to be significant or useful to any human being. Remember, the next perfect number is 496, followed by 8,128, both probably irrelevant to human life: How many things coming in 496's is one likely to encounter in a day?

189 Abrahamyan, in *Anania Širakats'u* (above, note 182), pp. 57–61, 226.

But both 6 and 28 are preeminently useful and significant perfect numbers, and Maštoc', evidently knowing this, incorporated these and other numbers into his alphabetic system, thereby stressing their significance to the discerning: With the sixth letter representing 6 and the twenty-eighth, 1,000, together they represent 6,000. Armenians studied and commented upon St. Basil of Caesarea's *Hexaemeron* (Arm. *Vec' avreak*: a title Anania likely had in mind in coining the title *Vec' hazareak*);¹⁹⁰ and the lunar cycle, about which Anania Širakac'i just happened to write a treatise, is always 28 days long (as noted, the letters of the Armenian alphabet number 36 – the same number as that of the lunar mansions).

And if you think 'So what?' – well then, try to navigate without knowing about tides or moonlit nights, or to stay heterosexually married without taking into account the changes, physical and psychological, of the menstrual cycle. The solar year is more accurate in some ways, but even after the moon landing in the summer of 1969, we continue to live in a sublunar world. The regularity of the moon, amongst the various luminaries of Heaven, is so striking that Muslims, good astronomers, acknowledge its fidelity and preserve the lunar as against the solar calendar. The astrological religion of the moon-god Sin endured amongst the 'Sabaeans' – *Sabier* with their *Sabisma* – at Harran, a stone's throw from the city of Urfa/Edessa with its long and intimate connection to Armenia, down to mediaeval times. Thus, in Armenian, thanks to the scheme laid out by Maštoc', the number of the present world era before the Sabbatical millennium equals pre-Sabbath week (6) times lunar month (28), which is also the product of the two perfect numbers, a harmonization of Christian cosmology, astronomical and natural science, and Pythagorean arithmetic, in a linguistic system – a phonetic alphabet.

We may recall, too, that the letter *va* itself, arbitrarily placed 28th in the series, is itself a *binary* creation of Maštoc': Both phonetically and graphically, it is a combination of two *r*'s. In the MSS of magical texts based upon Anania's original book, binary combinations of the Armenian letters in ordered series are used as spells believed to have power over the four elements and various signs of the Zodiac. For example, in British Library MS Or. 6471, 233a–b, a somewhat garbled and brief text of the *Vec' hazareak*, the user is apparently instructed to start by forming the series a.b.a.g.a.d, down to a.k', and then to proceed with the other letters (b.b.b.g.b.d ... b.k', etc.). This seems to be an attempt at the production of an arithmetical series;

190 See Barsel Kesarac'i, *Yalags vec' avreak arare'ut'ean*, ed. K. Muradyan, Erevan: Armenian Academy of Sciences, 1984.

and it also resembles the combinatory scheme of *SY* for the generation of the roots of language.¹⁹¹ It is thus both *t'ubananakan*, 'arithmetical', and *k'erakanakan*, 'grammatical'! The introduction to the text mentions that Anania and Mesrop (i.e., Maštoc') were amongst the possessors of these secrets. As you see, the use of binary combinations of the sort that form the roots of the divine language in *SY* is attributed to Anania as a part of his system. These binary combinations, in the Hebrew text, are generated at the point(s) where two interlocking circles, each with the 22 letters on it, meet – and these are most likely to be two circles inscribed on a sphere. So let us look once more at spheres.

The binary roots of the primordial language of *SY* are generated at the meeting of two circles – wheels (Heb. *galgalim*). But which two wheels are they? Well, take a look at the celestial sphere, as modelled, for instance, in a painting from the Casa dell'Argenteria at Pompeii by the stunning Sun-god Apollo, better known to the Iranian world, with his characteristic radiate nimbus, as Mithra (or Mihr or Mher). On it may be seen two interlocking circles: One is the celestial equator; the other, the plane of the ecliptic. This sphere rotates on the *axis mundi*, to which the Hebrew word *teli*, 'hook', in *SY* indeed seems to refer.¹⁹² Roughly speaking, one circle has to do with the

191 It can also act as the generative pattern for a system of cryptography, in which a particular count of unimportant and misleading words and/or letters is followed by one that is part of the actual message. Successive counts, adding to the gap between significant letters each time on the same principle, follow. This system was employed, for instance, by Johannes Trithemius (1462–1516) in his *Steganographia*, as explained by Gustavus Selenus in his *Cryptomenytices*, Luneburg 1624 (ed. and Eng. transl. by Adam McLean, Edinburgh: Magnum Opus Hermetic Sourceworks, 1982, pp. 117 ff).

192 Sefer Yetsira, §18: 'Esrīm ushtayim otīyot yesodam qavvā' beteli, begalgal bamatayim ve'esrim ve'eḥad she'arim. Ḥazar galgal panim ve'aḥor. Veze sinan im letova lema'ala me'aneg ve'im lera'a lemata menagea'. 'Their foundation is 22 letters attached to a hook, on a wheel with 221 gates. The wheel rotated forward and backward. And this is the sign: If for good, upwards, it delights; and if for evil, downwards, it oppresses' (ed. Hayman [above, note 161], p. 98). The pun is on the roots 'ng, 'pleasure' ('it delights'), and ng, 'pain' ('it oppresses') – good and evil are merely permutations of the same letters. The double letters (which, strung together, form the Hebrew mnemonic begedkephret) are seven, and there are seven opposites (temurot): life/death, wisdom/folly, wealth/poverty, prosperity/desolation, beauty/ugliness and mastery/slavery (Hayman, p. 127, §37). There are also seven firmaments, earths, hours, times, planets, days and bodily apertures: The connection between math and language, both linked to the operations of cosmology, astrology, fate and creation, could scarcely be clearer. The word *teli* is found in the shortest (and probably oldest) recension of *SY*, so it seems that the later

earth's rotation and our days and nights (6 in the *Hexaemeron*); the other, with the Zodiac (about which the astrologer Anania Širakac'i wrote in detail) and our months (of 28 days, by the lunar calendar). Where they intersect at the sign of Aries is where, in the Zoroastrian scheme, time started moving, on the day of Ormazd of the month of Farvardin in the year 6000, when Ahriman invaded the universe; and that is where the world will be renovated and perfected, too, on the same date in the year 12000. (This day, the first day of spring, is still the Iranian New Year, *Nō Rūz*.) Aries, the Ram of the vernal equinox, stands right over the head of Mithras in the Roman tauroctony (bull-slaying) scene, which in my view telescopes the beginning and end times (the slaying by Ahreman of the Uniquely-created Bull in the year 6000, and the sacrifice of the bull at the final *yazna* in the year 12000). This conjunction is a good point for the verbs of Being itself to pour forth, since language and creation, remember, are linked, and in the Armenian *Book of the Six Thousand*, each letter is said to tell 12,000 things – to reflect, one supposes, the inner structure of the whole 12,000-year cycle. And a word on the holder of this sphere: As already noted, Anania Širakac'i, while still a student of science and mathematics at Trebizond, dozed off one morning in chapel and was vouchsafed a vision of the Sun coming down to him.¹⁹³ From various analogous visions, we may surmise that what he saw was probably a being very like the figure from Pompeii, an Apollon-Helios-Hermes-Mithras. In the account given in Anania's treatise *Yalagx erkri*, 'Concerning the Earth', the Sun is a radiant, beardless youth with golden lips, in white raiment. Allowed a question by this delectable creature, Anania asks whether humans live in the Antipodes – implying that he knows the earth is a sphere. After all, what does Apollo usually hold in his hand? The armillary *sphere* or celestial globe hanging from the *axis mundi*, the *teli* of *Sefer Yetsira*, that's what – on which the two planes, as circles, intersect: one for measuring the six days; the other, for the twenty-eight; both, for generating the binary roots of the divine language and determining

copyists and commentators, who tended to add rather than to subtract, might have forgotten what was meant by the original description.

- 193 See Russell, 'Dream Vision' (above, note 8); and Fr. Yeghishe Durean (Tourian), 'Širakac' *iin eraz*', *Masis*, 45/1 (22 June 1896), pp. 99–104. Tourian, b. Mihran, a scholar of broad talents and a great national and spiritual leader, was to become the Armenian Patriarch of Jerusalem. He was the younger brother of Bedros Tourian (Petros Durean, 1851–1872), the first real poet of Modern Western Armenian; see J.R. Russell, *Bosphorus Nights: The Complete Lyric Poems of Bedros Tourian* (Harvard Armenian Texts and Studies, 10), Cambridge, MA: Harvard University Press, 2006.

man's shape and fate.¹⁹⁴ (In his cave behind *Meher kapısı* at Van, the apocalyptic hero of Armenian folk epic, P'ok'r Mher, i.e., Mithra the Younger, is said to hold, *mutatis mutandis*, the *ĕarx-e falak*, the Zodiacal wheel of fate. In Mithraic scenes of the tauroctony mentioned earlier, the Zodiac either arches over Mithras, with Aries at the centre, or else encircles him.) The next day, Anania reported his vision, with the angel's reference to Job, to his teacher, Tykhikos, who responded, a bit testily, 'Why did you not inform me of this?' He then insisted that his pupil read a pious commentary on Job in which it is asserted that there are, indeed, no Australians. Perhaps there was some anxiety in this: Too much esoteric knowledge of the spheres could cause trouble. In subsequent Armenian legend, Anania is supposed to have been banished for his employment of magical arts.

So, I suppose, Anania decided to conceal some of his insight in what he knew would be *angitac' anpet*, 'useless to the ignorant' – a simple table of arithmetic. Buried within it, yet in plain view for those able to see, was the treasure hidden in Armenia that was to serve as the foundation of the country's principal indigenous magical text, around which the others would coalesce: That rich fusion of cosmology, mathematics, and symbolism in the letters as perfect numbers – the numerically perfect alphabet itself, the enduring creation of Maštoc', saint and national hero, linguist, mathematician and magician.¹⁹⁵

194 The solar *angelus interpres*, with his celestial sphere, was of perennial interest: *Pictura sapientis* seems to be the message of such a winged figure atop a celestial sphere on the title page of a Latin translation of *SY* published in Amsterdam in 1642, as shown in Joseph Dan, *Kabbalah: A Very Short Introduction*, Oxford: Oxford University Press, 2006, p. 12. Visionaries see what they are conditioned by the prevailing images of their time, place and beliefs to see; and few symbols were more powerful and widespread than that of the Sun god, which was popular even in synagogue mosaics; see J.R. Russell, 'The Four Elements and the Cross in Armenian Spirituality, with an Excursus on the Descent in Merkavah Mysticism', *Jewish Studies Quarterly*, 4/4 (1997), pp. 357–379, reprinted in *AIS*. Why the Sun god? Copernicus cited an utterance attributed to Hermes Trismegistus: The Sun is a 'visible god' (Heninger, *Cosmographical Glass* [above, note 168], p. 47).

195 It remains to be noted that, even as the secret in plain view of the Six Thousand could not be seen by those not equipped to see it, so many gradually came to doubt the very existence of the *Book of the Six Thousand* itself; see J.R. Russell, 'A Tale of Two Secret Books, or: How and Why the Armenian Magical *Book of the Six Thousand* Exists but Some People Think It Doesn't, and H.P. Lovecraft's *Necronomicon* Doesn't Exist but Some People Think It Does, and Why They're Both Wrong', paper presented on 3 May 2011 at the conference 'Knowledge to Die For: Transmission of Prohibited and Esoteric Knowledge through Space and Time', the Free University of Berlin and the Max Planck Institute, Berlin, 2–4 May 2011; forthcoming in the conference proceedings, edited by Prof. Florentina Badanalova.

Note: Since this lecture was prepared for publication, I have become aware of a short list from the Cairo Geniza of Cilician Armenian words and phrases transliterated into Hebrew script, with their Judeo-Arabic equivalents. See James R. Russell, "On an Armenian Word List from the Cairo Geniza," *Iran and the Caucasus*, 17 (2013), pp. 189–214.

James R. Russell is Mashtots Professor of Armenian Studies at Harvard University; he was twice a Lady Davis Fellow, and a Visiting Associate Professor of Iranian and Armenian Studies at the Hebrew University of Jerusalem. His principal books are *Zoroastrianism in Armenia*, *Armenian and Iranian Studies* and *Bosphorus Nights: The Complete Lyric Poems of Bedros Tourian*.

The lecture was delivered on December 20, 2009.

October 14th, 1995.

Mr. William S. Burroughs,
P.O. Box 147,
Lawrence, Kansas 66044

Dear Mr. Burroughs,

I trust this finds you well. In your recent book, *My Education*, you devote much attention to dreams. This interest seems to pervade your work- of which I am an avid and attentive reader- and I was very interested to notice that the five Cities of the Red Night derive their names from Ibn Khaldun's spell in the *Muqaddimah* to induce the dreams of one's desire. A vision in the conclusion of the trilogy follows precisely the same pattern as the heavenly ascent and vision of the solidified waters that one finds in the literature of the Kabbalah, from the tractate *Hagigah* on down. In particular, though, it has an affinity with a meditation on the Epiclesis (the part of the East Christian liturgy when one invokes the Holy Spirit) by a tenth-century Armenian mystical saint whose writings I've been working on since the age of twenty. I'm forty-two, now. Though I'd love to be able to talk about all this with you if ever you revisit your old college, that is not the purpose of this letter.

Are you aware of the existence of a mediaeval book called the Voynich Manuscript? With your interest in the indefiniteness of boundaries between the mechanical, botanical, and biological, it should warrant immediate attention. (But perhaps you have known of it for years. If so, forgive my presumption.) The book, some 120 pages in length, is written entirely in a cipher that has resisted all attempts at decipherment ever since it was publicized, some seventy years ago. The diagrams and pictures in it seem to portray all sorts of natural phenomena, but in unnatural and baffling combinations- my description does not do it justice. I'm enclosing herewith a blow-up of a sample page, out of a book of articles on the manuscript. The fact is that anybody who studies it comes away with a nasty feeling that is so strong it is the separate subject of some comments in a National Security Agency monograph about the Voynich. The manuscript dates, most likely from the fifteenth century, though authorship is attributed to Roger Bacon. John Dee and Athanasius Kircher both owned it, as it seems, at diverse times. Voynich was an American rare book dealer who bought the thing at a villa outside Rome.

The Voynich affects people. A dean at Penn devoted the last years of his life to what turned out, tragically, to be a misguided decipherment. His *Nachlass* was published by R. Kent, the great scholar of linguistics, whose grammar of Old Persian I use in my own classes. Panofsky studied the Voynich and was utterly certain of its authenticity, yet he could not connect the style of the intricate illustrations to any known school of art. Colin Wilson wrote a wonderful story, "The Return of the Lloigor", about the Voynich. He connects it there to Lovecraft's invented *Necronomicon*. My own first encounter with it was at age six: there was a page of it, in all its baleful original color, on the cover of *Scientific American*. My mother was in the kitchen, but seemed a million miles away. The manuscript inspired a bleak feeling, and a sort of dread. The shadows even lengthened a little.

My conviction that you ought at least to be informed about all this was enforced by a passage in I.B. Singer's novel, *Enemies: A Love Story*. The hero, Herman, is in his room in the Bronx thinking about his dreams, in which he is writing in Rashi script, on yellowish paper, a mixture of a story book, Kabbalistic treatise, and record of scientific discoveries, all illustrated with pictures. Maybe the Voynich is some lone scholar's dream, but one that is stupendously long, learned in an unearthly way, and able to affect us over the abyss of centuries. It even reminds me of your Mayan book, though I've not found any centipedes in it!

If you are not familiar with the Voynich, you have a real treat in store; and your insights would be at least as valuable as those of any academic who has stared at the thing. If you do know it, then pardon me for taking up your time— at all events, you have a devoted reader, and two friends (me & my Cat), back at Harvard, who wish you good health and happiness.

Yours sincerely,

James R. Russell,
Mashtots Professor of Armenian

Enclosure.

Nov. 1, 1995

Dear Mr Russell

Many thanks for your letter and the transcript.

I had not heard of the Voynich Manuscript and find the transcript fascinating. I think it is intended to be rotated and read in four directions. I have seen similar four way grids in Moroccan manuscripts. I did not know the source of city names.

Brian Gysin, a painter who used the four way grid in his painting, gave me the names but did not know their source.

Last night I had a dream faces in shells which clearly derives from the transcript you sent.

I now have six cats

sincerely

This paper examines some unusual features of a modern Armenian magical manuscript. The manuscript belonged to a Sephardic Jew, who annotated it, translating and transliterating some terms into Hebrew – a rare phenomenon in the Armenian context, since Armenia has no indigenous Jewish community, and the Armenians in the Ottoman Empire, a distinct *millet* (a defined religio-ethnic group), were often hostile to the Jews. The Jewish owner also inscribed an ancient spell known from Arabic magical literature at the beginning of the manuscript, and its use and significance are explored. The manuscript contains diverse spells, lists, magic squares and characters, and voces mysticae, with texts in Classical and Modern Western Armenian as well as in Armeno-Turkish. Representative portions of these are offered in translation, with commentary. The mystical prayers employed from the tenth-century Armenian *Narek* are translated in full, in an appendix; these are of interest insofar as they illustrate a nexus of canonical and folk religious concepts. The manuscript also contains a version of *Vec' hazareak*, 'The Book of the Six Thousand', a designation broadly employed to describe Armenian magical texts that often differ widely from each other. A final appendix considers some reasons why the original of this book, a mathematical table, was of intellectual importance in the context of early Christian Armenia.

James R. The lecture was delivered on December 20, 2009.

The Script of the Dove: An Armenian Hetaerogram

James R. Russell

Cryptography, the study of codes, ciphers, and the storage and transmission generally of information in a secret manner, is today more a science dominated by mathematicians with computers, than an aspect of textual and historical research studied mainly by philologists and paleographers, as it was in the past. It is reasonable that this should be so: as human technology has become more sophisticated and complex, secret codes have become much harder to decipher than in previous ages. They were always an important feature of the security and military capability of states; but as wars have grown in scope and political systems have become capable of greater domination over everyday life, the stakes are greater than ever before.

So, the decipherment by Alan Turing and others of the German Enigma code was very important to the Allied effort to defeat Hitler in the Second World War. A by-product of Turing's work was the prototype of the modern computer.¹ Protection of the security of internet communications, financial and other, against viruses and hackers, is an issue that affects many aspects of life today. However great and intricate the advances of

¹ On cryptography generally, the best book is still David Kahn's magisterial *The Code-Breakers* (New York: Macmillan, 1967). Andrew Hodges in his biography *Alan Turing: The Enigma* (New York: Simon and Schuster, 1983), discusses how Turing's work on code-deciphering machines during World War II led to the invention of the computer. But with the onset of the Cold War, Turing's left-wing convictions and homosexuality isolated him from the authorities and society and led to his untimely death.

science, in scholarship one must still steadily resist as fallacy the impression that because we have over time developed more complex machines now than our ancestors did, it must follow that we are as individuals more intelligent than they were. The writings of the ancients are still our fundamental classics; and even in the field of cryptography, the mastery of the men of the past endures. For it is after all a mediaeval cipher, not the mechanized encryption of a modern intelligence service, that still resists the combined efforts of scholars and scientists to decipher it. The Voynich MS, a book written entirely in an unknown code and illustrated with enigmatic anatomical, astronomical, and mechanical pictures, is perhaps the most popular manuscript in the world: drawings of what look like the cellular walls of the skin, and the structure of galaxies, have proved particularly intriguing and controversial, since the manuscript undoubtedly predates the invention of microscope and telescope. It belongs to the Beinecke rare book library of Yale University, the American National Security Council and Bell Labs are among the institutions that have commissioned studies of it, at least one scholarly career has been wrecked by a failed and misguided decipherment of it—and to this day nobody has any idea what it says.²

The writing in the Voynich MS, if it was not from the start a sort of scholastic joke with no plain text behind the encrypted one, must then be a code of extraordinary complexity, probably involving either an artificial language or a permuted natural one. The simplest codes, by contrast, are substitution ciphers, in which a symbol, number, or other letter is substituted for a letter of the alphabet in transcribing straightforwardly the spelling of a word in a natural language. When the language in question is English, it is a straightforward matter to crack the code, if the enciphered text is of moderately sufficient length, simply by counting the occurrences of each symbol and then applying the list of frequency of letters in the English language: *etoon irshd lucmpf jkqcx*. A few years ago a dealer in antiques in New Eng-

² See Gerry Kennedy and Rob Churchill, *The Voynich Manuscript* (London: Orion, 1992). The president of the University of Pennsylvania thought he had cracked the code; and the great scholar of Old Persian, Prof. R. Kent, approved the solution and supported its posthumous publication. The internet has spawned numerous sites and networks dedicated to the Voynich, but we are still no closer to a solution than ever. Collin Wilson's wonderful story "The Return of the Lloigor" links the Voynich to the Cthulhu cult of the writer H.P. Lovecraft, on whose fictional *Necronomicon* see *infra*.

land sent me out of the blue several photographs of a painting handed down as an heirloom in his family. It is a still life in oils of a glass vase of flowers; and it looked to its owner, and to me, as though it might be the work of an artist living in the Ottoman Empire in the middle or late 19th-century. Armenian artists of that place and period in particular combined Western European expertise in technique with Near Eastern subjects and sensibilities; so it would not be unreasonable to surmise that the painter might have been an Armenian.³ But what interested the owner of the picture was not so much the possibly Armenian provenance of the picture as this: someone had incised short inscriptions into the lower part of the painting and across the back, and nobody he had consulted could tell him what language it was. Several of his interlocutors⁴ knew I taught Armenian and

³ A number of Armenian artists working in the Ottoman Empire in the late 19th century painted such still life oils, though with greater technical expertise: Ōzeni K'awuk'čean, Anton Mkrean, Eruand Ōskan, and Batist Limončean come to mind. See Garo Kōrkman, *Armenian Painters in the Ottoman Empire, 1600-1923*, 2 vols. (Istanbul: Metusalem, 2004). For the painting and cipher inscription see Plates 4-7 in this essay. A few characters and the first two lines and bottom of the longer inscription on the back of the panel are blurred; and the individual symbols to the left may be numeration of some kind. But the bulk reads: "I met al.../ Just opened to the morning .../ And so I stopped to gaze/ And thou art beautifull [sic] I said/ That lily did not hide its head/ But freely forth its odors shed/ To pay me for my praise." The shorter inscription on the painting itself reads, "... face to look upon and pray.../ ... spirit keep thee..."

⁴ I never learnt the identity of these mysterious friends; but in connection with one's interest in arcana a curious incident is worth retelling here. Not long after I first came to Harvard, in 1993, a stranger working at the Widener Library forwarded to me for reply a letter of inquiry from the north of England about the *Necronomicon*. The American writer of fantastic fiction H.P. Lovecraft (d. 1937, Providence, RI) invented and wrote about this (unfortunately) fictional tome of dread occult lore in his story "The Dunwich Horror," which blends the invented with the real. Dunwich itself is a sunken city off the east coast of England; and Lovecraft's Massachusetts town of that name is inspired by a real village submerged by a reservoir near Amherst. As for the book, the story claims copies carefully kept from the public eye belong to the collections of Miskatonic University (fictional) and Harvard's Widener Library. The story also mentions a cipher passed down by a secretive cult—just the phenomenon that is the topic of this essay! It was my sad duty to inform our British correspondent that although, as the *mantra* in Aklo proclaims with ominous majesty, *Ph'nglui mglw'nafh Cthulhu R'lyeh wgah'nagl fhtagn*, "In his house at R'lyeh dead Cthulhu

were perhaps aware as well of the pleasure I took in puzzling over arcane writing; and suggested he contact me. Upon receipt of his photographs, the first thing I noticed was that some letters

waits dreaming" there is to the best of my knowledge no *Necronomicon* at Widener. As to the mantra, one notes that *ph-* seems to be a preposition, like Arabic *fi* or Hebrew *be-*. The past participle *mgilw'naft* appears to be formed on the verbal base *mgil-* "die," cf. Armenian *mgil-el*, "to decay"; and the present participle *wgahnagl* would contain *wgah-*, "dream," cf. perhaps Arm. *wkay* "witness" (<OPth. **wikas-*, Phl. *gugay*). The cognomen Akdo, if it was taken by a translator from 'Abd al-Hazrat, would perhaps be from Arabic *'aql*, "intelligence." Here is a section of the book: "Nor is it to be thought, that man is either the oldest or the last of earth's masters, or that the common bulk of life and substance walks alone. The Old Ones were, the Old Ones are, and the Old Ones shall be. Not in the spaces we know, but between them, They walk serene and primal, undimensioned and to us unseen. Yog-Sothoth knows the gate. Yog-Sothoth is the gate. Yog-Sothoth is the key and guardian of the gate. Past, present, future, all are one in Yog-Sothoth. He knows where the Old Ones broke through of old, and where They shall break through again. He knows where They have trod earth's fields, and where They still tread them, and why no one can behold Them as They tread. By Their smell can men sometimes know Them near, but of Their semblance can no man know, saving only in the features of those They have begotten on mankind; and of those are there many sorts, differing in likeness from man's truest eidolon to that shape without sight or substance which is Them. They walk unseen and foul in lonely places where the Words have spoken and the Rites howled through at their Seasons. The wind gibbers with Their voices, and the earth mutters with Their consciousness. They bend the forest and crush the city, yet may not forest or city behold the hand that smites. Kadath in the cold waste hath known Them, and what man knows Kadath? The ice desert of the South and the sunken isles of Ocean hold stones whereon Their seal is engraven, but who hath seen the deep frozen city or the sealed tower long garlanded with seaweed and barnacles? Great Cthulhu is Their cousin, yet can he spy Them only dimly. Iä! Shub-Niggurath! As a foulness shall ye know Them. Their hand is at your throats, yet ye see Them not; and Their habitation is even one with your guarded threshold. Yog-Sothoth is the key to the gate, whereby the spheres meet. Man rules now where They ruled once; They shall soon rule where man rules now. After summer is winter, and after winter summer. They wait patient and potent, for here shall They rule again." The proper names and toponyms, heavy on -ath and -oth endings, are delightfully pseudo-Semitic, while the rhetorical repetitions, litanies, and jeremiad explosions are all Biblical—bending the forest and crushing the city might please the Psalmist himself. And then there is the lapse down through the sea and into the elegiac speech of Lovecraft's inspiration, Poe.

obviously derived from the Runic alphabet of northern Europe. I therefore hypothesized that the inventor of the code was not a Middle Easterner and was therefore most likely encoding a Western European language. The words of the inscriptions are helpfully separated by dots, and from a cursory survey of the two-to-four-letter words I hazarded the guess that these were the definite articles, prepositions, and conjunctions of French. That didn't work; so I tried English. I then poured myself a peg of Scotch (Sherlock Holmes would have lit a pipe) and deciphered the message in a few minutes.⁵ It is a rather banal, sententious poem of the sort a provincial American (and a rather vulgar one—he was after all defacing a painting that is not without a simple and affecting charm) of the Victorian age might have liked. Thus the painting might have been purchased as a souvenir in an Ottoman city frequented by Western travelers, most likely Constantinople or Smyrna. I have not seen the code elsewhere; so it is at least possible that the writer of the text invented it himself and maybe even used it just this once. But where would he have found the symbols for it? One surmises they could easily have been culled from another cipher, maybe that⁶ of one of the semi-secret fraternal societies that were very popular in the United States in the period.⁷

⁵ This part of decipherment, the cultivated hunch, is the *Fingerspitzengefühl* that comes with formal training if one is lucky. It goes back a long way: al-Khalil of Basra, eighth century, solved an encrypted Greek message sent as a condescending tease by the Byzantine emperor. The Arab scholar thought it must begin with a formula "In the name of God" or words to that effect. It did, and he got the first letters of the code that way: see Kahn, *op. cit.*, p. 97.

⁶ American Freemasons, then as now, work the Craft rituals "to an approved ritual issued to them in cipher": Bernard E. Jones, *Freemasons' Guide and Compendium* (London: Harrap, 1956), p. 226.

⁷ Mark C. Carnes, *Secret Ritual and Manhood in Victorian America* (New Haven: Yale University Press, 1989), suggests the Masonic order and other groups affirmed their members' masculinity while the churches and other institutions of the fast-growing industrial Republic undermined and threatened it. At the same time, the revelation of the "Royal Secret" of our hermaphroditic nature provided release for sexual emotions that could not be expressed otherwise or elsewhere in Victorian society. Although some of Carnes' insights have undoubted validity, they seem informed less by a standard of impartial scholarship than by the agenda of gender studies. The author's work is marred by an almost cartoonish contempt for the organizations he is studying, and throughout the book he seems to assume *a priori* that sane, mature men cannot have serious spiritual or mystical strivings. On page two,

Those societies, with their secret rituals and signs of recognition, satisfied a need to belong and to feel special, apart from the ignorant herd; and one aspect of their operations was the use of ciphers to endow their communications with a sense of privacy, prestige, and mystery. Those are precisely the conditions under which one proposes the kind of Armenian cipher to be discussed, which I will term a "hetaerogram" (i.e., the writing of a sodality—a pun on heterography!), would have developed and flourished. Indeed in America the exposure of the secrets of one such secret society, the Ku Klux Klan, was more a factor in its downfall than any diminution of its violent activity.⁸ Secrecy has an incomparable allure.

Some ciphers invented by one person for his own use and never employed by anyone else derive their symbols from historical sources, as in the case of the painting. A substitution cipher attested uniquely in the Folger Manuscript, devised by a medical doctor in New York in 1827, to write about Masonic philosophy uses different simple symbols representing the individual letters. But the inventor put them together in such a way as to have each word form a squared design resembling somewhat Egyptian hieroglyphics: the inventor even uses the Egyptian convention of the cartouche to enclose words of special significance. The cipher thus reflects both the fashion of aegyptomania in early 19th-century America and the inherent secretiveness of the Masonic order, as well as of course the Masonic interest in primordial culture.⁹ Masonic secrecy, which has its own social and religious value independently of any public or political stimuli, became a practical and urgent matter in Folger's day. For this

for instance, he summarily dismisses the rituals and teachings of the secret orders as "hokum." One need but reflect that the latter word is itself a Victorian product of British colonial usage in India: Arabic *ḥukm*, "an order" (see Henry Yule and A.C. Burnell, *Hobson-Jobson: a Glossary of Colloquial Anglo-Indian Words and Phrases*, 1886, London: Routledge and Kegan Paul, repr. 1986, p. 424) became for the Westerner good slang for nonsense! Such an attitude in any other context toward a culture or religion under study would be regarded as a disqualification of the researcher from further serious scientific work: one shudders to think what such a scholar might do to Sufism in Islam, or Kabbala.

⁸ See Steven D. Levitt and Stephen J. Dubner, *Freakonomics: A Rogue Economist Explores the Hidden Side of Everything* (New York: Harper Collins, 2006), p. 58.

⁹ As one author has put it, combining Proust with the Masonic quest, *à la recherche du verbe perdu*.

was the period of the anti-Masonic movement following the Morgan Affair of 1826—a year before Folger composed his MS.¹⁰ A man named Morgan in upstate New York was abducted and apparently murdered by Lodge brethren, for having divulged Masonic secrets. So the arcane and the mysterious are a lure to prospective members of secret societies; but sometimes those societies, whether embroiled in scandal or condemned by some powerful establishment of religion, also have good and practical reasons to try to protect their members by keeping their communications secret.

Sometimes the mere difficulty of a known script can be counted on as a sufficient deterrent to undesired intrusion into writings of a personal nature. In the mid-17th century, the English politician Samuel Pepys used a system of shorthand to write the several volumes of his famously candid diaries: the system was published but might as well have been a secret code to the untutored.¹¹ Invented scripts are sometimes associated with invented languages with their purpose not so much discretion as literary invention or plain fun: the British fantasy writer and mediaevalist J.R.R. Tolkien used an angular Runic alphabet and a delicately curvaceous cursive script called Tengwar or Quenya to write his various made-up languages in *The Lord of the Rings* and other books. The palaver of his Elves, indebted to Old English, also owes much of its euphony to Finnish; whilst the sinister inscription on the Ring of Power in the dark tongue of Mordor, jabbered by cruel and ugly Orcs, is endowed with the agglutinative character and phonetic signature, I think, of Turkish.¹²

¹⁰ S. Brent Morris, *The Folger Manuscript: The Cryptanalysis and Interpretation of an American Masonic Manuscript* (Bloomington, IN: The Masonic Book Club, 1992), published the entire text in facsimile, with facing plain text: see Plates 1-3 accompanying this study. On the aegyptomanic craze and American literature, cf. John T. Irwin, *American Hieroglyphics: The Symbol of the Egyptian Hieroglyphics in the American Renaissance* (New Haven: Yale University Press, 1980): Poe's Antarctic traveler Arthur Gordon Pym encounters mysterious Ethiopic, Coptic, and Arabic inscriptions on his journey portending doom and various reflecting Hebrew *tsalmaweth*, the shadow of death in Ps. 23, see pp. 195-205.

¹¹ The system is published in Thomas Shelton, *A Tutor to Tachygraphy, or Short-Writing* (London, 1642).

¹² On invented languages and their scripts generally, including Tolkien's, see Paolo Albani and Berlinghiero Buonarroti, *Aga Magèra Difira: Dizionario delle Lingue Immaginarie* (Bologna: Zanichelli, 1994). The idea that the northern races are noble; the southern, base—is a pernicious sort of racism that suffuses also the Narnia books of Tol-

Another interesting example of a cryptogram invented by a writer for his own use, employing some esoteric symbols or characters from foreign writing systems, is the cipher of the Russian writer Daniil Kharms (the *nom de plume* of Daniil Ivanovich Yuvachev, 1905-1942), a member of the OBERIU literary circle in Leningrad. Like many other Soviet citizens, he fell afoul of the Stalinist authorities: Kharms died of starvation, imprisoned in a mental hospital, during the Nazi blockade. Though he is best known as the author of absurdist poems, plays, children's literature, sketches, and short stories, Kharms was also an inspired artist with an avid interest in ancient Egypt, Kabbalah, the mystical properties of the Hebrew alphabet, and kindred occult subjects—the same range of interests, that is, that animated the Masons of Folger's day and that one will observe presently in the case of the Order of the Golden Dawn. Several characters of the private cipher he invented are the same as those of the cipher employed by members of that order; others come from Japanese; and one seems to derive from the Samaritan Hebrew script. Some of the encoded entries in his diaries are of sexual content—a good reason for secrecy—and eavesdropping by others was the first stage of the pervasive culture of surveillance in the Soviet Union, though one rather thinks a secret code would have sparked, not deterred, the malign attention of police informers.¹³

kien's Oxford friend, C.S. Lewis. The villains in the latter's children's epic come from Calormen (i.e., they are hot-blooded, cf. Latin *calor*). Their currency is the Crescent (symbol of Islam) and their capital is the seat of the Tashban (Turco-Persian, "protector of the stone," their idol, cf. the Ka'aba—medieval Europeans considered Muslims idolaters, the one thing they assuredly never were). These lascivious folk keep pretty blond boy slaves from northerly, pseudo-Germanic Archenland. A bad business all around. See J. R. Russell, "News from Zembla," a review article on John Garth, *Tolkien and the Great War*, Elena Obatnina, *Tsar' Asyka i ego poddannyye*, etc., *The New Leader*, New York, Summer 2004.

¹³ See Plates 10-14 here; cf. Aleksandr Nikitaev, "Tainopis' Daniila Kharmsa: opyt deshifrovki" ["The cipher of Daniil Kharms: an attempt at decipherment"], in Yu. S. Aleksandrov, ed., *Risunki Kharmsa* ["Kharms' Drawings"] (St. Petersburg: Ivan Limbakh, 2006), pp. 237-247; and Zh.-F. Zhakkar, ed., Daniil Kharms, *Zapisnye knizhki, Dnevnik* ["Notebooks, Diary"], 2 vols. (St. Petersburg: Akademicheskii Proekt, 2002). In a discussion of Orlando Figes, *The Whisperers: Private Life in Stalin's Russia*, the great Dostoyevsky scholar Joseph Frank notes how during the Great Terror of 1937 many people took to diary writing, "using a script they tried to make undecipherable" ("In Stalin's Trap," *New York Review of Books*, 26 February 2009, p. 31. That puts Kharms in the dark context of his age.

Russia brings us a little closer to Armenia; and indeed the creation of new languages, some with their own scripts, has never been limited to the West. Zoroastrian sectarians in India, followers of Dastur Azar Kaivan, who flourished in the reign of the emperor Akbar, several centuries ago invented an artificial language for the book of their traditions and teachings, the *Desdâtir*.¹⁴ In a Perso-Turkish milieu of around the 15th or 16th century there was created a language for the use of mystics called *Bâl-a î-Balan*: it displays characteristics of the languages of its inventors, and was probably invented to conceal esoteric teachings from censorious orthodox divines.¹⁵ There is, in the Armenian sphere, the interesting case of a reclusive gentleman of Smyrna, Petros Tnker(ean) (or Tenger, d. 1881), who had studied with the Vienna Mekhitarists, an Armenian Catholic monastic order dedicated to scholarship, and had mastered the principal languages of Western Europe and the Ottoman Empire, as well as Sanskrit. Tenger settled in a stone house on a hill in the Aspra Khomata district of his native city and dwelt there in seclusion: he devised a new language, called *Sahleray* [pronounced *Sahlerâ*], with its own alphabet and grammar. He had the custom of presenting copies of a textbook of his new language, presumably privately published in an edition of a modest print run, to the (presumably few) guests who penetrated his fortress. A sign inscribed in the *Sahleray* language and script with the word *Ayzeratand*, meaning "Temple of Wisdom," hung over the entrance to the visionary linguist's mystic lair.¹⁶ It is

¹⁴ See J.R. Russell, "On Mysticism and Esotericism among the Zoroastrians," *Iranian Studies* 26.1-2, 1993, pp. 73-94, esp. p. 87, repr. in J.R. Russell, *Armenian and Iranian Studies* [=AIS], Harvard Armenian Texts and Studies 9 (Cambridge, MA, 2004).

¹⁵ Alessandro Bausani, "About a curious mystical language *Bâl-a î-Balan*," *East and West*, Year IV, No. 3 (Rome: IsMEO, 1954), pp. 234-238.

¹⁶ Abraham Ayzazean, *Šar hay kensagrut'eanc'* (Constantinople, 1893), part II, pp. 91-95; and Fr. Ep'rem Pôlosean, *Guyumčean ew T'enkerean gerdastannere* [German title, *Die Familien Kouyoumdjian und Tinger*; Tenger is another known spelling of the latter surname], Vienna: Mxit'arean tparan, 1951, pp. 34-39. I have been unable to locate a copy of Tenger's textbook, and Kevork Bardakjian has not seen one; but a copy may exist in the Mekhitharist library at Vienna. Mustafa Kemal's troops set fire to Smyrna (Tk. Izmir) in 1922 and massacred or drove into the sea the Greek and Armenian Christian inhabitants. Warships of the Western powers sat at anchor in the harbor and their crews were ordered to ignore the drowning people. A young American missionary assembled a fleet of Greek fishing boats to res-

not clear whether Tenger intended his new idiom to be an international tongue to promote human unity, as Dr. Zamenhof of Warsaw did with Esperanto. At least, the former never made any real attempt, as far as is known, to popularize *Sahleray*.

But it may be surmised at least that these imaginative representatives of two harassed and disfranchised minority nations—the Jew from Russian Poland and the Armenian in Western Anatolia—were in part attempting by inventing languages they could control to compensate for the feelings occasioned by the impotence and unofficial status of their own native tongues, each with its distinctive script (Armenian, for Armenian and Armeno-Turkish; and Hebrew, for Hebrew and Judaeo-German or Yiddish).¹⁷ Tolkien, an Oxford don, felt no such insecurity; but for him, too, as he admitted in a lecture of ca. 1930, the invention of languages was an eccentricity and a matter of pleasure, and of a sort of guilty, boyish pleasure at that.¹⁸ So invented scripts, as we have seen so far, tend to fulfill certain, similar needs: a member of a secret society seeks a sense of belonging and of validation. A religious sect endows its new writings with the patina of ancient prestige through the invention of esoteric scripts and words. A member of a belabored small people whose own language and script are without honor in the macrocosm

cue the survivors. One of the people plucked out of the water was Bishop Leon Tourian, who later became Archbishop of the Armenian Church in North America and was murdered during Mass at the Holy Cross Church of Armenia in Manhattan in 1933. The crime so shocked the public that William Burroughs was to use his name a decade later in the novel *And the hippos were boiled in their tanks*, which deals with another scandalous murder in New York.

¹⁷ The life of Ludovic Lazarus Zamenhof, 1859-1916, in many respects parallels that of Eliezer Ben Yehuda, to be discussed presently. Both were Russian Jews, and both associated their imaginative linguistic projects with an ideology. In 1901, Zamenhof published in Russia a book, *Hillemism*, in which he outlined an idealistic philosophy of universalist, humanist liberalism taking its name from the gentle Jewish sage Hillel: see Marjorie Boulton, *Zamenhof: Creator of Esperanto* (London: Routledge and Kegan Paul, 1960), p. 98f. Esperanto was to be the language of this utopian (and unrealizable) cosmopolis, even as Hebrew was to be the speech of the reborn commonwealth of Israel. One recalls that Thomas More created for the perfect society of his *Utopia* an alphabet of ideally simple geometric shapes, in its way like Zamenhof's pleasantly simple language.

¹⁸ J.R.R. Tolkien, "A Secret Vice," in Christopher Tolkien, ed., *The Monsters and the Critics and Other Essays* (Boston: Houghton Mifflin, 1984), pp. 198-223.

creates a language or script of his own that he can magnify and control in his own microcosm. An academic reluctant to part entirely with adolescence retains its need for self-aggrandizing, romantic secrets such as codes others cannot read, and magical-sounding incantations outsiders cannot understand: through these he hopes to gain others' awed attention, their respect, maybe even their love.

As we have seen, the sheer force of the imagination, employed to serve a profound psychological need—the thirst for inner self-fulfillment, for validation of one's status and integrity—has brought forth cryptograms used by individuals and sodalities, as well as languages and scripts created for fiction and artificial languages intended for use worldwide. The act of creative imagination is as crucial to a related phenomenon of much greater historical importance: the revival of ancient or degraded languages, such as Hebrew or Armenian alluded to above, with their native scripts, for modern, secular use in the setting of a newly-created nation-state. Language is an inestimable component of the project of nationalism: an imagined, shaped identity needs not only the practical appurtenances of territory and state power to administer and defend it, but an idea and a voice to animate the society defined within international frontiers. That is, nationalism needs ideology and language. In the case of the Armenians, it is fairly evident from the hagiography of Maštoc' by Koriwn that the visionary activity of the saint in creating a script for Armenian in the fifth century served a palaeo-nationalistic end, giving a standard literary language to a polity on the threshold of the loss of political sovereignty.¹⁹ And in the modern period, two great modernizers of Armenian, Mesrop T'aliadeanc' and Xaç'atur Abovean (the latter the author of the first "modern" Armenian novel, *Vêrk' Hayastani*, "The Wounds of Armenia," 1848) were isolated and traumatized men moved by a powerful inner vision verging on passion. Before them, the Mxit'arist reforms of the language had been grounded in classic-

¹⁹ On this subject, see J.R. Russell, "On the Origins and Invention of the Armenian Script," *Le Muséon* 107.3-4, 1994, pp. 317-333 (repr. in AIS, pp. 565-581); and on early Armenian nationalism see J.R. Russell, review of Razmik Panossian, *The Armenians: From Kings and Priests to Merchants and Commissars* (New York: Columbia University Press, 2006) in *The American Historical Review* 112, Bloomington, IN, 2007. For comparative studies of the phenomena of language and nationalism among Armenian and Jewish communities in the modern age see the collection of essays edited by R.G. Hovannisian and D.N. Myers, *Enlightenment and Diaspora: The Armenian and Jewish Cases* (Atlanta, GA: Scholars Press, 1999).

ism and were not connected to any movement of national liberation: the good Catholic fathers, living in distant Venice and Vienna, were largely content with Diaspora circumstances and saw no prospect of an end to Ottoman rule. They were mainly unconcerned with the political fate of the Armenian highland, a country most of them had never seen. But these two men set out to transform Armenian, a cluster of mutually unintelligible dialects burdened by thousands of loan-words from the languages of Muslim overlords and neighbors, into a standardized, modern literary idiom capable self-sufficiently to construct neologisms much as the literary language of Maštoc' had become—and to become the vehicle of national liberation and the forging of a free Armenian state.

Jewish history seems so often to run parallel to that of the Armenians that the crucial, intriguing differences sometimes seem to jump out at one unexpectedly. Most Armenians inhabited their ancient homeland but were oppressed by Muslims and looked to the Christian powers for help; the Jews lived in exile from their country in Christian lands that were hostile *ipso facto*, while Palestine was governed by the relatively benign Ottomans. Yet here are the similarities: rather like the promoters of the Mxit'arist project, the European Jews of the Enlightenment, the *maskilim*, sought to standardize and modernize the Hebrew language. But their main goal in this was to enable their fellow Jews to imbibe secular culture and thereby to become assimilated into the nations of the Diaspora as a minority stripped of the lineaments of its ancient separateness. They did not foresee that their efforts were often one-sided: the ambitious, assimilated, secular Jew was to appear to hostile eyes more insidious and threatening than the ghettoized one of a generation before. However the linguistic reformer Eliezer Ben Yehuda saw the question differently, and attempted in the final quarter of the 19th century to shape a revived Hebrew that Jews might employ for their own everyday purposes, without sacrificing their identity, in their own country. Ben Yehuda himself emigrated to Jerusalem from Russia, and was excommunicated by the local rabbinate, much as Abovean had been anathematized by the Armenian Church. But Ben Yehuda persisted: he raised his children to hear only Hebrew, he wrote a dictionary, and the living speech of Israel today owes its existence to him. But he came to his vision—and to his traumatic fate—not only from a study of history, or an interest in linguistics, but from reading, in the Russian journal *Vestnik*, about a work of fiction.

The Englishwoman who published under the male *nom de plume* George Eliot wrote her last, great novel, *Daniel Deronda*,

about a young man gently raised in an English home who discovers his Sephardic Jewish lineage from some documents hidden in a chest. The psychological metaphor, of uncovering something suppressed from one's past and at the core of one's being, and of coming out of a closet, is too obvious to require comment. Daniel determines not only to embrace his heritage and people, but also to move to the land of Israel and to restore the Hebrew language there to its original status as a living idiom. The novel was translated into Russian in its ponderous Victorian entirety by Perets, Gordon, Smolenskii, and Lilienblum in the 1880's: these men, Hebraists who had at first advocated assimilation, abandoned the idea in the wake of Tsar Alexander III's pogroms and themselves made *aliya*, "ascent," to Israel.²⁰ The novel is not merely a leap of imagination, an invention of Zionism *avant la lettre*; it turns out to have been also the spark that fired Eliezer Ben Yehuda to move—literally—in the direction he did. In retrospect, the Jewish state without Hebrew seems inconceivable.²¹ Having a collective speech and script in a country of your own is as important as having that room of one's own Virginia

²⁰ On the translation, see Solomon Hurwitz, "George Eliot's Jewish Characters," *Jewish Forum* 5, 1922, p. 369. Susan Meyer, "Safely to Their Own Borders: Proto-Zionism, Feminism, and Nationalism in *Daniel Deronda*," *ELH* 60.3, Autumn 1993, pp. 733-758, argues that here, as in other novels, Eliot has deflected the problems of being a woman, which she fails to challenge and resolve when she creates female characters, onto problems of "race" instead of gender; and males are produced to master these issues. She also observes that Daniel Deronda and other Jewish men in the novel actually assume feminine traits and roles. The belief that Jewish men menstruate is a staple of anti-Semitic racist fantasy. In the fourth century St. John Chrysostom stigmatized the synagogue, which John the Evangelist had already called satanic, as a gathering place of actors and homosexuals; and it came to be believed that Jewish men had a menstrual cycle. So the undermining of Jewish masculinity is as old as systematic Christian theology itself.

²¹ There is a counterfactual historical novel by Michael Chabon, *The Yiddish Policemen's Union*, 2007, that imagines instead of Israel a temporary refuge for Holocaust survivors at Sitka that is about to be repossessed by the state of Alaska; its inhabitants, dispersed. The tongue of these hapless, homeless Jews is that of the Diaspora—Yiddish. And the imagined Sitka has a Hotel Zamenhof! Though I can imagine no stronger argument in favor of the State of Israel than this *noir* fantasy, its author seems to have intended it as a kind of anti-Zionist romance.

Woolf was to demand for women.²² The continuing demonization of the Jews and Israel in the world suggests that Zionism is the most radical of national liberation movements; so it is perhaps not surprising that it should have an affinity, though sublimated, to feminism—and, one can argue, to gay liberation as well.²³

There are other ciphers of the substitution kind, employed not for invented but for natural languages, which have been used, not by a single writer, but by many different people over the course of centuries—in the cases we are to examine, as long as nearly half a millennium. Though they are essentially cryptograms, in that they are intended to have a veneer of secrecy, and though they employ symbols considered to be of esoteric sym-

²² For minority peoples like Armenians and Jews, whose very right to that room of one's own is contested, and whose languages have often seemed to be endangered species, the issue is a burning one. But even the young American republic, in a far less parlous condition, was exercised by what was regarded as the urgent necessity of defining a national language and the orthography of its alphabet: see Jill Lepore, *A is for American: Letters and Other Characters in the Newly United States* (New York: Knopf, 2002).

²³ In 2007 the American gay novelist and literary scholar Edmund White published a novel, *Hotel de Dream*, which imaginatively expands an incident known only anecdotally from the last weeks of the life of the American writer Stephen Crane (1871-1900). According to James Gibbons Huneker, a New York art critic and friend of Crane's, the two men once saw on the street a beautiful young male prostitute whose appearance first repelled, then fascinated Crane, who took the boy home to dinner and plied him with questions about his life. He began a novel about the youth but then destroyed it under pressure from horrified friends. Though the story may be largely apocryphal, the fact is that Crane did write about a female prostitute: *Maggie: A Girl of the Streets* (see Stephen Crane, *Prose and Poetry* [New York: The Library of America, 1984]). In White's novel, Crane's lost MS is called *The Painted Boy*, and the youth, Elliott, is unashamedly gay and unassimilated to the breeder world. When at a reading and discussion of *Hotel de Dream* at the Brattle Theatre in Cambridge, MA, a year after the publication of the book one asked White whether his imagined novel might be viewed as a sort of *Daniel Deronda* of gay liberation, he warmly agreed and reminded me that he had written the introduction to the Modern Library Classics edition of George Eliot's novel (New York: Random House, 2002, pp. i-xxv). Here in Cambridge, where a thoughtless, one-sided hostility towards the Jewish state is often a part of the general left-Puritanism, White's enthusiastic endorsement of Zionism drew a visible shudder from an audience that had come to hear its comfortable myths affirmed, not challenged.

bollic importance or else have esoteric designations, they cannot truly be said to be secret, given their long and wide employment. They are certainly not the gully, pleasurable effluence of a solitary vice; so some other term must be devised better to characterize and understand them. I propose here a neologism, *hetaerogram*—by which term I mean an invented script employed to represent a natural language whose users draw, or claim to draw, upon a tradition of antiquity, that also belongs, not to one user, but to a *hetaira*, that is, in Greek, some association or sodality of people, or to several groups; and that is employed also not for a single occasion but over a significant period of time. Moreover, despite its wide and long application, the script never emerges into the arena of entirely public employment. It retains its reputation, however undeserved, of deep secrecy. To lessen somewhat the grating effect of a novel word in the language, one intends a punning reliance upon an existing term, *heterogram*, by which is meant the representation of a word in one language by the same word in another.²⁴ The users of *hetaerograms* would seem to see the script they share as ennobling the message of a text and setting it apart from other texts in the same language, as though they were writing the same and another language at once; and correspondingly they regard themselves as communicating in a special and privileged way.

Perhaps the most important *hetaerogram* in the West is the cipher that was most famously employed by the Order of the Golden Dawn of the late 19th and early 20th centuries, of which the Irish poet William Butler Yeats was a member.²⁵ This substitution cipher goes back to the *Polygraphia* of the 16th-century abbot Johann Trithemius and is composed mainly of alchemical symbols. Some symbols present in the cipher had been employed earlier by Chaucer in a secret code of his own.²⁶ John

²⁴ In Zoroastrian Book Pahlavi, or Middle Persian, for instance, cursive, connected Aramaic letters forming the Aramaic word *MLKA* represent, and are read as, Persian *šāh*, "king." In English, the ampersand symbol (&) meaning "and" is actually a shorthand heterogram of Latin *et*.

²⁵ See Darcy Küntz, *The Complete Golden Dawn Cipher Manuscript* (Edmonds, WA: Holmes Publishing Group, 1990). A key to the cipher is provided also by Nigel Pennick, *Magical Alphabets* (York Beach, ME: Samuel Weiser, 1992), p. 181, as a "Renaissance magical alphabet."

²⁶ These symbols were of course known very widely among practitioners of alchemy and the occult arts: see Fred Gettings, *Dictionary of Occult, Hermetic, and Alchemical Sigils* (London: Routledge & Kegan Paul, 1981), esp. the entry "Alchemist Script," pp. 44-45, with ref. to B. de

Dee, the Elizabethan occultist and magician, owned a copy of Trithemius' *Steganographia* and knew the *Polygraphia* as well.²⁷ So before its employment by the Order of the Golden Dawn, this alchemists' cipher was already well known and several centuries old, with its roots older still. Its modern users could scarcely have thought it particularly secret, then; and by the modern era the decryption of a substitution cipher would have been a fairly simple matter for any interested and literate Englishman. One thinks therefore that the cipher of the Golden Dawn was not so much a cryptogram as a hetaerogram—a writing system for which an old and noble pedigree might be claimed, limited to the use of a *soi disant* elite. It derives its prestige, not only from its long itinerary across the ages, but also from its content—the symbols of the alchemical craft. As we shall see presently, there is in Armenian usage an analogous hetaerogram.

The Armenian hetaerogram now to be discussed was used mainly by physicians and herbalists, though craft guilds of other kinds employed it as well. It seems to have endured, thus, for nearly half a millennium. It is referred to in some MSS as *ahuanic' gir*, "Aluan script," i.e., the alphabet devised by St. Mesrop Maštoc' for the *Ahuanik'* or Caucasian Albanians (no relation to the Albania of the Balkans or to the Iranian Alans of the North Caucasus); it also bears the designation *bžškakan*, "belonging to physicians," and has been the object of intermittent study since the late 19th century.²⁸ It is in fact a cipher based

Vignere, *Traicté des Chiffres, ou Secrètes Manières d'Ecrire*, 1586. On Chaucer's code, see Kahn, *op. cit.*, pp. 90-91.

²⁷ Adam McLean, ed., *The Steganographia of Johannes Trithemius* [tr. of Books I and III only] (Edinburgh: Magnum Opus Hermetic Source-works, 1982), p. 7. The members of the Order may not have known of Dee's familiarity with the work of Trithemius; but they saw themselves within the tradition, at any rate, of Dee: a composite cipher-symbol Dee invented for hermetic meditation and called the *monas hieroglyphica* (see John Dee, *The Hieroglyphic Monad*, New York: Samuel Weiser, 1977) is reproduced on the page of the Golden Dawn cipher MS illustrated here. One might observe also that Dee's designation reflects an early interest, in turn, in Egyptian hieroglyphics as symbols of esoteric wisdom.

²⁸ See Plates 15-18. N. Karamianz (K'arameanc'), "Einundzwanzig Buchstaben eines verlorenen Alphabets," *Zeitschrift der Deutschen Morgenländischen Gesellschaft* 50, 1886, pp. 315-319, studied an encoded inscription from Sivas, AD 1535, in a MS including the Armenian version of the *Alexander Romance*. It reads, simply, *Yiſec'ēk' zmelapart Yovasap' sarkawak'n* [skt for *sargawag*] "Remember ye the deacon Ioasaph, the sinner." Karamianz believed the script to be ge-

wholly on the shapes and values of the Armenian alphabet, in contrast to a table of letters in a fifteenth-century Armenian MS. Erevan Matenadaran 7117, also—and more correctly—entitled *aluanic' gir*, that reproduces with fidelity some of the letters of the authentic Aluan or Aghvan script as it is now known from a recently-discovered palimpsest.²⁹ The Aluans were converted to Christianity, and lived in such close proximity to Armenians in all respects of life and culture as sometimes to seem indistinguishable from them; yet their written language seems to have vanished utterly by the mediaeval period. So naming a cipher Aluan was to endow it with a readily recognizable aura of antiquity and mystery: the Aluans were for the Armenians the "near Other". But it would seem that Aluan was an alternative name, or perhaps a misreading of another, original name, for the cipher: **alunic' gir*, "script of the dove"; for a superscription in Armenian letters above one enciphered text reads, *Ays ē Hayoc' hin alawnagim*, "This is the ancient dove-script of the Armenians." And the latter is claimed to have been *Hayoc' Senek'erim t'agaworin hin mateannerēn ḡrinakuac*, "copied from one of the old books of Senek'erim, king of the Armenians." Senek'erim, i.e., Sennacherib, was a regnal name of the Arccunids of Vaspurakan and the attribution would therefore belong to the period in which they flourished, the tenth century; or the eleventh, during which the last Senek'erim ceded his lands to the rashly imperialistic Byzantines and withdrew to an exilic appanage in Sebastia, to the Cappadocian west. Or else the writer perhaps had in mind the name of the fictionalized Armenian king of Van in the Epic of Sasun whose daughter, Covinar, was the mother of the twins Sanasar and Baldasar, the first generation of the warrior heroes. This attribution to fabulous and possibly heroic antiquity of the cipher is to be seen in much the same light as its identification as the (lost) alphabet of the ancient Aluans—as a conscious effort to endow it with a prestige linked to the supernatural or to the glories and mysteries of the distant past.

The MS so described was kept at Eudocia (Tokat), central Anatolia. The owner, one Dawit' Širinean, copied the cipher text

nuine Aluan. Frédéric Murat returned to the inscription in his article "*Nšanagirk' imastnoc'*," *Handēs Amsōreay* 17, 1903, pp. 333-335, and concluded correctly that it was not Aluan but a simple substitution cipher based directly on Armenian.

²⁹ Zaza Aleksidzé and Jean-Pierre Mahé, "Découverte d'un texte albanien: une langue ancienne du Caucase retrouvée," *Académie des Inscriptions et Belles-Lettres, Comptes Rendus*, Paris, Apr.-Jun. 1997, pp. 517-532.

on paper and sent it to his brother Tigran in Sebastia (Sivas). The latter sent it to the scholar Karapet Gabikean³⁰ in 1908. The latter had difficulty in deciphering it and applied for assistance to the great linguist Hraçēay Ačārean, a pupil of Antoine Meillet. In his monograph on the Armenian alphabet, Ačārean writes that when at first Gabikean found he could not read it, "he turned to persons versed in the Book of the Six Thousand (*ke dimē Vec'hazareaki hmut anjeru*), as well as to a number of master goldsmiths, particularly to the gunsmiths Oskehan and Gēorg Ēkeahēan. They informed him that the letters in question were called the Script of the Dove (*Aławnagir*) and provided the shapes of a few more, that indeed corresponded to the physicians' alphabet (*bžškarān*). The latter also stated that his father and grandfather used to employ those characters as a cryptogram and they still possessed some of those writings. But since, they said, they had taken an oath to their masters (*varpetnerun erdum tuac en eler*), they would not reveal the secret of the cryptogram (*cackagrīn galtnik'e erewan ē'en haner*)." Gabikean saw also a MS with another cipher in which the Armenian letter *inni*, "I", was represented by the umlauted Latin letter I, *Ī*.³¹ Another cipher Ačārean studied he termed Dawt'ean, "Davidic," because of its attribution in MSS to the fifth-century Armenian Dawit' Anyalt', "David the Invincible [Philosopher]".³² Armenian MSS sometimes attribute to the latter authorship of the magical text *Eawt'nagreak'k'*, "[The Book of the] Seven Letters" (i.e., the vowels); this text is often found in proximity to the similar *Vec' ha-*

³⁰ Karapet Gabikean received in 1913 the İzmirenc' literary prize for his botanical lexicon, *Hay busašxarh*, "The Armenian Plant-World," which was published at the St. James' Press of the Armenian Patriarchate of Jerusalem in 1968. It was there that I met his son, Bp. Kiwrel Gabikean (Guregh Kapikian) of blessed memory. Bishop Guregh, who served for decades as the much-beloved principal of the school in the Armenian Quarter, used to offer his guests chocolates and glasses of sweet liqueur while showing them the models he had painstakingly constructed of the churches of Armenia. He inscribed to me a copy of his father's book. The Kapikian clan are well represented in the United States: Bishop Guregh's three nieces, Melanie, Manyā, and Haygan, were friends of mine in Arlington, MA.

³¹ Hraçēay Ačārean, *Hayoc' grere* (Vienna: Mxit'arean tparan, 1928), pp. 472-473. For a table of this and other Armenian substitution ciphers, as well as published examples of enciphered text, see Plates 15-18.

³² *Ibid.*, p. 474.

zareak.³³ Thus, the Armenian hetaerogram shares a number of features cognate to those we have observed in other cases: it is a simple substitution cipher; it has some letters in common with other ciphers of the same language; its users claim antiquity and prestige for it; it is associated with magico-mystical practice; it has been in use for centuries (from at least the 16th till the 19th); and it was used till recently by privileged sub-societies—doctors, goldsmiths, gunsmiths, and magicians. Presumably the use of it as a para-linguistic mode of identity enhanced their own sense of cohesion and self-worth—useful survival tactics for Armenians existing as a minority people in a Muslim state. And though the characters themselves are laden with symbolic significance, the messages of the texts themselves are mundane. It is their script that ennobles them.

Ačarean noted with respect to the designation *alawnagir*, “script of the dove,” that it must belong to such expressions as *cti lezun*, “language of the sparrow” (Arm *cił*), for a secret language.³⁴ But the dove, *alawni* (and as a common name for a woman, Aghavni) is no common fowl for Armenian Christians—it is the bird of the Holy Spirit. So one recalls that a legendary cosmological text that fell to earth from heaven, the subject of an old Russian spiritual poem, is called *Golubinaia kniga*, “The Book of the Dove,” probably with reference to the Christian image, the original title and *lectio difficilior* having probably been **Glubinnaia kniga*, “The Book of Profound [Secrets?].” In a study of the Russian poem, I suggested that some of its identifiably Zoroastrian features might have come into the Slavic world via the teachings of Armenian followers of the Paulician heresy settled in the Balkans.³⁵ Perhaps the Armenian designation of the

³³ On these magical texts, see J.R. Russell, “The Book of the Six Thousand: An Armenian Magical Text,” *Bazmaev* 147.1-4, Venice, 1989, pp. 221-243, repr. *AIS*, pp. 319-341; and J.R. Russell, “Maštoc’ the Magician,” in Sergio La Porta and Theo Van Lint, eds., *Festschrift Michael Stone* (in publication).

³⁵ See J.R. Russell, “The Rime of the Book of the Dove (*Stikh o Golubnoi knige*): From Zoroastrian cosmology and Armenian heresiography to the Russian novel,” in Christine Allison, Anke Joisten-Pruschke, and Antje Wendtland, eds., *From Daena to Din: Religion, Kultur und Sprache in der iranischen Welt* (Wiesbaden: Harrassowitz, 2009), pp. 141-208 (*Festschrift Prof. Dr. Philip Kreyenbroek*). A shorter version of this study was delivered as the Roman Jakobson Memorial Lecture, NAASR, Belmont, MA, 11 Sept. 2008; and I had the honor to offer an expanded version of it in my own country as the Jack and Lewis Ru-

"Script of the Dove" has a parallel meaning to the Russian "Book of the Dove": the latter is the written revelation of the Holy Spirit; the former, the latter, the script used for such writing. For if one examines the characters of the *alawnagir*, their origin in the shapes of the letters of Armenian minuscule script (*bolorgir*) is plain; whilst their most striking common feature is the addition of loops or the transformation of the basic shapes so as to incorporate loops. This is, thus, a local development of the *Brillenbuchstaben*, "Eyeglass [shaped]-letters," often found in Jewish and Islamic magical alphabets; examples of the former go back two millennia.³⁶ Since the little circles on the ends of the lines of the letters resemble the stars of heaven, such magical alphabets have often been called Angelic scripts: given the association of doves with the Holy Spirit, that might explain in part the designation *alawnagir*. Though *Brillenbuchstaben* made directly from the Armenian alphabet of Maštoc' are reserved for ciphers, Pseudo-Arabic *Brillenbuchstaben*, eyeglass-letter-like asemic symbols, and individual circles probably intended to represent stars are common in Armenian magical MSS.³⁷

One finally contributes here a hitherto unpublished and curious example of the Script of the Dove. The text comes from the photostat—perhaps fifty years old—of an unidentified MS that was found by chance in November 2008 in a box of old papers at the National Association for Armenian Studies and Research in Belmont, MA, and was kindly placed at my disposal by NAASR's Director of Academic Affairs and my good friend, Marc Mamigonian.

The MS is a text of mixed medical and magical content written in a late Classical Armenian suffused with Arabic, Persian, and Turkish botanical and other terms: p. 337 (Plate 21) shows wheels of Life and Death to be interpreted by astrological and numerological operations, and there is a magic square with Arabic numbers; on p. 491 (Plate 22) the capital letter *p'ur*, Arm. aspirate *p'*, is shown as a naked woman; and on p. 129 (Plate 23) the names of various plants and other materials used in medicine are shown in a cross-hatched pattern reminiscent of the manner in which the sign of the Holy Cross is regularly mul-

din and Jack Driscoll Lecture, The Hebrew University of Jerusalem, Israel, 25 May 2009.

³⁶ See Plate 19.

³⁷ See Plate 20: it is noteworthy that towards the bottom the abbreviations of *T(ē) A(stua)c* in standard Armenian letters are adorned with multiple curls and zigzagging endings, a semi-cipher, as it were.

tiplied (and various sacred Crosses, named) in the texts of Armenian talismanic scrolls (*hmayi*). On p. 398 (Plate 24), the Armenian date *RČLA* = 1191 is inscribed in the upper right hand corner, i.e., AD 1742, along with a long list of the writer's debts: e.g., *młsi abrahamin partim lřš*, that is, "I owe Abraham the pilgrim to Jerusalem (*maltesi=muqaddas*) [one] *kuruš* (*huruš*)."¹ On p. 160 (Plate 25) is an inscription in *alawmagir*: *ew mat'usalay grič's yišec'ek' i k'ristos/ mat'usalay č'nč'in car ay p'erke'in* "and remember me, the scribe Methuselah:/ Methuselah, the least slave of the Savior [Christ]." The idiosyncratic features of the form of the cipher here are the letter *ca*, Arm. *c*, represented as a T above a small circle (as in Erevan Matenadaran MS 8360, fol. 570 b); *k'č*, Arm. aspirate *k'*, as one triangle inverted over another; and *se*, Arm. *s*, as an inverted triangle. But overall the cipher is instantly recognizable. The author of the cipher text seems to have taken advantage of empty space on the page for his colophon, and he has also inscribed the Latin alphabet in a cursive hand of the 18th century, followed by a heterogram, the ampersand. And he transcribes his cipher text into a kind of Latin plain text: *& maduocagay grigc yišecr ikricdoc/ maduocaga gngin zarae prggin*. It is obvious from the transcription of the word for "scribe," *grič*, as */krič'/* and of Christ's name, *K'ristos*, as */k'risdos/* that our author spoke Western Armenian; and this would make our MS an important early primary attestation in a foreign script of the pronunciation of that dialect. The transcription of *t'o*, Arm. aspirate *t'*, as Latin *d* in the author's name probably reflects not an actual pronunciation, but hypercorrection, it would seem.

There is no secret content to the encoded text. So unless Methuselah thought the Latin alphabet a cipher itself—which hardly seems likely, since he has taken the trouble to provide it all, including letters he does not use in his transcription—the use of the Script of the Dove here is more a demonstrative sign that the writer was qualified to be a member of the medical fraternity, than an attempt to conceal sensitive information in code. (But of course it did not hurt that the ignorant would be unable to identify his colophon, erase it, and insert their own in its stead!) That is, although he has employed a **heterogram** (&), his Latin allography is proof enough, were extra proof required, that his cipher is a **hetaerogram**, not a cryptogram. As we have seen, in the general scheme of invented alphabets these writing systems of a sub-society occupy a peculiar place: though not strictly secret, they lend the charisma of the occult and the arcane to mundane writing, as here, in a natural tongue. They also offer dignity and cohesion to people subject perhaps to social indigni-

ty, their sense of cohesion threatened by their lack of political power. Although his name was most likely bestowed upon him in wishful thinking by parents anxious that their son live long, the script, at least, that our 18th-century Methuselah has used has a pedigree, both actual and invented, to rival the age of his Scriptural namesake. And the hetaerogram of doctors, goldsmiths, and gunsmiths, the Script of the Dove, endured for at least a century and a half beyond, down to the eve of the First World War, in Sebastia and in other ancient cities of that hoary land where first the gentle dove returned with an olive branch of peace in her beak, for the travelers in the Ark: Armenia.

LIST OF PLATES

- 1-3: The Folger MS: key and samples of text.
- 4-7: Still life painting with incised encrypted texts.
- 8-12: Cipher page from the notebooks of Daniil Kharmis; Kharmis' monogram of Osiris (cf. Dee's Monad) with cipher characters; Kharmis' drawing of the Tree of Life of the Kabbala and table of the Hebrew alphabet with cipher text and symbolic meanings of the letters in Russian; key to Kharmis' cipher.
- 13-14: Golden Dawn cipher MS key and fol. 33 with Dee's Hieroglyphic Monad.
- 15: Table of Armenian ciphers, from Hrač'ya Ačaryan, *Hayoc' grere*, Erevan: Erevan University Press, 1984, following p. 676.
- 16: MS facsimile of enciphered text, from A.G. Abrahamyan, *Hay gri ev grč'ut'yan patmut'yun*, Erevan: Haypethrat, 1959, pp. 222-223.
- 17: Abrahamyan, *ibid.*, pp. 220-221: key to the *bžškakan cackagrut'yun* "physicians' cipher."
- 18: Inscription in *bžškakan cackagrut'yun* "physicians' cipher" added in AD 1722 to Armenian Patriarchate of Jerusalem MS 1000, Commentary on the Breviary (*Meknut'wn žamakargut'ean*) of Movsēs Erznkac'i, copied in AD 1706: Abp. Norayr Pölarean (Bogharian), *Mayr C'uc'ak Jeragrac' Srboc' Yakobean'*, Vol. 3, Jerusalem: St. James' Press, 1968, p. 619.
- 19: Hebrew *Brillenbuchstaben*, from Abraham de Balmis, *Grammatica hebraea*, Venice, 1523, in H.A. Winkler, *Siegel und Charaktere in der muhammedanischen Zauberei*, Studien zur Geschichte und Kultur des islamischen Orients, Heft VII, Berlin: Walter de Gruyter, 1930, p. 166.
- 20: Armenian MS with "eyeglass" symbols: Armenian Mxit'arist monastery of S. Lazzaro, Venice, MS 3042, AD 1779, a paper talismanic scroll (*hmayi*): from Frédéric Feydit, *Amulettes de l'Arménie Chrétienne*, Venice: S. Lazzaro, 1986, fig. 80.
- 21: NAASR MS, p. 337.
- 22: NAASR MS, p. 491.
- 23: NAASR MS, p. 129.
- 24: NAASR MS, p. 398.

The Golden Dawn Cipher Manuscript was written in a cipher alphabet or code which was used by Alchemists to conceal their secrets. The key to decoding the Cipher Manuscript was printed in Abbot Johann Trithemius' book, *Polygraphiae et Universellae Escriurae Cabalistique*. Paris, 1561.

The Key to the Golden Dawn Cipher Alphabet

In the cipher alphabet, letter 'I' can also be 'J' and letter 'U' can be 'V' or 'W.' In the Cipher Manuscript Kenneth Mackenzie created a new cipher letter for 'W' and modified the cipher letter for 'Y.' The new cipher letters are:

w y

Schon auf einem jüdischen Amulett des zweiten oder dritten nachchristlichen Jahrhunderts aus Palästina finden wir Brillenbuchstaben²⁾. Sicher haben auch die Juden die Brillenbuchstaben im Laufe des folgenden Jahrtausends weiter in Zaubersachen verwendet. In dem mittelalterlichen Zauberbuche *Raziel* erscheinen sie zahlreich, auch im „Schwert des Moses“ begegnen sie³⁾. Sogar eine Erinnerung an die babylonische Herkunft der Brillenbuchstaben ist möglicherweise durch das ganze Mittelalter hindurch bewahrt worden. ABRAHAM DE BALMIS gibt in seiner *Grammatica hebraea*, Venedig 1523, folgendes Alphabet⁴⁾:

und bezeichnet es als *כַּתְּבֵי מֶסוֹפּוֹטָמְיָה* „mesopotamische (!) Schrift“. Sein Alphabet ist um so bemerkenswerter, als einige der Zeichen (כ, ה, ו, ז, פ) an althebräische Charaktere erinnern. Eben dieses Alphabet hat seit dem 17. Jahrhundert in Amuletten der Anhänger Sabbatai Sewis Verwendung gefunden⁵⁾.

Wahrscheinlich haben die Araber auch bei den Juden Brillenbuchstaben kennen gelernt, ihre Hauptquelle waren indes die Kopten. Seit dem Beginn des Studiums hebräischer Schriften in der Renaissancezeit tauchen auch in den Werken abendländischer Magier — etwa CORNELIUS AGRIPPA'S VON NETTESHEIM — neben anderen Elementen jüdischer Geheimwissenschaft die Brillenbuchstaben, *characteres*,

AN ARMENIAN MAGICO-MEDICAL MANUSCRIPT (BZHSHKARAN) IN THE NAASR COLLECTION

JAMES R. RUSSELL

“Un document est un témoin; comme la plupart des témoins, il ne parle guère que lorsqu’on l’interroge.” (“A document is a witness; like most witnesses it barely says a word until it is questioned.”)

— Marc Bloch, “Pour un histoire comparée des sociétés européennes,” *Mélanges historiques* I, Paris, 1969, 16-40, 20.

1.

In the summer of 2009, Dr. Levon Boyajian of New Jersey, born in 1929 in Washington Heights, a neighborhood in upper Manhattan, New York City, donated several old and rare Armenian books, including a manuscript, to the National Association for Armenian Studies and Research (NAASR), in Belmont, MA.¹ They were brought to the U.S. shortly after his birth by his maternal grandfather, Levon Nazarian, who was the youngest of three brothers and a native of Chemishgezek. The family had moved in Nazarian’s childhood from western Armenia to Aleppo, Syria, where he grew up: he emigrated to New York in 1930, worked as a confectioner to help support the family during the hard times of the Great Depression, and died three years later. The books were part of a larger collection, most of which Mr. Nazarian donated to libraries in the new republic of Soviet Armenia when he left Syria. He had run an inn—described as a *khan* or *caravansarai*—where he sheltered relatives left destitute in the wake of the Armenian Genocide. His best friend had been a rebel fighter from Zeitun, where Armenians had defended themselves against the depredations and extortions of the Ottoman rulers and their Kurdish enforcers; and he always maintained an interest in progressive politics.

Grandfather Nazarian’s wide-ranging interests embraced also the occult. This is not surprising, considering that esotericism challenges the bounds of conventional belief about the order of the universe much as political radicalism questions the smug assumptions of the prevailing social order. And Dr. Boyajian said he had compiled a notebook containing esoteric symbols.

¹ A version of the first part of this study was published as “Collection of Books Donated to NAASR by Dr. Levon Boyajian” in the *NAASR Newsletter*, Belmont, MA, Fall-Winter 2009-2010, pp. 1-3.

Dr. Boyajian when we last corresponded was unaware of its whereabouts, even whether it was still extant. He passed away in 2010; and the notebook has turned up in a collection of the family's Armenian books donated to the library of NAASR by his son. Mr. Nazarian was a well educated and civilized man: he raised his daughter Verkin, the woman who was to be Dr. Boyajian's mother, in an environment of comfort, enlightenment, and respect. She came to America in 1923. Dr. Boyajian's father Apkar was born in Chemishgezdek in 1890 and came to the US before the outbreak of World War I. His was the itinerary of many Armenian immigrants: he worked in a New England textile mill, then as a photoengraver in New York City.

The ancient town of Chemishgezdek (Armenian *Ch'mshkatsag*), home of the Byzantine emperor John Tzimiskes, is NNE of Malatya, SE of Akn, and NNW of Kharpert; Aleppo is SSW, twice the distance of Malatya. The city is in the Dersim (now renamed Tunceli by the Turkish state) region of Western Armenia, a stronghold of the Zaza people. These are speakers of the dialect of Dailam in northern Iran and call their speech *dilmi*; but they are now identified culturally and politically with the Kurds. Legend has it that Dersim got its name from Der Simon, an Armenian priest who accepted the Alevi Shi'a sect of Islam to save his flock, during the Jalali uprisings of the 17th century that convulsed all of Anatolia. There were close ties between the Armenians and Zazas of the region, which is still in sporadic rebellion against Turkish control. The history of the town² mentions both the Boyajian and Nazarian families, whose children united in wedlock. Others there were bibliophiles: Harut'iun Ajemian, a priest from the nearby village of Sisna, "died a very old man and left many manuscripts".³

Dr. Boyajian's family memoir, *Hayots Badeevuh* [i.e., *Hayots' pative*, (Armenian honor)]: *Reminiscences of Armenian Life in New York City* (Reading, UK: Taderon, 2004), provides a vivid picture of Armenian life in uptown Manhattan in the years of the Great Depression. Times were hard, but the photoengravers' union to which his father belonged helped struggling members of its brotherhood and gave workers a sense of dignity. In their spare time, men sat around debating politics on the sidewalk of Wadsworth Ave., or at coffee houses and clubs, and played *tavlu* (backgammon). Friends visited each other's homes back and forth, and there was always a *jezve*—a pot of Turkish coffee—on the stove. Toasts were offered in homemade *oghi* (the anisette liqueur also called *arak* or *raki*). The center of social life was, thus, the family; and the center of communal life was the Armenian Apostolic Church. The Holy Cross Church of Armenia on West 187th St., between St. Nicholas and Wadsworth Avenues, sponsored an annual picnic in June and a bazaar in November; so church events and family life, shared meals, picnics, and the cultural-social-national luncheon-dinner-reception called the *hantes*

³ *Ibid.*, p. 502.

(Arm. *handes*, “gathering, occasion, encounter”) held the community together and determined the rhythm and pattern of life outside the workplace. Other outings might include breakfast at the Horn & Hardart automat on 181st St. on Saturday after the cashing of Dad’s paycheck. The neighborhood had a half dozen Armenian groceries;⁴ and “Doc” Cohen, the local pharmacist, had the young Levon write out for him in English transliteration the Armenian of the six hundred words that, according to *The New York Times*, were basic to any language. There were many single men in the community who had either never married, or who had lost their families in the Genocide; and their fellow Armenians took care of them.

The life that Levon Boyajian recalled is not very different from that of other ethnic enclaves in New York then. This writer’s mother grew up in Bensonhurst, an Italian and Jewish neighborhood of Brooklyn. In the years of the Great Depression, a nickel or dime was a treat went a long way on a weekend trip to the automat, or the movies, or even Manhattan. Home and family were the anchor of existence, and, as with the Armenians, the familiar foods of the old country gave people a sense of stability and warmth in a frightening world. My grandmother Marguerite cooked the Moroccan Sabbath stew called *adafina*, baked *kadayif*, and served guests little cups of Turkish coffee with homemade candied orange peel. By shopping for groceries wholesale and finding chicken wings and necks cheap, and God knows what other strategies, Grandma managed to put food on the table every night for parents, grandparents, four daughters, several sisters, their families, and friends. The hard *roskas* and *fijuelas* I remember from my childhood were made with recipes brought to Salonica from the Spain of Ferdinand, Isabella, and the Inquisition five centuries earlier. During Prohibition my grandfather made wine and *raki* at home; and when I was a boy Grandma entertained me and my cousins with tales of Djuha, the crafty dervish Hoca Nasrettin know so well to Armenians, too. And though I was too young to have heard him, Uncle Jack played the *oud*. As for the occult, my great grandmother Rachel, whose nickname was Manache, used to offer the blood of a black cock to the dead at midnight when somebody was ill. I don’t know the other aspects of her witchcraft; but she was an austere and bony woman of immense power who got around on a great staff till she passed at ninety six, having foretold her own death to the day. She loved me and used to say to me when I was little *Camina, pasha!* “Walk, O king!” in Ladino. I inherited her ring of twined snakes with diamond and ruby eyes. The family had escaped from the famine and great fire of 1917 in Greece, and from the filth and ignorance of Morocco: America, despite the Depression, still meant freedom, goodness, and opportunity in those days. President Franklin Delano Roosevelt and New York Mayor Fiorello La Guardia enjoyed the status of living saints.

⁴ In my teenage years, around 1970-71, only one was left, the *Hay Nparavachar*, on St. Nicholas Ave. The neighborhood is now largely Dominican.

I first met Dr. Boyajian when we worked together on the organizing committee of a two-day conference on the *sequelae* of trauma—the experiences of children of Genocide survivors—that was held at the Armenian Diocese in New York in April 1980. He was then a vigorous man of middle years, a respected physician and psychiatrist, a pillar of the Church, and very friendly and forthright. I was twenty-six, and coordinating cultural affairs for the Diocese was my first job. It was a good job—His Eminence Archbishop Torkom Manoogian and our Director, Syraun Palvetzian, treated me with boundless kindness and courtesy, and the Diocesan staff was a supportive, hard-working, fun family. The conference, which touched upon the Holocaust and Cambodia as well as the Armenian Genocide, was attended by hundreds; and the proceedings, with Levon's study of the sequelae of genocidal trauma, was prepared for publication. It remains still in manuscript, though, and is now in the NAASR archives. Levon and I had a lot in common, for I grew up in Washington Heights, too; and when I interviewed him a few months before his passing we discovered that there were more than a few memories of the old neighborhood we shared and treasured: listening to the Texaco broadcast of the Metropolitan Opera on Saturday afternoons on WQXR through every radio in every window uninterruptedly as we walked down the street, not missing a note. I remember the wonderful *hantes* in the hall below Holy Cross, where my Armenian teacher, Vart Tarpinian, taught Sunday school. There was a feast of salad, pilaf and roast beef, ice cream and coffee, then impressively intoned prayers and flowery speeches and songs with a lady of a certain age on the piano playing awfully well and dances by kids in lovely costumes and poems, and a lot of loud socializing and good cheer. In mid-afternoon you would stagger out of Haik Kavookjian hall with the strong conviction, Armenia lives! When I was young, Archbishop Tiran Nersoyan, a great scholar, lived in the parish house attached to the church; and Levon remembered Fr. Yeghishe Simonian, who served from 1935 to 1965: he was a survivor of the burning and massacre of Smyrna, as was Abp. Leon Tourian, whose assassination in the church by leaders of the New York chapter of the Armenian Revolutionary Federation (the Tashnag or Dashnak party) in December 1933 created a rift in the community that lasted for generations and whose echo is still felt.⁵ Indeed the echoes of the grisly crime reached far

⁵ Marjorie Housepian Dobkin, author of the groundbreaking historical masterpiece *Smyrna 1922: The Destruction of a City* (Kent, Ohio: Kent State University Press, 1988), about the Turkish massacre and destruction of a great and ancient city, published a memoir of her own Armenian-American childhood in New York, *A Houseful of Love* (New York: Random House, 1957), that became a bestseller and was serialized in *Reader's Digest*. Although overly sentimental and sanitized, in my view, the book presents a faithful picture similar to Boyajian's. Marge is the mother of my old friend and Columbia classmate Stephen Andrew Johnson of New York, who told me she answered the phone the day of Abp. Tourian's murder: her family lived a few minutes away from Holy Cross, and her father, a physician

beyond the confines of the Armenian community: in his first novel *And The Hippos Were Boiled In Their Tanks*, a *roman à clef* about a murder within the social circle of the nascent Beat movement in the mid-1940's, William S. Burroughs named one of his fictionalized characters Tourian. The very name, after a decade, still evoked the horror of murder.

Washington Heights was not just a big Armenian neighborhood—my teacher, Fr. Krikor Maksoudian, remembered the pun Washington *Hayots'*, “of the Armenians”—but a center of arts and learning. The scholar and translator of Persian poetry, Mihrdat Tiryakian, whose translation of *dastans* from the *Shah-name* of Ferdosi was published in 1951, lived in the neighborhood—he followed in the path of his father Harut'iun, whose Armenian translation of sections of the same epic was printed in New York in 1909. The graphic designer Minas Minasian, who died in 1981, born in the village of Chengiler near Nicomedia, lived on Pinehurst Avenue. His Armenian typefaces and designs defined the poster, periodical, and book arts of the American Armenian community for decades. Harout'iun Hazarian, who lived on Ft. Washington Avenue and 170th Street, died at the same time. He had devoted his considerable wealth to buying Armenian manuscripts and donating them to the Matenadaran in Erevan, and to leading the Gesaria (Caesarea of Cappadocia, Kayseri) Compatriotic Union. By the 1970's, the neighborhood had become dangerous, the children went away to college, and most families moved to the suburbs—to Fort Lee in New Jersey, or Westchester in New York.⁶

The 1930's saw not only the great schism in the Armenian community, which began at the little parish church in Washington Heights, but also the rise of fascism overseas and the eclipse of the Soviet Union by Stalinist tyranny. The convulsions beyond the sea affected Armenian-Americans. Levon averred that widespread anti-Semitism in the Armenian community sometimes precluded sympathy for the Jews in Nazi Germany, but this was by no means a majority sentiment and one member of the community reacted quite differently indeed. Avedis Derounian, a Genocide survivor growing up in Washington Heights, witnessed Abp. Tourian's horrible murder in the church and perceived a connection between the Armenian Genocide, that crime, and the fascist movements gaining strength in Europe and here. Using the *nom de plume* John Roy Carlson, he wrote a bestseller, *Under Cover*, about fascist organizations in America. His articles in *Fortune* on the subject spurred Congress to form the House Un-American Activities Committee. After the war, Derounian traveled to the Middle East to cover the Israel War of Independence and published with Knopf in New York a few years later

who had served as a medical relief volunteer in Armenia in World War I, attended the Primate, who died in the parish house of his wounds shortly after the attack.

⁶ See James R. Russell, “The Calligrapher of Washington Hayotz,” *Ararat Quarterly* (New York, Autumn 1981), pp. 24-26.

From Cairo to Damascus, in which he detailed the transplantation of Nazism into the Islamic world and presciently argued that Islamic political fanaticism would prove to be a far deadlier and longer-lasting threat to freedom than Communism. And meanwhile, as the world surged and darkened and ignorant armies clashed by night and the Armenians of New York worked and ate and prayed and cooked and raised their children, the books waited...

Mr. Nazarian's books were kept with respect in a cabinet, and the family had a Bible and a *Narek* (that is, the *Book of Lamentations* of the tenth-century St. Grigor Narekats'i, a cycle of 95 mystical prayers), as most Christian Armenian homes did. It would appear from the notations that Mr. Nazarian read his books carefully. The seven vowels of Armenian were the subject of a magical text, the *Eot'nagreank'*, or "(Book of) the seven letters"; and perhaps Mr. Nazarian's interests in esoterica led him to the only manuscript in the initial collection donated by Dr. Boyajian, a seventeenth-century miscellany that contains two grammatical treatises. One notes that the probable origin of the term "grimoire", the standard word for a manual of magic, is French *grammaire*, "grammar"! The manuscript contains also Aristotle's letter to Alexander; and this, too, has magical overtones; for their fictional correspondence, which includes advice on the preparation of talismans, is the matter of the magical book known in the West as *Secretum secretorum*, "The Secret of Secrets." The occult notebook of Mr. Nazarian was donated posthumously to NAASR, as noted above, by his son. But the principal books donated by Dr. Boyajian shortly before his death are these:

a. A manuscript on paper of roughly octavo size, containing texts in several hands. The first, with title in purple and red and text in black, is, "Definition of Grammar: Grammar is an art comprised of speech and writing and its parts are four: letter, syllable, word, saying..." in an attenuated notary, Arm. *notrgir*, of the early 17th century, concluding with an undated colophon, "Remember this sinner in Christ." The next text is in a considerably cruder semi-cursive *sheghagir* hand of the 17th century: "Grammar is a skill, those matters of the poets and of oft repeated utterances, and its parts are six: first, writing..." There follows in a neater, mixed *notrgir* and *sheghagir* of the same period, "The letter of Aristotle the Philosopher to king Alexander. History concerning the world [*ashkharhi* for *ashkharhi*]. Alexander often seemed to me to be something truly divine..."

The book is completed in this same hand but with less space between the words, and concludes with a colophon: "And now God, as the saying of the ancients goes, is the beginning and the end. And, having within Him all beings, He completes their paths in a straight way, causing them to follow the various kinds of their natures. Falling short of justice they are punished by God; and likewise whoever is favored will be blessed with His grace. Eternal glory, Amen. This was written in the Armenian year 1096 in the month of

May, at a time when one Sultan Epram [Ibrahim] reigned, who fought a war against the Cretans and all the land of the Ottomans endured great suffering. And all the more so this city of Halap [Aleppo], for the Pasha was particularly lawless. They called him by the name Tali Husen [i.e., *dali*, Mod. Tk. *delli*, Huseyn, "Crazy Hussein", a typical Jalali sobriquet]. If only God might free all faithful Christians from the hands of these people by the intercession of the Holy Mother of God, Amen." There follows in Arabic language and script: *Al-faqir qasis [keshish?] Markar*. "The poor man, the *priest Markar."

The surface leaves of the cartonnage from which the hard cover was made were manufactured using an older MS in very fine *bolorgir* script of a type found in Cilician MSS of the early 14th century; but as the thin, polished paper feels to me more recent, I am inclined to date it to the 17th century or not much earlier. The text has a superscription in modern cursive Armenian, perhaps belonging to Mr. Nazarian: "Menologium, martyrology of our holy father Gregory the Armenian of the family of the Illuminator and a most select martyr. History." The book bears two stamp seals, one of which seems to have the Armenian name Kirakos; and on the flyleaf in purple ink is this note in the same flowery hand as the superscription on the cartonnage: "I took (this) from Brutean (the potter?) Kir[a]kos in the monastery of St. Sargis, abbot of the Armenians, 1882 February 20 *yitisisia* (in Edessa?) *Arewin* [?]." The text of the *Menologium*, which is evidently the martyrdom of the Apostle Bartholomew, is as follows: "... who went after him. Take those deceivers there outside. And the executioners went... apostles... took Philip and Bartholomew, and Mary, and dragged them outside. And when the tyrant beheld them he began to gnash his teeth, and said, Pull away those witches, who are leading astray many women and virgins. And they said, We are worshippers of God. And he commanded.../ ... your deeds. And let go your life full of pain. And abandon your fleeting joys. For it passes like a shadow. See that which endures, and forget these transient things. And give up your savage ways, that is, the deeds of foulness, that..." And at the other end, "She went outside and saw them. She made bold [*hamardzets'aw* for *hamardzakets'aw*] before them all and said, I am a Hebrew and the daughter of a Hebrew [*ebraets'o* for *ebrajets'woy*]. Speak to me in the speech of my fathers. For I have listened before to your preaching and was healed of my disease. And now I glorify and bow down to the beneficence of your God even in this distant land, for the precious stone of one's own that the great dragon swallowed. But Lord, make alive the true stone..." Next page, "... they led astray the multitudes. For after that they went in to him. This city was full of useless people. The slew also the serpents, the sons of the viper, who were our gods [i.e., false gods, Arm. *atsk'* with a *patiw* below the abbreviation, as is done with the name of Satan]. They destroyed our temple and our worship perished. Our table, too, was ruined, and no longer do we find wine to place before us. For having drunk of the..."

b. A printed *Sharaknots'* (Hymnal) illustrated with woodcuts, as of Adam and Eve deceived by the serpent (p. 130). Following the table of contents on p. 240, the endpaper contains a fragmentary inscription, "May there arrive.../ Khumkhabu [Kum kapu in Constantinople, site of the Armenian Patriarchate]/ Khan and/ Lord Grigor/ *T(i)r(a)ts'(o)w* [a cleric without ordination]..." Following p. 716, *Es em ch'imish/ kezakts'i/ terats'u/ arut'[iw?]n/ girets'i/ t'vin* "I, the *tirats'u* Harut'iun of Chimishkezek wrote this in the year..." In pencil there follow the numbers, in Arabic:

1928
1096
 832

1096 is the Armenian date of the MS described above, to which one adds 551 to obtain the date *Anno Domini*; but it would seem Mr. Nazarian subtracted it from AD 1928—two years before his departure for the US from Aleppo—in what appears to have been a misguided attempt to ascertain when the colophon was written.

c. *P'elik's ew Pawlinē kam Zhuray leṛan taki gerezmanē* (Felix and Pauline or, the tomb below Mt. Jura(, translated from Italian (into Western Armenian) by Grigor T'orosean (Paris, 1859). It is inscribed, *Ar nazeli or. Zmrukht Nazarean, i nshan buṛn zgats'mants' nuirē sirakarot khosets'ealn iwr V. M. K'iwrk'chean*, "V.M. Kurkjian, her intended, pining for love, offers this in token of his ardent feelings to the charming Miss Zmrukht Nazarian" with the date 1887 March 2, Constantinople. Dr. Boyajian does not know who the swain and his lady were; though perhaps Ms. Nazarian was a relative. The novel was written by Pierre Blanchard (1772-1856). Ms. Shushan Teager of Belmont, MA, a native of Beirut whose family were from Aintab, has identified the ardent swain as none other than Vahan M. Kurkjian, the author of *A History of Armenia*, *Aspet Liparit*, and other books. The young lady, whose family settled on the form Nazaretian of their surname, was first cousin to Ms. Teager's grandmother, Zarman Nazaretian. The Nazaretians settled in New York City.

d. A collection of miscellaneous political tracts bound together:

1. *Sots'ializmē ew sots'ialakan sharzhumē 19-rd darum* (Socialism and the socialist movement in the 19th century), translated from (Werner Sombart's study in) German and published by the Armenian students of Geneva, press of the Armenian Revolutionary Federation, 1898, with the epigraph *Och'inch' ch'em arajarkum, Och'inch' ch'em ent'adrum, patmum em* (I propose nothing, and I suppose nothing: I merely relate).

2. John Stuart Mill, *Azatur'ean masin* (On Liberty), translated from the Russian translation, with a brief account of Mill's life (Moscow: Herbek Press, 1898).

3. S.S. Zak, *Hogh hew kapitalizm* (Land and Capitalism), translated from Russian (Tiflis, 1907).

4. Yovhannes Kh. Nazarean, *Krt'akan veratsnut'iwn* (The Renaissance in Education) (Constantinople, 1909).

5. H. T'. Bokl (Buckle), *Angliayi k'aghak'akrt'ut'ean patmut'iwnē* (The History of the Civilization of England) (Tiflis, 1909).

The latter miscellany suggests that Mr. Nazarian was interested in economic history and in progressive politics in particular. This was not at all uncommon: Karl Marx, in a preface to a late edition of his *Communist Manifesto*, mentioned two Armenian translations of his work that he had not seen since they had been confiscated by the Ottoman police. Both Western and Eastern Armenian printed versions of the Manifesto are known; and Armenian socialist and revolutionary activity is coextensive with that of the Russians themselves. In the US, especially during the 1930's when so many people were out of work, the *Hnch'ak* party ("Bell", named after Alexander Herzen's *Kolokol*) and the Communist *Harajdimakan* (Progressive) league were active in calling for reform or even overthrow of the capitalist system. There were even Armenian translations of Trotsky's tracts of the Fourth International published in New York. And when the American Lincoln Battalion fought with the International Brigades against fascism in the Spanish Civil War, one of several Armenian Americans who died in battle was Ashod Antreassian on New York. His brother named the Ashod Press, which served the Armenian Diocese for decades, after the fallen hero.

So as the fledgling Armenian-American community weathered the storms of political assassination and economic depression while building its thriving, vital culture in New York City, a cabinet in an apartment held a manuscript whose scribe evokes the cataclysmic events of the Jalali uprisings of the 1600's, decades before New York received its present name. A printed hymnal records its acquisition by a man of Chemishkezek from a lay priest. A romantic novel gives a brief insight into a romantic engagement in late 19th-century Constantinople. The latest text in a collection of political studies and tracts is bound in 1909—the terminus date for the miscellany, i.e., in the turbulent period of revolution in Russia, Iran, and Ottoman Turkey and the portentous year of the Adana massacres, scarcely half a decade away from the holocaust that was to destroy the millennial life of the Armenians in most of

their homeland and scatter the survivors across the globe, as far as upper Manhattan and New England.

For decades, the books brought to the shores of the New World from Aleppo were kept carefully as life roiled around them. Men worked, women cooked and brewed coffee, there was laughter and conversation, and sorrow and longing. Children played, grew up, studied and became professionals, Americans. The neighborhood changed and most of the Armenians moved away. The Holy Cross Church of Armenia still stands, but most of its parishioners come to Sunday services by car from suburban homes. And as for the grocery stores, the large Sunday crowds, the inviting smells—all that belongs to the past. Though the bloodstained vestments of Abp. Tourian are still stored near his tomb in the church, and the dark tale of his grisly murder still can shock one, it is swiftly fading away to ancient history now, and as the Soviet era itself recedes into memory and an independent Armenia confronts new challenges, the wounds of old political feuds within the community are healing. But the old Armenian books, like folded flowers waiting through the night for dawn, waited patiently on their shelves. And now the books open, and speak to us again.

2.

One of these is Dr. Nazarian's newly discovered notebook containing those esoteric symbols that his grandson thought was lost. Its title-page calls it *bzshshkaran*, a book of medicine or healing; but it is perhaps better described as a magico-medical miscellany. The manuscript is inscribed in a small, sturdy hardbound brown notebook, probably of late 19th or early 20th century manufacture. The pages, about 100, of which 89 are inscribed, are ruled in squares like graph paper and measure 3.8 inches (19 cm) by 4.8 inches (24 cm). There are four sections: a collection of remedies (pp. 1-49), a series of spells (pp. 50-64), a list of Psalms to be recited as magical texts for various purposes (pp. 66-73 and 81-88), a long disquisition on the medicinal and magical uses of parts of the stork (*aragil*) (pp. 74-78), and two loose inserts. The latter section, following instructions on using the liver mixed with oil to cure the possessed and keeping the wing to chase depression from one's heart, concludes with the laconic instruction to keep the "inner beak" (*znergin ktuts'n*) with one: *bavē imastnots'* (to the wise it is sufficient). *Verbum sapienti* indeed.

The phrase reminds one at once of the title *Angitats' anpet* (Useless to the ignorant), that the great fifteenth-century Armenian physician Amirdovlat' of Amasia assigned to one of his tracts. Medicine requires skill and knowledge, many of its methods and ingredients are not indeed to be disclosed to those who might foolishly or maliciously misuse them, and some of its operations seem magical still. But Amirdovlat' did not intend his craft to be esoteric; as

other compositions, *Usumn bzhshkut'ean* (The study of healing) and *Ogut bzhshkut'ean* "The usefulness of healing", demonstrate. He believed the physician's art was useful to the body as prayer was, to the soul; and closed a tract with a brief poem: *Yorzham sharzhmunk' lini ts'avots' / Ev estatsem est pitoyits' / Ev Astuats tay zaroghjut'iun est hachoyits'* "When the symptoms of pains appear / Then I provide the needed care; / And God bestows health, if it pleases Him." In his manuals for treatment, Amirdovlat' lists each disease, then its cause, its signs, its treatment (*statsum*), and the opinions of various previous Greek, Arab, Persian, and Armenian experts. The famous Mkhitar' Herats'i figures among the latter. The title *bzhshkaran* or an Arabic equivalent in Armenian, *Akhrapatin*, is fairly common in Armenian medical books, such as that of Grigoris, late fifteenth century, each chapter of whose book is called a "door" (*duṛn*), suggesting a Muslim source: Arabic *bab* or Persian *dar*. Armenian doctors were prominent in the Ottoman Empire and elsewhere, and the tradition is long: in the late 18th century, for instance, Petros K'alant'arian, born at New Julfa in Isfahan, traveled to Moscow to study medicine. His "concise" (*hamarot*) *bzhshkaran* contains sections on emetics and laxatives, fever, stomach ache, liver ailments, problems of urination and ejaculation (*sermnakat'ut'iun*), headache, cuts and wounds, skin diseases, and problems of the eyes, ears, teeth, and musculature. He frequently transcribes Latin terminology in Armenian script, and uses some Russian, too (*petrushka*, *romashka*) for herbal matters.⁷ It is easy to imagine him taking a walk in the forests outside Moscow with a Russian friend on a beautiful bygone day, learning about plants and probably picking berries and mushrooms.

So Armenian medicine and medical books as such have a long pedigree;⁸ and it is likely that the copyist of our text worked from one or more of these, adding French words where a modern source indicated them or as he himself knew them. But the manuscript has two other sections, on spells and the magical employment of Psalms. These suggest still deeper, more ancient, springs. And such a mixture of relatively modern medicine, medieval magic, and magical use of Biblical texts is actually not at all strange or surprising, any more than was the interest of the compiler of our *bzhshkaran* in these subjects. For in fact little in human culture is older than the association of magic and medicine. One of the spells in our manuscript invokes Solomon, the ancient king of Israel whom Jews, Christians, and Muslims alike regard as the greatest magician in history. Jewish tradition attributes to Solomon's authorship a book (*sefer*) or table (*tabla*) of remedies (*refu'ot*) for every

⁷ See Arak'el G. Arak'elyan, *Hay zhoghovrdi mtavor mshakuyt'i zargats'man patmut'yun*, Vol. 2 (Erevan: Haypethrat, 1964), p. 374 ff.

⁸ Hakob S. Anasyan, *Haykakan matenagitut'yun* (Armenian Bibliology), Vol. 3 (Erevan: Haykakan SSR GA Hratarakch'ut'yun, 2004), includes detailed discussions of 89 MSS and printed books on medicine, together with an extensive bibliography (to p. 75) of secondary sources on Armenian medical literature and practice.

disease. Towards the end of his life Solomon is said to have repented of his errant ways and consigned many of his writings to a great bonfire; but Hezekiah is supposed to have “concealed” the *Sefer Refu’ot*: the verb used is *ganaz*, an Iranian loan meaning “treasure” (Pers. *ganj*, Arm. *gandz*, etc.); and one recalls the derivative *geniza*, a storeroom for worn-out sacred texts. The Church Father Hippolytus cites an old tradition, repeated later and independently by Maimonides, to the effect that Hezekiah consigned the book to occultation (but did not destroy it!) because people had come to rely on it, rather than on God, for healing.⁹ Just as for centuries magicians have produced magical books purporting to be the Seal of Solomon, which probably never existed; so the original of the book with which we deal now might have purported to be a revealed text of the *Sefer refu’ot*, whose actuality is likewise doubtful. Myths are inherently impossible, though meaningful; but legends can have a plausible basis in reality. It is at least possible that the sick sought the aid of king Solomon; for since time immemorial in diverse countries people have believed that the touch of a monarch can cure such tellingly-named ailments as the skin disease called in English “the king’s evil”. From there, the claim to be able to cure all diseases is but a hubristic expansion, to which would then be attached Solomon’s reputation as the author of thousands of books.

Solomon is often identified in Iranian and Islamic lore with the primordial king Jamshid (Avestan Yima *khshaeta* “the shining”, the equivalent of the Vedic lord of the dead, Yama), to whose hubris and fall from grace Zarathustra referred enigmatically in his hymns, the *Gathas*, probably in the late second millennium B.C. In later tradition, though, it is made quite clear that Jamshid demanded men worship him as God since he could cure every disease. Though one may dispute who inspired whom in the development of the legend, the Hebrew God is often death-dealing while the Persian Ahura Mazda, an entirely benevolent being, never is. So although both divinities are healers, the source of this particular detail of the Solomonic cycle may just be Iranian. Solomon’s legendary medicine had a magical aspect, too— yet another reason for remedies and spells to rub shoulders in the Armenian *Bzhshkaran*. Josephus reports that in the presence of the Roman emperor Vespasian a Jew named Eleazar employed an incantation (Gk. *epode*), Solomon’s name, and a root (probably the famous *baaras*) prescribed by the latter, to draw demons out of possessed men. And as for the third portion of our manuscript, the list of Psalms and their magical uses, one need only recall Josephus again: David was able to heal and exorcize Saul because he could charm away (Gk. *psallein*, cf. the word Psalm) spirits with his harp (*Ant.*

⁹ See David J. Halperin, “The *Book of Remedies*, the canonization of the Solomonic writings, and the riddle of Ps.-Eusebius,” *Jewish Quarterly Review* 76.4 (Apr. 1982), pp. 269-292.

6.166-169).¹⁰ One can scarcely criticize a pious Armenian for employing the Psalms to magical ends when their author did the same himself.

The title page, with the single word *Bzhshkaran* (Compendium of remedies), is followed by 46 pages listing diseases, their symptoms, and treatment, written in purple ink with a *sheghagir* cursive hand. Three additional pages of the same in pencil and black ink by the same hand follow. The language is Modern Western Armenian; and the names of diseases and medications are given also in French in parentheses. This would suggest that the manuscript was compiled at Aleppo: Syria after the first World War was French mandate territory according to the terms of the Sykes-Picot agreement that divided the Arab spoils of the Ottoman Empire between Britain and France. Since Dr. Boyajian claimed that the notebook was compiled by his grandfather, one can assert beyond reasonable doubt that the hand was Mr. Nazarian's own; and he wrote the notebook most likely in the 1920's, in Aleppo. The remedies in the first section are generally of the sort available at home (strong coffee and the like) or easily obtained at an apothecary shop in the days before sulfa drugs and antibiotics were discovered; and one supposes that the laboriously copied text was put to practical use. The first sickness addressed is migraine (*glukhin kes ts'av*), for which sitting in the dark is recommended as the cure (*darman*), with a cachet of antipyrine or quinine sulfate. Treatments follow for various complaints including hemorrhoids (with the Turkish term for the complaint, *mayasil*, helpfully appended), constipation (*pndut'iun*), drowsiness, drug-overdose (cocaine, morphine, belladonna, and laudanum), arsenic-poisoning, fish-poisoning, mushroom-poisoning, tuberculosis (with progressive symptoms carefully listed), epilepsy, colic, seasickness, cholera, hair loss, skin disease, rheumatism, shortness of breath, brain fever, brain hemorrhage, abscesses, neuralgia, stomach ailments, bronchitis, chills, cystitis, angina pectoris, athlete's foot, and a fever called "snake disease" (*odzakht*, Tk. *ilanjik*) whose symptoms include trembling, vomiting, and redness of the nose. For the latter ailment *bzhshkin ts'oyts'tal*—a visit to the doctor—is recommended. The added pages in pencil and black ink address eye problems, toothache, and cuts. An example from p. 4: *Belladone* [French, i.e., Belladonna]: *nshan—beranē ch'or ev ach'k'in biberē metsts'ats k'elan, ev hivandē kē zārants'ē. Darman—p'skhoghakan, arants'shak'ari zoravor surch talē v hivandē tak'ts'nel*. "Belladonna: symptom—mouth dry and pupils of the eye dilated. The patient is raving. Treatment—emetic, keep the patient warm and give him strong coffee without sugar." On p. 9, one is advised to administer "Bromhydrate de quinine, antipyrine" to treat a fever; and if the patient is spitting up blood, *safoys'i pok'ri(k) ktorner kllal tal* (have him swallow little bits of ice). As a cynical Scottish convert to

¹⁰ See Dennis Duling, "The Eleazar Miracle and Solomon's Magical Wisdom in Flavius Josephus' *Antiquitates Judaicae* 8.42-49," *Harvard Theological Review* 78.1/2 (1985), pp. 1-25, esp. pp. 2, 4, 22.

Orthodoxy swinging a censer in a Moscow church was once heard to mutter in between verses of the Old Slavonic liturgy, “If it does ye nie goud, it’ll do ye nie harm!”

Pages 50-64, in pencil and black ink, contain a series of magical spells in semi-Classical and Modern Armenian interspersed with lines of magical symbols or grids of the same that resemble magic squares but have only a few actual numbers (in Arabo-Muslim numerals, with occasional Western ones) in each example. These numbers don’t add up; so the magical squares were either copied wrong or were gibberish from the start. The medical portion of the book is written in somewhat smaller letters, but the hand seems to be the same. “(50) By the command of God Elijah the prophet lived in heaven 7 years and 6 months.¹¹ Solomon the wise bound the (fiery red?) giant¹² and all the (legions?)¹³ of the demons he submerged and bound in the depths of the sea. Joshua bound the feet of the (son’s king?) the sun;¹⁴ Daniel the prophet bound the mouths of the lions; (51) and as Moses the prophet parted the Red Sea and bound the same with fetters, I bind you, evil *t’pghas*,¹⁵ with the three nails and the milk of Mary the virgin, and as (52) the Lord Jesus Christ bound the evil Satan, so bound with the same fetters stand you before the keeper of this holy writing, NN,¹⁶ in immovable fetters, in seven chains, and by the name of the holy tree of life of the Cross of Christ and of the Father and of the Holy Spirit, Amen. The holy Mother of God came and brought 300 (legions?) of iron. (53) Keep this writing with you: your fortune will open and you will be beloved before every man. The name of the Father and the Son and the Holy Spirit, Amen. God the Father, creation of Adam. The beauty of Joseph was sweetened before Pharaoh. The Sole-Begotten Son was sweetened, salvation of the world was sweetened as at the love of Solomon for wisdom the bee was sweetened at its labor. So sweet before all men be (this person’s name). God had mercy on us and blessed us as his heaven in us, and have mercy on us. (54) End. [Magical symbols] (55) For stomach ache write, God, strengthen a pure heart within me and renew the soul in my breast straightly.

¹¹ I have not found another version of this spell; but in general it resembles other binding spells that list Biblical precedents; cf. Frédéric Feydit, *Amulettes de l’Arménie Chrétienne* (Venice: St. Lazarus, 1986), no. XCI (p. 256 f.).

¹² The text is unclear but seems to read **hrashek k’ajñ*. There are Armenian spells against the *shek mard* “red man” or *shek ach’k’avor* “red-eyed man”: see Sargis Harut’yunyan, *Hay hmayakan ev zhoghovrdakan aghot’k’ner* (Erevan: Erevan University Press, 2006), p. 84. According to the superstitions of many peoples red-haired people are dangerous or unlucky; and mediaeval Germans believed that demonic *rote Juden*, “red Jews” living outside the wall Alexander built to confine Gog and Magog were to burst forth as the army of the invading Antichrist.

¹³ Arm. **gunds*, indistinct and crossed out before gen. pl. *divats*’.

¹⁴ This refers to the miracle at Gibeon, *Joshua* 10.12-13.

¹⁵ The *t’pgha* and *al* are mythical beings, the “child stealing witches” of Armenian and general Ancient Near Eastern mythology who make women sick in childbirth.

¹⁶ Arm. *filan*, i.e., the Turkish form of a loan from Arabic, *fulan* “somebody, so-and-so”.

Write it all, then this [magic square]. Save me from sickness, God, God of my salvation and so on. (56) This writing is for a journey and a robber and the sea and harm done by witches. [Magical symbols] (57) [Blank] (58) [Blank] (59) Write for falling in love: Take red copper, write this talisman on it and write the name of the person desired, then cast it into fire, and say, May the heart of N of N burn for my love like this talisman. It will burn. By God¹⁷ he will get up and come. [Magical symbols] Write this on a stone also and cast it into fire. [Magical symbols] And say, May the heart of N of N burn for my love. By God he will get up and come. (60) Write this and put it on your forehead. [Magical symbols] In order to kill your enemy, write these 6 letters on an egg and bury them in a field. The hour of your ill-wisher's death will be the hour he looks upon it. [Six magical symbols] And with (?)¹⁸ incense burn for its *star¹⁹. (61) If they want somebody's daughter and they do not give her away, write this talisman, write the names of the people in that house along with it in a green bowl.²⁰ Then pour water over it till it is full. Let the boy who wants the girl wash in it, then take the water he has washed with, and pour it at the girl's door. By God, the desired girl [magical symbols]. (62) [Crossed out: If you want somebody to...] Releasing the binding of a bridegroom...²¹ Clap your hands: Heavenly God, the 'Render power' and write the name next to it on two pieces of paper. Let the groom and his bride wash with the first piece. Let the groom bind the second to his right arm and by God he will be released. Here they are: *Hasavigh, mat'um, marum, mat'eumn, mariun, mahk'on, avasi, azavmi, marut'*.²² By God he is released. (63) [Magical symbol] Write this on

¹⁷ Arm. inst. sg. *A(stutso)v*, that is, "with God's help." This abbreviated, pious formula is repeated throughout.

¹⁸ Arm. *u tsats*.

¹⁹ A symbol meaning "star"—an X with a dot in each angle (see Ashot Abrahamyan, *Hay gri ev grch'ut'yan patmut'yun* (Erevan: Haypethrat, 1959), table on p. 169)—is the only one used in the body of the text, as opposed to the separate talismans that follow each spell (one of which, on p. 54, includes it); and this is the only instruction to burn incense, presumably at a time indicated by an astrological calculation.

²⁰ Arm. *ch'anakhi*; variant *ch'ank'i* partially erased. The first form is a Central or Eastern Anatolian pronunciation of standard Turkish *çanak*, "bowl." The second form might have been erased as it could be confused with Tk. *çünki*, "because." Aside from a particular color, the type of bowl is never specified in these spells; nor am I aware of the existence of Armenian inscribed magic bowls of the sort found in ancient and late antique Mesopotamia and, for instance, in modern Iran.

²¹ Followed by unclear words: *zay erig tun ev aghmun* (?)

²² This rhyming concatenation of vaguely Arabic magical words is mostly nonsense save perhaps for the final one, which may be the name Marut. Harut and Marut are the Armenian (or Sogdian, though distance makes this less likely) forms of the Middle Iranian names of the Zoroastrian Amesha Spentas ("Holy Immortal" archangels) that preside over the plants and waters, Haurvatat and Ameretat. They replace in the *Qur'an* the twin angels Shemhazai and Azael of Jewish demonology, who dwell in a cave and teach magic to all comers. What is interesting is the appropriateness of the name to the magical rite, for on Ascension Eve, Armenian girls take petals of the flower *horot-morot* and place them, with various personal

your beloved's [crossed out: she will come] threshold on the first Wednesday of the moon [=month?] and bury it there. By God, she will come. Keep it on you and you will be beloved of all men. [Magical symbols] (64) [Magical symbols] End."

Page 65 is blank and the text resumes with the third section on p. 66, a list of Psalms and their uses written hastily in large letters in pencil: "(Vol.?) 1 ch.²³ For going to court; Vol.(?) 6 ch. For not being harmed. (67) Psalm 58, 3, 8, to be rescued from an enemy. 'The heavens relate...' To cross the sea or a river ch. 68, read on the sea." The main text begins with a heading on p. 68 and is in clear black ink, with dividing lines between each Psalm, which I identify according to the numeration of the Armenian Bible in curved brackets {}. The verses cited are sometimes corrupt, sometimes different from the Classical text, so the translations are direct and my own, rather than from the KJV or other standard translation:

"Chapter of the Psalm(s) of David. 'Blessed is the man who did not go' {1}. It is for planting trees and plants that they are not harmed, by God. 'Why are the heathens disturbed.' {2} For when you go into court your cause will succeed. 'Lord, for many are they who have oppressed me.' {3} For counteracting ill will: read it and by God you will be free of all evil. 'When I called you heard me, God.' {4} When you fall into straitened circumstances, read it and by God you will be freed. (69) 'Give ear to my words, O Lord.' {4} For pain in the eyes. Read it over hot water and wash your face. You will be freed by God. 'Lord, do not oppose me with your anger.' {6} Concerning a witch. Read it 5 times over water for 3 days. Then wash yourself, and you will be freed by God. 'Lord my God, I have hoped in you, save.' For being afraid of a man. You will be freed by God. 'Lord, our Lord, for wondrous is the name.' {8} For evil will against a man. You will be saved from him and he will not bother you anymore, by God. 'I will thank²⁴ you Lord in all.' {9} For other evil read this and you will be freed by God. (70) 'I hoped in you as you will say to my soul.' {10} For an insane person. Read it over him or write it on a piece of raw canvas and keep it on his head: he will be freed by God. 'Save my life O Lord for I grow faint.' {11} For a man deprived. When the deprive you, read it over rose oil and anoint your face and

possessions, in a bowl of water that is then guarded beneath the stars. Heaven opens that night, it is believed; and on the morn a girl takes each possession and reads out to its owner a quatrain predicting her fortunes in love and wedlock. This *vichakakhagh*, or "game of lots," is here distilled into a magical rite. See J.R. Russell, "Hārūt and Mārūt: The Armenian Zoroastrian Demonic Twins in the *Qur'ān* Who Invented Fiction," forthcoming in *Proceedings of the Irano-Judaica conference*, Hebrew University of Jerusalem, Oct. 2010, ed. J. Rubanovich and S. Shaked.

²³ Arm *h.* may abbreviate *hator* (volume); *gl.* abbreviates *glux* (chapter).

²⁴ *Gohats'uts'* for Clas. Arm. *gohats'ayts'*, would be a Modern Arm. 3rd pers. sg. factitive "he satisfied" in place of a forgotten Clas. Arm. "I will thank"!

hands and you will be freed by God. ‘Till when, O Lord, do you forget me?’ {12} For robbers; and read it aloud that you be freed by God. ‘The insensate one has said in his heart’ {13} is for matters of witchcraft of a man. Read it over water and give it to him to drink; he will be freed by God.²⁵ (71) ‘Lord, who will stand in your canopy?’ {14} This is for a crazed demon-possessed person.²⁶ Set down a vessel of water, read this over it, warm it and wash that man: he will be freed by God. ‘Listen, Lord of righteousness, and look’ {16} is for all snares and evil mischances. Read it and you will be freed by God. ‘I will love you my Lord of power’ {17} is for all snares and harm. Read it and you will be freed by God. ‘The Lord will hear you on the day of sorrow.’ {19} For success by God’s command. ‘Lord may he be glad in your power.’ {20} For enemies, that you may be freed by God. Renew.²⁷ (72) ‘God, my God, look upon me.’ {21} Against weapon and poisonous snake. Read it every morning that your affairs may prosper by God. ‘God the earth with its fullness.’ {23}²⁸ For snakes and scorpions, that they do not go and harm any man, by God. ‘I called to you, Lord God’ {27} is for success and the day of evils. Read it 4 times: you will be freed by God from every evil. ‘Judge for me, Lord, for I am accursed.’ {25}²⁹ For a court case. It will succeed. Lord God. (73) ‘The Lord is my light and my life.’ {26} For a thief. Read it five times a day to turn the thief away, by God’s will. ‘I called to you, Lord God.’ {27} For evil-wishers: write it on a goatskin. Hang it over the house and the evil-wisher will flee or go crazy by God. ‘Approach the Lord God’ {28} is for wasting disease. Recite it over olive oil and smear it: he will be healed by God.³⁰ ‘I exalt you Lord for receive.’ {29} For the sea: read it 3 times every day and travel fearlessly, by God.”

The list resumes on p. 81 in scrawled pencil:

²⁵ Arm. *vasn kaxardut'ean irats' mardoy* (for matters of witchcraft of a man) is an awkward construction, perhaps meaning that the Psalm has power over any manner of things caused by deviltry. The full verse of the Psalm protests that the fool in his heart says there is no God; so perhaps Armenians associated the black arts with atheist disbelief or belief only in powers other than the Almighty.

²⁶ Arm. *vasn khevi ev divahari: khev* is an epithet employed sometimes by *ashughs*, minstrels, with the specific sense of love-crazed; see James R. Russell, *Yovhannes T'lkuranc'i and the Mediaeval Armenian Lyric Tradition*, Armenian Texts & Studies Series 7 (Atlanta, GA: Scholars Press, 1987).

²⁷ Arm. *Norogo* stands alone on the last line of the page. My instinct was that the copyist had begun to write the hymn *Norogogh tiezerats'* (Renewer of the universe). But one cannot know.

²⁸ Arm. *Tern*, nom., instead of the gen. *Teain*, “The earth is the Lord’s and the fullness thereof...”

²⁹ Arm. *yanetss*, “in curses,” is a startling misreading of *yanbtsut'ean* (in unblemishedness)!

³⁰ The citation of the verse omits *ordik'* (sons [of God]), whose literal meaning outside its idiomatic Hebrew context would surely have scandalized a believer in the *Miatsin*, Sole-Begotten, Christ. *Barak ts'av* is literally “thin pain”; and I read *zeyt' eagh(in)* as Tk. *zeytinyaḡi*, “olive oil”.

“Ch. 137, ‘I will confess.’ For trade and profit, read 7 times a day for 7 days. (82) Ch. 122, ‘To you, Lord, I raised,’ 2 times till ‘Have mercy on us, O Lord, and have mercy’ is for headaches that happen on one side.³¹ And write the talisman and keep it on your head. [Magical symbols] (83) Ch. 41, ‘As he longs for the bride’ till ‘I said to God, I am acceptable.’ Read 50 times and keep the talisman. [Magical symbols] (84) Ch. 59, ‘God, you have rejected.’ Recite till ‘By your right hand and hear us.’ Write the talisman. [Magical symbols] (85) Ch. 19, ‘May God hear you.’ Read 3 times and count your demands. They will be fulfilled immediately; and for headache read till ‘We will greatly...’ and keep this talis(man) on you. [Magical symbols] (86) Ch. 39, ‘Rejoice.’ [Magical symbols] Amen, amen. (87) Ch. 22, ‘The Lord is my shepherd.’ Read 7 times: sadness will turn to gladness and if you have business with a great man³² read it 7 times and go and ask and immediately he will fulfill or give. (88) Ch. 24, ‘To you, Lord.’ Read 3 times for a prisoner. He will be freed of all oppression. Take soil from beneath your foot and read over it 40 times, drop and scatter it. He will be freed.”

Two loose, small pieces of paper were found inserted into the notebook. One, evidently in Mr. Nazarian’s hand, is a slightly ungrammatical Classical Armenian Biblical imprecation, perhaps employed for magical purposes to ward off an enemy: *Khavarests’ē ach’k’ nots’ay zi mi tesanits’en* (He will darken their eyes that they not see). This is in black pencil; on the reverse, in the purple ink of the section on remedies, is a more mundane text: a cure for hemorrhoids, with the ingredients of the medicine to be compounded listed in grams.

On another scrap of paper, in a careful but crude hand, is a short love poem that reminds one strongly of the hayrens attributed to the late mediaeval bard Nahapet K’uch’ak. It was probably originally a quatrain of ancient Armenian octosyllabic lines with a caesura at each hemistich; but the text is corrupt and full of misspellings: *Du vard unis/ havet garun/ k’ukieank’n i tel menayun/ es i ayrunim im hok’u/ mej var menaun* (You have a rose that is/ Eternal spring; your life/ Forever in your heart./ But I have fire in my soul/ That can never be put out). On the reverse of the slip is a recipe for a popular dessert called *hat hat p’al luzayz* (piece by piece) followed by unfamiliar words) calling for two cups each of cornstarch (*nishe*) and sugar, and three of water. This mixture is stirred in such a way that the resulting sweet crumbles like grains of rice.

To conclude, we may observe that the medical portion of the manuscript deals mostly with everyday complaints: constipation and hemorrhoids, migraine and stomach ache, and different kinds of poisoning; and the

³¹ That is, hemispheric: migraine.

³² The Arm. here mixes the pseudo-Classical with the thoroughly idiomatic: *Ev mets mardoy het khndirk’ mē unisnē*. The last word would be in “standard” Modern Western, *et’e unenas* (if you have).

remedies prescribed are of the sort that would have been easily and inexpensively available. Consultation of a physician is recommended only once; and every cure can be done at home. There is no reference to surgery, no recourse to specialized medical instruments. So this part of the manuscript probably was used. The two magical sections of spells and Psalms focus on love and marriage, court cases and one's reputation and image, counteracting the ill will and machinations of enemies, head and chest pain again, and the thieves and perilous conditions at sea or on the road that beset the traveler. From the urbane, sophisticated image of Mr. Nazarian that we have, it is most unlikely that having copied the talismans, he employed them to concoct potions, mutter dire spells to destroy foes, or perform lecanomantic rites to woo women. Use of a magic bowl for such a purpose, one imagines, might have earned him a smart bat on the head from an irate wife wielding a wholly unmagical frying pan. His curiosity about the occult is of a diffident sort many of an intellectual bent share—I am writing this study, am I not—so it was sufficient to engage his writing hand; but one thinks he kept the darker forces of the supernatural at arm's length.

Recitation of the Psalms was probably another matter. It is common for printed editions of the *Narek*, the *Book of Lamentations* of St. Grigor Narekats'i, the tenth-century mystical poet-theologian, to contain a list of chapters to be prayed for this or that purpose; and owners of these books frequently added lists of their own. I have several such, large and small, from the 18th to the 20th century, in my own collection. Christian and Jewish believers resort to the help of the Psalms for comfort in grief, help in healing, relief from fear, and reassurance in the face of enmity. I have done so myself, in sickness and in health. So Mr. Nazarian might have used this list, too. Again, one would imagine that he did not employ everything he copied; and he mentions only a quarter or so of the hundred-and-fifty Psalms; so perhaps he had only a partial manuscript, or his notebook was coming to an end, or he was just tired.

It is not clear what the magical symbols he copied, sometimes assiduously, sometimes it would seem a bit more playfully or carelessly, meant to him. He uses only one symbol or abbreviation, an X with four dots, one in each angle, in the text itself. He surely understood the Arabic numbers and individual letters of the Arabic alphabet that appear; but the rest of the symbols, whether rising from a base line or inscribed freely in space, do not seem to have any translatable meaning and never did, although many of them have been systematically employed in Armenian cryptograms. The bulk of them, with the obvious exception of permuted letters of the Armenian alphabet, seem to derive from Muslim magical texts, where they have no linguistic sense either.

None of the spells touches upon any achievement of technology of the last two centuries; though the medical portion does mention cocaine, a recent import to the Near East. Although recent editions of the Armenian *Erazahan*,

or book of interpretation of dreams, incorporate the images of recent inventions: telephones, trains, air travel, electric lights, and so on—we do not find them here. Travel is only by sea. The setting seems to be that of a rural village: one buries magic bowls in fields, not on the crossroads of 187th Street and St. Nicholas Avenue.³³ Still, not much has changed in the human condition, perhaps. Travel is more common, and faster; but it still has its dangers. A number of Psalms are addressed to the insane, the lovesick, the possessed, the depressed. Sigmund Freud died in 1939, less than a decade after our manuscript traveled by sea to the New World; but most people beset by the sorrows of life still confided their troubles, not to a psychiatrist, but to God or loving friends and family. Society was kinder, and more respectful, to the elderly; but the young still clamored for excitement and passion. I close the book, return to these latter days, and wonder whether we have really come so far. Genocide did not end with the Armenians and the Jews, but became an increasingly common instrument of state policy; and people were as indifferent to the recent Rwandan slaughter as it was happening as they were to Auschwitz. Have texting, Prozac, and Ritalin really ameliorated human loneliness and sorrow? The warm kitchen, the cup of coffee, the actual and not virtual face of a trusted friend or loved relative, seem to me more authentic and less alienating. Mr. Nazarian's cures, like the other treasures of his little library, are quaint but perhaps not wholly obsolete.

HARVARD UNIVERSITY

³³ Ironically, perhaps, a different kind of witchcraft, as a part of the Afro-Caribbean Santería religion, does thrive in the neighborhood; and implements of the craft can be purchased at numerous shops called *botánicas*.

The Seh-lerai Language

James R. Russell

Day after day,
Alone on a hill,
The man with the foolish grin is keeping perfectly still
But nobody wants to know him,
They can see that he's just a fool,
And he never gives an answer,
But the fool on the hill,
Sees the sun going down,
And the eyes in his head,
See the world spinning 'round.

Well on the way,
Head in a cloud,
The man of a thousand voices talking perfectly loud
But nobody ever hears him,
or the sound he appears to make,
and he never seems to notice...

—John Lennon and Paul McCartney, 1967.

A MYSTERIOUS LANGUAGE AND ITS MAKER.

We scholars of Armenian studies have tended to focus generally inward—researching the history, culture, and language and literature of the nation itself—rather than outward, considering the participation of Armenians in the wider culture of the world outside their (our) own ethnic sphere. This is reasonable, particularly as the nineteenth and twentieth centuries were the period when the serious groundwork of the discipline had to be done. But now, in the early years of the twenty-first century, most of the Classical texts essential to historiography and many literary texts of diverse periods have been edited to a high scholarly standard and translated satisfactorily into the accessible

JOURNAL OF ARMENIAN STUDIES X, 1 & 2 (2012-2013)

languages of international learning. The ancient, medieval, and modern forms of the language, including its dialects, have received their fair share of attention from Indo-Europeanists. The record of the Genocide of 1915 in the heartland and the Ottoman periphery is firmly established, wanting only proper international and judicial recognition. And the chronicle of Soviet rule in the northeastern surviving sliver of the country has by now been meticulously declassified and documented. So the demons and secrets of modern trauma are now exposed, as it were, to the sun.

The field occupies a small niche, but a secure and respectable one. Now we can allow ourselves, perhaps, to widen the horizon. For Armenians have also been, and are, participants in *world* civilization, particularly in the intermediary zone between Europe and Asia, the bridge between West and East. Interacting with different cultures and living in other countries, writing in foreign languages and thinking about wider and other ideas than those of parochial concern, naturally contributing their particular experiences and points of view to what we might call nowadays the global conversation: this is as much a part of Armenian experience, particularly in the modern era, as is the indigenous culture. The study of "cosmopolitan Armenia" is not yet central to the field, but it is rich and can potentially contribute new insights as it develops. This study falls into that relatively new genre. It considers the life and times, and the work, of an eccentric Armenian savant of nineteenth-century Smyrna who invented what he hoped would become a universal, international language. Though his project was in the end doomed to obscurity, it is of value to the study, for instance, of how progressive thought—of which internationalism is an essential part—developed in the Near East. Karl Marx in 1888 wrote of a (Western) Armenian translation due to be published at Constantinople of his *Communist Manifesto*—though suppressed by a printer wary of police persecution, it would have been the first in the Near East, in an indigenous language of the region.¹ (There were to be many other translations, mainly into the Eastern literary mode.) Here is another example, then, of Armenian cosmopolitanism.²

I studied recently an invented *a priori* language and cipher in an Armenian manuscript of the late eighteenth century that is housed in the collection of the Institute of Oriental Manuscripts of the Russian Academy of Sciences at St. Petersburg (MS A 29). It would appear from such features as the frequency of sounds

¹ Marx 1968, p. 5.

² For an example of the early modern Armenian contribution to global commerce—the network of traders and travelers from New Julfa—and its effect on the development of Armenian society and letters, see Aslanian 2011.

such as *ō* and *f* that the author, a man of eclectic interests living most likely in Georgia, invented his fanciful language, which he named *R(u)štuni*³ (after the ancient Armenian district on the southern shore of lake Van and its legendary argot), in such a way as to make it sound as exotically un-Armenian as possible. Despite his intentions, its morphology and even features of its lexicon such as the similarity of words for heaven and earth (Arm. *erkin(k')*, *erki*) betray its birth in an Armenophone mind. Though the language has some philosophical and theological vocabulary, its maker evidently created *R(u)štuni* for his own amusement, rather than out of some noble impulse to bring the races of man back together with a single speech, and thereby to begin to repair the damage done by the fall of the tower of Babel. His cipher uses older Armenian cryptograms, such as one used so widely by guilds that I have called it a "hetaerogram," that is, the vehicle of an alphabetic subculture, and combines these with elegantly calligraphic forms based upon the late-Classical *nusxuri* script of Georgian. It was meant for the invented language (so he writes) but is actually employed in the manuscript mainly to enshroud sinister or salacious magical formulae in Armenian, including one spell for zombification and another employing the wild rue, a plant important in ancient and modern Iranian religion.⁴ My research led me to examine other invented tongues, including international, universal languages and their creators, and to return to a brief, intriguing reference in an article some decades old to one of the latter—one invented, with a strange script to go with it, by an Armenian.

The old article, then: in 1984 Vahé Oshagan, a writer, editor, and literary scholar, son of the famous writer, literary scholar, and educator Hagop Oshagan (Yakob Ošakan), published in a volume of the *Review of National Literatures* dedicated to Armenia an essay on cosmopolitanism among Western Armenian intellectuals of the late eighteenth-early twentieth centuries. He noted that a millennium of experience as international travelers—and of life as a people in diaspora as well as in the historical homeland—had conditioned Armenians to multi-lingual agility, familiarity with diversity in culture, and the ability to cope with crises of divided loyalty. In the nineteenth century much of Armenian literature remained decidedly parochial in scope and consciousness, preoccupied with schemes of national liberation and communal politics. But the upper classes of Armenian society, particularly in Constantinople and Smyrna—the great western coastal cities of the Ottoman Empire—looked outward as well. They hailed very often from families who had converted

³ For the purposes of this article, Hübschmann-Meillet transliteration will be employed.

⁴ See Russell 2012.

from Armenian Orthodoxy to Catholicism, were fluent in French and Italian, and were well-versed in modern European literature. As examples of men who pursued cosmopolitan careers he cites several examples, including Murad Tosunian, who under the grand adopted name Ignace Mouradja d'Ohsen served as Swedish consul at Constantinople in 1795 and authored a history of the Ottoman Empire; and Goghmas Keumurjian (restyled Cosmas de Carbohnano), interpreter to the Spanish consulate and translator into Italian of a history of Constantinople in 1798. These elite Armenians resided mainly in the heavily European district of Pera (Beğöğlü, now Beyoğlu) of the capital. Ottoman Turkey's great Aegean port in ancient Ionia also contributed to this burgeoning cosmopolitan culture among Armenians: the press of the Dedeyan Brothers at Smyrna brought out Armenian translations of Dumas, Chateaubriand, Swift, Samuel Johnson, Jules Verne, Sir Walter Scott, etc. The Smyrna intellectual Matt'eos Mamurian, who had translated Voltaire into Armenian, criticized contemporary Armenian society and morals in his satirical *Angliakan namakani* ("English Letters"). We will have much more to say about this extraordinary man presently.

Oshagan also sketches brief portraits of two intellectual eccentrics. Charles Akdjalian founded in 1867 the French-language journal *Politique Morale, revue de poésie, de santé et de morale*, which went out of print after only a year by reason of its editor's insanity. "Then there is the strange case," Oshagan continues, "of the lonely, misogynous and vegetarian eccentric Bedros Tingir,⁵ who had taught himself nine languages (Armenian, Greek, Latin, Arabic, Persian, Italian, English, French, and Sanskrit), who lived secluded in a hilltop castle near Smyrna and who had devised, around 1865, a new alphabet and an international language which he called 'Sahlara'. The purpose of this enormous effort was to 'promote peace and love among the nations'. He had also prepared a special text-book for the teaching of his universal language, a grammar, and a dictionary which he gave to rare visitors and correspondents to enable them to communicate with him. He had also devised a new system of musical notation based on his alphabet."⁶ I wanted to learn more about Sahlara; but all I could find was a biographical sketch on its creator, Bedros Tingir, in a brief historical monograph by Fr. Ep'rem P'olosean (Boghosian) of the Catholic Mekhitarist order at Vienna of the wealthy, influential Tingirian clan of Constantinople to which he belonged.

⁵ The name will be found in various forms, with or without the Armenian family suffix *-ean/c*?; the pronunciation would be Tenger, in modern Turkish orthography Tingir, with the stress on the final syllable.

⁶ See Oshagan 1984.

The family seems to have originated in central Anatolia—in the region called in ancient times Galatia, near Angora (modern Ankara). The first notable figure of the clan, Grigor *Hoca*⁷ T'nkṛeanc', born in 1701, served as interpreter to the French consulate at the Ottoman capital, and in 1768 and after was honored with the titles Chevalier de Guignard and Comte de St. Priest. He married a woman named Hrip'simē (we do not hear all that much about the women of this clan history) and fathered several sons who worked in the prestigious and privileged profession of the mint and banking (Ar.-in-Tk. *sarraḡ*). Grigor died August 13, 1781, and was buried at Pera. Karapet, Grigor *Hoca*'s middle son, fathered three boys, Petros (in Western Armenian, Bedros), Anton, and Astuacatur (Astvadzadur), and a daughter whose name has not reached us. Bedros (let's call him that: that was the name he heard) was born at Constantinople on 3 September 1799. On either October 21, 1811 or July 8, 1814 (accounts differ), Fr. Andrēas Šiwk'iwrean (Shūkūrian) took Bedros and a number of other boys to Vienna to begin study for the priesthood at the Mekhitarist (Armenian Catholic) seminary. Bedros was given the religious name Karapet on September 7, 1813, entered the order on April 15, 1816, and was ordained a priest on November 1, 1818—at the age of nineteen. Now Fr. Karapet, he returned to Constantinople but was sent away from the city during a notorious persecution of Armenian Catholics instigated by the Armenian Orthodox Patriarchate of the capital in 1827-1830.⁸ He went first to Bucharest, but on January 8, 1828, returned to his monastery in Vienna, leaving both the Mekhitarists and the name received at ordination on May 11—for we next encounter him with his old, secular name, Petros T'(ə)nkṛ (Tk. Tigr). He then traveled to Rome, seems not to have found peace there, and went on to Pesaro, a town on the Adriatic coast of Italy south of Ravenna. We do not know what made him abandon holy orders, nor is it clear what inner demon pursued him, though presently some suppositions of researchers will be advanced.

Fr. Pōlosean's narrative continues:

It would appear that somewhat later Petros T'ngṛeanc' returned to secular life, moved to Izmir [the author uses the Turkish form of the city's name interchangeably with Gk. Smyrna and

⁷ The Turkish honorific, from Persian *xwājdān*.

⁸ The English traveler William John Hamilton, in a narrative of 1842, states, "it is impossible to feel respect for men who had recourse to the vilest intrigues, in order to procure the banishment of their Catholic countrymen from Constantinople in 1829 and 1830" (Ghazarian 1997, p. 320). Perhaps the trauma of this event of internecine viciousness contributed to T'nkṛ's dislike in later life of sectarianism and nationalism.

Arm. Zmiwǵnia), and took up residence in Buca,⁹ where also he died. (Abraham Y.) Ayvazean in his *Series* (*Šar hay kensa-grut'eanē* ["Series of Armenian Biographies"], II, Constantinople, 1893, pp. 91-93; cf. also *Areuek'* 1899, no. 3946) writes on all this in detail under the entry 'Petros-T'nkār', which we here abbreviate: 'Petros-T'nkār, who was once a clergyman of the Vienna Mekhitarist order, was a scion of one of the most notable and honored Armenian Catholic families of the capital, the T'nkareans. He began his schooling at Constantinople and completed his education at the Vienna Mekhitarist seminary and another school of higher learning. Petros-T'nkār was deeply learned in various branches of knowledge, and one might also say he was a considerable linguist; for in addition to a good knowledge of Armenian, Greek, Latin, Arabic, Persian, Italian, English, and French, he was familiar with Sanskrit ... Petros-T'nkār lived nearly forty years in the village of Buca, at Smyrna. With financial help from his family he purchased, a few years before his death, a lovely hill in the locale near Buca called [Gk.] *Aspra Khōmata*, that is, White Lands, on the summit of which he caused to be erected a square stone house, which might more suitably be called a small castle... It was in that house where, secluded from humankind... Petros-T'nkār pondered the betterment of humanity anew [the contrastive irony seems intentional in the style of the Armenian text—JRR] and labored every day... For his newly-invented speech [*noragūt barbaroyñ*] he constructed an alphabet primer [*aybbenaran*], a grammar, and a pocket [*arjērn*] dictionary, which he caused to be printed, and which he presented as gifts to visitors to his home. He named the language [*lezu*] Sahleray, which means worldwide language [*hamasxarhayin lezu*]. In this language he wrote poems and composed verses that his visitors [*yačaxord-nēn*] read in French translation... but nobody except their author could read, grasp, and understand their original text. Again, in the special letters of his language Petros-T'nkār placed a plaque over the door to his house, upon which he caused to be engraved the word *Ayzeratand* [probably intended to be pronounced *Ayzeradant* in accordance with the orthography of Western Armenian—JRR], which meant Temple of Wisdom [*tačar imastut'ean*]. Inside the *Ayzeratand* was a library which was greatly adorned by books on linguistics... Petros-T'nkār never ate any food such as meat, fish, or the like... although he held these strange convictions, Petros-T'nkār won the affections of all his acquaintances by reason of his modest and noble demeanor and entrancing conversation [*iur parkešt ew azniw varmunk'oun ew hrapurē' xōsake'ut'eamb*]. For Petros-T'nkār was endowed with the ability to speak fluently all the languages he knew. By the final days of his life, that is to say, after having lived his life, one evening Petros-T'nkār, who had become weakened to an extreme degree, went to a grave he had long ago dug

⁹ Thus the modern Turkish spelling; in the Ottoman period it was rendered into European tongues as Boudja or the like.

and made ready in the middle of his temple, there to go to repose in a conscious death [*gitakic' mahuamb gnac' hang'e'elu*]. The following day when his customary visitors arrived they discovered him dead in that grave.' He died in 1881.¹⁰

Petros' brother Astuacatur (or Asatur, for short) studied at the Mekhitarist academy in Trieste; his brother Anton, a pillar of the Armenian Catholic community, in 1831 read out the *ferman*, or imperial decree, to the assembled *amiras* (Armenian aristocrats) and lay community concerning the construction of the Church of the Holy Savior (*Surb P'rkic'*). Anton had two children, who in turn reared children of their own—one, Karapet, was a writer who took the *nom de plume* Tigran *Erkat'* ['Tigran the (man of) Iron']. Scores of other sons and daughters of this famed *amira* clan are recorded through the nineteenth century and into the 20th: Dr. Raffi Tingir, a graduate of Robert College (now Boğazıcı), Istanbul, is a prominent physician on Long Island, New York, with a daughter studying in college here in Boston as I write. The American-Armenian writer William Saroyan was a friend of the Tingirs, and appended to this study is a group portrait of the great master and the family in their Istanbul home, half a century ago. (Plate 7.)

And what of the ellipses in Fr. Pölosean's citation of Ayzavean's book? Heeding the stern Victorian admonition to verify one's references, I sought and found a photocopy of the rare volume in the Widener stacks. Opening it to the chapter quoted, I now restore the portions omitted in the Vienna book. We find there a fuller, more interesting, and perhaps more troubling narrative in which delicate subjects are alluded to and a richer emotional portrait of the brilliant and eccentric linguist is attempted. I translate Ayzavean's biographical entry now in full. I have not altered its style.

In 1881 the Smyrna newspaper *Aršaloys* ['The Dawn']¹¹ reported the grievous tidings of the decease of a philosopher of all our nation; then the local national papers echoed the same sad news. I had already in my 'Letter' to the people in the *Ülegrud'iumk'* ['Itineraries'] of 1878 offered a little taste, a brief notice; but the life and the circumstances of the passing of the deceased—which a friend from Smyrna had relayed to me—provoke such interest that I consider it indispensable today to expand upon his ideas and the manner of his life, so that it may be possible for readers to make their own judgments about what manner of eccentric exceptions human life encompasses.

¹⁰ Pölosean 1951, pp. 36–38.

¹¹ That is, *Aršaloys Araratean*, 'The Ararat Dawn,' founded 1840. *Arewelean Mamul*, 'The Eastern Press', was the other major Armenian newspaper of the city. There were numerous other Smyrniote Armenian periodicals.

Petros-T'nkār, who was once a member of the Vienna Mekhitarist clergy, was a scion of one of the most notable and honored Armenian Catholic families of the capital—the T'nkerean clan.

He began his schooling in Constantinople and then completed his education at the Vienna Mekhitarist seminary and at another school of higher learning.

Petros-T'nkār was deeply learned in various branches of knowledge, and one might also say he was a considerable linguist; for in addition to a good knowledge of Armenian, Greek, Latin, Arabic, Persian, Italian, English, and French, he was familiar with the Sanskrit language, which according to the new scientific dogma is singled out as the root of languages.

Petros-T'nkār, by reason of some unfortunate circumstances at the time of his adolescence, shunned human society. With unshakable conviction he was ever unable to believe that the calling of being a member of the human race could ever forgive him for diverging from the path of benevolence and turning to evil.

These noble sentiments became so elementary to his heart that he shunned all manner of evil. The hatred of evil things guided him to misanthropy, and it is just because of this that civil life became unbearable to him.

Belonging to a wealthy clan facilitated his disposition to lead a solitary life; and his bachelorhood further strengthened that inclination in him.

For over forty years Petros-T'nkār resided in the village of Buca near Smyrna. Thanks to financial assistance sent by his family he purchased, a few years before his death, a beautiful hill in the place near Buca called [in Greek] *Aspra Khómata*, that is 'White Lands', on whose summit he caused to be built a square stone house, that one might more appropriately call a small castle.

This building was so firm and solid that even the most ferocious brigands despaired of (pillaging) it.

It was in this house that Petros-T'nkār, the recluse from the human race and hater of human society, pondered the betterment of humanity and worked from dawn to dusk.

He supposed thus: the diversity of religions and languages subjected mankind, which is of a single origin [*hamaser*], to division. And he believed that together with a composite [*miajoyl*] religion a universal single language [*tiezerakan miórinak lezu*] would integrate the nations with each other and would even put a stop to all individual strife, all fighting and disputation. And thereby general peace and concord would follow.

For a long time he worked at contriving this sort of worldwide [*hamasxarhayin*] language. He imagined that this language would be accepted with love and without resistance by all nations.

The language's structure being of no lesser interest, our abovementioned friend, who had the honor to meet the de-

ceased, related to us that this newly-invented tongue, being comprised of the various sounds of several languages but especially of Sanskrit, had letters that were an amalgam shaped of the parts of various characters. Since it was not yet accepted and used by any nation it could not yet, generally speaking, be termed a language.

He named the language Sahleray, which means 'world-wide language'. In this language he wrote poems and composed verses that his visitors read in French translation and found sufficiently interesting. For his newly invented speech he constructed an alphabet primer, a grammar, and a pocket [*arjeyn*, "handy"] dictionary, which he caused to be printed, and which he presented as gifts to visitors to his home.

But nobody except their author could read, grasp, and understand their original text.

Again, in the special letters of his language Petros-T'nkār placed a plaque over the door to his house, upon which he caused to be engraved the word *Ayzeratand*, which meant Temple of Wisdom. Inside the *Ayzeratand* was a library that was greatly adorned by books on linguistics. And on the tables one found to one side sponges, mineral samples, and various other objects, all covered in dust.

The haphazard state of these objects made it plain to the visitor that the *Ayzeratand* had never benefited from the care of a woman.

It is a point worthy of attention that when we say woman here we understand not only a spouse—for Petros-T'nkār, aside from never marrying, so detested the fairer sex that he never suffered a member of it to cross the threshold of the *Ayzeratand*.¹² And if without his knowledge a matron or maiden slipped in by stealth, he would instantly show them the door, no matter who the lady in question might be.

Petros-T'nkār never ate any food such as meat, fish, or the like, but sustained himself solely on vegetables, milk, and eggs. He considered carnivorousness the province of beasts, and consequently considered men who ate meat little better than scavenging animals.

In this respect his opinions were very like those of Jean-Jacques Rousseau, with the difference that Petros-T'nkār put the latter's thoughts into practice upon himself. But the re-

¹² Ayvazean inserts here the following footnote (p. 95 n. 1): "It is said that Petros-T'nkār had a powerful reason for that hatred of his. That feeling can perhaps be considered pardonable for him when one considers that others in the same circumstance have even resorted to suicide, as a young Armenian of genius did in early 1881 at Yenī-Kapu." This seems to be most likely a delicate reference—astonishing still for its candor, given the time and place—to the forbidden topic of homosexuality. But gay people often have women friends; so it is just as likely that Bedros was a person of no realized predilection at all, a recluse with a horror of the flesh, somewhat like the visionary American writer of fantastic and horror fiction H.P. Lovecraft (d. 1937), also a lover of arcane scripts and tongues, who detested bodily contact and animal food in equal measure.

markable thing is that Petros-T'nkər carried his hatred of meat to fanatical extremes—he never wore leather shoes, only elastic rubber ones. For he maintained that wearing footwear of leather comes in the wake of the murder of animals and is therefore contrary to natural law [*bnakan ḡrinac*].

He saw to his own work, cleaning, and shopping, and felt no need of a staff of servants.

"Although he held these strange convictions, Petros-T'nkər won the affections of all his acquaintances by reason of his modest and noble demeanor and entrancing conversation. For Petros-T'nkər was endowed with the ability to speak fluently all the languages he knew. By the final days of his life, that is to say, after having lived his life, one evening Petros-T'nkər, who had become weakened to an extreme degree, went to a grave he had long ago dug and made ready in the middle of his temple and lay down to rest in conscious death after enjoying over sixty winters, much as once St. John the Evangelist went to his rest in a grave he himself had made.

On the following day, when his customary visitors arrived, they found him dead in that grave.

So that is how Petros-T'nkər met his end, he whose breadth of knowledge was comprehensive; his vision, broad; and whose life, albeit outside the normal round, can be an occasion for the pondering of contemplative souls...

Go, then, o weary and desolate soul, who wast born of poesy, rocked by the lullaby of linguistics, who lived by philosophy and who died in spiritual converse [*hogexdsut'eamb*].

Go to that place where all is poetry, all is soul, where there is no Babel of the tongue, where there is no international frontier, where there is no issue of the pulpit, where there is no political party, where there is no Hereafter and no Here...

There the issue of language has been resolved, and the inhabitants are of the same speech...

There, there is no party, no faction, there is a single flock and but one shepherd...¹³

And with that prolix, elegiac evocation of a Heaven in which the Greek, Armenian, and Turk speak the same language, the Christian, Jew, and Muslim worship at the same altar, and social democrats and revolutionaries are in accord, the window onto the past (and into the Otherworld) closes. There, there, there... The repetition of that word in the elegy reminded me of the lament over the death of a friend penned by another Bedros, a poet and contemporary from Constantinople who died at the tender age of twenty, ten years before the recluse of Smyrna lay down to his eternal rest in the Temple of Wisdom. This is Bedros Tourian (Petros Durean), the creator of the modern Western Armenian poetic language. In the final stanzas of "Laments"

¹³ Ayvazean 1893, II, pp. 91-97.

(*Hececunk'*, 1871), addressed to a dead classmate, Tourian wonders:¹⁴

Are you happy there or sad?
Send me tidings on an angel's wing.
Ah! This world is ever weary...
This world is a mother of great pain.

O, if the shade of a tree there
May be found, and a rill besides,
If imperishable love is there,
If there are freedoms there, free airs...

O, I toss in the filthy raiment
Of my soul, my whole life until today:
I clothe myself in earth, the mourning soil...
Ah, Vartan, are the things we longed for there?...

The poet's work was very widely known: the despairing, brilliant, lyrical boy cut down by consumption in his twentieth year became an instant Romantic hero. And in the same year, 1893, that Ayvazean published his three volumes of biographical sketches, including that of Petros T'nkər, Barsel E. Ek'sərčean (Parsegh Ekserjian) published at Constantinople the volume Petros Durean, *Talk' ew t'atregut'ũnk'* ["Poems and plays"], with both the memorial poem quoted (pp. 44-46) and the graveside eulogy (*dambanakan*) to the poet's friend, Vardan Lut'fean (pp. 254-256). So one thinks it very likely that the words of the young Armenian poet, whose friend predeceased him by but a few months, echo in Ayvazean's closing lines.

But the lyrical author of the necrology of the Smyrnaic linguist (and poet, too, though the verses have not come down to us) Bedros still divulges only one word of Sahleray. And we do not even know yet how the name was to be pronounced, for Oshagan evidently believed its final -y to be silent, as in the modern pronunciation of all Armenian polysyllabic words, since he transliterates it as Sahlera, but the name, as we shall see, was to be pronounced Sehlerai. Only one word is breathed out loud: *Ayzeratand*. Temple of Wisdom. But what associations the name of the house of the man standing alone on the hill summons to mind!

THE TEMPLE OF WISDOM AND THE FREEMASONS

Ayzeratand, "Temple of Wisdom." Although many erudite men at one time or another might in an excess of self-esteem

¹⁴ See Russell 2005, p. 294 [Armenian text, p. 292].

give their homes some such grand name, the best-known edifice with the title, *Weisheitstempel* in German, belongs to a famous work of fiction. That is, to a literary invention in music. That is, to an opera—to the very greatest opera, the very last work, the most luminous and mysterious, of the greatest composer who ever lived in all history: *Die Zauberflöte*, “The Magic Flute,” which Wolfgang Amadeus Mozart completed shortly before his death in 1791. The delightful libretto is the work of a fellow Freemason named Johann Emanuel Schikaneder. Mozart himself belonged to the Masonic lodge *Zur gekrönten Hoffnung*, “Crowned Hope”;¹⁵ and the opera, an allegorical attack in the spirit of the Enlightenment on oppression by tyranny and on the obscurantism of dogmatic religion, is steeped in Masonic allegory and symbolism. The opera and its Temple of Wisdom are so proudly Masonic that the inevitable conspiracy theorists have suggested, wrongly, that the composer betrayed secrets and hastened his own death thereby. Echoes, perhaps, of the later Morgan Affair in the young American republic...

Mozart's lodge met at Vienna, where the very young Petros T'nr̄ was to come as an acolyte a scant two decades later—and, as we have seen, to return as a harassed and disillusioned adult, abandoning the established Church and dedicating himself to a private vision of service to humanity involving a utopian, cosmopolitan linguistic (and musical!) project and the erection of an edifice of learning with a tomb at its center. Petros T'nr̄'s biographer suggests this remarkable eccentric was driven by a particular predilection too dreadful overtly to name; but he chose to deal with his inner demon, to turn it to a good purpose, in a manner strikingly consonant with the arts, philosophy, and imagination of the city of Mozart, the city of his youth, the Vienna that was still a crown of hope for the brotherhood of man, the city whose orchestral music and opera were attuned to the divine harmonies of the *Erklärung*, the Enlightenment.

Freemasonry is an international fraternity (it does not, indeed, admit the fairer sex, and in this regard the Ayzeratand followed suit) dedicated to the spiritual rebirth, transformation, and growth of the individual human being. This process of personal alchemy begins with a series of dramatic initiatory rites in Lodge combining vivid experiences enacted through a drama with the intensive and complex study of an all-embracing cosmological, moral, and mythopoetic system. The latter is expressed in the symbols of the craft of the builder and geometer, and in a passion play based upon the story, dimensions, and features of the Temple at Jerusalem ordained by the archetypal sage, King Solomon and built by his Phoenician architect, the

¹⁵ See Landon 1982, where a painting of Mozart in his mother Lodge at work is reproduced, and a recently discovered list of its Brethren is provided.

widow's son Hiram Abiff of Tyre. Masonry is inherently cosmopolitan, secular, and democratic (if not feminist) in its world outlook (and thereby sympathetic to the concept and ideal of a universal language)—for it recognizes within its temples no distinction of religion, nationality, or social class. Brethren (as the members of the Craft are known) meet, work, and part on the level of equality, and strive to develop their moral character through fraternal effort and charity. The leveler of men is death: the symbolism of the tomb and of the initiate's conscious death is figuratively and literally at the center of every Masonic temple—much as was the grave of Petros T'nkər in the stone Ayz-eratan on its hill outside Smyrna. Through the eighteenth and nineteenth centuries Masons such as George Washington, the Marquis de Lafayette, Simon Bolivar, Jose Rizal, and many others played leading roles in the revolutions in America, France, and other countries. Freemasonry was often regarded by the old order and the Catholic Church in particular as a threat and was obliged to operate in conditions of secrecy. In order to protect the Craft from its enemies and to preserve its mysteries pristine, Masons still employ coded language and written ciphers.

The hero of *The Magic Flute* is a brave youth, Tamino, who through various ordeals must win his beloved soul-mate, Pamina: their names are fanciful variants of the Persian Tahmina, known from epic literature; and the libretto, itself a pastiche of previous orientalizing operas, reminds one strongly of the Hellenistic romances set in the East, some of which allegorize the rites of the mystery religions. One of these is Mithraism, with its roots in Armenia, from which elements of Freemasonry probably descend.¹⁶ *Die Zauberflöte* combines Egyptian motifs with Persian ones, since both those ancient civilizations were believed to have contributed the universal *prisca theologia* that Pythagoras and Plato propounded to the world, fusing the wisdom of the East with the philosophy of the West.

The priest of the *Weisheitstempel*, Sarastro, is the Iranian Zarathustra; but in an aria he invokes the Egyptian divine pair, Isis and Osiris. The *Weisheitstempel* in the original stage set for the opera at Vienna was flanked by pyramids;¹⁷ and the Masonic symbol of the pyramid surmounted by the all-seeing eye of God on the great seal of the United States is obviously at once a Pythagorean tetractys, an Egyptian edifice, and an archetypally ancient Temple of Wisdom. Egypt and its strange written characters, which were regarded as a primordial philosophical language, had been a source of fascination since the Renaissance and the somewhat fanciful writings of Athanasius Kircher; and the new discoveries of Egyptian antiquities in the Napoleonic era

¹⁶ See Russell 1989 and 1995.

provoked a kind of aegyptomania in European and American art and fashion. So it is not surprising that when the New York Mason Robert Folger, born 1803, set out to invent a ritual cipher in 1826—a few months after his raising in the Third Degree as a Master Mason and just a year before Jean-François Champollion published his sensational decipherment of the ancient Egyptian script—it was made to resemble Egyptian. The Folger Manuscript abounds in symbols; and at the center of page 21 stands the *Weisheitstempel*, the stone Pyramid. (Plates 1-3.)¹⁸ Many secret societies sprang up in imitation or emulation of the Masons, and they, too, created codes to protect their teachings and their members from eavesdroppers and persecutors: the mid-18th-century German fraternity of Oculists, for instance, were a guild of ophthalmologists who framed their esoteric teachings in the symbolic system of their own craft—instead of swords, cataract needles; and instead of heraldic lions, cats (who see well in the dark). Their code, in the Copiale manuscript, was deciphered in 2011 by a team using new computer techniques.¹⁹

Freemasonry has existed in Smyrna since the eighteenth century, and endures in modern Izmir. It is not known whether Petros T'ngar was a Mason, whether Mozart's opera inspired him at Vienna or in a Lodge, or whether he simply came up with the Ayzeratand, its odd restrictions, its cabinet of natural curiosities, and its central tomb, all on his own. But the most prominent Armenian intellectuals of Constantinople and Smyrna in his day were Masons; and Armenians had been pioneers in the spread of Freemasonry to the East. The first Grand Lodge of England sealed its charter in 1717; yet already by 1762, we find an Armenian named Dr. Manass appointed one of four Masters of Lodges in the Near East, Aleppo, and Persia by the Grand Lodge at London. Armenians saw the power and influence of colonial Britain as a kind of protection, and this attracted many at first to join Lodges under London's jurisdiction. But in the nineteenth century Armenians in the Ottoman Empire with revolutionary, liberationist sentiments tended to prefer affiliation with the rival Masonic authority, the Grand Orient of France, both because of its more overt association with liberal and radical ideas and individuals, and in view of Britain's increasingly troublesome reputation of siding with Turkish Muslims against Levantine Christians. Some seemed to maintain affiliations with both jurisdictions, however. At Smyrna in the 1860s, the prominent writer and public figure Matt'eos Mamurian, mentioned above, belonged to the Anglo-Armenian Tigran lodge, which had

¹⁸ See Morris 1992; on aegyptomania, Erwin 1980; on Champollion, Robinson 2012. On the use of cryptograms in Armenia, including a "hetacogram" used by large sodalities within Armenian society, see Russell 2010.

¹⁹ See Schachtman 2012.

also Greeks, Turks, and Jews among its Brethren. (One recalls here the tantalizing name Petros T'nkār took for himself in Sehlerai, *Tg(h)ransar*, though it supposedly has nothing to do with Tigran, the Armenian king. But more on that anon.)

On 7 May 1866 the first Lodge working exclusively in Armenian was inaugurated at 21 Yazıcı Street, Kule Kapu district, Constantinople: *Sēr* ("Love") was chartered by the Grand Orient of France, and Mamurian became one of its most active members. The Lodge met at seven PM on the first and third Sunday of each month at its *tačar* (i.e., temple!). Work opened with a hymn heavily flavored by the *grabar* (Classical Armenian) forms generally encountered in the Divine Liturgy of the Armenian Church: *I mēj mt'ut'ean darer xarxap'ac, / Aysōr zart'ec'ank' ew zloyš gtank'; / Erkiṽlacut'eamb Ōt'eakə mtac. / Zīrar p'ntrec'ink', zīrar mek' gtank'; / Zays šēm̄k'ə koxac— t'ol oč' ok' mezmē / Berē kanxakal mtk'er u xoher. / Hamerašxut'ean t'ol zšunč' c'anē... / Azat hogu tēr, zloyšə p'ntre, / Zi mek' Tiezerk'i bari elbark' emk' "Having groped for centuries in darkness, / Today we awoke and found the light; / Entering the Lodge in awe / We sought and found each other. / Crossing this threshold let no one of us / Bring thoughts and opinions previously held. / Let him sow spirit of concord... / Master of a free spirit, seek the light, / For we are the good brothers of the Universe."*

Following the Ritual governed by the *gerapatiw varpet* (Worshipful Master), the Brethren of *Sēr* Lodge repaired to a standard *hamkeroyt'* (Collation, the meal after the meeting, or Communication), with toasts and convivial fellowship. The printed notice of a Communication of Mar. 1867, which included the conferring of the *A astičan* (1st Degree), has at its head the letters *I.P'.M.Č.T.*, which I recognized with pleasure as the abbreviation of a formula I could reconstruct in *grabar* containing some familiar terms: *I p'ars meci čartarapeti tiezerac'* "To the glory of the Great Architect of the Universe." Brethren were entertained at a meeting of the Lodge in February 1867 with a performance of songs by none other than *elbayr Mozart'*, "Bro. Mozart" (who, of course, had written specifically Masonic music as well as "profane" music imbued with the Masonic spirit). Most of the Brethren were intellectuals who came from well-to-do families, so the meeting often featured a learned lecture: in June 1866 Bro. Mamurian gave an impassioned oration on the life and recent death in Siberian exile of the Eastern Armenian revolutionary activist Mik'ayēl Nalbandian (1829-1866), declaiming the latter's famous poem *Erg azatut'ean*, "Song of Freedom."²⁰ The young poet Bedros Tourian also wrote of Nalbandian's martyrdom in distant Russia; and freedom, *azatut'iwon*, was a watch-

²⁰ See text in Simonean 1965, p. 61.

word and slogan of Ottoman Armenian Masonry. (Bro. Garibaldi and the Carbonari were front-page news in those years; and one recalls that the Armenian national anthem, *Mer Hayrenik'* ["Our Fatherland"], was originally a poem about the Italian liberation struggle against Austrian and Papal tyranny.) We have seen that Petros T'nkār did a lot of traveling; and this seems to have been typical of members of *Sēr* Lodge, some of whom lived for most of the year at Paris, Rome, Manchester, London, and Smyrna—all places where Western Armenians studied or did business. The Lodge must have been, even with its work in Armenian, a gathering place of impressive polyglots, even if T'nkār, with his Sanskrit, would have stood out among them.

In his illuminating series of articles on *Sēr* Lodge published in 1937 Rubēn Berberean seeks to place the growth of Freemasonry among Armenians in the political context of the time. By the mid-1860s, he argues, the hopes for reform and national liberation excited by the Constitution (*Sahmanadrut'iwn*) had been dashed. The community was rent by fractious and corrupt behavior: "In the '60s there were in Armenian life not only purely Armenian national ideological currents, but also moral and philosophical ones embracing all humanity [*hamamard-kayin*]. The age is typified by the attempt by the Turkish Armenian intellectual strata, for a brief time, to found and strengthen the structure of 'the benefit of the nation' and 'national unity' by fusing it with sentiments of 'universal brotherhood' and 'the harmony of mankind.'"²¹

Though in his booklet describing Schlerai, Petros T'nkār uses Armenian script constantly to explain the phonology of his language, the manual itself is in French and its precursor was in Greek: we do not know what view he took of Armenian communal and national activism. And although Masonry is tailor-made for a man of T'nkār's humanist and universalist convictions, it is somewhat difficult to imagine the ascetic denizen of the Ayzcratand as a gregarious Lodge Brother firing glasses of strong drink at Collation, though he did have constant friends—and even, perhaps, followers. However Masonry has always had room for eccentric thinkers whose life trajectory turns to late isolation; and Berberean cites the example of a member of *Sēr* Lodge whose linguistic interests, even, are akin to those of T'nkār. Bro. Serovbē T'agworean (Takvorian) left Constantinople and settled in Paris, where, in Berberean's words, he "withdrew into his shell" (*k'ašuec' ir pateanin mēj*). There, in 1881 (the year of T'nkār's death), he published an *Essai d'un système de linguistique comprenant l'interprétation des racines par les lettres de l'alphabet, appliquée à la langue Arménienne*.

²¹ Berberean 1937, part 1, pp. 74-75.

MERCURIANS

In his controversial recent monograph on modern Jewish history, the Slaviciſt Prof. Yuri Slezkine proposes a division of human societies into types he calls Apollonians and Mercurians, after telling characteristics of the ancient gods: the Apollonians are rooted in land, hierarchy, honor, and military service; while Mercurians live by traveling, trading, and exchanging information. Jews, some Armenians, Overseas Chinese, some Roma, and other like cosmopolitan groups comprise the latter, global fraternity; while the traditional, landed aristocracies of Germany, England, Russia, etc. exemplify the former. It is as much in the interests of Mercurians—who are in many ways transnational, and represent the common human denominator in the most positive sense—to knit the world together with one language, legal system, and currency as it is vital to the status of Apollonians—whose essence is parochial and reactionary—for these things to be divided among nation-states.

The T'nkorean clan and the other families of the Armenian *amira*-nobility of the Ottoman Empire were Mercurians *par excellence*: they dominated finance but were barred from the military, they slipped effortlessly from one language into another, and they traveled ceaselessly. In Smyrna, one might add to the Mercurian roster the "Levantineſ," thoſe huge, wealthy trader-clans of mixed Western European and Eastern Mediterranean Chriſtian lineage who reſided in garden-wreathed palaces in Smyrnaic ſuburbs like Bournabat, T'nkōr's Buca, and even a diſtrict called Paradise.

Idealistic visionaries of the eighteenth and nineteenth centuries created hundreds of invented languages,²² but only two have ſurvived, and Jews made both. The firſt, perhaps more a reſurrection than a creation *ex nihilo*, is Modern Hebrew. Eliezer Ben Yehuda (1858-1922), who grew up in the Pale of Settlement of the Ruſſian Empire, read in Ruſſian translation George Eliot's novel *Daniel Deronda*, in which a young Engliſh aristocrat diſcovers he is a Jew, but inſtead of burying his ſhameful ſecret comes out of the cloſet, as it were, and determines to revive Hebrew and live in the Land of Iſrael. Following the pogroms of 1881, the year of T'nkōr's death, Ben Yehuda followed the example of his fictional hero and emigrated from Ruſſia to Jeruſalem, ſeeking to erase his Mercurian ſtatus by reclaiming his ancestral homeland. (Mercurian Armenians felt the ſimilar pull of *Yergir*, "The Land," though many, like Bedros Tourian, imagined its fallen glories but never pulled up ſtakes and went.)

²² Okrent 2010 provides a liſt of ſome five hundred, though Sehlerai is not among them.

The second made-up tongue is Esperanto, meaning literally "one who hopes." Its inventor, Ludwik Zamenhof (1859-1917), a Jewish oculist from Bialystok, witnessed the same anti-Semitism as his contemporary Ben Yehuda. Though sympathetic to Zionism, he elected to remain in Europe, hoping with his *internacia lingvo* to promote world peace through mutual understanding. In 1887 he published at Warsaw in Russian his booklet outlining the rules and lexicon of his new language. Although Esperanto was the creation of Jews, it was Armenians who propagated it in the Caucasus: In Tiflis, Hayk Artem'evich Astvatsatriants (Astuacatreanc') from March 15, 1910, published and edited the journal *Kaukaza Esperantisto* ("The Caucasian Esperantist"), which featured articles in Esperanto, Russian, Armenian, and Georgian on art and music, *belles lettres*, and the theater, and provided also lessons in Esperanto and a review of the press. At Baku from 1911, Abel Ivanovich Ter-Bagdasarian (Tēr-Baldasarean) published, and Yakov Kalustovich Khodzhamir (XoJamir) edited, the commercial and humor paper *Nerkarar* (Arm., "The House Painter") in Esperanto, Russian, and Armenian. And at Constantinople, as we shall see presently, Greeks were at the forefront of the Esperanto movement.²³

These trends in cosmopolitan, global thinking reached the Islamic world mainly through Mercurian, Christian communities and individuals. It is true that in the sixteenth century a hypothetical faith or abstract religious philosophy called *Dīn-e Elāhī*—"Divine Religion" in Persian—was created by intellectuals of the different religions that flourished at the cosmopolitan court of the Mughal emperor Akbar. It united the teachings of these diverse confessions—Hindu, Muslim, Zoroastrian. And the Parsi Zoroastrian author of the *Desātīr* ("Instructions"), a mystical treatise in the spirit of the *Dīn-e Elāhī*, composed his work in a hybrid language. There is another, likewise Persian-based invented language employed to convey Sufi mysteries to initiates, Balaibalan.²⁴ And in the early decades of the twentieth century the leader of the Baha'i faith championed the study and use of Esperanto in Iran. However it would seem that Sehlerai is the only invented language intended specifically for all nations and faiths that was invented in the Near East by a native of a Near Eastern nation, a Mercurian, an Armenian, Petros T'nkār.

AN INTERNET DETECTIVE STORY

Unsatisfied by one word of the invented language, I pursued my search for Sehlerai and turned to an Italian dictionary of imaginary languages, and found a brief reference. Albani and Buonarrotti 1994, p. 371 s.v. *Sehlerai*, report that the inventor of

²³ See Vlasov 2011, pp. 57-58 and 58 n. 1.

²⁴ See Bausani 1954.

Seh-lerai published at Smyrna in 1864 under the pseudonym Tghransar a description of his language. They provide a sample sentence with translation: *Rum shai yran bes lerai vom, shaiz il le sam lerai iun sim, mim serai vam shaiz il le som* "Nel mondo sarà preferita una lingua scientifica unica à numerose lingue con una scienza unica" (or, in the Esperanto translation of Stamatiadis, *En la mondo estas prefere por la scienco unu sola lingvo/ Ol multinombraj lingvoj kaj plej malgranda scienco.*) A history of international languages in Esperanto offers a brief notice: *La libro de Tghransar portis la nomon "Alphabetarion Ansailanzar Sahlerai" kaj estis eldonita en Smyrna. La eldonjaro de la libro ne estas konata, sed lau la havataj informoj ĝi estis publikigita en ĉiu okazo ne pli malfrue ol ĉe la fino de la XVIII jarcento.* ("Tghransar's book bore the name *Alphabetarion Ansailanzar Sahlerai* and was published at Smyrna. The date of publication of the book is not known, but according to the information we possess it was published at any event no later than the end of the 18th century." [tr. by JRR])²⁵ But that would place the invention of the language at or before the date of Bedros' birth; and this erroneous statement seems to be the source of a still more inaccurate assertion by the linguist Mario Pei—that Sehlerai (as he calls it) was invented around 1800 but published in 1921.²⁶ For the latter date is erroneous as well. 1921 is the date of an abridged translation of T'nikar's work into Esperanto, with facing text in Greek, published in two consecutive issues of the journal *Bizantio* at Constantinople by its editor, the Greek physician and author of the standard Greek-Esperanto dictionary, Anakreōn Stamatiadēs (Stamatiadis in general transliteration).²⁷ I did not understand that Stamatiadis was a person: my reference suggested this was the title of a journal.

I wrote to the e-mail address of Dr. Arika Okrent, a professional linguist and author of a very entertaining book on invented languages already noted here, hoping she might have a lead. She promptly replied, apparently much amused and approving of my pleasantly lunatic quest. She had not heard of Sehlerai, but suggested I contact her learned friend Ms. Olga Kerziouk, Esperanto librarian of the British Library, to whom I wrote at once. Ms. Kerziouk answered straightaway, explaining that Stamatiadis was a person. And she located his journal, *Bizantio*, at

²⁵ Drezen 1967, p. 61.

²⁶ Pei 1968, p. 147.

²⁷ See Tg[h]ransar 1921, reproduced at the end of this study as Appendix 1. According to Wikipedia, Stamatiadis was born at Florence in 1868 at Florence and died in 1964. He worked as a physician on Samos, was exiled in 1913, and settled in Athens. He published *Bizantio* from July 1921 to July 1924, and was active in Greek Esperanto associations and publications. His first book of many on Esperanto, *Hē diethnes boēthetikē glōssa* (Greek, "The international auxiliary language") was published at Samos in 1912.

a British Esperanto library. But my e-mail to its curator somewhere in the English countryside languished without response for some time. Olga, anxious that my work not be delayed in the interim, kindly located another set of *Bizantio* in the Planned Languages (this is another designation of "invented" languages) collection of the Austrian National Library at Vienna; and Dr. Bernhard Tuidar and the rest of their helpful staff immediately sent me scans of both articles. They are reproduced here, with my translation of Dr. Stamatiadis' introductory essay. They allude to a publication by T'nkār in Greek. In the meantime, Prof. Johann Strauss, a historian of Ottoman Turkey at the University of Strasbourg, was intrigued by the question and sent me a reference to a biographical note on T'nkār and to a documentary history of the Ottoman Armenians of the nineteenth century by the contemporary Istanbul Armenian savant Pars Tuğlacı. Both are cited in this study.²⁸

At my request, my colleague Prof. Taner Akçam of Tufts University, the eminent historian of the Armenian Genocide, took time from preparing for yet another lecture tour and contacted his old friend Osman Köker, founder and editor in chief of *Birzamanlar Yayıncılık* ("Once Upon A Time Publishers") at Istanbul, who instantly sent me the photograph reproduced here of the place where Petros T'nkār had lived. Both these men have, at enormous personal cost, including prison and torture, dedicated their lives to studying the record of Armenian life and death in Ottoman Turkey. My peregrinations on the internet have involved quiet heroes of collegiality and scholarship, and real life, flesh and blood heroes of politics too. The speed of their collegial aid vied with the lightning rapidity of electronic communication.

But the book by T'nkār himself, printed at Smyrna in 1864,²⁹ still eluded me. Neither the British Library nor the Library of Congress nor the Bibliothèque Nationale de France possessed a copy; and it proved well-nigh impossible to contact the libraries of the two Mekhitarist monasteries at Venice and Vienna. (Perhaps T'nkār's papers are hiding in the Mechitharistengasse or on the isle of St. Lazzaro.) But my colleague and friend Prof. Valentina Calzolari of the University of Geneva (to whom I am also indebted for her close reading of the draft of this study and her many helpful comments) recommended I ask Dr.

²⁸ Seropyan 1999, vol. 2, p. 624; and Tuğlacı 2004.

²⁹ For the year 1864 there is but this mention of the T'nkārean clan recorded by Tuğlacı 2004, Vol. 2, p. 227: *8 Eylül 1864: Tınçırzade Ohannes Efendi'nin Der saadet Maliye Nezareti muaviniğine atanmasına irade buyruldu* "8 September 1864: Mr. Yovhannēs T'nkār at Constantinople was appointed to the post of assistant at the Ministry of Finance." Though the declaration is less than earth-shattering, it illustrates well the special privilege of *sarraf* enjoyed by the Armenian *amīras*.

Raymond Kévorkian, director of the AGBU Nubarian Library at Paris and an eminent Armenian historian, whether that collection might have the volume. And indeed, a copy of Tgransar's manual, perhaps the only one in existence, had been given in 1928 by an Armenian from Istanbul to Aram Andonian, the library's first director and author of *Mec oçir* ["The Great Crime"], one of the first histories of the Armenian Genocide. To my delight and astonishment, Dr. Kévorkian instantly provided a miraculous scan of the precious little book by e-mail; and you now hold it in your hands. (See Appendix 2.) The booklet deals with the writing system of Sehlerai and contains mainly the names of letters, diacritical marks, and numbers, with the single sentence quoted by the Italian authors of the encyclopedia noted above; the fuller grammar and dictionary Tnkar compiled have not yet come to light. And in March 2013 I received this letter:

Philippos Iliou Bibliology Workshop
Benaki Museum
Athens
Greece
To Mr. James R. Russell

Athens, March 18th 2013

Dear Mr Russell,

I am the responsible [director] of the "Philippos Iliou Bibliology Workshop" of the Benaki Museum, Athens, Greece (<http://www.benaki.gr/bibliology/>). Last Wednesday we received as a present a copy of the Sehlerai alphabet and we are sending you the scanned copy; some pages are missing. The book has been mentioned by the Greek *Bibliography* of Ghinis-Mexas (v. 3, 1957) as an edition of circa 1820. Philippos Iliou, who started the new edition of the Greek Bibliography of [the] 19th century that we are continuing, was not sure of the date and, as the copy was lacking, he did not include the entry in his description of the Greek books of the 1820's (posthumous v. 2, 2011), assuming that it might be a later edition.

After the copy (in which the date is not mentioned) reached our hands, my colleague Anastassia Mylonopoulou found your exciting article ("The Sehlerai Language." FL-000011-00, *Fiat Lingua*, <<http://fiatlingua.org>>. Web. 01 February 2013) and our question is whether we could also assume that the date is 1864 for the Greek edition as for the French one you have seen. As at the moment my colleague Sandra Vretta is preparing the (Greek) bibliography of Smyrna, we are looking forward to your answer.

We thank you very much for your attention and, of course, for your article.

Yours sincerely,
Popi Polemi.

The Greek version of *Ans haĭlanzar* is now appended to this article as Appendix 3, as it goes to the press (having been available for a while to conlangers on the Web), with thanks to the Benaki Museum. The place of publication is given in *katharevousa*, or neo-Classical Greek on the title page, *En Smyrnēi* "At Smyrna"; but the book is undated. Very likely it precedes the French edition by only a few years or even months. From the look of it, it came off the same presses.

We do not have much of Schlerai, then, but what we do possess is a lot better than nothing. And if one seeks the holy grail of the inventors of planned languages—the state of human fraternity and mutual assistance across religious confessions and national frontiers—one place it is surely to be found is on the electronic strands of the worldwide web, where collegial scholars, quiet heroes of the mind, weave the magical brocade of learning. And one can travel there, unlike the hobbit Bilbo Baggins, without leaving one's front door.

ANS HAĬLANZAR.

So here, finally, is the Book, *Ans Haĭlanzar ou Alpha-Gnomonomic de Seh-lerai: ouvrage*, by Tghransar, Petros T'nkər. Its Greek precursor lay before Dr. Stamatiadis, who published in *Bizantio* on September 30, 1921, these reflections on it, which I translate from the Esperanto:

For a long time people have not ceased to invent artificial languages as international ones. For this purpose they have from time to time proposed various projects, which belong to three different systems.

According to the first, the inventor proposed languages *a priori*, made without reference to languages already existent, such as those of Descartes (1629), Leibniz (1716), the Solresol of Sudre (1817), the Spokil of Dr. Nicholas (1900), etc.

According to the second type, they took into consideration the already existing languages, and, principally, the European ones: of this kind were those of Faiguet (1765), Schöpfer (1839), Zamenhof (Esperanto, published in the year 1887), and others. Finally, according to the third system, the projects are based upon both principles of the abovementioned schemes: of this kind were the languages of Von Grimm (1860), the Volapük of Pastor Schleyer (1880), the *langue bleue* of Bollach (1899), etc.

A project appeared again in the Near East, in olden time, of an artificial language to be employed as an international one. This one was named Sehlerai (Σελερών) and was published in the Greek language—at least the old undated booklet which we have before our eyes and introduce. It was published once, under the pseudonym Τγρανσάρ (Tgransar), which means, according to the language, 'intellectual movement'.

What distinguishes this old artificial language is that it can be written in three different ways: from above to below, from left to right, and from right to left. Before becoming acquainted with its strange alphabet, we consider it good to present the literal translation from Greek of the preface by the inventor. It will be evident therefrom, that 'There is nothing new under the sun,' and that the same principles that inspired our Master of blessed memory [i.e., Ludwik Zamenhof, who died four years earlier, in 1917] to invent Esperanto likewise impelled Tgransar to create Sehlerai. [Tgransar's preface from *Ans Hailanzar* follows, in Esperanto and Greek.]

The second and final installment of Stamatiadis' contribution in the next issue of *Bizantio*, October 31, 1921, presents in Esperanto and Greek the consonants, vowels, diacritics (all named, which is not done in the French booklet of 1864), the reading lesson (all of one sentence, the ditty cited above), and the numbers, in Esperanto and Greek. Here is an annotated translation of Tgransar's booklet, his ABC or *Ans hailanzar*, from the French. I have not put in the various invented characters, for which the reader is referred to the appended facsimile of the text. Where they are supposed to appear, I signify the space with hooked quotation marks, thus: < >.

Tgransar, *Ans Hailanzar*, or, an explanation of the rules of the alphabet of Seh-lerai. A work Smyrna, 1864.

Preface. It is a most natural tendency the world over to observe objects of curiosity and in particular to satisfy the sense of sight. That is taken for granted.

I now place before the eyes of the public a new object for observation, the product of a fantasy that is not fantasized—that is, the lovely form and basic model, the means of pronouncing the words of a new language called thus: Sehlerai, that is, a Universal Language, composed and enriched not as other languages are, by some taking from others, but original, entirely pure, from a single unsullied idea, or, to put it better, without imitation but invented through the faculties of the spirit and the imagination in direct relationship with the Natural Law, put in order in this language. For it would be absurd and unseemly to make a universal project such as this compatible with a particular, non-universal language.

It is already known that the most detestable calamity has sundered human hearts to espouse diverse preferences. There are nationalities in the world, and, by consequence, their languages and dialects. These are: the Chinese language and its relatives; the Chaldaean, and its; the Egyptian, and its; the Teutonic, and its; and

finally, the Illyrian, and its.³⁰ Of all these remarkably original tongues, the Chinese is the most lively in sound; the Chaldaean, crude; the Egyptian, majestic; the Teutonic, elegant; and the Illyrian, energetic. It follows that there are many languages, with their innumerable dialects, of which French has a charming and very touching quality, while English tickles, and is in our day the most profitable. This being the case, perhaps only an imbecile would venture upon the error of such a new linguistic form: in effect one might say, What purpose is served by such superfluous rubbish? Bah! It would have to end there, were it my purpose to add a new nation to the existing ones; and a new language, to the other tongues. Heaven forbid! To undertake any project, however excellent, that is detrimental to reason, is but a perversion of the same. Indeed, it would be the work of a hare-brained individual, for a good project is one that is forever and is advantageous.

Whatever the case may be, if it seems to those attached to our real world, a world that is morally topsy-turvy, that the creation of a universal language is bizarre, unnecessary, and, on the whole, a lot of garbage, I would recommend it to the various quotidian observers of such theatrical spectacles that likewise find an obstacle to acceptance of this offering of my modest invention that I present, most humbly, to the learned public, not as an exacerbation— a new national and linguistic divide— but to the contrary, as a possibly complete harmonization and means of connection.

At the outset I would wish to offer to public knowledge this *Alphabetar* (*Alpha-Gnomonic*), or Alphabet, of the language in question, in order to make study as easy as possible for the elementary students of SEHLERAI, who will be obliged always and in every way to remember with acknowledgment and gratitude, not me but the wisdom of the ineffable and supreme Providence.

Borrowed characters suitable for the pronunciation of the words of Sehlerai: h, in Latin, Italian, and French, for < > Y: Armenian for < > Z, z: Armenian for < > J: French for < > G: Latin, Italian, and French for < > B: for < > G: Latin and Italian for < > C: for < > D: for < > U: French for < > Armenian *shu* and French short e for < >. The rest are as in French.

Instruction in the *Alpha-Gnomonic* of the Universal Language. The basic characters of Sehlerai. Sehlerai (the Universal Language) is composed of nineteen syllabiforms. These characters are called syllabiforms because they are in effect syllables by reason of the value of their assumed vowel a, which can be deleted by means of a perpendicular stroke, thus < >, called *šekənāll*. This makes them equivalent to the letters of already known languages.³¹

In order to ensure from the start the most exact possible pronunciation of these forms, one lists them individually, with the pronunciation of each in French and Armenian, noting to either side the characters of the two ancient languages Hebrew and Arabo-Persian, as follows:³²

³⁰ By Chaldaean the author means "Semitic"; by Teutonic, "Germanic"; and by Illyrian, "Slavic."

³¹ T'nikar here borrows the scheme of Devanagari for Sanskrit, in which each letter is pronounced with a short a following unless a short diagonal stroke, the *śrīma*, is written at the lower right-hand corner of the character.

³² The list of letters commences on page 10 of the text, with the character in the center, the Hebrew equivalent to the left and the Arabic to the right, with the name of the letter in French above and Armenian below. I transcribe the Armenian in accordance with the Hübschmann-Meillet system; so the reader

Chapter One. Function of syllabiforms.

No. 1. Handizer (syllable of *hʾaʾ*), the first consonant, with its assumed vowel *a*, has three sounds: 1. In its own basic form, simply formed, it is equivalent to the character *h* in Latin, Italian, etc. 2. When it has a point on top of its upper hook it takes the value of Hebrew *h*, Arabic *kh*, Greek *χ*, and Armenian *x*. 3. When it has a circle in the same position it renders an *éye* [perhaps a misprint for *éye*, "chiming"?] sound, or one like the breath of birds or their likes, which one can note and produce with the characters of other known languages.

No. 2. Iandizer (syllable of *ia*). This has a single pronunciation, identical to Hebrew *y*, Arabic *y*, and Armenian *e* [i.e., *ye*, with on-glide].

No. 3. Landizer (syllable of *la*). It takes the place of the three following sounds: In its simple, basic form it is equivalent to Latin, French, and Italian *l*, Hebrew *l*, Arabic *l*, and Armenian *l*. When it is marked with an accent like a circumflex, thus < >, or sometimes by two points, thus < >, at the ends of words, this signifies gemination, or at the end a doubling vibration of the same character, performed by touching the tongue to the palate and sliding it at once, as in English.

No. 4. Mandizer (syllable of *ma*). The shape of one sound only, equivalent to the *m* of French, Italian, etc., Arabic *m* and Armenian *m*.

No. 5. Sandizer (syllable of *sa*), the basic radical of five sounds: 1. Written simply, it is equivalent to the *s* of Latin, French, etc., Arabic *s*, and Armenian *s*. [2.] Marked by a sinuous line like the Greek perispomene at the middle and bottom, thus < >, it becomes equivalent to Greek *θ* and French *th*. 3. Surmounted by a

should keep in mind that in T'nikar's Western Armenian the voiced stops are unvoiced and vice-versa, the diphthong *ea* is pronounced /ya/, etc.

³³ There is of course the Persian and Ottoman Turkish *z*: the Arabic *r* with three dots above it; it is noted and printed in the discussion of syllabiform no. 8, so its absence seems to be one of a number of errors for which one can but commiserate with the harried typesetter!

semicircle thus < >, it produces the sound of French *z*, or the radical *s* *nakkōni* (?) in a *Sehlerāi* word. 4. Surmounted by a hook touched by a point at the right edge, thus < >, it is pronounced like French or Italian *xā* and Greek *ξ*, while if deprived by a *šerkōdāl* of its *a*-vowel, thus < >, it becomes equivalent to Greek *ξ* and French *x*. 5. When it is surmounted by the miniature syllabiform < > of no. 9, thus < >, it is pronounced like Russian *uz*, Italian *scia*, and Armenian *əḥ'ia*.

No. 6. *Zandizer* (syllable of *zā*), written as a simple radical. But written with a point below, thus < >, it has the value of Armenian *c* [in the Hübschmann-Meillet system in *W. Arm.*, *dz*], and does not differ from the following base syllable

No. 7. *Dzandizer* (syllable of *dza*). Finally, touched by another point below, thus < >, it renders the stronger sound of *zā*: Hebrew *z* or Armenian *j* [Hübschmann-Meillet; in *W. Arm.*, *z*].

No. 8. *Jandizer* (syllable of *ja*). The pronunciation of this form is identical to French *j*, Armenian *ž*, and Persian *ž*.

No. 9. *Chandizer* (syllable of *ča*). This has only one sound, of the same pronunciation as Arabic *č* and Armenian *ž*.

No. 10. *Gandizer* (syllable of *ga*). In simple form as a radical it is pronounced like *gā*, or Arabic *g*, or Persian *g*. If there is a point touching the top, thus < >, it becomes the equivalent of French and Italian *k*, Arabic *k*, and Armenian *k'*.

No. 11. *Fandizer* (syllable of *fa*). This form has only one sound, equivalent to French *f*, Arabic *f*, and Armenian *f*.

No. 12. *Vandizer* (syllable of *wa*). This form has only one sound, and is pronounced like French and Italian *v*; Hebrew *v*; Arabic *v*; and Armenian *v*.

No. 13. *Bandizer* (syllable of *bā*), a form with two sounds. The basic one, without a point, is equivalent to French *b*, Arabic *b*, and Armenian *p* [pron. *b* in *W. Arm.*]. The other, touched by a point on the right edge and above its circular figure, thus < >, or else to the left side, thus < >, is equivalent in value to French *p*, Persian *p*, and Armenian *b* [pron. *p* in *W. Arm.*].

No. 14. *Nandizer* (syllable of *nā*): the form has only one sound, equivalent to French *n*, Arabic *n*, and Armenian *n*.

No. 15. *Giandizer* (syllable of *giā*): the form has only one sound, equivalent to Latin and Italian *g*, Arabic *j*, and Armenian *č* [pron. *j* in *W. Arm.*]; French *g* has a corresponding character.

No. 16. *Ciandizer* (syllable of *ciā*). The form has only one sound, corresponding to Latin and Italian *c*, Persian *č*, and Armenian *j* [pron. *č* in *W. Arm.*]; French *c* has a corresponding character.

No. 17. *Dandizer* (syllable of *dā*), the base form, with four sounds: 1. Written simply, it is equivalent to French and Italian *d*. 2. Pointed in the middle above, thus < >, it has the sound of French and Italian *t*, Arabic *t*, and Armenian *t'*. 3. Surmounted by a semicircle, thus < >, it becomes equivalent to Greek *θ* [i.e., Modern Gk. *th*]. 4. Finally, < > surmounted by the same semicircle renders the sound of Greek *θ* and French *th*. But one must take care not to confuse the form with the perispomene of no. 5, < >, with this character of the same value, keeping in mind that the latter, always in the middle, interiorly, has an entirely particular function characteristic of abstract nouns in *Sehlerāi*.

No. 18. *Randizer* (syllable of *rā*) is a base form with two sounds. Written simply it is equivalent to French and Italian *r*, Arabic *r*, Hebrew *r*, and Armenian *r*.

Reinforced by a point, thus < >, it renders the sound of Greek 'ρ or Armenian 'r [i.e., a trilled r], almost equivalent to the value of French, Latin, and Italian *br*.

(No.) 19. Ghandizer (syllable of *gha*), a base form with two sounds. Written simply, it is of the same pronunciation understood by French *gh*, Greek γ, Arabic *gh*, or Armenian / [pron. *gh*]; and being marked thus, by a point [not shown], it produces a guttural sound cruder and more forceful than either Arabic *gh* or Armenian /, while < > pointed by no. 10 introduces a more mitigated sound, between a strong [Arm.] *x* and the natural [Ar.] *kh* and [Arm.] *x*, equivalent to the χ of Greek. And that suffices for the entire function of the consonants of the universal language.

Second chapter. Vocalization, or the movement of the syllabiforms in Sehlerai. The first grade of pupils studying and memorizing the forms and function of the 19 syllabiforms of Sehlerai, following their precise image and punctual delineation, are to progress directly to the study of their vowels, this being absolutely necessary in order to execute the act of reading.

Now, the vowels in question most current for the pronunciation of the words of this universal language are 12 in number, beginning with < >. An *a* is assumed for every syllabiform, as I have already mentioned earlier; and when it is marked within with the figure of a Greek or Latin comma, thus < >, it renders the sound of Hebrew 'אָ and Arabic 'اَ, while the rest is as follows [the Latin transcription is followed by the Arm., which I italicize]:

No. 2. < > *e* *é*

No. 3. < > *i* *î*

No. 4. < > *o* *ô*

No. 5. < > *eu* *ëu*

No. 6. < > short *e* *ə*

No. 7. < > *ou* *û*

No. 8. < > *u* *ü*

No. 9. < > *iou* *ïo*

No. 10. < > *iu* *iü* [Arm. *iü* represents the diphthong *yü*]

No. 11. < > *ieou* *ïéu*

No. 12. < > *ieu* *ïéu*

Note: It is evident and perfectly clear to all grammarians that the five vowels *a*, *e*, *i*, *o*, and *u* are simple ones, the rest being compounds, or diphthongs. The two last and most complicated are < >, *ieou*, < > *ieou*— *ïéu*, *ïéü*— whose use in Sehlerai is most rare and perhaps serves when necessary to pronounce certain Chinese words and the like.

Now, those beginning the study of Sehlerai, after having strictly imprinted upon their imagination the preceding consonantal forms, as well as their vowels delineated above, must now apply themselves to combining them together and making syllables of them, carefully following the combinations below:

< > *he* *hê*

< > *hi* *hî*

< > *ho* *hô*

< > *héu* *hëu*

< > *he* *hə*

< > *hou* *hü*

<> hu hūw
 <> hīou hūw
 <> hūa hūw
 <> hīeou hūw
 <> hīeu hūw

Then one must practice sufficiently before syllabifying, with each separate consonant with its vowels on the same model, which is done by changing only the successive consonants: that is, in the place of *hū*, one puts an *īa*, then *ūa*, and so forth— which I think it superfluous to repeat here to my ingenious pupil. Still, if he wishes to practice only with the formal representation of their aspects, and one by one, he can see them in my Prototype paradigm in Greek, where all 19 consonants are arranged and set in motion, explicitly.³⁴

Note: The vowels ought to be proportional to their syllabiforms as much as possible, so students at the outset are to arrange them between two evenly spaced lines, the adornment being thus lovelier. And this is a most necessary exercise, whereby you behold them at every instant, and at every point, to ravish them as bees do flowers, in order to produce the most exquisite sweetness of this universal language.

Third chapter. The diacritic signs of Sehlerai.³⁵ The comma is an inverted triangle, thus

< >, when pointed in this way < >, it marks the division of a phrase. The full stop to end a sentence is a round mark and appears thus, < >. Accent is a line inclined slightly to the right, thus < >, and must always be written under the syllable to be accented. The question mark is a perpendicular stroke capped above by a semicircle, thus < >, which is written at the end and sometimes under the *serkendil*s of words that bear the sense of a question.³⁶ The exclamation point is likewise a perpendicular stroke with a hook just to one side, thus < >, or sometimes inclined thus [not shown], when its hook is placed upon the accent of an interjection. Note: The doubling of syllabiforms (a variety of the Arabic *talafuz*)³⁷ is

³⁴ This would clearly be the earlier pamphlet to which Stamatiadis had access. The table would have resembled somewhat the scheme of Ethiopic, in which each consonant is altered in shape slightly by the vowel added to it.

³⁵ The text from which Stamatiadis worked gives the Sehlerai names of the signs of punctuation, which he renders in Esperanto (and Greek): *komo* [comma], *raniedil*; *punkto* [period, full stop], *periendil*; *malakuta akcento* [accent grave], *prondil*; *demanda punkto* [question mark], *aisendil*; *eckria punkto* [exclamation point], *fran-safrandil*; *signo pro la koincido de la radikaj elementoj* [sign for the coming together of radicals, i.e., gemination], *sefrkendil*; *signo por korekti la malbonsonecon* [sign for the correction of cacophony], *ferurindil* (Tg[h]ransar 1921, part 2, p. 100). In the original Sehlerai each name would have ended with a double *i*; cf. the spelling of *serkendil* in the 1864 text, above.

³⁶ Here T'nsar adopts the usage of Armenian, whose question mark is a diacritical sign placed above the stressed syllable of the questioning word in a phrase, rather than at the end of the sentence as in English.

³⁷ This is the common Arabic-in-Persian term that T'nsar would have known from either Persian or Ottoman Turkish, grammarians of Arabic themselves preferring to call the symbol *sedda*, literally "strengthening," a sign of gemination.

done with two points separated by a *šerkerāšū*, and is called a *šerkerāšū*, thus < >. Finally, to soften and assimilate two dissonant consonants found at the end of a word and the beginning of another, one uses the sign < >, called *šerkerāšū* (see the rest in the Grammar).³⁸

Reading lesson. < >.

Accent.

hrošm chāš īram, bes lerāi
vom chāšz illē sam
lerāi ioun sem mimserāi
vam chāšz illē som;

[in Armenian transliteration]

Hron šay, eirou, pēs širay sōm
šēšzū lē sam:
Lerāy eirōm, mimšeray sōm
šēšzūllē sōm.

Meaning.

One language on all the earth,
A plethora of sciences is worth more
Than various languages in great number
Which scarcely contain any knowledge.

Nota bene. Seh-lerāi may be written in three ways: right to left, left to right, and in vertical columns like Chinese. Even the existential law itself is written together in all three fashions (see it in its place).³⁹

Fourth chapter. The numbers, or, characters for noting the numbers in Seh-lerāi. Aside from its alphabetic characters, Seh-lerāi is also the possessor of its own arithmetical signs to mark numbers, following the forms below:

< > 1 aik *ayk*⁴
< > 2 fir *fir*
< > 3 chia *šia*
< > 4 hun *šōw*
< > 5 ghir *kir*

³⁸ *Feruriundill* seems to follow the practice of consonantal *sandhi* in Sanskrit grammar and orthography. In the writing of the classical Indian language one does not separate words in writing a phrase, and an unvoiced stop at the end of one word is harmonized to a voiced stop at the beginning of the next, for instance, by being written as its voiced equivalent (t becomes d; k goes to g; p changes to b; etc.). Whaddaya mean? The same thing happens in actual English speech; but since we separate words in writing the phonetic process is not represented on the page, except when reproducing colloquial north-eastern American ("What do you mean?").

³⁹ This would presumably refer to some recapitulation of Rousseau's *loi naturelle* in the credo of a universal religion intended to accompany Sehlerai, the international language.

- <>6 ūks ūk's

- <>10,000,000 jeronikari jerom kom žerōmk'arīžerōmk'ōm

Note: These arithmetical characters, as one can see, are formed in an ordered system, of which the basis is a point, augmented successively. It is written from left to write and with a composite system. This is done intentionally to abbreviate the writing of the characters and to abridge them even when one is computing mentally. Still, if one wants to express them also according to the methods of arithmetic, it will go much better that way for beginning students. As to an alternative function for these characters, note well that the same numerical symbols up to seven render also the notes of the [musical] scale, when one writes them in their entirety at a slant and uses for the sharps the division of a *sekeradill*.

And for the concise instruction in Seh-lerai, that suffices.

The End.

Advertisement. The studious pupil, after having studied assiduously my little course of primary instruction in Seh-lerai is then to have the grammar, after its dictionary, which are already complete and ready to be printed, at the service of the public, with sole thanks for the assistance of divine Providence.

Table of Contents of this work, the *Alpha-gnomonic*.

32. Advertisement.

And that, to the best of my knowledge, is all that is known or can be known, on present evidence, about Seh-lerai, though I should be happy to be discover the lost Grammar and Dictionary. What can we extract from it? *Seh-lerai* means "universal language"; and from the rhymed reading passage it is plain *lerai* means "language," with the base *ler-* and *-ai* most likely a suffix; cf. *žirai* "ten" alone but *žir-* "ten" in compounds. The name *Tghransar* means "moved by mind"; and the title *Ans hallanzar* means "Alpha-gnomonic." The first syllabiforms are H, Y, and L; accounting for *hall-*, "ABC"; that leaves the suffixes *-sar* and *-zar* meaning, most likely, "mind" and "gnomic"; and *ay-zer-* "wisdom" (in *Ayzeratand*; *tand-* pronounced, of course, *dant-* then meaning "temple," with the final *-t* perhaps the marker of an abstract noun and the root word then possibly inspired by Pers. *dān*, "container," from which is Arm. *-aran*?) with the initial sibilant modified by verbal *sandhi*; and to this same root having to do with thought or order one might add *-zer*, probably "form," with a different vowel gradation, in *X-anti-+zer*, "syllabiform of X". (Could the ending *-antfi* be participial, and thus from Indo-European?) The base *tigr-* would then mean "move"; and *ans*, "law." The *-en* and *-an(t)* would thus be nominal suffixes in compounds (in numbers, *-an-* means "times"). So we can analyze *šerkendill*, the *virāma* stroke that cuts away the *-a* following each syllabiform consonant, as *šerk-* "cut," *-en* suffix, and *dill* "line," following which we can derive the bases *ram-* "comma," *peri-* "stop," *pron-* "accent," *aiš-* "question," *fran-šafr-* "exclamation" with related *šefir-k-* "geminatation" (with the shared root *šafr-* meaning something like "intensify"), and *feriuri-* "harmony" (perhaps sharing a root with *fr-an*?). The bases *peri-* and *pron-* sound like they have Indo-European prepositions as their precursors. But when one deals with an avowedly *a priori* language, and one for which so little evidence exists besides, such impressions may be mere mirages. Returning to the reading sample in verse, *seh-* would be "universal"; and *šaiž-ille*, "sciences." Supposing a use of vowel gradation as above, *sam/sem/som* might mean "plethora, many, hardly any"; whilst rhyming

vom/vam could be the connective terms of the comparative "more... than." *Bes* would be "one only, sole" (for *aik* is ordinal "one", cf. Sanskrit *eka*-, Persian *yek*); and *iun*, "various". The phrase *hrum šai iram* could be "on all earth" in that order, with *rum/ram* a pair with the root sense "surface" perhaps. All roads, a Greek or Armenian might say, lead to Hrum (for a rough breathing must precede the initial R of the name of the Eternal City where the itinerant Bedros briefly sojourned)... The numbers give us *-mun*-, "and, plus" and *-om*, the marker of a hundred. Most of these decipherments are of necessity hypothetical and could quite easily be wrong.

Bedros Tghransar, whom I like to imagine, not as "moved by mind" but as an immovable Tigransar, a lonely mountaintop (Arm. *sar*) with the proud name of the Armenian king of the first century B.C., Tigran II the Great (and, *inter alia*, the invented *nom de plume* encodes his outer-world surname, *T-n-g-r*, so for all we know there is a three-way word-play hidden here), shows a marked predilection in his *a priori* language (the only word I have found related to anything is that for "one") for monosyllabic roots—a nod, perhaps, to Chinese, for which he seems to have a particular regard and consciousness. Though his alphabet provides amply for Arm. *ts*, *dz*, *ch*, and *ch'*, these are strikingly absent from what little Seh-lerai we have; and the value of the vowels follows French, not Armenian: the vowel spelled as *-u* is frequent but to be pronounced as in French, transliterated into Arm. as *-iu*- /yu/, not *-ow*- /u/. It would have been a cumbersome language, no matter whether written left to right, right to left, or from the top down. Yet one hopes the poems, grammar, and glossary may yet be discovered.

At the beginning of Kevork H. Gulian's *Elementary Modern Armenian Grammar* (printed by the Vienna Mekhitarists) is this quotation from Lord Byron (who stayed at San Lazzaro with the Venice Mekhitarists in 1816, when Bedros was a seminarian at Vienna): "I have begun, and am proceeding, in the study of the Armenian language ... It is a rich language, and would amply repay any one the trouble of learning it." Few take that trouble; and although the dervish-like Bedros evidently had frequent callers at his temple of wisdom with its cabinet of curiosities and somber tomb, we are told that they contented themselves with French translations of his verses, so one feels fewer still learned Seh-lerai. But this fleeting acquaintance with a nineteenth-century eccentric, intellectual, and idealist does afford an intriguing glimpse into the rich diversity of late Ottoman Armenian life and letters, and that is ample repayment. As though the quest were anything but an exciting adventure in any case.

AN ELEGY FOR SMYRNA.

Smyrna, Izmir, Zmiwînîa—the second largest city of the Ottoman Empire—was the major trade emporium of the Aegean and a cosmopolis of culture, enlightenment, and sophistication. It stood in the heart of ancient Hellenic Ionia: Homer was born, according to traditional legend, on the nearby island of Chios. Armenians are known from the thirteenth century and their numbers grew following the collapse of the Cilician kingdom in the fourteenth century and the chaotic conditions in the Anatolian heartland during the Jalali rebellions of the seventeenth century. The Church of St. Stephen was built in the sixteenth century and restored in 1853. The first Armenian printing press of Smyrna opened in the eighteenth century (T'ëodik gives the precise year 1676, however, as the date when the *Tparan S. Êymiacni ew S. Sargisi Zôravarî*, "Press of Holy Echmiadzin and St. Sergius the *Strategos*" opened its doors); and in the nineteenth century the city was a center of Western missionary operations, with Mekhitarist schools (the first one founded in 1847), Protestant presses, etc.

The majority of Smyrniotes were Greeks; the Armenian quarter, Haynoc', was next door to the Jewish one. In 1841 the American traveler Valentine Mott wrote of the Armenians of Smyrna, which he calls the Paris of the Levant, "These people have their own quarter, and are numerous and wealthy, of fine persons and great dignity of deportment, and wear a costume of their own, of which the huge cap is the most striking." He then describes vividly a church service in Haynoc'.⁴⁰ In 1861, the city had about 124,000 inhabitants.

Armenians were prominent in commerce, with trading connections at Trieste, Vienna, and Manchester, but never numbered more than 15,000 or so. It was a city of the Armenian cultural renaissance: major figures include the author Grigor Č'ilingirian; the philologist Galust Kostandian; the lexicographer Mesrop Nuparian; the poet Rubën Vorberian; and many others. Major institutions included the Mesropian School and Surb Lusaworič' (Holy Illuminator) National Hospital. A number of benevolent societies functioned, including the Siwneac', Aragacuneac', and Haykazean. The prominent Freemason Matt'ëos Mamurian shines perhaps most brightly in the constellation of Smyrna Armenian intellectuals of the day: he translated Voltaire, Dumas, Goethe, Lessing, Stendhal, and Tolstoy, wrote the social critique *English Letters* mentioned earlier in this study, and championed an Armenian woman writer, Srbuhi Tiwsap, in her struggle to make a career in *belles lettres*.⁴¹ The publishing

⁴⁰ Cited in Ghazarian 1997, p. 308.

⁴¹ See Hovannisian 2012; for pictures of the Haynoc', S. Step'anos, and the Mesropian school, see Kévorkian and Paboudjian 1992, pp. 160–172. Köker 2005, p. 133 pl. 278, provides an illustration of the church of the Capuchin

house of the Dedeyan Brothers, mentioned above, was founded in 1851: among its publications was a book on Joseph Balsamo, or Cagliostro, the enigmatic Freemason of legend and conspiracy theory.⁴² "(Smyrna's) prosperity," wrote the American traveler John Price Durbin in 1845, "is to be attributed chiefly to the capital of the Armenians, and the commerce of the Greeks and Franks, that is, to the Christian population," of a country, he adds darkly and presciently, "in which, though they be subjects, they are not citizens." (This could be the epitaph of millions of Mercurians of the twentieth century.)⁴³

The nineteenth century was a time of hope for progress in the Ottoman Empire punctuated by Imperial decrees that expanded, or purported to expand, the liberties and protection of individuals and national-religious minorities: in 1839, the edict *Hatt-i Şerif* guaranteed life and property; the *Hatt-i Humâyûn* of 1856 expanded these reforms and liberties; the Tanzimat period of 1839-1876 saw the formation of commercial and criminal courts and the establishment of a unified customs tariff; and at the mid-point of the nineteenth century Victor Hugo prophesied that in a hundred years Constantinople would be the capital of the world.

In 1863, one year before the printing of T'nkār's manual of *Seh-lerai*, Armenians celebrated the promulgation of a national Constitution (*Sahmanadrut'iwn*) codifying their communal rights. The poet Bedros Tourian in a prose poem evoked that Constitution as a mighty ship sailing into a shining future. But that future might better be seen as the Titanic. The massacres of Armenians in 1894-1896 were the whiff of arctic cold; and the 1908 revolution of the Young Turks was the ghostly ice mountain looming suddenly in the dark, with its murderous submarine mass cutting a gash in the hull in the black waters below the surface where lights glittered and the band played.

The metaphorical ship carrying the passengers celebrating their century of progress, with all its bright hopes, went down in the night; and all historical Armenia was destroyed. Smyrna itself was spared, for a time. The horrors of the Genocide of 1915 bypassed the city: it was too profitable a place, nearly all *gâvur* "infidel" Smyrna was Christian, and there were too many foreign eyes trained on the city. After the Great War the Greeks invaded Ionia, pursuing the phantom of Venizelos' *megalē idea*, but what had begun as a triumphal sweep towards Angora ended as a rout. In early September 1922, a few days short of one year after

priests at Buca (Boudja), the village where Petros T'nkār lived. It is a pleasant white building in a park of cypresses.

⁴² See T'ëodik 1912, pp. 133-138, on the history of Armenian publishing in the city.

⁴³ Cited by Ghazarian 1997, p. 330.

the publication in *Bizantio* of Stamatiadis' "*La lingvo Sehlerai*," Turkish forces under the command of Mustafa Kemal (the hero of the defense of Gallipoli, soon to be dubbed Atatürk, "Father of the Turks") conquered Smyrna. His men forced its Christian inhabitants to the quayside and systematically burned the great city behind milling, teeming crowds, in such a conflagration as history had not known hitherto. Thousands were massacred in the town and on death marches into the interior. Turkish troops waded into the helpless multitude at the shore, severing limbs and casting victims into the sea, even as the crews of Allied warships moored in the harbor watched impassively, sometimes turning up their gramophones to drown out the clamor. Fleets of Greek fishing boats rescued some of the survivors, and ancient Athens saw the construction of a new kind of city, a refugee quarter, Nea Smyrnē. But in a matter of days in September 1922, the largest and most secular, cosmopolitan city of the eastern Mediterranean, the embodiment of the proposition that Muslim, Jew, and Christian might live and prosper together, had ceased to exist.

The grim story is well known: the American consul and eyewitness George Horton published his scathing *Blight of Asia* four years after the disaster, and his white hot fury still burns through the pages. Marjorie Housepian, professor of English and dean of Barnard College, published in 1971 her meticulously researched *Smyrna 1922*, whose archival sources and testimonies recount the horror with a different, cool precision that makes the blood of the reader, too, run cold. Most recently, Giles Milton, *Paradise Lost: Smyrna, 1922*, fills out the record with a lyrical memoir of the opulent life that preceded the sudden and utter destruction: the villas, parties, cinemas, cafes, theaters, sports clubs, daily papers in a score of languages.

Marge Housepian-Dobkin is the mother of one of my oldest friends and Columbia classmate, Stephen Andrew Johnson. Though I first met her when I was an undergraduate, I first read her book a few years later as a graduate student at Oxford, opening it early one fall evening at the Wadham College library and meaning to read for an hour, only to finish the last pages in the chill morning after a sleepless night. The murder of an entire modern city and the world's indifference on a scale just as grand became a precedent for both vast crimes and moral oblivion. As I write these lines one of the oldest cities on earth, magnificent Aleppo, with its vibrant Armenian community dating back to the Middle Ages, is being destroyed and not a single world power is helping its population. One recalls the Nazi massacre at Babi Yar and then the silence captured in Yevtushenko's poem: Над Бабьим Яром памятников нет:/ Крутой обрыв, как грубое надгробье. "There is no monument over Babi Yar:/ A steep

ridge, like a crude grave piled." There is a monument on the outskirts of Kiev now; but memory in the rebuilt Izmir belongs to the victors, who were mass murderers like the Nazis, not liberators like the Red Army. And each calendar day of the deadly month Eylûl/September of conquest and destruction has become the gloating name of an Izmir street, or a square. The officially defined, homogeneous *türkîlik*, "Turkishness," of the present has no room for the cosmopolitan babel of Greek, Armenian, Ladino, French, Italian ... or *Seh-lerai*. Yet there are cracks widening in the wall of silence, and Turkish scholars and humanists themselves (for there is no such thing as a criminal nation) are, more and more loudly, speaking the truth of history. Some day when the entire record is written, perhaps this small study will be a footnote. I tried in a book to render the homage he felt his due to young Bedros of Constantinople, the poet; and here I have attempted the rescue of another Bedros from the same city, then of Smyrna, of Boudja and Aspra Khomata, of Paradise lost, from oblivion.

The square stone edifice of the man alone on the hill, the Ayzeratand, is gone, too, though here memory is not entirely dead. For the place at Buca where the Temple of Wisdom once stood is still called Tingirtepe, "T'nkər Hill"; and upon its summit is now a statue (see Plate 4), frozen in its whirling dance, of the thirteenth century Persian poet and mystic Mevlana Celaleddin Rumi (Maulānā Jalāl al-Dīn Rūmī), whose tomb at Konya in western Turkey is a major pilgrimage site. Rumi had espoused a mystical strand of Islam, Sufism, that addresses God through love, as Christians are taught to do. Rumi taught his dervish disciples through poems, parables, meditation, chanting, melodies, and the dance; and he shunned the divisions of language and creed as illusion and wickedness. Some of the mourners who joined his funeral procession, indeed, were Armenians. There, there, in that undiscovered country from whose bourne no traveler returns, there where there are no dogmatic religions, divisive ideologies, or determined nationalisms, there Mevlana and Bedros, and Bedros, walk together.

Here on earth, happily, the Tingir clan survives, and here my evidence is photographic: Dr. Raffi Tingir describes the family pictures from Istanbul he has kindly provided, here Plates 5-7 (letter of 27 November 2012): "The first picture has my father Nurhan with his brother Levon (with glasses) and their father Mihran, *circa* 1952. The second picture depicts three generations of Tingirs: my younger brother Zohrab and I, with our father Nurhan and paternal grandfather Mihran Tingir, *circa* 1959. The third picture shows the Armenian-American author William Saroyan visiting with my maternal grandparents, father, brother

and me, circa 1962. Bedros Tingir is three, four, and five generations apart, respectively, from Mihran, Nurhan and Raffi."

May Bedros' family prosper. To him, to them, and to the gentle dreamers and inventors of a peaceful future, I dedicate this work.

- 1 hat inconvenient because four habits such men and such rules or doctrines as I have alluded to are to be
 2 found and it is believed that everyone who
 3 has strove to do [his] task as a D and F will seek and find [them]
 4 [This] gre light of is ever open in a proper [Lodge] to that end that we should be reminded of the
 5 at Masonry ng and practising the excellent precepts it contains and if we as far as we can
 6 scrupulously
 7 examine both the character of [those] who gave the precepts and the influences
 8 [they] have had upon society
 9 and still have upon it if we examine the great ends and views of the doctrines here written and thus become
 10 acquainted with [this] volume we shall
 11 xperience that [this] volume is an inestimable treasure and should be viewed as such by all good men it is in
 12 fact the book that
 13 contains the rules of life pointing out to man [his] whole duty
 14 [this] volume is of great antiquity and splendid monuments of the ancients have decayed and nations who
 15 peopled the countries where [these] things were written
 16 have vanished or are scattered over the face of the earth [their] former
 17 yet the book survives and the enemies of order
 18 and opposen
 19 obduracy and snowed with jets
 20 with philos
 21 effort of [their] genius to bring [this]
 22 volume into contempt
 23 taken in vain it stands deservedly
 24 considering the character of the
 25 writers for [this] vol
 26 ing [the] doctrines contained in [this] volume and observing [their] union with truth and [their] beneficent
 27 influence upon society and upon individuals thinking upon the great antiquity of [these]
 28 writings and the many revolutions which [they] have survived and [their] complete victory over the efforts of
 29 enemies [there] with continually increasing in the estimation of the world at large
 30 of the friends of good order and of truth [there] it can be said even if [there] were no other reasons for so
 31 saying that [this] volume is not to be neglected but
 32 on the contrary that it ought to be examined and should be made the subject of our attention and study and see
 33 how correct is its philosophy how interesting the history how
 34 sublime and beautiful the poetry how acceptable the doctrines of religion and morality contained in [this]
 35 volume it is calculated in every point of view to engage our attention and if attended to the truths it con
 36 tains make man better wiser and happier and the benefits arising from [these] sacred truths are not limited to
 37 the period of human life [they] point not forward to the grave as the boundary of our
 38 xistence as the place where men shall cease to be no the thick gloom of death is dissipated by a divine truth a ray
 39 of sacred light makes visible to the eye of faith a state
 40 of xistence beyond the grave a state of xistence at the approach of which all must fear for it lasts to all eternity
 41 for it is a state of rewards and punishments
 42 for it is dependant upon divine mercy for no man can claim a place [there] happy indeed is [the] man who has
 43 strove to subdue [his] passions and to lay aside
 44 [his] prejudices and thus is fitted for the task of the F and studying and executing
 45 the designs and rules
 46 of the M by contemplating upon the image of the pillar of beauty [he] may have
 47 observed [his] own weakness
 48 and [his] own inability to make [his] work according to the pattern given [him] by
 49 the M if [he] is sensible of his own incapacity and imperfections

Ĉu Esperantistaj Kongresoj
estas vere utilaj?

ΤΑ ΕΣΠΕΡΑΝΤΙΚΑ ΣΥΝΕΔΡΙΑ
ΕΙΝΕ ΑΛΗΘΟΣ ΟΦΕΛΙΜΑ:

Internacia Esperantista Kongreso en
Ceboslovaĵo, antaŭkongreso en Ge-
nosujo, postkongreso en Hungarujo,
Naciaj Kongresoj en Anglujo, Francujo,
Usono, Hispanujo, Bulgario kaj en aliaj
landoj... Ĉu pluviga la Esperantista
kongreso!

Ĉu tiaj Kongresoj estas vere utilaj? Ĉu ili estas necesaj por la progresigo de nia afero? Pri tio la opinioj estas diversaj. Kiom da kapoj t'om da opinioj.

Laŭ la propono de nia neforgebla Majstro D-ro Zamenhof pri organizo de niaj Kongresoj, «Internacia Esperantista Kongreso estas antaŭ ĉio festo de la Esperantismo kaj propaganda manifestado, ĝi havas krom tiu la gravan rolon diskuti kaj decidi pri ĉiuj demandoj, kiuj koncerne ĝian tutan aferon kaj ne povas esti solvataj de apartaj personoj, societoj aŭ institucioj Esperantistaj».

En la nunaj malfacilaj cirkonstancoj, kiujn kaŭzas la lasta grando milito, ne estas facile al ĉiu Esperantisto, eĉ la plej fervora, ĉeesti internaciajn esperantistajn kongresojn kaj konsekvence partopreni sin belan ĉiujaran feston; tamen se niaj laŭ la favoroj de la sorto, kiuj nuntempe sukcesas partopreni Esperantistajn kongresojn, estas trege malmultaj proproble al la nombro de la nun ekzistantaj geesperantistoj: en la tuta mondo, la rezulto estas ĉiam bona precipe je la vidpunkto de propagando manifestado.

Krom tio se vi estas el la partoprenantoj, la vojaĝo de la deira punkto ĝis la

BIZANTIO

LA LINGVO SEHLERAI

De longa tempo oni ne ĉesis fari proponojn por alpenso de artefaritaj lingvoj, kiel interlingvaj. Je tia celo oni ĉiujfoje proponis diversajn projektojn, kiuj apartenas al tri apartaj sistemoj.

Lan la unua, la elpensintoj proponis lingvojn originale verkitaĵoj de la senkonidero de la jam ekzistantaj lingvoj, kiel tiuj de Descartes (1639), Leibniz (1716), la Solresol de Sudre (1817), la Spokil de Dro Nikolai (1900) kaj aliaj.

Lan la dua oni proponis en konsideron la jam ekzistantajn lingvojn kaj precipe la Esperantojn; tiuj estis ĉi de Faiguet (1904), de Schuyler (1899), de Zamenhof (Esperanto publikigita en la jaro 1887 kaj aliaj). Fine lan la tria sistemo, la projektoj bazigitaj sur ambaŭ pri, (poj de la antaŭaj projektoj); tiuj estis la lingvoj de Von Grimm (1800), la Volapük de l'pastro Schlever (1880), la lingvo blua de Bollach (1890) kaj aliaj.

Lan la tria sistemo, aperis en malnova tempo ankoraŭ en Proksima Oriento projekto de artefarita lingvo por ke ĝi estu uzata kiel interlingva. Ĝi estis nomita Sehlerei (Σηλερεια) kaj publikigita en Greka lingvo, almenaŭ la malnova libreta nedatumiĝis, kion ni havas antaŭ la okuloj tion montras al ni. Ĝi estis publikigita unue sub la pseŭdonimo de Typeros (Τυπερος), kio signifas lan ĉi tiu lingvo; intelekta nova.

Tio kio distingas tiun malnovan artefaritan lingvon estas, ke oni petas ĝin skribi per tri diversaj manieroj: de supre malsupren, de maldekstre dekstren kaj de dekstre maldekstren. Antaŭ ol konigi ĝian strangan alfabeton, ni juĝas bone doni la laŭvortan tradukon el la Greka lingvo de la protogo de l'elpensinto. Per tio evidentiĝos, ke enenio nova sub la suno, kaj ke la samaj principoj, kiuj inspiris nian konstantoran Majstron al la elpenso de Esperanto, instigis ankaŭ Typeron al la elpenso de Sehlerei.

«Estas laŭnature, ke la homo estu kaptita de l' deziro leri ĉiun novon en la mondo, kaj tio okazas ĝenerale inter ĉiuj homoj. Per plenumi tiu deziron oni uzas krom aliaj sentoj precipe tiu de la vivo.

Mi do prezentas al vi kuriozan sed tute ne strangan, belan vidon: la skribsignojn, kiuj rilatas la novan lingvon el kio literoj konsistas ĝin nove elpensitaj vortoj. Per ĉi tiu mi komencas la elementojn el kiuj estas esprimita la uni-

versala lingvo Sehlerei, kromita kaj ordigita ne kiel la aliaj lingvoj, unaj de la aliaj, sed el la trezoroj de la pura kaj ĉasta patrino, de la natura kaj senmalica famazio. Alivorte, ĝi ne estas imitado sed absoluta elpensado per la forto de la pensolapablo havanta kiel precigas la naturon legon pri ĝeneraleco kaj absoluteco. Estas ankoraŭ nedecoj kaj nekongruencoj imiti tion, kio estas komuna.

Evidente estas, ke la destino senkompate malkunigis la korojn de la homoj. En la Universitato ekzistas multaj nacioj sekve ankaŭ multaj lingvoj, kies unaj estas simplaj kaj aliaj multaj.

La Greka lingvo kaj ĝiaj najbaraj lingvoj, la Ĉina kaj ĝiaj najbaraj, la Egipcia kaj ĝiaj najbaraj, la Tebana kaj ĝiaj najbaraj, fine la Iliria kaj ĝiaj najbaraj lingvoj.

La specialaj ujoj, kiuj karakterizas ĉi tiujn lingvojn estas la skuto de la Ĉina, la skuto de la Greka, la grandiozo de la Egipcia, la plebeo de la Tebana kaj la aktiveco de la Iliria.

Ni do havas multajn lingvojn kaj sen nombrajn dialektojn. El ĉi tiuj la Greka estas ĉarma je la esprimo kaj multe parolata. La angla fariĝas multproleta. Sekve senprudentulo povas sin malkondiĝi: Pri kiu nova kaj malkondita malpaco ankoraŭ estas la afero? Bible pri la senutila senveneco!

Kaj li estas prava se mia celo estis plimultiigi ankoraŭ per unu nacio la jam ekzistantajn naciojn kaj aldoni lingvon al la nun ekzistantaj. Ke Dio min gardu!

Sekve estas senprudente mallogi iam ajn celon se ĝi estas bonintenco, la homo estas ĉiam evidenta, ĝi estas ĉiam laŭga kaj utila.

Tamen se multaj personoj imagis, ke ĉi tiu nova lingvo estas neutila en la mondo kaj ili ĝin konsideras, kiel strangaĵon kaj senvencaĵon, mi mia turnas al tiuj, kiuj multenombraj aldonas pri tiuj celoj, kio ĉi tiu malhelpus akcepti ankaŭ ĉi tiun modestan elpensadon, kion mi humile prezentas al la poliko, ne kiel malkunigas ideon kaj plimultiigon de naciaj lingvoj, sed kontraste, kiel ilian kunordigon kaj kombinaĵon kiel eble plej perfektan.

La nova Amikantara Sehlerei alfabeto, mi dediĉas per kompento al la komencantoj de la Sehlerei. Ĝiuj bildoj nedubeble dodon kaj profundan dankon ekskluzive al la respondeculo por la homo savaco de la proklamado de la Plejaltulo.

**Kelkaj vortoj pri propaĝando
DE ESPERANTO**

**ΛΕΞΕΙΣ ΤΙΝΕΣ ΠΕΡΙ ΠΡΟΠΑΓΑΝΔΑΣ
ΤΗΣ ΕΣΠΕΡΑΝΤΟ**

Tiuj kiuj havis la okazon propaĝandi en grandaj mezuraj Esperanton kaj sur tiuj, estas en stato scii pri la ĉiutagaj renkontataj malfacilaĵoj. Ĉi tiuj se efektive ne estas ĉie tute samaj, tamen ili mal multe diferencas rilate al la landoj kaj regionoj en kiuj agas ĉiu propaĝandisto.

Ordinare por provi Esperantistigi personon oni atentis antaŭ ĉio pri ĝiaj profesiaj kondiĉoj, pri la aĝo kaj sekso de la persono al kiu tiucele oni volas utili. Certe la helpaj argumentoj ne mankas por tio ĉi al la apertuloj, sed la ĉefa punkto, kiel ni spertis, estas, ke la varbata persono ne nur rekonu la veran senton de tiel alta idealo, kiel Esperantismo, sed precipe ke ĝi persistu en la bona opinio, kiun ĝi formis pri nia afero serione daŭrigante sin okupi estonte pri Esperanto.

Nuntempe pro la malfacilaj vivkondiĉoj ĉiutage, la argumentoj, kiuj rilatas Esperantismos, kiel ankaŭ ĉiun similan idealon ne estas bedaŭrinde destinitaj havi por multaj personoj grandan sukceson. Certe oni ofte renkontas elektindajn homojn, kiuj kan evidenta ĝojo kaj al nekutita plezuro akceptas sincere viajn homantajn ideojn, sed ĝenerale apenaŭ vi kontencas preparoli pri Esperanto, via Esperantismo profitante de punkto je la fino de via frazo, intermetas jene: «Kaj kio estas, mi petas, la praktika celo de tia afero?» La si, nio estas donite. Detrigi paroli pri idealo kaj idealismo en tiuj cirkonstancoj estas tute vana. Do laŭgi direkton, kaj kvazaŭ vi estas

Tutmonde elstaras ĉiutage ĉiuj elstaras pri la malmultaj personoj kiuj estas «*Byzantion*» kaj «*Byzance*». Tio estas la nomoj de du landoj kiuj estas en la Balkanoj, kaj kiuj estas en la Balkanoj. Tio estas la nomoj de du landoj kiuj estas en la Balkanoj, kaj kiuj estas en la Balkanoj. Tio estas la nomoj de du landoj kiuj estas en la Balkanoj, kaj kiuj estas en la Balkanoj.

6 cand, 7 dand, 8 jand, 9 fand, 10 gand,
11 fand, 12 vand, 13 band, 14 nand, 15
jand, 16 fand, 17 dand, 18 pand, 19 ghand
[y Greks].

SANGUO DE LA LITERO!

El ĉi tiuj radikaj literoj, 9 estas submetataj al elparola ŝanĝo per aldono de punktoj aŭ de diversaj aliaj signoj. Se ekzemple al la unua p [hand], ĉiu estas elementa litero, oni aldonas punkton je la ekstremo de ĝia radlinio, tiel p, tiam ĝi estas elparolata kiel birdflavo (').

INTERPUNKCIO KAJ EKONOMIGILOJ. *Dispersiindaj signaloj.*

Kono, wōpōn, riniedil. — Pundio, wātoŋ ū onyā, perianjil. — Malokato akcento, bogela, prondil. — Denzanda punkto, kumqumamōn ayawōn, zikendil. — Ekhis punkto, dūmawomōn, fūn — ūafandil. — Signo pōr la kōncido de la radikaj elementoj, ayawōn ūā ūā ayawomōn ūā ūā ayawōn onyōwōn. — ūafirandil. — Signo por korekti la malbonsoncon, ayawōn ūāfawōn ūāwōn ayawōn. a, ūafirandil.

Raniedil Periendil Proendil

Appendix 2: Tghransar, *Ans Hañanzar ou Alpha-Gnomonic de Seh-lerai*: ouvrage, Smyrne, 1864

Avant propos.

C'est un penchant très naturel à tout le monde de vouloir observer les objets de curiosité et de satisfaire particulièrement la faculté de la vue. Ceci posé,

je viens mettre sous les yeux du public un nouvel objet d'observation, produit d'une fantaisie non fantasmagorique, c'est la joie forme et le modèle fondamental, instrument de prononciation des mots d'une Langue nouvelle, ainsi appelée *Seh-le-rai*, c'est-à-dire, Langue Universelle, composée et enrichie non comme les autres langues les unes des autres, mais originale, tout à fait pure, d'une idée sans tâche, et à mieux dire non imitée, mais inventée par la faculté d'esprit et d'imagination absolue relativement à la Loi Naturelle composée dans cette Langue. Car il était absurde et inconvenant de combattre un tel projet universel avec une Langue non universelle ou particulière.

On connaît déjà que la faculté la plus détestable a divisé les cœurs des humains à plusieurs particularités. Dans l'univers il y a des Nationalités, conséquemment leurs Langues et Dialectes. Ce sont, la Langue Chinoise et ses cognatiques, la Langue Chaldéenne et ses cognatiques, la Langue Egyptienne et ses cognatiques, la Langue Téthienne et ses cognatiques, enfin l'Indique et ses cognatiques.

De toutes ces Langues remarquables raciales, la Chinoise est de voix vive, la Chaldéenne de voix rude, l'Egyptienne majestueuse, la Téthienne élégante, et l'Indique énergique. Il s'ensuit qu'il y a plusieurs Langues et leurs Dialectes innombrables, dont la Française, d'un accent charmant, très touchant, et l'Anglais, d'un accent enthousiasmant et le plus profitable en nos jours. Et dans ce cas, peut-être qu'un habile métisera une telle formation nouvelle linguistique, ou di-

— 8 —

ra-t-on en effet, à quoi sert un tel rébat superflu? Bah! il fallait aller finir de cette sorte, si ma n'intention était d'ajouter un nouvelle Nations sur les Nations, et nouvelle Langue, sur les autres Langues. Dieu m'en garde! Mépriser donc un projet quelconque excellent, au détriment de la raison n'est que d'un gâle-raison, plus, d'un étour di, car un bon projet, est bon pour tous jours et éternels.

Quoiqu' il en soit, s' il parait, aux attachés à notre monde actuel mortellement boudé, la formation d'une Langue universelle, comme extraordinaire, supérieure, et un objet plutôt de rebut, je dirai aux divers observateurs journalistes de tant d'objets purement illégitimes, qui empêchent d'agréer pareillement cet offre de mon humble invention que je présente très humblement au public savant, non comme accroissement d'une nouvelle division national-linguistique, mais au contraire comme leur accord et liaison possiblement complets.

Au commencement, j'ai voulu bien accorder succédant à notoriété populaire le présent *Anshaianzar* (*Alphab. Gnomozantier*), ou l'Alphabet de la langue en question, pour rendre plus facile à l'étude des élèves commençants de SEH-LERAI, qui serait obligés longtemps et en général de se souvenir d'un bien reçu et de gratitude non envers moi mais envers la sagesse de ineffable et suprême Providence.

TOMMASINI.

INSTRUCTION

ALPHA—GNOMONOMIC^d
de la Langue universelle.

Les Caractères basculés de Schlerai.

Schlerai (Langue universelle) est composée de dix neuf syllabifformes. Ces caractères sont appelés syllabifformes, Car ils sont des syllabes en effet pour la valeur de leurs voyelles sous-entendues *a*, qui étant coupées par une ligne perpendiculaire, ainsi (1) appelée *chêrëndill* se rendent égaux aux lettres des autres langues déjà connues.

Pour assurer d'abord la prononciation possiblement exacte de ces formes, on a voulu les indiquer à une et une, en les prononçant par des caractères étrangers Français et Arméniens, et les remarquer de côté et d'autre par les caractères de deux anciennes Langues Hébraïque et Arabe-Per-sanne comme suit:

§ CHAPITRE PREMIER.

Fonction des Syllabiformes.

N. 10. *H a n d i z e r* (Syllabe de H), la première consonne, sous-entend une voyelle a, est de trois voix. 10. En sa propre forme basale simplement déliné, égalise le caractère h, lat. it. etc.

20. Lorsqu'on la voit touchée par un point à l'extrémité de son crochet supérieur, ainsi elle prend la valeur de *Hebr.* 2 ar. 7 *Sr* 4 ar. 30. avant à l'extrémité de même crochet un rond, alors elle prend une voix égale, ou comme le soufflement des ciseaux et des semblables, ce qu'on peut marquer et prouver par les caractères des autres langues connus.

N. 20. *I a n d i z e r* (Syllabe de ia] elle est d'une seule prononciation égale à 3 *Hebr.* 5 ar. — 4 ar.

N. 30. *L a n d i z e r* (Syl. de La). Elle remplace les trois voyelles. Dans sa forme basale simplement de liné est égale à 1, lat. it. etc., 1) *Hebr.* 1 ar. 4 ar.

Lorsqu'on la voit marquée par un accent comme circonflexe ainsi a (quelque fois par deux points ainsi : dans la distinction des mots, se détermine à une double prononciation, ou plutôt à une vibration de double son de même caractère qu'on opère en touchant l'organe de langue au palais et la glissant de suite comme en anglais.

12

N. 40. Mandizer (Syl. de Ma) Forme d'une seule voix est égale à celle de M. tr. li. etc. (S) ar. s arm.

N. 50. Sandizer (Syl. de Sa) forme radicale de cinq voix.

10. Simplement délinée est égale à celle de S. Lat. tr. etc. (S) ar. (u) arm. Étant marquée par une ligne exigée comme de persienne grec au milieu, à l'extrémité inférieure ainsi t̄t̄ devient égale au 9 gr. - lb fr. 30. Surmontée par un demi oiseau ainsi t̄t̄, elle réelle son de z fr. ou d'un S radical radonei dans un mot de Sehe-ral. 40. Surmontée d'un crochet touché par un point à l'extrémité envers la droite ainsi t̄t̄ on prononce xa fr. li. etc. et t̄t̄ grec tant qu'il est privé de sa voyelle a, par un Cherhendili, ainsi (t̄t̄) devient égal au t̄t̄ grec y fr. etc. 50. Lorsqu'on la voit surmontée d'un petite syllabiforme de (t̄) de N. 9. ainsi t̄t̄ on prononce comme (u) Russe z̄ia J soit li, z̄ia arm.

N. 60. Zander (Syl. de Za) forme radicale simplement délinée. Puis étant marquée par un point à l'extrémité inférieure, ainsi t̄t̄ a la valeur de z - Bra arm. et ne diffère de Syl-abi carme basale qu'en ce que N. 7 Dandiger (Syl. de Dz) Enfin touchée par un point de plus à l'extrémité inférieure ainsi t̄t̄ elle rend le son le plus fort d, (t̄s) Hebr. ou z arm.

13

No. 8 Jandizer (Syl. de ja) La valeur de cette forme est tout égale à j. tr. s arm. etc. (S) Perm.

No. 9. Chandizer (Syl. de Cha) Forme d'une seule voix. Elle est d'une paren. P. comme-à-tout avec le (S) ar. et z arm.

10. Gander (Syl. de Ga) Forme radicale, se lit si pi mon ou ang? in ou po- nuce co n. egr. ou S ar. et S ar. kef. ne e Per-ann. P. egr. "ant" tournée par un point à l'extrémité supérieure ainsi t̄t̄ devient égale à k fr. li. e. c. (S) ar. s arm.

N. 11. Fandizer (Syl. de Fa) Forme d'une seule voix, égale à f. tr. (S) ar. s arm.

N. 120 V. a n d i z o (Syl. de va) Forme d'une seule voix, on prononce co avec v fr. li. etc. (S) ar. s arm.

Hebr. (S) ar. s arm.

130. B a n d i z e r (Syl. de Ba) Forme de valeur de d avec b. Une basale, et comme écrite sans point, égale à b. fr. (S) ar. s arm. L'autre touchée par un point à l'extrémité droite et supérieure de sa ligne cyclique, ainsi v au à côté gauche ainsi v̄ égale à la valeur de p fr. tr. Pers. . . s arm.

N. 140. Nandizer (Syl. de Na) Forme d'une seule voix égale à celle de n fr. (S) ar. s arm.

N. 150. Rāndizer (Syl. de Ra) Forme d'une seule voix égale à celle de r lat. li. etc.

(S) ar. s arm. et à caractère convenant. N. 160. Cia n d i z o r (Syl. de Cia) Forme d'une seule voix, égale à celle de c lat. fr. (S) ar. s arm. et à caractère convenant.

N. 17. Dautizer (Syl. de Da) forme basée de valeur de quatre voix. 1^o simplement, étendue est égale à l. fr. it. etc. 2^o pointue : au m. l'au, au sa. persennement; ainsi, *la, it*, est de valeur 1 it. it, etc. (C) ar. Fern. 3, surmonie par un d'ambroie, ainsi *it* devient égale à *g ec A*. Enfin *y*, surmontée par 1^o même d'écrite rend la voix de *g grec th f*. Mais il faut première grille de ne confondre la forme de *yo* persennement de N. 5 avec celle de la même valeur, attendu que ce (*yo*) persennement toujours au malien in écriturement est d'un emploi tout à fait particulier, et caractérise de noms abstraits de S. h. l. rai.

N. 18. R a n d i z e r [Syl. de Ra] forme basée de valeur de double voix. Deliaev, sim. l'eman; est égale ar. fr. it. etc. > Hebr. *frar* a pu s'étant renforcée par un point au d' *g*, elle rend la voix de *g grec*, ou *g-arm*, presque égale à la valeur de *br it lat it*.

N. 19. G h a n d i z e r (Syl. de Gha) forme basée de valeur de double voix. Deliaev, simplement, est de même prononciation consonne fr. gh. y. fr. (*g*) ar. *h* arm, et étant marquée par un point, ainsi produit la prononciation gorgiale plus rude et plus forcée que *g ar h* arm, tandis que (1^o) pointe de N. 10, introduit une voix plus molle entre le *g* forcé et les *g*, *h*, naitrels égale à la voix de *X grec*.

Et pour la fonction totale des Consonnes de la Langue universelle dans *suffi*.

CHAPITRE SECONDE.

Vocalisation, ou mouvement des

Syllabifermes de *Seherat*.

La première classe de *Seherat*, en étudiant et en connaissant les formes et la fonction de 19 Syllabifermes de *Seherat* suivant leurs images exactes et linéairement ponctuels, il passeront immédiatement à l'étude de leurs voyelles, comme absolument nécessaire pour en exécuter la lecture.

Or, les voyelles en question les plus usitées pour prononcer les mots de cette Langue universelle, son de Nombre 12 qui comprennent d'v

a sousentendue dans chacune des syllabifermes comme j'ai déjà mentionné en avant, et que étant marquée en dedans par un signe de figure d'une comma grecque, ainsi *o* elle rend le son d'(*o*)

Hebr. ע ar. puis le reste sout
comme suit.

22

No 2.	י	e	é
No 3.	י	i	é
No 4.	ל	o	o
No 5.	ל	eu	é
No 6.	ל	e muette	é
No 7.	י	eu	é
No 8.	י	u	é
No 9.	י	hou	é
No 10.	י	in	é
No 11.	י	ion	é
No 12.	י	ieu	é

Remarque. Il s'est évité de bien clair à tous
les grammaticiens que, cinq de ses voyelles: a, o,
i, u, sont des voyelles simples, et le reste,
composées, ou des diphthongues. Et il y en a
deux autres les plus composées: (eu)
i é ou y i é u. (é) i é u. (é) i é u. (é) i é u.
Seul l'arabique très rare, et l'usage en
prenant ces quelques mots l'arabique et l'arabique.

23

Or, les commençans qui étudient la seh-lerai,
après avoir étudié l'arabique dans leur imagi-
nation les lettres des consonnes arabiques, ain-
si, que leurs voyelles: et après délinées à part il faut
se mettr à les combiner ensemble et les s'habili-
ter avec soin suivant les concours ci dessous.

he	é
hi	é
ho	é
hén	é
he	é
hou	é
ha	é
hion	é
hieu	é
hion	é
hieu	é

24

En suite, il faut s'exercer et tirer avant l'action de syllabier en séparant chacune des consonnes par leurs voyelles sur le même Modèle, que l'on fait, en y changeant seulement les consonnes successivement, c'est à dire: à la place de Ha, j'emplacant ia, après la, et ainsi avant, ce que je pense comme superflu répéter ici au mes Elèves ingénieux, cependant, si l'on veut s'exercer même sur la représentation formelle de l'un s traite et une à une, il peut les voir dans mon exemplaire Prototypus en grec, ou sont arrangés et mises en mouvement les toutes les 49 Consonnes, en experts.

Remarque. Les voyelles doivent être proportionnées relativement à leurs Syllabiformes autant que possible, que les Elèves au commencement les arrangeront entre les deux lignes également tracées, dont la parure est fort jolie, et exercez très nécessaire, l'audis que vous les voyez à la fin à chaque instant et à chaque pas bannir comme les abeilles sur les fleurs pour prodire la couteur très exquise de cette Langue universelle.

CHAPITRE TROISIEME.

Des signes diacritique des voyelles

Comme, Est un Triangle marqué à la gauche ainsi (∇). Etant posé à un (∇) marque la moitié d'une Phrase.

Poin, par conclure une Phrase, est une marque ronde et vide ainsi (O)

A ce n'est, est un trait, peu incliné envers la droite ainsi (\swarrow) et qui doit être marqué toujours sous la syllabe que l'on veut acrochier.

De même, Est un trait peu pendi que l'on revêt supérieurement d'un demi cercle ainsi (\frown) que l'on place à la fin et quelque fois sous le Chorkendils des mots qui portent le sens d'interrogation.

De l'admission, C'est pareillement un trait perpendiculaire ayant un crochet d'un seul côté ainsi (\lrcorner), et quelque fois incliné ainsi lors qu'on voit son crochet posé sur l'accent des mots interjectionaux.

Remarque.

Redoublement des Syllabiformes [un espèce de Tchidid arabe] on fait par deux points entrecoupés par un cherkendil, qu'on appelle alors cherkendil ainsi ($\text{ }^{\circ}\text{ }^{\circ}$)

21
 Enfin pour valoir et accorder la di-sonance
 de deux consonnes qui renouent, l'une en ex-
 tremité d'un mot, et l'autre au commencement d'un
 autre mot, qui lui succède immédiatement, on em-
 ploie un tel signe (—) appelé *lifonari* -
ouedill.
 (Le reste voir dans la grammaire.)

Leçon

Leçon de Lecture.

 Qui renferment guère des
 sciences.

N.B.²⁸

Seh-leräi écrit en trois manières de tracer les lettres de droite à gauche, de gauche à droite et à colonne, à l'usage des Chinois. La loi existentielle même, est écrite communément dans toutes ces trois façons d'écrire. (Voir dans sa place).

CHAPITRE. 4. LES CHIFFRES.

ou

Caractères pour marquer les Nombres en seh-leräi.

Seh-leräi outre ses caractères Alphabétiques est maître aussi de propres chiffres Arithmétiques pour en marquer les nombres, suivant les formes ci-dessous:

1	Àik	ou f
2	Fir	phr
3	Chia	zhw
4	Lun	l'ob
5	ghir	ghr
6	lis	lew
7	likis	ghew
8	Chiks	zhew
9	Loks	l'ew
10	jirai	ghew
11	àik mun jir	ou ghew l'ew
12	fir mun jir	ghew l'ew
13	chi r' mun jir	ghew l'ew

R e m a r q u e. Ces caractères Arithmétiques comme on vult, sont formés en système algèbre, dont la base est en point, augmentée avec système. On écrit de gauche à droite et à système mixte. C'est pour rendre un plus court l'extension des chiffres marqués en espère, et les abréger lorsqu'on opère mentalement. Cependant si l'on veut les exprimer aussi d'après la Méthode d'arithmétique, va tant mieux et plus sur pour les commençants.

Quant à fonction ultérieure de ces Chiffres. Notabene, que les mêmes caractères numériques jusqu'à 7 rendent aussi les Notes de Gamme, lorsqu'on écrit obliquement les notes et par une Table de Cherbonni les dièses.

Et pour l'Instruction concise de Schétau c'est assez.

F I N.

Avertissement.

L'Élève étudieux après avoir suivi avec assiduité ce petit cours de l'Instruction primordiale d'Alpha-gnomonic et arrivé au point de lire et écrire franchement en Schétau il en suit conséquemment la grammaire, après son Dictionnaire, qui son déjà préparée et disposée à être imprimée et à saluer le public, à la merci, sans de l'assistance de la divine Providence,

The χ^2 statistic is used to test the hypothesis that the observed frequencies are equal to the expected frequencies. The χ^2 statistic is calculated as follows:

$$\chi^2 = \sum \frac{(O - E)^2}{E}$$

where O is the observed frequency and E is the expected frequency. The χ^2 statistic is then compared to a critical value from the χ^2 distribution table to determine the significance of the results.

For the purpose of this study, the χ^2 statistic was used to test the hypothesis that the observed frequencies are equal to the expected frequencies. The results of the χ^2 test are presented in Table 1.

Iranians, Armenians, Prince Igor, and the Lightness of Pushkin

James R. Russell
Harvard University

Abstract

The Animal Style that characterizes Scythian art came into Armenia and Russia, where it is attested in bas-reliefs on churches; and the epic Song of Igor's Campaign, a unique verbal reflection of it, inspired Pushkin and his descendants in their poetic visions.

Keywords

Scythian Art, Animal Style, Pushkin, Ruslan and Lyudmila, Kitovras, Song of Igor's Campaign, Aght'amar, Cathedral of St. Demetrius at Vladimir, Mandel'stam, Ch'arents', Kusikov

For Professor Nina Georgievna Garsoian on her goth birthday

PREFACE

In the early 1920s the Russian archaeologist and art historian Mikhail Rostovtzeff coined the term “Animal Style” to describe a type of ancient art, one which endured into the Middle Ages, in which wild and tame animals are the predominant image. Animals are, of course, prominent in every kind of art; but the most striking feature of the Animal Style in particular is its capture of the kinetic aspect—of creatures flying, running, fighting. The animals are in motion. It is a style marked by lightness, often also by what seems to be a kind of playfulness. The human and vegetable realms of nature are also depicted in this style of art, which was diffused east and west in a band across the northern tier of Eurasia from a home somewhere in the steppes of Central Asia, probably among nomadic and semi-nomadic peoples, most of whom spoke a northern Iranian language, early in the first millennium before Christ. Men in art of the Animal Style are

not frozen as static portraits. They gallop on horseback to the hunt, or wrestle with each other, or do physical work. The reach of the Animal Style is paralleled in scope only by the later Greco-Roman art forms of the Classical and Roman Imperial ages or by the globalized fashions of the present day. Celts brought the style from their Eastern European homeland to the westernmost shores of Ireland, and we can see its reflection in mediaeval manuscripts like the Book of Kells and the Lindisfarne Gospels; while artifacts in the Animal Style are still being unearthed in western China. The inspiration art of this art of the “western barbarians” came to felt in the Middle Kingdom proper, as well.

Most objects produced in the Animal Style are small, and are functional and decorative pieces appropriate in their portable form to the needs of nomadic peoples: golden jewelry for personal adornment, silver vessels for household use, and bronze and golden items of horse tack and wagon equipment. A separate and vast category, not to be considered here, is that of body art: the tattoo. The Scythian horseman's idea of beauty was not a still life in a heavy gilt frame but the form of a strong and agile creature, imprinted on his body, whose motions undulated with the rippling of his own muscles. It is not surprising that there are parallels between these ancient tattoos, preserved by the permafrost in south Siberian burials, and the biker tattoos of today. And it is not surprising either that this dimension of the subject lies outside the ken and competence of most academic savants, who tend to be innocent of the rich and vibrant culture of the American motorcycle rider. But perhaps the greatest surviving artifact of the Animal Style in both its size and the sheer, rich abundance of its images, is a very massive and stationary object, indeed—the 10th-century Armenian Church of the Holy Cross on the island of Aht'amar, Lake Van, where we find the form endowed, though only partially, with a Christian didactic purpose. And from Armenia, in part, this style came to be employed also for the carvings in bas-relief on some Russian churches of the 12th century.

I propose that the Animal Style, whose endurance from antiquity into the Middle Ages is an established fact for the visual arts, enjoyed a perhaps unique literary expression as well, in the 12th-century Russian epic *Слово о полку Игореве*, “The Song of Igor's Campaign”. The poet Alexander Pushkin, who can fairly be considered the founder of modern Russian

literature, was able to break with the ponderous forms of the past by shaping a new mode of expression that critics from the beginning have noted specifically for its lightness. Pushkin was an avid, critical, and perceptive reader of the Igor Epic, the unique manuscript of which had belonged to a relative, and whose publication the year after the poet's birth was an epochal event for Russian letters. Pushkin's first major *poema*, *Ruslan and Lyudmila*, is steeped in material drawn as much from the Song as from other folkloric sources—and, of course, the bedtime stories of his famed nanny, Arina Rodionovna. I offer the not entirely audacious suggestion that the Animal Style in the Epic could have been an important element that helped in the shaping of Pushkin's ineluctable but crucial lightness and that of his literary heirs, notably Osip Mandelshtam.

1. THE ANIMAL STYLE

Death and time have not slowed them; gold and bronze have not stilled them. The sinuous felines, sinewy horses, and screaming eagles of the Scythian "Animal Style", that art of the great steppe-land that is north Iranian and south Russian, lope and gallop and soar in the viewer's imagination. Their supple limbs stretch as they run in endless herds across the plains (Pl. 1); their tensed muscles swirl and clench as they tumble in deadly combat (Pl. 2); and the men for whom the teeming animal world is life are in motion, too: they gallop to the hunt and wrestle with each other (Pl. 3) (Rostovtzeff 1929, Pls. XIV, XVI, XXIX). The Celts on the western edge of the plains embraced the Animal Style permanently and made it their own: so antic creatures whose like can be unearthed in Xinjiang disport themselves also in the dense and stylized foliage of mediaeval Irish manuscripts. There are echoes of the Animal Style—and perhaps of the Armenian *xač'k'ar* or Cross-stone as well, for Christian Armenians travelled to the distant hyperborean climes of Slavs and Celts alike—in the stone crosses of Ireland (Pl. 4) (Henry 1964).

But it is the Slavs, for whom the plains dotted by the grave-mounds called kurgans are home, who tenaciously claim primary kinship with the ancient nomads. We are *Skify*, Scythians, declared the 20th-century poet Alexander Blok of the denizens of the south Russian steppes of the 7th century B.C. We are Sarmatians, the Polish *sztachta*, or nobility, had boasted long before—for the escutcheons of the Sarmatians, forebears

from the 4th century B.C. of the Alans or Ossetes of the north Caucasus of today, looked uncannily like their own. These claims have foundation in historical and ethnographic actuality, though they were buttressed by romantic notions of hard-riding, hard-drinking, fighting men close to nature, with wild and poetic souls. Since the growth of nationalism in the 18th century European peoples have sought their own antique roots in local sources other than Biblical and Greco-Roman scripture and history. The Scythians were local. Herodotus in the fourth book of his *Histories* evokes their vivid way of life; and the Royal Scythians lived in Russia itself: the Greek historian helpfully provides their native name, *Paralatai*, a north Iranian form corresponding to the designation of the earliest heroes and kings of the Iranians in the Zoroastrian Avesta, *parađāta-*, and in the Persian epic *Šāh-nāma*, the *Book of Kings* of Firdausī, *pīšdād*. The term means, suitable, made or created first or foremost. The golden and silver treasures of the kurgans—the Scythian burial mounds—unearthed since the days of Peter the Great, with their wildly exuberant style, glitter in the treasury of the Hermitage in St. Petersburg and still take one's breath away.

What did they fashion? From Tolstaya Mogila, 4th century B.C., comes a golden pectoral of three horizontal bands: a pastoral scene of men and animals in the upper register; a floral design meandering across the middle; and wild animals—gryphons attacking horses—in the lower, third band. The vegetable images thus order the piece, dividing the tame from the feral, the human world from that, which lies beyond it. (Herodotus seems to have swallowed whole this schema in its mythical elaborations, with his Issedones and dragons guarding gold in the remotest north.) As we are to observe presently, the sculptors of the church at Alt'amar were likewise to employ vertical bands, notably the vine scroll, to divide worlds and themes. Fights between animals, often rendered in such a way as to have the leaping beast cover the falling one in a yin-yang-like circle, express both the violence of nature and its cyclical energy and change (Jacobson 1995: fig. 11). From Chertomlyk, at about the same time and of the same precious metal, there is a crown: three bands again, one floral and the other two depicting animals fighting (ibid.: fig. 32). From Kelermes, three centuries earlier, comes a golden overlay for a scabbard: some winged Mesopotamian genii, and then a descending line of fantastic

beasts holding bows in the manner of sagittarian centaurs, endowed with wings in the shape of fish (ibid.: fig. 103). There is a gold plaque to be affixed to clothing, with a running hare, too (ibid.: fig. 61). Remember this rabbit: he will show up again and again. There are some pieces that show men fighting, but they are few; and despite the ferocious reputation of the nomads, the very numerous petroglyphs of the Scythian and related cultures depict mostly wild animals and pastoral scenes, likewise with very few of battles and fights (ibid.: fig. 31). But we do find insteads scenes of wrestling, which is not merely ritualized fighting, but, I would suggest, an activity with overtones of the eroticism of the embrace and the delicacy of dance—the fight, that is, as lightness and play.

The impression one takes away from Scythian art is of the pleasure of movement, the beauty of the kinetic body. And if one recalls that this art was meant to be portable, often to adorn a rider and his mount, it is understandable that it celebrated the galloping horse, the swooping falcon, the hare or stag in full flight—*zvazeln etanc' ew zvargeln eġeruac'*, “the running of the deer and the bounding of the stags” in the elegy of the 2nd century B.C. of the dying king Artasēs I recalling the morning hunt in the month of Nawasard—the first month of the new year—in the *Letters* of Grigor Magistros. But it is not so much the wistfulness of an elegy I mean here to emphasize, to capture, as playfulness and lightness. A famous vignette of another hunt may serve to illustrate the attitude. When the forces of king Darius were arrayed against the Scythians, Herodotus reports, “a hare ran between the two sides, and every Scythian who saw it pursued the hare. As the Scythians were wildly excited and shouting, Darius asked the meaning of this tumult among his enemies. When he learned that they were pursuing a hare, he spoke with his usual confidants and said, ‘These people despise us utterly...’” (*Histories* 4.134). The Persian monarch conquered some Scythians anyway, and his triumphal relief at Behistun, the Place of the Gods, a mountain towering over the main road from Iran down to the lowlands of Mesopotamia, shows at the end of the line of a line of despondent captives of various nationalities, tied together at the neck, one Scythian, or Saka, distinct in his *tiyraxauda*, his tall conical hat. (Both the Iranian roots that form this word came into Armenian: for the first, meaning sharp, we have the famous regnal name *Tigran*; for the second, meaning tiara, we have the *xoyr*, a priestly vestment.) And a

seal-impression of the Achaemenian era found at Artasat, Armenia, shows a line of six captive Scythians in a careful imitation of the style of the Behistun relief (Santrot 1996: 222-223, pls. 210 a-b.). They were, there too, a known neighbor, or rival. (In peaceful times, it was Scythian tutors who taught the sons of Persian nobles how to ride.) But, given the choice between a battlefield set piece with the imperial Persians and a dash after a hare, the horsemen-hunters of the steppes did not hesitate; and in any case, the tactic of hit and run, of retreat and attack, was more effective for them. Kutuzov was to use it against another imperial invader in 1812, a fateful year we will have occasion again to recall. To the Scythians, one thinks hunting, fighting, and wrestling were equally games men play; and the first of the three meant a tasty dinner and a soft pelt. Let us let the hare run away for a bit. We can catch him later.

2. THE ANIMAL STYLE IN ARMENIA: ALT'AMAR

The church of the Holy Cross on Alt'amar island in Lake Van, Armenia, was built by the architect Manuel in A.D. 920 next to the palace of king Gagik Arcruni, which has not survived but which T'ovma Arcruni in his *History* of the noble Arcruni house describes as adorned with reliefs of warriors, wrestlers, lions and other wild beasts, and flocks of birds. "He also devised and depicted around the church", T'ovma continues, "companies of game animals and flocks of birds, also all varieties of wild beasts, boars and lions, bulls and bears facing one another, recalling the opposition of their natures, which greatly pleases wise men. He girded the church with a remarkable and detailed frieze, which represented a grapevine animated with figures of vintagers, with wild animals and reptiles, accurately rendering the characteristics of each species" (Der Nersessian 1965: 4). Presumably Manuel did not execute or even plan all the carvings himself, but had at his disposal a crew of skilled masons (whose individual marks one finds on Armenian buildings) working from sketched plans and employing also model books.¹ Their sources would have been mainly

¹ See, for example, Mekhitharist Convent of San Lazzaro, Venice, MS 1434, 15th cent., possibly from the Lake Van area, with floral and geometric designs, sacred portraits, hybrid and fantastic creatures, and schematic compositions with multiple figures; and another model book of the 16th cent. bound into the same MS with a wild man, a Chinese dragon, etc. (Scheller 1995: 400-412).

the earlier Armenian churches of the 7th century² whose sculpture they or other authors of model books observed and sketched; but most likely there were also sources in the folk arts of the country that are less well attested.³ To be precise, we find carved in low or high relief on the walls these animals: bears, boars, bulls, calves, camels, cows, deer, dogs, elephants, fawns, foxes, goats, hares, harts, hinds, horses, hounds, ibexes, lambs, leopards, lions, oxen, porcupines, rabbits, rams, sheep, stags, swine, and wolves. It is a fairly thorough passenger manifest of the Ark that rested in the mountains of Ararat long before but not far away.⁴

² At Ptñi, for instance, one finds hunting scenes, the possible depiction of Samson's combat with the lion, and possible portrayals of the martyrdoms of men of the noble Amātuni clan: these could have inspired analogous scenes at Alt'amar and the depiction of the Arcruni martyrs Sahak and Hamazasp, according to Maranci 2014: 283 ff. As to animals, Ptñi has a striking number of birds, which Maranci plausibly explains as representative of the souls of the deceased, citing numerous Armenian sources, both literary and artistic, for the image (p. 304 ff.). This latter feature, however, is not so prominent at Alt'amar, leading one to suppose that the memorial of the dead was not a principal concern—the edifice was erected, after all, at the cheerful dawn of a dynasty its founders doubtless hoped was to be long-lasting. I am greatly indebted to Prof. Christina Maranci for allowing me to read the manuscript of her forthcoming study of 7th-century Armenian churches.

³ One promising source of information on this very scantily attested but enduring folk tradition of iconic sculptural representation would be the figured tombstones of Armenian Arc'ax (Karabagh) and Nakhichevan (especially what monuments are left of the vast cemetery at Julfa, now destroyed by the Azerbaijani authorities in control of the region). These depict scenes of the deceased's earthly joys or perhaps their renewed enjoyment in the life to come, and have very archaic overtones: a horseman flourishes aloft the ancient Iranian ring of glory, musicians play, servants bring jugs of wine, and nobles feast (for a preliminary study, see Russell 2001a). From the early Byzantine period the Balkans were a refuge or exile for sundry heretics, many of whom were Armenian T'ondrakites and Paulicians; and the famous Bogomil tombstones in Bosnia depict scenes familiar from the Armenian types noted, such as hunting, jousting, the ring of glory, astral bodies, various animals, such as the bear and stag, etc. (see Bihaji-Marin/Benac n.d.). Soviet Armenian scholars, partly for ideological reasons, sought secular and pre-Christian elements in the mainly ecclesiastical art that has survived from the country's past (cf. Mnac'akanyan 1955; Gevorgyan 1978).

⁴ The viewers of the church and its vine scroll, whether learned or unlettered, would have known a variety of animal fables to enliven their appreciation of the bas-reliefs. One famous compilation is the *Atuēsagirk'* (*Book of the Fox*) by Vardan Aygekc'i, 13th century. An exquisite little edition, with modern Armenian translation by Aksel Bakunts and graphic design by Hakob K'ojoyan, was published at Erevan in 1935, on the eve of the purges that swept Bakunts, Charents, and many others away. One tale (Bakunc' 1935: 61-

The overall plan of the outer decoration of the church, which is itself cruciform in shape, is highly symbolic and is meant to illustrate or teach sacred history, both cosmic and Armenian Christian, to the priests and lay faithful who participated in ritual perambulations of the structure. (The frescoes that encircle the inner walls of the church, appropriately, teach a parallel history, but one that is esoteric, that is, for those alone who are literally and metaphorically initiated: the cycle of the mystery of the Life of Christ.) The eastern outer wall, where the sun rises, shows figures associated, correspondingly, with awakening and beginnings: Adam, the first man; John the Baptist, who heralded the coming of Christ; and St. Gregory the Illuminator, who baptised the Armenians. The south façade features the theme of martyrdom, both Armenian and pan-Christian; while the north, the realm of darkness, is the domain of conflict and accordingly depicts the three warrior saints Sergius, George, and Theodore vanquishing their monstrous or demonic adversaries. Facing the west, where at the fulfillment of earthly history the sun will rise at the end of days, are Gagik with Christ and the angels.

These sacred scenes, large in scale and generally rather static in composition, with the figures staring hieratically outwards in fixed postures, or captured in the frames of medallions, command the scene just above the viewer's eye level. In relief above them on the outer walls, in both solid bands and random profusion, we find the moving animals, some of them Iranian *Mischwesen*, or hybrid creatures of folklore and religious myth, such as the three-toed, canine, winged *simurgh* (the Armenian loan-word, *siramarg*, had by then come to mean a peacock, with demonic overtones; the *Simargl* was a member of the pre-Christian Kievan pantheon attested on the eve of the baptism of Prince Vladimir in

62), for instance, relates that a man came to market to buy an ass for a single *dahekan* but could not find one that cheap. The merchants, seeing he was a fool, sold him a watermelon, telling him it was the egg of a great Indian donkey, but he had better take care not to drop it lest it break and the donkey run away. On his way home he dropped it, it rolled down a hill into some bushes, and out ran a hare (*napastak*). The hapless man cried out to the creature to stop but it ran off. In Persian, *inter alia*, the word for a hare is *xargūš*, "donkey-eared", suggesting a subliminal connection satirized in the fable. The more learned congregants might have read the *Physiologus* as well: Davies 1991 relied largely upon this source in his exegesis of the sculpture.

988) whom a sculptor has chosen to represent the *višap jukn* (“dragon-fish”) of Jonah, and the *yuškaparik*, the siren with her dire and heretical song (Pls. 5, 6) (Russell 1993). The inner walls, as was noted, chronicle Christ’s life, the interior and sanctified mysteries. But the outside of the church, facing the elements, is the place to portray something of the wildness of the outdoors, the untamed and dangerous world that was named in Eden, rescued by the Ark, and under God’s dominion, but still outside the protective confines of the sacred edifice. And, just as one often finds with the Scythian pieces, there is a defining band of foliage: in the art of the steppes it was employed to separate the pastoral from the feral; while the densely populated vine scroll here encircles the entire building, a scene that combines the wildness of nature and everyday human life, going its way apart from and parallel to the stately scenes of sacred history that unfold below in their symbolic order. So as saints lead their exemplary lives, prophets preach, and other Biblical events of war and peace proceed, above them is animal and human life in its energetic, quotidian profusion. A bear is eating grapes, a lion is attacking a bull, and, as we might expect, men are wrestling (Pls. 7, 8). There is also mounted archer and next to him proceeds a hunt for a hare.⁵

It is the garden or wilderness that is not Eden, but is still under the dominion of its Creator, whose kingdom the edifice proclaims; and as if to make this explicit, high on the East façade is a medallion portrait of Adam with the words of Genesis 2.20 relating that he named all the animals (Pl. 9).⁶ Much of the decoration has no apparent Christian meaning at all,

⁵ Sirarpie Der Nersessian thought the bas-relief of the mounted hunter, whose face has Oriental features, was inserted centuries after the Mongol conquest to replace a missing or damaged stone. Professor Christina Maranci (verbal communication) disputes this assertion, finding scant evidence for such a repair. And one might observe that by the 10th century the incessant traffic of the Silk Road and the infusion of Sogdian elements into the art of Iranian Khorasan had made East Asian features familiar.

⁶ The four letters of his name in Armenian are divided, two to each side of the central bust. This could be for symmetry and economy of space; but the designer or sculptor might also have had in mind that in Greek the four letters of the name of our common ancestor are also the initial letters—most conveniently for a cruciform church whose decoration, as we have seen, takes fullest advantage of the symbolism of the four directions—of *A(natolē)*, *D(ysis)*, *A(rktos)*, and *M(esembria)*, that is, East, West, North, and South! (for more of the symbolism of quaternity in Christian Armenia, see Russell 1997).

though: lines of animals course under the conical dome and there are bas-reliefs of severed heads, singly or in rows. Triumphant Sasanian kings festooned the walls of the fire temple of Ādur Anāhīd at Staxr with the severed heads of defeated Roman foes; and in earlier ages the Scythians had adorned their reins with shrunken heads: so perhaps the reliefs at Alt'amar echo this grisly token of victory (Pl. 10). But overall the Animal Style has been baptised: the siren of beguiling song of antiquity, Armenian *yuškaparik*, has now become an embodiment of heresy; and the proud *sēnmurw* is Jonah's whale, the obedient servant of Divine plans (Pls. 11, 12). Alt'amar was unique for its time; and it astonished and impressed mediaeval Armenians just as much as it does us: the later builders of the Church of St. Thaddeus in Persarmenia emulated the vine scroll from Van, but were unable to grasp its essence: the florid, heavy relief even has a pair of wrestlers, but it is dense with curlicues and arabesques and bristles with armed conflict. It is decorative and static, rather than vital and kinetic. The architects and sculptors working under the direction Alexander T'amanyan who shaped the cool parks, sparkling fountains, and imposing arched edifices of Soviet Erevan employed the vine scroll motif more gracefully and successfully, on the façade of the building of the Council of Ministers of the Armenian SSR (Manasyan et al. 1972).

As for the Scythians to whom the Animal Style originally belonged, they were no strangers to Armenia, and some of them were even blood ancestors: one of the nation's forefathers, according to its Father of Histories Movsēs Xorenac'i, was Paroyr (i.e., Scythian Partatua, "Capable in Battle") *Skayordi*, "the Scythian's Son". A Titan is called *hskay*, "well-and-truly Scythian". Artašēs (whose deathbed elegy was cited earlier) lassoed on the river Kura the Alan/Osete epic heroine Sat'enik (the mythical progenetrix Satana of the heroes called the "manly men", the *Nartæ*), married her, and bore the royal Artaxiad children; and Armenian- and Ossetic-speaking populations till recently met at that spot, too. A northeastern province of the country was called Šakašēn, "Scythian's Home". Although Armenians recognize Hayk (the eponymous ancestor, cf. *hay* "Armenian") and Biblical Togarmah (Arm. T'orgom, an ancient Anatolian ethnic designation) as their forefathers, they style themselves also *Ask'anazean*, the progeny of Biblical Aškenaz, i.e., the Scythians. Thus the Animal Style endured for many centuries past the Classical age, found its way from gold

and bronze to stone, and made a home in Armenia, even as did the descendants of the Scythians themselves. The most powerful expression of the Animal Style is surely the program of bas-reliefs at Ałt'amar; and even if the style was *not* very successfully recaptured at St. Thaddeus, still, farther north it *was*. We travel two centuries into the future from the tenth, and into Kievan Rus'—Russia.

3. THE ANIMAL STYLE: FROM ARMENIA TO KIEVAN RUS'

Armenians played a powerful if sometimes shadowy role in early Russian culture. It can be argued that the legend and names of the three brothers who were the founders of Kiev derive from a strikingly similar Armenian foundation myth of the Tarawn region preserved in the *History* attributed to the mysterious Zenob of Glak. At least it is easier to state that case than to suggest, as Academician D. S. Likhachëv dutifully did, that the early chronicle *Повесть временных лет* inspired Zenob instead—through some castling the long way to evade the issue of chronology, including—if textual transmission played a role—the knotty problem of the invention of a script in time for this act of textual transmission from the unlettered Slavs to the long-literate disciples of Maštoc' to happen several centuries before the arrival in Moravia of Sts. Constantine-Cyril and Methodius, the inventors of a script for the Slavs (Russell 2005). Armenian painters worked in Kievan Rus' and at a church at Ryazan' of the early 12th century an identifiably Armenian Cross has been unearthed (Vernadsky/ Karpovich 1959: 259 ff.). The church of the legendary sunken city of Great Kitezh, whose bells can be heard only by the faithful, bears the name of St. Gregory of Armenia, but that edifice is in another world, removed from banal reality, and stands now deep beneath the waters of Svetloyar besides. The legend itself might have been inspired by that of the bells of sunken Arčēš, that Armenian Dunwich, that are said to be heard to ring when there are storms in lake Van (Russell 2007).

But let us consider instead, for evidence of Armeno-Russian artistic relations, a church that is also easier of access. In 1194, Prince Vsevolod III erected at Vladimir the Cathedral of St. Demetrius (Св. Дмитриевский собор); a similar church, dedicated to St. Sergius (Св. Сергиевский), was constructed around the same time at nearby Yur'ev-Pol'skii. Both are densely encrusted with bas-reliefs, mainly of fauna and flora. On the latter

is one fine relief of a properly three-toed *simurgh*; a second has a decidedly vulpine face (Pls. 13, 14). There is also a centaur (Rus. *kitovras*) whose human portion, Orientally robed, looks decidedly like the model came from the same studio the sculptor at Alt'amar engaged. He seems to be returning successfully from the hunt, and carries a hare in one hand (Pl. 15). We can return to him presently. The West façade of the Cathedral of St. Demetrius is decorated with band after alternating band of fauna and flora—forests and mythical creatures, the vast and wild world—all safely presided over by an enthroned Christ (Pls. 16, 17), reminiscent of the calming (and explanatory) presence of Adam at Alt'amar (Kazarinova 1959). It is a scene, indeed, without doubt inspired in part by Alt'amar; and the style of the stone carving is much the same. There is, and we shall return presently to him, a bird with wings outspread as if ready to crow (Rus. *klikati*) or take flight, perched at the top of a tree whose pyramidal base suggests it may be, if not a mere stylized plant, then something symbolically important, a world-tree (Pl. 18).⁷ The vast and rich canvas of winged griffins, simurghs, centaurs, and lions ranged between lines of flora, with Christ above, governing His almost-peaceable and densely vital natural and mythological kingdom, can fairly be said to represent a final, architectural apotheosis of the Animal Style. It is a harmonious and majestic confluence of forms and ideas Christian and pagan, Scythian, Sasanian, Armenian, and Russian. Indeed, the influences of all those cultures have been invoked in bewildered attempts to explain its abundant wonder.

4. THE ANIMAL STYLE IN RUSSIAN EPIC

Which is all very well, and all of these disparate cultures contributed to the genius of the rich tradition of mediaeval Russia; but as a teacher of mine, Prof. Nicholas Sims-Williams, once insisted, a word is still worth a thousand pictures. It is not that the great philologist was or is hostile to art history, far from it; it is just that sometimes a person can explain clearly more of what he means, and more precisely, with words than by means of a picture. And if one has both—a picture that one can relate or

⁷ V. N. Toporov, indeed, interprets the Ur-image of the World-tree as one with birds on its crown, hoofed animals at the center to represent earth, and snakes and fishes below (Rempel' 1987: 98).

anchor to a text—well, so much the better. For the Animal Style, evoked in word-pictures, we have, I think, a text, a unique text: the concise 12th-century Russian epic of the campaign of the Kievan Prince Igor against the Polovtsians or Cumans to the south, in the steppe region north and east of the Sea of Azov. It is beyond reasonable doubt an authentic inheritance of that age, with elements of far hoarier antiquity abounding within it: there are numerous reasons to reject the closely-argued thesis of my learned and respected colleague Prof. Edward Keenan that the Russian epic *Слово о полку Игореве* was a forgery composed by the eminent 18th-century Czech Slavist Jozef Dobrovsky. The latter simply did not know Old Russian anywhere near well enough to compose such a poem *ex nihilo*, nor was he enough of a creative artist to reshape it out of the comparatively plodding strophes of the later *Zadonshchina*, which is more likely an awkward and stiff imitation (like the vine scroll at St. Thaddeus!). Dobrovsky was unaware of the very archaisms within it that we now examine. He was also too principled a scholar and too decent a man to engage in the act of forgery, a despicable and treacherous betrayal of everything science stands for.

So why would one think the Igor Tale a forgery at all? The epic stands out uncannily from the other Slavonic writings of the 12th century; but then, to adduce the closest parallel case, so too does *Beowulf* in the Anglo-Saxon canon. The sole MS of the former perished in the fire that consumed Moscow in the Great Patriotic War of 1812, at the home of its owner, Count Musin-Pushkin, a relative of the poet Alexander Pushkin (1799-1837); the one MS of the latter was but singed at the edges when a much less apocalyptic fire damaged Joseph Cotton's library at London. Both were bound in miscellanies, with similar eclectic, entertaining, and esoteric contents, as though their respective owners had similar tastes and interests. It is a curious parallel and one no forger would be likely to have considered. Had the tables been turned, and *Beowulf* survived not as an original manuscript but only in a handwritten copy done by an 18th-century gentleman, perhaps savants might now be questioning the authenticity of *Beowulf*'s monster Grendel rather than that of the Igor Tale's sinister *Div*-bird. But there is a particular feature most relevant to the present discussion that might also argue strongly for the authenticity and antiquity of the Song: It has long seemed to me that the beasts and birds that

constitute the bulk of the imagery of the Song of the Campaign of Prince Igor are neither more nor less than the unique *literary* expression of the Animal Style, in all its energy, lightness, playfulness, and color, still the living stock of artistic imagery of a culture whose Byzantine learning rubbed shoulders with an unbroken heritage of arts and ways of life connected with the steppes.

The great Russian-American writer Vladimir Nabokov, in my view the most insightful scholar and translator of the text, approaches this evaluation without explicitly invoking the Animal Style: "An army of animals, resembling the fauna of rich-hued rugs, and marginal designs of delicate plants play a changeable double role in the structure of the Song. They give its circumstances a touch of local reality, and they participate in the general theme of magic, prophecy, and conjuration, a theme bespeaking a singular freedom of thought and distinguishing this pagan poem from the pallid and rigid compositions of routine Christian piety, which by that time had begun to direct and to drain literary art" (Nabokov 1960, p. 8). And a scholar who analyzed the Greek poetical tropes codified by George Khoiroboskos and attested in Slavonic translation in the *Izbornik* of 1073 that she believed the poet employed—and let it be stressed that sophistication in the poetic craft is no necessary impediment to the employment of the Animal Style, for it is a conceptual error to confuse archaism with naïvete—observes that most of its metaphors are permeated by an animistic mobility, that the most pervasive image of the Epic is one of flight, and that verbs are used consistently to animate objects, to endow them with kinesis and sound (Besharov 1956: 51-52, 71, 89). Like Nabokov, she does not mention the Animal Style in so many words; but her every characterization of the Song seems to imply it.

The historian Michael Rostovtzeff, who first gave the Animal Style its name in print, in 1929, had authored a monograph on the art and archaeology of the Scythians and Greeks in Southern Russia, where he really defined it, in 1922. This is the region, too, where the action of the Song takes place. He was also a friend who assisted the Nabokovs' immigration from France to the United States at the beginning of the Second World War.⁸

⁸ Nabokov's father had been inadvertently killed by Russian émigré monarchists when he attempted to shield the liberal politician Milyukov from an assassin's bullet; and the

Vladimir Vladimirovich knew of these antiquities; and perhaps it crossed his mind that the swift steeds (*бръзья комони*), the falcons attacking swans, the blue-gray eagles gliding under clouds, the wagons creaking like dispersed swans, the jargon of jackdaws, the Cuman a black raven, the warrior Gzak a gray wolf, the foxes yelping at vermilion shields (*лисици крешут на чръвленя щиты*)—all are the friezes of the Dmitrievskii *sobor*, the treasures of the kurgans, endowed with a voice, with sound and motion, the living, kinetic literary imagery of a bardic poem steeped in the immemorial Animal Style of the steppes.

One collocation of verbal image in the Song and bas-relief is intriguing. We have seen the bird on its world-tree at Vladimir; and here is another bird in a similar perch, though this time we can hear its mighty screech carrying to far lands: *Тогда възступи Игорь князь въ златъ стремь и поъха по чистому полю. Солнце ему тъмою путь заступаше, ноць стонуци ему грозою птичь убуди, свистъ звъринъ възта, збися Дивъ, кличетъ брѣху древа, велитъ послушати земли незнаемъ, Влѣзь, и Поморию, и Посулию, и Сурожу, и Корсуню, и тебѣ, Тьмутараканьскыи блѣванъ*. In the rhymed translation by V. A. Zhukovsky found in Pushkin's papers we have: *Тогда вступил князь Игорь в золотое стремя/ И поехал по чистому полю./ Солнце дорогу ему тьмой заступило;/ Ночь, грозой шумя на него, птиц пробудила;/ Рев в стадах звериных;/ Див кличет на верху древа,/ Велит прислушать земле незнакомой,/ Волге, Поморию и Посулию,/ И Сурожу и Корсуню,/ И тебе, истукан тьмутараканский!*

And here is V. Nabokov's English translation: "Then Igor set foot/ in the golden stirrup/ and rode out to the campaign./ The sun blocks his way with darkness./ Night, moaning ominously unto him,/ awakens the birds;/ the whistling of beasts [arises?];/ [stirring?] the *daeva* calls on the top of the tree,/ bids hearken the land unknown—/ the Volga,/ and the [Azov] Seaboard,/ and the Sula country,/ And Surozh,⁹ and Korsun,/ and you, idol of Tmutorokan!"

murderers were to serve the Nazis during the occupation of France. His wife, Vera, was Jewish; and they had a son, Dmitri; so all three would have been in peril of their lives, had they remained in Europe.

⁹ That is, Sudak, ancient Sugdak—the Sogdian trading settlement on the north shore of the Black Sea.

Nabokov has understood this bird of loud and dismal tidings, called Div, as an Avestan demon, a *daēvā*. The nightingale (славий) is the bird identified with the bard Boyan who sings the glory (слава) of the princes (in the family tree of the rulers of Kievan Rus' there are eight common compound names with the final element *-slav* by my count: Svyato-, Yaro-, Msti-, Izya-, Bryachi-, Vse-, Vyache-, and Rosti-). So, this *Div* is a kind of anti-nightingale, a demonic herald of malglory. (In Avestan, the demon personifying Wrath, Aēšma *daēvā*—Asmodeus or Ašmedai, on whom see more below—and the chief of all evil spirits Angra Mainyu, or Ahreman, bear the epithet *dušxvarənah-*, “dys-glorious”, from which comes ultimately Armenian *t’šuar*, “wretched”.) Its dismal, stentorian screech, moreover, reminds one strongly of the famed Nightingale Robber, the *Коловей Разбойник* vanquished by the folk hero Il’ya of Murom, who brings it to the court of Vladimir at Kiev, in the famous ballad-tale (былина). And I have argued elsewhere that this creature has a long Indo-Iranian pedigree, appearing as a demonic child-robbing bird in Armenian *hma-yils*, or magical scrolls; and as the Indian Garuda imported from Buddhism into the Mongolian shamanic otherworld. In these various traditions there is a baleful bird with a stentorian voice perched on a tree in the middle of the universe. In the Armenian magical texts it is an embodiment of the demoness Lilith, called Al, and afflicts women in childbirth: God’s three warrior angels (cf. the three armed saints on the northern wall of Alt’amar) attack and subdue the creature, rather as Il’ya the folk hero does in his turn (Russell 2005).

That is all very interesting, too. But what strikes one when considering the image with reference to the spirit of the Animal Style is not so much the antiquity or function of this actually rather fearsome creature as the *lightness* of its role in the Song. The sun is eclipsed, the feathered harbinger of disaster crows, the beasts stir obligingly in chorus, yet where is the dark tragedy that sudden night and a demonic cry covering the farthest reaches of the land ought to ensure? As Nabokov insists in his novel *Pnin*, doom should not jam. Vut, just as in *Pnin*, it does: Igor is, indeed, vanquished, only to be entertained briefly by his erstwhile ally and reluctant captor Konchak and then sprung from captivity unharmed by the obliging Ovlur; while Igor’s son Vladimir falls in love with a Polovtsian princess and stays on the steppes. When Sovexportfilm released the cheerful

movie of Borodin's opera "Prince Igor", based on the Song, four decades ago, one had the impression of a colorful, light, somewhat exotic story with pleasant overtones of romance and few hard feelings (except for a pair of drunken layabouts on the Russian side who shirk army service and accost Yaroslavna, whose dirge incidentally, in its appeal to wind, river, and sun, is very much in the spirit of the Animal Style)—scarcely a grimly martial epic.

Let us consider one other creature that appears at the Cathedral of St. Demetrius and in Scythian art, and consider its echo in Slavonic literature. That should bring us to the final consideration at which the essay aims. It is the centaur, that half-human, half-equine *Mischwesen*—Sagittarius if it carries a bow, the fertility-being Gandharva if it is Indian, Achilles' tutor or a skilled physician or a lustful brawler at a wedding if it is Greek. Like the **daēvā*-bird it is old, its functions are complex, and its traces and sources are widespread across Asia and the ancient world (Russell 2004). Russian borrows Greek *kentauros* as *kitovras*, perhaps encoding willy-nilly but quite functionally into the name another loan, *kit*, from Greek *kētos*, "whale"—the creature in some legends has an association with the sea. (One recalls the Sagittarian Scythian creature with fish for wings!) But this *Mischwesen* appears most prominently in Russian in a mediaeval apocryphon, *Сказание о Соломоне и Китоврасе*, "The Tale of Solomon and the Centaur" (Dmitriev/Lixačev 1969: 370-375, 746-747), a text that for its wryly humorous and irreverent character was entered in lists of proscribed texts by the Orthodox Church. It is a version of the well-known apocryphon extant in Greek and other languages, notably Armenian (where it also forms the basis of an illustrated manual of demonology used by witches): the *Testament of Solomon*.

In the earlier Greek version, however, Solomon encounters not Kitovras but Asmodeus, that is, the Demon of Wrath mentioned earlier, the one who merits the Avestan epithet "malglorious". He appears first in Hebrew literature as Ašmēdai in *Tobit*, a dangerous supernatural being smitten with love for a Jewish girl in Ecbatana who kills all seven of her suitors. In *Test. Sol.*, God has rather unreasonably charged Solomon with the task of building the Temple of Jerusalem without using metal tools; but the king's capable vizier (all Oriental potentates of legendary fame have them; cf. the late Assyrian Aḫīkar, the Akir *premudryi* "most wise" of Sla-

vonian literature whose precepts were bound together with Song in the MS miscellany owned by Musin-Pushkin) suggests finding Ašmedai and getting him drunk when the latter stops at a favorite mountain spring on his way from daily morning study of Torah at the Heavenly Academy down to afternoon learning at a terrestrial yeshiva. The captive Asmodeus not only provides the *šamīr*, a stone-cutting worm, to Hiram of Tyre, the chief architect serving the king of Israel, but furnishes a whole contingent of demons to labor at the building. He supplies a personal dossier on each containing its name, function, a description of its appearance, and the spell that can summon and control it. Asmodeus himself appears as sardonic, world-weary, and wise (Russell 2001; idem 2013).

I suspect the centaur replaced Asmodeus because Solomon's opposite number in the ancient story is a character presented as strong and potentially dangerous, lascivious and rowdy when aroused, but also intelligent, capable, and world-wise. He is in some ways not unlike Solomon himself. That is, the Russians have lightened the tale, introducing a creature we know from the walls of St. Demetrius at Vladimir. And the story in its Slavonic iteration may also be contaminated by a popular text, the Lives of the Desert Fathers, in which Paul, the first hermit, loses his way in the desert one day at a scorching noontime and gets directions from a semi-articulate but helpful centaur (Waddell 1997: 44-45). But what is the centaur in the bas-relief actually doing there? He is shown holding a hare. Like the Scythians, those magnificent riders who were one with their steeds, he has not lingered for the scheduled war with Darius or an appointment with Hiram and Solomon to discuss progress on the First Temple: he saw a rabbit and galloped off after it! Rabbits are, of course, a nice semantic portmanteau: they are swift, they signify the hunt, and of course they are also proverbially procreative. I have already mentioned one Soviet cinematographic evocation of heroic Rus' *in illo tempore*, so perhaps it does no harm appositely to mention another, the classic *Alexander Nevsky* directed by Sergei Eisenstein (1938). On the eve of the fateful clash with the invading German horde, the prince walks pensively among his troops: an old man is telling a funny, slightly off-color fable in which a fox that has been chasing a hare gets herself caught between two trees and the hare then violates her maidenly honor. Alexander Yaroslavich takes this folk wisdom to heart and plans his strategy to trap the heavily-armored Teu-

tonic knights on the ice. The enemy will crash through into the frigid waters of Lake Chud; but the *lightly* armed Russians will escape. Lightness and rabbits, again. And so we come to the great Russian poet whose lightness has been called his particular virtue.

5. THE LIGHTNESS OF PUSHKIN

Alexander Blok, delivered his famous lecture on “The poet’s role” at Petrograd on 11 February 1921. In despair and defiance, he lamented the loss of air to breathe, the vanishing of poetic, inner freedom under the new Soviet order. He was to die in August of that year, and the speech proved a valediction. His fellow poets Esenin and Mayakovsky were to take their own lives in the middle and end of the decade so grimly inaugurated. Blok speaks of the poet whose work is the essence of the air to breathe and the freedom to create: *это лёгкое имя: Пушкин* “this light name, Pushkin”. He exclaims, *Пушкин так легко и весело умел нести свое творческое бремя*—“Pushkin knew how to bear his creative burden so lightly and gaily”. Then Blok plunges into the abyss of the creative process itself: *На бездонных глубинах духа, где человек перестаёт быть человеком, на глубинах, недоступных для государства и общества, созданных цивилизацией,—катятся звуковые волны, подобные волнам эфира, объемлющим вселенную; там идут ритмические колебания, подобные процессам, образующим горы, ветры, морские течения, растительный и животный мир.*—“In the bottomless depths of the spirit, where a man ceases to be a man, at the depths inaccessible to state and society created by civilization, there course the waves of sound that are like the waves of the ether that encompass the universe. There proceed the rockings of rhythm that are like the processes that form the mountains and winds, the currents of the seas, the vegetable and animal world” (apud Richards/Cockerell 1976: 122). Here Pushkin metamorphoses, like the shape-changing men and animals of the Igor Tale, into a sea creature (and we are presently to note Esenin’s telling use of a marine metaphor for images that move). It is at one with the currents as it swims, flexing and undulating, playful and serious in the deeps. The extended metaphor recalls Pushkin’s self-identification with ancient Greek songster Arion, rescued by a dolphin from a shipwreck. And for dolphins, see below the key poem by Mandelshtam.

Andrei Sinyavsky, the Soviet dissident who wrote under the pseudonym Abram Tertz, famously pondered this perennial question of Pushkin's lightness that has engaged, I think, many of us. In his *Прогулки с Пушкиным* (*Strolls with Pushkin*) he sets it out: *Легкость—вот первое, что мы выносим из его произведений в виде самого общего и мгновенного чувства. Легкость в отношении к жизни была основой мирозерцания Пушкина, чертой характера и биографии. Легкость в стихе стала условием творчества с первых его шагов. Едва он появился, критика заговорила о «чрезвычайной легкости» его стихов: «кажется, что они не стоили никакой работы» «кажется, что они выливались у него сами собою»* (*Невский Зритель*, 1820, No. 7; *Сын Отечества*, 1820, ч. 64, No. 36).

До Пушкина почти не было легких стихов—ну—Батюшков. Ну—Жуковский. И то спотыкаемся. И вдруг, откуда ни возьмись, ни с чем, ни с кем не сравнимые реверансы и повороты, быстрота, натиск, прыгучесть, умение гарцевать, галопировать, брать препятствия, делать шпагат и то стягивать, то растягивать стих по требованию, по примеру курбетов, о которых он рассказывает с таким вхождением в роль, что строфа—балерина становится рекомендацией автора... (Terc 1993: 7-8)

"Lightness—that is the first thing we take away from his works, in the aspect of the most general and immediate feeling. Lightness in relation to life was the foundation of Pushkin's conception of the world, that feature of his character and biography. Lightness in verse became the condition of his creativity, from his very first steps. Barely had he appeared on the scene when the critics began to speak of the 'extraordinary lightness and fluidity' of his verses: 'It seems that they took no labor at all,' 'It seems that with him they poured out of their own accord'".

"Before Pushkin there were almost no light verses. Well, there was Batyushkov. Well, Zhukovsky. And even at that we are at a loss. And suddenly, as if from nowhere, incomparable to anything, to anyone, his bows and turns, swiftness, dashing, hopping, deft prancing, galloping, taking obstacles, entwining and tensing or loosening the verse at will, in the

manner of the leaps he recounts with such absorption in the role that the strophe, a ballerina, becomes itself a recommendation of its author..."

After this essential insight Sinyavsky goes on to describe how Pushkin acquired easygoing manners at the Lycée, rejected the burden of the lofty calling of a poet, liked to write in bed, and so on. All that is doubtless true; yet one might stress in addition that Pushkin's lightness does not imply any of the triviality of form and thought of a superficially lived life: this lightness endows poems of considerable compositional complexity and high seriousness of content with a supernal joy, a classical playfulness. It is this quality that establishes Pushkin's oeuvre as the basis of the modern Russian language and its literature, that released it from the ponderous styles of the post-Mongol period and the hypercaloric frippery of 18th-century salon verse, and that also makes him untranslatable. Pushkin once opined that the epic *Слово о полку Игореве* could not have been a forgery of the 18th century, since not even Derzhavin knew Russian well enough to compose it. And Pushkin's own *Exegi Monumentum*, with its parting admonition not to quarrel with a fool, was a deliberate parody of Derzhavin's ponderous Horatian ode. It has, as such, a playful and daring lightness; yet there is a powerful undercurrent of profound seriousness in it, too, when one regards it in its proper context. It is the sixth and final part of the *Каменоостровский* (Stone Island) cycle, in which the reader follows the inner sign posts of a solemn Holy Week peregrination. The cycle begins with a reflection on verbal and aesthetic liberty; then Pushkin casts in a limpid Russian the great meditational prayer of Ephrem Syrus; then we visit the scene of the damnation of Judas; walk through a Petersburg cemetery; and finally encounter Pushkin's own monument not built with hands (See Puškin 2012: 91-95, with commentary on p. 181 ff. by S.A. Fomičev). The light parody, then, crowns a Lenten cycle of reflection.

So, one might add that not only was Derzhavin incapable of faking the *Song of Igor's Campaign* (never mind poor Jozef Dobrovsky, that decent and devoted Czech scholar who would never have done something so dishonest in any case)—perhaps Pushkin was the first fully to grasp it, the only one of his generation entirely to understand it. And with his reading of it, then—it was published in 1800, a year after his birth—he inherited with its flowing imagery of the living heraldic creatures of the ancient and mediaeval steppes the strong *literary* expression of that lightness that

runs through Russian art and storytelling, from its most ancient springs. But it took Pushkin to return it to *belles lettres*, to make of the rill a river.

We can see the direct inspiration of the Igor Tale in Pushkin's first long work, *Руслан и Людмила*, which teems with magical animals (Russell 2012), where the bard Boyan of the Tale sings, his identity as praise-singer with the nightingale, the *slavii*, even encoded subtly, pleasantly, and with originality and complexity into the text: *i slavit sladostnyi pevets/ Lyudmilu-prelest', i Ruslana,/ I Lelem svityi im venets* "The sweet singer praises/ Lovely Lyudmila and Ruslan/ And their diadem woven by Le'", with a complex progression from *slav*- "praise" to *slad*- "sweet" and a shift via the implied base *lad*- "love" in the latter to homonymic *lyud*- (before *mil*- "love") and then *Lel'*, Hymen. (Lel' and the homonymic and coincidentally also demonic/divine and erotic Lilith will join forces to become Nabokov's Lolita.) We have traversed time, but not space, from the curving shore of the Sogdian/Surozh sea in the Igor Tale (*Iz luka morya*) to the curving shore of *Ruslan and Lyudmila* (*U lukomor'ya*). Ruslan is, of course, a name derived, in any case, from Saka, that is to say, Scythian, Rostam—**rautas-taxma*- "strong as a river". Pushkin continued to read, and to write about, the Igor Tale throughout his life, which should have been as light, and as life-filled, as the animals that course through the epic. We know him as a boy listening rapt to the folk tales of Arina Rodionovna (Pl. 19); and then, when he was not yet forty, came the lethal duel with d'Anthès that brought such far-reaching harm to all the Russian land. It was all too short a life, and there was nothing light about its end at all.

But perhaps something of Pushkin's lightness of spirit crossed by some process of literary metempsychosis into his truest heir, Osip Mandelstam. For in the latter's first cycle of poems, *Камень* (*Stone*), one discerns what we might now dare to call the Pushkinian Animal Style. Here are a few examples: *Воздух пасмурный влажен и гулок;/ Хорошо и не страшно в лесу.* "The overcast air is damp and ringing;/ It is nice in the forest and not frightening". *С весёлым ржанием пасутся табуны/ И римской ржавщиной окрасилась долина./ Сухое золото классической весны/ Уносит времени прозрачная стремнина.* "The herds of horses pasture with gay neighs/ And Roman rusty red adorns the dale./ A Classical springtime, dry and gold,/ Is carried off in the limpid flood of time". *Сусальным золотом горят/ В лесах рождественские ёлки;/ В кустах*

изрушечные волки/ Глазами страшными глядят. “With tinselled gold burn/ The Christmas evergreens in the woods;/ And in the shrubbery toy wolves/ Stare with terrifying looks”. *О, вещая моя печаль,/ О, тихая моя свобода,/ И неживого небосвода/ Всегда смеющийся хрусталь!* (Mandel’shtam 1990). “O my sorrow wise,/ O my freedom still,/ And the lifeless dome of heaven’s/ Ever-smiling crystal!” (With respect to the latter strophe one remembers how Pushkin had written, famously, in his poem *На холмах Грузии* [“On the hills of Georgia”] ... *печаль моя светла*, “my sadness is bright”).

And the greatest Animal Style poem of *Stone*, is one in which the sea creature seems to swim in the creative depths to be evoked by Blok in the oration cited above (ibid.: 14):

<i>Ни о чем не нужно говорить,</i>	“It is not necessary at all to speak
<i>Ничему не следует учить,</i>	Nor anything at all to teach;
<i>И печальна так и хороша</i>	And sad she is, and as comely,
<i>Темная звериная душа.</i>	The dark soul of the beast.

<i>Ничему не хочет изучить,</i>	She doesn’t want to learn a thing
<i>Не умеет вовсе говорить—</i>	And knows nothing of speech—
<i>И плывет дельфином молодым</i>	And, a young dolphin, swims
<i>По седым пучинам мировым.</i>	The world’s deep and hoary seas”.

Another and different kind of heir was the powerful, charismatic Sergei Esenin, an avid reader of the Igor’ Epic and an elemental force of nature in his own right, who associated with the “Scythian” poets before the Revolution and after it rubbed shoulders with the Imaginist poet Alexander Kusikov and probably with the latter’s acquaintance, the great Soviet Armenian poet Elišē Č‘arenc’ (Yeghishe Charents, as his name is generally transliterated), as well. There is a curious mystery to be explored on the side here: the author of a standard English biography of Esenin misidentifies Kusikov, who was Armenian, as a Circassian; and seems to be entirely unaware of the presence of Č‘arenc’ in the Moscow of the Imaginists. I have in my library a copy of Kusikov’s *В нигуда* (*Into Nowhere*), Moscow, 1920, signed and dated by Charents: *Elišē Č‘arenc’ Moskva/ [1]922 t’.I.* (Elišē Č‘arenc’ Moscow/ [1]922 [year] [January]) (Plates 20, 21). Kusikov liked to fuse Muslim-Oriental and Christian-Russian themes and terms in his verse: his *Искандар Намэ* (i.e. *Iskandar-nāma*, Pers., “Book of Alexander”,

1921-22) is a play on his own name and the Persian version of the Hellenistic *Alexander Romance*. Charents borrowed from it these lines as the epigraph to his own autobiography in verse, the *Charents-name* (Moscow, Jan. 1922): *Москва, Москва, ты Меккой мне, Москва, а Кремль твой—сладость чёрной Каабы* “O Moscow, Moscow, thou art Mecca to me, Moscow; and thy Kremlin is the sweetness of the black Ka‘aba” (Č‘arenc‘ 1963: 151-176, 342 fn.). Kusikov (1896-1977) was born to a somewhat indigent branch of the prominent Armenian merchant clan of the Kusikyans at Armavir in the north Caucasus, but insisted to the very end of his life (he died in emigration in France) that he was a Circassian whose Muslim ancestors had been warlike horsemen. Kusikov seems to have made a great effort to conceal his true background, for the poet Ryurik Ivnev (a close friend of Esenin) claimed once to have picked up Kusikov’s passport, which the latter feverishly snatched away and hid in his pocket, though not before Ivnev saw the bearer’s nationality, “Armenian”, inscribed on one of its pages (Drozdov 2005: 174, 202-203). Perhaps the poet concealed his ethnic identity out of the sense of shame and self-hatred that often afflicts members of weak and persecuted peoples and leads them to claim some more manly pedigree. One recalls the analogous case of Lev Nussimbaum, the son of a wealthy Jewish family from Baku who converted to Islam, and wrote a biography of Stalin and a romantic novel, *Ali and Nino*, under the names Essad Bey and Kurban Said. The novel describes the love of the dashing young Azeri Muslim Ali for the enchanting Georgian maiden Nino; and the action takes place in the war-torn Caucasus in the years following the Russian Revolution and the end of the First World War. Tellingly, the villain of the piece is an Armenian, the older, wealthy Nakhararyan in his sinister black limousine (Reiss 2005). Perhaps Charents was not just a fellow poet, then, to Kusikov, but also a fellow Armenian in whom he could confide, at a time when it was a shame, a disadvantage, and sometimes a danger to be identified as an Armenian or a Jew.

To return to the Imaginists, they followed Ezra Pound and the Imagists in seeing in the verbal picture that the poet shapes, the image of a thing or idea, the heart of his art. Esenin divided these images, the essential features of the poem, into *заставки*, static “rubrics”, and *корабельные*, “caravel-like”, dynamic ships of images (McVay 1976: 112). Running horses,

flying bird, and now sailing ships cresting the waves: in Esenin's distinction is there not the enduring sense of the Animal Style with its playful lightness and kinetic energy? In a return to the asserted power of the verbal image, and in the encounter of Russian and Armenian artists, we have not, perhaps, come full circle, but we have certainly come full spiral, into a new appreciation of an archaic and powerful mode of artistic creation, on the northern tier of Eurasia. The Animal Style is not, then, a primitive curiosity of the remote past, but an enduring way of seeing that has enriched and shaped human imagination down to our time. And as people turn to a renewed appreciation and concern for the natural world all life shares, it may yet infuse our arts and minds again with its lightness and joy.

ENVOI

Thus, in a very few strokes, in a very preliminary way, I have tried here to join words to images and to make concrete what is actually a rather elusive idea. What is lightness? How does motion endure in the stasis of a carved object, how can a poem inherit a style and save the sense of words that might once have been sung; and how then can all this infuse and bring to life, in the work of one man perceiving a crucial feature of a very long and versatile tradition, a modern literature? Perhaps such audacity were better left to living conversation, over a glass of wine or vodka, with *les artistes chez eux*, as Nina Georgievna used to say after the academic heavyweights had left her famous annual Easter party and she and her students crowded happily, late at night, into her little study on East 79th Street in Manhattan. I met her first when I was seventeen. The first time she showed a slide of Persepolis in class at Columbia and my jaw dropped, she gave me a conspiratorial smile. Her pioneering study on the Arsacid elements in Armenian culture helped determine the course of my future studies. It has been a long road: I will soon be sixty, but she has not aged. Her mind and her laugh are the same. Nina's family escaped from revolutionary Moscow and left France as Hitler threatened: the experience of a harsh century tuned her political and personal morality to perfect pitch. One day she cautioned me never to give my loyalty to an institution. I never have, and never will, but my beloved teacher is my Marseillaise and I give my undivided loyalty to her.

But now I must start my motorcycle and ride off after that rabbit, and who knows what adventures yet await us.

ON THE IMAGE OF ZOROASTER

James R. Russell

Although the records of Iranian and Classical antiquity abound in references to Zarathustra, there is no indigenous or foreign visual image of the Prophet labelled with his name, or certain to be an intended depiction of him, that is known before the Italian Renaissance. That is not because we lack for visual imagery and iconography in the Zoroastrian tradition in antiquity. The recent discoveries of Sogdian Zoroastrian religious art, ranging from ceramic ossuaries found in Central Asia to monumental nephrite bas-reliefs on Chinese-style tomb-couches and ossuaries unearthed at the terminus of the Silk Road at the ancient Han capital of Chang'an (modern Xi'an), have enriched the iconographic record considerably, but they have not yielded an identifiable image of the Prophet. It was already long known, before these momentous discoveries, that Armenia had shrines called *bagink'*— this loaned term was shared with various Iranian lands— containing images of the *yazatas* (in the round, one supposes, rather than in mere relief). Anthropomorphic sculptures in the Arsacid era were influenced in style by Greco-Roman art, as was, indeed, the *Buddharupa* in India. The cyclopean platforms and statues in the round of king Antiochus of Commagene and the Iranian gods at the *hierotherion*¹ 'sacred funerary depository', on the summit of Nemrut Dagħ from the first century BCE, in south-eastern Anatolia, afford a sense of both the artistic style and scale of the Zoroastrian monuments that existed in the Arsacid period before the Christianization of the Armenians and of neighbouring religiously Iranized peoples such as the Cappadocians. There are also bas-reliefs, at Nemrut Dagħ and at nearby Arsameia on the Nymphaios, where the king or a royal ancestor (Antiochus claimed descent from both the Achaemenids and the Macedonians) is shown shaking hands with a god, for instance, Mithra, or receiving from him a large ring, sometimes adorned with trailing ribbons. The statues in the round, on their great pedestal or throne, that face the ceremonial space with its fire altar at the far end on the levelled summit of Nemrut Dagħ are gigantic; the reliefs that flank the processional ways of the sanctified space are on a much more human scale. It will be seen presently that Zoroastrians have used the standard image of Mithra to represent the Prophet Zarathustra (Figs 6, 7, 8 and 9).

Figure 7 Nemrut Dag, Commagene: *Syndexiosis* of Mithras and Antiochus. J. R. Russell provides scale

Figure 8 Nemrut Dag, Commagene: *Syndexiosis* of Mithras and Antiochus, without author

Figure 9 Mithra, Arsameia on the Nymphaeas, Commagene

The ring or diadem that the god holds out to kings on the Commagenian and Iranian reliefs is thought to be the sun-like divine glory, Av. *xvarənah* (Phl. *xwarr*, Arm. *l-w p'ārk'*, etc.)— a mark of heavenly sanction and favour that is bestowed on just and rightful rulers and taken away from wicked ones. Sometimes it is envisioned, both in a Pahlavi text and on a Greco-Bactrian coin, as a bird or ram. The symbol of a winged disk surmounted by a man (actually, a man rising from a ring that girdles him) was borrowed by the Achaemenians from Urartu and Assyria and ultimately was a symbol of the Egyptian Sun-god. It ceased to be employed in pre-Islamic Iranian art after Alexander, but it is noteworthy that it has come back as a popular national symbol in modern Iran and as a religious emblem of Zoroastrians everywhere. Individual components of this symbol, such as a disembodied pair of wings, or the ring, remained in use and there can be little doubt they signified holiness and dominion, for why else would art of an official and propagandistic purpose employ them? In the absence of a written contemporary explanation, however, their exact meaning remains disputable. They are visible symbols but they embody abstractions, qualities not naturally found on earth in physical form. For Zoroastrians they are representations of realities believed to belong to the *mēnōg*, 'spiritual' world, in the forms of *gētīg*, 'worldly' objects that have some analogous function here. The ring might then, perhaps simultaneously, have been intended to be symbolic of an object on a mundane and visible level as well, the diadem (Middle Persian *didēm* or *pusag*, Sogdian *ʾs'k* /pronounced *əfsēl*, Armenian loan-word *psak*). This was very much part of royal adornment in the material world; so in art it need not be just a symbolic representation, but a depiction also from life. The diadem was tied around the crown at the time of coronation: I shall adduce medieval Armenian evidence presently that suggests that this was how the object seems to have been understood more than a millennium later, in the context of a fairly similar religion, within the orbit of the Iranian world and by artists strikingly close in other ways to the ancient Iranian sculptors. At the ceremony of investiture the king was not fully enthroned until this tying on of the diadem was completed. In the Arsacid era, where key positions were parcelled out to the noble clans, a noble house held in hereditary perpetuity the office of coronant. In Parthian Iran proper the Sūrēn clan, masters of the Saka province Sagastān (modern Seistan), were 'crown-bestowers' (Persian *tājboxš*). This is one of a number of epithets of Rostam, himself a *sagzi*, Saka, in the *Shāhnāme*h of Ferdowsi. The Armenian historian Movsēs Xorenac'i, who lived centuries before the Persian epic poet, knew him and his steed by older forms of their names; and by the older form, *sagčik*, of his ethnic designation. But a form for his title is unfortunately not attested. In Armenia only a Bagratuni *naxarar*² might be *t'agadir* 'coronant'. On the reliefs, the divinity hands the ring to the king, and does not slip it over his crowned head. So if it is an investiture scene, it is a symbolic one, and one in which Ahura Mazdā, 'a spirit *even* among spirits' as Zoroastrian texts stress, is visible. So the scene is a metaphor, or an event in the *mēnōg* world parallel

to our own in life, as heaven celebrates the coronation as it proceeds on earth, much as the great *fravaši* spirits do battle over earthly armies, or following it, in death. Staying in Commagene for a moment, it is noteworthy that Mithra appears there, several times, with the same tell-tale radiate nimbus behind his head, just as he does over a century before and at the other end of the Iranian world, in Bactria, and just as he will do on a Sasanian relief at Tāq-e Bostān near Kermanshah, in western Iran. It is a mark that makes it certain that an image represents this divinity embodying many aspects, the light of the Sun being among them. This does not mean that Zoroastrian iconography was thoroughly systematic and stable over time and space; but some of it clearly was. This is important to remember for what will come later.

Another relevant consideration has to do with the overt setting of all the scenes I have mentioned, except perhaps for the Sasanian one: they are *funerary*. The king meets and greets the divinities, and is seated with them, in the next world. That is reasonable: all Zoroastrians are to encounter a triumvirate of judges of their earthly deeds, Mithra, Rašnu and Sraoša at the time of judgment three days after earthly death; and the blessed then sup with them, too – the *Haðōxt nask*, which is the Avestan foundation of the famous book of the righteous Virāz, describes the scene. Sasanian coins name the monarch as one *ke čīhr az yazdān*, ‘whose seed is from the gods’; and Ammianus Marcellinus has the long-lived, mighty Sapor (Shapur II) introduce himself vaingloriously as ‘Partner of the Stars, Brother of the Sun and Moon’ (*particeps siderum, frater solis ac lunae*). So perhaps the kings might have been thought to see the gods, to whose number they belonged, not only after death but while they were still alive. In Rome a similar belief is manipulated as a device employed ironically to ridicule a particularly hubristic emperor: at the full moon, in accordance with his claim to be on equal footing with the gods, Caligula used to invite Luna to his bed. ‘Did you not see her?’ he demanded once of Aulus Vitellius (himself later to become emperor). ‘No,’ replied the latter tactfully, ‘only you gods can see one another.’

The Sasanian relief at Tāq-e Bostān near Kermanshah with its portrayal of Mithra, to be considered presently, is always called an investiture, like a similar, earlier one of Ardašīr I at Naqš-e Rostam. Ten out of the 28 known Sasanian rock reliefs are, or are presumed to be, investiture scenes. The ancient Iranians and Armenians were sticklers for form – there was a *darandarzbed*, Arm. *handerjapet* – and as his title suggests, he was in charge of matters of protocol at court that included vestments. So, as I suggested above, the scene of a god handing the ring of glory or diadem of legitimacy (or whatever it was) to the king might have been a symbolic representation, or even a parallel ceremony in the *mēnōg* or spiritual world, of what was going on down in the *gētīg*, or material one, at coronation time. As was just mentioned, in Armenia the only way an Arsacid became king was for the *t’agadīr*, ‘coronant’ – this was a hereditary office of the Bagratuni clan and nobody else could do it – to tie the diadem around the crown. Sasanian ceremony may have differed, even

considerably; but to be certain we deal in fact with the royal investiture it might be helpful to see features of the ceremony like a throne, a coronant, and so on. But we do not: the newly minted monarch meets the god Ahura Mazda, and both are on foot or horseback. Ardašir's steed tramples the fallen Ardavān; Ohrmazd's, a humanoid with gorgon locks generally taken to be Ahreman, who the *Bundahišn* tells us is in abasement in hell (which must be very far down) (Fig. 10). And if the god and king are in a room at the top, why are they mounted? One supposes a king could ride his horse anywhere he pleased (and one remembers, again, Caligula's mount, who became a Senator). In Armenian epic the magic horse of the heroes stands in a smallish cave at Van for eternity with Little Mithra on his back; and water trickling down the rock is believed to be the animal's urine. But would the Sasanians risk having the king's horse relieve itself in the grand, carpeted throne room? The visual shorthand of an enemy trodden upon, with its roots in Assyrian art, became standard for Sasanian triumphal propaganda. Armenian preserves an ekphrastic epithet, a word crystallized in amber from Parthian days, as it were, for the particular humiliation to which these defeated foes are subjected: *smbakakox*, 'trampled underfoot by hooves'. Could this not have been intended as a scene of the just king's welcome into the next world, rather than as a rite of investiture? (One is reminded that to this day, funerary monuments and dirges depict and describe Kurdish heroes riding their horses into the Otherworld.) That is another point to keep in mind, as we explore the subsequent artistic record.

So far, then, we have portrayals in Iranian art of both men and gods, and at least one of the latter, Mithra, looks much the same wherever we find him, suggesting that the viewer was expected to recognize him without the help of

Figure 10 Naqš-e Rostam, Sasanian relief of Ohrmazd and Ardašir I

an inscribed caption (such as the multi-lingual one identifying Ohrmazd at Naqš-e Rostam, for instance). The iconoclast Sasanians seem to have removed from the *bagin*-temples and destroyed statues in the round of *yazatas*, replacing these with fire altars, in the course of their reforms after coming to power. They felt no hesitation in portraying divine and supernatural beings – Ohrmazd, the goddess Anāhitā, the *daēnā* (the embodiment of one's spiritual virtue, whom one meets on the bridge into heaven after death or in a vision of the afterlife) – on bas-reliefs, since nobody worshipped the latter. But nobody labelled as Zoroaster is identifiably portrayed anywhere; and indeed no Achaemenian, Parthian Arsacid, or Sasanian official inscription mentions the Prophet by name. That is not because they were not Zoroastrians (they said they were) or because they had any compunction about mentioning the Prophet (the legends about whom multiplied in the period). The most we can surmise from silence is that the context simply did not call for his mention. Though the reciter of the Zoroastrian credo, the *Frāvarānē*, identifies himself in Avestan as *zaraθuštriš*, and the Prophet's name is attested in pre-Islamic Iran in widely varying local forms – Sogdian *zrušc*, for instance – that may attest to local *zands* as well, the name given to the Good Religion in inscriptions is 'Mazdā-worship' (*dēn ī mazdēšn*). Fifth-century Armenian sources likewise call it *deni mazdezn*, using an older, Arsacid pronunciation of the designation. This is not surprising or disturbing: Christ in both name and image pervades Christendom – and the religion founded by his followers came to bear his name within two short decades after his death. But that is because he is God and his life is divine epiphany. (And for all that, Christians in the Iranian world were called just as often Nazarenes, since Christ's family hailed from Nazareth in Galilee, or *tarsagān* '(God)-fearers'.) The founders of the Abrahamic faiths were all men, not divinities, and canonical images of them are not *de rigueur*. Muslims do not call themselves Mohammedans; some Jews toyed once with being euphemistically Mosaic (*musavī* in the Near East) since the various forms of *yahūdī* were used derisively by anti-Semites. It did not stick; though the polite *kalimī* survives in Persian. Zarathustra brought the Good Religion: he was *patgāmbār* 'messenger', *waxšwar* 'bearer of the sacred word', and even 'enlightener' (finite verb *rōšnēnīd*), the latter title appropriated by the cult of the patron saint of Armenia, Gregory *lusaworič* 'the Illuminator'. But he was not a divine being or an immortal like Christ; nor was he even a political and military leader like Moses or Mohammed. He was a priest, a visionary, and the perfect man.

Still, there is one ancient portrait painting, more precisely, one of a pair, which, in the opinion of some scholars, was intended to depict Zoroaster, although there is no inscription identifying the figure and the suggestion remains purely a hypothesis that, indeed, several generations have deprecated. But it is a suggestion, it may be argued, that is not altogether unfounded or audacious. Indeed it is less so than much of the speculation that passes for scholarship in the Iranian field. The fresco was found in the Mithraeum of Dura-Europos (it was fortunately removed from Syria and is safe in the art

Figure 11 Twin portraits, Dura Mithraeum, colour restoration

museum of Yale University) and dates to the early third century AD – that is, to a time shortly before the destruction of the city by the forces of Shapur I (Figs 11 and 12) Dura (this is its old Aramaic name, just meaning a fort; Europos was a Macedonian add-on) was a walled fortress-city on the Euphrates frontier of the Roman Empire with the Parthians and, later, the Sasanians. The population was heterogeneous: Jews, Christians, Greco-Roman pagans, worshippers of sundry local Syrian gods, polyglot speakers of Parthian, Persian, Aramaic, Arabic, Greek and Latin. The Mithraeum was dedicated, obviously, to an Iranian deity, in a region steeped in Iranian Zoroastrian culture and tradition on two sides, not-yet-Christian Arsacid Armenia to the north (where Mithra was so important that he survives as the apocalyptic folk hero Mher, mentioned above)³ and Parthian Iran to the east; so it makes sense that there is a much stronger religiously Iranian flavour to the art there than one finds in Mithraic temples in Rome, or in the City of London or in the recesses of Hadrian's Wall for that matter. For instance, there is a fresco decoration on the arch over the portraits and cult niche, and contemporary with the portraits, of alternating fire altars and cypresses that we do not find anywhere else in Mithraic art

Figure 12 One of the latter without restoration

(Fig. 13). The permanently blazing fire particularly sacred to the Parthians and to their Arsacid kings (hence its designation in Greek as *Asaak*, that is, **Aršak*, by Isidore of Charax in his *Stathmoi Parthikoi*, 'Parthian Stages'), that of *Burzēn Mihr* 'Mithra the Lofty', was enthroned in Khorasan, near the famous cypress of *Kišmar* that was believed to have been planted by Zoroaster himself. (It was cut down on the orders of the Arab caliph Mutawwakil in AD 861: but by the time the trunk of the poor murdered tree was conveyed to Baghdad, the Muslim tyrant was dead.) So the repetition of the two juxtaposed images in the shrine of a god adopted from the Iranians, across the river from Parthia, seems more than a fortuitous pairing of generic 'Oriental' images of the time. Dura's Mithraeum went through stages of repair and enlargement as with Mithraea elsewhere, except that, unlike the builders working on the Londinium temple at the Walbrook near the present-day Bank of England, the Mithraists of Dura did not have to deal with rising damp. The edifice began as the modest wing of a house, was enlarged, and finally took the form of a basilica rather than the standard *spelaeum* ('cave'; cf. our Armenian Mher on horseback again). The founder was a local Syrian legionary, that is, a soldier of Rome: 'Ethpeni the *strategos*, son of Zabde'a the chief of the archers of Dura.' But it is quite certain the rich frescoes were not painted by soldiers but by professional artists. The style of the Mithraeum is the same as that of the Synagogue of the town; for all we know, the same contractors were hired to decorate the sanctuaries.

Large portraits of two men in white sacerdotal garb flank the cult niche with its carven tauroctony scene and dedications. They stare straight ahead, hold slender ebony staffs, and are seated on fine carven armchairs. Franz Cumont,

Figure 13 Fire altars and cypresses, Dura Mithraeum

the pioneer of Mithraic studies, wrote confidently in the excavation report co-authored with Mikhail Rostovtzeff, pioneer of the study of Parthian art,

There is no doubt [...] that the persons represented in the paintings of Dura must be regarded as the *magi*, or prophets, those who were the authors or the interpreters of the several books (*logoi hieroi*) of Mithraism. Since Zoroaster was regarded as the originator of the Mithraic mysteries and Osthanes was his most famous pupil, we may speculate that the two *magi* of Dura are to be identified with those two great Iranian prophets.⁴

Recent scholarship has tended to dismiss this hypothesis and more cautiously to propose that the portraits are not of Zoroaster and another Iranian magus at all, but of prominent donors to the temple in the garb of the local Palmyrene pagan clergy,⁵ so we may be looking at Ethpeni, the fairly remote founder, dressed up for lodge night, or one of his wealthy successors, but not Zoroaster. One might counter that Palmyrene, Hatrene and Edessene pagan priests all looked a lot like Parthian ones, since Iran set the fashion for sacerdotal garb in Syria. (It has been argued that even the *mikhnasayim* 'trousers' worn by the *kohanim* of the Temple of Jerusalem were an innovation from Persia.) One might object also that a relief in the temple depicts donors quite differently accoutred, looking like the Roman soldiers they were, and names them as Zenobios, Iariboles and Barnaadath – Syrians all. And if the men in the two frescoes were brethren, so to speak, of the Mithraic lodge, then why not name them in captions, with the usual epithets *nama*, *renatus*, and so on? It has been said of modern American Jews that we have an edifice complex (*sic!*), which involves not just building more synagogues than necessary but affixing a plaque naming a donor to every pew, water fountain and doorknob in them. The Mithraists seem to have suffered from an earlier form of the same malady, though one grants the average Mithraic congregation was quite small and its members were more likely to know the others mentioned in inscriptions. But the portraits gaze fixed at us in their frontal Parthian way, noble, uncaptioned.

Between the third century and the end of the First World War, when Dura was rediscovered, the Armenians were baptized, invented an alphabet that exists unchanged to this day, and created a unique Christian civilization. In 1915 Turkey, which occupies nine tenths of historical Armenia, tried to put an end to that by systematically exterminating its Armenian population in the first genocide carried out by a modern state on its own citizens. The word 'genocide' was coined years later to describe that event, which at the time the Turks called simply *jihad*. Turkey's ally, Germany, both helped and learned, and was to put its experience to use scarcely a generation later, in the Holocaust. The terminus of the Armenian death marches, where the survivors were left to starve in the desert void, or were burnt in caves, was Deir ez-Zor. Officers of the liberating French Army in Syria discovered Dura just nearby, on the banks of the Euphrates, and France sponsored the subsequent digs. So a photograph of 1932 (Fig. 14) shows two latter-day sages, Franz Cumont and Mikhail

Figure 14 Cumont and Rostovtzeff at the Dura Mithraeum

Ivanovich, at the site in the hieratic garb of the European savant, in front of the newly excavated frescoes and cult niche. (The Dura Synagogue frescoes went to the National Museum at Damascus, then safe under French control; the deal was that Rostovtzeff got the Mithraeum for Yale.) One might compare either of the Dura figures to a portrait, probably taken from life or very nearly so, in the scene of the Adoration of the Magi in the Armenian manuscript called the Echmiadzin Gospel (Erevan Matenadaran 2374) (Fig. 15). The miniature was done most likely in the Sasanian period, and was later bound into the manuscript. The latter is dated to AD 989, when Zoroastrians were still very visible in Iran and surrounding lands in any case and an Armenian viewer would still have no trouble identifying their Magi. The magus of the Armenian manuscript has richly coloured clothes; but he is a traveller, a wealthy and powerful guest showering riches on the Son of God. The similarly attired priest from Dura is in white – but he, like an officiating *mobed* or *dastur* in gleaming white vestments in an *agiari*, is in a temple after all, not on a diplomatic mission.

Let us suppose the two figures were intended to be magi. What are their ebony canes for? ‘Median diviners also divine with rods,’ declare the *Scholia in Nicandri Theriaca* (613, with reference to Dino); and Albert de Jong, commenting on the Classical sources, notes that these staffs might have been confused at time with the long, thin bundle of the *barsom* – the ritual *fascēs* held by a magus on a gold plaque from the Oxus treasure, and wielded by

Figure 15 Adoration of the Magi, Echmiadzin Gospel

Ohrmazd and Mithra on the Sasanian rock reliefs. The Dura figures grasp tightly furled scrolls, too, in their left hands. Mani, a contemporary of the paintings and nominally a Parthian, who modestly advertised himself as the seal of the prophecies of Christ, the Buddha and Zoroaster, *in manu validissimum baculum tenebat ex ligno ebenino, Babylonii vero librum portabat sub ala sinistra*, according to the *Acta Archelai* – that is, ‘he held a stout ebony staff in

his right hand and had a Babylonian book tucked under his left arm'. His book might have been a fashionably novel codex, but the iconographic shorthand for 'book' was still a scroll (we still use the Latin word *volumen*, too). In the Classical world Zoroaster, thanks to the resemblance of part of his name to Greek *astēr*, 'star', was regarded in the main as the inventor of astrology and the author of many books, voluminous ones, on the subject. This accorded with the general association of the Magi with divinatory and other occult sciences. They gave their name to our word 'magic' after all. But Zoroaster had another, more venerable image, and one that would have justified depicting him with a scroll. The Zathraustes, that is, Zoroaster, of Diodorus Siculus (1.94.2) was pre-eminently a *nomothetēs*, a lawgiver. He had received the laws from the *agathos daimōn* 'good spirit' (or *epitykhes noēma*, 'fortunate mind' of the *Greater Alcibiades* 1.122A), that is, the *Amāša Spānta* (Holy Immortal) Vohu Manah of the Zoroastrian pantheon. So it is proper that the putative magus at Dura hold a *volumen* as well as a staff – a book as well as a magician's wand.

As for the other figure, whom Cumont took to be Ostanēs, Diogenes Laertius, discussing the *Lydian History* of Xanthus, states that '... six thousand years passed from the time of Zoroaster up to the crossing of Xerxes, and that after him there had been many Magi in succession, Ostanēs, Astrampsychus, Gobryas and Pazatas, until the conquest of the Persians by Alexander'.⁶ (One should keep in mind that Lydia, in central Anatolia, had been a satrapal centre of the Achaemenid administration, with a large Zoroastrian population that remained long after the fall of the dynasty.) Ostanēs is elsewhere hailed as the greatest of the magi and discoverer of the proper invocations of the seven planetary divinities. He wrote mainly on magic and alchemy; Zoroaster, on astrology. Lactantius Placidus, a scholiast on the poet Statius, writes, 'Ostanēs reports that among the Persians the sun is called by the proper name Mithra', which is true, if not particularly esoteric, information; and various books are attributed to him, of which only one is named, by the pagan Phoenician scholar Philo of Byblos: the *Octateuch*, which deals with the qualities of the supreme deity.⁷ As for the name, Ferdinand Justi advances no etymology (s.v. Austanēs) but cites an Armenian Ostan: this would be the form closest to a hypothetical Iranian one. This is a weak link, though: the latter word, certainly an Iranian loan, means 'royal palace' and exists in Classical and later Armenian usage and toponymy, but is found as a proper name only once, in a colophon of the fifteenth century.⁸ There are no Iranian references to a person named *Ostan; so even if Zoroaster is depicted at Dura, and there is no real reason why he should not have been, Ostanēs is a figure who on present evidence existed in Classical sources, might or might not have belonged to Mithraic tradition (for which we have no books, only some inscriptions, Latin hexameters, and maybe one page of the ritual for the religion's fourth degree of initiation, that of Leo), and is unknown to Zoroastrian tradition.

Why should Zoroaster be depicted together with anybody else in the first place? He had a royal patron, Vištāspa, to whom he speaks directly in the

Gāthās; and the latter's sagely adviser at court, Jāmāspa, is a hero of the faith. Some Parsi devotional pictures show the Prophet and another person, generally identified as the Kayanian hero Lohrāsp, with a blazing fire on its altar between them. This scene may have been inspired by the obverse of Sasanian coins, though, where armed warriors flank a sacred fire, and was then reinterpreted in a ritual sense, in which case the Prophet would perhaps be the officiating priest of the *Yasna* ceremony, the *zōt* (who holds the *barsom*); and his counterpart, the *rāspī*. The Avestan *Ahuna Vairya* prayer, which, as we shall see presently, Zarathustra wielded with such great power, itself probably refers to his own pastoral and soteriological role and mission. It extols righteous holders of spiritual and temporal authority, the *ahu* and *ratu*; so a dual portrait, with its aesthetic symmetry, might also suggest this complementary balance of functions.

The paintings at the temple to Mithra at Dura, then, may or may not include a portrayal of the Iranian prophet as the devotees of the most iconographically stable and familiar of the *yazatas*, Mithra(s), imagined him. Their contemporaries in the Greco-Roman world thought of Zoroaster as an astrologer, but also as a great lawgiver. What about the people dwelling on the far side of the Euphrates frontier, in the lands where his faith was known and practised? Two centuries after the destruction of Dura-Europos, and about 125 years or so after the baptism of the Armenian Arsacids, the historian and clergyman Elišē (Elisaeus) *vardapet* mentions *mecn Zradeštn*, 'the great Zradeš' and the *awrēns zradaštakan*, 'Zoroastrian laws' (again the *nomothetēs*, 'lawgiver', with a book!), in his chronicle of the Armeno-Sasanian war of AD 449–51. This was the conflict, culminating in the Battle of Avarayr, in which forces under the commander-in-chief St Vardan Mamikonean resisted the attempt of the Sasanian Yazdagerd II and his prime minister Mihrnarseh to re-impose Zoroastrianism upon the recently Christianized Armenian nation. Though Prof. Robert W. Thomson wrote that Elišē most likely lived a century later, Prof. Nina Garsoian has argued convincingly on the basis of Sasanian epigraphic evidence that the Armenian historian was an eyewitness to these events. And although there is much rhetorical elaboration in the manner of the age, the text of his *History* is rich in contemporary information about Persian Zoroastrian beliefs and practices; and the letters and rescripts are paraphrases true to the style of the originals, maybe even translations of documents. And the vocabulary of the official formulae, the words that describe the Persian religion, most often do not even require translation, since Armenian was and is steeped in Middle Iranian loans, not least in the area of religion. Several MSS of the sixteenth and seventeenth centuries offer fascinating marginal glosses of the name of the Iranian prophet, given also in the form *Zradešn*, as *karewor uxt* 'mighty (or, significant) covenant' or *bun bank* 'fundamental words'. It is impossible to tell how old these two explanations are, but three of the four terms used in them are, not unexpectedly, Iranian loans themselves, and *uxt*, 'covenant', literally 'something spoken' probably either interprets the element *dešn* as *dašn*,

an Iranian loan-word meaning ‘covenant’, or else echoes the Middle Iranian form Zarduxšt, whose intrusive *x* would suggest to a speaker of Parthian or Middle Persian such an interpretation. (The *dašn* word is still a household one in Armenian *Dašnak*, the colloquial designation for a member of one of the nation’s most notorious political party, the Armenian Revolutionary Federation, *Hay hetap’oxakan dašnak’ut’iwn*.) The first element of the name of Zoroaster, *Zra-*, might have been understood as deriving from *zawr*, ‘power’ (also an Iranian loan in Armenian). It is a theologically good, if philologically inaccurate, understanding of the Prophet’s name, which contains in fact *uštra-*, ‘camel’, just as the names of most of his family and contemporaries have to do with the domestic animals so valued by the pastoral, nomadic society of the most ancient Iranians.⁹

But the understanding of Zradešt, Zradešn, or Zarduxšt as ‘mighty covenant’ is consonant with native beliefs about the Prophet in a way animal names no longer were for an urbane, sophisticated Iranian world far removed from the life of the Prophet’s semi-nomadic, stone age people. For the structure and content of Zarathustra’s revelation was and is pre-eminently connected by classical Iranian tradition, not only to dime-store miracles such as healing the sick or raising the dead (the fourth-century Armenian P’awstos Buzand mentions an itinerant Christian holy man who raised the dead ‘and did still more wonderful things’ though we are not told what those tantalizing feats of thaumaturgy were), but to the radically new dualist doctrine he preached in his hymns, to the words themselves of those hymns, to their mental and physical power, and to their ethical and moral message. He was a priest and *maθran*, one who wove together and recited audible ritual formulas of power and truth, mantras – the Avesta is one entire holy mantra, one *maθra spənta*. The mountain where the Prophet’s colloquies with Ahura Mazdā took place is called after them the *spəntō frašnā*, ‘sacred questionings’. The Zoroastrian credo in *Yasna* 12 to which one referred above draws its authority from the doctrines and revelations given ‘in all the questionings, all the meetings at which Zarathustra and Ahura Mazdā conferred together’ (*vispaēšu frašnaēšu, vīspaēšu hanjamanaēsu, yāiš āpərəsaētəm Mazdāscā Zaraθuštrasčā*). The great Iranists of the twentieth century took up anew the study of Zarathustra’s hymns, in the decades after Henning had decried the disintegration of Avestic studies; and in the main their work has shown, through judicious use of the comparative method and relation of the *Gāthās* to Vedic, Hellenic and Celtic poetry, how these foundational texts of Zoroastrianism can be understood as very sophisticated religious poems. Prof. Martin Schwartz in particular has demonstrated in his groundbreaking studies how the *Gāthās* themselves are intricately composed words, vast symmetrical structures and encodings; and often, one might add, they are themselves about the spiritual, mental and physical power of words, poetry upon poetry. Schwartz’s insights in many respects are founded in those of Saussure’s studies of what the great French Swiss linguist called the hypograms of Latin poetry. These patterns are not

products of the fertile imagination of modern savants, but are the bones and sinews of ancient poetics.¹⁰ In Yasna 28.5 the Prophet declares he will by great pronouncement ward off harmful creatures. In Yasna 31.1 he pronounces 'speech never heard [hitherto]'. Prof. P. O. Skjærvø in his series of studies of the epic substructure of the Avesta (and of the transmission of this epic and mythological material into the subsequent Manichaean literature in various Middle Iranian languages) has justifiably compared to Homeric feats of brute strength the episode in the *Vidēvdāt* in which the Prophet casts two stones, each the size of the house, at the Destructive Spirit; and the structure, themes, and language of oral heroic epic indeed suffuse the Avestan corpus. The great Russian Iranist and scholar of the *Gāthās* Prof. Ivan Mikhailovich Steblin-Kamensky notes rightly, though, that the use of this image may be a metaphor: in *Yašt* 17.20, the Destructive Spirit complains that the Prophet is assaulting him with the *Ahuna Vairya* prayer, 'fighting as though with a stone the size of a house'.¹¹ The great spiritual war of Zoroastrian dualism is of course between cosmos and chaos, as in Greek conceptions of physics and cosmology; but *Aša* and *Druj* have a moral dimension and semantic distinction beyond this. They are Truth/Righteousness ('Order', favoured by some recent students of the religion, seems a peculiarly vapid misunderstanding of the great moral force that *Aša vahišta*, *Aša sraēšta*, 'O best Truth, O most beautiful Truth!' represents) and the Lie. It is by spirit and word, not by mere brute strength, that the Prophet fought evil; and his words were and are deeds.¹² If, then, an ancient Mithraic artist were to attempt to portray Zoroaster, he might well dress him in Persian priestly garb and place a staff in one hand and the scroll of the lawgiver, the prophet, the sage, in the other, as at Dura. He is the bringer of the powerful covenant.

We find a parallel to that Armenian gloss at the other end of the Zoroastrian world, in India – suggesting, perhaps, a common exegetical strand, or *zand*, in both regions. In her discussion of the depiction of Mithra on the bas-relief of Tāq-e Bostān, to which we will turn presently in greater detail, Martha Carter suggests that the great *yazata* is shown standing on a lotus flower because the symbol was used to signify a contemporary political connection of the Sasanians with the Kushans.¹³ Perhaps so, for in the sixteenth chapter of the *Bundahišn* it is rather the goddess of the waters Ābān who is associated with the lotus (Phl. *nīlōpal*), while Mihr presides over all *wiškōfagān* – 'blossoms' – generally. So the lotus is not his particular flower. The lotus is fairly common in Ancient Iranian art, and Achaemenid kings are depicted holding the flower in their left hands, perhaps to enjoy its fragrance. But the lotus was in the Indian Subcontinent and in regions influenced by its Buddhist iconography especially so potent and universally recognized a marker of sanctity that Christians in western China were to make of it the base of the Cross in images on bas-reliefs. The Armenians co-opted the Sasanian symbol of twin wings, to support the Holy Sign on their own early Christian monuments: a parallel co-optation of an earlier religious framing device to new purposes. So it is not beyond the realm of possibility that a lotus on a Sasanian relief might have had political overtones.

Carter discusses briefly, in conjunction with her theory, the famous *magavans* – Zoroastrians of the region of Sind. According to the *Bhaviṣya Purāṇa* (139.44) the *magas* were descended from a sage of the Mihira clan in Śakadvīpa, literally the Island of the Sakas/Scythians – that is, from an Iranian noble family such as the Mihrānids, from Sagastān/Sistān. The daughter of the sage, the legend continues, married the Sun god (this would be the Indian Sūrya). Their son, founder of the Maga sect, was named Jaraśabda, that is, Zarathustra. The association with the sun and light would accord with the Zoroastrian tradition, found in the seventh book of the *Dēnkard* and elsewhere, that the home of the parents of the Prophet blazed with light before his birth. Classical and Iranian traditions affirm that he laughed at birth, and the *Zardušt-nāme* brings together the two details: *be-khandīd chun shod ze mādar jodā;/ darrakhshān shod az khande-ye u sarā*, ‘He laughed as he left his mother’s womb/ And from his laughter shone the room.’ As to the Prophet’s name in this Puranic tradition, Jaraśabda, it seems an arbitrary, deliberate kind of form. One can render Zarathustra in various ways in Indic languages, Parsi Gujarati Jarthošt for example; so perhaps making Indic *śabda*, ‘word’, the second part of the Prophet’s name was translation from an Iranian form where the same was perceived, whether it contained something like *uxt* ‘speech’ or *dašn* ‘covenant’. That is what apparently produced the Armenian gloss. Given the importance of the identification of Zarathustra as a lawgiver, the parallel may not have been fortuitous, but reflected instead a widespread exegetical tradition. The manuscripts containing the Armenian gloss are very late, copied a full millennium after Elišē wrote his history of Vardan, but so indeed is the entire Zoroastrian manuscript tradition itself, and so is that of India. The conservatism of Armenian tradition and its long and intimate acquaintance with Iran and Zoroastrianism speak in favour of an authentically old exegetical line, yet coincidence and late invention are also possible.

So we may have a tradition in which Zoroaster was regarded mainly as the bringer of a powerful covenant, as a lawgiver. A furled scroll could have signified such a role to Zoroastrians of the late Parthian Arsacid period, to which the Zoroastrian Pahlavi books assign the first attempts to codify the Avestan corpus in writing. One sacerdotal figure in the Mithraeum of Dura-Europos, then, could be Zarathustra; the other, either the Ostanēs of Classical legend or perhaps even the sage Jamaspa of native Iranian tradition. One does not insist that Cumont and Rostovtzeff were right in their identification; but they were not necessarily wrong. Palmyrene priests? Donors? The things that you’re liable to read in the Bible (or Near East art historical writing), it ain’t necessarily so ...

Let us now consider the relief of Mithra at Tāq-e Bostān, from the late fourth century (Fig. 16). It belongs to a complex of reliefs on the cliff face and in rock-cut vaults near a spring emptying into a pool, in the Zagros highlands near Kermanshah, on the old Baghdad-Khorasan road. It would have been, thus, a pleasant rest stop and place of pilgrimage and veneration for travellers in antiquity. There is no problem of identification of Mithra himself, even

Figure 16 Mithra, Shapur II (?), and Ohrmazd, Tāq-e Bostan

though the scene as a whole lends itself to various interpretations. The basic iconography of the god, as we have already noted, is widespread and stable as that of no other in the pantheon; and he appears in Sasanian Iran too, on a coin of Hormizd I in the late third century, that is, about a hundred years before this rock relief. The *yazata* appears behind a king who is receiving the beribboned ring from Ahura Mazdā, and extends the *barsom*. Mithra stands on a lotus; the king and the supreme God, on the extended, prostrate corpse of a bearded Roman emperor. The latter can be none other than the fourth-century Julian the Apostate, whom Shapur II defeated; but there has been much debate about the identity of the king treading upon him. Some scholars¹⁴ identify him as Ardašir II, who reigned for four years after Shapur and could scarcely have killed poor Julian a second time, so if it is indeed he, then the victory over the powerful enemy is meant somehow to accrue to his benefit, as a good deed of his predecessor – probably also a close relative – whose merit he is meant to inherit. Carter would have the lotus signify the success of Sasanian policy in eastern regions. Poor dead, defeated Julian had gone on campaign proclaiming the protection of Sol-Mithras, so some interpreters of the scene have suggested that showing Mithra himself blessing the Sasanian who crushed

Figure 17 Modern Parsi depiction of Zarathustra

the audacious Roman aggressor was a propagandistic retort; and indeed this is the only ancient Iranian use of Mithra in a scene legitimating royal power.¹⁵ That argument seems far-fetched: when the Sasanians sacked Bethlehem, they left a fresco of the three Magi unharmed because the visitors to the newborn Christ looked so much like their own priests, quite understandably. One doubts the same Sasanians would have gone out of their way to disparage worshippers of one of their own gods and make the insult a key point of a major bas-relief, however different the Mithraic religion was from mainstream Zoroastrianism.

It is a striking sculpture, whatever its overtones; and it serves as the basis for most modern Parsi depictions of the Prophet Zarathustra¹⁶ (Fig. 17). There are 13 rays on the nimbus at Tāq-e Bostān; in Parsi depictions there are 11 or 12, perhaps because the Western Christian superstition about 13 as an unlucky number had entered Parsi consciousness. The Prophet holds the *barsom*, or a knob-stick, or a flaming torch, or a cow-headed mace, or is shown as an *imago*

Figure 18 Modern Parsi depiction of Zarathustra

Figure 19 Modern Parsi depiction of Zarathustra

Figure 20 Modern Parsi depiction of Zarathustra

Figure 21 Modern Parsi depiction of Zarathustra

clipeata 'portrait on a round shield' (Figs 18, 19, 20 and 21). A priest in the course of ordination sleeps with a mace under his pillow; and it hangs with a sword in the fire temple to signify the battle against evil. The Sasanian Mithra has a low-cut, heavily embroidered collar that shows off his powerful shoulders; the Parsi Zarathustra's white shirt comes up to his neck, like that of an officiating priest. There is an image of Zarathustra that was frequently used a century ago but is now rare, that portrays him holding a bow and standing in the open country before a fire altar (Fig. 22), while a stylized winged figure hovers in the sky facing him: this is taken from an early engraving of the tomb of Darius I. Other recent Parsi depictions of Zarathustra show him in simple, priestly garb, as on a medal to be worn by a believer (Fig. 23); and he is always, in all Zoroastrian art, bearded. (So is Mithra at Tāq-e Bostān and so are the figures in the frescoes of the Dura Mithraeum.) And there are portrayals of the Prophet, as noted earlier, with another figure (Fig. 24 and 25). The obvious questions are the ones one cannot confidently answer, though there may be documentation that one has simply been unable to find. Were the early Parsi artists fully aware that the figure that served as their model for Zarathustra was Mithra; and if so, why did they choose him? Mithra's very name means 'covenant'; and one tradition, possibly widespread, finds a word for the covenant in the Prophet's name. Zarathustra was the perfect man, the *teleios anthrōpos*; and Mithra is

Figure 23 Medal with Zarathustra, India, silver, early 20th cent. (?).
Collection of J.R. Russell

Figure 24 Zoroaster and 'Lohrasp'

the most human of the *yazatas* – a quality that figured, most likely, in the evolution of the soteriological religious fraternity of the Mithraists. Mithra is a *yazata* also associated very closely with the sun; and the Parsis in Gujarat adopted a local symbol of the Hindu sun god Sūrya – the sun rising (or, if one is in western India, setting) over the sea as an emblem of their own faith. So a picture recognized as that of Mithra might have been co-opted as an icon of Zarathustra.

Figure 25 Zoroaster and 'Lohrasp'

We know at least that Zoroastrians in the early modern period, before any encounter with Western archaeological and philological research, preserved an image of Mithra that seems very much like the standard iconographical type: in the seventeenth century *Šabī* Dastur Anushirvan Marzban of Kerman beheld in a dream the *yazata* Mihr with a luminous face. The vision is described in Persian verse in a *rivāyat*, or religious responsum:

Dastur Nushirvan told me, "This is a secret hidden amongst the good and bad alike. Now, one night as I was deep in slumber, I beheld one whose face was like the Sun, from whom wafted the fragrance of musk and rose water; languorous was that ambergris perfume. I opened my mouth and spoke to him: Who are you? Tell me your name. He said: Know that I am the god Mithra, who by the gracious command of the Knower of the Hidden am the keeper of all covenants. I am the guide in the material and spiritual worlds. I shattered the works of Ahreman; I work enmity against the demons and Satan [...]"¹⁷

Between the Mithra of Sasanian and earlier ages, whose appearance seems to have been remembered in indigenous tradition, and the appropriation in modern Zoroastrian art of that image for the portrayal of the Prophet Zarathustra, lies the entire era of the growth of the Western tradition, in which Zoroaster was at first but dimly remembered. Gemistos Plethon revived the Classical image of the Persian astrologer-mage for the Italian Renaissance; and Raphael portrayed Zoroaster among the great philosophers of antiquity in his 'School of Athens,' painted in the Stanza della Segnatura of the Vatican for Pope Julius II (1503–1513). (Fig. 26) He is shown with Ptolemy and Euclid,

Figure 26 Raphael, 'The School of Athens'

Figure 27 'The School of Athens', details

Figure 28 Giusto of Padua's Zoroaster, Ambrosian codex, fol. 3r

but opinion seems to be divided, though, about which figure represents him. Vasari identifies him as 'Zoroastre, Re de' Battriani', King of the Bactrians; so he may be the man in the radiate royal crown (not unlike Mithra's nimbus) with his back turned to us. This figure holds a terrestrial globe and there are tiny pseudo-Oriental characters on the hem of his golden mantle (Fig. 27). But if the star-studded globe represents Zoroaster's profession of astrology, then he is the sage in white facing the crowned figure and the viewer, with Raphael hovering nearby.¹⁸

Raphael had several precursors, the most prominent of whom was Giusto de Padova (d. c. 1397), who painted a fresco on the right wall of the Capella di Sant' Agostino of the Eremitani of the philosophers of antiquity seated beneath the figures embodying their particular arts and sciences. A German traveller a century later described the painting and it was also copied in a contemporary manuscript. The latter shows Zoroaster seated below a figure embodying Dialectic (*Dyalectica*), who holds a serpent in each hand (Fig. 28). Zoroaster's identification as a dialectician would have been based on the grounds of his dualistic philosophy. The other non-Christian prophet of such contemporary schemata of arts and virtues paired with their human proponents or opposites is Mohammed. But his dualism is of another sort: in the *Inferno* of Dante the Arab tears himself down the middle as punishment for having rent in twain the body of the Church; and he is the human antithesis of *Fides*, 'Faith'. Dialectic is lodged between the two other subjects of the medieval curriculum of studies called the *trivium*, *Gramatica* and *Retorica*. The Prophet's name is given in the rather garbled form *Cereastes*, and he is clothed in a rose-coloured hood, with yellow undergarments and a blue and red mantle. He is writing unintelligible characters on a page he holds at right angles to himself. Karl Dannenfeldt describes these as 'undoubtedly intended for oriental script'.¹⁹ Although most of the other philosophers in the scene are also scribbling away at books, I think this is still an argument for identifying the crowned figure with his back to us and a line of Oriental-style writing on his mantle in 'The School of Athens' as Zoroaster, even though the figure in Raphael's painting holds a terrestrial globe rather than the expected celestial one. At Padua it is Ptolemy, not 'Cereastes'/Zoroaster, who is the proponent of astrology; so Raphael a century later might have made the same identification, and we need not force upon Zoroaster the star-studded globe or the profession of astrology either.²⁰

In conclusion, one offers some final reflections on the question. Much is made of the need to protect the environment and to curb the diminution of species, whose diversity is an ecological necessity and whose destruction by human agency is a moral wrong. The same may be said of languages, which are disappearing at a rate proportional to the extinction of plants and animals. The Zoroastrians are a small people, defined not by land or language or even cultural unity, but by a common devotion to a unique conception of the cosmos and its meaning, radically and irreconcilably different from any other, that was in antiquity of extreme power and influence. This revelatory conception

belonged to a single man, whose elusive image one has pursued here, across millennia, monuments and texts. Surely the study of such an unusual heritage deserves to be continued: one taught it at Columbia, only to see the century-long history of Zoroastrian studies there come to an end. It is now at an end at Harvard as well, and at Berkeley. But the study of ancient Iran ought not to be eclipsed by subjects of greater topical practicality, whose value may prove to have been ephemeral. I come to this field, also, quite specifically and unapologetically as an Armenologist. I speak for the ancient and continuous testimony of a people that, unique among the non-Muslim peoples of the Near East, have never surrendered for any period of time any salient aspect of their identity, their sovereign right to be themselves, claiming their native land, pursuing their political aspirations, preserving their language and script, and defending their faith. The Armenian perspective, even in the consideration of so seemingly distant a topic as the image of Zoroaster, is valuable, and students of antiquity, particularly Iranists, ignore it to their own detriment. The river that flows through the Armenian capital, Erevan, is called the Hrazdan: it takes its name from Frāzdānu, the river on whose banks Zarathustra converted king Vishtaspa to his new religion. No other city, neither the one through which the Thames flows, nor the one above the mighty Hudson, can boast such a mark of hoary nobility. In an appendix I would then adduce some further Armenian evidence to approach questions concerning the iconography of the Sasanian reliefs that have come up in this discussion.

APPENDIX

A stone capital from K'asał of the fifth or sixth century shows the Armenian king Tiridates the Great, the first royal convert to Christianity, holding a staff in his right hand and a ring in his left; the ring ought to remind one of the one bestowed upon the Sasanian kings of the period, and its survival in early Christian Armenia suggests the durability of certain religious emblems of royalty (Fig. 29).²¹ It does not, however, bear an inscription. The medieval Armenian cemeteries of Julfa in Nakhichevan and of various sites in Arc'ax (Mountainous Karabagh) have numerous tombstones depicting in bas-relief the activities and pleasures of the noblemen who rest beneath them. They depict hunting and feasting and riding on horseback. No other mode of transport for a nobleman was imaginable, and one has already observed that the ancient belief that one's faithful mount bears one to the otherworld endures amongst the Iranians of modern Armenia – the Yezidi Kurds. So important was the equine image that such funerary monuments, which Armenians carved for themselves as well, are called in Armenian *jiak'ar*, 'horse stones'. The Armenian tombs have been compared sometimes to the massive grave monuments of Bogomil princes of the same period in Bosnia; and there is abundant evidence to suggest that Armenian sectarians of the Byzantine period, resettled in the Balkans, brought

Figure 29 Tiridates on a capital from K'asat

their beliefs and culture to enrich the homelands of the Southern Slavs. In the Kievan period, the Iranian-flavoured art of the bas-reliefs of the Armenian Church of the Holy Cross on Alt'amar Island, Lake Van, seems strongly to have influenced the bas-reliefs of the churches of Rus', at Vladimir and other sites.²² One Armenian tombstone from Gndevank bears this epitaph: *Ays ē hangist paron Avak'in, or karčawrawk'ēlav, ēar andarām psakn ... t'v. ԹՅԶ* 'This is the resting [place] of lord Awag, whose days were short; he took the unwithering diadem in (AD 1567).'²³ (Fig. 30) The relief depicts a man holding in his right hand the reins of a saddled horse; in his left, he has a round, ring-like object. To

Figure 30 Gndevank'tombstone

his left a hunter aims an arrow at a fleeing mountain goat. The reference to the diadem (Armenian loan-word *psak*; see above), though of course a standard Christian formula, still explains what the sculptor meant the ring-like object to be. No Sasanian bas-relief does this. But we do have both *pusag* and *didēm* in Parthian funerary hymns as the ring-wreaths the righteous will receive after death.²⁴ A funerary inscription of 1318 from Noravank reads, *Gelahrašn Pułtayin, or eritasard hasaki yet yolov k'aj mrc'manc'tigaxoc'eal zant'ařamn ankalaw zpsak* 'Of Pułtay of wondrous beauty, who at a young age after many brave tournaments was pierced through by a javelin and received the unwithering diadem.'²⁵ The tombstone of *melik*'Mirřan from Břnakot', AD 1551, shows a man standing on a prostrate figure: he holds the Cross in his right hand and a ring-like object in his left (Fig. 31).²⁶ Although a scholar who has discussed this image believes the fallen man to be a revered ancestor; and the ring, a wine cup viewed from above – it seems more likely that this funerary scene celebrates the nobleman's defeat of an enemy and his triumphant reception in Heaven with Cross and diadem; it would then be a remote echo of the Sasanian reliefs, such as the ones at Naqř-e Rostam and Tāq-e Bostān. A tombstone from řōř in Arc'ax (Fig. 32), possibly of the noble *melik*'řahnazarean clan and *circa* seventeenth century, depicts horsemen flourishing aloft rings that even trail ribbons behind them in pure Sasanian style, though their weapons are more up to date – a rifle is neatly carved nearby.²⁷ The rings are diadems, then; and the hard data of Armenian texts must be taken into account in any discussion of the Iranian monuments, despite their distance in time. These scenes take place,

Figure 31 Bīnakot'tombstone

Figure 32 Tombstone from Šoš, Arc'ax

not at court or here, but in the next world: one must consider the possibility that the scene at Naqš-e Rostam is not an 'investiture', but a vision of the first Sasanian king in the otherworldly House of Song, the *rōšn garōdmān* of Ahura Mazdā, the dead body of his enemy solid proof of his kirbag, his meritorious action – and a guarantee of salvation. Let us return to the Armenian relief.

There are amphorae of wine and a feast is about to begin. A seated *gusan* ('bard, minstrel', a well-known Parthian loan in Armenian that is discussed in far more detail in the Armenian texts than in any Iranian ones) indicates that their glorious, diademed entry into the *gerezman* is to be taken quite literally. For that Armenian word for the tomb (heaven is *draxt*, a forest of trees) derives from a Northwestern Middle Iranian descendant of the Avestan *garō dāmāna*, 'house of song', that designation of the otherworld of the righteous coined by Zarathustra himself. Zarathustra, the singer of the *Gāthās*, the bringer of the mighty covenant and the good law, not the pernicious 'Superman' of diseased modern fantasy but still the most godlike of men. Zarathustra, whose image seems to be settled once and for all amongst his followers as that of the Mithra, the most human of the gods, whose name in Persian, Mihr, has expanded from covenant or treaty and come to embrace friendship, love and the Sun's light. Mihr lives still in Armenia as a hero in a cave, Mher, the once and future king. But that story is for another time; and our present study is ended.

NOTES

1. The term seems to be Antiochus's invention.
2. Iranian **naxwadāra-*, 'holder of the prime (position)'; the form is attested in the Parthian period in Greek form as *nohodaes*.

THE ELEPHANT IN THE ROOM: DAWT‘AK THE RHETOR’S GIFT LIST.

By James R. Russell,
Harvard University.

Pil omer: Mah gadlu ma‘asekha Adonay, me‘od ‘amqu mahshevotekha “The elephant says, How great are thy works, O Lord; Thy thoughts are very deep (Ps. 92.6).” (*Pereq shirah*)¹

“At that time a certain man skilled in speaking happened to be passing through, who was well informed in skillful wisdom, called by the name Dawt‘ak, who was handy in the exercises of creative composition and advanced in the reading of poetry. He also played music splendidly, with artistry, drawing upon a generous abundance of words, having even as brave a public voice as he had a pen that swiftly wrote. He had come for a stay of many days and frequented the royal court. But when the dire murmurs (ššuk) concerning the sudden killing of the great commander were reaching these eastern parts, then he began to sing this lament, its first lines arranged alphabetically, over Juanšēr, a man deserving of much good.” That is the conclusion in the *History of the Realm of Ałuank‘* of 2.34, introducing Dawt‘ak *k‘ert‘ol*, the Rhetor. The following chapter, 2.35 is the lament over Prince Javanshir itself, the first long secular poem recorded in Armenian literature—and there is no further comment on it. Dawt‘ak, is not mentioned again, in the *History* or in

1 - The “Chapter of Song” is a medieval Hebrew text on the psalms the animals sing, based on Biblical verses. The introduction explains that David was once boasting about how many psalms he had composed. The frog interrupted, explaining it had sung more. When David made to disagree, God interposed Himself into the conversation and assured His anointed that the batrachian bard spoke truly. For an illustrated edition of the text, with commentary, see Slifkin 2009. For more on David, see *infra*. For more on frogs, see Aristophanes.

Armenian sources thereafter. And, with the possible exception of an earlier passage in the same *History*, the one to be considered here, no other work of his is known to exist.

So all that is known of him at present is this laudatory introduction and the Lament, with his name. That name Dawt'ak, "Little David", is almost as lonely. It is attested only once more, of the *chorespiskopos* of Arcn in 1048. There is an Armenian-in-Greek Tautoukas of 890, that is, *Dawt'uk, and a Dawt'ik of 1508—the scarcity of diminutives is striking, since Ačarean knows fully 254 Davids from the written sources, from the fourth century on. The name here may just have been the professional moniker of this praise singer, orator, and jack-of-all-verbal-trades, who frequented the court of this prince in the northeast and was maybe a wandering scholar, seeking employment with other minor dynasts in the course of his career. Was he christened simply David, Dawit'? The Biblical tag is apposite, at any rate, with or without a diminutive *-ak*, *-uk*, or *-ik*. King David was the eloquent Psalmist, the musician whose lyre (Hebrew *kinnōr*, Syr. *kinnāra*, Arm. l-w *k'nar*), Orpheus-like, had calmed king Saul in his bestial moods. The image of David in art has been inseparable from his musical instrument, since ancient days. David is perhaps the most densely complex, humanly vivid character in the Bible, the beautiful boy singer and handsome warrior, the fleeing poet begging the Lord's aid, the wayward sinner who lusted after Bathsheba, the faithful lover of Jonathan, the king of Israel who danced naked before the Lord, and (not least for Armenian Christians in later centuries) the royal ancestor of Jesus. The Bagratuni house, the "god-given ones" were after baptism to abandon their old genealogy from the divinity of stormy might, Tarhundas/Tork' Angeł, and claim descent from David. Perhaps Dawt'ak had been given the famous name, with its associations with eloquence and music, at birth—and grew into it. So the diminutive *-ak* might have been part of our poet's fortuitous given name; but again it, too, might just be a conscious mark of his trade. For the connection of diminutives to singers and poets, one has only to think only of the famous 16th-century *ashugh* of the Van region, Nahapet *K'uč'ak*, "Little Nahapet". (And for those of us who grew up with the blues and rock as our minstrelsy, I need only invoke Little Richard.)

Dawt'ak orated, on a permanent or part-time basis, at the up-country Ałuan court of a Sasanian prince (not king), Javānšēr—the Young Lion (in Armenian that would be Koriwn, from Hebrew, the name of the pupil and hagiographer of St. Mesrop Maštoc'). Javānšēr, appointed prince (*išxan*) of Ałuank' by Yazdagerd III Šahriyār, r. 632-652, the last Sasanian (and, in the Parsi Zoroastrian view, legitimate) ruler of Iran, was the second of the four sons of Varaz-Grigor, who was consecrated by Viroy, Catholicos of Ałuank', and was himself a member of the house of Artašir, that is, a Sasanian and a Persian. He would have been fluent in Middle Persian, schooled in some Greek, conversant in the local Ałuan patois, and probably capable of a little Arabic. But Dawt'ak's alphabetic Lament follows the order of the Armenian, not the Caucasian Albanian, alphabet devised by Maštoc'. Armenian was a language employed often at court and for much Christian learning in Caucasian Albania, whatever the native tongue of those employing it might have been, and Javānšēr most likely spoke and read it perfectly. Though the Ałuan language in its Mesropian script was used for epigraphy and the composition of one known

theological manuscript (presumably there were many more), we have far too little of it, and our knowledge of its use is too scanty, to paint a clear picture of its cultural and political status. It seems most reasonable to suppose that Dawt'ak was an Armenian by birth or by schooling, unless one suppose that Movsēs translated an abecedarian lament from Aḫuan, rendering it as an equivalent Armenian abecedarian poem of considerable sophistication—which seems absurd. Or did he invent the whole scene, poem and poet and all? That is most improbable as well.

The genre of the elegy and lament was well known generally; and in the pre-Islamic Iranian world the literary *locus classicus* is the lament over the fallen brother of Vištāspā, Zairivairi, in the Parthian-accented Pahlavi *Ayādgār ī Zarērān*, “The Memorial of Zarēr”. The episode of Vač'ē (i.e., Persian *bačče*, “the kid”, which is what he is) in the *Buzandaran* of P'awstos suggests a specific knowledge of the episode in which little Bastwar, Zarēr's son, tries to ride out to avenge his treacherously slain father. Great epic heroes often die by treachery: Clytemnestra and Aegisthus hack Agamemnon to death in his bath, and an Arab princess shoots David of Sasun in the back as he is bathing, too. Dawt'ak is conscious of the *topos*, and has one foot firmly planted in pagan antiquity. But the other stands on Christian ground, so, as is often the case in Armenian literature, we encounter a curious mixture of images from the two worlds. The poet thus presents Javānšīr's murderer, the ungrateful courtier Varazoy, in traditional epic colors while comparing him also to the Biblical Cain;² the 12th-century Armenian writer Matthew of Edessa, also, in a passage I have interpreted as an epic poem, likewise stigmatizes the low-born, cowardly killer of the champion Vasak Pahlawuni as Cain.³ Both poets call their own heroes lions.

One feels the same kind of unsettling strangeness, the sense of incongruity, even, of the encounter with old, local, pagan themes and images culled from the new Christian dispensation rubbing shoulders in the same lines, when one reads an epic text from the other edge of Christendom that emerged at about the same time as Dawt'ak's Lament. This is the *Beowulf* poem in Old English, where an ancient monster of Nordic lore is likened to Cain: *Waes se grimme goest Grendel hāten,/ maere mearc-stapa, sē þe mōras hēold,/ Fen ond faesten; fifel-cynnes eard/ won-saelī wer weardode hwīle,/ siþðan him Scyppend forscrifen haefde/ in Caines cynne...* “Grendel was the name of this grim demon/ haunting the marshes, marauding round the heath/ and the desolate fens;/ he had dwelt for a time/ in misery among the banished monsters,/ Cain's clan, whom the Creator had outlawed.”⁴ C.S. Lewis, the medievalist and philologist whose imaginative musings found relief in Christianizing science fiction, conveys this feeling of a dim, intermediate time between two ages—discrete ages, as perceived in remote hindsight, at least—in the character of Merlin in the novel *That Hideous Strength*. The old magician of Arthurian Celtic Britain, about to rise again, is imagined as a Christian with something of the old Druidic religion

2- Arak'elyan 1983, p. 227, line 22.

3- See Russell [2016].

4- Heaney 2000, pp. 8-9.

still clinging to his heart, speaking a likewise intermediate language, one akin to Welsh and spoken in the proximity of a late Latin vernacular that might sound a bit— Lewis' hero muses— like Spanish. Our prince Javānšēr is a Christian, but one who still enjoys the pagan entertainments of *gusank* ("minstrels") and celebrates the ancient Zoroastrian New Year's feast of Nawasard in the company of his band of bodyguard-intimates, the *name-sakan gund*. The protective shield of the Christian faith is sometimes but a thin veneer; for his assassin, a villain named Varazoy (the name contains the Iranian word for "wild boar", the totemic animal of Vərəθrağhna and of the Arsacids) who is "imbued with the sin of Cain" (instead of slaying his innocent brother, he is to kill his guileless liege-lord), tempts the prince to evil pleasures that the latter enjoys but that are, unfortunately, not enumerated.⁵ Javānšēr and Merlin both inhabit two worlds, cosmologies, cultures.

To return back briefly to the *Buzandaran*, that text reflects an awareness of the general themes of the much larger epic cycle to which "The Memorial of Zarēr", with its elegy, belonged.⁶ So Dawt'ak, who mentions in his lament for Javānšēr the troupes of professional women mourners, a local custom, might very likely have heard local forms of the laments they sang, as well as Biblical and Classical models— even though his own lament is a highly polished, written work that bristles with complex learned allusions. These *ḵaylk* "bands" of *eleramayrs*, "mothers of lamentation", were still common in the Armenia of St. Gregory of Narek, who mentions them late in the tenth century. Their ritual practices have an Iranian parallel also in the widespread Iranian *sūg-e Siyāvōš*, the lamentation over the young dying and rising hero-god Syāvaršan, which al-Bīrūnī and his contemporaries knew. The word for mourning in the rite comes into Armenian as the loan word *sug*; the name, as *Šawarš*; and the persecutor of the latter, king Afrasiyāb (Middle Persian Frasiyāg) indirectly attested from the toponym Hrasekaber, *Hraseak.⁷ So when it came to ritualized mourning, the mythological stories, the setting, the vocabulary, and the rite— all were known to Armenians. The word for these bands of wailers, incidentally, has been prone to be misunderstood as "ostriches": this was corrected by the late Prof. Charles J.F. Dowsett, one's thesis supervisor at Oxford and the learned predecessor of the subsequent great scholars enthroned on the Gulbenkian Chair there, my friends Robert Thomson and Theo Van Lint. It is to Prof. Dowsett that we owe the first and so far only major translation and study in English of the *Patmut'iw n aluanic' ašxarhi* of Movsēs Dasxuranc'i (or Kałankatuac'i), our sole source on the work and personality of Dawt'ak. But even if Dawt'ak did not sing of wandering gaggles of howling ostriches, it would seem he lovingly described other impressive, exotic animals, as we shall see presently.

For Dowsett suggests Dawt'ak might have been the author, not only of the Lament, but also of the eloquent and vivid description preceding it, in 2.28, of the gifts of the Arab

5- The rare term *namesakan*, variant *namisakan*, understood by Malxaseanc' as "close, near, noble" from context, may be Middle Iranian, perhaps from a compound like **nāma-yasa-* "attaining a name", cf. Parthian *nāmḡn* and the identical Sogdian *nāmḡn*, "famous".

6- See Russell 1996.

7- See Russell 1988.

Caliph, the “king of the south”, to prince Javānšēr:⁸ an elephant, a parrot, a gold-plated steel sword adorned with pearls, robes of silk and royal purple, and 52 horses.⁹ This is an interesting passage deserving of some close examination for its form, content, and setting in its own right. If indeed it may be the only other piece Dawt‘ak composed that we have, then its value is correspondingly greater still and one may further consider its connection to the securely-attributed Lament. My partial translation follows:

2.28 (pp. 196-201): THE SECOND JOURNEY OF JAVĀNŠĒR TO THE RULER OF THE SOUTH, AND HIS HELPING THE GREEKS WITH PRUDENT AID, AND HIS HAVING HIS TRIBUTE HALVED. The king of the south again summoned with an invitation, promising gifts, the famed Javānšēr, prince of the east, saying he would augment his previous honor with greater glory still, on account of the grandees of the city of Byzantium having come to undertake subjugation by of the sons of Hagar for tribute, because it was in the seventh year of the reign of Constantine that the eunuchs had planned by themselves to kill him; so there was a command from the king to the grandees to wait till the prince of the east might arrive. But the greatly lauded lord Javānšēr reached there without hesitation with the same company just like the first time; at which the king accorded him incomparably greater esteem and honors than he had done at first; for he ordered that the palace of his own brother be arranged for his rest, and he always had him sit next to him at the table at dinner. So he ordered him therefore propose words of peace to the honorable men who had come from the imperial city. The king was mightily amazed on account of his thoughtfully deep wisdom, and the gratitude of the emissaries of the Romans to him was no less, since he contrived to persuade the mind of the king in their favor in many matters.

And after this with the highly acclamatory honor due one who is about to take the crown, the king of the south according the ultimate glory of monarchs to the prince of the east, commanding that he be granted that superbly trained, greatly learned elephant of mighty form from the realm of India, by which the courts of kings, most mighty and casting a long shadow, are adorned. Till today nobody has ever heard of such a thing, how to the most junior such a thing was granted by reason of great esteem. After that, also the parrot, which also is more honorable than any other birds. In the remote past there was no way one might see it anywhere other than in the kingdom of the Romans.

8- Dowsett 1961, p. 129 n. 4.

9- Why exactly fifty-two horses? One to ride to the hunt each week of the year, I suppose. In the Pahlavi text *Xusrō ud rēdag-ē*, “Khosrow [Anushirvan] and one page boy,” the former asks the latter, who is applying for a job at court, what the best mount is. The one of the nocturnal chamber, replies the pert youth lewdly. In Rajasthan this writer was shown the harem of the former maharajah: it had 360 rooms, so that the ruler might enjoy a different concubine each day of the year. The exertions of venery come in various forms.

With the same he granted him yet more greatness: a steel saber, sheathed in gold, encrusted with pearls; and gold-embroidered cloths and silks, brocades and purples joyous to behold with whatever other noble colors all reckoned in their number together, that were and are now; and fifty two swift coursing horses that he, the king himself, used to ride.

And he commanded the queen of his ladies that she give to the lady of the east gifts of beautiful adornment splendid in their richness, gifts fit for queens: silken and gold-woven garments; and for those who came after him in his train he commanded that there be given to every one of them, about fifty men in all, brocades and woven headbands...

We saw the royal bird, whose form was desirable; for in its yellow feathers a little greenness was evenly mixed and shimmering, and here and there the reddish spotted color of its flanks was varied, roundabout its neck, like gold-tinged pearly dewdrops on a spring morning in the tilled fields tumbling about each other. So also the pupils of its eyes, and its heavy curving beak turned down over its mouth, where the tip of the round spike of its tongue, jutting out as teeth do, continuously rolled out the trilling of delicate sound of a voice like the speech of human nature. And just as at first it had been the praise-singer of a certain emperor Nero in his chambers, so latterly we saw it become the speaker of the blessings of our very fortunate prince. But however enchanting that amazement, it was not so much as what I am now about to relate, for just when he was minded to go outside to the hunt or to play at some other amusement, we beheld at the departure of the assemblage of the royal procession, outside the battlements at the entrance gate on the road, that animal— monstrous (*anari*), not good (*anbari*), grotesque (*anheded*), as if come to bow down to the person of the king— the elephant, tall as a boulder, whose legs were like roof beams raising up a mountain, and from its skull the trunk hung downwards like a reptile with evil poison. It dragged and turned it constantly as it shambled over the ground, or it would stand and raise it straight up, or sometimes nuzzling itself with it, it would snort powerfully, breathing in and out through its nostrils. In truth I say that there was a trembling of terrified awe that gripped a man's very nature at the behemoth-like motion of its head. We saw also steeds ridden, haughty, with splendid necks, walking, trotting, and galloping (*čemołk' čepołk' ew ews čaxraslac'k'*), that charged as lightly as if carried on the wind, with golden reins and saddles and decorated trappings. Now what shall I say, what thing shall I utter? For by divine providence even from birth he was created for glory and greatness; and to this day the Lord has opened the way wide for him to be the most glorious in every thing. On account of that we saw him lacking in nothing that kings have, full of everything, gold and much silver, noble purples and lovely clothes and noble gems and shining pearls, no less; everything full and replete.

Gift giving is one of basic social actions of humanity, of course; and Parthian, Sasanian, and later Near Eastern dynasties, down into the Islamic era, preserved in large part the forms of the ritual inherited from the Seleucids, whose own court etiquette combined older Greek forms with a strong Persian admixture. Rolf Strootman, in his recent study of Hellenistic courts and elites, a fundamental contribution to the field, sounds at times as though he could have been a witness to the interaction of Javānšēr, the king of the south, and Dawt'ak. Particularly lavish gifts, he notes, were a way of confirming the giver's superior status—the elephant, in the present case, is the prerogative of the king of the south to give but only barely the prince's right to receive (since he is not a full-fledged king himself, though at least he comes from the Sasanian royal line). This “king”, as Movsēs persistently calls him, is actually the Arab Caliph, Mu'āwiya (661-680 AD). Purple garments also enjoyed particular prestige as a gift, and Javānšēr is to stagger home from the capital of the Caliphate, Damascus, overloaded with them. Strootman cites the description by Phylarchus of an audience at the court of Alexander the Great, with various noblemen, bodyguards (cf. the Ałuan prince's *namesakan gund* “*intimate troop”), and armed soldiers teeming about the person of the emperor, resplendent in their shining armor and purple robes—with a circle of fully armed and caparisoned elephants (!) in a ring outside the royal pavilion. The scene at Damascus would have looked very similar. And Strootman further observes that patronage of the arts was vital to the function of the court, which was a “stage for the drama of kingship” and a “focus for competition with other dynasties”. Among the artists who received favored patronage were composers of panegyric poems, who were especially valued for the purposes of royal propaganda. That is what the panegyric, perhaps of Dawt'ak, does here. It is propaganda that makes explicit and broadcasts the value, importance, and meaning of the gifts Javānšēr received, verbally echoing the visual spectacle. Dawt'ak's eloquence and erudition, too, fit seamlessly into the ancient model. As Strootman writes, “The complexity and learnedness of court poetry, with its references to obscure versions of myths and ingenious literary allusions, give some idea of the level of sophistication that was required to take part in the table talk at court.”¹⁰

And table talk is quite the point here, too; for the setting is a feast, or a series of feasts, some diplomatic, some celebratory, interspersed with royal processions and amusements and—dear to every Armenian or Iranian nobleman—rides to the hunt. Strootman notes that it was common for a Hellenistic ruler to dispense precious tableware, cups, and plates to his guests at a banquet: again, the Sasanians perpetuated this practice. Prudence Harper in her landmark study of royal Sasanian silver vessels and other art uses the Armenian sources to place these objects in the living context of their actual use, and cites Movsēs Dasxuranc'i himself, who mentions that the fourth-century king Shapur II held a feast (čaş) for “all the grandees of noble birth of the ancient clans of the Persians” (*amenayn mecamecac' hnamenic' tohmic' azatatohmn parsic' naxararac'*) and “according to their precedence in honor in seating” (əst gahu naxapatiws) gave each a cup (*bažak*) and a

10- See Strootman 2014, pp. 155-157, 164, 175 and 191.

branch.¹¹ The mention of a branch recalls the leafy fronds that Agathangelos reports the Arsacids used to offer to the Zoroastrian *yazata* Anahit. Apparently it was acceptable protocol for the giver of a gift to call attention to it and to explain its significance on the spot himself. Harper in an epigraph quotes P'awstos (5.2), who describes how the same king gave Mušel Mamikonean, commander-in-chief (*sparapet*) of the Armenians, a cup decorated with the portrait of the latter's white (*čermak*, New Persian *čarmeh*, the white horse that Anglophone equestrians call a "grey") steed in token of gratitude for his noble service to the royal family, and at feasts would command him, Čermakajin gini arbč'ē "Let the rider of the grey drink!"¹² The word for "cup" here is *tašt*: that would have been a wide, flattish bowl with the image inside at its center. Traditional Zoroastrians in India of my acquaintance still drink water or tea out of such shallow bowls, usually made of smooth, unadorned silver, tipping the vessel to one's mouth without touching the lips. The wine of the Sasanians was dark, so the sculpted, repoussé image of the horse at the bottom would have emerged into view as the Armenian warrior was finishing his drink. It would be covered by liquid and obscured once more, for as we know from the Book of Esther, one drank at the Persian court by command, as much as the king wished. Shapur probably bade Mušel hoist more than a few cups before the banquet was over.

The giving of sumptuous gifts to barbarian rulers remained so important an aspect of diplomacy and court life for the eastern Roman Empire that Constantine Porphyrogenitus addresses advice on it to his son at the very start of his treatise, immediately after the preamble to *De Administrando Imperio*, in Book I, Chapter 1: "I conceive, then, that it is always greatly to the advantage of the emperor of the Romans to be minded to keep the peace with the nation of the Pechenegs and to conclude conventions and treaties of friendship with them and to send every year to them from our side a diplomatic agent with presents befitting and suitable to that nation (*meta xeniōn harmozontōn kai pros to ethnos epitēdeiōn*) and to take from their side sureties, that is, hostages and a diplomatic agent, who shall come, together with the competent minister, to this city protected of God, and shall enjoy all imperial benefits and gifts suitable for the emperor to bestow."¹³ By "suitable" gifts one supposes the author means things the foreign ruler might understand and recognize as valuable, invested with "cultural capital" within the context of his own culture. But one might dispatch a letter together with the gifts to explain their meaning and intent, and to underscore their value. That convention was sufficiently well known, already in antiquity, to be employed to sarcastic effect, too, with the added hint of a riddle: the last of the Achaemenid kings, Darius, sent the young Alexander of Macedon the gifts

11- Aṙak'elyan 1983, 2.1 (p. 106).

12- Harper 1978, p. 24. There are several inaccuracies: the horse is that of the commander Mušel, not of the Armenian king Aṙšak II; the passage is in 5.2 not 5.3; and Movsēs' surname might be Kalankatuisky if he were an expat from the Caucasus in Moscow today but in his time the ending was Armenian. Those are minor errors; Dr. Harper by engaging the Armenian material in a way very few Iranists trouble to do, rendered an inestimable service to the study of the culture of the period.

13- G. Moravcsik and R. Jenkins 1949, pp. 48-49.

of a leather strap, a ball, and a big chest of gold, with an accompanying letter explaining that the first was to discipline him as a mere boy; the second, a toy for him to play with together with other children; and the third, a pittance (in the haughty Persian's view) for the Greek and his fellow bandits out of the measureless treasures of the King of Kings.¹⁴ The story comes from Ps.-Callisthenes, whose work was well known in an early Classical Armenian translation that was much augmented over the centuries by prosimetric *qafiya* stanzas of various hands to be chanted to musical accompaniment during oral performances of the text, to amuse the audience and recapitulate the story. The irony in the episode of Darius inheres in the reader's foreknowledge of the hubristic monarch's impending downfall: nobody picked up the *Alexander Romance* of Pseudo-Callisthenes without knowing the ending. Suspense was not the strong point of the universally popular work.

The ceremonies and literary trappings of gift giving carried on into the age of Islam with a sumptuary vengeance. An Arabic work datable to the eleventh century, *The Book of Gifts and Rarities* of ibn-Zubayr (*Kitāb al-hadāyā wa al-tuḥaf*), contains numerous, long lists of numbingly extravagant royal gifts, with both explanatory letters from the donors and odes by poets praising the gifts in order. (There are also chapters on how much was paid for memorable parties and weddings, circumcision feasts, celebrations for proficiency in reading the Qur'ān, crowded festivities in general, etc.) So, for instance, al-Zāhir li I'zāz Dīn-Allāh sent to al-Mu'izz ibn Bādīs a gift of perfume, precious stones, clothes, wall hangings, banners, silver staffs, some Bactrian camels, palanquins encrusted with gems and plated with gold and silver, slave girls who could sing and dance, "plenty of handsome eunuchs with lovely faces, figures, and clothes", expensive thoroughbred horses, armor, chain mail, swords, a giraffe, and other things. Abū Muḥammad al-Ḥasan ibn Rashīq, "the (leading) poet of the Maghrib", wrote a *qaṣida* for ibn Bādīs on the gifts, starting with the most exotic item, the giraffe, whose neck bears her head like a pole beneath a haughty standard.¹⁵ A pity there was no elephant; but then the ode would have been even longer than the giraffe's neck and the pachyderm's trunk together.

So we may suppose the particular gifts received by the Aḷuan prince carry a symbolic weight of their own, further embellished by the rhetor's description and evaluation. We may begin with the parrot, who is the emblem in the East of sweet eloquence, not as in the West of the mindless, cackling repetition of silly phrases. Ctesias in his *Indica* (late fifth century BC) praises the parrot as having a human tongue and voice; later Armenian texts likewise note admiringly that a parrot (*papḳay*, the word used by Movsēs here) can be taught by people to speak; and the Armenian version of the *Alexander Romance*, already cited in connection with Darius' humiliating gift to Alexander, records a more munificent and sincere gift of two hundred parrots: *berēn k'ez ar i mēnḡ papḳay erkeriwr*, "they bring you from us two hundred parrots". Middle Armenian borrowed an Indian word via Iranian for the bird, *t'ut'ak*; Yovhannēs T'lkuranc'i writes admiringly of his beloved, *Berand*

šak'rov i li, t'ut'ak lezu es, "Your mouth is full of sugar; you are parrot-tongued."¹⁶ The poet called himself a parrot, too, for the proficiency of his verbal art; and the Cilician Armenian poet Frik lamented the approach of death as the end of his sweet song, writing, *Im t'ut'ak lezu ku kapi*, "My parrot tongue is bound."¹⁷ So the association of the parrot with verbal eloquence is old and well established: perhaps one purpose of Dawt'ak's extravagant description of the bird, then, is delicately to remind his patron that a certain rhetor deserves a rich reward for his own art of beautiful and useful eloquence.

And then there is the elephant in the room. St. Vardan Mamikonean spurred his horse, leading the Christian soldiers of Armenia onward into valiant and unequal combat against the great elephants of the army of the pagan Yazdegerd II at the battle of Avarayr in 451. The Armenians were defeated, but in the long run they won a moral victory—the Sasanians relented from their campaign to reconvert the country from Christianity to Zoroastrianism. Elišē *vardapet* makes of Vardan and his martyred warrior-companions a band of latter-day Maccabees. Elephants figure in the historical legend of the latter, too. One recalls a famous incident during the battle of Bet Zakharia in 162 BC: the Jewish hero Eleazar Avaran, brother of Judah the Maccabee, attacked and killed a war elephant on which he mistakenly thought the pagan king Antiochus V was seated. The great animal collapsed on top of him, so although he had slain the monstrous creature, he still died a martyr's death there and then.¹⁸ The elephant was the ubiquitous emblem of the Seleucids, and the death of their war elephant is an obvious metaphor of the downfall of paganism and the victory of the true faith. After the rebirth in 1948 of a Jewish state in the Land of Israel, the artist Ze'ev Raban designed a Hanukkah menorah depicting Eleazar's valorous deed (Pl. 1). In his *History* of the war of Vardan, Elišē has the apostate villain Vasak *hide* among the elephants of the Sasanian army—an obvious and intentional *inversion* of the type of the Israelite heroes Samson and Eleazar.¹⁹ In Armenian manuscript illumination the elephant marks the pagan horde; the horse, the Armenian Christian host (Pl. 2).

The author of *Maccabees* overtly modeled Eleazar on the still earlier type of Samson. Back in the era of the Judges, in the mists of the second millennium BC, the blinded hero of the tribe of Dan brought down the temple of Dagon of the pagan Philistines upon them and himself at Gaza, ending their triumph and crowning his poor blinded, shaggy head with the wreath of martyrdom and victory. That hero is also admired in Armenian tradition: Samson and David (who is shown slaying another Philistine, Goliath) both appear on the walls of the tenth-century palace Church of the Holy Cross of the Arcrunids at Ałt'amar. And the types of these two Biblical heroes inform in part the characters of Mher the Lion-slayer and Davit' in the oral Epic of Sasun, whose many ancient components crystallized around the same time, with the Armenian uprisings against the Arab

Caliphate. Armenian manuscripts that illustrate the battle of Avarayr generally identify the hostile Persian army by their elephants; the righteous Armenians, by their equine mounts. Thomson points out that the contrast of images endured: in the later revolt of 572, too, the elephant represented the Persians; the horse, the Armenians.²⁰

An elephant might be a safe, if high maintenance, gift for the proverbial man who has everything. But, given its traditional associations in Biblical and Armenian tradition with the might of pagan tyrants, was it quite the appropriate present for Mu'āwiya to offer an Armenian-speaking, Christian king in the seventh century? Perhaps it was, when one considers that the prince was after all of royal Persian lineage. The archetypal hero of Iranian epic, Rostam, was well known to Movsēs Xorenac'i and other Armenian writers of the classical era and there is an indigenous cycle of folk *dastans* about him as well that has become loosely connected to the Sasun epic.²¹ Rostam bears a number of standard epithets, among them *tāj-baxš*, "crown-bestower": he is the support of the kings of Iran but not a king himself, an ambiguity one might sense also in the social position of Javanshir, who is a mighty warrior like Rostam, and a sage diplomat, yet still only an *išxan*, a prince, not a king. Another very frequently encountered epithet of Rostam in the New Persian of the *Šāh-nāme* of Ferdousi is more apposite still here: *pīl-tan*, "elephant-bodied". There is every reason to think that epithet long predated the Islamic period; and the intention was wholly honorific, without any of the negative connotations of Judeo-Christian literature. In Sogdian, for instance, one finds the proper name *pyδmz*, interpreted as *Pīlmaz, "as big as an elephant".²² In later centuries, the swashbuckling companions of the folk hero Kōroğlu, the bandit who flourished in the tumultuous period of the Jelali uprisings, were to give themselves heroic, tough guy names in Turkish like Kara Sā'at "Black Hour" (when you meet him, that is, it's not your day) or Tanrı Tanımaz "He doesn't recognize any god". In an Armenian version of the Kōroğlu epic we meet Palt'an, whose name I understand as a probable variant of Pīl-tan. Here is a brief glimpse of the latter-day "Elephant-bodied one" in action. The heroic literature of the Armenian plateau has as much vitality in the seventeenth century as it did in the seventh:

Ayvaz the Boy observed from far off that they were folding their tents. He said, "Boys, I tell you truly, they've captured Koroghlu and are taking him away."

Baba K'anhan asked, "How could you know? There are a few thousand of the enemy." He replied, "Forty thousand." They assembled the braves and

20- Thomson 1982, p. 31. And the symbolic opposition of the two animals goes farther back into antiquity: on a decadrachm Alexander is shown on horseback charging the elephant upon which the Indian king Porus is seated. See Russell 2012, with discussion and illustrations.

21- See J.R. Russell, "The *Shah-nameh* in Armenian Oral Epic," International Ferdousi Conference, Centre for the Great Islamic Encyclopaedia, Tehran, Islamic Republic of Iran, August 2000, printed in Russell 2004, pp. 1063-1072.

22- See Lurje 2010, p. 317 no. 974.

took counsel: “How many men of us should go in order to free Koroghlu?” They decided eight should go and the rest should remain and wait for the outcome.

Eight men were chosen: Big Whiskered Yusuf, Isa the Kid, Crazy Hasan, the Smith’s Son, Basil the Arab, Inje the Arab, Crazy Murt’uza, and Baba K’anhān. As they mounted up, a ninth, Crazy Palt’an, who had not been chosen, could not restrain himself and set out running, without horse or weapon. Coming down from the mountain, he saw a huge willow tree growing on the road: he shook it, uprooted it, slung it over his shoulder and went on. When he got to the camp he asked a soldier, “Who is your greatest *yuzbashi* [commander]?” The soldier said, “What do you mean, *yuzbashi*? Our commander is a Bek, a Pasha!” Crazy Palt’an said, “I don’t know from Pashas— whoever your greatest man is, just show me where he is.” They showed him the green tent. He went that way: when the troops saw him, they thought a giant forest was coming upon them and milled about in confusion, unable to believe their eyes. And that way, plowing through the army, he went on and arrived at Poli Bek’s tent. Planting his tree at the entrance, he went inside. At that moment Poli Bek was sipping a golden cup of coffee, amber pipe in hand. He dropped both when he beheld the frightful spectacle; and before Crazy Palt’an could open his mouth, the quaking Poli Bek stammered, “Who are you and wha, wha, what is it you want?” Crazy Palt’an began to speak. “Hah, *yuzbashi*, where do you get off coming here with all these men and going around trampling the places where Koroghlu’s dappled horse likes to graze? When he goes out to graze tomorrow, and Koroghlu hears of it, he’ll have my head cut off.” Terrified and amazed, Poli Bek asked, “What are you to Koroghlu?” “I’m the guard of his pastures.” “Uh-oh,” said Poli Bek. “If this is what the one who guards the pastures is like, what is the guardian of the flocks themselves?”

He called, “Ghajar Ali, let Koroghlu stay on the side for now. Come and give some answer to this ferocious beast.”

In the other tent, when Koroghlu heard the loud, ox-voiced bellow of Crazy Palt’an, he spoke to his two guards: “See, one of my braves has come. The rest, wherever they are, will be here soon and scatter your whole army. Untie my arms and I promise that in return for the favor I’ll see you aren’t harmed.” Frightened, they were persuaded and freed Koroghlu’s arms. He took the *saz* in his hands and began to sing...²³

Prof. Richard C. Steiner, the eminent Yeshiva University Semitist, has pointed out to me that there is a far more famous elephant that one great king gave to another, albeit later

23- My translation, from Mkrtič‘ Taleanc‘ (*Ašeg* [Ašul] Jamali), tr. from Tk. to Arm., *K’orollu hek’iat’ə gzir öllui ev poli beki het patahac anc’k’erə*, Part I, Tiflis: Tparan Movsēs Vardaneanc’i, 1897, repr. in Solomonyan 1992.

that the exchange of gifts here. It is the one named Abū 'l-'Abbās, that Harun al-Rashid gave Charlemagne. The name is that of the uncle of Mohammed; it is also the name of Harun's own Abbasid dynasty itself, and since the word *'abbās* means "stern in countenance" (like our elephant), it is one name given also to the lion in Arabic. The recipient in our text, one recalls, is Young Lion— but that would be an anachronistic play on names. Elephants remained, at least one can say, a gift of iconic opulence at Muslim royal courts.

In the epigraph to this paper I have cited a medieval Hebrew compilation of the Biblical verses the various creations are believed to sing in praise of God. The powerful elephant, the hugest of land animals, recites a line from the Psalms praising God's deeds as "great" or "big" (Hebrew *gādū*), and adds that the Creator's thoughts are correspondingly very profound (*mə'od 'āmqū*). Surely the elephant's enduring, widespread, and deserved reputation for wisdom inspired the anonymous author's choice of a Biblical verse. And this figure combining great size and power with wisdom may be echoed in an arcanelly learned stanza of the Lament that likewise connects the two qualities: *Nirhēr i marmin, ayl hogwoyn art 'nut'eamb/ Varēr zkaṛs zArēsi i mēj astelac'n, / K'ajut'eamb berelov zušimut'eancalikn*, "In body he would slumber, yet in wakefulness of the soul/ He drove the chariot of Mars through the stars,/ Bravely bringing back the flower of wisdom."²⁴ Armenian *uš-im* has the sense of both intelligence and conscious alertness, from Middle Iranian *hōš*, the conscious mind, so Dawt'ak might have intended the verse to suggest that both the soul and mind of the princely warrior were awake even when he slept. The chariot of Mars is a symbol of strength: the occultist scholar Giordano Bruno was later to provide a vivid word picture of it in Book Two, Chapter Five of his work *De imaginum, signorum, et idearum compositione* (1591): "A man strong in appearance rises up... sinewy, full-chested, strong armed, broad-shouldered." He carries a bronze shield on which is engraved the image of a dragon, and "with his right hand he brandishes a gleaming yellow sword that blinds the eye with fiery splendor. He stands in a four-wheeled chariot drawn by four wing-footed horses. His charioteer is a woman sentinel they call Bellona who drives the team with a snake whip." Bruno later adds the comment that the classical image reminds him of the contemporary "Turk... who is about to triumph over the nations, who is armed only with helmet, sword, and shield, while the rest of his body is not hampered, but remains very free for action."²⁵

So the mighty Javānšēr is both strong and wise, like an elephant; and he also controls his power. The image of the chariot itself suggests this: Plato famously employed the metaphor of the charioteer and his horses to explain how the mind should govern our bodily passions and energies, and Elišē, our Armenian *locus classicus* for the elephant, employs the figure of the chariot as well, since for him the dispute between Zoroastrian Iran and Christian Armenia is as much a moral and intellectual as a military one. He depicts the Persians as lustful, choleric, and intemperate; the Armenian Christians, as chaste,

24- Aṛak'elyan 1983, p. 229, lines 1-3.

25- C. Doria and D. Higgins 1991, pp. 155-161.

restrained, and thoughtful. *Bolor marmnoys hogi kendanut'wn, isk marmnoy ew hogwoy mitk' en karavar: ew orpēs ar mi mard, ayspēs ar bolor ašxarhs. T'agaworn oč' ziwrn miayn tac'ē partis, ayl ew oroc' elew patčark' i korust* “The soul is that which animates the whole body; while the mind is charioteer of both body and soul. And as this is for one man, so it is for all realms. The king is not to render his own debts alone, but those of all for whom he became the cause of perdition.”²⁶ The prince of the Ałuans, then, is no less mighty than his Sasanian forefathers; but as a Christian he combines, in contrast to them, his power with wise governance of his passions. Both the oration enumerating and praising the gifts he has received, and the Lament over his treacherous murder make this explicit: his elephant, its reputation restored from Zoroastrian obloquy, combines might with sagacity; driving his chariot while spiritually awake even in corporeal slumber, Javānšēr skillfully reins in the tempestuous steeds of Ares. Dawt'ak by recalling the slumber (*nirh*) of the prince during his life and his imaginal heavenly ascent then, may thereby suggest also in the Lament that now, having entered into that deeper and longer sleep that is the death of the body, the prince's enfranchised soul has ascended once more, prepared by its spiritual *askēsis* in life for the joys of heaven, and perhaps the approach to another chariot—the one on which, according to the vision of Ezekiel, God is enthroned.

The poet describes these gifts in an extremely rich and recondite style, loading down with words objects and animals already supercharged with symbolic content. But it is a vivid style that is still free of rebarbative Hellenophilica, and there is only one Classical allusion to send an anxious banqueter scurrying to the boxes of volumes of his memory palace—the mention of Nero. There are also only two passages where an alliterative pattern is consciously stressed, and they seem overt and clear, and are intended, one thinks, to highlight what should by now be for us a familiar contrast: the heavy *anari*, *anbari*, *anheded* elephant dragging its trunk along the ground as it shambles, *versus* the capering horses, light as the wind, walking, trotting, and galloping (*čemołk' čepołk' ew ews čax-raslac'k'*). The alliteratively abusive epithets heaped upon the back of the poor elephant have further unsettling overtones in Armenian usage. The word *anari* can mean either unmanly (with Arm. *ayr*, “man”) or un-Iranian (from *an-arya-*) or both, that is, simply, monstrous; *anbari* “not-good” was employed memorably by Movsēs Xorenac'i in the figure *anbari barerarut'wn*, “beneficence that is not good” to describe the proto-communist, Mazdakite social experiments he attributes to the monster-tyrant Aždahak. But Javānšēr, the prince who receives a gift fit only for a king, will use his abundance of divine glory, it is hoped, to transform the creature, redeeming his new elephant as a wholly Christianized embodiment of the Lord's weighty thoughts, as he sets off home for the Caucasus.

One may offer a final observation. The composer of the passage describing all the gift giving, Dawt'ak perhaps, stresses that he saw it all, that he *heard* the thin, sweet syllables of the parrot and the stentorian heaving of the elephant. And in the passage setting the scene for the Lament, the sad tidings of the death of the prince are said to spread as a

26- Elišē, text p. 15; the translation is mine.

whisper or murmur across the land, and the onomatopoeic word *ššuk* /*šəšhúk*/ is used. The reader will recall how Movsēs Xorenac‘i foregrounds his snatches of ancient epics and lays: The singers of Golt‘n tell... The old women tell... But some say... The same singers express... We heard with our own ears how they sang this to the accompaniment of the *p‘andir̄n*... (I.30, I.31, II.61) Perhaps there is more to this than mere dramatic strategy. The Classicist Shane Butler, in a recent study,²⁷ suggests that ancient writers employed such strategies— alliteration, onomatopoeisis, etc.— not so much to embellish their compositions or to argue their veracity, as to make the reader, who was most often reciting out loud, or having the book read to him, hear and reproduce the sounds of the scene being described. As though the *volumen* or codex were an ancient phonograph. The dismembered corpse of Orpheus course down the river and Ovid sings, *Flebile nescioquid queritur lyra, flebile lingua murmurat exanimis, respondent flebile ripae* (Metamorphoses 11.50-53), “Crying, the lyre something is keening; crying, the tongue murmurs, inanimate; crying the riverbanks respond.” Lyre, tongue, and nature all give voice and the words are shaped by the poet in such a way, Butler argues, as to engage our imaginative capacity not merely to know about, but to hear those unified voices, the ink of the scribe’s pen being, as it were, the groove of a vinyl record. “Any writing system,” he argues, “that corresponds to fairly stable conventions of speech can capture such phonetic figures (i.e., one hears them while reading), but alphabetic writing actually represents them (i.e., they are as visible as they are audible, at least to the extent to which its letters continue to match, one-to-one, the constitutive sounds of speech.” Koriwn, the lion cub, writes in the eleventh chapter of his *Life* of Maštoc‘, “At that time this realm of the Armenians was without doubt blessed and desirable, wondrous: in it suddenly the lawgiver Moses, with the ranks of the Prophets, and the forward-gazing Paul, with the whole troop of the Apostles, together with the Gospel of Christ that animates the world, came, arrived, all at once thanks to these two partners [Sahak and Mesrop] and were found to be Armenian by language, Armenian in speech (*hayabarbak‘ hayerēnaxawsk‘*).” It is not, perhaps, just rhetoric: the alliterative, repetitive figure at the breathless conclusion of the passage invites the reader to hear in his mind the sudden clamor of many voices. One may return to these key texts of the Armenian tradition with an aim to recover how they may be heard, how the miraculous phonograph of Maštoc‘ has recorded them with high fidelity (itself a phrase no longer often heard). But that is for another time. For now, at least, thanks to Little David’s recording pen, we can hear the speech of the parrot and the snort of the elephant that the young lion prince received, and, if we listen closely, the clinking of cups, the din and murmur and whisper of the feast, in a faraway kingdom, long, long ago.

HERESIES: ON AN ARMENIAN PRAYER TO THE SUN

JAMES R. RUSSELL

According to Yovhan of Odzun, titled *imastaser* (“the Philosopher”, d. 728), a theologian who wrote a tract *Enddem Pawghikeants* “Against the Paulicians”,¹ the latter heretics *zaregahn aghach’el kamets’eal asen, arewik lusik* “when they wish to beseech the Sun, say ‘Little sun, little light’”. The *Oskip’orik* (a thirteenth-century miscellany containing texts of various periods) reports virtually the same text, though the “heretics” in question are designated differently: *Manik’ets’ik’ erdnun yaregahn, ew asen: lusik, arewik k’aghts’rik, li es tiezerok* “the Manichaeans swear by the sun and say ‘Little light, little Sun, little sweet one—you are full of the world.’”² The differences between the two testimonia are not great, but the latter gives us a just little more of the text and describes the formula as an *oath* (verb *erdnum*; noun *erdumn*, pl. *erdmunk*) rather than a prayer. If further verses followed, they are unfortunately not attested. But the one precious verse we have is tantalizing enough to warrant close analysis. After all, Armenian literature does not afford very many texts that are identified explicitly as native and non-Christian. As to the identity of its original reciters, one must keep in mind that medieval Armenian writers were generally clerics with a strongly held ideological position and social role; they tended to paint with a broad brush when depicting, generally in disparaging hues at that, what they considered heterodox beliefs. So their writings sometimes lump together indiscriminately Manichaeans, Christian dissident sects, and others. Most any of these could conceivably have addressed a prayer to the sun now and then, or sworn by it—the Manichaeans had a sun god in their bafflingly vast pantheon of mythical beings.

But one long ago proposed a more likely single source for the prayer: there were Armenians who preserved some of the Zoroastrian heritage of the pre-Christian era and called themselves *Arewardik*, or “Children of the Sun”. I will proceed from the assumption that this prayer to—or oath invoking—the sun was in fact theirs. It would have ample ancient precedent in the country. Movses Khorenats’i in his *History of the Armenians* mentions the custom of swearing by the sun twice, with reference to both pre- and early-Christian Armenia. In book 2.19 he writes that Hyrcanus asked for an oath from Barzap’ran, clan leader (*nahapet*) of the Armenian canton of Rshtunik. (This would be in the mid-first century BCE; the Rshtuni noble’s name in Iranian means “high glory” and may refer to the dynastic sacred fire of the Parthian Arsacid dynasty, *Adur Burzen Mihr*, the Fire of High Mithra. Mithra is “high, lofty” because of his place with the Sun-god in heaven.) The latter *erdnu nma yaregahn ew yamenayn pashtamuns iwreants’ ernkayins ew erkayins, ew yarew Artashezi ew Tigranay* “swears to him by the solar orb and by all things heavenly and earthly that they venerate, and by the sun of Artashez and Tigran.” And in 3.22, with reference to the events of the fourth century CE, in newly baptized

² James R. Russell, *Zoroastrianism in Armenia* (Cambridge, MA: Harvard Iranian Series, 1987), 213, 524, and ch. 16 for a general discussion of the *Arewardik*.

Armenia, *Erdnoyr Vardan yarewn ark'ayi*, “Vardan swore by the sun of the king.”³ To this day in Armenian *arev* “sun” is a way of referring to a person’s life, soul, or fortune; so it is common to swear *arevid merrnem*, “may I die for your sun”. Light is another important, obvious, and related metaphor, so one common expression for “I bring you good news,” “Congratulations,” or the like is *ach'k'id luys*, lit. “light to your eyes.” Light, eyes, and sun form a pattern of homologies nigh universal to the human race (and probably to most terrestrial beings); but it may be argued that in Armenia, whose religious pre-Christian substratum is Zoroastrian, the particular emphasis on light in the language, and in religious culture in particular, may be a survival of the older religion, that placed (and still places) the symbolism of fire and the sun at its very center.

From what little is known of the Arewordik', they preserved a number of telltale Zoroastrian beliefs and observances; and the sun, which the little prayer addresses so reverently and lovingly, is fittingly part of the name by which the Christian sources designate them. (Their beliefs were probably related to those of the Shamsis in northern Syria, whose name contains Arabic *shams*, “sun”. But we still do not know what they called themselves.) The sun is the greatest of all fires for the Zoroastrians, for whom fire is the pre-eminent living symbol and focus (no pun intended) of the faith. It embodies the light, warmth, life, and power of the supreme divinity Ahura Mazda, the Lord Wisdom, Creator of heaven and earth. Zoroastrians invoke the sun, Middle Persian *Khwarshed*, and the closely associated *yazata* (spiritual being worthy of reverence) Mithra, *Mihr* in Middle Iranian, thrice daily in litanies (*niyayishn*) that are recited together. In Muslim Persian, *mehr* endures as a common noun, for the sun and for loving kindness; it is because of the latter meaning used as a proper name for girls;⁴ and tradition remembers the autumn feast *jashn-e Mehregan*. The old Armenian calendar has a month named Meheki, from *Mihrakan. Our Arewordi prayer does not mention Mihr (or as he was in medieval Armenian, Mher) by name, yet his presence loomed large in Armenian culture and lore, even long after the baptism of most of the nation early in the fourth century. Mithra is, as the guardian of covenants, the divinity most closely attached to human concerns; and he is in many ways the most human of the Zoroastrian *yazatas*, the only one whose portrayal as a human being in a fixed form—with a rayed nimbus—is stable and universal throughout the Iranian world over a millennium. One recalls that Mithra is the only Iranian divinity around whom an entire new faith took shape, the mystery religion of Mithraism in the Roman empire. It would even seem that the liberation struggle against the Arabs in the eighth and ninth centuries CE coalesced around a revival of the reverence for Mithra—two out of the four heroes of the great epic cycle of Sasun, the millennial folk composition that gave voice to that struggle, are named Mher, that is, Mithra. In a recent study I have placed the anti-Arab uprising and the heroic epic that crystallized around it beginning in the eighth century, to contemporary events in the Iranian world east of Armenia, where a Mithraic revival, as it were, also took place. The revival in that period of pre-Islamic and, it would seem, also pre-Christian national identity at precisely that time might also argue a “late” date for the *History of the Armenians* of Movses Khorenats'i, which is, in contrast to the earlier histories, such a treasure house of pre-Christian lore—lore that its compiler cherished, at that.

³ See also Vardan Hats'uni, *Erdmunk' hin Hayots' mej* (Oaths in Ancient Armenia) (Venice: S. Lazzaro, 1932), 52 et seq.

⁴ Such an association may be why the meticulous Herodotus misidentified Mithra as a goddess.

We know already *how* the epic evolved and what ancient features it brought together. Looking at the Sasun cycle in that context answers the other question: *Why?*⁵

This little invocation, or perhaps fragment of a longer one, if there was originally more—seems clearly to be a folk prayer, the vernacular composition of unlettered people, not a version of a pre-existing prayer, say, in Avestan—the Old Iranian sacred language of the Zoroastrian sacred books.⁶ Its Classical Armenian aspect, as we shall see presently, is ungrammatical, so it does not have the character of a literal or even slightly garbled citation of an old text from a book. Rather it seems a vernacular verse that bears the external influence of the high speech of Christian liturgy: it is *parole*, touched by *langue*. But that does not mean it is not poetically sophisticated in its way; and an examination of its structure will suggest, I think, that it is artful indeed. Let us try an analysis of the six words that constitute the longer version. They can be evenly divided into two hemistichs of three words each: seven syllables in the first; six in the second. The caesura feels naturally placed, as the first three words are a compact unit of two nouns (little light, little sun) and a noun or adjective (little sweet [one?]), with no verbs. All are diminutives, and all bear a stress on the final syllable: *-ik*, *-ik*, *-ik*. All are vocatives: little light, little sun, little sweet one. The second part of the verse could stand as an independent declarative statement: it has implicit subject with verb and thus is contrastively different. Its sound pattern underscores that contrast. The hemistich begins with two terse monosyllables: the first is *li*, “full”; the second of them, the enclitic verb *es* “thou art” with implied subject—so *li es*. These terse words are followed, balanced, by the final long drawn out word of the line, the four-syllable */tíyazerók’/* (inserting the onglide *-y-*: there is no hiatus between *i* and *e*). Its first syllable, *tí-*, “god, divine”, resonates alliteratively but also semantically with the first word of the hemistich, *li*, “full”—for divinity is a pleroma, a fullness. And the *k* of the final syllable *-ók’* recapitulates the three-fold *k* of the three substantives of the first part, indeed emphasizing it by its aspiration, while the vowel *o* marks a differentiation from the repeated *i* of *-ik* and *li*.

The addition of the diminutive (the Arm. suffix is *-ik*), so important to the structure of this brief verse, is common in affection and also in reverence in the Indo-European languages, cf. Rus. *царь батюшка* “Tsar Little Father”. The threefold invocation of a divinity that we see in this Armenian folk prayer is also an ancient and important Indo-European feature that likewise survives in the Russian honorific, not for what is above but for what is below—*Мать сыра земля* “Mother Damp Earth”. The latter indeed corresponds very closely to the threefold Zoroastrian honorific given the goddess of the waters and of female fecundity and purity in the Avesta: *aredvi sura anahita*, “damp powerful undefiled”. The final epithet of the triad became the goddess’ proper name, attested in Armenian as Anahit and as Nahid

⁵ See James R. Russell, “Mithra,” forthcoming in a special volume of *Iran and the Caucasus* dedicated to the proceedings of a conference held at the Collège de France, Paris, October 2015.

⁶ There is a fragment of a Sogdian Zoroastrian text containing a version of the Ashem Vohu prayer, somewhat changed in transmission over time, in either very old Avestan or another form of Old Iranian; see *The Everlasting Flame: Zoroastrianism in History and Imagination*, ed. Sarah Stewart (London: I.B. Tauris, 2013), 93-94 and pl. 27. This would be an attestation of local variants of the *manthra spenta*, the holy word, of the sort one might have hoped to find among Armenian Zoroastrians. But by the time Odznets’i was writing, these had perhaps already been forgotten, or else were not recited in the presence of Christians, who do not observe Zoroastrian laws of purity and whose physical presence might therefore have been believed to violate their sanctity. It is also possible that the believers in Aramazd/Ahura Mazda also did not wish to expose their cherished words to mockery and disrespect.

in modern Persian.⁷ One will have more to say about triads in their Christian context presently; and perhaps the most important expression of this idea in human religious culture is the Christian Holy Trinity itself. But with more specific reference to the Zoroastrians and the Armenian Children of the Sun, one notes that St. Nerses *Shnorhali* (“the Graceful”), who was concerned with the conversion of the Arewordik’ to Christianity, might have composed at least one strophe of his credal poem *Hawatov khostovanim*, “I confess in faith”, with a view to attracting them, since it seems to echo the Zoroastrian moral triad of good thoughts, words, and deeds (Av. *humata hukhta hvarshata*). The standard Zoroastrian prayer *Vispa humata*, which declares that the three virtues bring salvation, might suggest that recitation of the triad, with its rhythmic breathing of the initial *h-*, served as a *mantra* Zoroastrian priests used to help go into trance and overcome the terrors of the unconscious and the dangers of the road as they undertook shamanic journeys through the Otherworld. Today, many modern Zoroastrians consider the triad, whether in Avestan as above, as Middle-Persianized *humat, hukht, hvarshat*, or as Persian *pendar-e nik, goftar-e nik, kerdar-e nik*, to be the defining tenet of their religion as a whole.⁸

The sun stands in heaven, and one might have expected in the one verse of our possibly Arewordi prayer to encounter not *tiezerk’*, which means the universe or the world in its entirety, but the more common Arm. *erkink’*, “heaven”. The latter, as the standard term in Armenian,⁹ is paired with rhyming *erkir*, “earth”, in what is likely to be the most ancient poetical text preserved in writing in the language: the song of the birth of the god Vahagn (Avestan Verethraghna, Middle Iranian Bahram), preserved in the *History of the Armenians* of Movses Khorenats’i. It is encountered frequently and forever thereafter in most every imaginable poetic form. The alliterative and thematic association of the two words among native speakers is so strong that it exerts a kind of subconscious gravitational pull—the words for heaven and earth sound similar to each other, as a kind of pair, in a private language that an Armenian invented in the 18th century—this despite his obvious and deliberate effort to make his new tongue not sound like his native Armenian. In the language they are *rōšmēxe* (“earth”) and *rōčki* (“heaven”), with the initial un-trilled *r* that is extremely rare in Armenian words. He invented an alphabet based on the Armenian script, partly for his invented tongue and partly for the transcription of a number of magical spells and

⁷ For a discussion of this, see James R. Russell, “The Word *chragamah* and the Rites of the Armenian Goddess,” *Journal of the Society for Armenian Studies* 5 (1990-1991): 157-72.

⁸ On St. Nerses’ credo, see James R. Russell, “A Credo for the Children of the Sun,” *Journal of the Society for Armenian Studies* 4 (1988-1989): 157-60; on the possible use in the Sasanian period of *humata, hukhta, hvarshata* as a shamanistic mantra see James R. Russell, “An Armeniological Note on Kartir’s Vision,” in *Dasturji Dr. Hormazdyar Dastur Kayoji Mirza Birth Centenary Memorial Volume* (Udvada: Dastur Kayoji Mirza Institute, 2010), 253-58.

⁹ The less common word for the sky, *anjrapet*, “ruler of the waterless”, seems to be a term for the airy region intermediate (cf. Skt. *antariksha*, “ruler of the in between”) between the solid earth and the upper waters that in Biblical cosmology were released during the Deluge but are now held back (see Genesis 1.7). Psalm 148.4 exults, *Halleluhu shemei ha-shamayim/ ve-ha-mayim asher me’al ha-shamayim* “Praise Him, heavens of the heavens/ And the waters that are above the heavens.” Cf. Ps. 104.3 *Ha-miqra va-mayim ‘alilotav/ Ha-sam ‘avim rekhuvo* “Who founds the beams of Your upper chambers in the waters./ Who makes the clouds His chariot.” In the Mishnaic tractate *Chagiga* the three travelers to heaven are warned not to say “Water, water!” when they see the marble (Heb. *shayish*) of the divine *hekhalot*, “mansions, halls”. The floor of the palace of Solomon, in legend, was made of plates of glass beneath which was water, to produce perhaps a similar effect. In Armenian mystical theology, the “final curtain” between this world and heaven is *loytsn matsuats*, “liquid made solid”—the marble, as solidified water, that Rabbi Akiva and his companions beheld, perhaps. See James R. Russell, “Liturgical Mysticism and the Narek,” *Revue des Etudes Arméniennes* 26 (1996-1997): 427-39.

stories of herbal lore. The script is pleasingly similar in appearance to Georgian cursive *mkhedruli*; and some of the sounds of his invented tongue, *rshtuni* (a word meaning here secret language, after the argot of Armenian traveling merchants hailing from the province of Rshtunik'), resemble those of Georgian. He lived most likely in Georgia, then the center of Armenian life in the Transcaucasus, and was thus acquainted with the local language, which, though rich in Iranian and Armenian loans, is decidedly not Indo-European.¹⁰

In the fragmentary prayer studied here, perhaps *tiezerk'* was used with honorific intent. The late Prof. Charles Dowsett suggested the word is to be analyzed as **ti-*, a root which he argues meant at first "divide, apportion", and *ezr*, "boundary", ending in *pluralis tantum* in *-k'*. It would have originally meant "boundary of a plot of land" and its meaning developed from there to "inhabited world", expanding thence to "universe". One may cite two common examples for the sense of honor and superiority that *ti-* confers. The first is the honorific *ter*, "lord", from **ti-ayr*; the second its heterosexual partner, *tikin* "lady". The former is to this day the appellation of an Armenian priest; and it carries on in American-Armenian surnames like Der Hovannessian, literally "son of Father John". The latter, *tikin*, is attested in Agathangelos' narrative of the conversion of the Armenians as a title or cult epithet of the goddess Anahit, evidently translating an Iranian term. Nowadays it just means "missus"; for "mister", we can thank the Crusaders for Armenian *baron*. The anachronistic Classical plural is used in formal address, so "Ladies and Gentlemen" becomes the *Dignayk' yev baronayk'* familiar to anyone who has sat through a public speech. (One transcribes the Western form since except for Iran, Eastern Armenian was communized and for some decades employed only *enkerner*, "comrades".)

By the Middle Ages the process of dialect variation in Armenian just alluded to, which had begun in ancient times and of course is still continuing—as tends to happen with many living languages—might have led to the mutual voicing and devoicing of the palatals *d* and *t* that one observes in the Western and Eastern forms of the modern language today. So perhaps after a time, in westerly cantons of the Armenian mountain fastnesses, the reciters of the Arewordi prayer might have heard in *tiezerk'*, pronounced by some */diyezerk'/*, also the pagan term for a divinity, Classical Arm. *di-k'*. We find it in the pre-Christian toponym *Dits'avan* ("Place of the gods"), and in *diwc'-azn* "gods' [noble] progeny", i.e., "hero" (for which the Greek loan *heros* is used interchangeably). Dowsett posed as a semantic parallel to **ti-k'*, "apportion(er?)" the Vedic *bhaga-*, "*idem*", which comes to mean "god" in Indian and Iranian. One may cite the Russian loan *Bor* and the immensely productive Iranian-in-Armenian *bag-* "god" of Bagawan "Place of the god(s)", an alternative name for *Dits'avan supra, bagin* "(pagan) shrine", Bag(a)rat "god-given [cf. Gk. Theodoros]", etc. In the Armenian version of the Bible, *tiezerk'* regularly translates the Greek *oikoumene* "world, universe" of the Septuagint; twice, in Psalms, it renders *ta perata tes ges*, "the ends/extremes of the earth". The word just might have been used for what its authors perceived as possible overtones of pre-Christian antiquity and non-Christian sanctity, though it has a respectable place in Christian usage as well.

¹⁰ James R. Russell, "Armenian Secret and Invented Languages and Argots," *Acta Linguistica Petropolitana* 8.3 (2012): 602-84; and Charles J.F. Dowsett, "Arm. *ter, tikin, tiezerk'*," *Mémorial du Cinquantenaire, 1914-1964* (Paris: École des langues orientales anciennes de l'Institut Catholique de Paris: 1964), 135-45.

Whatever the case with *tiezerk'*, the preceding phrase “you are full of” and the use of the Classical Armenian instrumental plural for “world” itself in our invocation leaves no room for doubt at all. It points, not to any Zoroastrian or other pre-Christian source, but to a patterning upon, and borrowing from, the Sanctus in the Anamnesis (*yishatakn*) of the Divine Liturgy (*patarag*) of the Armenian Apostolic Church. The passage is very famous and is well known, indeed, to adherents of most Christian confessions: *Surb, surb, surb ter zorut'eants' li en erkink' ew erkir p'arrok' k'o: orhnut'awn i bardzuns. Orhneald or ekir ew galots'd es anuamb Tearnn: Ovsanna i bardzuns.* “Holy, holy, holy is the Lord of Hosts, **the heavens and earth are full of your glory.** Blessed are you who came and are to come in the name of the Lord. Hosanna in the heights.”¹¹ This passage derives from the throne vision of Isaiah 6.3, used in the Jewish “angelic” liturgy of the *Qedusha* [“Sanctification”] that is chanted during the repetition out loud of the silent *'Amida* (lit., “Standing”) prayer: *Qadosh, qadosh, qadosh Adonai tseva'ot melo kol ha-arets kevodo*, “Holy, holy, holy is the Lord of Hosts, all the earth is full of His glory.”¹² The Christian usage is different from the original Hebrew, and felicitously so for Armenian, since in that language is used the alliterative heaven and earth pair so cherished by the language. The Christian prayer has *li en* “they are full”; our strophe has *li es*. The re-use of the instrumental plural in *-ok'* (in *p'arrok'*, “glory”, a loan from Old Iranian *farnah-*) clearly patterns the Arewordi prayer on the Christian one. The Arewordi usage is perhaps ungrammatical, too, since one has to stretch the grammar to make the prayer mean what one thinks the Arewordik' might have intended it to mean: “O sun, the world is full of you” (not, “O sun, you are full of the world”). Space or the universe as we behold it in the daytime is filled with the light of the sun; the sun is not filled with it.¹³ The Arewordik', who most likely had no access to a high social position or to education, might not have understood Classical Armenian any better than other peasants did. There is some irony in this, since as preservers of a pre-Christian faith they were closer in their traditions and beliefs to its sources than the country's patron saint Gregory the Illuminator, the inventor of the alphabet St. Mesrop Mashtots', and the others who had co-opted their language to Christian usage. The latter is replete with densely meaningful Zoroastrian terms like *p'arrk'*. One must also consider the possibility that there is no grammatical error and they meant exactly what they are reported to have said. It would seem that after the Armenian Genocide there are no Children of the Sun around any longer to explain; but let us conjecture for a moment that *p'arrk'*, *farnah-*, Av. *khvarenah-*, was understood to mean, among other things, solar radiance, which is both spatial (radiance, after all, has to radiate) and supernal. Might *tiezerk'* then have been meant to stand in for it, perhaps so as to ameliorate somewhat the Christian content (even though the Christian text uses an Iranian word)? If we take the verse, then, as it is, rather than as containing a grammatical mistake, it might be rendered thus: “Beloved light! Beloved sun, sweet! Thou art replete with the vast divine spaces!” The

¹¹ Tiran Nersoyan, ed., *Pataragamatoys' Hayastaneayts' Arrak'elakan Ughghap'arr Ekeghets'woy* (Divine Liturgy of the Armenian Apostolic Orthodox Church) (New York: Delphic Press, 1950), 66.

¹² This prayer is also commonly called that of the *Shemoneh 'esrei*, “Eighteen [Benedictions]” and is regarded as a substitute for the Temple sacrifice.

¹³ Armenian has various words for the sun, and in the poem on Vahagn's birth the god's eyes are *aregakunk'*, “solar orbs”. Another term, *arp'i*, probably related to the root *erew-* “appear”, may mean not just the sun itself but the sunlight that fills the daytime sky. So the heavens are full of the sun. Iranian miniature painters sometimes paint the sky gold to reflect this understanding of sunlight.

Zoroastrian texts speak of Ahura Mazda as reigning in *roshn anagan*, “unbounded radiance”, so the same brilliant vision might lend a reflection of its light to our verse.

Why is the Sanctus the particular prayer that seems to have left its mark on the Arewordi strophe? Its source is in a vision of angels, and in the song of Armenian rite, usually performed by a woman with a beautiful voice, one can sense the still solemn sweetness of their beating wings. The threefold repetition of the word “holy” (*surb*) would also have attracted common folk in whose language, folklore, and mental conceptions triads, as we have already observed, are a basic element and building block, a *topos*. This observation might explain also why it was that late medieval Armenians chose the Trisagion (Gk., “thrice holy”)—and in particular the version of the formula that is chanted the feasts of the Cross—*Surb Astuac, surb ew hzor, surb ew anmah, or khach 'ets 'ar vasn mer, oghormea mez* “Holy God, holy and powerful, holy and immortal, who was crucified for us, have mercy on us”¹⁴ as the pivotal prayer to translate into *mareren* (“Median”, i.e., Kurdish) in the 17th century. This was done perhaps in order to attract proselytes of Iranian speech.¹⁵ Threefold words and things have a familiar and pleasant resonance to the ear attuned to archetypal poetic forms, threefold invocations are like spells (cf. the Zoroastrian triad discussed above, and perhaps the three virtues in Hebrew *infra*), spells are believed to have power and thereby gain respect and attention, and power is attractive to anybody looking for a new religion. If his old faith still possessed the attraction of supernatural power and efficacy for him, why would he abandon it? This particular form of the Trisagion (for there are several, depending upon the occasion) also specifically mentions the Cross, the defining symbol of the faith. The others do not. In the Conversion of St. Cyprian, which in the Middle Ages became a very popular talismanic text in Armenian folk belief and remains so to this day as the *Kiprianos*, the sorcerer Cyprian of Antioch abandons his pagan beliefs after a spell fails and the demons explain to him the superior power of the Cross. He promptly converts to Christianity. The motivation for his action seems scarcely to have been altruistic; and indeed as one reads on, his acceptance of the new dispensation proved to be a shrewd career move for him—he went on, not to assume the crown of martyrdom (unlike his namesake, St. Cyprian of Carthage, with whom he is not infrequently confused) but the miter of a bishop.¹⁶ Still, the *historiola* illustrates the particular Armenian reverence for the Cross, which some Christian neighbors remarked upon as excessive. Turkish naturally acquired many Armenian loan words; but it is perhaps indicative of the Armenians’ stress on the sacred sign that it is the Armenian word for the Cross, *khach*’, rather than some transmitted form of Arabic *salib*, or Greek

¹⁴ Nersoyan, *Pataragamatoys*’, 40.

¹⁵ On the prayer, see James R. Russell, “On Armeno-Iranian Interaction in the Medieval Period,” in *Au carrefour des religions. Mélanges offerts à Philippe Gignoux*, ed. Rika Gyselen (Leuven: Peeters, 1995), 235-38. Conversion from Islam to Christianity in the Muslim world was and is fraught with extreme danger, and pressure to abjure one’s faith went in the other direction. But one may cite, for instance, the case of T’ukhman, a Kurdish youth of Diyarbakir who was baptized an Armenian Christian in the 18th century and suffered martyrdom for it. See James R. Russell, “The Armenian Shrines of the Black Youth (*t’ux manuk*),” *Le Muséon* 111.3-4 (1998): 319-43, esp. 322-24.

¹⁶ The cynical materialism of Cyprian’s conversion corresponds well to the practical concerns of a magician. It does not matter whether the rite is for good or ill, divine or demonic, so long as it works. His name is therefore associated with grimoires (manuals of black and white magic, from an old French word for grammar): in the 18th century a short text, the *Ciprianillo*, was popular in Spain; or one might employ the *Cypriani Clavis Inferni sive Magia Alba et Nigra approbata Metratona* to open (with the Kabbalistic archangel Metatron’s assistance) the gates of hell. See Owen Davies, *Grimoires: A History of Magic Books* (Oxford: Oxford University Press, 2009), pp. 32-33 and 114-25 with fig. 9.

stavros, that was borrowed into Turkish as *hach* and became the standard term for the symbol.¹⁷

What of the appellation *k'aghts'rik*, "little sweet one"? The Armenian word for "sweet" is cognate with the English and thus goes back to the earliest Indo-European stratum of the language; the modern synonym *anush*, from Classical *anoysh*, is a Middle Iranian loan meaning "immortal", hence ambrosia (lit., immortal [wine]), with the secondary sense of "sweet" emerging from there. But the source is neither proto-Indo-European nor Iranian, one thinks, but again the Armenian liturgy, in this case the Hymn of Praise before Communion. *Matik' arr Ter ew arrek' zloys. Aleluia./ Chashakets'ek' ew terek' zi k'aghts'r e Ter. Aleluia.* "Come near to the Lord and take the light. Halleluyah./ Taste and see that the Lord is sweet. Halleluyah."¹⁸ It is telling also that the Christian hymn juxtaposes light and sweetness, which are found together in the Arewordi text as well. Several Armenian folk prayers recited at sunrise do the same. From Vardenis/Chakherlu, *Bari lusi k'aghts'r K'ristos./ Du oghormanas, du gt'as./ Du p'orts'enk'nerats' azat enes./ Du anp'orts'ank' pahes, ter Astvats* "Sweet Christ of the good light./ Have mercy, have pity./ Free [us] from trials./ Keep us untried, Lord God." A longer prayer, from Mush/Bulanekh, begins *Orshnyal i Astvats./ Orshnyal i bari lusu k'aghts'rik K'ristos* "Blessed is God./ Blessed is sweet little Christ of the good light," with the same diminutive for "sweet" as in the Arewordi invocation. Another such prayer, from Van/Andzak, pairs light and sun as the Arewordi one does: *Luse lusats'av/ Arev parts'rats'av/ Tiroch' zorut'enov/ Trakhti trrner pats'van,/ Tzhokhk'i trrner kots'van./ Art'arner urkhets'an/ Meghavorner tanjvets'an* "The light lightened./ The sun rose high/ By the Lord's power/ The gates of paradise opened./ The gates of hell were closed./ The righteous rejoiced./ The sinners suffered torment." Another prayer, from Rshnunik, pairs sweetness and light: *Los losats'av./ Ter k'aghts'rats'av./ Baru drrner bats'av./ Oghermut'en shatats'av./ K'ristos, ch'e khamis k'u akh im srten:/*

¹⁷ See James R. Russell, "The Armenians, the Holy Cross, and Dionysius Bar Salibi," *St. Nersess Theological Review* 8 (2004): 1-12. The territory of historical Armenia was dotted with *khach'k'ars*, "Cross-stones", as ubiquitous as the gaunt colossi of the *moai* of Rapa Nui (Easter Island) and as defining of the culture of the land. They are named in lists on talismanic scrolls where the direction of the writing itself forms crosses (see James R. Russell, "The Armenian Magical Scroll and Outsider Art," *Iran and the Caucasus* 15.1-2 (2011): 5-47.) Armenians baptized crosses and there was a folk belief that they then came to life and possessed power. This is reflected in an oikotype of the "Boil, little pot, boil!" folktale, about a magical Cross that slays unbelievers: see James R. Russell, "Raiders of the Holy Cross: The Ballad of the *Karos Khach'* and the Nexus between Ecclesiastical Literature and Folk Tradition in Mediaeval Armenia," in *New Approaches to Medieval Armenian Language and Literature*, ed. Jos J.S. Weitenberg (Amsterdam: Rodopi, 1995), 79-93. In 1997 I visited the village of Shushants' near Van. An ancestor of the Armenian-American playwright Herand Markarian had been the local priest; but when we came to the site of the church all that remained was a pit with a few stones at the bottom. A Kurd of the village told us that he had helped destroy the building in the early 1950s: he and other Muslims believed the cross to be an evil *isharet* ("sign, symbol") of great power: the Armenians and their symbols had to be eliminated lest they destroy the Muslims first. As one will observe presently, Christians tended to regard the Jews and the language and symbols of Judaism as likewise powerful in a malefic way, and went on to appropriate them to texts and rituals of magic.

¹⁸ Nersoyan, *Pataragamatoyts'*, 88. The Arm. *k'aghts'r* "sweet" translates Gk. *chrestos*, which has a range of meanings including "good, merciful, bountiful" of God and persons and "sweet" of fruits. The original Hebrew, of Ps. 34.9, has *ta'amu u-re'u ki tov Hashem* "Taste ye and see that the Lord is good." The further implication, relevant to Communion, that He is literally edible, is a Christian interpretation of the verb, which the Psalmist probably intended to mean "consider, try out," not "eat"—he is enjoining Israel to examine, ponder, and remember God's specific beneficences, not to devour Him. Rabbinic teachings point out that God begins the Ten Commandments not by introducing Himself to the assembled Children of Israel generally and theoretically as Creator of heaven and earth, but immediately and intimately as the liberator from Egyptian bondage.

K'u akh-amot'ov dzi shakhes, pakhes/ Ter, du es steghtse; ch'e koruses,/ Ter du es shine; ch'e kortsanes;/ K'u ardar chambkheneru veren/ Zi khangist makhem tas "The light lightened./ The Lord sweetened./ The gates of good opened./ Mercy abounded./ Christ, remove not your fear from my heart./ By fear of you and shame before you, care for and keep me./ Lord, you have created; do not cause perdition./ Lord, you have made; do not destroy./ [Let me walk] upon your righteous paths/ That you may grant a peaceful death."¹⁹

These examples can be multiplied, but the texts cited are sufficient to demonstrate an interesting point. The Arewordi prayer is distinguishable from the Christian ones cited mainly in the **absence** from it of explicitly Christian terms—of words such as *K'ristos*, "Christ", or *Astvats* "God". To be sure, there are other marked terms in these Christian prayers that are of Iranian origin and that Arewordik' might have used. *Drakht* "Paradise", an Iranian loan meaning "tree", and *dzhokhk'*, "Hell", a specifically Zoroastrian term meaning "worst existence", and even *orhn-em* "bless", from the Iranian *afri-*, are among innumerable other lexical items of religious import that were adapted from local Zoroastrianism to Christian use from the beginnings of written Armenian in the fifth century. At that time Armenia's powerful neighbor to the southeast was, of course, the militantly Zoroastrian Sasanian Empire. There was a numerous, strong, and generally tolerated Christian community in Iran and its possessions, then; and treaties with Constantinople guaranteed toleration of Zoroastrians in Byzantine lands. But it would seem Christians did not honor those agreements and Zoroastrians in Anatolia were reduced to an impoverished and clandestine existence. Presumably the Zoroastrian Armenians fared little better.

Although the Arewordik' preserved some Zoroastrian beliefs, there is no evidence of their having known Avestan prayers or the names of *yazatas*, unlike, for instance, the *magousaioi* of neighboring Cappadocia, who according to St. Basil knew a form of the name of Zurvan, the supernatural personification of time.²⁰ They had a kind of religious leader called a *hazerpet* ("chiliarch"), but little else of what makes up the material life of a religious community endured. The Arewordik' recited the prayers of their decimated, isolated faith, a religion that had lost its temples, sacred implements, vestments, liturgical language and holy books and was reduced, one might say, to the bare essentials, to the *declaration of what it was not*: their prayer invokes light, sweetness, sun in the manner of the folk prayers of other Armenians, and these prayers are strongly influenced by the usages of the Apostolic Church to whom those other Armenians belonged—but Christ is absent.

One is reminded here of Arthur A. Cohen's haunting short story, "The Last Jew on Earth: A Fable," published in *Commentary*, November 1972, in which all the world has accepted the Roman church, save for a single man, a Spanish *converso*. (We shall have more to say presently about real life conversos—Iberian Jews who were baptized, some of retained in secret what they might remember of Judaism, or a changed form of it.) His family has long since forgotten the Hebrew language; they possess only an old document in which they swear allegiance to their true faith. They read it once on year, on the Shabbat before Yom Kippur, the Day of Atonement. The man, Don Rafael, is discovered and brought before an astonished crowd: "The old priest limped to his side and spoke: 'The world awaits you. Speak the recantation and

¹⁹ Sargis Harut'yunyan, ed., *Hay hmayakan ev zhoghovrdakan aghot'k'ner* (Armenian Incantations and Folk Prayers) (Erevan: Erevan University Press, 2006), 191-95.

²⁰ See James R. Russell, "Two Roads Diverged: Ancient Cappadocia and Ancient Armenia," in *Armenian Kesaria/Kayseri and Cappadocia*, ed. Richard G. Hovannisian (Costa Mesa, CA: Mazda, 2013), 33-42.

then hand the document to the Cardinal and kneel before him.' Don Rafael bowed his head in salutation to the Cardinal and moved toward the microphones. There was silence, but for the gentle patter of the rain. Don Rafael passed a hand lightly over his forehead and touched his eyes in a gesture of friendship toward himself. He paused and breathed deeply. He began. 'I believe in one God, Father Almighty, maker of Heaven and Earth,' and he paused, 'and . . . and . . . that is what I believe, that is the only belief I share with you.' Cries. 'No, no!' 'And the rest that I believe is what I have learned from my father and my father's father and all those in the generations of fathers which stretch back in the history of time to Moses, my first master. . . . And so much more, if you would like to hear about it.' Don Rafael paused. He would have continued and told the history of the generations of Israel, but he was not allowed. The microphones went dead." Don Rafael's religion has been reduced, thus, to the subtraction of what he does believe from the Catholic credo.

The Arewordi community was, though evidently not subject to active persecution, still something of a Don Rafael. It was an isolate, a survivor in a nation that was itself for the most part, and for the long stretch of its recorded history, a Christian island in an often turbulent and perilous Muslim sea. For in the Arab Caliphate and later in Ottoman Turkey the Armenians constituted a *millet* ("nation"), that is, a community granted the degrading but tolerated status of *dhimmis* but also allowed semi-autonomous status in some spheres of life—marriage, family, burial, etc.—under the governance of their religious authorities, who were answerable to the Sultan. Armenian identity was thus socially and legally inseparable from Christian identity. This was so much the case than the very idea of a non-Christian Armenian identity was and generally still is well nigh unthinkable and incomprehensible: an Armenian convert to any other religion lost his language and identity within a generation.²¹ But the Arewordik were speakers of Armenian who lived on their ancestral land, an island within an island, a culturally impoverished people subsisting with no legal status or definition. The words and rites of the Christian faith had surrounded them for many centuries and they patterned what was evidently an important invocation (since, as we have seen, two sources report variants of it independently) on Christian liturgical usages. This influence or emulation was unwitting and subconscious, or, less likely, was accepted by design as a kind of camouflage. (If so, it was scarcely effective.) There is no evidence to suggest that the Children of the Sun were Christian converts on the surface who practiced their authentic rites privately and secretly held to their original beliefs. But a comparison may, with those caveats, be drawn nonetheless to another group.

In the centuries before and following the mass expulsion of their community from Spain in 1492, many Sephardic Jews converted to Catholicism rather than leave their homeland. Various scholars, notably the father of the present Israeli Prime Minister Benjamin Netanyahu, have persuasively argued in recent years that Christian anti-Semitism was not always theological alone but often had a biological aspect as well, long before the Nazis. This dimension was perhaps present even *ab initio* in

²¹ Prof. Seta Dadoyan's groundbreaking research on the Fatimid Armenians demonstrates this well, *The Fatimid Armenians: Cultural and Political Interaction in the Near East* (Leiden: Brill, 1997). The only Armenian community that was converted to Islam but is known to have retained its language was that of the region of Hamshen in the mountains south of the Black Sea coast within Turkish territory. (Other Hamshen Armenians who refused conversion fled northwards to safety in Sukhumi, in Christian Georgia.) Elsewhere, an Armenian who became a Muslim became in time also a speaker *exclusively* of Kurdish, Turkish, or Arabic.

embryonic form—if one considers some of the vicious tirades of St. John Chrysostom against the Jews in the fourth century. In the medieval Iberian peninsula, at least, Jews were believed to have an inherently pernicious racial identity that did not change with baptism: the “New Christians” or *conversos* (also called, disparagingly, Marranos), lacked what was called the *limpieza de sangre* “purity of blood” of Old Christians. This meant that even converts who believed sincerely in their new religion and became successful in Spanish society still bore an ineradicable stigma. Such conversos often went on to deal creatively with their enforced marginal status, as innovative Christian believers, thinkers, and even explorers—among these luminaries are St. Theresa of Avila, San Juan de la Cruz, and companions of Christopher Columbus. They looked inward and stressed the inner and intangible aspects of faith and the person, rather than the external signs of ancestry and status; or, outwardly, they sailed forth to find new lands. In the case of Armenian sectarians such as T’ondrakets’is and Paulicians, one has found over the years that descendants of adherents of these “heretical” confessions have tended to move away from the Apostolic Church, embracing Protestantism and freethinking, or, in Russian Armenia, making common cause with exiled Russian sectarians—the Subbotniks and Molokans.²²

But to return to the example of the Inquisition, many other conversos, while presenting themselves as Catholics in public, held privately and inwardly to the tenets of their original faith: there is only one God, Jesus is not divine, the “Old” Testament is true and not the “New”, and Moses stands alone as the foremost of the prophets. They attempted to practice what they remembered of Jewish rites handed down to them, lighting Sabbath candles secretly in a cellar or inner room, or finding subtle ways symbolically to abstain from eating pork. Clandestine faith was more than a social necessity: to be discovered or denounced to the Inquisition meant certain arrest and torture, followed by imprisonment or death. And though they soon forgot the Hebrew language and had no access to Rabbinic texts, the conversos passed their beliefs on to their children for many generations: the Holy Office of the Inquisition itself was closed only in 1819, and it was well over a century after that before Judaism began again to be practiced openly in Spain.

It was inevitable that over time the secret Judaizing prayers of the Marranos acquired Catholic features of style and content: sometimes they might pray before a picture of Moses or another prophet, much as Catholics employed iconic images, though Judaism forbids the use of such representations. Their philosophical emphasis on salvation is also a Catholic feature, as Prof. Yirmiyahu Yovel has persuasively and illuminatingly argued. For normative Judaism stresses performance of the Commandments and loving adherence to God and the Covenant. The hope for salvation is important, but Jews do not accept the ideas of original sin and the prospect of damnation in the way Christians do; so salvation is generally seen as communal and national restoration of the Land of Israel, the Temple service, and the advent of Messianic kingship. Personal salvation is not the central concern of the religion in the way it is for Christians. The conversos, then, in expressing anxiety about salvation from sin and damnation as the centerpiece of some devotions, had absorbed aspects of the surrounding Catholic faith and the language and style of its

²² See James R. Russell, “The Last of the Paulicians,” *Hask hayagitakan taregirk’* 7-8 (1995-1996): 33-47. In the spring of 2009 I made the acquaintance of an Armenian-American from California named Josa who had settled in Mevasseret Tzion, a suburb of Jerusalem, Israel, with her husband, a Protestant archaeologist from Mississippi.

prayers into their beliefs and practices. The Armenian Children of the Sun seem to have done something similar in their prayer to the Sun on the liturgy of the Armenian Apostolic Church. Indeed it would be indistinguishable from a Christian folk prayer of the dawn but for what it does not have—any reference to Christ, the Hebrew Bible, or the Gospel.

A prayer of one community of crypto-Jews, I would suggest, seem to reflect a pagan view of the journey to the Otherworld after death that is extremely archaic and presumably had endured underground among Iberian gentiles. One clandestine group might thus have felt a kind of affinity and sympathy with another,²³ even as Armenian T'ondrakets'is and Russian Molokans found mutual affirmation, consolation, and the support that comes in numbers, in each other's company. Let us consider the Marrano prayer. Gitlitz reports that in early 20th-century Portugal, it was a custom of the *cristãos novos* to put a coin in the mouth of the deceased, or to pass it over his mouth (either way it is Charon's obol, and no currency of Judaism!)—and then give it to the poor. This would be a rationalization of the pagan custom, transforming it to *tsedāqa*, “charity”. The latter, with *teshūva* “repentance” and *tefilla* “prayer”, form the triad of virtues that *ma'avirin et ro'a gezera*, “turn away the evil decree” on Rosh Hashana and Yom Kippur.²⁴ Then the mourners recited thrice: Ao Vale de Josafat irás/ um leão encontrarás:// Se te pedir carne, dá-lhe pão:// Se te pedir senha, dá-lhe dinheiro:// Se te procurar de que lei és./ Diz-lhe que és de Moisés.// Que te deixe passar/ livre e desembaraçado// Para onde Deus te deixar/ para onde Deus te mandar.// Se perguntar quem te compôs/ diz-lhe que foi uma hebreia// que neste mundo ficou./ que te fez o que sabia./ não te fez o que devia. “You'll go to the valley of Jehosephat/ and find a lion there.// If he asks you for meat, give him bread;/ if he asks you for a sign, give him money.// If he inquires which law is yours,/ tell him the law of Moses.// May he let you pass by/ freely and untrammelled// where God allows,/ where God orders.// If he asks you who made you,/ tell him it was a Jewish woman// who brought you into this world:/ may he do to you what he knows how// and not do to you what he should.”²⁵ The prayer is replete with explicitly Jewish symbolism. The valley of Jehosephat outside the walls of Jerusalem is where Jews believe the dead will be resurrected. The lion recalls the lion of Judah. Bread and meat may refer to the variant meanings in Hebrew of *lechem* “bread” and Arabic *lahm* “meat” and thus recall a time when both languages were known in the Iberian peninsula. Moses alone is named as a religious figure (not Jesus or any Christian saint), and the mother of the deceased is identified as a Jewish woman.

But these Jewish references still re-frame the entirely pagan theme—one utterly alien to normative Judaism—of a journey to the next world on which the imperiled soul must be equipped with the necessary directions, bribes, and passwords it needs to reach a place of bliss. The text that explains all these is recited as the soul departs from the body. The Tibetan *Bardo Thodol* gives a Buddhist cast to the same

²³ See David M. Gitlitz, *Secrecy and Deceit: The Religion of the Crypto-Jews* (Philadelphia: Jewish Publication Society, 1996); and Yirmiyahu Yovel, *The Other Within: The Marranos, Split Identity and Emerging Modernity* (Princeton: Princeton University Press, 2009).

²⁴ The words comprising triad have a poetic assonance, with stress on the penultimate syllable and a final -ah for all. They point to acts with salvific power: one is reminded of the Zoroastrian “good thoughts, good words, good deeds” discussed earlier. It is noteworthy that for both Jews and Zoroastrians, it is deeds (*hvarshita*, *tsedāqa*) that matter most—it is no use to repent in prayer on Yom Kippur the wrong done a person unless one has first sought his forgiveness!

²⁵ Gitlitz, *Secrecy and Deceit*, 285 and 307, n.48.

tradition, co-opting what was plainly a pre-Buddhist belief and ritual. The *locus classicus* for such texts is the Egyptian *Book of the Dead*. We find a similar itinerary in the famous ancient Greek Petelia tablet, which Jane Harrison discussed long ago:

ΕΥΡΗΣΕΙΣ Δ' ΑΙΔΑΟ ΔΟΜΩΝ ΕΠ' ΑΡΙΣΤΕΡΑ ΚΡΗΝΗΝ / ΠΑΡ Δ' ΑΥΤΗΙ
ΕΣΤΗΚΥΙΑΝ ΚΥΠΑΡΙΣΣΟΝ. / ΤΑΥΤΗΣ ΤΗΣ ΚΡΗΝΗΣ ΜΗΔΕ ΣΧΕΔΟΝ

ΤΟΤ' ΕΙΠΕΙΤ' Α(ΛΛΟΙΣΙ ΜΕΘ') ΗΡΩΕΣΣΙΝ ΑΝΑΞΕΙΣ...

You will find to the left of the house of Hades a wellspring / and by the side of it a white cypress standing: / to this wellspring do not come near. / You will find though another by the lake of Memory, / cold water flowing forth, and guardians before it are. / Say: I am a son of Earth and of Heaven starry, / but my race is Heavenly. This you yourselves know. / I am parched with thirst and perish. But give quickly / cold water flowing forth from the lake of Memory. / And they will give you to drink from the divine lake/ and then with the other Heroes you will have lordship.²⁶

This text is not unique in the varieties of ancient Greek religion but citation of it is sufficient to prove the pagan and non-Jewish origin of the custom that underlay the Judaized prayer of the Portuguese New Christians.

As one might expect, the language of the prayers of adherents of secret and forbidden religions has points of similarity to the spells of magic. Christian folk magic used to beneficent ends—the arts of healers, for instance—lies oftentimes just within the bounds of social acceptance. Sorcery and black magic are beyond and thus practiced clandestinely. But these practices have a social role: love spells, or spells designed to thwart the designs of enemies, may be malefic in intent but are a sort of steam valve, useful in releasing tension. It is better to have a magician write a curse on a rival suitor than to go out and kill him; better to invoke the wrath of supernatural beings on the boss than to “go postal”, as Americans say of disgruntled mailmen who suddenly arrive at work one day, God forbid, with a gun. So in modern Erevan one can engage the services of magicians who will write a curse and put it in a tree trunk, or insert a counter-clockwise rendering in feathers of the Christian scythe-sun of eternity, in an enemy’s pillow. It is difficult to discern whether the people derided by the fifth-century Eznik of Koghbe as *heshmakapasht*, “worshippers of Wrath”,²⁷ practiced actual demonolatry. Does anybody deliberately worship a being whose purpose is to harm one? Nowadays there are such people: one can easily obtain a “Satanic Bible” or acquire the liturgy of a “Black Mass”. But those very terms illustrate well the dependence of the presumed devil-worshiper on the very beliefs and institutions that he is inverting. Magicians often use Jewish symbols

²⁶ Jane Harrison, *Prolegomena to the Study of Greek Religion* (Cambridge: Cambridge University Press, 1903), 659 and discussion, 572 *et seq.*

²⁷ Arm. **heshmak*, compare Geor. *heshmaki* “demon” and Pers. *khesm*, “wrath”, is the archdemon *Aeshma Daeva*, the Heb. Ashmedai and Eng. Asmodeus of the apocryphal Book of Tobit, a pleasantly quirky Persian-style romance (and an ancestor, one thinks, of Restoration comedy) set in Nineveh and Hamadan: see James R. Russell, “God is Good: Tobit and Iran,” *Iran and the Caucasus* 5 (2001): 1-6. On some Armenian spells and their folk associations see James R. Russell, “Languages of Men, Languages of Demons,” in publication, *Festschrift Michael Stone*, ed. Theo Van Lint.

and Hebrew letters and words, borrowing from another group on the margins; and Christian anti-Semites associate Jews with the symbols and images of satanism, such as upside-down pentacles and black men with the heads and feet of goats and of course long horns.

I mention all this simply because writing spells seems to have been a kind of sideline to bring in a little extra income for adherents of forbidden or marginal religions willing to bend their own morality and take advantage of the curious and the credulous. In Muslim lands, it was wine taverns that were the domain of *kafirs* as well—and a different sort of esoteric religious mystique formed around those.²⁸ From the mid-16th century Marranos settled in the region of the Bordeaux Parliament, contiguous to their ancestral land of Spain; and it is recorded that in the mid-18th century gentile Spaniards were still making trips to Bayonne hoping to learn magic from them.²⁹ These lessons were presumably not *gratis*, unlike the month-long introductory offer available from a pair of fallen angels and their cat in the Mountains of Darkness beyond the river Sambatyon.³⁰ So perhaps if one were in search of an Awordi in medieval Armenia, finding out where the local witch lived might be a good place to start, perhaps after a few drinks in the company of friendly Sufis at the local Magian bar.³¹

James Russell is Mashtots Professor of Armenian Studies at Harvard University; Distinguished Visiting Professor at The Hebrew University of Jerusalem; and part-time Lecturer at California State University, Fresno

²⁸ In Muslim Iran, the Zoroastrians found another niche in a business that was also tolerated for its social function of release of tension but officially frowned upon: running a bar. Persian poetry abounds with esoteric treatments of the *maykadeh*, “temple of wine”, *pir-e moghan* “Magian elder” (the bartender), and the latter’s son—the handsome young *mogh bachche* “Magian boy” who served as *saqi* “cupbearer”. The boy becomes the metaphor for God, the Beloved; passionate love (*‘eshq*) and drunkenness (*masti*), the ecstatic state of the mystic worshipper. On the subject generally, see Ehsan Yarshater, “The theme of wine-drinking and the concept of the beloved in early Persian poetry,” *Studia Islamica* 13 (1960): 43-53.

Sergius Tokhtasev and Paulus Luria (St. Petersburg: Institute of Oriental Manuscripts of the Russian Academy of Sciences and Nestor-Historia, 2013), 469-80.

³¹ In Constantinople at the turn of the century one might visit a hashish den instead and witness the modern permutation of a pagan ritual, of the sort we have discussed, right there. For it was the custom for the musicians to throw three grains of hashish in the fire and sing in modern Greek, *Ya sou Khare! Na kharis to mavro sou skotadhi*. “Greetings, Charon—may you enjoy your black darkness!” There is a play on the name of the ferryman of Hades, Charon, and *kharo*, “enjoy”. Prof. Martin Schwartz, the prominent Iranist and ethnomusicologist, and a friend and teacher, showed this to me (and played it on one of his precious antique gramophone recordings) about thirty years ago at his home in Berkeley.

Odysseus and a Phoenician Tale¹

The question of the authorship of the two Homeric epics — whether there was one Homer, or two — has vexed scholars since the inception of critical literary study. The more bellicose, less inner and mysterious Iliad was by far the more popular poem in antiquity. And although the later Aeneid of Virgil tendentiously fuses together war and *nostos* (homecoming), it is of arms and a man, not a man of many ways and wiles, that the Roman poet sings. Odysseus is likened, invidiously, to a Canaanite (Phoenician) traveling merchant in his flexibility and adaptability — he, the “rootless cosmopolitan” of his remote age, resonates with the predicament of alienation of modern man and with the psychological depth of the modern literary sensibility, then bellicose, candid, limited Achilles and Aeneas. It is proposed in the article that the Odyssey employs the topos of a man traveling in search of lost members of his family, with a happy resolution, that seems indeed to have been peculiarly popular over many centuries with Phoenicians and Carthaginians. The author suggests indeed that Menaechmus, the name of a character in a play based on this topos with a Punic setting that might even have been performed, in a Northwest Semitic translation in Qart Hadašt (Newtown, i.e., Carthage) itself, is merely the very common Hebrew name Menachem. And it is noted that the topos recurs, employed in aid of religious propaganda of the Jewish Christians, in the setting of the Pseudo-Clementine Recognitions.

Keywords: literature, tale, culture, man, topos, Christianity, paganism.

“It’s about family, stupid!”

The Lost Boys 2: The Tribe (Thunder Road Pictures, Hollywood, California, 2008)

1. Two books and two Homers?

What is the canonization of a sacred text?

Homeros hebraïzōn? Kyrie eleëson! Homer acting like a Jew? Lord have mercy! Not again. The search for affinities between Homer and the Bible, between the ancient civilizations of Greece and Israel, between Athens and Jerusalem (*pace* Tertullian) seems to be old news: in 1658 Zachary Bogan in his *Homerus Hebraizon* compared words and phrases in the Hebrew Bible and Greek Epic. And the vexed question of the authorship of the *Iliad* and *Odyssey* is very much older, going back to Hellenistic literary criticism, though in this instance the question at issue resolves into a simple opposition: some believe Homer (or somebody else who was or wasn’t named Homer) composed both heroic epics; others,

¹ For my Mother, Charlotte Sananes Russell (Rachel bat Yosef), and in memory of our ancestors from Salonica, Greece — the Jerusalem of the Aegean.

the *khorizontes* (lit. “separators”), that the authors were different (two poets who were not Homer but whom posterity named Homer, two different Homers, or a Homer and someone else who wasn’t, etc.). Assigning an approximate date to the poems poses a further problem, though it is generally accepted that the *Iliad* was the earlier composition. The plot of the whole narrative is the simplest support for this supposition — first there was the Trojan War, then Odysseus got home from it — but there are other factors as well: the archaic elements of the *Iliad* are strong, while much of the setting of the *Odyssey* is that of roughly the eighth century BCE. Neither of the two poems reflects fully or accurately the Mycenaean age in which the war is set; and some of the inherited detail that the poet does know is so remote to his own time that he misunderstands it.

There seem to have been two different books from the start, however one may resolve, or fail to resolve, the question of authorship. The parties of dividers and unifiers have, thankfully, to do with authors, and not with whether an original, single book was split in two. The evidence of the proportion of surviving manuscript fragments shows, incontrovertibly, that the *Iliad* was read by itself and was by far the more popular of the two epics in antiquity — there are about ten times as many surviving fragments as there are of the *Odyssey*. It is generally accepted that ancient Hellenic scholars established a canonical text, the edition of Athens in the golden age of Peisistratus. This is over half a millennium before the books of the Hebrew Bible were canonized as the Masoretic (“traditional, handed down”) text of the “written Torah” with the accompanying “oral Torah” of the *Mishnah* (lit. “repetition”, a code of laws compiled by the Tannaim around the 2nd century CE not directly based upon the Pentateuch but intended to elucidate it) and the *Gemara* (lit. “completion”, the oceanic commentaries, narratives, and discussions of the Amora'im of the Land of Israel and Parthian and Sasanian Mesopotamia, anchored on the *Mishnah*). *Mishnah* and *Gemara* together constitute the *Talmud*, or “teaching”. There were schools of different sages — those of Hillel and Shammai are the most prominent — that offered different interpretations and judgments, and debated each other. The *Talmud* records these, often without concluding who was right. The sacred books of the Zoroastrians were codified around the 5th century CE by the Sasanian priesthood and its academies as the *Avesta* with its accompanying translation and commentary, the *Zand*. Very little of the 21 great divisions of the Sasanian *Avesta* survives, compared to the *Talmud* (which also has many subsidiary texts, also of great antiquity). But the Iranians, too, had schools following sages with differing interpretations. Even though Zoroastrians privilege orality over writing, which would suggest there were fewer written copies of the *Avesta* than there were of the *Talmud*, perhaps there was still a vast manuscript heritage that has now been irretrievably lost².

² Zoroastrian texts in Middle Persian lament the destruction of sacred manuscripts, and the murder of Magi — the living books of the faith — by Alexander; and they record, too, the synods convened by Parthian and later Sasanian monarchs to codify the *Avesta*. Because of their predominantly oral tradition the Zoroastrians, like the Hindus and Buddhists in India, did not gain unambiguous recognition and protection under Islam as an Abrahamic “people of the Book”, and were subject to sporadic persecutions that became increasingly severe down to early modern times. Christian states accorded Jews a protected but degraded status as an object lesson: this is what happens to Christ’s people when they do not accept Him. The *Talmud*, which contains some anti-Christian remarks, was often censored or burnt. But its real fault is that it is the brilliant representative a living, spiritually and intellectually vibrant faith that neither has nor needs any reference or relationship to Christianity at all.

In the Greek case there never seems to have been a system of sacerdotal academies devoted to commenting upon and arguing about a Homeric scripture, for all the immense importance accorded these foundational texts of Greco-Roman civilization. Neither *Iliad* nor *Odyssey* pretends to offer the two categories of authoritative, revelatory teaching that Christians, Jews, and Zoroastrians have come to expect holy scripture to offer: first, an explanation of how and why the physical universe we inhabit came into being (cosmology); and, second, normative precepts about what we human beings are supposed to do while we are in the universe, and, indeed, why it is that we are here at all (ethics). It is not the Word of one God. Yet pagan tradition assigned sacred status to both poems, the *Iliad* and the *Odyssey*, without these desiderata. Despite the misgivings of some literary critics, the consensus of the ancients was that the two poems had a common author, Homer, a blind bard from the island of Chios, just off the Ionian coast from Smyrna. The subsidiary Homeric hymns, composed after his time, became attached gradually to the venerated literary corpus. These expand upon or flesh out the events and personages of the poems. This formal process is analogous, *mutatis mutandis*, to the treatment in Jewish tradition, alluded to above, of the texts that have come to constitute the Hebrew Bible. The five books of Moses — the Pentateuch — at its core were taken to have been set down by a single hand, despite their obvious differences of period and authorship; and as the Masoretic canon was established, subsidiary texts were included or rejected, sometimes for reasons that are far from clear today. It takes special pleading to justify the inclusion of *Ecclesiastes*, whose dismal theology is on the face of it incompatible with the rugged, ethnocentric covenantal cheer of Rabbinic Judaism. And the erotic *Song of Songs* can be justified only if the interpretation of the whole as a spiritual metaphor is forced upon the text. The evidence of an Egyptian precursor surely argues the artificiality of such an undertaking. In the Greek case there is a similar oddity, a kind of parody in heroic verse of the Trojan War called the *Batrachomyomachia*, “The War of the Frogs and the Mice”, in which the little creatures, with Homeric names, squeak their speeches and battle nobly for possession of a swamp³. Perhaps the ancients, in Athens and Jerusalem alike, did not take themselves too seriously, allowing room even in a pious conception of the world for humor, sarcasm, and eroticism.

The Homeric epic, consisting of two poems, 24 books in length each, is a linear narrative about the Trojan War and the return of the hero Odysseus from it. If one were to combine the two poems into a single book, a good title might be *War and Peace*, had not a later writer already used it. It at least presents a unity of subject, theme, genre, and character to which the Hebrew Bible, the *Tanakh*, cannot aspire unless one sum up the latter in the most general way as a grand narrative of the Creator’s covenantal bond with His people Israel. The journey of the Torah would then include many stops along the road to survey the way, take in the view, and examine the smallest details: to specify laws, sing praises, recount the deeds of kings, and issue prophetic warnings. This approach requires a base line of irrational faith (or supra-rational faith, depending on one’s point of view) requiring that one accept the canonical text in its entirety, with all its obvious textual and

³ This strange poem can be related to the larger and more familiar genre of Aesopian animal allegories. The late 17th-century Armenian poet and artist Naghash Hovnat’an (Jonathan the Painter) employed the venerable allegory of cat and mouse (cf. Art Spiegelman’s graphic novel of the Holocaust, *Maus*, in recent years) in such a composition: the little Armenian mice think the tyrannical cat, presumably a Muslim Shah or Sultan, is dead. They rejoice, and prepare to bake a funeral loaf. But the cat rises suddenly and, loading himself with heroic epithets appropriate to the exploits of felines, boasts that he will chase them from Karabagh in the Persian east to Marsovan in the Turkish west and eat them all — see [1, p. 41–42].

other contradictions to be accounted for as emanating from beyond time and space — that one profess the Torah as the Word of God from Sinai, that being unifying factor enough (which privately as a believer, this writer freely admits that he does, though the mundane realm of philological scholarship presents quite other parameters and demands). *Credo quia absurdum est*. For a clear-eyed Athenian thinker, of course, there is a fair measure of the absurd in Homer's semi-divine personages, talking horses, animate rivers, and indecorously squabbling gods: fair game for euhemeristic and metaphorical interpretation, but dangerous ground for the disbeliever, too, if one regards the trial of Socrates, with its accusation of atheism, as an expression of genuine outrage at blasphemy rather than just a trap set by his political enemies.

Part of the problem that arises when one attempts to draw a comparison between the revealed texts of the Abrahamic and pre-Islamic Iranian faiths and the sanctified Homeric corpus is the tacit presupposition that they fall under the same rubric of something one can define as “religion”. This is misleading: Greco-Roman paganism evades the Judeo-Christian understanding of religion. It is not a tidy matter of a single dogma, with a more or less canonized set of customs and liturgical rites, but rather a mass of local beliefs and diverse practices sanctified by time and custom, of corresponding loyalties steeped in emotion and blended with the supernatural, all of it bound together by the sense of a larger, shared history and way of life. This complex or web of mythologies, local shrines and gods, and varied rituals was susceptible to be sure to the interpretations and speculations of philosophers, but in practice it was still to be maintained in all its manifold forms, a kaleidoscope with the sense of one light shining through but with no less a devotion to the myriad patterns and colors. The Homeric poems are not, then, *normative*: there are no Ten Commandments there. But they are *formative*: they present society with a shared vocabulary, a corpus of cultural *Gemeingedanken*. And they are *exemplary*: they display models for imitation on various levels of art, of action, and of thinking⁴. Out of the Homeric sea flow the intricate rivulets of the *Odes* of Pindar, the turbulent streams of Greek tragic drama, the rich eddies of mythography. But what do these poems, of such extraordinary importance, say?

2. The story

And even before the story they actually tell, where did it begin? — as Roberto Calasso is wont to ask in his long meditations on classical Greece and Vedic India. It is a wry question, since there is nearly an infinite regress till we get to the beginning of the story, and in any case Homer does not tell us the beginning (his brief is not *Genesis*). This is partly

⁴ For a discussion of these three categories in the context of a canon of sacred scripture, see [2, p. 3]. The clearest case of the Homeric corpus as exemplary scripture is that of the Aeneid of Virgil, which takes up the Homeric narrative at the fall of Troy and then presents a sort of Homer-in-reverse: The Trojan exiles, led by Aeneas, journey outward to the war for the conquest of Italy that closes the epic. But Italy is obscurely their original home; so the journey is actually a *nostos* to a divinely promised land. It is likely here that the Roman poet appropriated both the Biblical Exodus and the idea of the Chosen People to his tendentiously propagandistic celebration of the Augustan imperial project. The shield of Achilles, evoked by Homer, is a charming, poignant cosmogram of the dance of life, but that of Aeneas is a carefully plotted political map, its message of universal Roman dominance as gravid as the metal of its manufacture. The first line clangs as dismally a gladiator's sword: *Arma virumque cano*, “I sing of arms and a man.” Pious Aeneas is the consummate *paterfamilias*, but the Roman poet still reserves his derision for Odysseus, for reasons we will presently propose.

because in his dramatic and narrative brilliance he prefers to plunge *in medias res*, to stress a point, rather than cover a whole tale; and partly too because he can be confident that his listeners (or readers) already know at least the outlines of the Trojan War, and probably many details. The point is not merely to retell it, but to relive it. But here is how it began: Agamemnon, king of Mycenae in the Peloponnesus, summoned the Greeks — called Achaeans or Danaans (the later Greeks — the latter is a Roman term — called themselves Hellenes) — and raised an armada to invade Troy (or Ilium, as it is also called) because its prince, Paris (or Alexander, as he is also called, not to be confused with the later Macedonian world-conqueror), had run off with Helen, the wife of Agamemnon's brother Menelaus. It is a matter of honor and shame: it is not her beautiful face that launched a thousand ships (*pace* Christopher Marlowe), but the embarrassing fact that she is stolen property. And the ill-fated seduction goes back to a choice of three apples, and the golden, treacherous goddess of love, Aphrodite. One recalls a much earlier epic, that of Gilgamesh, and the ruin that followed his refusal of the love of the goddess Ishtar⁵. Such, we are meant to feel, is the human condition: as some American men still say of women (when there are no women present), you can't live with them but you can't live without them. How much more is it true of these vindictive, fickle goddesses⁶. Helen's elopement will end with the destruction of Troy: Menelaus returns with her to Argos, to a tense and embittered married life in middle age made tolerable only by her spiking her husband's drinks with a drug that brings on oblivion. It is worse still for Agamemnon, who sacrificed his daughter Iphigeneia (whose name means "engendered violently") to get of the gods fair winds for the invading fleet. He is to return to his wife Clytemnestra, who detests him for his cruel deed and his selfish, callous pomposity. She and her lover Aegisthus will kill him while Cassandra howls her worthless prophecies before her own throat is cut. And because of that, the slain king's son Orestes will take revenge for his father, killing his mother. And for that, his mother's vengeful spirits, the *Erinyes* or Furies, will pursue him.

When Orestes reaches Athens, its patron goddess and its primordial king will grant him sanctuary, and establish law and justice in the place of the sanguinary chain of vengeance. None of that will save the House of Atreus, though: Agamemnon led the Achaean armies and fought a ten-year war, all for his family to vanish utterly. All this we have thanks to retrospective storytelling in the *Odyssey* and to the dramatic expansion of the narrative in the *Oresteia* trilogy of Aeschylus, who modestly averred that his plays, written for the annual festival of Dionysus on the slopes of the Athenian acropolis, were mere scraps from Homer's feast. So there are stories that come before, and others still of what came after, into which the narrative of the war itself is sandwiched. And this seems to be

⁵ The ancient Mesopotamian epic is recognized as one remote ancestor of the Homeric corpus, and it is fascinating to trace both the changes and the lines of continuity from Mesopotamia to Greece. The character of Gilgamesh seems to bifurcate: as the grand and lustful king, who leaves none of the girls and boys of Uruk in peace, he prefigures Agamemnon, with the latter's fatal lack of self-control. As the brave companion and lover of Enkidu, Gilgamesh foreshadows Achilles, with his *therapon* ("caretaker") Patroclus.

⁶ And there is no escape. The poor adolescent Hippolytus (his name means "destroyed by horses"), afraid of his own nascent sexuality and repelled by the advances of his stepmother Phaedra, sublimated his desire into hunting and racing his horse-drawn chariot. Esteeming Artemis, he succeeded only in enraging Aphrodite: a bull rose from the sea, spooking his quadriga, and he fell and was trampled and mangled — destroyed by his own horses indeed. So for the Greeks the archetype of the dying and rising god — Anatolian Cybele and Attis, Hebraic and Islamic Zuleikha and Joseph, Iranian Sudابه and Siyavakhsh (which means "black stallion"; cf. Hippolytus) — was not a basis for a cult but the occasion intricate psychological investigation of the paradoxes of sexuality.

a large lesson of the first Homeric poem: humans being what they are, at a remove from other natural beings on the one hand (as Homer insists in his long similes, trees burst into leaf anew every spring, but we live once, then die forever), and from the gods on the other⁷, it is inevitable that we will go to war, and it is a foregone conclusion besides, that however necessary a war may be, in the end it will cause tremendous destruction without solving anything of our predicament, at most serving as the turning point where one epoch ends and another begins. In epic, the war generally marks the end of the heroic age and the inception of the one in which we lesser mortals live now⁸.

The action that drives the *Iliad*, which begins in the ninth year of the ten-year-long war, is a kind of abduction of Helen in miniature. Agamemnon has taken a concubine, Chryseis, from a priest of Apollo, who calls down a plague upon the Achaean camp. To lift it, the king returns the girl — but then takes another, the concubine Briseis of his champion fighter, Achilles. If Achilles were truly subordinate the problem might have ended there; but as Prof. Nagy pointed out in his seminal work, both king and warrior are called the best of the Achaeans, and the problem of such a superlative is that it cannot be plural. Achilles refuses to do the one thing he is good at, fighting, and the tide of battle begins to turn against the Greeks. The hero, brooding in his tent, muses vaguely about returning to his wife and son and aged father in “fertile Phthia”, but it would have been a dim life, lived out in meaningless obscurity. The only possibility for him is to acquire *klewos aphthiton*, “imperishable fame” by fighting — and dying young. Achilles arrives at a kind of apotheosis towards the end of the *Iliad*, when he finally goes to war, slaughtering so many Trojans that Hades screams aloud; and the poem will end soon thereafter with the walls of Troy still not breached, but with its champion Hector (who name means “defender”) dead, his wife Andromache widowed, his son Astyanax orphaned, and his father — king Priam — bereft and undone.

3. Enter the hero

So the *Iliad* deals mainly with men. Women figure as pieces on the chess board of politics (Helen), or as objects of men’s animal lust and acquisitive pride (Chryseis, Briseis, Cassandra). And the Achaean host spend their time in the company of other men, en-

⁷ Not that being a god would help very much: the members of the Greco-Roman pantheon are seldom worth emulation and are best offered due reverence, at a safe distance. Athena, patroness of both Odysseus and Telemachus, would seem to be the shining exception. The poetess Sappho observed that we know death is a bad thing because were it otherwise, the gods would have taken it, too, away from us. The fleeting joys of life are the best we can do; and perhaps the immortal glory of some brave deed may outlive us. But the soul flees at death to the mournful shadows of Hades. If you were a hero in this life, there will be fields of asphodel and horses to ride, which sounds as though it might be nice.

⁸ Thus, the apocalyptic war between the Pandava and Kaurava clans of the vast Indian epic *Mahābhārata* is to usher in the basest of the epochs of history, the one we are living in now, Kaliyuga. The *Bhagavad Gītā* (literally “Divine Song”), coming at exactly the midpoint of the Sanskrit text, is a teaching of the *avatar* (incarnate god) Krishna to his friend, the warrior Arjuna: since the latter’s cause is just he must fight without regard to the long-term consequences of his actions, reposing his faith instead in God. This doctrine of *yoga* (“yoking”, cf. the Jewish concept of the faithful believer assuming the *‘ol haš-šamayim*, “yoke of Heaven”) and *bhakti* (“devotion”, cf. perhaps the Hasidic concept of *deveqūt*, “clinging” to God) makes of the *Gītā* an overtly religious treatise, possibly a later interpolation into an otherwise less religiously oriented epic text. The Indian epic has an ancient Iranian analogue: see [3, p. 17–35].

gaged in the single art of fighting, then feasting and boasting after each round. The family life of the warriors is either irrelevant to who they are, or a dysfunctional mess. Hector, a happy family man, is compelled to fight because of his lazy, voluptuous brother Paris' unrestrained lust — and Hector's family are all doomed. There is one hero in the *Iliad* for whom war is a distraction from life, who is there only because he has to be, and who just wants to get the whole damned thing over with so he can go home. This is Odysseus, who does not shrink from covert warfare, from a nocturnal commando raid in which a prisoner, Dolon, is captured, promised safety, interrogated, and then executed on the spot. This is not the honorable mode of fighting of a warrior for whom killing is a profession wrapped in traditional manners, but the way of a man who wants to win as soon as possible, by any expedient means. It is Odysseus who with the same motive — winning, destroying Troy, and leaving — acts as an adept politician and deal-maker, fixing the rift between Achilles and Agamemnon so that the Greeks can end the stalemate and fight effectively.

Odysseus is a family man who can relate easily to women, including witches (Circe) and goddesses (Athena): he misses his wife Penelope and his son Telemachus, and wants to get home to them, to Ithaca. The return voyage (Greek *nostos*) will take ten years and 24 books, also starting in the ninth year of the ten — a kind of parallel, chiasmic complement to the war itself. For the first poem is an outward campaign of a mass of soldiers with the goal of invading and destroying an entire city; while the second, a single man's journey back home to restore a little kingdom and reunite a sundered family, is in more than one sense a reversal of the first.

The disparity between the *Iliad* and *Odyssey* is thus profound, for all their many stylistic and other points of similarity. This difference has encouraged *khorizontes* to the present day, but one thinks it a weak point of argument, whatever the others. For it can be argued with equal persuasive force that the very inverse symmetry of the two narratives is evidence of a literary strategy most likely to have been conceived, and achieved, by a single ingenious author. And where the two poems differ greatly, surely that has to do in large part with their very different settings, and concerns — and a *good* writer can and does compose different books, not rewrite the same one. (In Western Armenian one would say of such a *bad* writer, *Meg lari vra gē khagha*, “He plays on one string.”) The authoritative Homeric scholar Prof. Gregory Nagy has deftly defined a key difference, in terms of the focal characters, between the two poems. Achilles, the best of the Achaeans (a wry definition, also achieved by Nagy, to be approached again presently), the central figure of the *Iliad*, is a man characterized by *biē* — of strength and violence; while the defining term for Odysseus is *mētis* — reasoning and thought⁹. The first line of the *Iliad* asks the goddess to sing the *mēnis*, “anger”, of Achilles; in contrast, the opening verse of the *Odyssey* asks the Muse to tell of a man “of many ways” (*polytropos*) — elsewhere Odysseus receives the epithet *polymēnis*. As a corollary to this, one might focus on the family: for Odysseus it is everything, worth a journey of return (Greek *nostos*, “homecoming”, cf. the loan in English, nostalgia) and of recognition of one's genuine identity that will take many years. For Achilles family means nothing, it would take but a few days to go home, and identity is bound up with fame achieved on the battlefield among fellow soldiers. He is a man with one *tropos*, one skill (*tekhnē*) and one sphere of excellence (*aretē*) only: he is a warrior. And we have already seen that even though Menelaus and Agamemnon do get home, the ends

⁹ Cited by [4, p. 622].

of their *nostoi* are meaningless: long and unbearably miserable for the former, and short and hideously violent for the latter.

Odysseus, by contrast, can try on different identities, thrive in different environments, practice many trades, and transcend his class, his station, even his gender — at one point he cries like a woman. He is a fine, careful carpenter, seemingly more at home with tools than with weapons, though he can use both well¹⁰. He has to adapt, to dissemble, so often that the reality of his very name seems to dim and waver, after he declares himself to the cyclops Polyphemus as *Outis*, “Nobody”, in order to avoid pursuit. His homeward voyage is one of **recognition**, a theme whose dramatic importance we shall discuss presently. And at one point Odysseus is told, not kindly, that “you seem to be a skipper of a merchant crew rather than a trained athlete” (see *Odyssey* 8.145–164). A cosmopolitan, a trader — these are well-known anti-Semitic stereotypes and it is no wonder that James Joyce called his novel about the peregrinations through Dublin of Leopold Bloom, a Jew, *Ulysses* (the Latin form of Odysseus, from a western Greek Oulixēs). But there was another people, close cousins of the Israelites, who were renowned as seafaring traders. And it is a possible affinity of the *Odyssey* to their culture that we shall now explore.

4. The Phoenicians

Homer calls the Phoenicians “Sidonians”, after one of their two principal home ports in the Lebanon; the other, Tyre, overtook Sidon in importance during the reign of Hiram I (969 BCE). The Greek word *phoinix* can mean purple (the famed Tyrian export), or date palm (a Phoenician national symbol), or a mythical bird that is immolated in fire and rises. But they always called themselves Canaanites: *knʾn* is of unknown origin but came to be associated in Biblical Hebrew with the meaning of “merchant” since that was the calling *par excellence* of the Phoenicians. The Semitic root *mkr* is found in the Akkadian designation of the upper class *tamkāru*-traders, Phoenician clients. Later, Carthaginian traders were known as *mkr* and *šhr*; commercial agents, as *mhsbm* [6, p. 107, 229]¹¹. There was extensive contact between Hellenes and Phoenicians from the Mycenaean age on (from the 14th century BCE), and Linear B has some Semitic loans that may be Phoenician (a Northwest Semitic language so similar to Hebrew that the two are mutually intelligible most of the time): *kurusu* for “gold”, cf. Hebrew *ḥārūš*; *kito* “robe” (Classical Greek *khitōn*), cf. Hebrew *kitōnet*. Phoenicians colonized Cyprus in the late 10th century BCE; a bronze bowl of the 9th century of Phoenician manufacture was found at the Kerameikos, Athens. Major Phoenician expansion into the western Mediterranean began in the 8th century; and descriptions in the *Odyssey* of Phoenician objects relate to this period as well, and not the Bronze Age¹².

¹⁰ Odysseus returned home in the hope of a peaceful life, but had to massacre the suitors of Penelope and some of the serving-women of the palace— their collaborators— in order to regain control of his own household. This part of the narrative has specific parallels in other epics in Indo-European languages, at the point in the story where a king must assert his right to his wife’s bed: see [5] on the case in the Armenian Artaxiad cycle and the Ossetian (Alan) *Narts*.

¹¹ Punic (Carthaginian) inscriptions mention “sellers” (*mkr*; cf. Hebrew *mōker*) of iron objects (*brzl*), gold objects (*hḥrṣ*), broad beans (*hpl*), and flax or linen (*hpšt*); two Punic inscriptions mention *šhr*, “merchants” (cf. Hebrew *sōḥar*). See [7, p. 281–282; 341–342].

¹² See [8, esp. p. 46–51].

In around 814 BCE the Tyrian princess Elissa or Dido (the name means “wanderer”, sister of Pygmalion and husband of Acherbas (Zakarba‘al, meaning “the Lord remembered him”), high priest of the temple of the “Tyrian Heracles” Melqart (the god’s name means “king of the city” in Phoenician), founded the city of Carthage (*Qart Ḥadašt*, “New Town”) on the Tunisian coast, directly south — as the frightened Romans always reckoned its position — of the mouth of the Tiber. It was to outgrow and outlive the home of its founders, as the capital of a naval and commercial empire, till its conquest and destruction by the Romans in 146 BCE. In the *Aeneid*, Dido seduces Aeneas when his band visit the new town on their way to Italy, and would have him stay on with her. But the hero, true to his mission, abandons the lustful queen, who combines the dangers of Circe and Calypso and the voluptuous blandishments of the dangerous, deceitful Orient with a political challenge — if Rome is to thrive, then Carthage cannot. As the Trojans set sail, Dido swears eternal enmity, has a pyre built on the acropolis of Carthage, the Byrsa, with her bed on top, and immolates herself. Hell hath no fury, perhaps, like a woman scorned; and although Virgil doubtless makes an invidious contrast between the manly self-control of Roman Aeneas and the violent, effeminate hysteria of the Carthaginian monarch, her act was historically consonant with Phoenician religious practice¹³. For the Romans henceforth, whatever was Phoenician was Carthaginian, and the term for the Phoenician language became Punic.

There are but two references in the *Iliad* to the Sidonians: Paris brings an embroidered garment from Sidon to Troy, and there is a silver *kratēr* (mixing bowl for wine) made by the *sidones polydaidaloi* “skilled Sidonians” [4, p. 598]. They do not figure, that is, except as producers of the sumptuary objects enjoyed by royalty. But in the *Odyssey* the Phoenicians are mentioned more often, and generally in a negative way — not as admirably *polydaidaloi* but as deplorably (though alliterative) *polypaipaloi*, “devious” [4, p. 621]. Odysseus, ever the master of creative cover stories, tells Eumaeus, the “glorious swineherd” who welcomes him and keeps Telemachus and him well hidden from the suitors on Ithaca as they plot their coup d’état, that he was tricked by a Sidonian sea captain hungry for profit who took long voyages. Eumaeus has his own tale of woe and abduction by those polypaipalous people, whose ships are slightly dismissed as crammed with *athyr-mata*, cheap trinkets (*Ody.* 15.459). (The Phoenicians in fact excelled at producing and selling mass-market knock-offs of Egyptian art. But they also transported other goods, often quality items, back home from the places they sailed to: Ezekiel 27 mentions Tyrian ships with goods from Yavan, i.e., Ionia, Greece.) Athena Herself on a visit to Telemachus pretends to be the Taphian merchant Mentès, and thus also a Phoenician, if Prof. Irene Winter’s suggestion that Taphian is a portmanteau name for a fictional place, combining Cypriot Tamassos and Paphos, is correct [4, p. 613, n. 13].

Perhaps the reason the *Iliad* scarcely mentions the Phoenicians, if only as the source of luxury goods, is that they are best known as traders and travelers and are thus not relevant to the epic’s setting or characters, as the poem focuses on the aristocratic way of life of a landed royal and warrior elite. In the *Odyssey*, however, Phoenicians are mentioned more often, and precisely as voyagers and merchants with sea voyages that were, like Odysseus’, very long, lasting as much as three years [4, p. 605]. One thinks that this might be

¹³ Elissa actually committed self-immolation, an act alien to the Classical world but commonplace among the Canaanites, in order to remain faithful to Acherbas and refuse the hand of the Libyan chieftain Hiarbas. See [6, p. 215–216].

because they can thereby serve as a kind of foil for Odysseus' predicament and the anxiety caused over the loss of his own status and identity over time. He is different from, but in character and predicament also uncomfortably close to, these Sidonians and this juxtaposition of the hero with the near other contributes to narrative tension¹⁴. When he finally does arrive home, will all this traveling, and negotiating, and role-playing, have changed his identity into that of a Sidonian? Thomas Wolfe wrote, *You can't go home again*; for, as his contemporary George Seferis, the Modern Greek poet, sighed, partly with Odysseus in mind, *Ma den teleiōnan ta taxeidia*, "But the journeys never ended."

If the structure and story-line of the *Odyssey* differ in so many ways from those of the *Iliad*, and the latter, rooted in archetypal and familiar epic themes, was the poem Greco-Roman posterity preferred, then we might search for the origin of the story of the *Odyssey* outside Hellenic, even Indo-European sources. I will presently propose here such a source. It is Phoenician and is attested at least thrice to my knowledge, albeit after the time of Homer. But the fact that it was told over and over, and used for different purposes, suggests it was both traditional and popular, and might therefore have been very old, too, perhaps current when Phoenician power was at its zenith and Greeks and Sidonians lived and worked in close proximity. The first issue to be considered is the evidence for the existence of a Phoenician literature in the first place. Though literature can thrive in oral form without most of it being set down in writing (pre-Islamic Arabic is a good example for the otherwise hyper-literate Semitic world), ancient Phoenicia lay between the two great ancient cradles of written civilization — Egyptian and Mesopotamian — and papyrus came from Phoenician Byblos (hence Greek *biblion*, "book", and the "Bible"). So did the alphabetic script used by most of the human race today. Even though very little of Phoenician literature has survived, it is likely there was once a very substantial body of writing in the language.

Speakers of a Northwest Semitic language modified Egyptian phonetic characters to create the first alphabetic script, in the 2nd millennium BCE. Subsequently the Phoenicians reduced and reshaped the alphabetic Ugaritic cuneiform signs, employing forms of the earlier Semitic alphabetic script, to fashion the 22-letter alphabet that is still used, though with altered forms of the characters, by its sister language, Hebrew. It is the source of almost all other alphabets, and Homer's time corresponds to the period of its widespread adoption and modification by the Greeks for their language — between 800 and 700 BCE. There was a considerable corpus of historiography, though most has been lost: the main surviving work is the epitome by Philo of Byblos in Greek of the cosmology and history of Sanchuniathon (ca. 10th century BCE) [6, p. 28]¹⁵. We have the *Periplus*, the dramatic narrative by a Carthaginian admiral, Hanno, of his exploratory sea voyage around Africa, but only in Greek translation. There are numerous inscriptions of all periods, many bilingual, in the 22-letter alphabet, reflecting the status for several centuries of Phoenician as a *lingua franca* of Western Asia and the eastern Mediterranean. Finally, Prof. Charles

¹⁴ By the near other I mean a person whose culture and identity are markedly different from one's own, but who does not live faraway and is thus also familiar, the familiarity and proximity often generating unease and hostility. For Europeans this was the Jew; for the Greeks of Constantinople and the later Turks, the Armenian (see [9]); and for the Hellenes of Homer's time, I suggest, the Phoenician. I. Winter suggests that the Phoenicians of the historical Homer's time (that is, the mid-8th century BCE) might even have served as the model for an emerging urban and mercantile society in Greece, though they were still the "other" to the aristocratic ideal of the epic [4, p. 633].

¹⁵ For an edition and detailed study of Philo of Byblos see [10].

Krahmalkov has identified a late Punic praise poem whose parallelisms make it akin to the Hebrew poetry of over a millennium earlier¹⁶. This would argue, in favor of the case I am about to make, for the conservatism of Phoenician writing, and the long memory of particulars of literary plot and style.

There seems to have been some imaginative romantic and adventure literature, if indeed one can claim a native source for the Hellenistic novella *Phoenicica* of Lollianus: Graham Anderson has adduced ancient Near Eastern parallels, that he argues were in some instances sources, for such Greek exotica. Parts of the *Phoenicica* survive as papyrus fragments from the second century CE; and a long, complete version, “The Tale of the Jewish Doctor”, is found in the Arabic *A Thousand Nights and a Night*, indicating wide popularity over a period of a millennium. It is not a particularly edifying tale, with plenty of steamy sex, and at one point the villains murder a child as a sacrifice and eat cooked bits of it [12, p. 152–159]¹⁷. This may perhaps be an authentic echo, bent to narrative purposes, of the ubiquitous *molk* rite, a unique and enduring feature of Canaanite religion that horrified other peoples,¹⁸ though Anderson does not suggest it. And the ancient Greek novels are as sanguinary as they are erotic. But if the murder of a boy in Lollianus’ *sesterce*-dreadful is a genuine Punic touch, then perhaps there was an earlier Phoenician text.

5. A Phoenician tale

Let us now turn to three texts whose plots have much in common with that of the *Odyssey* of Homer: a man travels over the seas for many years to reunite his sundered family, with scenes of recognition and of restoration of name and identity. I do not mean to suggest that these motifs, and others related to them, were peculiar to Phoenicia or originated there¹⁹; but as we have seen, the Phoenicians were the foreign people closest to Homer

¹⁶ See [11].

¹⁷ The surviving Greek fragments of the *Phoenicica* were translated into English, with notes and bibliography, by G. N. Sandy in [13, p. 809–812].

¹⁸ The Phoenician and Carthaginian nobility offered their own infants to be immolated in sacrifice (the *molk*, which has come into English as *Moloch*) and buried in urns, with commemorative steles. The place where all this was done, is known from the Hebrew (of the Prophets who execrated it) as the *tophet*. There are *tophets* everywhere the Phoenicians settled; but the largest is the Precinct of Tanit at Salammbô in Carthage, where some 20 000 funerary urns have been found [6, p. 245]. The Romans outlawed the practice but it persisted down to at least the 2nd century CE (see [14]). Queen Jezebel introduced the Tyrian form of the rite in the valley (Hebrew *ge*) of Hinnom of evil fame near Jerusalem (thus subsequent *Gehenna*), but it has precursors in Israelite religion: the *Aqedah* (“Binding of Isaac”) in Genesis and Jephthah’s sacrifice of his own daughter. The sacrifice of God’s only Son, whose followers drink His blood and eat His body for their salvation, might be skeptically regarded as in a way the last and greatest *molk* of Northwest Semitic religion, though the faith with this rite at its historical core is so universal as not to occasion surprise, much less revulsion. In medieval and later literary Hebrew, *tophet* even becomes a term for hell, even as Eden is used for the paradise of the world to come (see [15, p. 96, 106]). But it is interesting to observe that the baseless Christian blood libels against the Jews — according to which Christian children are kidnapped and their blood used to bake Passover matzah — may be the projection of an underlying anxiety about the strangeness of human sacrifice onto Christ’s own people, where such practices were attested but rarely and in the archaic era, and were shunned many centuries before the Nativity. The latest court cases of the blood libel were of Mendel Beilis (acquitted of all charges in court at Kiev, on the eve of the First World War) and Leo Frank (arrested, tried, and lynched by a mob in Atlanta, Georgia, USA in 1915). The anti-Semitic blood libel is still broadcast as truth on television shows in Syria, Egypt, and other Islamic countries.

¹⁹ S. Thompson [16], for instance, notes motifs encountered in the folk-lore of diverse peoples of the quest for a lost or kidnapped family or particular relatives (H 1385), of families accidentally reunited after a wife is, for instance, kidnapped by a sea captain, with tests of identity [cf. Penelope and the bed] and scenes

and his Odysseus, and as merchants and seafarers theirs was the culture most relevant to the main themes of Odysseus' life story. From the pen of earliest of the Roman dramatists, Plautus (b. ca. 254 BCE), comes the play *Menaechmi* ("The Two Menaechmuses"): A Sicilian (Sicily was heavily colonized by Phoenicians) has twin sons. He dies of grief after one is kidnapped; and the boys' maternal grandfather who raises the other, named Menaechmus, gives the name of the abducted boy, also Menaechmus, to the one still at home, whose original name was Sosicles. This Sosicles sets out to look everywhere for his twin, and sails for six years. The play starts at the end of that time: he casts anchor in the port of Epidamnus, where as it happens his kidnapped brother has been raised. This Epidamnian Menaechmus has prospered and has a hanger-on (*parasitus*) named Peniculus. The name of the latter means "little brush", one who sweeps up crumbs — which is what a *parasitos* does (the Greek means one who exchanges flattery, conversation, etc. for bread). But it can have obscene overtones, since the word can be read also as "little penis". And it may have been heard as well as a kind of epi-pun, perhaps, on Poenulus, "little Phoenician" — the name of the second play of Plautus we are presently to consider. The visitor is taken for his brother, who has planned to meet his favorite whore, Erotium, for lunch, and through a Comedy of Errors (indeed, the name of Shakespeare's play based on Plautus!) the brothers are reunited. So the sexual power of woman, so sinister in the Odyssey, is here the occasion for the favorable conclusion. It is a good story, and Ben Edwin Perry suggested that it and the ancient novel *Apollonius, Prince of Tyre* (note the Phoenician setting) served as the likely sources for the composition of the Pseudo-Clementine Recognitions, which we will consider once we are done with Plautus.

Is there anything Phoenician about the *Menaechmi*? The name Menaechmus is elsewhere attested only once in Greek, as that of a mathematician, a pupil of Eudoxus and friend of Plato, ca. 350 BCE. There is no known etymology, but I would like to propose one here. The name *mnḥm*, vocalized *Menaḥēm* in Hebrew and hypothetically as *Meneḥem* in Phoenician, means "comforter". It is well attested: from Kition, 4th century BCE, we find it in an inscription of Ariš, grandson of one Meneḥem, *rb srsrm* "chief of the brokers" (a long line of ancestors with the same title is listed); from Tamassos, Cyprus, 363 BCE, a monument (*sml*) is erected by Meneḥem son of Ben Ḥadaš son of Meneḥem²⁰. The meaning of the name, "comforter", seems singularly appropriate for the characters of Plautus' play, who are tragically parted and happily reunited. By contrast, in *megillāt Eikhāh* (the scroll of *Lamentations*), a text mourning the loss of the first two Temples, *ēin menaḥēm lāh*, "there is no comforter for her" (i.e., Zion, Jerusalem) is a constant refrain. (But the Prophet Isaiah 40.1 also encourages us, *Naḥamū 'amī*, "Take consolation, O my nation!") As we can see from the Phoenician inscription from Tamassos, it was not unusual for the name to be used multiple times in a family over the generations, just as it is in Plautus' play. It is as extremely rare a name in Greek and Latin, as nominal derivatives of the root *nḥm* are common in Hebrew,

of recognition [cf. Eurycleia and Odysseus' scar] (N 730: from Buddhist texts to Boccaccio!), a man's return home in humble disguise [cf. Odysseus with Eumaeus] (K 1815.1), a guest in disguise under a false name [cf. Odysseus in Phaeacia] (P 322.2), etc. G. K. Gresseth [17] (for this reference I am indebted to Hannibal Taubes at the University of California, Berkeley). He also adduces a long parallel Indian tale to the Odyssey, embedded in a classical epic, that is close in both general structure and in some, though far from all, details. The relation between the two clearly cognate texts is impossible to define, but we may be fairly certain at least that India was not the source of the Homeric narrative, which displays, in Gresseth's view, some basic "non-Indo-European" traits.

²⁰ See [18, p. 70–71; 88–89] and [19, p. 141].

from Biblical times down to the present day: Menachem, Nahum, Nachman, and Nechama. The proposed etymology of Menaechmus forces one, if the meaning of the name is of significance to the play (as is often the case), to ask also whether Plautus' play might even had had a Punic precursor whose audience understood the name.

And this leads us to the consideration of Plautus' second play, whose name and content leave no room for doubt as to its connection with Phoenicia: *Poenulus* ("the little Phoenician boy"), parts of which are in Punic transcribed into Latin script²¹. A seven-year-old boy, Agorastocles, is kidnapped from Carthage. His father names a cousin, Hanno, his heir, and dies of grief. Hanno has two daughters. An old woman-hater, Antidamas (who as it turns out was a family friend) buys the boy, adopts him, and makes him his heir. Later the two girls are kidnapped also at Megara, a park outside Carthage, and one Lycus ("Wolf") purchases them. Our little Phoenician has grown into a strapping youth who falls in love with one of the two young ladies. Lycus torments him, but the frustrated swain manages to implicate the villain in an act of theft. Hanno the Carthaginian, who has been searching everywhere by sea and land for his lost daughters, finds the suitor to be his long lost nephew Agorastocles, and then recognizes the girl as well. The family are happily reunited, with a wedding as icing to the cake. Hanno is portrayed, not only as a dedicated family man ready to travel for years to find his lost relatives, but as a savvy cosmopolitan who "knows all languages, too, but dissembles what he knows — a total Carthaginian. Why say more?" (lines 104–113); *polytropos*, *polymētis*, polyglot — a complete Odysseus, too. The play is so similar to the *Menaechmi* that they seem to emanate from a single source, from the treasure house of stories and shared concerns of the same group of people. This play is known to be a translation of a lost Greek work, *Karkhēdonios*, "The Carthaginian", ca. 309–308 BCE, but we do not know whether the original had lines of Punic in it interspersed with the rest of the text, as here²². Krahmalkov²³ suggests, intriguingly, that Plautus had at his disposal a Punic version of the *Carchedonius* and interwove lines from it with the Latin of his translation from the Greek. That means the Carthaginians would not only have had a theatrical culture, but enjoyed performances of Greek plays translated into their own language — a language that was evidently rich and capable of many kinds of literary genres and voices. Perhaps there was an original Punic play about members of a sundered family all named "Comforter", who were comforted.

The third text to be considered is the Pseudo-Clementine *Recognitions* (Greek *Anagnōseis*)²⁴, for it, too, is novel of sea travel, of family members lost and found, and of Phoenicia — the genre has a convenient if ponderous generic brand name in German, *Wiedererkennungsmärchen*. Authorship was falsely attributed to Clement I, Bish-

²¹ For instance, *avo doni* "Live (long), sir!" (cf. Hebrew *hai* "live" and *adōnī* "my lord, mister"); *mu punim sucartim*, "Do you remember Punic?" (cf. Hebrew *zākhartā*, "you remembered"); and, poignantly, *makom*, literally "place", for "city" — the Jewish use of this word for Amsterdam became the slang name of the city in Dutch and is still used, even though some ninety percent of the Dutch Jews were murdered by the Nazis. As Hanno makes his entrance he prays (line 930) *Yth alonim ualonuth sicorathi symakom syth*, "Ye gods and goddesses that I call upon, of this place!" (Cf. Heb. *elyōn* "high [god]" and *qarā'ti* "I called").

²² On the face of it that would seem unlikely, given the deeply rooted Greek disdain for "barbarian" tongues. The early Romans were in a somewhat different position: many were at least bilingual to start with in Etruscan and the various Italic languages, and any man aspiring to even a smattering of culture had to learn Greek, which in any case was spoken all over southern Italy. And one had to know some Punic to travel do business in the western Mediterranean.

²³ See [20].

²⁴ See [21].

op of Rome (late 1st century CE; his Latin name means “calm, tranquil, gentle”); the work seems rather to be a document associated with the Ebionites or Nazoraeans. These were early Christians who accepted Jesus as a prophet or messiah but to varying degrees rejected the doctrines of the Pauline Christians whose version of the new faith was to become its self-proclaimed orthodoxy. Paul courted the gentiles and abandoned both the people of Israel and the laws of the Torah. One might go so far as to assert that Christian anti-Semitism was born with Paul’s Epistles. The Ebionites and Nazoraeans did not break away, though, from the mother faith: they kept the Sabbath, the dietary laws of *kashrut*, circumcision, and other commandments. They also maintained steadfast attachment to the Land of Israel and reverence for Jerusalem as the place of the house of God on earth, the holy Temple. So it is reasonable to suppose that a story whose structure and themes are readily identifiable as belonging to the traditions of the Phoenicians, a people closely kin to the Jews, would have struck an instant resonance with them. Here is the story: Clement, the son of Faustus (a common Latin name meaning “fortunate”), has two brothers who are twins, Faustinus and Faustinianus (cf. the Menaechmi!)²⁵. He lives in Rome with his parents and them, but one day the twins and their mother travel to Athens and mysteriously vanish. Clement later goes on a religious pilgrimage to see the Apostle Peter in the Land of Israel. They travel together to the isle of Arados (i.e., Arvad, off the Phoenician coast), where Peter meets a beggar woman. She tells him she left her home once with her twin sons to escape the lustful advances of her brother-in-law without bringing shame upon the family. She and her boys were parted in a shipwreck. Peter reunites Clement with his mother, and they proceed northwards along the coast, visiting the temple of Melqart at Tyre and eventually arriving at Antioch, where they meet Nicetas and Aquila — who are in fact Faustinus and Faustinianus. The two had been captured after the shipwreck that parted them from their mother, and were adopted and named by a kindly Jewish Christian, Justin, in Caesarea on the coast of Israel. Peter mentions several times in the text the mendacious doctrines of the bad man — Paul — so the story is used as a frame to propagate Jewish Christian teaching, and Peter and Justin, the righteous men of the piece, are made to be the instrument of the recognitions and reunions of the sundered family, mother, twins, and all. The name Clement to the ear of a Semitic speaker might well be understood as a Latin synonym of Menachem; but in any case we already have a play on names — twin boys and a dad all named “Lucky”, which indeed the lads turn out to be, as their names and identity are restored.

6. Conclusions, and a different future for Odysseus

To review the evidence: we have the *Odyssey* of Homer, ca. 750 BCE; two similar Greek plays, one of which is securely Phoenician in its characters and setting, the other likely to be so, ca. 350 BCE (later translated and reworked by Plautus); and a Jewish Chris-

²⁵ T. Hägg [22, p. 163], notes that the motif of the twins is entirely unexploited, which would suggest that the author “simply took over parts of a ready-made story” on which to erect the “superstructure” of his apologia for the Christian faith. I have argued that a propagandist of Manichaeism, probably around the same time (3rd-4th century CE), acted in much the same way— he appropriated the epic motifs of the heroic quest and *Drachenkampf*— battle with a dragon— and then cunningly altered aspects of them in order to attract, disorient, then teach a Syro-Armenian audience (see [23]). If one recalls the episode of initiation into the cult of Isis in the *Metamorphoses* of Apuleius of Madaura (2nd century CE) and considers Merkelbach’s persuasive argument that Iamblichus worked Mithraic allegory into his own Oriental Hellenistic romance, the *Babyloniaka*, then the religious subtext seems more the rule than the exception in these popular works.

tian novella clearly modeled on the same basic story of the two plays and set in the Land of Israel, Phoenicia, and up the Syrian coast, *ca.* 2nd century CE. The two plays and the novella would appear to flow from the same stream of Phoenician storytelling, in overall theme and in small details such as naming, but they are attested at a minimum of four centuries *after* Homer. Moreover, one might expect to encounter the common story line among peoples who sailed the Mediterranean, without the necessity of filiation; and the themes and elements of the story can be found as folk-lore motifs in many places and times. So one cannot offer a watertight case. This is a skiff whose caulking Odysseus would not approve. Fortunately, even as Melqart rides his sea horse over the waves, the hero of Ithaca, so like the Tyrian Heracles in his trials of strength, could mount the floating planks of a shattered vessel. But one's suggestion of a much older Phoenician tale behind the plays, the novel — and the epic — given the circumstances of culture and geography, is something more than a thought experiment if less than a concrete archaeological excavation. It is a suggestion that is not at all an unreasonable one. And if we give it a hearing, then perhaps our understanding of the complexity of Greek identity itself may be enhanced. Man is both a single being and a binary, forked creature; our thoughts perpetual thesis and antithesis. Thus, too, the foundational, sacral epic of Hellenic civilization itself. Half is aristocratic, martial, landed, rooted in the rules of honor and shame, and imperishable glory, Achaean, Indo-European, chanted by bards. And the other half is writ in the script of Cadmus (Semitic *qdm*, “eastern, ancient”), and is clever, mobile, and febrile, cosmopolitan and adaptable, curious and adventuring, Phoenician, Semitic. One adumbrates here not only the cross-cultural borrowings admirably explored by Michael Astour in his *Hellenosemitica*, but the very sense of what it is to be Greek. The truly admirable is always also inexplicable; yet perhaps it was this merging of two streams of eastern Mediterranean civilization that was in part responsible for that synthesis: the golden age of Athens, the city whose goddess was patroness of Odysseus and Telemachus, the city where the written recension of Homer was accomplished.

In his famous poem *Ithakē* the modern Greek poet Constantine Cavafy writes, “When you set out on the journey to Ithaca, / Pray that the road be long,” full of adventures, new sights, discoveries, and luxurious, exotic things to enjoy. A less well-known verse published in the *Mikra Kabaphika* entitled *Deutera Odysseia*, “A Second Odyssey”, with epigraphs from the 26th canto of the *Inferno* of Dante and Alfred, Lord Tennyson’s “Ulysses”, suggests (lines 27–29) ...*kai tēn eirēnēn kai anapausin tou oikou ebarynthē:/ K’ ephygen* “... and the peace and relaxation of home weighed upon him/ And he fled.” Dante has Ulysses and his men sail through the Pillars of Hercules (i.e., of Tyrian Melqart) and turn south to discover what lies in the regions of the Antipodes. Ulysses urges them on with a short, stirring oration that must be seen as the noble battle cry of the Renaissance at its moment of birth: *Considerate la vostra semenza:/ fatti non foste a viver come bruti, / ma per seguir virtute e canoscenza* “Think of the seed from which you were born! / You were not made to live as animals, / but to pursue virtue and knowledge.” But as the crew heave in sight of the mount of Purgatory, three great waves engulf them, punishing them for their hubristic audacity. Three waves, *trikymia*, is Greek for a storm at sea; and here the number must correspond to the Trinity as well. Tennyson’s poem presents Ulysses in the same way, urging on his men with eloquence of equal might and passion: “It may be we shall touch the Happy Isles, / And see the great Achilles, whom we knew. / Tho’ much is taken, much abides; and tho’ / We are not now that strength which in old days / Moved

earth and heaven, that which we are, we are;/ One equal temper of heroic hearts, / Made weak by time and fate, but strong in will/ To strive, to seek, to find, and not to yield.” Is there a man, young or old, with such a heart of stone as to be unmoved by these lines?

Yet all the prediction in the *Odyssey* actually says is that our hero is to travel again, to a place where men do not know oars, and that death will come to him from the sea in a normal way. There is no suggestion that he will become bored and want to leave Ithaca, and there is no sequel either that might recount the fate of Telemachus. Western humanistic tradition has projected the fate of Odysseus in a direction never explicitly defined, in a mighty and audacious feat of imagination²⁶. If the basic narrative frame, the armature, of the *Odyssey* is the Phoenician tale that I have proposed, then the later life and end of our hero can accordingly be imagined in another way than Dante and his successors envisioned it. His later life, following our model, would have been a time of domestic happi-

²⁶ Joseph Brodsky tried to imagine it. Either the worst has happened, and the journey has blurred the consciousness and identity of Odysseus, or it is years later, and he is old and about to go away. *Мой Телемак, / Троянская война окончена. Кто победил — не помню. / Должно быть, греки: столько мертвецов/ вне дома бросить могут только греки..., / И все-таки ведущая домой/ дорога оказалась слишком длинной, / как будто Посейдон, пока мы там/ теряли время, растянул пространство. / Мне неизвестно, где я нахожусь, / что предо мной. Какой-то грязный остров, / кусты, постройки, хрюканье свиней, / заросший сад, какая-то царица, / трава да камни... Милый Телемак, / все острова похожи друг на друга, / когда так долго странствуешь, и мозг / уже сбивается, считая волны, / глаз, засоренный горизонтом, плачет, / и водяное мясо застит слух. / Не помню я, чем кончилась война, / и сколько лет тебе сейчас, не помню. // Расти большой, мой Телемак, расти. / Лишь боги знают, свидимся ли снова. / Ты и сейчас уже не тот младенец, / перед которым я сдержал быков. / Когда б не Паламед, мы жили вместе. / Но, может быть, и прав он: без меня/ ты от страстей Эдиповых избавлен, и сны твои, мой Телемак, безгрешны.* “My Telemachus: / The Trojan war is over. Who won — I don't remember. / It must have been the Greeks: only Greeks / could toss so many corpses out the door... / But the road leading home even so/ seems to have been too long, / As though Poseidon, while there / we wasted time, stretched space. / I don't know now where I am / Or what's in front of me. Some dirty isle, / bushes, houses, snorting pigs, / a garden overgrown, some queen, / and grass and stones... My dear Telemachus, / all islands are similar to each other, / when you've been wandering this long, and the brain / loses track counting waves; / the eye tears, clogged by the horizon, / and the flesh of the brine dulls the ear. / I don't recall how the war ended, / don't remember how old you are now. // Grow big, my Telemachus, grow. / Only the gods know if we'll meet again. / You aren't the baby anymore / Before whom I held the oxen back. / If not for Palamedes, we'd have lived together. / But perhaps he's right: without me / You're relieved of Oedipal passions, and your dreams, my Telemachus, are harmless.” I sat a few feet from Brodsky as he recited this newly completed poem at a reading in the international studies building of Columbia University on a Spring afternoon in 1972, shortly after his expulsion from the Soviet Union. A freshman all of eighteen then, one did not yet know to ask him whether he meant that all islands are alike, like all Tolstoy's happy families; and had one known more then, one might have asked him, also, whether he intended his evocation of stretched space and wasted time in “Odysseus to Telemachus” to resonate in wan irony with the final verses of Mandelstam's poem of 1917 in *Tristia*, “The stream of honey golden from the bottle flowed”: *Помнишь, в греческом доме: любимая всеми жена, — / Не Елена — другая, — как долго она вышивала? / Золотое руно, где же ты, золотое руно? / Всю дорогу шумели морские тяжелые волны, / И, покинув корабль, натрудивший в морях полотно, / Одиссей возвратился, пространством и временем полный.* “Do you recall, in that Hellenic house, the wife beloved of all, / Not Helen, the other, how long she was weaving? / Golden fleece, where are you then, golden fleece? / All the way thundered the heavy sea breakers, / And abandoning his ship, working a canvas of the waves, / Odysseus returned, replete with time and space.” Brodsky was impatient with pedants in later years but he was still young then, and gentle with a boy: I approached him and asked whether he had read *The Icon and the Axe*; later, I gather, he and James Billington were friends. There is another Russian insight, cryptically brief but wonderfully pregnant with suggestion of the uncanny, into the character of Telemachus: in Vladimir Nabokov's novel *Bend Sinister* the hero, Professor Adam Krug, suggests that one read the “pruned” essence of the name *ТЕЛМАХ* (i.e., Telemachus) backwards: the result is Hamlet.

ness and tranquillity, not a daring voyage of heroic discovery (or, viewed more cynically, a deadbeat dad's road trip with his pals to relive his youth). It is a future with Penelope and the growing Telemachus to comfort (*nħm!*) him and be comforted by his gentle presence as he grew old, not one of arms and warriors. So at some point towards the end, the aged Odysseus, king of a little island, set out on a distant journey on business: those Sidonians of ours were sailing through the Pillars of Melqart all the time, not to storm Purgatory but to trade in Cadiz and pick up cargo at the tin mines of southern Britain. And perhaps on just such a commercial voyage in the dangerous Atlantic he met his end. But for long years he had enjoyed a happy life at home reunited with his beloved wife and son. It was the life of peace that he worked so hard and prayed so long for, over ten long years of hard fighting under the walls of Troy and ten more of harder sailing — peace that he deserved, and, with the aid of his friend, the grey-eyed goddess Athena, finally got. It's about family.

Одиссей и финикийская сказка

Джеймс Р. Рассел

Гарвардский университет, Массачусетс Холл, Кембридж, МА 02138

Для цитирования: Рассел Д. Р. Одиссей и финикийская сказка // Вестник Санкт-Петербургского университета. Философия и конфликтология. 2018. Т. 34. Вып. 2. С. 00–00. <https://doi.org/>

Вопрос об авторстве двух гомеровских эпосов — принадлежит ли Гомеру только один из них, или оба — сделался трудным местом для ученых с момента начала их критического литературного исследования. Отличающаяся воинственным духом, но в меньшей степени психологизированная и таинственная Илиада безусловно была более популярной поэмой в древности. И хотя позднее в Энеиде Вергилий сумел тенденциозно объединить историю о воинской доблести с сюжетом возвращения на родину, перед читателем предстал воспетый римским поэтом воин — человек оружия, а не человек многих путей и уловок. Автор статьи утверждает, что Одиссея с его гибкостью и приспособляемостью к обстоятельствам можно сравнить с ханаанским (финикийским) купцом-путешественником. Одиссей — «бескорыстный космополит» своей бесконечно удаленной от нас эпохи, резонирует затруднительному положению отчуждения современного человека и психологической глубине современной литературной чувствительности гораздо больше, чем воинственный, откровенный, ограниченный Ахиллес или Эней. В статье выдвигается гипотеза о том, что Одиссея Гомера использует тоpos человека, странствующего в поисках потерянных членов своей семьи, причем, путешествие завершается счастливым концом. Этот тоpos, по-видимому, был особенно популярен на протяжении многих веков у финикийцев и карфагенян. Автор утверждает, что за именем Менехма — персонажа основанной на этом тоpose пьесы Плавта «Два Менехма», пуническая постановка которой могла быть осуществлена в Кварте Хадаште (в новом городе, т. е. в Карфагене) в северо-западном семитском переводе, с очевидностью просматривается очень распространенное еврейское имя Менахем. Опираясь на обширный сравнительно-лингвистический материал, автор отмечает повторяемость топов (общих мест) данного сюжета, использовавшихся в религиозной пропаганде иудео-христиан, в частности, в «Псевдо-Клементинах» — апокрифических текстах, в которых описывается морское путешествие обращенного язычника (предположительно св. Климента Римского) с ап. Петром.

Ключевые слова: литература, сказка, культура, человек, тоpos, Христианство, язычество.

A Greek myth about the invention of the lyre, reflected also in a medieval Persian romance, suggests that while the natural harmony of the spheres is divine, human music can be demonic. A Talmudic story about King David, “the sweet singer of Israel”, may utilize the myth to demonstrate the superiority of Torah to the pagan culture with which Jews were in intimate contact.

Keywords: Hermes, Orpheus, Terpander, turtle, lyre, harp, *Vamiq u Adhra*, David, Psalter, Babylonian Talmud, *Odes of Solomon*, St. Ephrem, Paul Raboff, A. S. Pushkin

Греческий миф об изобретении лиры, отраженный и в средневековом персидском романе, предполагает, что естественная гармония сфер — божественная, а человеческая музыка зачастую сатанинская. Легенда в Талмуде о «сладком певце Израиля», царе Давиде, очевидно, использовала этот греческий источник с целью продемонстрировать превосходство Торы в отношении к языческой культуре, с которой, однако, евреи периода сочинения *Гемары* находились в тесном контакте.

*Thrown like a star in my vast sleep
I opened my eyes to take a peek
To find that I was by the sea
Gazing with tranquility:*

*'Twas then when the Hurdy Gurdy Man
Came singing songs of love.*

*Unenlightened shadows cast
Down through all eternity
The crying of humanity —*

*'Tis then when the Hurdy Gurdy Man
Comes singing songs of love.*

Donovan Leitch
(Scottish musician, 1968)

Greeks listened to, and learnt to play, live music, especially that of the lyre: it was central to their life and culture in a way that is rather unfamiliar to the everyday experience of a person in the present digitalized culture and consequent-

ly hard to appreciate, so to understand its importance requires special stress. The instrument figures prominently, given its ubiquity, in religious imagery and cosmological theory. The Greek lyre was loud enough in various ways to be heard across the Aegean as part of the Hellenic cultural and philosophical challenge that Israel encountered, pondered, and answered. In a story that was passed down to Hellenistic and later Persian romance — thus enjoying a very wide currency over considerably more than a millennium — Hermes heard the wind playing through the sinews of a dead tortoise and producing music; he enjoyed the tune of what we would now call an Aeolian harp, but was sad because he could not reproduce it. Later a mysterious old man he just happened to meet by the roadside (though nothing just happens in a folk tale or myth, least of all wise old men in the middle of nowhere; one of them, for example, gives the house of Sasun, the clan of the Armenian national epic, their name) helped him to fashion an instrument he could play by himself. The lyre was born.

In the Iranian version of the tale, the name of Hermes is given as Hurmuz, which just happens (though as we noted above, nothing just happens) to be a form of the name of Ahura Mazda, the good creator God of the Zoroastrians. The old man is given the name Hazhraman: whatever this might also have rendered, it sounds like the name in Middle and New Persian of Ahura Mazda's cosmic enemy Angra Mainyu, Ahriman. So the mysterious elder might be an incarnation of the evil demon. If so, the story can be seen to adumbrate the contrast between the inspired music of the divine, passively received but pure, and active human artifice, which is fallible and can be perverted to employ music for the purposes of vice. As a corollary matter, the ancients pondered the states of sleeping, with its passivity, and waking, with its conscious activity.

The pagan figure of Orpheus, the good shepherd and lyre-player who charmed wild animals by his art and brought his wife back from Hades, was co-opted by Judaism and Christianity to the iconography of David, the lyre player who soothed the madness of King Saul and composed the Psalms, and (as the Christian New Testament insists) of David's lineal and messianic descendant Jesus. The possible "Jewish-Christian" *Odes of Solomon* receive the mixed pagan and Biblical tradition and juxtapose the music of the Aeolian harp with that of the lyre of the poet, the singer of God's praises. The Babylonian Talmud and Midrash Tanchuma contain slightly different versions of a myth about King David rising from a habitually light sleep every midnight when the north wind blew through the lyre hanging above his bed. I suggest that this may be a reply to the Greek aetiological story, and that it was composed so as to assert in multiple ways the pre-eminence of the sweet singer of Israel, by virtue of his true faith, over the siren songs of Hellenism.

1. HERMES, THE TURTLE, AND THE DEVIL'S MUSIC

On his day of birth, the Greek god Hermes was on the way to steal the cattle¹ of his brother, the god Apollo, when he discovered a turtle. He killed it, scooped out its shell, and fashioned a lyre of seven strings. Later on the busy youngster sang to Apollo and gave him the lyre to appease him for the theft. This account, from the Homeric Hymns, *ca.* 6th – 5th centuries BCE, is the earliest of a number of accounts, which differ in small details, of the complex myth on the origin of the lyre. Lucian, for example, relieves young Hermes of the disturbing detail of killing the creature: the little tortoise is already dead when he finds it². There is a slightly different myth as well, fragmentarily attested in Greek in the Hellenistic romance *Metiokhos and Parthenope*, *ca.* 1st century BCE; it seems to have become very popular and enduring, for it is more fully related in the Persian romance in *mathnavi* verse *Vāmiq u 'Adhrā* of Abu'l Qāsim 'Unsuri (*ca.* 970 – *ca.* 1040 CE). The Persian tale relates that the diners at a symposium (dinner party) at the court of Polycrates of Samos (the names are fairly faithfully rendered in Persian transliteration) were discussing the shapes of Eros (the god of love). The poet Ibycus took up the *barbaq*³ and sang of the beauty of the young couple Vamiq and Adhra, who were present at the celebration. Vamiq then told this story: the *farzāna* (“wise man”) Hurmuz (i. e., Hermes) once went up a mountain to worship God and saw a tortoise (Persian *sang-pušt*, lit. “rocky-back”) with dried sinews. He hung it up and the wind blew through the sinews, making music. Hurmuz wanted then to fashion an instrument he might play by himself, but all his attempts were unsuccessful. He went for a walk down the road feeling bad, and came upon an old man who just happened to be sitting there.

The old man, whose name was Hažrahman, arranged the tortoise shell with strings “in the likeness of the disposition of animate nature” (*āmīzeš-i gōhar-i jānvar*): “a stroke on the strings is like a movement in our body”, he explained. And that was the lyre. The Greek romance was evidently widely popular in the early Islamic period: Ibn al-Nadīm mentions in his *Fihrist*

¹ This is not necessarily an anomalous activity for a mythological figure, though it is admittedly not the first thing human newborns do. Cattle raiding is part of the job description of rakish young Indo-European epic heroes and divinities, from Cuchulain in pagan Ireland to the Kalaša god of raiders and rustlers Gīš (< *gāv-išti*– “cow seeking”) in the Hindu Kush. The narrative of the *Gathas* of Zarathustra, in their canonical order, begins with the complaint of the Soul of the Cow against the violence of her kidnappers; and the ancient Iranian Prophet comes in part to preach a way of life that excludes this customary practice as immoral. The raiders were called *mairya*, a word that originally meant simply “marriageable young man” (and became that again in Middle Persian, as *mērag*). The young Indian god Krishna enjoys dalliances with the *gōpīs*, “cowgirls”. In America all this is sublimated into the cinematic Western saga.

² See Graves 1957, 63–64, for a useful and lively composite summary of the story.

³ This instrument could be a lyre with deep pitch corresponding to the Greek *barbitos*, the invention of which was attributed to Terpander of Lesbos (7th BC): see Hägg 1989, 47.

(the “List” [of the books in his father’s Baghdād book shop]) an Arabic translation; and Birūnī knew a Persian prose version. The Persian rendering here of Hermes — Hurmuz — coincides with one form of the name of the good Creator God of Zoroastrianism, Ahura Mazda, Middle Persian Ohrmazd. This can scarcely have been mere happenstance, as already suggested, and the Iranist Bo Utas proposed reasonably that at some point the coincidence offered an opportunity to make a point. The old man’s unusual name, Hazhraman, might be a scribal corruption or, better, an otherwise unattested form of the name Ahreman, the Middle Persian form of Avestan Angra Mainyu — the name of the Evil Spirit, Ahura Mazda’s co-eternal cosmic enemy. Thus Utas remarks, “even if sung for the highest purposes, poetry and music will need something devilish”⁴. Hägg noted that Longus and Achilles Tatius attributed to Pan — the god of the “panic”, whom Christians early equated with the devil — the invention of the *syrix*, a flute⁵. Though the woodland god did this in a grief-stricken attempt to reconstruct the sundered limbs of his beloved, might this association of Pan with the origins of another instrument also have perhaps inspired a transmitter of the tale along the way to ‘Unsurī to take up the theme of music as potentially demonic?⁶

There are two kinds of lyre in this story, and the physical distinction between them seems to imply, or to facilitate, a moral divergence of greater import. For the first one, which Hermes makes in one version of the myth but simply discovers in the other version — the one that is attested in the Hellenistic romance and is transmitted down to classical Persian — is the kind of lyre that makes music when the wind blows through the sinews and makes them vibrate, without the exercise of any human agency save hanging the tortoise shell in the right place for the breezes to find it. This one belongs to God or Nature, without human interference. This instrument, which can be manufactured to have the wind play it, is the Aeolian harp⁷; and it will be of importance to our discussion shortly also to note that in a number of Semitic languages, including Hebrew and Aramaic/Syriac, the word for wind and spirit is the same, Heb. *rūah*, Syr. *rūhā*. So this first kind of lyre produces literally the music of the spirit. The second is the lyre the old man Hazh-

⁴ See Utas 1997.

⁵ Hägg 1989, 67–68.

⁶ American folklore abounds in cautionary tales about “the devil’s music”, fiddlers’ duels, *etc.* One need only recall the deal the great bluesman Robert Johnson is supposed to have made with Satan at the proverbial crossroads. Johnson recorded twenty-nine songs; a film on the search for the thirtieth suggests that it is, mystically, within each musician — his own, waiting to be created.

⁷ It is still manufactured; and the ceaseless winds of the Pacific play with their invisible fingers on the strings of one that hangs at one of the piers at Fisherman’s Wharf on the San Francisco Bay, to the distant accompaniment of the hearty barking chorus of the antic congregation of California sea lions at Pier 39.

raman crafted, a work of secondary human artifice⁸ rather than of primary nature *ab initio*, and one whose strings a musician must willfully strike with a plectrum or pluck with his fingers. Perhaps the intrusion of these elements of individual human artifice and art, of the musical expression of our fallible free will, is what is perceived to open the door to sin and evil — to the devil's music. This problem, or distinction, will loom large in our discussion presently. For the greatest and most vividly portrayed of the Kings of Israel, David, made his contribution to Scripture, and to the prayer and music of all later ages, both Jewish and Christian, as a lyric poet and musician. How can his art be set apart from that of other players of the lyre? Is it in any way morally vulnerable?

Though until Thomas Edison, a scant century and a half ago, all music everywhere was live, technology has set much of humanity at a distance from many of the direct experiences that our ancestors enjoyed and suffered. It is as though the information age and digital recording have thrust us deeper into Plato's cave — farther away from authenticity than ever, and deeper into the dreams of semblance, of illusion and simulacrum⁹. So the modern reader is unlikely to encounter a harp, much less a lyre, in the course of a day; and most of the music he hears is likely to have been recorded. His experience is thus third-hand, and the instrument itself is wholly unfamiliar, as are the mechanics and principles of its operation. This engenders a myopia that prevents one from appreciating, unless it is specially emphasized, a point crucial to this discussion: how very important and familiar the lyre is likely to have been for the ancient writers whose mythological tales and philosophical arguments we are presently to consider. All the music of antiquity was live, and the music of the lyre in particular pervaded the culture of ancient Greece. One need think only of the very designation of the genre of *lyric* poetry — now a wholly formal term, and nearly meaningless — to appreciate this, but the lyre had a role in heroic poetry as well, and in the lives of the heroes themselves. Reciters of Homer often played the lyre (Greek *kithara* or *kitharis*; the synonymous term *lyrā* is first attested in the poetry of Archilochus of Paros, 7th century BCE); and ac-

⁸ The Zoroastrians, relevantly for this story, distinguish between the capability of Ahura Mazda to create *ex nihilo*, expressed by Persian *dādan*, and Ahreman's more limited ability only to slap things together secondhand (*kirrēnīdan*) from material already created by God. See Russell 2004, 1333–1345 (“Some Iranica in Eznik”).

⁹ The advertisement for an American sound recording tape used to ask, “Is it real or is it Memorex?” This writer's friend Robert L. Karash, a mystic and computer scientist of genius, used to smile when we enjoyed together one or another direct experience of music or religious practice and say, “It's not Memorex — it's real!” The American science fiction writer Philip K. Dick, on whose work the film “Blade Runner” (1982) was based, explored through a creative life that produced over forty novels the question of cybernetic and other simulacra and its resonance with larger social, moral, and ontological issues of identity, the definition of human rights, and the nature of consciousness.

cording to Homer both the Achaean warrior Achilles¹⁰ and the Trojan prince Paris were accomplished players of the instrument. Aeschylus (*Supp.* 681) called the grimness of war in which the former at least excelled “lyre-less, generating tears”; so when the best of the Achaeans plays, it is in the lulls between battles, underscoring thereby, perhaps, the very horror of fighting and bloodshed. Musical training was a basic part of education for life, and Greeks could not imagine a paradise after death without it, either: Pindar includes the music of the lyre among the pleasures of the city of the virtuous departed (Pyth. 10. 37 sqq.). Music, with lyres and pipes, was associated mostly with cheerful events — with such celebrations as weddings or symposia — but also with ritual processions, both joyful and solemn. There were lyres of different types, as well as harps; and a red-figure Attic pottery fragment depicts young men playing tortoise-shell lyres (*chelys*)¹¹ — the kind Hermes was said to have invented¹². Music, being so ubiquitous and so obviously mathematical in its principles, was a subject of physical investigation and of cosmological, philosophical, and spiritual speculation. The Pythagorean school, followed by Plato, conceived the idea that the measurable, arithmetical intervals of the harmonies of terrestrial music pervaded the cosmos, with the sounds and distances of the paths and movements of the heavenly bodies of the rational *macrocosm* corresponding — resonating, literally — to those of the soul, thoughts, passions, and bodily members of the human being, the *microcosm*. For one recalls also that the Greeks believed the sound of each string of Hermes’ lyre did not merely stir the spirit — it resounded to a specific member of the human body.

2. THE LYRE AND THE PHILOSOPHERS

The practice of philosophy, considered by the Greeks to be the loftiest discipline of the mind, might thus lead one to appreciate the best of music and to experience the correspondingly highest music of the spheres; while the appropriate kinds of music performed here on earth were believed to have the power to exert a psychological influence upon an individual, with therapeutic effect. Doctors employed music in the belief it might heal both maladies of the soul and physical diseases. Of course not all music could do this: if some was sublime, other sorts might serve only to excite the lower passions

¹⁰ A Syrian mosaic captioned in Syriac Estrangelo script, mid-to-late 3rd century CE, in the Bible Lands Museum, Jerusalem, Israel, shows Achilles (*k'w's*) with a lyre serenading Patroclus (*p'trql's*). The two are seated on a low couch together: Achilles holds the lyre upright in his left hand and extends his right hand to his beloved friend; Patroclus gestures with his left hand towards Achilles, and holds a leafy branch in his right. See Russell 2001–2002, 62, pl. 9.

¹¹ Cf. the ancient Roman riddle *Dum vixi tacui; mortua, cano* (“I was silent when alive; having died, I sing”), the answer to which is Greek *khelōnē*, “tortoise”.

¹² See West 1992, 13–15, 50, and pl. 18.

(in latter-day terms, this would be the “sex and drugs and rock ‘n roll” kind), and to be detrimental to one’s moral and physical health. In the *Republic*, Plato prescribes limiting the kind of music that the youth of his imagined, metaphorical polis are allowed to hear, preferring military music to other types as being most encouraging to patriotic sentiment and conducive to useful activity¹³. Aristotle categorized the functions of music as educative (*paideia*), as providing intellectual enjoyment (*diagōgē*), and as effecting purification (*katharsis*). The Neoplatonist Plotinus, who viewed all things as linked in a chain of being, emanating from higher to lower, classified music in a three-stage hierarchy: *mousikos*, *erōtikos* — and, of course, philosophical. Christians inherited much of this ancient pagan music theory: some kinds of music might be base, and therefore to be avoided; so some churches to this day disdain polyphony and the playing of instruments, preferring plain song. But in its highest form music was angelic song: the *Trisagion* (Greek, “Thrice Holy”, corresponding to the Hebrew *Qedushah*) chanted before the throne of God, and conveyed to the prophet Isaiah by an angel¹⁴.

The lyre enjoyed a potent association with Greek religious mythology that went beyond mere theories of cosmology, psychology, and philosophy and entered the realm of faith and of hopes for life beyond the grave. It was the instrument of Orpheus: when he played his lyre, birds and wild animals

¹³ Platonic strictures about music have had an enduring influence on the cultural policy of ideology-driven societies, far beyond Christian fundamentalism. The Beatles were banned in the 1960s from playing in the State of Israel for fear their songs might turn the longings of young *kibbutzniks* from their tractors to girls. Russian readers will recall that a similar anxiety animated the ideological guardians of culture of the Soviet Union, who denied that there was such a thing as “sex” in the workers’ paradise at all — a very chaste Eden. As the Soviet bard Vladimir Vysotsky sang in his satirical “Instructions before a trip abroad”:

Там шпиёнки с крепким телом:
Ты их в дверь — они в окно!
Говори, что с этим делом
Мы покончили давно

“There are girl spies out there with supple bodies:
Show them the door and they come in through the window!
Well, just explain it to them straight:
We put an end to all that business long ago”).

Ever since Karl Popper’s *The Open Society and Its Enemies*, the notion has lodged firmly in Western thinking that Plato advocated artistic censorship, as part of the recipe for a totalitarian society of the kind that modern man knows, unhappily, only too well. But this *idée reçue* is untrue: in the dialogue, Socrates takes pains repeatedly to emphasize that his *politeia* is but a convenient metaphor for the study of the parts of the soul and of its training and control, and not a prescription or suggestion for the organization, governance, and morals of an actual human polity.

¹⁴ Wellesz 1998, 49 ff. Orthodox Jews do not allow musical instruments to be used in the prayer service: these will be restored only with the rites in the rebuilt Temple. But *klezmer* music, which is often devotional and ecstatic, is allowed for festive occasions. And Hasidism excels in its *niggunim* — melodies based upon sacred verses.

listened attentively and became tame, rivers paused in their flow, and even rocks and trees edged down the mountain sides to be closer to the mystic musician. As a shipmate of the Argonauts, Orpheus was able to out-perform the songs of the Sirens; and by his music he prevailed upon Hades to release his wife Eurydice. The music (and, to put it delicately, the person) of Orpheus so entranced the men of Thrace that their neglected wives conspired to relieve him of his head — which, though severed, seemed to survive death, for it kept on singing. A lost Orphic book referred to by Varro explained that the seven strings of the lyre of Orpheus corresponded to the seven circles of heaven; the souls thus required the strains of the *kithara* to make their ascent. (Eratosthenes wrote in a poem that Hermes himself went up to heaven and marveled to find the planets humming along their paths on the very notes of the lyre that he had invented down on earth.) So the theory of correspondences was widened to embrace the belief in the soul's ascent after death, *psychanōdia*. It is not clear that there was in antiquity a definably Orphic religion, but it is undeniable that there existed a complex of mystical beliefs about salvation from death and other mysteries, expressed in hymns that focused on the divinized human singer¹⁵.

The figure of Orpheus as a spiritual master of the lyre posed a challenge to Jews at a fairly early date, and they found a creative solution: in the second century BCE, Aristobulus of Alexandria in his commentary on the Pentateuch identified Moses with the homonymic Greek Musaeus, making the latter the teacher of Orpheus, and thereby subordinating the Greek sage, songster, and shaman to the greatest of men, the lawgiver of Israel, who spoke with God awake and face to face (more on Moses and David presently). And in a pseudepigraphon, Orpheus is made to abandon his inconvenient polytheism for belief in the one true God. The loose ends are neatly tied¹⁶. Early Christians adopted as a matter of course various images of earlier gods and philosophers to portray their Savior, who had, after all, a human form. Among these was the figure of Orpheus holding his lyre (or a little lamb), employed to depict Christ the good shepherd; and the episode of Orpheus and Eurydice was interpreted as foreshadowing of Christ's own harrowing of hell and liberation of the souls of the righteous¹⁷. Jesus Christ was not to the best of our knowledge a singer or musician. The pre-eminent harpist of the Bible is King David; so the musical as-

¹⁷ See Boardman 1970, especially chapters II and III: “Moses’ Pupil: The Orpheus Who Came out of Egypt” and “Orpheus-Christus in the Art of Late Antiquity” (pp. 13–85); and Mathews 1993. The latter argues specifically against the so-called “imperial” image of Christ that seems to have been particularly popular with German scholars, in favor of more eirenic and less political models. Christians tended to regard the pagan gods, heroes, and mythological themes that had affinities to their own divinities and beliefs as either phenomena prefiguring the revelation of the fullness of the Christian revelation, or (as in the case of recorded miracles in paganism) as demonic simulacra designed to lure men away from genuine, true religion — the latter being the case especially with regard

pect of the personality of Orpheus was diverted to the Psalmist. Medieval Christian commentators compared the healing strains of Orpheus' lyre to the young David's exorcism by his lyre playing of the demon from the afflicted King Saul. The pagan image of Orpheus picking his lyre and charming the animals also found new employment in the iconography of King David, among both Christians and Jews¹⁸.

Christians inherited from the Hebrew Bible the Book of Psalms, which from the start came to play just as important a role in the evolving liturgy of the new faith as it did and still does in Israel. But there is an interesting disparity in nomenclature: the name of the Biblical book in Greek, which was duly inherited by Slavonic, English, and most other Christianate languages, means literally music sung to the plucking of the strings of a lyre — that of King David. But in Hebrew the "Psalter" has no such designation, no such specific focus on the instrument. It is *Sēfer Tehillīm*, literally the Book of Praises, from the unique superscription of Psalm 145, *Tehillāh le-Dāvid*. (No other Psalm bears this title.) The Syriac term for the Psalter, *ktābā d-mazmūre*, lit. "book of songs/melodies", cf. the Hebrew superscription of some Psalms *le-Dāvid mizmōr* — seems to occupy a middle ground between music and praise. It is musical and not just words, but musical also without necessary reference to a lyre, though, as we shall observe presently, that instrument is exceedingly prominent in Syriac Christian poetic imagery.

The first lyre known to history is depicted in a pavement graffito of ca. 3100 BCE from Tel Megiddo, Israel¹⁹. That does not mean it was invented right there in the Holy Land (or that it is to provide musical accompaniment to the end of the world at Armageddon!), but it is at least strong evidence for the Near Eastern origin of the instrument. We do not know what the anonymous artist called the object he had doodled, but the usual term for it in Biblical and later Hebrew is *kinnōr*, loaned for instance into Armenian via Syriac *kenār* as *k'nar*. (The Psalter mentions many different musical instruments, including harps and lyres with different numbers of strings. The *nēvel*, for instance, had 22,

to Mithraism, which never posed a real challenge to Christianity but was still seen as uncomfortably and threateningly similar, with its rites and mysteries and soteriological doctrines.

¹⁸ Boardman 1970, 149–155; see especially pl. 19, opp. p. 151, in which the crowned King David, seated in the shade of the letter *reš* of the Hebrew word *Ašrei* ("Happy is the man who has not walked in the counsel of the wicked...") at the beginning of the Book of Psalms, serenades with a harp four animals in niches above the *incipit* (Ambrosiana B., 32 inf., 3r, 13th century). David is also shown (and named, in *scripta plena* Hebrew as *dwyd*) on a mosaic from a synagogue of the early Byzantine period at Gaza, Israel: he is seated, playing a multi-stringed lyre with a little hammer, and various wild animals including a giraffe are gamboling tamely before him. The image, clearly derived from that of Orpheus, has achieved modern iconic status: it is reproduced, for instance, without the exotic animal audience, on a medal of the State of Israel commemorating the 3000th anniversary of Jerusalem, City of David.

¹⁹ West 1992, 49.

said to correspond to the number of letters in the Hebrew alphabet²⁰.) There is a Cycladic marble statue from the island of Keros, somewhat later, from the 3rd millennium BCE, of a seated harpist playing his instrument, and “some sort of seven-stringed lyre” is represented by a Minoan hieroglyph. The lyre probably came to Crete and mainland Greece from the Near East: so its origins go back to the beginnings of civilization and it seems quickly to have achieved universal popularity in the ancient world²¹. But it is to the pre-eminent player of the lyre in the Near East, in Biblical tradition, that we now turn.

3. THE SWEET SINGER OF ISRAEL

The singer and lyre-player *par excellence* of ancient Israel was of course King David, the comely, ruddy young shepherd whose playing soothed King Saul in his madness. Orthodox Jews attribute the Psalms to some ten different authors, beginning with the first man, Adam; and secular scholarship considers them to belong to different hands and ages, for quite different reasons. Perhaps the point is not so much as to argue fruitlessly over which of the songs belong to the historical David as to observe why the most poetic book of the Bible is called his own. He is the most poetic of Biblical figures. The very name David means “beloved”, and as one recent biographer has observed, nobody in the Bible is loved so often, as much, or by so many as he²². Lyric verse is often the poetry of love, but seldom does it celebrate the lineaments of gratified desire; and all David’s love relationships are beset by problems, tragedies, and reversals. The ruddy, handsome young shepherd, delicate and gentle, was also the diminutive warrior who slew Goliath and created in that instant one of the most durable archetypes of the human imagination — that of the underdog defeating the seemingly invincible juggernaut of the oppressor. David the King was the charismatic who leaped and danced stark naked before the Ark, to the prudish lady Michal’s consternation²³. He is a complex, even a tragic figure, allowed to make Jerusalem the royal capital, the site of the House of God (so Rabbinic doctrine still assigns him the credit of a builder), but forbidden by God to erect the Temple therein. That is left to his son, Solomon. For David lusted after Bathsheba and arranged for the death of her husband, provoking

²⁰ Following the theory of corresponding resonances harmonizing members of the body and sounds, this likening of the 22 strings to the 22 letters would be but one more facet of the magical employment of the alphabet. In pagan Greco-Roman and later Christian societies, special powers and influences, Divine and other, were assigned particularly to the seven vowels. See Russell 1989.

²¹ Lindsay 1968, 14, 115, and plate opposite p. 29.

²² Wolpe 2014, X.

²³ One scholar has argued that a naked dancing figure carved in the center of a round marble slab a little over half a meter wide — perhaps the top of a little side table — of the Roman Imperial period is David and the object is Jewish. The object was unearthed in the province of Pannonia (modern Hungary). See Thomas 1970.

a wrathful, sarcastic accusation by Nathan: “Uriah the Hittite you have struck with the sword; and his wife you have taken for yourself to wife” (2 Samuel 12:9). Elijah’s parallel accusation against another King of Israel, Ahab, “Have you murdered, and inherited also?” (1 Kings 21:19) may be the earliest case of the condemnation of *chutpah* in world literature. Yet in his own last words, in 2 Samuel 1–2, David declares, appropriately in song, a kind of vindication:

*Ne’um Dāvid ben Yīšai ū-ne’um hag-gever huqam ‘āl, mešīaḥ Eloheī
Ya‘aqov ū-ne’im zmīrōt Yīsrāēl: / Rūaḥ YHWH dibber bī, ū-millātō ‘al lešōnī.*

(“David son of Jesse speaks, yea, the man established on high speaks — the anointed of the God of Jacob and the sweet singer of Israel: / The spirit of the Lord has spoken through me, and His word is upon my tongue”).

The image here of the spirit of the Lord (it is again to be recalled that “spirit” and “wind” in Hebrew are the same word) speaking in or through David, the harpist, might conjure up in the imagination of a reader of the Hellenistic period and Late Antiquity the evidently well known aetiological myth, discussed above, of the wind/spirit passing *through* the sinew-strings of the tortoise-shell Aeolian harp of Hermes. Thus David, though the human player of the lyre, may be absolved from the danger of playing on his own and making Ahreman’s music, as it were, since he is no less than the inspired anointed of God: the wind of Heaven blows through him.

A hymn composed in the early Christian centuries takes the two images: Hermes’ tortoise-shell lyre and the Divine spirit/wind speaking through David — and sets them side by side, with a little mystical music theory added on about the resonances of the strings to the parts of the body. The mention of love at the end of the Pericope perhaps is an oblique nod to the king whose very name means love. Thus, the first two verses of the sixth of the Syriac *Odes of Solomon* read:

(1) Ayk da-mehalkā (rūḥā) b-qītārā u-menne memallān (2) hākanā memallāl b-handāmai rūḥeh d-māryā wa-memallel ‘nā be-ḥūbeh.

(“As the wind/spirit goes through the kithara and the strings speak, / So speaks in my limbs/members²⁴ the spirit of the Lord and I speak in His love”).

The hymn continues: “He destroys all that is alien forever, and nothing shall oppose Him. He multiplied knowledge and gave us His praise. Then a stream came from Him and widened into a river that carried all away and brought it to the Temple (*l-hayklā*, cf. Hebrew *hēikhal*)²⁵. Nothing could restrain

²⁴ In Syriac this is a loan from Middle Iranian *handām*, cf. Armenian loan-word *andam* “member”.

²⁵ This is directional, not accusative: see Charlesworth 1973, 31, n. 12. And Lattke 2009, 74, agrees, and further notes that this word for the Temple, *hēikhalā*, is a hapax in the text. That would be an argument for specificity — for the author referring to the Temple at Je-

the stream, it spread everywhere, and all the thirsty drank of it. Happy or blessed (*tūbayhūn*, lit., “it is good for them”: this is the Syriac term that consistently renders the Hebrew *ašrei* of the Psalms, which in turn is the Gk. *makarioi* of the Beatitudes in the Sermon on the Mount) are its ministers”. For the water is restorative, and all lived “by the living water that is for eternity, Halleluyah” (*mayyā ḥayye da-l-‘ālam, hallelūya*).

The original of the Odes was probably Greek. Some of the Odes survive in Coptic, but the Syriac version is by far the most complete. We do not know who composed the Odes or what if any defined religion they belonged to: some earlier scholars associated them with Bardaišan of Edessa; others, with early Christian sectarians. It is not unreasonable to speculate that early Christians who still adhered to some of the *mitzvot* — such as Sabbath observance, the dietary laws of *kashrut*, and perhaps male circumcision — and persisted in traditional Jewish reverence for Jerusalem and the Temple might have composed the Odes in Greek (which was widely spoken by Jews of all classes in the period), and like-minded people in northern Mesopotamia where Syriac was spoken (the centers of Edessa or Nisibis seem most likely) received and welcomed them and subsequently produced a Syriac version for the communal use of local believers who knew no Greek, only the local dialect of Aramaic, Syriac. The Ode cited is in any case sufficient proof that early in the age and region of the setting down in writing of the *Gemara*, a learned religious poet writing also in a form of Aramaic, and not far away, associated David with the Greek myth.

The image, or better, images of lyre and spirit endured and developed in the Syriac literature of Pauline Christianity as well. The great poet-theologian St. Ephrem is regularly called *kenārā d-rūḥā d-qūdšā*, “the lyre of the Holy Spirit” (or simply, in modern Syriac parlance, *Kenoro*). The title is still used of St. Narsai as well, but it is pre-eminently Ephrem’s. The lyre was evident-

rusalem. But Lattke (ibid. 81) states also that the *mythos* of the hymn takes place “in some undefined and timeless past” so there is no point in talking about the Second Temple. Elsewhere he claims, likewise without proof, that the assertion in another Ode that God will never change His holy place for another can have nothing to do with Jerusalem (which is in the Psalms and elsewhere, and always, His holy place). But in context it would seem to have everything to do with the city — perhaps it was a defiant Jewish Christian response to the Pauline Christians’ abandonment of earlier reverence for the city and Temple following its destruction of 70 CE and the further devastation following the defeat of the Bar Kokhba uprising in 135. This context — Lattke’s seemingly relentless inclination to de-Judaize the Odes and to do so by employing special pleading to neutralize all inconvenient evidence to the contrary — raises one’s suspicions of a venomous, familiar animus when he quotes approvingly the question of R. H. Connolly, “Why is the Greek word for harp always used in the Syriac version, and the Semitic word avoided?” Surely the correct answer, if the question is taken as an ingenuous one, would have to include the reflection that the Syriac is a translation of a Greek original. Do the classical Armenian Christian usages of Semitic words such as *k’nar* (lyre), *k’ahanay* (priest), *bēm* (altar), *sop’r* (text), *magalat’* (parchment), etc., not to mention Amen and Halleluyah, suggest then a de-Aryanizing, a deliberate avoidance of *Indo-Germanisch*?

ly seen as superior to the flute: Jacob of Sarug is normally called the “Flute of the Holy Spirit”, a designation symbolizing his subordinate position relative to St. Ephrem. Examples of Ephrem’s use of the image include the following passages from his hymns:

Because thou hast loved the poverty, of thy master who in secret was rich,
the fountain of his words shall flow from thee, that you may become a harp
for the Spirit, and may sing to yourself inwardly His good will;

and

They scorned the trumpet of Isaiah, which sounded forth His pure Con-
ception — they silenced the lute of the Psalms, which sang of His Priest-
hood — the harp of the Spirit [when used of a person by St. Ephrem, this
phrase refers exclusively to King David] they hushed, which sang again of His
Kingdom — under deep silence they closed up, the great Birth that joined
the cry — of them above with them below²⁶.

When the spirit wafts through a man and stirs the strings of his mind, is he fully conscious, fully in control of his will? Or is he a passive instrument, like the tortoise shell hanging from its perch? Is a person the same when he is asleep as when he is awake? The question, albeit an ancient one²⁷, seems to have exercised the imagination of the heresiarch Montanus, whose teachings have been held to have affinities to Jewish Christianity²⁸. Epiphanius, *Haer.* 48. 4 reports:

Montanos phēsin: idou, ho anthrōpos hōsei lyra, k’agō ephiptamai hōsei plēktron. Ho anthrōpos koimatai, k’agō grēgorō.

(“Montanus says: look, man is just like a lyre, and I [God] fly over like a plectrum. The man lies asleep, and I am awake”²⁹).

Does the Lord ever sleep? Though “the Guardian of Israel will neither slumber nor sleep” (Ps. 121. 4), the question of sleep and waking seems to have

²⁶ For much of this information, including citations, I am indebted to a former pupil, Christian Šidak, a devout Syriac Christian fluent in both classical and modern forms of the language. The Russian reader will know St. Ephrem Sirin from the liturgy of the Orthodox Church, and from Alexander Pushkin’s rendering into modern Russian from Slavonic the prayer of St. Ephrem composed for Holy Week, “Master of my days...” (*Владыко дней моих!*) in the second poem of the “Каменноостровский цикл”, the lyric cycle of Stone Island, an idyllic district of Saint Petersburg. The cycle concludes with Pushkin’s famous testament *Exegi monumentum*.

²⁷ In the play of Sophocles, *Oedipus Tyrannus*, Jocasta tells Oedipus not to worry about prophecies of incest, since people in dreams marry their mothers. In dreams, the Irish poet William Butler Yeats responded two and a half millennia later, begin responsibilities; and with an extra Freudian urgency the American Jew Delmore Schwartz took up Yeats’ statement in a poem and a short story T. S. Eliot acclaimed as a classic.

²⁸ See Ford 1966.

²⁹ Cited by Lattke 2009, 77, n. 28.

been posed even with relation to God, though here it seems more a matter of rousing God and getting the Lord to focus on us down here, rather than speculating about where His mind goes. According to the *Mishnah*, the High Priest Jonathan abrogated three practices that had been customary in the Temple at Jerusalem. Among them, he abolished the “Awakeners”, that is, those who recited “Awake, why do you sleep, O Lord” (Ps. 44. 24) to arouse God in the morning. The idea is not altogether counter-intuitive: even though on a theoretical level the religious believer knows God is aware of everything we do³⁰, and thus cannot be sleeping, one still invites or tries to attract His attention in prayer. Saul Lieberman compared the practice to the way Egyptians used to wake up their god at the Serapeum of Alexandria every morning (as reported by Porphyrius of Tyre)³¹. We will review the thoughts of the sages of the Babylonian Talmud on this matter of harps, sleeping, and waking.

And we are to consider presently also a story about how David used to hang his lyre on his bedpost every night. The simple visual image of hanging up this instrument is strongly and tragically evocative in a Biblical context. In the Hebrew Bible, the *locus classicus* is Ps. 137:

(1) By the rivers of Babylon, there we sat, and cried, when we remembered Zion. (2) On the willows in its midst we hung our lyres (*kinnorōtēinū*). (3) For there they asked us — our captors — for the words of song; and our tormentors — for pleasure. (4) How shall we sing the song of the Lord on alien soil? (5) If I forget you, O Jerusalem, let my right hand wither: (6) Let my tongue cleave to the roof of my mouth if I do not remember you, if I do not raise Jerusalem above my chiefest joy.

Surely this archetypal lament will echo in some way in any later evocation of a hanging lyre. But let us hear the story of David’s nights, from the Babylonian Talmud.

4. KING DAVID AND HERMES’ HARP

A meandering discussion in Tractate *B. Berakhot* 3b of how many watches there are in the night, touches upon the long abecedarian Psalm in which King David declares:

At midnight (*ḥaṣōt laylāh*) I will rise to give You thanks for the judgments of Your righteousness” (Ps. 119. 62).

³⁰ The tenth of the thirteen articles of faith formulated by Maimonides is expressed in this way in most orthodox prayer books: “I believe with perfect faith that the Creator, may His Name be blessed, knows every deed of the children of Adam and all their thoughts. As is said, He shapes their hearts together and understands all their deeds”.

³¹ See Lieberman 1950, 142. There is a modern parallel: upon entering a Hindu temple the worshipper strikes by agitating its tongue a hanging bell that is usually a little under a foot in width, to rouse the attention of the divinity: the constant ringing of this bell is one of the most memorable everyday sounds of life in India.

The text then asks whether David indeed arose at midnight and goes on to describe his activities upon waking. But it is first objected that he was already awake in the evening, so how could he be asleep, in order to rise? (The logic is a bit like that of the Mad Hatter's tea party in the English mathematician Lewis Carroll's novel, ostensibly for children: When Alice in Wonderland is offered *another* cup of tea, she ruefully observes that it is impossible to take one, since she has not yet been poured a *first* cup.) R. Ze'irā solves the dilemma by offering a compromise solution: *'ad ḥaṣōt laylāh ḥāyāh mitnamnēm ke-sūs* "till midnight he would doze like a horse". This is to be understood as a light sleep: horses most often rest thus, standing on four feet, rather than sprawling whenever they sleep³². R. Aṣī adds, *'ad ḥaṣōt laylāh ḥāyāh 'ōsēq be-divrēi Tōrāh, mi-kān ve-ēilākh be-šīrōt ve-tišbāḥōt* "till midnight he would occupy himself with the words of Torah; thenceforth, with songs and praises". So in a way David did not really sleep at all the way other men do. But the conversation returns to the initial question: How did David know when it was exactly midnight?

R. Aḥā b. Bīznā comes to the point (an Aha! moment, if you please), echoing the tale of Hermes and the lyre. He says (in the name of) Šim'on Ḥasīdā, *Dāvid simānā havā lēih de-amar rav aḥā bar bīznā amar šim'on ḥasīdā kinnōr ḥāyāh tālūi le-ma'lāh mim-miṭṭātō šel dāvid ve-khēivān še-higī'a ḥaṣōt laylāh bā rūaḥ šefōnūt ve-nōševet bō ū-menaggēn mē'ēlāv miyyād ḥāyāh 'ōmēd ve-'ōsēq ba-Tōrāh 'ad še-'ālāh 'ammūd haš-šaḥar*

("... A lyre was hanging over David's bed and as midnight arrived the north wind would come and would blow through it and play over it: at once he would stand and busy himself with Torah until the break of the dawn").

So music played by the wind/spirit would waken the King who by playing his lyre and praising God would then himself waken the very dawn. After this pre-dawn Torah study, as morning came, the sages of the nation would enter into the presence of the King and remind him: Israel needs sustenance (*parnāsāh*). So then presumably David would leave his study of Divine Scripture for a time (both the Law and the Psalms, before midnight and after it, qualifying as Torah) to attend to the needs of his people. We shall see presently that this order of *nocturnal* activities parallels, the schedule according to which the Lord divides His own *day*.

There are four winds, and each blows for six hours of the day, in this order: East, South, West, and North. R. Ḥai Gaon, cited by the Rashba, said there was a timer that made the harp face the north wind exactly at midnight, but this

³² One offers for this observation not a printed source (one tome delivering another, as in the horrid scene of arid academic fertility depicted by Orozco in his fresco in a dining hall at Dartmouth college) but that most elusive kind of learning in modernity, direct experience — a life lived in the good company of both horses and cats. Horses will stretch themselves out on their sides only in deep sleep or if they are, God forbid, very ill.

seems a superfluous explanation verging on the comic inventions of Rube Goldberg, as the lyre could easily be hung in the right cardinal direction and, alarm clock or no, Boreas still had to be punctual. Indeed, Rashi explains the matter that way: David's lyre was positioned to catch the north wind when it blew, and it blew on time³³. And how do we know it was a lyre that woke David?

R. Yiṣḥaq b. Addā and others cite by way of a source Ps. 57. 9, where David declares, *'ūrāh khvōdī 'ūrāh han-nēvel ve-khinnōr ā'irāh šāhār*, "Wake, O my glory [i. e., heart, soul], wake, psalter and lyre — I shall awaken the dawn"³⁴.

The verse does not, to be sure, tell us precisely that the lyre woke David. It is more a justification, one thinks, for the co-optation of the Greek story. The *Gemara* tells us David would then address God (*B. Berakhot* 4a):

ribbōnō šel 'olām lo ḥasīd anī še-kol malkhēi mizraḥ ū-ma'arāv yešēnīm
'ad šāloš šā'ot va-anī ḥašōt laylāh āqūm le-hōdōt lākh

("Master of the Universe, am I not pious? For all the kings of west and east sleep till the third hour and I at midnight will arise to render thanks to You").

Why was he so anxious? He knew he had sinned lustfully; so his music was offered in expiation.

There is a variant of this mythological tale in the discussion in *Midrash Tanḥūmā* of the *parashah* — weekly Torah portion — *Be-ha'alōtkhā* (*Bamidbar*/Numbers chs. 8–12), which discusses *inter alia* the musical instruments and other implements to be made for the *Mishkan* — the Tabernacle, precursor of the Temple. The text comments on the verse "Make for yourself two trumpets" that the two in the Temple were hidden or deposited in the treasury (*af ha-ḥašoṣrōt še-hāyū vam-miqdāš nignezū*); therefore, it seems, David used to use (*mištamēš*) a lyre instead³⁵. There follows the story in *B. Berakhot*, but with an addition at the end: when the north wind blew through it, David would arise instantly *ve-khol hat-talmīdīm ve-hāyū 'ōsqīn ba-Tōrāh 'ad 'amūd haš-šāḥar* "and all the schoolchildren, and they would occupy themselves with Torah until

³³ Davis 2006, 226, n. 8.

³⁴ In medieval Armenia the guards of the last watch of the night at Hromkla ("Fortress of the Romans", near Aintab), the residence of the Catholicos (Supreme Patriarch of the Armenian Church) St. Nersēs Šnorhali ("full of grace", an ecclesiastical-academic title), used to greet the welcome rays of dawn with a pre-Christian hymn to the sun, a divinity of Zoroastrianism. Hearing these, he chose this verse of the Psalm, in its literal translation "Wake, O my glory!" as a proper Christian hymn to greet the morning, *Zart'ik' p'ark'im*. The word for glory in Armenian is itself a loan from a form of Old Iranian *farnah*-, the Divine sun-like glory bestowed upon heroes and kings. St. Nersēs often co-opted such Zoroastrian imagery, often more explicit, in his religious songs to reach out to a Zoroastrian sect, the still-unconverted Children of the Sun of his nation. See Russell 2005.

³⁵ Since David's son Solomon was to build the Temple, the reference to it in the *midrash* seems an anachronism.

the break of dawn". David would then explain, *Derekh haš-šāḥar lihyōt m'ōrēr benēi ādām, avāl anī me'ōrēr et haš-šāḥar*, "It is the way of the dawn to be the awakener of the children of Adam, but I am the awakener of the dawn". The *midrash* here adds to the story, introducing a subtle element of moral decision to what might otherwise be unseemly boasting: David's free will or inclination (*yišrō*; this may likely be an abbreviation for the Evil Inclination within men, the *yešer ha-ra'*) would ask him, "David, are you not a King? It is the way of kings to be sleeping till the third hour; and why do you stand at midnight?"³⁶ So David would reply with the Psalmic verse "Awake, my glory [literally rather than as a word for the heart and soul, cf. *supra*]" and explain, taking the meaning of *kāvōd* in its literal sense of "glory", *ēin kevōdkhā lifnēi kevōd yošerkhā klūm*, "your glory is nothing before the glory of your Maker"³⁷. David's retort may contain a play on the Hebrew root "to make", *y-š-r*, and address also thereby the distinction and potential conflict we noted earlier between human free will and artifice, and the (evil) *inclination* to which they are vulnerable (*yešer*) vs. divine inspiration and action — the work of the *Maker* (*Yōšer*). He would seem here to resolve the problem by suggesting one has the power to control one's inclination towards vice, including here the vice of sloth.

The detail of schoolchildren (students? disciples?) is not in the *Gemara*, but one suspects it was drawn in the *midrash* from the famous and charming discussion in the Talmud, *B. 'Avodah Zarah* 3b, about how the holy One, blessed be He, spends His day, since the description of David's night in the *Gemara* already corresponds, *grosso modo*, to it: R. Yehudah reports that Rav said the day is 12 hours long. During the first three He studies Torah. During the next three He sits in judgment on the world, and when He sees it is guilty enough to deserve destruction, He moves from the seat of justice to the seat of mercy. During the third part of the day He feeds the whole world. During the fourth part He plays with the sea monster Leviathan (cf. Ps. 104. 26). But another authority differs, insisting God has not laughed since the destruction of the Temple, and insists instead that now He *yōšēv ū-melammēd tīnōqōt šel bēit rabbān tōrāh* "sits and teaches Torah to little children from rabbinical houses" (on babes as pupils, citing Isaiah 28. 9). God's action in the third part

³⁶ The sages who set down the Babylonian Talmud lived in Parthian and Sasanian Mesopotamia; so their discussions are steeped in knowledge of, and direct or oblique references to, the Zoroastrian state religion of the Iranians. There may be one such reference in David's resistance to the inclination to sleep late. Zoroastrians were in oldest times mostly rural folk, herders and farmers, for whom it was virtue to rise at cock-crow (the rooster, thus, is holy) and vice to lave a lie-in. So there was a demoness of sloth, Bušyastā, whose name was originally an optative form of the verb "to be" meaning "let it be (later)". This verb turned temptress would whisper to sleepers her infernal tune of "Let It Be", encouraging them not to get out of bed yet. It is an anti-alarm clock we all know. In Judeo-Persian she is de-demonized to *bušāsf*, an innocuous siesta.

³⁷ Davis 2006, 226–227 with Hebrew text and English rendering; all translations here are mine.

of the day — nourishing the whole world — resonates with the morning visit to court of the sages recounted in the *Bavli* to ask King David to give sustenance to Israel. And one notes a correspondence, too, of the quadripartite Divine day and the four winds and four watches³⁸. It is difficult to assert the priority of a narrative in the correspondences and intertextualities of the Talmud, perhaps the world's first true hypertext. But it seems safe at least to suggest that in some ways the schedules and protocols of the court King of the Kings of Kings (Who is thus one up on the Sasanian Persian *šāhanšāh*, who is merely “King of Kings”) are to inform those of the royal court of His people Israel.

In the Torah portion that our *Midrash* comments upon, elaborating the story of David and his lyre from the *Bavli*, God also addresses Aaron and Miriam (Num. 12. 6–8), telling them that He makes Himself known to a prophet in a vision (*mar'eh*), and speaks to him in a dream (*ḥalōm*); but not so with Moses, with whom the Lord speaks mouth to mouth, plainly, and Moses beholds His likeness (*temunāh*). Though David is not Moses, and does not behold the Lord face to face, neither is he one who receives inspiration passively, in sleep: the assimilated *topos* of the Aeolian lyre of Hermes becomes here only a call to him to wake more fully from a light slumber — and then, in full wakefulness, after midnight when other monarchs are still sound asleep, moved passively in the oceanic tide of dream, the alert and watchful King of Israel composes his songs of praise and, like the holy One, blessed be He, employs the fourth and final watch to teach Torah to children. On his lyre, the lyre of the Psalms, he does not play the devil's music — for he has overcome by his piety the blandishments of the evil inclination as the pagans cannot hope to do. The Amoraim have thus taken the popular story of Hermes' lyre and deployed it to the advantage of Israel. David acquired the lyre of Hermes and the image of Orpheus; with his psalmody and piety he has out-performed both Greeks.

Earlier one suggested that the mournful Psalmic image of the lyres of the exiles hanging on willow branches by the rivers of Babylon — though chronologically long after David's reign, of course — must overshadow subsequent uses of the image when writers look in retrospect to the Biblical age³⁹. The Talmudic reader cannot have failed to compare the two: the seated ex-

³⁸ There are four faces of the Divine *merkabah*-chariot, too; and Christians carried over this quadripartite symbolism into further elaborated commentary on the four-armed Cross. See Russell 1997.

³⁹ The Chronicle of Yerahme'el senses the violence of the grief of the exiles: when their captors threatened to force them to play, the Children of Moses (*benēi Mošeh*) tore off their fingers with their own teeth. Then a cloud came, and lifted them, and took them beyond the river Sambatyon. See Reeves 2005, 211. On the goings-on beyond the mythical river that throws up stones all week long but rests on Shabbat, see Russell 2013 and Russell 2014–2015. This essay began as a Shabbat stay at the hospitable home in Kiryat ha-Yovel, Jerusalem, with its well-stocked library, of my old friend and mentor Professor Michael Stone of the Hebrew University. He invited me to offer the *Dvar Torah* at his synagogue; as I leafed through *Midrash Tanchuma* on the week's portion, I realized I had heard of wind

iles' silence and refusal vs. the rising David's greater, eager songs of praise. The Psalms are poetry, and a poet may understand them in ways a scholar is not trained by sensibility and inclination to do. So one defers to the comment on these passages of a friend in whose soul the spirit plays — the Israeli English-language poet Paul Raboff (private letter of 30 June 2017, from Ein Kerem, Jerusalem). He writes:

Everything that David hanging his harp in Jerusalem *is*, the Jews hanging their harps by the river of Babylon *isn't*. Can we learn anything from the contrast? There the *Shechina* [the Divine Presence, which is believed to have dwelt in the Temple — JRR] is already homeless, dispersed, the Kingdom shattered, lost with the Temple — all, all lost. They cannot sing, despondent, hang their harps, perhaps, a fugitive whisp [*sic*, combining perhaps wisp and whisper] of the wandering *Shechina* will yet pluck a muted remembrance of Jerusalem where the *Shechina* had nested, appeased by a penitent David (who had a lot to be penitent about) who hung his harp in the same room where he had spied Bathsheba and plotted. It would be a pure song, unmediated by any human hand, sinned, stained. The *Shechina* was close, intimate. It would speak to the besieged penitent directly. His enemies packed around him — men and demons. Words are the music of emotion; emotion, the music of principle; and *dvar Elohim* [the Word of God], three layered. The naked harp is our soul exposed to the ministrations of the *Shechina*, hanging unsupported by will power, human interference.

It has been suggested that the canonical Hebrew Bible has 24 books (Josephus mentions only 22) because the Rabbis knew each of the epic poems of Homer had 24. Codification was stimulated in part perhaps by competition, and also emulation. From the Ten Commandments (five on one stone, five on the other, like the fingers of two hands) to *gematria*, Torah learning is insightful exegesis and entrancing storytelling — and a numbers game. There are five books of the *Chumash*, the Pentateuch — the mind, law, and prose of God. When it came time to codify the Psalms, the Rabbis divided them accordingly into five books to correspond to the five of the “Five”, the *Chumash*, as the heart, grace, and poetry of God's own sweet singer, His beloved David. Though the number here appealed to a precedent within the tradition, the Rabbis lived in a world where they also heard the sound from outside, heard the myth of Hermes and turned it around, to answer unasked but anxious questions, to affirm the truth of the faith, to embroider the rich career of their own great lyricist. One can answer, when it comes to unpacking a Talmudic tale, Tertullian's tendentious question, “What has Athens to do with Jerusalem?” When it comes to music, everything⁴⁰.

blowing through a lyre before, and one thought led to another. It is a pleasure to offer these musings to him.

⁴⁰ One hesitates to combine the sublime with the ridiculous; but it must be observed parenthetically that some elements in Western culture have co-opted David in a vulgarly Hel-

lenizing direction that masks an unmistakable and dark bias. I do not mean Michelangelo's statue. In 1974, Thomas Burnett Swann published a science-fiction/fantasy novel about David and Jonathan entitled, unsurprisingly, *How Are The Mighty Fallen*. Swann populates his homoerotic reverie with pagan fairies, satyrs, leprechauns, mermaids, chimerae, and so on; and Jonathan is made to sport a pair of atrophied wings. The author portrays the prophet Samuel as a batrachian creature, a squat, bug-eyed, fat religious fanatic serving a monstrous god (that is, God). The Philistines (*scil.*, gentiles, Aryans) are a gentle, highly civilized people without a bone of cruelty in their svelte bodies. The Israelites are presented as scrappy savages whose various battles are part of one continuous war of expansion and conquest. Jonathan himself is blond and blue eyed. Spunky little red-haired David is blue eyed as well. David ambles around the Israelite camp, dodging the lewd advances of hairy Jews and occasionally announcing, rather like a folksy singer-songwriter *avant la lettre*, “I'm writing a new psalm”. He composes Psalm 23 (not numbered in the text but easy to identify, shall we say) in honor of Jonathan, to cheer him up after Jonathan's faithful armor bearer is immolated as yet another human sacrifice to God by the sanguinary Samuel. Enough! Mr Swann, this is your song. How are the mighty fallen, indeed.

**THE BIBLE AND REVOLUTION:
SOME OBSERVATIONS ON EXODUS, PSALM 37,
ESTHER, AND PHILO**

*(К СТОЛЕТИЮ ВЕЛИКОЙ ОКТЯБРЬСКОЙ
СОЦИАЛИСТИЧЕСКОЙ РЕВОЛЮЦИИ)*

Abstract: Human ideas and events develop and unfold in the context of inherited culture and tradition. The idea of revolution in the modern world, even in atheist ideology, partakes of necessity of religious beliefs and imagery, where the natural order is miraculously and apocalyptically overturned and the poor and downtrodden are vindicated. The foundational text is Exodus; Psalm 37 with its overt reference to the poor inheriting the earth develops the theme; and Esther translates it into a romanticized narrative of political history. It is proposed that Philo encodes Esther into his *In Flaccum*.

Keywords: Revolution, Lenin, apocalypse, Exodus, Psalm 37, Jesus Christ, Esther, Philo of Alexandria, *In Flaccum*, dreams.

**БИБЛИЯ И РЕВОЛЮЦИЯ:
НЕСКОЛЬКО ЗАМЕЧАНИЙ ОБ ИСХОДЕ, ПСАЛМЕ 37,
ЕСФИРЕ И ФИЛОНЕ АЛЕКСАНДРИЙСКОМ**

Резюме: Идеи и события в истории человечества развиваются и развертываются в контексте религиозной идеологии и иконологии: естественный и общественный порядок божественным чудом перевернуты, униженные и угнетенные сего мира приобретают богатство и власть. Основной текст: книга Исхода; Иисус Христос применял и Псалом 37, где подчеркивается спасение бедноты. Книга Есфирь переводит тему в сферу романтизированной политики; автор статьи полагает, что Филон Александрийский в своем сочинении *In Flaccum* пользуется ключевыми темами и структурами Книги Есфирь, скрытых от римлян и обращенных к еврейскому читателю, знающему библиейский текст.

Ключевые слова: революция, Ленин, апокалипсис, Книга Исхода, Псалом 37, Иисус Христос, Книга Есфирь, Филон Александрийский, *In Flaccum*, сны.

Товарищи!

Рабоче-крестьянская революция, о необходимости которой все время говорили большевики, совершилась!

В. И. Ленин (из к/ф «Ленин в Октябре», 1937)

You say you want a revolution, well, you know, we all want to change the world.

John Lennon (The Beatles, *White Album*, 1968)

1. RECENT REVOLUTIONS AND BIBLICAL ECHOES

“Blessed are the meek, for they shall inherit the earth” (μακάριοι οἱ πραεῖς, ὅτι αὐτοὶ κληρονομήσουσιν τὴν γῆν) declared Jesus Christ in His Sermon on the Mount (Matthew 5:5)¹. But the messianic Parousia still has not yet arrived; and the revolutionary prophecy of redemption attending that supernatural event can seem farther than ever from fulfillment. “Philosophers have hitherto only *interpreted* the world in various ways; the point is to *change* it”, fumed a later Jewish prophet, Karl Marx, in his *Theses on Feuerbach*, 11. So suffering mankind, understandably impatient, has taken the business of revolutionary transformation into its own hands in the interim — and, given human nature, with predictably mixed results. In the lapidary words of Victor Stepanovich Chernomyrdin, delivered in the wake of the latest watershed events of Russian history, *Хотели как лучше, а получилось как всегда* (“We hoped for the best, but got the usual”).

Hope, as the Russian saying goes, is the last to die. Many of the fond hopes that attended the previous watershed — the second, Bolshevik revolution of the year 1917 in the Russian Empire — wilted in the care of a bureaucratic establishment inherited from the *ancien régime*. Its sanguinary criminality, tragically, reached its nadir on the twentieth anniversary of Soviet rule: that year, 1937, saw the great terror, the Stalinist show trials, the decimation of the Red Army, and the liquidation of the old Bolsheviks. Yet revolution is a youthful passion and humans are nostalgic creatures, even if a sardonic voice whispers within that anyone under thirty who is not a communist has no heart, but anybody over thirty who is one has no head.

¹ “Blessed” is the standard English and has conveyed the spirit of the sermon for many generations. It is still inaccurate, however; for Greek *makarios* translates Hebrew *āšrei*, “happy”. In a separate work in progress, the preliminary findings of which were presented as a plenary lecture at the conference on diaspora organized by the department of Jewish studies of St. Petersburg State University in September 2017, one proposes that a central prayer of the synagogue liturgy that bearing the latter name — it consists of Ps. 145, preceded by several verses from other Psalms beginning with the word *āšrei* — developed as a response to the Beatitudes, whose original text might have been in a gospel in Hebrew or Aramaic used by Jewish Christians.

There is no denying how bitterly ironic the words of the actor Boris Shchukin playing Vladimir Ilyich that close the film “Lenin in October”, released in that dark year of 1937, must sound. Why is it, then, that the viewer, conscious of all he knows, and understanding all that he feels, can still be moved by that exulting proclamation — the first epigraph to this essay — just at the moment the curtain comes down and the word Конец, “The End”, appears on the screen: “Comrades! The revolution of the workers and peasants, about the necessity of which the Bolsheviks have been speaking all the time, *has been accomplished!*” Part of the reason Lenin’s cinematic valediction can resonate so strongly is that it has overt Scriptural overtones: the declaration of that “most human of men” (самый человеческий человек) at the end of the movie echoes literally the last words as He died on the Cross of Jesus Christ, believed by much of the human race to be both the most human and the most divine of men. According to John 19:30: ὅτε οὖν ἔλαβε τὸ ὄξος ὁ Ἰησοῦς, εἶπε, τετέλεσται. καὶ κλίνας τὴν κεφαλὴν, παρέδωκε τὸ πνεῦμα (“When Jesus took the vinegar, then, He said, ‘It is accomplished!’ And, lowering His head, He gave up the spirit”)². The Old Church Slavonic for Greek *tetelestai*, “it is accomplished”, is *sovershishasia*; modern Russian *sovershilos*’ — the very word that concludes “Lenin in October”! Most Russians alive in 1937 were born and raised in the traditions of the Orthodox faith; and despite the terrible suppression of religion a decade earlier and the subsequent convulsions of collectivization of the land, theirs was no subconscious memory. The lexical Christian-Communist correspondence, then, is exact: both the Soviet slogan “Ленин жил, Ленин жив, Ленин будет жить” (“Lenin lived, Lenin is alive, Lenin shall live”) and the popular song “Ленин всегда с тобой” (“Lenin is with you always”) echo the Christian belief in the Resurrection, as well. Death, or the end of a world-epoch, must happen for the resurrection to be possible: this is the chain of teleological thinking, and both the historical determinism of Marx and the dramatic title of Edmund Wilson’s famous history of European revolutionary thought *To The Finland Station* display a crypto-religious, apocalyptic teleology. The sociological historical method of Giambattista Vico begins to gather steam and turn its wheels, and Lenin alights at the final stop³. It seems that even with down-to-earth, avowedly atheistic revolutions we still cannot do without apocalypticism and teleology, cannot get away from postponed *Parousiai*: Communism, one was always assured, is on the horizon (which, as one wry Soviet anecdote used to add, is defined as an imaginary line that vanishes as you approach it). The paradigm of religion is as inescapable today in modern revolutionary ideology as it was over two millennia ago in the Servile rebellion of Spartacus, which took Dionysus, the dying and rising god, as its patron.

² The film adaptation of the novel of the modern Greek writer Nikos Kazantzakis, *The Last Temptation of Christ*, closes with these words as the crucified Savior gives up His spirit on the Cross, and the movie ends with an ensuing joyful thunder of bells.

³ Fly forward, our locomotive: in the commune is our destination. We have no other path — we hold a rifle in our hands!” runs the famous early Komsomol song *Паровоз*.

None of this is news, but such a recollection of recent, lived events and familiar slogans and turns of phrase is still useful to a discussion of the concept of revolution, when one returns to parse the details. There has always been a recognizably eschatological, religious fervor, and a passion for martyrology, in revolutionary upheavals; and the arts of Communism, from phrases and iconic banners to the usages of the more recent medium of cinematography, are much indebted to their Christian precursors, to the Hebrew Bible, and at least to some degree, to the notable pagan exemplar already mentioned — Spartacus⁴. The intervening gulf of time between the turbulent first century CE and the convulsions of the twentieth was not, to be sure, a void over which such inspirations leapt. It was replete with movements of social protest, with primitive and inchoate rebellions. The last days of the Sasanian dynasty in Iran saw the proto-communist Mazdakites (who served as a precedent rooted in pre-Islamic tradition for Iranian secular revolutionaries in the 20th century)⁵; and soon after, the Paulician and Tondrakite movements washed over Armenia, leaving their traces in the Bogomil and Albigensian “heresies” of the medieval west. Bandit-rebellions of the Robin Hood type, studied notably by the great Marxist scholar Eric Hobsbawm, have been so frequent and widespread, from the British Isles to the movement of Köroghlu (Turkish, “Son of the Blind Man”) in 16th–17th-century Anatolia, that it is accurate to study them both as

⁴ On the Soviet Armenian case see Russell 2012a: in the little Transcaucasian republic the enthusiasts of the new dispensation drew freely on both Christian and earlier Zoroastrian symbolism in the creation of a canon for the future. The anatomy and genealogy of these transformations can embarrass ideologues, who aver that they are rationalists overthrowing superstition (or *vice versa*). An illustrative incident is perhaps worth recording here for posterity. Some years ago this writer was invited to offer a paper on Russian revolutionary posters at a conference on the art of the Islamic Revolution that was to be held at Harvard, and had secured partial funding from the office of the university’s Provost. One was suddenly disinvented by the organizing committee, when after consultation amongst themselves, they determined that the paper I had been asked to write — and had not yet even been written — might conceivably give offense to the Iranian régime by implying that its propaganda could be compared to art made by atheists. The conference went ahead without one’s sage contribution; and the Provost’s office did not respond to several formal complaints, both before and after it. So much for the freedom, diversity, and so on that the American “liberal” academic and media establishments self-righteously preach to others, while practicing the opposite themselves. To return briefly to cinematography, the American movie epic “Spartacus” ends with our hero dying on, yes, a cross. But there will be a kind of resurrection — his wife holds up to him their baby son. In the Soviet Union, *Spartak* was, of course, a soccer (football) team!

⁵ Several Classical Armenian writers termed Zoroastrian heresy, presumably Mazdakism, *anbari barerarat’ iwn*, “bad beneficence”, lit. “not-good good-doing”, the implication being that the reformers who promoted economic and social fairness and equality were motivated by heterodox beliefs that negated their efforts, or placed them in the service of evil ends. The phrase is used in connection with the serpent-man who in Iranian mythology, with its strong ideological foundation of kingship, is presented as the paragon of misrule, Aždahak.

general social phenomena arising independently in diverse cultures and displaying functional parallels, and as lines of tradition that are transmitted as heterodox and dissident teachings, altering details in time and space. Their literary-epic expression becomes then a *topos* of folklore and romantic balladry, with a filiation in some cases of transmitted literary models — but only in some limited cases can one insist confidently upon a linked historical chronology of influences from one movement to the other⁶.

2. THE PROTOTYPICAL BIBLICAL REVOLUTION

Revolution is, literally, the overturning of something: making what was below stand on top, vertically and in society and economics; and, laterally or temporally, reversing the normal and expected course of events. The Hebrew root for overturning, *h-p-k*, which will be central to our discussion, serves as the base of the modern Hebrew word for revolution, *mahapekha*⁷; many other modern languages either borrow the Latin term directly or form calques upon its prefix and verbal root⁸. The idea of God's overturning powerful and seemingly unchangeable human institutions, and reversing the inevitable course of human events, is absolutely central to Judaism. When it happens it is the stuff of miracle, the irruption of the wonder of the divine into the mundane. And when it does not happen, one prays for it to⁹. We shall examine presently how it suffuses alike the earliest foundational text of Israelite national and sacral history, the Biblical Book of Exodus in the Pentateuch, and one of the most recent texts of the canon of the Hebrew Bible, the Oriental romance we know as the Book

⁶ On the Paulicians, see Russell 1995–1996; on Kōroghlu see Russell 2017.

⁷ Less dramatically, the root produces also the name for the signature cappuccino of the Israeli café, *hafukh* (lit. “upside-down [coffee]”) — a calque on European usage. In both Biblical and modern Hebrew, v. t. *hafakh* with the preposition *le-* on its object means to turn or change into something, as from black to white in the laws on leprosy in Leviticus.

⁸ Thus Russian *revoliutsiia* but, for instance, Armenian *yela-p'oxut'awn*. The popular Arabic *thawra* (as in the slogan ending *hatt'al-mawt[i]*, “till death”, which may attract the *šahīd* “martyr” but is scarcely the point of a revolution) really means an uprising (cf. modern Greek *epanastasē*); the late Edward Said predictably accused philologists who dared to mention the association of this term in Classical Arabic with the behavior of rowdy or randy camels as “orientalist” conspirators in the service of imperialism, colonialism, and so on. Modern Persian *enghelāb* (and other “Islamicate” tongues, e. g., Hindustani, with the pleasant *Lati-nate* transcription *inquilab*) employs a seventh form of the verbal root *q-l-b*, “change, alter”.

⁹ Wanting better and winding up with “as ever” is the best case for such political and other disappointments of life. The worst is the truly impenetrable fog of human evil, such as the Holocaust and genocide. At that point monotheists must take cover behind the mystery of theodicy. But those Zoroastrians who still believe in the original dualism of their tradition have a better answer, even if it is not necessarily true: they can produce an all good but not all powerful Ahura Mazda, locked in battle with the inferior but wholly independent archdemon Ahriman, who assures His steadfast worshippers, to paraphrase William S. Burroughs, “I’ll do what I can, but I’m hustling, too”.

of Esther. It is expressed often in various contexts, to various ends, and always with the assertion of Divine sanction. And it will be seen in conclusion how the Jewish philosopher Philo of Alexandria, a contemporary of Jesus, encoded the revolutionary plot of the Book of Esther into a chronicle of Roman oppression.

Christ himself, a Jew who never called Himself anything else, derived his ideas directly from His own tradition, specifically, in the case we are briefly to consider, from a Psalm. He kept company with at least one adherent of the “Fourth Philosophy”, that of the revolutionary *Sicarii* (“dagger men”, after their preferred method of assassinating collaborators with the Romans) or Zealots (Hebrew *Qana'im*). The Apostle Paul, who almost singlehandedly invented a de-Judaized gentile Christianity, a development that Jesus perhaps neither imagined nor intended, and which many of His earliest followers bitterly opposed and rejected, was still to echo this core idea. He does so with a somber, thrilling eloquence that must touch the very soul of any believer in the one God, whatever else one may think of Paul’s strategic abandonment of the Torah and the Commandments of normative Judaism in the propagation of his message: “For ye see your calling, brethren, how that not many wise men after the flesh, not many mighty, not many noble, are called: but God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty; and base things of the world, and things which are despised, hath God chosen, yea, and things which are not, to bring to nought things that are: That no flesh should glory in His presence” (1 Cor. 1:26–29)¹⁰. It is a statement of Divine revolution, of the enfranchisement of the downtrodden, of the involution of mundane hierarchical values.

The motto “Rebellion to tyrants is obedience to God” would seem to combine active human initiative with an appeal to Biblical tradition and the hope of Divine assistance. During another revolution, Benjamin Franklin proposed those words for the Great Seal of the brand new American republic only a month after the Declaration of Independence: it was to surround an engraving, tellingly, of Israel crossing the Red Sea; and of the pursuing Egyptians, drowning¹¹. The difference, of course, is that the Americans took up arms against the British colonial authorities and defeated them. The only instance of Israelite violence

¹⁰ This writer, whose early Jewish education precluded the reading of Christian scriptures, was first exposed to these verses of the New Testament through Madeleine L’Engle’s *A Wrinkle In Time*. Like some other books meant for children, and books of science fiction, it is much better than much of the fiction written by *soi disant* sophisticates for adults.

¹¹ The new country received instead the preposterously cryptic image reflecting the Masonic iconography popular with many of the founding fathers that now adorns its currency: a pyramid representing the Pythagorean *tetraktys* with a blazing, all-seeing Eye in a triangle floating above it, and a quotation from Virgil, the sycophantic epic poet of the Roman empire.

in the events of the Exodus itself is Moses' smiting the Egyptian taskmaster. God does all the heavy lifting, as it were.

Let us consider this revolutionary prototype, Exodus, following the use of the Hebrew root *hpk* through it as a sort of trace element. The overthrow of the Egyptians might be said to commence when God turns Moses' rod into (*nghpk*) a snake, defeating the machinations of the court magicians (Ex. 7:15)¹². Since Egypt is the land of sorcery par excellence, this defeat is of great symbolic importance, and not mere legerdemain. Immediately thereafter, God orders Moses to inform Pharaoh of the first of the ten plagues, in which the waters will be turned (*wnghpkw*) to blood (Ex. 7:17). The king releases the Hebrew slaves, but has a change of heart (*wyghpk*, Ex. 14:5) and sends his army after them, to his ultimate doom. Further reversals follow in swift succession: the oppressor who would kill the Israelite first-born loses his own; the thieves of the Jews' labor are themselves utterly despoiled; the sea becomes dry land; the slaves become free men; and the army pursuing unarmed women and children is destroyed, with Pharaoh alone left to tell the tale¹³. To the prophetic Messenger of the *Qur'an*, Exodus is, indeed, *the* tale of *all* tales — the chapter in which it is summarized is entitled *al-Qisas*. Though "The Story" is actually that of a particular people, it is regarded not so much as the foundational saga of one nation as an exemplary event that teaches a universal and perennial message to all monotheists: Pharaoh was a worker of corruption (*mufsid*) in the earth; his victims were the oppressed (*mustadaf*); and God made them the *inheritors* (*wārith*; the root is the same as Hebrew *y-r-š*, a crucial term to be considered presently in the discussion of Ps. 37, which we have already noted from the Sermon on the Mount). God makes of His great deed an example — to the Egyptian tyrant, and, looking ahead to the Esther story (or from the vantage point of the revelation of Islam in the seventh century CE, looking back), to Haman (the villain of the story) as

¹² Jews and Christians felt the need to give names to the Pharaonic magicians, and came up with a rhyming pair, Jannes and Jambres. The latter then came to be associated with legends about another demonized duo, Harut and Marut (originally the Zoroastrian *yazatas*, "divinities", Haurvatat and Ameretat), and their garden became an antitype of Eden. An early modern Armenian poem decrying the latest vice of Ottoman society accuses them of having cultivated there a noxious weed from hell, tobacco (actually a product of the New World, of course): see Russell 2009; Russell 2013; Russell 2014–2015.

¹³ Jewish pietistic tradition makes the Egyptian tyrant the sole survivor of the rout of the Egyptian army in the Red Sea and the later king of the Assyrians, to whose court at Nineveh the Prophet Jonah is sent. Pharaoh's earlier humbling thus explains his strange alacrity in hearing out the warning of the reluctant Hebrew prophet and ordering immediate and general repentance. But another way of understanding this very short book of the Bible is to see Jonah as a late text whose sardonic irony is perhaps Hellenistic and certainly deliberate: though Rabbinic tradition discovers many ingenious justifications for his behavior, Jonah, the only Jew in the story, is also the only character who is angry, ill-intentioned, and disobedient to God: see Bickerman 1967. One is reminded of Jesus' admonition — probably not original even then but perennially good advice — to notice the plank in one's own eye before pointing out the splinter in another's.

well (Sura 28:3-6). It is unsurprising that such theological terms as “workers of corruption in the earth” and “the oppressed” were to become watchwords of modern Iranian Islamic revolutionary rhetoric¹⁴.

3. REVOLUTION PROPHESED: JESUS AND PSALM 37

In the Gospel narrative, the flight of the Holy Family with the infant Christ to Egypt and their return to the Land of Israel recapitulates the events of Genesis and particularly of Exodus: one is clearly intended to telescope Egyptian oppression into the narrative of Christ’s infancy, whether the parallel persecution be the supposed Herodian massacre of the innocents or, more likely in historical terms, the Roman census that was the first step in the tightening of direct imperial rule over the restive population of Judea.¹⁵ After this symbolic Exodus, and His correspondingly symbolic sojourn and temptation in the desert — these recapitulations of Biblical typology and fulfillments of prophecy are at the heart of the canonical biography of Jesus — comes His teaching itself. We may focus here just on Psalm 37 (according to the numeration of the Hebrew Bible) as one source for the declaration in the Beatitudes cited at the beginning of this essay. The Psalm is abecedarian — an alphabetic acrostic — with the first word of every second verse beginning with a letter of the Hebrew alphabet. The verse that would have begun with the letter ‘*ayin*’ is absent — not unusual in such Psalms — but the letter is present in three of the six words of the *samekh*-verse that would have preceded it. One might suggest that the author might have been following a deliberate plan, and by pointing out the missing letter repeatedly beforehand wanted one to anticipate the ‘*ayin*-verse and then to notice the line by its very absence¹⁶: *swr m-r*’

¹⁴ One prominent Persian theoretician of revolutionary Islam, Ali Shariati, even suggested that the Quranic address, *Yā ʿayyuhā 'l-insāna*, “O ye people,” is an appeal to the masses as understood in Marxian terms.

¹⁵ Herod was by ancestry an Idumaeon, a convert to Judaism; and he had to tread a dangerous path, accommodating and entertaining the Romans on the one hand and satisfying the restive Jewish population, most of whom detested them, on the other. But there was a “Herodian” religious party, Herod was apparently kind to the sectarians at Qumran, and he enlarged the Second Temple to its magnificent and final splendor. The demonization of Herod may reflect nascent Christian anti-Semitism. The Roman census in Judaea might have been the actual political turning point of Jesus’ lifetime, as the first act of imposition of direct imperial rule; and taxation (without even the ghost of representation) was a factor in the uprising of 66 CE. See: Brandon 1967: 49, 66.

¹⁶ It is important to understand that the order and length of the 22-letter Phoenician and Hebrew alphabet is arbitrary and not phonetically based, and did not change at all over the centuries. An exception is Arabic, which follows a scribal order of shapes but still preserves the ancillary *abjad* (i. e., A, B, C, D) list that follows the Phoenician order. Some alphabets adapted from it in antiquity added letters at the end but still preserved the basic order. The number and placement of the letters would seem to have possessed from the start, or achieved soon, a sacral status. (See the interesting and thought provoking study of Bund-

w-*śh* *ṭwb* w-*škn* l-*ʿwlm*, “Turn from evil and do good¹⁷, and dwell for ever” (Ps. 37:27, “do good” echoing the third verse¹⁸). A more subtle reversal may

gård 1965). A native reader of Hebrew would therefore be likely to notice and remark upon an absent letter in an abecedarian text, and it would affect his reception of the text in what computer geeks and mathematicians would call a non-trivial way. So the *ʿayin*-line is thus what I christen an example of the ghost verse, something that one sees out of the corner of one’s eye as it were, and imagines to be there, a verse that exerts an influence on the poem around it, and can be written about and commented on, but still does not exist. *Yesterday upon the stair/I met a man who wasn’t there/He wasn’t there again today/Oh, how I wish he’d go away* wrote William Hughes Mearns (1875–1965) in his poem “Antigonish” (1899). The absent line 1000 of Vladimir Nabokov’s “Pale Fire”, described by Kinbote (Botkin?) as a poem of 999 rhymed *couplets* (?!), must be the same as line 1, for intricate and compelling reasons of rhyme and theme alike, but it is not there. There is no “actually” in *Pale Fire*: that is what infuses the experience of reading the novel with wonder. In the case of the Psalms, the *locus classicus* is the missing *nun*-verse in the Masoretic text of Psalm 145. Tractate *Berakhot* of the Babylonian Talmud declares it deliberately to have been omitted, lest one think of a gloomy pronouncement of the prophet Amos beginning with the letter: *nāflāh*, “Fallen is the maiden of Israel; and she shall not rise.” But the Psalm scroll of Qumran and the LXX — and the Christian Psalter, subsequently — have a wholly innocuous *nun*-verse beginning with *ne’eman* “faithful”. But *Swmk YQWQ l-kl h-nplym w-zwqp l-kl h-kpw-pym*, “The Lord upholds all the falling and straightens up all those who are bent over”, reads the *samekh*-verse that would have followed *nun*. The *fallen* are raised, as though to reassure readers distressed by the (nonexistent) *nun*-line. The parallel second half of the *samekh*-verse seems to allude even more cryptically to the ghost line, for in square-character Hebrew *nun* is the “bent” (*kafuf*) letter, symbolic of the Messiah, the man bent beneath his heavy burden of trouble and sorrow. But at the *end* of days in the Messianic era he will be straightened, crowned king, even as the scribal *final nun*. There is no such distinction between initial-medial and final letters in Paleo-Hebrew script, however; so this further *allusion*, mystically and eschatologically replete with meaning, is also a temporal and historical *illusion*, a ghost of a ghost. For the Psalm that gives the entire Psalter its Hebrew title, *Tehillim* (Ps. 145 alone begins with the word *tehillah*), is probably too early to have been composed when square-character script was current in Israel. For pietistic and exegetical purposes, though, these phantasms are still useful; cf. the play of ostensible misprints, “fountain” and “mountain”, again, of Nabokov’s poem.

¹⁷ *Sur me-ra’ ve-’aseh tov* is also a part of the Psalmic *niggun* (a short song based on one or several Scriptural passages) “Who is the man who desires life (*Mi ha-ish he-chofets chayyim*)” popular in Hasidic Judaism.

¹⁸ The Midrashic discussion of the admonition to do good in the Psalm introduces, to explain David’s plight, the parable of a man who is not paid. The king — his employer — then hires another laborer and rewards him richly. How much more, the first man muses, will the king give me in the end, since I have served him longer. The implication is that one’s faith demands patience. See: Braude 1959: 1, 423–424. It may be that just recompense never arrives for an individual in his lifetime: Kirkpatrick 1902: 187–188, who rightly considers the issues the Psalm addresses much the same as those in Job, suggests that the ancients, who were more family-minded than humans of the latter day, would have taken solace in the firm belief that compensation was sure to come to their progeny and descendants, if not to themselves. This idea of recompense delayed by a generation seems to be adumbrated in Psalm 37:25: “I was a youth; I also grew old, and I never saw a righteous man abandoned, or his progeny begging bread”. Because of the reference to food, the verse is chanted also towards the end of the Hebrew blessing after meals. There is a Zoroastrian parallel to the first part

foreshadow this literal *turning point*. The third verse, which verse 27 echoes strongly, reads: *bṭḥ b-H w-šh ṭwb škn 'rš w-r'h 'mwnh*, “Trust in the Lord and do good, dwell upon the earth and cultivate faith” (the word *rə'ēh*, “cultivate, shepherd, cherish”, here differs scribally from *ra'*, “evil”, in 37:27 by only one letter). Verse 14 reads: *hrb pṭhw rš 'ym wdrkw qštm l-hpyl 'ny w-'bywn l-ṭbwh yšry drk*, “The wicked have sharpened the sword and strung their bow, to cause the destitute and the poor to fall; to slaughter those who are upright on the way.” The letters of *bəṭaḥ* “trust!” of 37:27 seem here to be *transposed* to *(lə-)ṭbōaḥ*, “(to) slaughter”. But this transposition is a sign of the unlikely reversal of fortune, and in a direction the wicked are least expecting; for verse 15 assures us that their sword shall be turned upon their own hearts, and their bows shall be shattered. The image of sword drawn and bow bent will instantly remind the pious reader of the vivid word-pictures of Psalm 7, the song of reversals *par excellence* in the Psalter, where the unrepentant man has sharpened his sword and bent his bow — but he will fall into the pit he dug, and his mischief will return upon his own head.

Psalm 37 repeatedly admonishes one not to fret (Heb. *ṭhr*, used thrice, in lines 1, 7, 8), and not to envy evil men (*rš 'ym*) for their apparent success. Indeed, the words “evil man” and “evil” (*r'*) are so frequent that one editor has subtitled the Psalm “The Problem of Evil”¹⁹. The attendant issue is envy of the wicked, who should not prosper but still do; Philo, whose *In Flaccum* we shall consider presently, constantly cites envy, Gk. *phthonos*, as the great temptation and pitfall that bedeviled his own life and that turns men generally to vice. But this situation will be overturned, the author protests five times, his assurance spread evenly through the text — the good, variously characterized, will inherit the earth:

37:9 *ky mr 'ym ykrtwn w-qwy H hmh yyršw 'rš* “For the doers of evil will be cut off and those who hope in the Lord will inherit the earth”.

37:11 *w-'nwym yyršw 'rš w-ht 'ngw 'l rb šlwm* “And the meek shall inherit the earth and take pleasure in great peace”.

37:22 *ky mbrkyw yyršw 'rš w-mqlyw ykrtw* “For those who bless Him shall inherit the earth and those who curse Him shall be cut off”.

of the verse (but without the key reference to progeny) that this writer noted in a Pahlavi didactic poem (Russell 1987, repr. in Russell 2004). One thinks here also of Jesus' deliberately provocative parable with the conclusion, The last shall be first. The issue of reward and payment is a vital one in the religious literature of antiquity, as it is today. Antigonus of Soho in Mishnah Pirquei Avot (The Ethics of the Fathers) enjoins the pious not to labor for God as one might for a human master, expecting a *peras* — which, the Renaissance scholar Casaubon first saw, to be followed by Bickerman latterly, is not payment by right but a bonus the owner/employer is not required to bestow. That is, expect nothing. The Sadducees and followers of Boethus deduced that there is no heavenly reward: later Rabbinic Judaism, with its canonical belief in heavenly reward, was to brand them *minim*, heretics.

¹⁹ See Cohen 1945: 111.

37:29 *šdyqym yyršw 'rš w-yšknw l-'d 'lyh* “The righteous shall inherit the earth and shall dwell for ever upon it”.

37:34 *qwh 'l H w-šmr drkw w-yrwmmk l-ršt 'rš b-hkrt rš 'ym tr 'h* “Hope in the Lord and preserve His way and He will raise you up to inherit the earth and you will see the cutting off of the wicked”.

The author of the Psalm takes pains to indicate, through the imagery of borrowing, lending, and repaying, that this inheritance is neither an otherworldly promise nor a metaphoric figure, but a concrete and down to earth matter of land and cash. The evil man borrows but does not repay (*šlm*), in contrast to the righteous man, who lends, gives generously, and enjoys peace (*šlwm*): a nice verbal figure²⁰. The righteous and the pious (*šdyq*, *šsyd*) moreover, are constantly associated with the poor and the needy (‘*ny*, ‘*bywn* — cf. the Ebionites, whose name means “the Poor”!). The eldest son of the family is in the way of the world the heir; but God overturns the ways of the world. The younger Jacob, not the elder Esau, receives the inheritance from Isaac; and to God it is Jacob, with his new name, who becomes the first-born: *bny bkwy Ysr 'l*, “Israel is My first-born!” One recalls that God did not just free the Israelites from Egyptian bondage. He slew their first-born and ordered them to despoil their oppressors: our ancestors departed with all the former masters’ gold and silver, making Israel not only free men, but rich ones (the precious spoils went to the casting of the implements of the Tabernacle), and first-born heirs as well, one and all.

So inheritance is not defined here automatically by pedigree, as in civil law. It is a matter of Divine election, as stated in Psalm 2 and echoed at Christ’s Baptism²¹. “He who sits in the heavens will laugh — the Lord will mock them. Then he will speak to them in His anger, and terrify them in His wrath: And it is I who have anointed My king on Zion, My holy mountain. I will speak of the ordinance that God commanded me: ‘You are My son. I have begotten you this day. Ask of Me and I will give the nations

²⁰ In a written communication of 6 May 2017 Prof. David Sperling of Hebrew Union College, who meticulously read the draft of this article and offered several important corrections, notes that I. L. Seeligmann has argued convincingly that Ps. 37:21 does not describe an attribute of the wicked man but his fate: in the days to come he will be unable to pay back a loan, while the righteous will be rich enough that they will be in a position to afford to be generous. The generosity of Prof. Sperling, my friend and colleague, over many years is but one facet of his righteousness: it is a pleasure here to thank this good man and Torah sage.

²¹ Those who focused on the words from Heaven at the Baptism and reckoned them as the starting point of his Divine career, but refused to accept His virgin birth or divinity, considering these a blasphemy against monotheism, were later to be anathematized as adherents of a heresy, Adoptionism. This was a legitimate early Christian point of view in its time, though, and it became the Christology, also, of normative Islam. Medieval Jewish scholars, including David Qimhi, were aware of Christian claims concerning Psalm 2 and refuted them: see Sperling 2011 with refs.

as your inheritance (*nḥllh*); the very ends of the earth, as your possession (*ʿḥwzh*)”²².

4. A PRELUDE TO REVOLUTIONARY ROMANCES: THE DREAM OF ILL OMEN

Jesus offers the prophecy of a just future; but what if one has a premonition of evil instead? The Jews of the Talmudic era, like other peoples at other times, believed that dreams are prophetic. So there is an extensive discussion of them, including instructions on how to avert such a dire future in Tractate *Berakhot* 55a–b of the Babylonian Talmud. R. Huna ben Ami transmits these: he received them from R. Pedat, who got them in turn from R. Yoḥanan: *hrw ʿh ḥlwm w-npšw ʿgwmh ylk w-yptrnw b-pny šlšh* “One who sees a dream and is anguished in himself, let him go and have it interpreted before three (men)”. They should assure him that all will be well, and then *w-l-ymrw iii ḥpwkwt w-iii pdwywt w-šlš šlwmwt. Šlš ḥpwkwt ḥpkt mspdy l-mḥwl ly, ptht šqy yt ʿzrny šmḥh ʿz tsmḥ btwlh bmḥwl w-bḥwrym w-zqnym yḥdyw w-ḥpkty ʿblm l-ššwn... w-lʾ ʾbh H ʾlhyk l-šmw ʾl blʾm w-yhpwk...* “And they should recite three [verses of] ‘overturning’ [*ḥāfūkhōt*], three of ‘redemption’ [*pedūyōt*], and three of ‘peace’ [*šelōmōt*]. The three ‘overturnings’ are: ‘You turned my lament into dancing and girded me with joy’ [Ps. 30:12]; ‘Then shall the maiden delight in the dance, and youths and old men together — I will turn their mourning into rejoicing’ [Jer. 31:13]; “And the Lord your God refused to listen Balaam — instead, the Lord turned the curse into a blessing for you, for the Lord your God loves you” [Deut. 23:6]. We are to discuss the Book of Esther presently: it evokes the remembered life and customs of the Achaemenid royal court, not very distant or different from the Parthian and Sasanian world of the Babylonian Talmud — the *Bavli*. One of the fixtures of the pre-Islamic court, and of stories told about it, was the *topos* of a monarch waking from a nightmare and summoning his advisers to interpret it²³. At the beginning of the sixth chapter of Esther — that is, at its exact center — when the prospects for the Jews are bleakest, the sleep of king Ahasuerus is disturbed (by a *bad dream*, explain Jewish exegetes, from which he wakes — the issue is not insomnia) and he

²²The typical parallel figure, with the somewhat assonant *naḥālāh* and *aḥūzāh*, may be rhetorical and nothing more. But it might also be read so as to embrace both monetary and real property.

²³For the use of the *topos* of dire dream vision, wakeful king, and seer in Armenian and Iranian epic narrative, see Russell 2012b. One Armenian word for a dream, *eraz*, derives from Iranian *rāz*, cf. the loan word *rz* in the Aramaic of Daniel in connection with yet more royal dreams: see Russell 1992. In the language of the Jewish texts of mystical ascent to the Divine palaces (*Hekhalot*), Heb. *raz* becomes a general term for the praxis in general of the presumably dream-like *Himmelsreise*.

has the *spr zkrwnwt*, the “book of memorials” (i. e., the royal annals)²⁴ read to him. This is how he learns of Mordechai’s report of the plot of two courtiers to assassinate the king, and from this moment the fortunes of Israel begin to turn for the better.

5. REVOLUTION AS ORIENTAL ROMANCE: THE BOOK OF ESTHER

The holiday of Purim has its origins in the Persian Empire — pre-Islamic Iran — and is based on events described in the Biblical Book of Esther that if they did occur would historically have to have transpired in the fifth century BCE or thereabouts, during the reign of the Achaemenid dynasty founded by Cyrus the Great. The book, probably composed in the Hellenistic period, describes the plot of Haman, the ambitious and hate-filled prime minister of an easily swayed and foolish king, Ahasuerus, to murder all the Jews of the vast Empire because of his malice towards a single man, Mordechai — who, as it happens, has saved the king from the plot of two assassins. Mordechai is also the guardian of an orphaned cousin, Esther, a beautiful woman whom Ahasuerus has chosen as the queen of Persia. At first, the king does not know of Esther’s background; and he does not know of Mordechai’s good deed, either. He also approves without question the genocidal decree Haman puts in front of him although it does not even name the nation to be destroyed. He goes so far as to lend the royal signet ring — the instrument of his autocracy — to Haman. It is a cloud, a fog, of ignorance and vagueness.

Once the dread decree is published, Mordechai urges Esther to come out to the king and reveal to him she belongs to the very people Haman wishes to massacre. She protests that she risks death to come before Ahasuerus without being summoned. But perhaps, Mordechai reasons, it is for the sake of this moment that she has attained her position at court. She fasts, and reveals herself to the king, who, fortunately, loves her and will do anything she asks. But wait, there’s more! Ahasuerus, who has not been sleeping well lately — as we have seen above — has the royal annals read to him and learns from them of Mordechai and his good deed. Truth is emerging from the fog — people and things are beginning to be called by their proper names.

And as this happens, the course of events reverses. Instead of Haman, Mordechai is honored: he is fitted out in royal robes and rides through Shushan on the king’s horse, with Haman walking before him to proclaim why he is being rewarded. Finally he is seated on the king’s throne. Instead of Mordechai being executed by impalement on a stake fifty cubits high, Haman is, along with all his ten sons. Instead of Jews being the victims, they take up arms, go out,

²⁴ Heb. *zīkārōn*, it might be noted, translates precisely the appropriate Middle Iranian term for some of these texts, *ayādgār*, “memorial”.

and kill thousands of their enemies in a preemptive attack. Anti-Semites cower in fear, and many gentiles convert to Judaism. The feast of Purim is established to commemorate the miraculous turn of events; and Mordechai becomes viceregent. Feasting is a notable aspect of both the text and the occasion on which it is read: the Book of Esther's ten chapters mention ten feasts, one of which lasts fully half a year; and on Purim night, after reading *Megillat Esther* from a special handwritten scroll, often in an ornate case — no other holiday merits such an object — and drowning out Haman's name with noise — again, unlike any other Scriptural public reading — Jews are bidden to drink and make merry till they cannot tell the exclamations “Blessed is Mordechai” and “Cursed be Haman” apart from each other. But Purim is strange in its excesses of sanctioned behavior, and has clear parallels in other early spring festivals like Mardi Gras. Most every holiday has its special food; for Mardi Gras celebrants in Louisiana it is gumbo, and for Ashkenazic Jews, on Purim it is *homentashen*, a three-cornered pastry stuffed with jam or poppy seed that is meant to look like the ear of a jackass — the shape may have its origins in antiquity, for the ancient Persians once ripped the ears off Gaumata, an illegitimate pretender to the throne, and there is a Greek mythological topos as well about donkey's ears²⁵.

If Ahasuerus has a historical counterpart it is most likely the early fifth-century king Xerxes, whose name, *Xšayarša*, means in Old Persian “Ruling like a man”, and who in his famous “Daiva” inscription at Persepolis boasts of having suppressed other religions and establishing Zoroastrian rites in their place. One can compare in spirit Haman the Agagite, son of Hammedatha. The father's name is pure Persian for “having the same law” (**hama-dāta-*); and Haman's name, if it is also Persian (it could have been from Elamite, a local language, but still can have sounded Persian enough to Jews that they interpreted it so), would mean “of the same mind/opinion” (**ham-manah-*) and thus the names of father and son underscore the point²⁶. And the point is that everybody in the 127 satrapies of Persia has the same law, except the Jews.

Why does Haman hate Jews? If there is any historical basis for the story, the reason would probably be that Israel as the Chosen People sets itself apart from all other nations: pagan anti-Semites called the Jews misanthropes for this. But the exegetes explain that his ancestors were the Amalekites, that ancient and peculiarly ruthless enemy whom God Himself swears in the Book of Exodus to wipe out utterly.²⁷ But the proximal cause is that Mordechai twice

²⁵ The Armenian Mardi Gras food is *herisa*: for an account of the riotous celebrations, in which traditional social and sacerdotal roles are mocked and overturned, see: Russell 2003.

²⁶ See Russell 1990. Similarly, in the Book of Tobit, which is also steeped in ancient Iranian lore, both the name of the hero and his son Tobias mean “God is good”: see Russell 2001.

²⁷ In some Jewish tradition, the Armenians are said to be the descendants of Amalek (and there is a legend that the people of Amasia, a Pontic city that once had a large Armenian population, were Amalekites); and the Yiddish name for them, *Timkhe*, is a Cockney rhym-

refuses to bow to Haman. The Hebrew text does not explain why; but the Greek version does. If it had been merely a gesture of respect that would have mollified the king's minister, that is one thing, but the kind of bow Haman demanded would have been tantamount to idolatry. This episode may reflect a real concern of Jews in ancient Iran: it was customary fully to prostrate oneself before the king (or other high official), and when Alexander the Great conquered Iran and took a fancy to local ways, even his Macedonian generals, idolaters to a man, balked at the *proskynesis* — full prostration — that he now demanded of them. Would such obeisance be halakhically idolatrous? And it has been suggested that there were images of false gods embroidered on Haman's clothes: one thinks of the figural roundels of Sasanian silk brocade — so by bowing to him one would be bowing to them.

Haman's name is symbolic; so is that of his wicked wife, Zereš. It derives from the Iranian name of a demon Zairičā, meaning “jaundice”, and forms a rhyming pair with another imp of hell, Tairičā, meaning “harm”. The two of them, a kind of infernal recipe for a bad harvest, are the opponents of the two archangels, Haurvatāt (“Health”) and Amərətāt (“Immortality”) (Middle Persian Xurdād and Amurdād), who are the guardians of fertility — of waters and plants. Tairičā appears in Esther as Tereš — one of the pair of would-be assassins of Ahasuerus whose plot Mordechai discovers. The other is Bigthan, which may be from Bagadāna, “God-given”. So Esther and Mordechai represent the forces of goodness and life, a kind of Khordad-Amurdad rhyming pair; their opponents, Teresh and Zeresh, the powers of evil and death. The term Purim itself means “lots”, and there is an old Zoroastrian game, preserved by Armenian girls, of casting lots (*vičak*) in the springtime (on Ascension Eve) to see who will fall in love and be married. They throw a flower into water under the *stars*. The flower is called *horot-morot*, a form of the names Khordad and Amurdad just mentioned. And as for the star, we have Esther, whose name probably means that. Did the author of the Book of Esther know the ancient key words encoded into his story, that make it into an allegory of cosmic war as well as a game of love and marriage? There can be little doubt of his knowledge of Persian: he uses the correct Persian term, *aḥašdarpana*, which is also, incidentally, the longest word in the Hebrew language, for a governor (English uses the same Persian word, *via* Greek, as “satrap”). When Mordechai

ing slang-style reduction of the Biblical injunction against Amalek, *Yemakh timkhe*, “May he be utterly blotted out!” Anti-Semitism exists in Armenian life and culture: the two Diaspora peoples, so similar in their energy and aspirations — and, later, in their misfortunes — evidently could be bitter rivals at times. But happily there is also friendship and mutual respect: the Jew Franz Werfel's novel *The Forty Days of Musa Dagh*, about the Armenian genocide, inspired resistance during the Holocaust; and the Armenian-American anti-fascist writer Avedis Derounian (a.k.a. John Roy Carlson), whom this writer had the pleasure and honor to know, combatted anti-Semitism and saw in the nascent State of Israel the model for a future Armenia.

becomes *mišneh*, “second”, to Ahasuerus on the throne, at the end of the book, the author is rendering into Hebrew a historical Persian rank, **bitya-xšaya-*, “second-ruling” (cf. Greek *pitiaxēs*; Armenian l-w *bdeašx*). And numerous other details of the story and setting are authentically Iranian. The use of gentile names and the intimate knowledge of Iranian language and ways suggest that the writer of Esther was not merely attuned to the dangers and insecurities of life in diaspora, but belonged to a well established and deeply rooted, viable diaspora community.

There seems to be a kind of very specific, supernatural event taking place, then, beneath the fog of vagueness, of identities concealed and people not named, in the Book of Esther. And where names are given in lists, they are suspiciously symmetrical. Seven noble families served the Persian throne, and these “sages” are named in the book in order as: Carshena, Shethar, Admatha, Tarshish, Meres, Marsena, and Memucan. The king’s eunuchs are also seven in number, also listed, and the name of the first eunuch rhymes with that of the last of the sages; the names of the last three eunuchs, with those of the first three of the sages: Mehuman, Bizzetha, Harbona, Bigtha, Abagtha, Zethar, and Careas. (Note that some pairs in these lists rhyme, in inverse order; cf. the diptych structure of the book itself.) Lists mattered to the ancient reader, as mnemonic tools and demonstrations of erudition (the classic example is the list of ships in the *Iliad* of Homer), and he was alive to this aspect of the story in a way a modern reader might not be. The Book of Esther provides the names of all ten of Haman’s sons, all of them authentically Persian. There are ten feasts and ten chapters, and the key reversal occurs right at the midpoint of the book. Everything is as symmetrical — and reversed! — as the two covers of a book, the two wings of a butterfly, the two panels of a diptych. Clearly, the author wants the reader of this romance to figure out puzzles, to pay attention when something is named, and also to notice the contrast between naming and not naming, between precision and vagueness — between truth and deception. Deception rules the first half of Esther; in the second half everything is overturned, inverted, made to run backward, and truth wins the day. So the parallel between the two name lists is in *inverted* order; and ironic *reversal* is the great thematic strategy of the story. Haman plans to kill all the Jews, but in the end by counter-edict the Jews slay all the anti-Semites. Haman hopes to be honored by the king; but it is Mordechai instead who receives honor, while Haman is humiliated. Mordechai is to be impaled; but instead Haman and his whole family suffer this gruesome form of execution. The reversal is as complete in its way as in Exodus. There, the very laws of nature are inverted; here, the seemingly inevitable course of history is reversed. Chiasmus is one of the more important stylistic features of Biblical composition, and the author of Esther uses it to the hilt.

The triumph of Mordechai — his reward for having unmasked Bigthan and Teresh, the would-be killers of the king — is worth mention, for it is por-

trayed in the Purim scene, one of the frescoes of the third-century synagogue at Dura-Europos. All four walls of this unique structure teem with portrayals of Biblical figures and episodes, painted by an artist whose “frontal” style, studied famously by the great Russian scholar and archaeologist Mikhail Ivanovich Rostovtsev, indicates he might have been an Iranian Jew, or at the very least a local from Syria with the strong cultural ties to Parthia characteristic of the place and time (one recalls that Edessa, the “blessed city” of early Syriac Christians, bore also the moniker “daughter of the Parthians”). We can imagine that if this were the case, the story of Esther, with its Iranian locus and flavor, would have had special resonance for him and his audience, who would have been attuned to the fine details of his portrayal of the scenes and characters. Events are shown in sequential order: Haman, attired as a slave to increase his abasement, leads Mordechai, who sits astride the white royal steed. Then Mordechai is enthroned — there are animals on each step of the platform of the throne in the painting. That is a kind of iconographic shorthand intended either to recall, or, overtly, to represent the Persian throne as that of Solomon, who, according to tradition, knew the languages of the animals. But the stories that accreted around the complex figure of Solomon suggest that he was weak in some respects, too. One recalls the legend that Solomon, who according to apocryphal legend had enlisted the help of the demon Ašmedai (English Asmodeus; this is the Zoroastrian demon of wrath, Aēšma daēva, *xašm* in New Persian) in the construction of the Temple, foolishly lent his signet ring to the demon; and Ahasuerus gives his own signet ring to Haman! This would seem to suggest that even the greatest monarch, Solomon, could be thoughtlessly impulsive; and Ahasuerus is far from the wisest of kings. Solomon loved women immoderately; and so does Ahasuerus. He marries Esther because of the disrespectful behavior of his previous queen, Vashti (whose name, I have argued, may be related to an Iranian word for lust). The image of Solomon’s throne may suggest to the attentive observer that Ahasuerus/Xerxes, for all his greatness and power, is a man with flawed and impulsive judgment, ruled by his passions. As the Biblical scholar Prof. Jon Levenson has observed in his witty and learned study of the Book of Esther, Ahasuerus is a king “who never says no”.

Given these strange data and *data* (Persian law, if the gentle reader will forgive the etymological pun), this mixture of comedy and high seriousness, of the profane and the profound, of important, even perennial themes lightly treated, what is one to conclude about the Book of Esther? Perhaps one way to approach the question is to address the question of the literary genre to which it may be assigned. Although it is a part of canonical Scripture and draws on Biblical precedents and parallels (there are a number to the story of Joseph, for instance), it is also the basis for an early spring holiday, a carnivalesque celebration with analogues elsewhere in the Near East and beyond. It is likely to have been the work of an Iranian Jewish author addressing the anxieties

(and evoking the life ways) of a deeply rooted Diaspora community. The book has very little to say of the Land of Israel, save that Mordechai's forebears had been exiled from Jerusalem — but it does not intimate or hope for a return there. All this is clear. But what *kind* of a book is it? The Bible presents many different styles of narrative. Pious believers accept the Bible as a single, normative, Divine scripture. It is the history of God's interaction and successive covenants with Israel. But it is still extremely diverse in genre: it has songs, carefully and tautly crafted stories, homilies. The Psalms are a compilation of prayerful poems, some connected with the Temple, others with private devotions and personal emotions. Ecclesiastes and Proverbs are wisdom-literature. The Song of Songs is an allegorical love poem with an antecedent in ancient Egyptian literature. And so on.

Esther, without doubt, belongs to the category called the Oriental romance. It is a genre that is most abundantly attested in the Greek of the Hellenistic age, and thereafter in both Greek and Latin: one of the longest and finest works of this type is the *Transformations of Lucius* of Apuleius of Madaura, a North African writer in Latin of the second century CE. The ancient romance typically has an exotic and sumptuous setting: often Persia, but also India or Ethiopia, or Phoenicia. The plot partakes abundantly of love triangles, situations of peril, and ironic reversals. The characters are generally a virtuous couple pitted against villains who are wicked, stupid, lustful, and base, in varying proportions. There is very often a religious subtext: Apuleius' narrative concludes with the praises of the cult of Isis, and the story of Rhodanes and Sinonis in the *Babyloniaka* of Iamblichus is covertly Mithraic²⁸. The end of the romance ties all the threads neatly together: virtue is always rewarded, lovers and sundered families are happily reunited, and the heroes, vindicated and delivered from peril, triumph over their enemies. The latter receive their just deserts, often in ways a modern reader might find gratuitously vindictive, even sadistic. Tragic heroes are larger than life; in romances the heroes are not, and the villains are sometimes comical and pathetic. By all these criteria, Esther is just such a romance.

The romance, by comparison with some other kinds of writing, has proven to be a durable genre over the centuries, partly because it is more accessible and immediately entertaining to the average reader than more sophisticated forms; partly too, because even though it is overtly escapist, a relief from the everyday grind, it can elevate and enchant the reader and deliver a powerful message through its sumptuous magic. A good example of such a survival, from more recent times, is the opera of Mozart *Die Zauberflöte*, with its lovers Pamina and Tamina (and of course, as in Esther, they rhyme), the pathetic, evil eunuch of a monk, the sinister Queen of the Night, and the high-priest Sarastro, who is none other than Zoroaster, the Prophet of ancient Iran, albeit here with abundant Masonic images and themes, and some modish Egyptian trappings added on.

²⁸ See Russell 2001–2002; Russell 2002–2003.

And this seems one key to Esther: the book addresses an important issue of common—and communal— anxiety as well as the perennial problem of the contest between good and evil, and solves the problems with a denouement that, for all its sumptuous Oriental fantasy, still delivers a sober, religious message that underscores the virtues of love, commitment, and faith. And through the book runs, like a trace element, also the key root *h-p-k* we noted above. Prof. Levenson cites a sage pupil, Brooks Schramm, who at a seminar in 1986 at the University of Chicago declared that one word in Esther 9:1 sums up the entire book²⁹: on 13 Adar the enemies of the Jews were to get them in their power *wnhpk hw'* — *və-nahafokh hū* “and it was *overturned*”, i. e., the opposite happened, and the Jews got their enemies in their own power instead. And in verse 22 of the same chapter, the holiday of Purim is ordained for 14 and 15 Adar, since a time of grief and mourning *nhpk, nehpakh* “was turned” into festivity and joy. Although these overturnings (or, to use the Latin, revolutions) suggest a Divine agent, rather than the mere operation of chance, the Hebrew text of Esther does not mention the name of God anywhere; and though Esther fasts, no prayer she might have uttered is recorded. The translator of the Greek version, in the Septuagint, hastens anxiously to fill in both lacunae, but the theological silence of the original may suggest — and this is literally an *argumentum ex silentio* — that the events of the narrative are so mundane, so much a part of the conditions of the exile, that the artful reversals and the verb *hpk* must suffice to suggest that the Almighty is still active in the world and a helper to His people Israel. In Exodus, God works with a mighty hand and an outstretched arm; here in Esther, though the revolution takes place, the Lord is working, as it were, behind the scenes. Hence perhaps the crucial turning point and *deus ex machina* is made Ahasuerus’ disturbed sleep, or mantic dream, triggering the reading of the royal annals, rather than a fully wakeful, daytime event.

6. THE *IN FLACCUM* OF PHILO: ESTHER AS CRYPTOGRAM

As we have seen, revolutionary ideas tend, paradoxically, to be rooted strongly in earlier prototypes of all kinds, from the theoretical to the artistic. The urge to break away into the new never fully achieves the escape velocity to overcome the gravitational pull of the past. So it should be even less surprising that a work of antiquity presented by a Platonist, Hellenophone Jewish philosopher as a historical narrative might have been patterned very closely upon the Book of Esther, though the author had good reasons to ensure that only a Jewish reader would discern the underlying armature and its message. This is the *In Flaccum* of Philo Judaeus of Alexandria. Philo was a leader of this diaspora community, which was large and well established but in many

²⁹ Levenson 1997: 8.

respects without political power or civil rights. Although Philo wrote in Greek, it is unlikely gentiles read his books: he had an exclusively Jewish audience in his own time³⁰.

The text, which differs strikingly in its dramatically narrative style from Philo's other works of philosophical exegesis of the Bible, deals with events of 38–40 CE that may be summarized thus in brief: the Roman emperor Tiberius appoints Flaccus prefect of Egypt, and at first he performs his duties properly; but upon the accession to power of Gaius Caligula, Flaccus finds his own position precarious. Two corrupt men, Isidorus and Lampo, persuade him to deflect from himself the adverse attention of the new emperor by using the Jews as scapegoats. In the meantime Herod Agrippa, scion of the royal house of Judaea, stops in Alexandria (the ancient equivalent of an airline hub) on his way home to the Land of Israel from Rome. Though he tries hard to avoid ostentation, even notice, the locals still behold his splendid bodyguard and retinue. They are consumed by *phthonos*, “envy”, a moral failing on which Philo focuses (he regarded it as a serious shortcoming in his own character). They are outraged, too, that the Jews should dare to claim a king of their own. The spiteful Alexandrian Greeks and Egyptian natives conceive a stratagem of provocation, what we would call nowadays a “set up”: they install statues of the emperor in the synagogues of the city knowing the Jews will regard them as idols and remove them. The second Commandment forbids idolatry — as the Seleucids had learnt nearly two centuries before, at the time of the Maccabees, and as we have seen in Esther. God alone is to receive *proskynēsis*³¹.

This religious obduracy would guarantee a furious reaction from the mercurial and choleric Caligula, who already finds it offensive that Jews offered sacrifices *for* him but not *to* him. In this dedication exclusively to one God, the Jews differed from the other religio-national communities of the Roman Empire in the same way they had differed from the other peoples of Ahasuerus' domains³²; and ancient proto-anti-Semites further claimed that Jews were misanthropic in their refusal to share meals and intermarry with their pagan neighbors. In short, the Jews were different from everybody else — an echo of Haman's claim. A grisly pogrom ensues³³; and it seems certain Caligula

³⁰ See Birnbaum 2001.

³¹ Goodenough 1938: 27.

³² As Gibbon drily observed, to Roman pagans all gods were equally true; to philosophers, equally false; and to politicians, equally useful.

³³ Van der Horst 2003 notes how Philo takes pains to detail how prominent leaders of the Jewish community were flogged with scourges, a punishment much more demeaning than being beaten with the flat of a sword, as citizens were. He points out also (p. 214) the frequent use in the text of the term *hybris* — out of all proportion to its appearance elsewhere in the Philonic corpus. What the Jews experience, then, is a state peculiarly dreaded in antiquity (and not at all pleasant today, either): public humiliation, expressed in Greek by the passive verb *hybrizomai* — “to be hubris-ed against”, as it were. On this theme as a cat-

will introduce harsher measures still — for although the Jewish community had written a decree proclaiming their loyalty to the new emperor, Flaccus deliberately neglected to send it, “so that we alone of all people under the sun would be considered enemies” (*Flacc.* 101–102).

But the reversal, the *h-p-k* moment, comes just when Jewish fortunes look bleakest: Agrippa takes the document and has it delivered to its Roman addressee. This happens precisely at the mid-point of the narrative, and signals the dramatic reversal of the fortunes of the Jews for the better (and of Flaccus’ fortunes, for the worse). Philo calls the reversal “revolutionary” (*neōteron*, *Flacc.* 120) — one of the very rare instances in which the eirenic, conservative philosopher uses the term in a positive sense. He does so evidently because he considers the revolution a Divine act³⁴. Several scholars have noticed the general affinity of *In Flaccum* to Esther³⁵, but the points of comparison in both large structure and minute detail — the chiasmic reversal, for instance — are so striking that it seems all but certain the Philo intentionally patterned his work upon the Biblical book in order to deliver the Jewish reader this *coded* message³⁶: Caligula, like Ahasuerus, is a vile and ignoble buffoon; Flaccus is like Haman; Isidorus and Lampo play the roles of the petty villains Bigthan and Teresh; Mordecai will not bow to Haman and the Jews will not countenance a statue of Gaius in the synagogue; and God will intervene subtly in history to give protection (*epikouria*) to His people. In its overall structure, its thematic and narrative armature, *In Flaccum* is symmetrical, a near perfect diptych³⁷.

Prof. Peter Brown wrote eloquently in his *Power and Persuasion in Late Antiquity* of the utility of *paideia*: a shared background in Greek culture and learning and common values such as self-restraint and respect for freedom of speech and civility enabled the educated but powerless commoner to speak effectively to the ruler. But speaking truth to power safely is possible only when the powerful respect *paideia*, or when the rule of law constrains them.

alyst to the “bandit” epic see Russell 2017, and recall the humiliation of Haman in the Purim scene of the frescoes of the synagogue at Dura.

³⁴ See van der Horst 2003: 200.

³⁵ Notably Goodenough 1938: 7–10.

³⁶ van der Horst 2003: 16, quotes approvingly the astute judgment of the Philonic scholar Dr. Ellen Birnbaum: the book would have been addressed to the Jews as a consolation in adversity, and as a warning to the gentiles against harming them.

³⁷ *In Flacc.* 36–40, the enemy Alexandrians take a hapless pauper named Karabas from the street, dress him up as a king of the Jews, surround him with a mock retinue, and call him jeeringly in Aramaic *Mārān* — “our Lord”. This is first of all a message to the Jews and their Agrippa. As a literary strategy it may be a reworking of the theme of the enthronement of Mordechai as well. One hears perhaps an echo of the “lord of misrule” of vernal customs analogous to the Purim festival; or, more chillingly, the echo of the mock enthronement, but a few years before of another *Rex Iudaeorum*, a certain Nazarene. One notes that Philo apparently wrote a book, now lost, on the persecution of the Jews by Pontius Pilate, the Roman governor who condemned that King to death.

That was not the case with Gaius Caligula. So when one wishes in such conditions to give an audience a piece of one's mind the choice is either a highly visible martyrdom (perennially an effective if costly tool), following the advice of the old Armenian proverb to tell the truth only if you've got one foot in the stirrup (or, *mutatis mutandis*, Joseph Brodsky's Eleventh Commandment, "Scatter!"), or cryptography — encoding the message somehow. Leo Strauss in *Persecution and the Art of Writing* argues that Maimonides did this in the *Guide to the Perplexed*, a philosophical book that, Strauss believed, had to get past religious censorship. And even encoding a message to those who will understand it — Maimonides on divinity to fellow philosophers, Philo on Caligula to fellow Jews — only works if there are no informers in the house. In 1933 the Soviet Armenian poet Charents published his *Girk' chanaparhi*, "The Book of the Journey". The first printing was confiscated and burnt because the censors discerned a satirizing reference to Stalin as the buffoon Pierrot. Charents told a friend with glee that they had missed the subversive message spelled out by every second letter of the initial word of each line of the poem *Patgam*, "Message", in the book. It was: "Armenian nation, your only salvation is in your united strength." The friend informed on the poet, and the matter went from departmental level to the dean's office, as it were — from Erevan to Moscow. Charents was arrested in the summer of 1937 and died in prison in November of that year. *Совершилось*.

It seems Philo encoded his message with fair assurance he would not be turned in. But in his text the Jews offer a prayer of thanksgiving for their sudden and unexpected deliverance that begins with a curious, almost legal disclaimer (*Flacc.* 121): "O Lord, we are not delighted at the punishment of our enemy, for we have learned from our holy laws that we should sympathize with our fellow humans. But it is right to give thanks to you for having taken pity and compassion on us and for having relieved our constant and incessant oppression". Various scholars have considered this abjuration of *Schadenfreude* disingenuous. The ancients regarded hubris as a tragic flaw, to be sure, but the humiliation and ridicule of a defeated enemy was well within the acceptable terms of their politics and morals: the riotous, vengeful, joyous customs of the Purim holiday itself reflect these. Jewish tradition also stresses, though, that the Israelites were forbidden to rejoice over the drowning of Pharaoh's host in the Red Sea; and to this day at the Passover *Seder* Jews spill ten drops of wine for the ten plagues, plus three more drops at three acronyms of them, to subtract from the celebrants' joy — in compassionate memory of the suffering and death of God's creatures. On the one hand, the incipit of the prayer may be defensive, lest gentile readers think the Jews overweening in their pride. On the other, though, it may be an encoded message to the Jewish reader who knows the traditions of Passover, as if to say: all others indeed rejoice in the spectacle of a defeated, downtrodden enemy, but we and our Laws are, precisely, different

from (and better than!) all those other, barbarous nations³⁸. Or Philo might have been hedging his bets.

It is interesting to observe one way that Philo has brought up to date, as it were, a crucial detail of the Book of Esther. At the beginning of the sixth chapter of the latter, we recall, the sleepless king Ahasuerus has the *spr zkrwnwt*, the book of memorials, read to him. The book is the instrument of the reversal of the Jews' fate. That may be fitting for a people who, uniquely among ancient peoples, reposed their loyalty and identity in a single normative written canon of scripture believed to be the only true revelation of the only God. But ancient Iran was a culture that revered the oral tradition, not the written word; and Persian documents such as Ahasuerus' royal annals existed in at most a few copies. Even the Zoroastrian sacred scripture, the Avesta, was transmitted mainly by word of mouth: the Pahlavi texts assert that there were but a few written copies, so rare that they were kept in provincial treasuries³⁹. So the Persian book is more sacral than political. Philo, by contrast, lived in a far more literate world whose affairs were dependent upon written documents — officials were accordingly adept at manipulating them. Instead of an archive to be read to a sleepless king, in a scene drawn from the stock of epic and myth, we have a time-sensitive letter, the Alexandrian Jewish pledge of allegiance to Caligula, that Flaccus cunningly neglects to forward to its addressee. As if to direct our attention even more closely to such bureaucratic malfeasance of the written word, Philo uses an epithet of the villain Lampo *kalamosphaktēs* “one who murders by means of the pen” (*Flacc.* 132) that, van der Horst points out, is a *hapax* in Greek — a word found here and nowhere else.

7. CONCLUSIONS

One can only imagine how Philo's faith might have been shaken, had he been able to see the *kalamosphakteis*, the desk-murderers (*Schreibtischtäter*) of two millennia in the future, had he come to know how his *hapax* was to become a commonplace. Philo argued that for Jews, Jerusalem is the metropolis, the mother-city, but the foreign lands where diaspora communities reside are

³⁸ Balaam's prophecy that Israel will dwell alone is double-edged indeed. But as to taking pleasure in another's misery, the American Jewish folk definition of a Jewish holiday treads a middle path, at once celebratory and gently humane: “They tried to kill us. We won. Let's eat!” As for *Schadenfreude*, one cannot help noting the language and culture that has supplied the word, along with *Blitzkrieg*, *Vergeltungswaffen*, *Endlösung*, *Beamtersprache*, and other terms the world could well have done without. Many are specific to what Victor Klemperer famously studied as the *Lingua Tertii Imperii* — George Orwell, shortly after the Second World War, conceived “Newspeak” in 1984 to warn humanity that no one is safe from the danger of the totalitarian perversion of language. I concur here with C. S. Lewis, *Qui Verbum Dei contempserunt, eis auferetur etiam verbum hominis*.

³⁹ See Bailey 1971, chapters *Patvand* (“transmission of the tradition”) and *Dēn dipīrīh* (“writing down of the Religion”).

their patria, their father-land. He did not live to see the destruction of the Temple of Jerusalem, either — not two millennia, but a few short decades after the Alexandrian pogrom. It signaled the beginning of a precarious, powerless, imperilled diaspora, one with no mother-city left at all. “We had good reason to think that our hopes were *not* lost”, he writes of his fellow Alexandrian Jews, perhaps with reference to Ezekiel 37, *yḇšw ‘šmwtynw w-’bdh tqwtmw*, “Our bones are dry and our hope is lost” The Zionist movement, determined to end the condition of diaspora once and for all, was to adopt as its hymn, years before the Holocaust, a song called “The Hope”, with its poignant verse *‘wd l’ ‘bdh tqwtmw* (*‘Od lo avda tikvatenu*), — “Our hope is *not* yet lost”. In the aftermath of the extermination of the Jews of Europe, David Ben Gurion and his comrades would not and could not wait for Divine intervention: “Our future depends, not on what the gentiles think, but on what the Jews do”, he declared, much as Lenin had left off an essay half written, preferring to make a revolution rather than write about one. But paradigms of Biblical redemption quickly accreted still around the modern, secular State of Israel, with Hatikvah as its national anthem, and Jewish worshippers around the world began to bless it as *r’šyt smyht g’wltmw*, “the beginning of the flowering of our redemption”⁴⁰. As we have seen, in ideology and intertextuality, in passion and hope, in the homeland and in diaspora, religion and revolution are, and have always been, inseparable. For the Jewish, Christian, and Islamic faiths — the Abrahamic world civilization — the Hebrew Bible is at the living heart of them all, from Moses and Jesus to Lenin and Marx, and beyond. And “we all want to change the world”.

⁴⁰ Hasidim, even those extremely supportive of Israel, refuse to pronounce this blessing, because for all the importance of human agency redemption must still come from a supernatural source: the Messiah. Many Jews in the Diaspora who do pronounce the blessing, and who dutifully recite “Next year in Jerusalem” at their Seder tables, seem to reflect in their choice of domicile another sort of faith, that of Philo: Jerusalem is the mother, but the land of dispersion is the father, and God will protect His people everywhere.

FROM MASHTOTS' TO NGA'ARA:
THE ART OF WRITING AND CULTURAL SURVIVAL
IN ARMENIA AND RAPA NUI

JAMES R. RUSSELL

Professor Jos Weitenberg was a superb scholar, courteous colleague, and faithful friend. He was also a man of strong principle, who cared deeply for human rights and freedoms and made a practice of his convictions, helping endangered gay Armenians to obtain asylum in the Netherlands and sending masking tape for safe rooms at his own expense to Israeli colleagues when their country faced possible attack with poison gas by an Iraqi tyrant. This essay, dedicated to his blessed memory, considers the way culture and learning helped two peoples to survive assaults on their human dignity and physical survival. I dare to hope he might have liked it. I am grateful to have known him. May his luminous soul rest in everlasting peace.

PREFACE

This paper* compares the role of newly-invented writing systems and the men who championed them in the cultural survival of two peoples that would at first glance seem to be utterly different—the vast Near Eastern realm of Armenia, at the teeming crossroads of the ancient and modern worlds; and the tiny island of Rapa Nui (Easter Island, Chilean Isla de Pascua) at the eastern edge of Polynesia, in the empty middle of the Pacific, on the other side of the world, the loneliest place of human habitation on the planet. The former is an ancient center of civilization and technology that has flourished for at least three millennia, with a lucid alphabetic script that has endured without significant change for some sixteen centuries; the latter, a stone-age culture whose hieroglyphic

writing system, of uncertain purpose and possibly recent age, may have been used for only a century and still resists convincing decipherment as a whole. Yet both peoples, the Armenians and Rapanui, have faced with versatility and vigor the most radical challenges to their physical and cultural existence. Both created civilizations of astonishing richness. And it will be seen that for both the art of writing proved crucial to their survival. The unlikely parallels between these two most distant manifestations of human culture are astonishing, even poignant— even as their differences illustrate the diversity of human culture on the planet.

Like many Americans born in the 1950s, I first became fascinated by Easter Island when as a little boy I read *Aku Aku*, the account by the Norwegian archaeologist and explorer Thor Heyerdahl of his journey in his reed boat, the *Kon Tiki*, from Peru to Easter Island. The island, with its gaunt, cyclopean statues, the *moai*, and its beautiful and enigmatic hieroglyphic script, *rongorongo* (hereafter RR), seemed the very essence of mystery. Easter Island's minute size and utter remoteness in the emptiness of the South Pacific made its vanished classical civilization even more entrancing and exotic. My academic interests in school tended in another geographic direction— towards Russia, then to Armenia and Iran. Although the Apostle Paul enjoins us to give up the things of childhood as we grow, some scholars never do this, and, taking consolation from the example of the great J.R.R. Tolkien, I confess my own prolonged adolescence.

The nine-mile long island is a triangle formed chiefly by three extinct volcanoes: Rano Kao, Terevaka, and Poike; and the *moai* are of gray volcanic rock starred with green lichen, on grassy hillsides and rocky fields. At fifteen I found myself in a place whose tallest mountain, Ararat, at the time of the Deluge had been the only island on earth, according to the myths of my culture. In history that land was to become isolated in other ways, through language and religion, a rugged Christian island defined by a triangle of three lakes, Van, Sevan, and Urmia, in an Islamic sea: the Soviet Armenian poet Paruyr Sevak (1924–1971) even called his homeland a “mountain-island” (Arm. *leṛnakṭzi*). Gaunt red and gray volcanic monuments with patches of lichen stand on its slopes and plains— the *khach'k'ars*, or Cross-stones, with their lacework bas-reliefs and inscriptions in the exotic Armenian alphabet. And that script, invented by a visionary named Maštoc' sixteen centuries ago, has changed little over all that time.

On 5th April 1722, Easter Sunday, the Dutchman Jakob Roggeveen, sailing on the ship *De Afrikaansche Galey*, christened the island after a

holiday unknown to its people of a religion they had never heard of. The people he “discovered” probably called their home simply *Te Kainga*, “The Land” (or *Te Varu Kainga*, “The Eighth Land”); later on they came to call it *Mata Ki Te Rangi* “Eye (looking) at the Heavens”, *Te Pito O Te Henua*, “The Navel of the Earth”, or *Rapa Nui*, “Great Rock” or “Land’s End”—the latter its proper name today and the one we shall use (the people themselves, and their language, are Rapanui as one word). At its height of its prosperity the population of the island may have hovered around as many as 12,000 souls. But by the last quarter of the 19th century, after colonial exploitation and depredation, the introduction of pandemics, and mass kidnappings into slavery, the population of Easter Island had plunged to barely over a hundred. Its ancient monuments had become neglected ruins, the lofty moai lying face down; its script—the only indigenous writing system of Polynesia!—virtually forgotten; its economy and ecology, utterly shattered; its few remaining inhabitants confined to a walled ghetto on their own land. In the case of Armenia, the country’s gradual isolation from the rest of the world and the impoverishment and degradation of its indigenous population by wave after wave of alien invaders culminated in the First World War in a program of ethnic cleansing unlike anything the Eurasian continent had seen before, leaving nine-tenths of the country desolate. A generation later, the Polish Jewish lawyer Raphael Lemkin coined the word “genocide” to give a name in law to that crime.

The tiny Pacific island also never faded entirely from one’s thoughts. Over the years I read here and there references to pictographs in medieval Armenian manuscripts that were compared to the hieroglyphic writing system of the ancient Hittite neighbors of the Armenians on the Anatolian plateau, less plausibly to the still-undeciphered hieroglyphic symbols of the ancient Harappan civilization of the Indus Valley, and still less sensibly to the enigmatic RR glyphs of Rapa Nui. In the summer of 2012, being between projects, I decided to revisit that question, examined the evidence, and soon came to the same conclusion at which sober Armenian philologists had arrived long ago: the very few similarities are entirely fortuitous. The figure of a man or a bird looks much the same from place to place. But the parallels between the two cultures and the place of writing in them turned out to be far more interesting than any diffusionist fantasies; and one carried on reading. This essay is the beginning of the journey. Since its completion I was fortunate enough to visit the island, in January 2013, and to make friends there, among both Rapanui and students of the island’s culture.

1. TO THE NAVEL OF THE EARTH: RAPA NUI

Monsters dot the coastline. Hollow-eyed beings with elongated ears, weather-beaten skin and pouting lips like sullen children... The end of the world is an accepted fact, and Easter Island is a case in point with its chain of unfortunate events that led to self-destruction; a lemming marooned in the calm of the ocean.¹

Humans originated in East Africa, diffusing northwards through the Rift Valley into the Middle East and branching from there north to Europe and the Caucasus, and eastwards into Asia. Scholars of palaeo-culture now hypothesize that around 6000 BC migrants from the coast of southeastern China settled Taiwan; and over the next two millennia the Proto-Austronesian culture evolved, with sea voyagers venturing over the Pacific to settle Melanesia around 1300 BC. Polynesians sailing east from Mangareva or nearby islands may first have come to Easter Island in the first centuries of the Christian era; some researchers place the settlement closer to 600-900, though carbon dating favors an early date. The island is the easternmost edge of Polynesia; settlers from the same place(s) of origin settled also Hawai'i, to the north (named after the mythical Polynesian homeland *Hawaiki), and New Zealand in the distant south: the languages of all three island (groups) are closely related (at least by Indo-European standards!), so Maori and Rapanui, for instance, are quite close.² The settlers had to sail against prevailing currents about two thousand miles of open ocean to Easter Island— an astonishing feat. They could scarcely have drifted there by accident. Rather, the place must have been scouted in advance before a huge party was sent in huge and heavily laden, ocean-going catamarans to settle the place, making about a hundred miles a day in good weather.

Foundation legend replaces this stage of scouting with a visionary dream by the mythical ancestor Hotu Matu'a, and makes war or inundation the cause of the exodus. The settlers brought fire and food crops (taro, yams, bananas, sugar cane) and some animals for eating— chickens, and, as we shall see presently, the little Polynesian rat. They probably took along dogs and pigs as well, but the latter two left no trace on

¹ Schalansky 2010, 100.

² For a good discussion of Polynesian origins, patterns of settlement, and the archaeological record, see Bellwood 1978. The best monograph on the language and its connection to the rest of the Polynesian family is still Churchill and Roussel 1912.

Rapa Nui.³ Polynesians sailed to the Americas as well: the sweet potato, with its name, came from there, and it was a two-way cultural exchange; for the word for a stone ax in the language of the indigenous Mapuche people of Chile is most likely a loan from Old Rapanui. A detailed traditional narrative of the journey of Hotu Matu'a in Rapanui inscribed in Latin script in a ledger ("Manuscript E") was studied minutely by Thomas Barthel in his monograph *The Eighth Land: The Polynesian Discovery and Settlement of Easter Island* (University Press of Hawai'i, Honolulu, 1978). Aside from its intrinsic importance, the narrative is a reminder that the indigenous Rapanui oral literature and mythological corpus is extensive and cannot be ignored when one approaches the question of how to interpret the Rongorongo texts.

The island is located at 27°9' S. and 109°25' W., with an area of 163.3 square km.; and the distance to Tahiti is 4190 km; to Chile, 3690 km. It is triangular in shape, its extremities marked, as noted above, by three extinct volcanoes with crater lakes, thrusting nine thousand feet from the ocean floor and about a thousand feet from the present-day surface of the Pacific. Scores of smaller volcanoes dot the island's surface. Far from anywhere, Rapa Nui is the remotest and most isolated human settlement on earth.⁴ Tradition has it that the first men pulled up their canoes on the sandy beach at Anakena: they found a subtropical rainforest with thick stands of giant palms; but their tiny rats, either shipboard stowaways or, more probably, brought as a food staple, seem quickly to have decimated the trees. Replanting them all would have been a pointless exercise, just feeding more rats (the animal reproduces and multiplies at a phenomenal rate); so, as a recent study of the island's archaeology and palaeoculture suggests, the early Rapanui soon resorted instead to lithic mulch farming. This was perhaps the first great technological marvel of the island's stone age culture, for it meant moving about a billion small, porous volcanic pieces of rock to create little gardens across the now largely treeless island that could be protected from the constant winds. There were no rivers, making the islanders dependent for fresh

³ The island now has as many horses as people. These were introduced in the 19th century and have multiplied without impediment by predators. They are called in Rapanui *hoi*, perhaps a loan from English or derived from an exclamation; in Tahitian the periphrastic term for them is *pua'ahorofenna* "pig run land" (see Fischer 1993, 169), even more awkward than the ancient Mesopotamian *anšukurra*, "ass of the mountains".

⁴ Well, almost. In Judith Schalansky's *Atlas of Remote Islands: Fifty Islands I Have Never Set Foot On and Never Will*, Penguin Books, 2010, Rapa Nui (p. 100) looms large by comparison to some isolated rocks with few or no people scattered across the world ocean.

water upon the large crater lakes, some underground streams, and rain caught in cisterns.

Though the island has a subtropical climate and it is possible to spend most of one's time outdoors and nearly naked, there are strong winds, winter can be chilly, and the people made bark cloth, as elsewhere in Polynesia, to protect themselves from the elements. They incised elaborate tattoos and body-paintings over themselves; and for ceremonial purposes they added headdresses of feathers. Chieftains wore a wooden breastplate, the *rei miro*, about which more presently. Headgear was of symbolic importance: the moai have cylindrical red stone crowns that were devilishly hard to elevate and safely install; and when the early European ships visited, the Rapanui relieved sailors and captains alike almost immediately of their hats. Food was what was brought or could be caught: yams, sweet potatoes, bananas, sugar cane, taro, chicken, and fish. There are no lagoons, no reefs to nurture very abundant fish stocks, and the growing scarcity of wood made the construction of seagoing canoes for deep-sea fishing uneconomical. At first there may have been some commerce with the rest of Polynesia; but the lesser Ice Age ca. AD 1500 cut off the Navel of the World from contact with the rest of Polynesia until the first European contact some two centuries later: the center of the universe was a lonely place to be. However the Rapanui, living in a decentralized society of clan-based areas with tiny villages practicing lithic farming, each clan with its sacred platform and serene ancestral statues gazing protectively inland, were loosely united under a head chief or king, were generally at peace, and had achieved a sustainable way of life and built a sophisticated material culture.

The spiritual culture of the island was similar to that of kindred Polynesian centers; and the language, though it has evolved in demonstrably long isolation, is still a recognizably close relative of Maori, Tahitian, Hawai'ian, and the other East Polynesian members of the Austronesian language family. Modern Rapanui contains numerous loans from Spanish and English; but there is scant evidence of early loan words from non-Polynesian languages such as those of the ancient Americas, with the significant exception of *kumara*, "sweet potato". Rapanui conceptions of society and self, of divinity and spirit, of death and the other-world, are typical of other Polynesian cultures in most respects and also are parallel, if not to those of the three dominant Western religions, than to a far greater number of other belief systems, ancient and modern, on the planet. This parallelism (*not* relationship) will become evident in a comparison of Rapanui and old Armenian mythological cosmogonic

texts. The moral system of Rapa Nui before Christianization in the late 19th century focused on the virtues of skill and power versus failure and impotence, rather than the abstract dualism of good and evil, much as one finds in other cultures based on external, social “shame” rather than internalized “guilt”—that of the Homeric Greeks furnishing perhaps the most familiar example for us. Invisible and spiritual power, called *mana*, inhered in objects, creatures, and persons. The population of the island was divided into clans called *mara*, marriage was most often within one’s clan though at a remove from the immediate family, and there were three divisions of society: the noble *ariki*; the commoner *urumanu*, and the expert craftsmen, *tuhunga*. The scribes of the texts of RR, for instance, were called *tuhunga tā*—experts in writing. There was also a class of slaves and outcasts. Social and geographical boundaries were strictly enforced and the force of *tapu* “taboo” was strong: this was a deeply stratified society, with an intricate and very elaborate system of genealogy and mythology. Feuds were common and violent; and defeated enemies were killed and eaten—cannibalism was a significant feature of the archaic culture of Rapa Nui. Late in pre-conquest history the *matato’a*, “warriors”, came to dominate the important Birdman cult, about which more will be said presently, and to challenge the authority of the hereditary nobility—a situation that led to instability and violence.⁵ As will be seen, a brilliant nobleman and scholar, Nga’ara, was able ingeniously, though only for a tragically short period, to establish a new kind of social harmony and cohesion.

The islanders are now all Christian, practicing a Catholicism enriched by a strong local substrate most visible in church art. But native texts still celebrate several gods, and considering the situation of Polynesia generally and of Rapa Nui in particular in the vastness of the Pacific⁶ it is scarcely surprising that Tangaroa, a being pre-eminently connected with the sea, was paramount, with his twin brother, the storm god Rongo. In later centuries a supreme creator-god, perhaps partly in imitation of the Christian cult it has been argued, came to the fore on Easter Island. The name of the latter, Makemake, whose meaning has been variously

⁵ Matato’a is now the name, *mutatis mutandis*, of Rapa Nui’s popular and successful (and anti-war!) rock band, which sings in the Rapanui language and celebrates the island’s traditions and ethnic identity, thereby presenting a counterweight to the powerful forces of linguistic and cultural assimilation while embracing the modern and global world.

⁶ The Pacific Ocean is some 20,000 km wide—so great that some hold to the hypothesis that the Moon tore away from Terra here; and if Polynesia be taken as a single cultural area, it is formally the largest on the planet.

interpreted as either “the shining one” or “having an erect phallus”, was perhaps at first a cult epithet of Tangaroa, and it would seem the shapers of the long, metered lays of the island’s oral literature were interested particularly in the generative roles of divinities and creatures alike. The act of generation and its instrument, as we shall see, have provided a possible key, moreover, in the first steps towards decipherment of the glyphs— according, at least, to one school of decipherment.

As was noted above, with the onset of the Lesser Ice Age the islanders began to lose contact with the Polynesian home islands to the far west and true isolation set in. The islanders remembered their origins overseas and the legendary voyage of the founders, led by the mythical figure Hotu Matu’a. It is possible that a mounting feeling of loneliness and a desire to be able to cross the endless sea elevated the importance of the image and cult of the *tangata manu*, the Birdman (literally “man bird”). Once a year young men sponsored by the clans competed to descend from the precipitous sacred site of Orongo and paddle on reed mats through the turbulent, shark-infested sea to the tiny islet of Motu Nui, where they then waited. The first to find and safely bring back the delicate first egg of the sooty tern (*manutara*) won for a year for his clan patron the elevated and sacral status as Birdman of the island. The rite was not just a sort of native Olympics but (as at times in ancient Greece) a way of sublimating tensions and even armed conflicts between clan powers. The sacred ritual thus codified and cemented social stratification and harmony; and the rite combined socially sanctioned elements of sacredness, danger, and virile prowess with key symbolic motifs of flight, sea travel, generation, and hybridization— the merging of categories of living species. When the Spaniards presented to the bemused Rapanui in 1770 a document ceding the island to them and asked them to sign it, the *ariki*, or chiefs, who had never seen writing before, gamely sketched a number of pseudo-alphabetic symbols in polite emulation of the Spaniards, a vulva symbol (underscoring the importance of the procreative pattern in the islanders’ system of cosmology: there are hundreds of vulva petroglyphs where young women have undergone the initiation rite of clitoral extension), and a large outline of the Birdman petroglyph. (This is shown in the appendix.)

Islanders believed in a multitude of spirits, called *akuaku*: some of these brought elements of culture to the island and then departed to the Otherworld. One might again imagine the Sumerian Ea, Hellenized by Berossus to Oannes, the supernatural, submarine creature who taught writing and other skills of civilization to men at the head of the Persian

Gulf and retired to his own realm at the end of every day. Rapanui believed, as did many other cultures, that a person had not one, but at least two souls. One died with him, but the other returned and was reincarnated, first as an insect or animal, then as a human being. One is reminded perhaps of the division in classical Zoroastrian culture between the *urvan* (Arm. l-w *uru*, now meaning “ghost”)—the personal soul that bears moral responsibility—and the protector-spirit called *fravashi* (Arm. l-w **hro(r)t*, attested in the ancient name of the last month of the year, Hrotic', cf. Avestan Fravašayō, *idem*); or of the multiple souls, some mortal and some transcendent, of ancient Egyptian thought; or of the Tibetan Buddhist doctrine with its intermediate stage, the *bardö*, in reincarnation. As for the location of the hereafter, it is either deep down or, more often, laterally very far away: when the first Rapanui of modern times ever to depart from the island returned on ships, their countrymen were terrified that these were ghosts from *hiva*, the otherworld, and were only gradually persuaded by relatives of the travelers that these were, indeed, the same mortal men they had known. Other shamanistic cultures, particularly in the Pacific region, locate the other world or worlds across the sea as well as up or down. The common belief of the three Abrahamic religions in a single human soul, and in a unitary and hierarchical universe in which female sexuality is somehow problematic or evil, is not the only view of life—maybe even a minority opinion, still—on the planet.

The island is best known for the great stone figures of human ancestors called *moai*, of which about nine hundred are known, some finished and either whole or broken, many abandoned at their quarry, in construction: they are on average eleven meters tall and weigh about 100 tons. These increased in size over time: the first were much smaller; and the largest and most recent was never erected. All were quarried and carved on the inner and outer slopes of Rano Raraku (an extinct volcano with a crater lake) near mount Poike over about six centuries beginning roughly AD 1000, and finished statues were “walked”—tilted and angled by small teams of workers using ropes—along stone-paved roads to the stone seawall platforms, called *ahu*, where they were erected, singly or in rows, protectively facing inland over a court of small, rounded rocks. The statues were part of a cult of noble clan ancestors and served as a focus of ritual and worship. The dead were often interred in their vicinity. The islanders celebrated rites of passage for both sexes, as noted above, carving the petroglyph of the vulva, *rona komari*, to signify the ritual distending of a girl's clitoris. (An individual stonecarver, it is

important to note, often had a personal *rona*, or monogram— much as masons from Antiquity to recent times the world over.)⁷ There are about a thousand sites, with over four thousand petroglyphs, scattered across the island. The Rapanui still craft polished wooden figurines of delicate and exquisite workmanship: the most common is the spirit *moai kavakava*, an emaciated old man representing an *akuaku* spirit, possibly the god Makemake; the *tangata manu* “bird man”, of whom more presently; the *tangata moko* “lizard man” regarded as a protector of the home and capable of removing disease from the body; staffs and Janus-faced ritual oars; and the half-moon shaped pectoral plate of authority, the *rei miro*,⁸ being the principal traditional types. A number of *rei miro* bear RR inscriptions; and one *tangata manu* has an incised inscription as well.⁹ So use of the RR script was not confined to the tablets or staffs bearing long inscriptions, though this does not mean or imply it was used for other than sacred and ceremonial texts. Islanders wielded the figures in ritual dances and chants; after evangelization, they also began to produce such Christian images as the Madonna and Child. Symbols carried over from petroglyphs, rock paintings, and carvings to tattooing, an art that was believed to have sacred origins: it was introduced by the two spirits Vi’e Moko and Vi’e Kena, who then returned to Ovaakevake, the spirit world, in a waterspout (*ohirohiro*).¹⁰ As elsewhere in Polynesia, tattooing much of the surface of the body was very common. When the time came to create a system of writing, the Rapanui thus already possessed an extensive and sophisticated iconographic and symbolic corpus of petroglyphs and paintings, statuary and tattoo, the range of media an indication of its versatility, that required only ingenious elaboration into a true script.¹¹ As all the symbols on

⁷ Fischer 1993, 212.

⁸ The silhouette of this object now serves as the emblem on the local flag of the island.

⁹ One viewed at the American Museum of Natural History on 10 August 2012 in the Margaret Mead Hall the inscribed *tangata manu*, “man-bird”, i.e., Birdman, which is mislabeled as “tangata mana” (*mana* means supernatural power), and is displayed in a glass cabinet in such a way and under such poor light as to make the unique inscription nearly invisible. Though the museum maintains the order and dignity of a third world railway station— it is filled to bursting with screaming, careening, uncontrolled and undisciplined hordes of children— one was able to view the rare Birdman in peace since nobody else was in the least interested in it. Nearby, however, crowds of tourists posed for photographs before the museum’s much-advertised but unlabeled, *plaster-cast* of a moai!

¹⁰ Fischer 1993, 212.

¹¹ This is a very general survey of the historical background and ecological situation, intended obviously for the reader who is not a specialist in Polynesia. The principal

which the inventor(s) of RR were to draw were already charged with mana, the hieroglyphic writing system was assured *ab initio* of a sacral status as well.

2. GENOCIDE

Older reconstructions of the history of the island are often based upon ill-founded conjecture and seem to project the vices and misfortunes of the European and American past and present upon the Rapanui themselves and to cast the colonization of the island in a favorable light, as though the conquest were a kind of redemption from barbarism. Such imposition upon a people of an ignorant or malign misrepresentation of their own past can do incalculable damage. We are presently to consider parallels to the Armenian record; so one might note a significant correspondence here. The falsification of history—the political and academic machinery of denial of the Armenian Genocide—has intensified the anger and misery of an already traumatized people. It has done material harm to their country too; for a world dulled by “competing narratives” rather than quickened by moral responsibility has acquiesced in the blockade by Turkey and its Azeri henchmen of the Armenian Republic and the deleterious consequences that have flowed from it.

The Norwegian scholar Thor Heyerdahl, through whose writings most of us came to know of the island in the first place, was able to sail the Kon Tiki, his boat constructed of bundles of reeds from Peru, from the coast of South America to Easter Island. Having proven this could be done, he asserted that there had been a secondary South American settlement of the island. This theory might well have been subliminally patterned upon the fantasies of light-skinned, culturally and technologically superior “Aryans” invading and ruling more primitive (and, inevitably, darker) people in India and elsewhere. He then presented a series of comparisons of the island’s art and stonework to that of the Incas, deduced that several finely-worked seawalls of *ahus* most likely belong to the same culture that produced the architects of Machu Picchu, and concluded that the artistic geniuses who designed the moai, which have

studies consulted are Fischer 2005 (especially on history) and Hunt and Lipo 2011 (who provide an important corrective to prevailing misconceptions about the island’s history). One should also consult Routledge 1919 and Métraux 1940—still the best monographs on Rapa Nui.

elongated ears, were light-skinned descendants of South American migrants, the “Long Ears” of island lore. Their ancestors, in turn, had come from the Old World still earlier. To account for the Polynesian character of the island’s culture as we know it, he further hypothesized that darker-skinned Polynesian inhabitants, the so-called “Short Ears”, obligingly or sullenly labored for the lordly Long Ears, whose edifice complex led to the devastation of the palm forests since the builders employed the trunks as rollers to get the moai from the quarry at Rano Raraku to their *ahu*-platforms. Once the tragically hubristic but nobly creative Long Ears had created their immortal monuments at the price of ecological catastrophe, the enslaved, primitive, despised, savage Short Ears revolted and the tragedy reached its denouement in a war of mutually assured destruction in which the moai were toppled, the combatants set fire to everything else that could burn, and the enervated, starving survivors could only sit and wait for the first European ships to arrive.

The foregoing picture of the island’s history is largely fantasy, yet it survived till quite recently as the dominant narrative, not because European scholars were fools but because like many fantasies it was subliminally useful, even flattering, to those who maintained it. It is not just, as Steven Roger Fischer put it, an “insulting declaration that the Rapanui were not the authors of their own ancient culture,”¹² but an assertion that the islanders of the post-classical period were unworthy custodians of that culture, degenerated and violent epigones who brought about their own destruction and that of their island. In the warped perspective of this narrative the advent of the Europeans and of Christianity in particular was to the benefit of the Rapanui. It is much more likely the case that the Rapanui were a single population descended from Polynesians who had sailed there from the west around the middle of the first Christian millennium. After the rats originally brought as food escaped to gnaw away and decimate the primordial palm forest, the Rapanui seem, far from descending into ecological catastrophe, to have developed, as we have noted above, a fairly stable and sustainable lithic farming system well suited to their decentralized pattern of small homesteads in clan units loosely united under a king believed to be of divine descent. There were, thus, both local and island-wide religious rites to anchor oneself to family ancestors and to create and celebrate ties with others. The clans built their separate *ahus* and most erected moai on them: these were not a ruinous and pointless extravagance but an aesthetic practice that gave the

¹² Fischer 2005, 188.

people an important basis for social cohesion and a rich spiritual culture. The prototypes of the moai can be found to the west in Polynesia and the Rapanui merely refined, albeit to an astonishing degree, an existing art brought from their ancestral home. The moai were probably maneuvered over stone roads to their sites from the quarry at Rano Raraku by small teams of workmen "walking" them in a sort of zigzag movement with ropes: precious felled palm trunks were not, it would seem, wasted as rollers and the image of long-eared overseers commanding huge gangs of dissatisfied short-eared slaves corresponds more to romantic conceptions, fuelled by Hollywood, of Moses' people under Pharaoh than to Pacific realities. Nor was there an internecine war on an apocalyptic scale preceding the arrival of the Europeans, who saw (and duly depicted) all the moai standing when they first came to Rapa Nui. But, tellingly, the European visits did spark both clan feuding and an existential crisis of confidence in the traditional system of belief in the mana of moai and other foci of the sacred—as we shall see in greater detail presently.

What followed after first contact we know only too well, though, for it belongs, not to diffusionist fantasies tinged by narcissistic racism, nor to the misreading of archaeological data, but to the written historical record. On Easter Sunday of the year of grace 1722 Roggeveen named the island after a holiday none of its people had ever heard of, celebrated by a religion they did not practice: the Rapanui happily swam up and effusively welcomed the newcomers, whilst rather oddly taking special care to relieve them of their hats. The Dutch produced their awesome fire-sticks and shot a dozen of them dead in an unfortunate misunderstanding about property, terrifying the Rapanui but apparently not irretrievably alienating them. Then Roggeveen and his compatriots sailed away, never to return. The first real taste of Christianity—and the second, of the terrifying foreign fire-sticks—came with the Spaniards, who landed in November 1770, erected three Crosses on three matching hill-ocks, marched around in splendid uniforms, and fired a 21-gun salute. They named the island this time after their king, San Carlos, and tricked the natives, who were apparently impressed by and delighted with the show and with the Spaniards' gifts (more hats!) into signing over the island to them. The chiefs, bemused but game, sketched a top-to-bottom, left-to-right slanting line of several symbols including a vulva, and put a large birdman glyph to the right.¹³ Then the Spaniards sailed away and never returned. Captain Cook was the next customer, four years later:

¹³ See Heyerdahl and Ferdon 1965, fig. 81 (p. 417).

the Rapanui helped themselves to some more hats and made love to the pleased sailors, for whom sex was something of a taboo because of their religion, of which the Rapanui were still innocent. Cook's explorers stayed only a day since there was little in the way of food or fresh drinking water to be had for trade.

Between 1722 and 1862 there were a number of sporadic visits to the island; but the Europeans did not stay. In the latter year matters took a horrible turn for the worse: Peru, desperate for manpower in its economic boom, kidnapped and enslaved Polynesian islanders, including most of the Rapanui, to harvest guano under lethal conditions. Christian missionaries tried to save some islanders by removing them to Tahiti and elsewhere; and the French government, probably motivated as much by a dispute with Peru over the latter's support for an insurrection in Mexico as by the human plight of the Rapanui, agitated for the release of the "indentured" workers. But most of these were already dead by the time the Peruvians relented; and the very few who returned brought smallpox and tuberculosis, which decimated an isolated people lacking any immunity. By the 1870s the population had plunged to 111 souls, after wave after wave of pandemics. Adventurous French and English entrepreneurs then converted the entire island into a huge sheep ranch, the surviving native people ruled by sheer terror, subject to increasingly vicious violations of their property and person. They were ultimately driven by main force from the hundreds of their tiny crofts into a single village, Hanga Roa ("Great Bay", so named for the nearby coast where most visiting ships moored and close to the fertile plain of Mataverí), to which they were confined behind a stone fence modeled on a Scottish sheepfold and kept under curfew as inmates of a ghetto or concentration camp. In 1888 Chile, a latecomer to Pacific empire, was encouraged by its ally Great Britain hurriedly to draw up a bill of annexation (according to the Spanish text) or protection and friendship (as the parallel text in Rapanui written in Latin script puts it). It is important to note that there were now Rapanui who could read their spoken language in the Latin alphabet, even if the document was a lie.

Till but a few decades ago the Rapanui were entirely without the legal and human rights of Chilean citizens on their island, and also were not allowed to leave it. The population hovered at about 400 by the 1930s and has since risen to ca. 4000, though many of the present-day residents are Chileans who have settled on the island and only a quarter to a third of the population have an active command of the Rapanui language. Mataverí is now an airport, next door to Hanga Roa, and with a runway

long enough to accommodate a space shuttle. The hotels of the village welcome an exponentially (and dangerously) increasing horde of tourists, but the Rapanui people enjoy civil rights as citizens of a democratic Chile and have an articulate community structure striving for political and cultural autonomy within the country. And the language may survive globalization, thanks to a revival of ethnic and cultural identity and pride. The Chilean government has made large parts of the island a protected national park and imposes severe fines on tourists who touch the antiquities; so these, too, may survive. After the terrible tribulations of the 19th and 20th centuries, the Rapanui live. Their beautiful script did not survive the genocide; but, as we shall see, it probably contributed to their survival.

3. RONGORONGO

As we have seen, the ancient culture of Rapanui before contact with Europeans had a complex system of petroglyphs: both iconographical symbols and masons' marks. They employed these and other symbols in tattooing and in painting; and when the Spaniards came they were capable of inscribing a number on paper. The RR texts, on some twenty-five surviving boards (*kohau*) and other wooden objects (a pectoral, a Bird-man figurine), are all that remains of hundreds and hundreds. The *kohau rongorongo* ranged from small pieces of wood to huge planks six feet long, and were stored in the houses of experts in writing, to be used to teach or taken out for festivals.¹⁴ Some were hidden by various clan-members in the caves used to conceal treasure, of which there were and are a great many in the porous volcanic rock of the island. They constitute the only indigenous Polynesian writing system known. After the eclipse of the epigraphic craft on wood, and the loss of systematized knowledge of RR, islanders remembering the script in part copied glyphs in books that were hidden and shown to Europeans only in the 1960s. Till the mid-20th century the two great undeciphered scripts of America and Oceania— Maya and Rongorongo— were regarded dismissively by Western scholars as primitive systems of pictographs

¹⁴ McCall 1981, 44, suggests that the *kohau* RR, which are all incised, were touched rather than seen, in the dark buildings where priests studied— much as blind people employ Braille. (He also asserts that RR was an *aide de memoire* rather a true writing system.) This suggestion should be rejected, since Rapanui recalled that priests brought RR boards annually to outdoor celebrations at Anakena and read them.

without the full communicative function of a true script. The Soviet scholar Yuri Knorozov, who also worked on and encouraged the study of RR, deciphered Maya after World War II. At the Institute of Ethnography of the Academy of Sciences of the USSR in Leningrad he directed for decades a workshop in decipherment: I was fortunate to make the acquaintance of one of his pupils, Dr. Margarita Albedil, an Indologist at the Institute who worked with him on Harappan.¹⁵ Though scholars have made competing claims in recent years, RR has so far resisted, it would seem, convincing and complete decipherment.

Eugène Eyraud was the first outsider to be shown RR boards, in 1864—that is, two years after the beginning of the Rapanui Genocide. He reported that there were hundreds. (One of the surviving RR boards is shown in the appendix.) The last king of the island, Rokoroko he Tau, and the last Birdman, Rukunga, died in 1866. Vike of the Hau Moana clan was the last *tuhunga tā* to die on the island—of smallpox.¹⁶ Within a few years there were hardly any RR boards, or people who knew how to read them, to be found. The islanders had believed every RR glyph possessed the same mana as a *rona*, a petroglyph; perhaps the catastrophe that had overcome them suggested that supernatural power had been lost. (Some large boards were used as timber for boats.) Alternatively, conversion to Catholicism convinced Rapanui that the mana of RR was real, but heathen and therefore evil: though the monks themselves had a scholarly interest in RR, the very teachings they promulgated could easily have led their credulous proselytes to destroy the very monuments the scholarly priests wished to study. Or, indeed, during inter-clan feuding Rapanui destroyed and burnt each other's *kohau* RR. But the subsequent production of manuscripts, which were carefully preserved and hidden from alien eyes would strongly suggest that reverence for the writing system was not wholly lost. The elderly leper Tomenika (Rapanui for “Domingo”), who wrote glyphs on paper and was interviewed by Mrs. Routledge, was probably the last Rapanui to have preserved knowledge of the script, though.¹⁷ The brief surviving text of his differs substantially from the RR inscriptions on wood. The characters are fewer, simpler, and less elegantly made. Perhaps they represent a subsidiary, “demotic” type of RR—one does not find support for the supposition that Tomenika was faking it, and inventing them *ad hoc* on the basis of real RR he had seen, with the aim to please his interlocutor. Yet another

¹⁵ Knorozov 1982.

¹⁶ Heyerdahl and Ferdon 1965, 326.

¹⁷ Routledge 1919, 250-253.

possibility (and none of these entirely excludes the others) is that the perpetually competitive clans of the island, driven by multiple and severe social and natural traumas to feuding, destroyed each other's *kohau* RR. The sudden and radical diminution of the glyph-bearing boards has, thus, remained without satisfactory explanation—most likely all the above factors came into play. By way of comparison and analogy, one might observe the fate of the great stone figures, the *moai*. When Roggeveen came in 1722, all the statues his party saw stood upright on their *ahu*-platforms; but by the time of Captain Cook's visit in 1774, most had been toppled facing forward.¹⁸ The appearance of the Europeans perhaps persuaded the Rapanui that the images of their ancestors had lost their mana; or the new situation intensified feuding between clans, who vengefully toppled each other's *moai*. Yet just as with the hieroglyphic script, texts in which were recopied on a new medium even after the demise of the *kohau* RR and the loss of their key, the subsequent situation of the *moai* is not without ambiguity: islanders continued to bury their dead in the vicinity of the *moai*, often right underneath the fallen monoliths. This indicates many continued resolutely to regard the sites and the now prostrate statues as sacred.

After Eyraud's "discovery" news of the RR "hieroglyphics" spread, travelers to the island searched for RR boards: the Smithsonian, the Santiago museum, and other centers of research acquired the rare pieces of finely polished wood with row upon row of enigmatic characters. The great Russian ethnographer Nikolai Nikolayevich Miklukho-Maklai, for instance, visited Rapa Nui and other islands on the ship *Vityaz'* in 1871: he brought two RR boards to St. Petersburg, where they were deposited in the *Kunstkamera* of Peter the Great, which became part of the institute and museum of ethnography of the Russian Academy of Sciences. (I have seen and held them; and they are objects of an almost unearthly perfection and beauty.) In 1925 A. Piotrovsky compiled and published the first proper catalogue of the glyphs at Leningrad. In 1940 three teenagers saw the boards on a school trip and formed a club, "Descendants of Maklai": the museum's director, Prof. D.A. Ol'derogge, was so impressed with the young Boris Kudryavtsev's researches in particular that he proposed the youth publish a monograph. But the latter died on the front defending the Soviet Union from the Nazi invader; and two years after the end of the Great Patriotic War, Ol'derogge sadly published Kudryavtsev's posthumous papers. Yuri Knorozov, another

¹⁸ Routledge 1919, 204.

brilliant young scholar of the institute, devoted his attention first to Maya, which he deciphered correctly in the late 40s. Though some powerful Western academics, who seem to have had a vested interest in keeping down the Maya heritage as illiterate and “primitive”, initially dismissed this momentous discovery as Communist propaganda, a young Harvard researcher named Michael Coe bucked the establishment and Knorozov’s momentous achievement was soon universally accepted. Knorozov, Nikolai Butinov, and Irina Fedorova then worked on RR; the latter, a scholar of Polynesian linguistics, subsequently pursued her studies independently of Knorozov, and published in Russian a monograph containing what she claimed was a full decipherment, in 2001.

Fedorova, now deceased, came to the conclusion that the texts were all agricultural songs of magical purpose. She also accepted Knorozov’s paradigm that hieroglyphic systems historically arise at the point of the establishment of state structures (Rus. *gosudarstvennost’*), as was the case in China, Mesopotamia, and Egypt. Consequently she fixed the terminus for the invention of RR at the late 16th or early 17th century—the end of the high classical period of the island’s culture—believing it to have come about at the time of the apex of moai construction. But another linguist and specialist in decipherment, Steven Roger Fischer, had published in 1997 at Oxford his own massive tome in which he came up with very different conclusions. Both scholars agree RR is a hieroglyphic script like Egyptian, Chinese or Maya; that it was invented on the island by the ancestors of its present inhabitants; that its inventors based its characters on the earlier petroglyphs found in large numbers everywhere on Rapa Nui; and that it is to be read in Old Rapanui. But that is where their agreement ends.

All existing RR boards are of recent date and Fischer proposes that RR, which is written left to right in parallel boustrophedon lines, was based upon the Spanish writing the islanders saw and therefore was invented soon after 1770. The rationale for this dating is two-fold: the islanders believed the Spaniards, with their great ships of precious wood, their fire sticks, and their armor of a strange, hard, shiny material (metal) possessed through writing as well a superior *mana* that the Rapanui might acquire through emulation. The sudden appearance of these uncanny, powerful aliens presented also a radical challenge to the traditional Rapanui way of life. And all the existing RR artifacts are of relatively recent date. The Rapanui, then, created RR in emulation of the mysteriously powerful art of the powerful aliens. It was a way of preserving key oral texts: cosmologies, genealogies, erotic songs— and

endowing them with new prestige, at a time when the traditional Rapanui world view had been shaken to its foundations. Fedorova asserts, rather, that because of the perishable nature of wood as a medium the existing RR boards are copies of older ones. Quite aside from the inherent weakness of the *argumentum ex silentio*, one might then ask why there is no evidence of archaic **epigraphy** from the period when she supposes RR to have been invented. (We do have, in fact, a few rocks with lines of RR in relief brought to Heyerdahl from a cave of hidden treasures on the island; but unless and until new evidence emerges to the contrary, the common opinion holds that these objects are recent forgeries.) From the period following the invention of RR one encounters, for instance, two RR glyphs for the vulva, *komari*, incised into a petroglyph of the *tangata manu* on the smaller of the two boulders at the Harvard Peabody Museum.¹⁹ This is not a unique example, only one the writer has himself seen first-hand. And the adaptation of RR to writing on paper by the elderly islander Tomenika in the first decade of the 20th century, further demonstrates the versatility of the Rapanui: had RR existed in the classical period, one might expect to see it on stone (as indeed one does in Mesopotamia and Egypt, and in Mesoamerica). There is no *a priori* reason it should have been confined to wood, even though wood was a uniquely precious material on the nearly treeless island. Indeed in 1958 Thomas Barthel recorded the testimony of two informants to the effect that the aforementioned Tomenika claimed the mythical ancestor of the Rapanui, Hotu Matu'a, had brought "RR on paper" (using for the latter the Tahitian word *marau* "book") at the first settlement of the island. When the paper disintegrated the islanders wrote on *toro maika* "banana stem". This seems to be more than a retro-fitting of tradition to sanction new usage; for when RR was written on boards, students of the schools really did their exercises on *rito maika* "banana leaves". And the great chief and scribal teacher Nga'ara himself (about whom more presently) sketched the glyphs in *ngarahu* "soot" before engraving them.²⁰

Fischer further accepts the testimony of islanders who had heard priests recite from the RR boards, concerning their content. Although unlike Fedorova he does not produce a continuous reading of any text, he does note a very significant recurrent pattern of glyphs, which he renders by the formula X1 Y Z, according to which the being (X) copulates (1) with (Y) and (Z) is generated. Generation is taken for granted

¹⁹ See Horley and Lee 2012.

²⁰ Fischer 1993, 182.

in this shorthand because of the preceding copulation sign, and no glyph for it is written. And this pattern corresponds to the repetitive shape and style of an important cosmological hymn that the islanders said the priests who read the RR indeed chanted. It is a commonplace in folklore that a repetitive pattern, and the repetition of words, is an aid to memory, as is the verse form as opposed to prose. If Fischer's proposal is correct, RR is not a script representing every sound in the language, but an *aide memoire*. Even though Fischer has not produced a complete deciphered text, his approach seems by far the soundest; and he may be the principal scholar working today who is on the right track. The studies of Albert Davletshin in Moscow are also an important new contribution; and with collective contributions, including studies of glyph frequency, the general outlines of a decipherment may emerge within a decade of this writing.

It should not come as a surprise to the readers of these lines that scholars have egos, and a sort of Cold War mentality informs the debate between the Russian and American experts on RR: Fedorova dismisses Fischer's hypothesis brusquely, with an aggrieved and defensive Soviet dogmatism in ironic contrast to Fischer's sunny and assertive American cheerfulness (his eminently readable autobiography bears the rather swashbuckling title, *Glyph Breaker*). She does not subject Fischer's painstakingly detailed argument to a sustained or systematic critique in her own book, most of which is a review of Rapa Nui history and ethnography. Only a few pages of the large tome are devoted to a sketchy explanation of her method, and no justification for its arbitrariness is offered.²¹ Fedorova is able to produce an entire decipherment only by assuming the agricultural content of the texts *in advance* and working on that assumption in interpreting the glyphs: for instance, glyphs of all different sorts are assumed to be rebuses for a number of different terms for varieties of the yam; and nearly all the characters taken to represent verbs are likewise assumed to represent actions associated with digging,

²¹ The absence of a detailed exposition of her method is alarming. Unfortunately the same lack of explanatory argument typifies another recent work on RR, De Laat 2009. This independent Dutch scholar, who has achieved an enviable mastery of the Rapanui language, proceeds to identify and read all the glyphs as syllabic— not a possibility to be dismissed out of hand, given the phonetics of Rapanui, and a tantalizing one if RR is in fact a late invention. But in most cases he does not justify why a particular glyph ought to represent a particular set of sounds; and, most damagingly, the text he reconstructs in his attempt at decipherment is a narrative not related to what informants who heard RR texts recited told scholars what they said.

planting and harvesting. There are no formulae in her reading that are identifiably magical.

The importance of agriculture in particular, and of fertility in general, to a stone-age culture in a small, isolated, and challenging environment, cannot be overemphasized; and the student of ancient Greece is aware of the centrality of Hesiod's *Works and Days*, for instance, to the early literary corpus— there is even a reference to it in the Greek graffiti of Armawir, perhaps of the 2nd century BC, in Armenia.²² It would also be a methodological error to suppose that because the *kohau* RR are impressive in appearance and exquisite in execution, their textual content must conform to an outsider's preconception of the sublime. The belief that the Egyptian hieroglyphs must be of elevated mystical content was long an obstacle to their decipherment; and in more recent times Ilya Gershevitch showed that the alphabetic inscription at Baghlan, Afghanistan, in Bactrian—a Middle Iranian language far less enigmatic than RR— was not the eloquent hymn to the Zoroastrian divinity Mithra of which the German savant Helmut Humbach produced an erudite reading, but just the record of the repair of a well.²³

However Fedorova's arbitrary supposition of a single theme to the exclusion of all others goes against the testimony of witnesses to readings of the RR documents, and requires that the most disparate glyphs be forced into a Procrustean bed, or rather, a garden row of yams. Rather uncharitably, she downplays the reliability of the important testimony of 1886 of Daniel Ure Va'e Iko because he was slightly tipsy when he recited the content of a RR board to attentive American sailors. Daniel's recitation, though, contains the formula upon which Fischer relied. The evidence of the MSS produced subsequently, which we shall examine, suggests the Rapanui wanted to set down in writing much more than magically-charged lists of edible plants: they were interested in cosmology, in weather, in genealogy as well. Their traditional corpus of knowledge was meant to order their entire world— and to restore a sense of that order when it was shaken to its foundations. One also wonders how likely it was that texts of drastically varying length, from the few characters on the wooden *tangata manu* at the Museum of Natural History in New York to the giant planks out of which disillusioned islanders built boats, were all and only yam-growing charms. If RR was created in

²² Russell 1987, 54-55.

²³ See Gershevitch 1985, 55-82 on Bactria; on Champollion's misguided predecessors see Robinson 2012, 15-27.

response to a profound cultural trauma, as an adaptation to a rapidly changing world, then the content of the texts might be more of an emergency salvage operation of the culture as a whole than a calm encyclopedia of agriculture. This forces one to approach her findings with caution.

Fedorova's *a priori* application to the situation on Rapa Nui of Knorozov's theory about the rise of hieroglyphic systems in nascent states also seems to lack the necessary historical nuance by which one would distinguish a massive bureaucratic entity in a stable ecological system from a small, precarious, endangered culture; and this, too, calls her dating of the script into question. The little island, without so much as a perennial stream, can scarcely be compared to the great hydraulic civilizations of the Fertile Crescent. If the testimonies of native and European eyewitnesses are to be believed, the island before the catastrophe of the 1860s had a vast library of *kohau* RR. Fedorova might have adduced this in support of her opinion that the script was by then hundreds of years old—had it been invented less than a century earlier, how could so many written monuments have been assembled so quickly? One might answer this (admittedly unasked) question with two considerations: first, prodigious cultural production was a hallmark of Rapanui civilization. Less isolated kindred Polynesian cultures produced a few small stone statues: rather than lapsing in isolation on their little island into desultory lassitude, the people of Easter Island carved the moai. Second, the school of Maštoc' produced a huge canon of translated and original texts in under a century; and we shall presently note more interesting parallels between the Pacific island and the Armenian *leṛnaktzi*, the "mountain-isle" to show that writing has been invented, not only at the rude dawn of the nascence of a great state, but in the crepuscular last rays of the collapse of a small one. The Armenian paradigm will be seen to fit Rapanui better than the Fertile Crescent one.

Rongorongo script is now generally accepted by serious researchers as a hieroglyphic system containing names with their morphemes, i.e., a picture pronounced with the corresponding word for it; homographs, that is, pictures of objects whose name is a homonym of another word that cannot be represented visually, rather like a rebus; and determinatives, i.e., symbols representing the category to which the symbols belong. Thus, Fischer reads as a single phrase from a known cosmological hymn the signs designated in Barthel's standard list as 631, 700, and 8, in the long inscription on the "Santiago staff". The first is a composite showing a bird with a man's hand and a phallus. As the words for "hand"

and “all” in Rapanui are homonyms, pronounced *mau*; and the phallus (glyph no. 76 alone) is understood to mean “copulate(d)”, the first glyph reads *Te manu mau ki 'ai ki roto ki*, “All the birds copulated with”, followed by *ika* “fish”; the phrase *ka pū* “there was born” is understood since the hymn is made of repetitive formulas; and the final glyph is simply *te ra'a*, “the Sun”. (The phrase in glyphs is written out in the appendix.) This follows the X1 Y Z formulaic pattern of the cosmological hymn Daniel Ure Va'e Iko said was on a *kohau* RR and recited for a group of American sailors in 1886. But for Fedorova the fish-shaped sign *ika* does not represent a fish at all but is a rebus for the identical-sounding name for a variety of yam. So she argues that since Fischer cannot by his method produce the reading of an entire tablet, while she can, his reading of this formula, even though it is one found repeated in several inscriptions, is misguided wishful thinking. It is plain, I think, that Fischer's findings should not be dismissed; but Fedorova's insights are also valuable.

4. NGA'ARA

Following the appearance of the Europeans, then, Rapanui society evidently underwent severe internal stress: the destruction of the moai is the most obvious outward sign. (One may dismiss Fedorova's assertion that the statues collapsed in earthquakes. All the evidence points to intentional destruction.) But RR production and study flourished under the quarter-century reign of the island's most famous scholar-chief, the revered Nga'ara, who brilliantly combined his temporal power with authority as a *tahunga tā*, an expert on writing, thereby curbing the destructive power of the *matato'a* warriors and providing a new ground of spiritual and cultural harmony and continuity for the island. Nga'ara not only established the RR festival at Anakena as the primary rite on Rapa Nui; he also supervised all the RR schools on the island, which he regularly visited and inspected, rewarding good teachers with the gift of a *kohau* RR from his huge library. The pupils practiced glyphs, as noted above, on banana leaves. For feats of memorization they employed *kai-kai*—rhythmic songs sung to the manipulation of cat's cradle patterns. His was not an easy tenure: he suffered imprisonment and humiliation by enemies, but was vindicated as the greatest leader of the Rapanui of historical times, and not because of his prowess but because of his genius and patronage of learning.

Nga'ara died in 1859, just three years before the slave raids and pandemics began; his sons perished in Peruvian captivity. If RR was invented after the Rapanui first in 1770 encountered the writing of the Spaniards, then Nga'ara was, if not its creator, then certainly its principal proponent for most of the period of its existence as a living script, the statesman who presided over the massive project of the setting down in writing of the island's full corpus of oral literature in an astonishingly short time. Even though the sequelae of the Genocide of 1862 led to the loss of RR, Rapanui culture might have perished entirely, if not for the roly-poly *ariki mau* Nga'ara. For RR conferred sanctity on the versified and sung text, on knowledge itself, providing an impetus to the preservation of that knowledge even when RR was gone.

Yet in a way, the RR script Nga'ara had cultivated enjoyed a shadowy, powerful afterlife, like a benevolent revenant spirit— or perhaps he had successfully instilled in the Rapanui a love of writing *per se* and, thus, the foundation of an indigenous intellectual life. For during a very brief respite from foreign harassment and depredation, in the years 1892-96, Tomenika and a handful of others compiled and wrote down on paper traditional stories including mythological texts on the supreme god Makemake and the creation of the world; a version of the Hotu Matu'a cycle (a chronicle of the discovery of Rapa Nui); genealogical lists of the kings who followed him; episodes of the history of the island since the slave raids; a list of aboriginal lunar months with their European equivalents; texts on weather and on agriculture; names for types of sweet potatoes; texts for religious feasts; chants recited during religious ceremonies; etc. These are in ledgers in Latinized Rapanui, along with painstaking handwritten copies of RR texts taken from photographs, and lists of glyphs with New Rapanui translation drawn, not from indigenous knowledge but from the dictionary of the European savant Bishop Jaussen of a few years earlier. One ledger, tellingly, contains also a brief quotation in Rapanui translation from the Book of Genesis— cosmology was a principal focus of interest and here one witnesses an attempt to harmonize island tradition with Catholic dogma. The manuscripts were carefully hidden and regarded as sacred treasure, with the same reverence that once had been accorded the *kohau rongorongo*.²⁴ Though one cannot say for certain that the contents of the manuscripts reflect faithfully or exactly the contents of the *kohau* RR, they agree in general with

²⁴ See Fischer 2005, 147-148; Heyerdahl 1975, 96-101; and detailed reports with facsimiles in Heyerdahl and Ferdon 1965, Appendix B (pp. 391-411).

the testimony of those who had heard recitations from the tablets as to the contents of the latter; and it is seen that the ideas of Fischer and Fedorova about these overlap. Some of the island's oral literature deals with human generation, the microcosmic aspect of cosmology: *He time te akoako*, for instance is a very ancient choral song of sexual jeering; one might compare it to the ancient Greek nuptial hymenaea (Sappho's "Raise high the roof beam, carpenters" to let in a bridegroom with a towering erection, gave its name to a novel by the American writer J.D. Salinger), or to the bawdy pre-Christian Armenian *ergk' c'c'oc' ew baruc'*, "songs of *phalluses and dances".²⁵ And with that one turns now to these and other relics of another people and another past.

5. ST. MESROP MAŠTOC'

The mountain-island Armenia was in the first centuries of the Christian era a vast patchwork of clan-based dynastic holdings separated from each other by mountain ridges, in deep valleys or on high plateaux, each with its patriarchal hierarchy, the local temples (*bagink'*) with their statues of ancestors and gods over which it exercised patronage, its complex web of alliances with other clans, and its hereditary prerogatives at the court of the Arsacid king, whose power depended upon the maintenance of those prerogatives and the balancing of relationships with the *naxarars*—the dynastic heads of the various clan-lands. The welter of overlapping designations in native Armenian and in terms loaned from Parthian (*hayrapet*, "patriarch", *nahapet*, "*idem*"; *t'agawor* "king", *ark'ay* "*idem*"; *azg* "clan", *tohm*, "*idem*"; etc.) attests to the great antiquity and slow, organic growth of these institutions; and to their successful melding with the similar social structures of Zoroastrian Iran, whose noble houses in the Parthian era intermarried with Armenians and ruled the realm. It was a decentralized system much like that of Rapanui, internally fractious but durable.

In the early fourth century mass conversion of the nation to Christianity began, as the new faith achieved a critical mass of followers in the

²⁵ Gen. pl. *c'c'oc'* could be from *c'oyc'* "performance, display"; but in the argot of the felt-pounders of Moks a man is a *c'ic'*, "tent peg", in what is presumably a metaphorical allusion to the phallus. The dances were often called *kak'awuc'*, "of partridges", and *kak'aw*, an Aramaic loan, is often used to mean a woman. Christian authors uniformly condemn the songs and dances as lewd; and the reference may be, thus, to celebrations at which men and women danced together, with all the implications therefrom.

Near East. The Armenian Arsacids adopted Christianity as they wrestled to free themselves from the militantly parochial state structure and newly puritanical sacerdotal hierarchy set in place by the Sasanian Persian house that had usurped the throne from their clansmen in Iran. The pre-Christian religion of the Armenians was then suppressed; its temples, destroyed and churches built over their ruins. The Arsacids, particularly the larger-than-life king Aršak II and the brave commanders-in-chief Mušet and Vasak of the Mamikonean clan, fought a long, hopeless war through the fourth century against the inexorable strength of the Sasanian Empire under its long-lived monarch Šābuhr II. A later chronicle of the period, the *Buzandaran* (perhaps “epic histories”, though it might simply identify as a Byzantine its mysterious author, P’awstos, i.e., Faustus—not a common Armenian name), casts the narrative in the set form of a heroic epic in which the good are doomed but must fight on, so that even though they and their realm will perish, their true faith will survive. Such was the shape of the catastrophe as contemporaries perceived it; and in 387 the country was partitioned between Persia and Rome.

The Armenian Arsacid dynasty was to endure only till 429 in the larger, eastern part of Armenia, *Mec Hayk’*; and after then the country became a Sasanian province governed by a *marzpan*, “guardian of a marchland”. Maštoc’ (Mesrop is a later epithet of unknown meaning) was born in 362, a generation before the partition, in the village of Hac’ekac’ in Tarawn, in the greater Armenian heartland, to a minor noble (*karčazat*) named Vardan, a name closely associated with the Mamikonean clan, to a branch of which, then, he perhaps belonged; and Maštoc’'s name may mean something like “good tidings”.²⁶ The young man traveled to the capital at Vałaršapat and served the Arsacid court as both a soldier and a secretary. He took holy orders, too; so in addition to his native Armenian and the Middle Persian required of a courtier he learned Greek and Syriac. These were the languages of the Church; for till then the only writing system Armenian seems to have possessed was a relatively rarely-used heterographic script of the same sort the various Iranian peoples had developed from the Imperial Aramaic employed by the Achaemenids. The Armenians were about to lose the remains of political sovereignty, and their cultural identity as well was quickly becoming eclipsed: they could either be assimilated into the Greek- and Syriac-speaking Christian churches and communities, or else abandon

²⁶ See Russell 1994 on the Armenian alphabet and Russell 1994a on the name of the Saint.

Christianity and revert to Zoroastrianism, but now risk being Persianized by the aggressive Sasanian régime.

Maštoc' and an associate, the patriarch Sahak Part'ew ("the Parthian"), saw the invention of an Armenian alphabet as a way to save the nation in this existential crisis. They enjoyed the patronage of king Vramšapuh, and the hagiographer Koriwn, a disciple of Maštoc' records that they experimented with an alphabet supplied by a priest named Daniel whose letters "were buried and resurrected". This was perhaps the old heterographic writing system, employed for a pre-Classical form of Armenian, whose letters were, as Maštoc' discovered after some experimentation, insufficient to represent all the consonantal sounds and the various diphthongs of Armenian. But after augmentation with letters derived probably from Manichaean Middle Persian and from Coptic, and divine revelation in dreams, in AD 406 Maštoc' created an Armenian alphabet, with the order of the letters following in general that of Greek (though it would seem he also employed a sort of Pythagorean numerical mysticism in the ordering of the full set of 36 characters to encode cosmological ideas).²⁷

He immediately formed a school and sent his disciples to collect and translate both the Bible and a vast array of Greek, Syriac, and, probably, also Persian literature. This was done with extreme speed; and Armenia was in essential respects self-sufficient in scholarly resources in its own language within a century, equipped with technical vocabularies for theological and philosophical compositions as well as a durable literary style probably inherited from the sophisticated oral literature that preceded literacy (and, for most Armenians for many centuries, persisted alongside it). Maštoc' also engaged the services of one Rūp'anōs (i.e., Rufinus, perhaps a Roman) to design the uncial forms of the letters in such a way as to make them imposing in inscriptions and impressive in manuscripts. That is, they were to co-opt the propagandistic charisma—the *mana*!—of both Roman imperial epigraphy and the Greek codex. So the saint looked to the material around him to create a writing system that was still in many respects without precedent. He was a holy man but also a politician, an adept administrator, and a teacher. And he did all this at a moment of crisis. Had he failed, it is unlikely Armenia would have survived the tribulations of the campaign of the Sasanian Yazdegerd II two generations later, or the Arab conquest of the seventh century.

²⁷ See "Maštoc' the Magician," appendix to Russell 2013.

The mountain-island was precariously to survive, though battered by the waters of a rising Islamic ocean.

Maštoc' invented the Armenian alphabet primarily for a sacral purpose—the translation of the Bible and of other Christian texts into Armenian—and deliberately endowed it with visible symbolic sanctity. He chose to make the final, 36th letter an aspirate *k'* in the form of the Greek Chi-Rho symbol of Christ, thereby giving literal visual shape to the declaration of Our Lord that He is the Alpha and the Omega—the first and the last. (The last letter for Jesus, a Jew and native speaker of Aramaic and Hebrew, would have been *tav*, perhaps not coincidentally cruciform in form!) One finds a contemporary parallel to this deliberate sanctification in the writing system of the Ho people of India, a group whose language is under threat of extinction: its inventor placed a character representing the Hindu sacred syllable Om at the beginning of his list of symbols. In the Ho case, according to Harrison, each letter reflects intimately the realia, way of life, and cosmology of the Ho, so one symbol resembles a child crying; another, a plow; another, a tree falling; yet another, a leaf cup for drinking home-brewed liquor. The resonance of the latter is particularly important: according to local myth that curiously reverses the fall of Adam and Eve, the now-elderly first human couple had lived long in Paradise without procreating, and an exasperated God taught them how to make liquor. They became tipsy, then aroused; and generated mankind.²⁸ Here the parallel to RR as well as to Armenian is instructive: just as the inventor(s) of RR used symbols to hand that were of both everyday and mythological significance, so did the creator of the Ho script. The script of this small Indian people inspires and strengthens them, and is contributing to their cultural survival.

Although Maštoc's purpose was to anchor Christianity in Armenia and to secure for the Armenians national and cultural survival within the new context of the Christian faith even as the other paradigms of identity, whether social or spiritual, were faltering or disappearing, the alphabet was early employed also for the composition of original works. Much as the Rapanui sought through the recording on the *kohau* RR, as it seems, of genealogical and cosmological hymns to chart and affirm a stable mental map of their world, so the immensely learned Armenian *patmahayr* or “father of history”, Movsēs Xorenac'i, devoted the first of the three books of his *Patmut'iwn Hayoc'* (“History of the Armenians”) to a *cnndabanut'iwn Hayoc' Mecac'* (“genealogy of Greater Armenia”),

²⁸ Harrison 2010, 198-200.

in which one finds the parables of the eponymous ancestor of the Armenians, Hayk bravely confronting the superior force of the Assyrian god Bel; of the Armenian king Ara the Beautiful scorning the grand hests of the Assyrian queen Semiramis; of the Armenian king Tigran fighting and defeating the deceitful Median tyrant Aždahak; and of Tork' Angel, the ugly giant defending his home (a Polyphemus as viewed by his own people rather than through the lens of the Achaean colonial raiders!)²⁹—the web of myths that shaped the Armenians' view of themselves and situated and gave meaning to their origins in primordial time. Although the work is also a monument of learned eloquence suffused with Neoplatonic moral concepts and citations and imitations of Classical authors such as Josephus and Eusebius, it is replete with native tradition that is recorded nowhere else. We should do it injustice to give it short shrift as a learned lucubration or an un-historical pastiche, or to regard the Genealogy as a mere imitation and expansion of the genealogical sections of Genesis or the mythography of Eusebius and Berossus. This would fail to take adequately into account the crucial, native material, and would also be a failure to understand the work and its intention as a whole.

This is not the place to enter into the vexed question of the formal date of composition of this seminal book of the Armenian tradition: it is certainly plausible to date it to the late 5th century, and there are strong grounds for doing so. But then there must have been significant interpolations. It is equally certain—and more important, to our present purpose—that much of the legendary and mythological material in it goes back to well before the Christian era and endured in oral form down to the eighth century and beyond. (One recalls that the massive Epic of Sasun, with its accurate and detailed evocations of the pre-Christian cult of the apocalyptic Iranian divinity, Mithra, and other trappings of hoary antiquity, was set down in writing by ethnographers listening to oral reciters, beginning only in the early 1870s.) The preservation of this material in writing suggests, not the detached erudition of an armchair antiquarian, but the lively concern of a scholar laboring for the survival of his people, whom he eloquently praises as small in number yet not deficient in deeds of greatness meriting record. He insists that he has listened to the recitations of the *gusans*—the bards—and has faithfully recorded their lays. Xorenac'i's princely Bagratid patron Smbat and his family and retainers would have read (or heard) the book much as a Rapanui chief and his clansmen might have listened to the recitation of

²⁹ Russell 1996-97.

a genealogical *kohau* RR on the shore at Anakena where, legend had it, the primordial ancestor and visionary patriarch of the people, Hotu Matu'a, landed at the Navel of the World. The genealogy is as much orientation in space and time, in history and society, as the destruction of one's culture is *dis*-orientation.

The first book of Xorenac'i's *History* includes the famous pre-Christian song of the birth of the god Vahagn, which is also a cosmological poem, the oldest text preserved in Armenian and arguably one of the most intricate, for its size, in any Indo-European language. Of its 42 words, 26 are repeated (that is, well over half) and there is obvious formulaic repetition of the strophes— tell-tale evidence of orality akin to the structure of the hymns Fischer claims to have found in RR.

*Erknēr erkin, erknēr erkir,
Erknēr ew covn cirani.
Erkn i covun unēr
Ew zkarmrikn etegnik:
Ēnd etegan p'ot cux elanēr,
Ēnd etegan p'ot boc' elanēr,
Ew i boc' oyn vazēr
Xarteaš patanekik.
Na hur her unēr,
Boc' unēr mawrus,
Ew ač'kunk'n ēin aregakunk'.*

Heaven was in labor, earth was in labor,
Labored too the *golden³⁰ sea.
The labor in the sea had
Also the little red reed.

³⁰ Arm. *cirani* is the standing alliterative epithet of *cov*; and in the 5th-cent. translation of the Bible and elsewhere it translates Greek *porphyron*, “purple”. Homer's sea was wine-dark. Kocharov 2009 in the most thorough study of this poetic figure to date reviews early attempts to etymologize the word as a loan from Old Iranian **zaranya*- “golden”. He notes that the difficulty of deriving Armenian initial *ts*- from the Iranian makes these suggestions, if not impossible, then at least inconclusive. But the poetic use and context of the word is still noteworthy for comparison with Arm. *cirani cov*: in the Avesta it forms an alliterative figure as an epithet of *zrayah*- “sea”. Presumably Arm. *ciran*, “apricot”, received its name because it was the “golden”, i.e., “precious” fruit; and I would suggest that the meaning of *cirani* as “purple” would be secondary, following the Armenians' first encounters with the precious Mediterranean dye. That would have taken place around or before the time that the song of Vahagn, with its significant percentage of Middle Iranian loans, was recited in the form in which Xorenac'i heard it, so “purple sea” certainly is a possible understanding. However I would venture here that the color “golden” would be better consonant with the substantial register of closely similar colors— red, fiery, flaming, blond, sun(like)— in the poem, so one tentatively suggests an “archaic” reading of the epithet.

Along the reed's shaft smoke rose;
 Along the reed's shaft flame rose—
 And out of the flame ran
 A blond little youth.
 He fire hair did have,
 Flame had he a beard,
 And his little eyes were little suns.³¹

Xorenac'i could not have preserved the poem, were it not for the script of Maštoc'; and that script enables us to appreciate all the lexical and phonetic details of the poem exactly as the Father of History heard a minstrel recite it to the accompaniment of a stringed instrument. It describes how out of the birth pangs of heaven, earth, and the sea a fiery human emerged from a reed. This is an archaic cosmological theme. But let us suppose for a moment that we did not have the Armenian alphabet, or that a script for the language had been invented in some other way, or using other principles, and see what we might have had to work with instead.

The cliffs, boulders, and grassy slopes of the Armenian plateau abound in petroglyphs engraved and painted by members of early and unnamed human societies. They depict armed men and running animals, flying or perching birds and arcane, abstract symbols.³² And later cultures, also silent to the historical record, left along river banks the great, prehistoric cigar-shaped smoothed *višap* ("dragon") stones with bas-reliefs of sea monsters and oxen. The Urartians, as the Assyrians called them (and hence Ararat; they called themselves Biaina, from which comes Armenian Van; or Nairi), had hieroglyphics but later left cuneiform inscriptions on these *višap*-stones and on boundary markers, commemorative steles, and on clay tablets. Some of the ancient steles were re-used in turn by Armenians as *xač'k'ars* ("Cross-stones"). And a very few of the mediaeval *xač'k'ars* have engraved upon them encoded texts whose cryptograms of lines and dots are based, in all likelihood, upon those cuneiform wedge-shapes Armenians saw. So there were numerous symbols and inscriptions in Armenia that the alert and observant Maštoc'

³¹ Xorenac'i 1913, 85-86. The standard translation and commentary is that of Thomson 1978. See Russell 1989 and 2012 for analysis of the poetics and mythology of the hymn; and Russell 1987, Ch. 6, on the cult of Vahagn generally.

³² Petrosyan 2005 should be employed only for its helpful sketches of petroglyphs: the author's analytical essay, which advances the idea that the presence of the swastika symbol in these prehistoric glyphs proves Armenian origins in a putative "Aryan race", is best taken *cum grano salis*.

probably knew of; yet he opted for a fully phonetic alphabet of letters separated from each other, easy to read, and written like Latin and Greek from left to right, rather than joined together or stacked or read right to left or without vowels (like Pahlavi, Syriac, Hebrew, and Arabic). In the appendix to this essay I have performed an experiment, in order to show how much the saint's invention has given us: the song of Vahagn's birth is given in the *erkat'agir* ("iron-script", i.e., uncial) of Maštoc'; and the alphabet transmits all of the phonetic patterns and intricate poetic phraseology of the text. It is then rendered into a reconstructed, hypothetical Armenian-Aramaic heterography, where the literal sense of the *words* is preserved but nearly all the poetic detail of the *sounds* is lost.

One mentioned at the beginning of this essay that mediaeval Armenian manuscripts contain lists, also, of pictographic symbols, a number of which are quite similar in appearance to the still-undeciphered hieroglyphics of the ancient Harappan culture of the Indus Valley of the Indian subcontinent. A few of them are parallel also to RR glyphs; and this coincidence has long mesmerized the curious. Ačaṙean and Abrahamyan proved long ago, however, that nearly all these symbols were created as a shorthand or diversion long after the invention of the Armenian alphabet, many are based upon it, and none can be derived with certainty from the pre-Christian written or carven monuments of the country. The similarities to ancient Harappan and RR— the parallels to the latter are noted in the appendix— are entirely fortuitous: at best they merely show that people tend to see such aspects of reality as an armed man or a standing bird in much the same way even though separated by space and time.³³ There are only 500-odd Armenian pictograms known from the various MSS taken together, once one accounts for a few overlaps. All are explained in the manuscripts and have a very limited range of meanings (mainly religious); so we know that they were an arbitrary, synthetic list never intended to encompass all the varieties of vocabulary required for true communication in a natural language, nor were they ever employed to represent one. Some of the symbols, indeed, are mere abbreviations employing characters of the Armenian alphabet.

However on the basis of what exists I have attempted a rendering of the hymn of Vahagn, again— this time in pictographs. The best result one was able to achieve is a telegraphic formula, very similar to the X1 Y Z pattern Fischer discerned in the RR inscription on the Santiago staff. But for all the stark structural elegance, how much detail and nuance is

³³ See Ačaṙyan 1984, 411-429; and Abrahamyan 1973.

lost! For example, I have compiled a register of the words that either name colors or evoke them, in the Armenian poem, all of which the pictographic rendering loses. And next to that register a list is given of the Rapanui words for colors, each of which is a metaphor dense with poetic possibilities. Though the text on cosmology from Easter Island (if that is what it is) has its own beauty, it is thanks to Maštoc' that the precious, tiny poem kept its appeal to the various senses, its multi-dimensioned richness: pictographs would have been in this instance an aid to memory shorn of most of the aestheticism, the poetics of the poem. Moreover, it is most unlikely a hieroglyphic system would have even been recoverable, had but one generation forgotten the oral texts to which the writing referred. This was, in large part, the fate of RR. The heterographic script, scarcely used in Armenia in the first place, would very likely have been abandoned in favor of Greek, Syriac, or Arabic, which are very much better suited to wide literacy and ease of communication. But the project of the Armenian alphabet was so successful that Maštoc' went on to create the Georgian and Aṭuan (Caucasian Albanian) scripts.

In this Armeno-Rapanui coincidence of concise cosmological formulas there is perhaps a reflection of an archetype, not of the collective *unconscious* Jung postulated, but of man's collective *consciousness*, the art that emerges in the explanation and ordering of his world: heaven and earth and water come together and that is how fire is born. There are, apparently, three independent loci where early human cultures developed the cosmological myth, according to which light came about as the result of the separation of Heaven and Earth (which means they had been together): the largest stretches from Egypt and the lands of the eastern Mediterranean over Iran and India to China and out across Australia and Polynesia; the other two are northwestern Europe, and Central America.³⁴ In Armenia Heaven and Earth labor, so does the Sea, and out comes a Man of Fire whose Eyes are Suns. On Rapanui, all the Birds mate with the Fish, and out comes the Sun. The association of birds and fish on the island may reflect particular, local circumstances: a splendid carved boulder in the collections of the Peabody Museum at Harvard (brought by Alexander Agassiz in 1906 from Orongo) has a petroglyph of the *tangata manu* on the front and a *pātuki* fish more crudely carved on the reverse. The researchers who noted this observe that on Rapa Nui, the Birdman motif is associated closely with fish, probably because it

³⁴ Watson 2012, Map 4.

was the presence of sea birds that alerted the islanders to the proximity of large schools of fish coming into coastal waters.³⁵ In Armenia, the sea out of which the fiery Vahagn bursts is Lake Van, the place where he is later to battle *višap*-dragons, seizing and hurling them into the sun.

The medieval mystic Ramon Llull believed that if he could discover a pure universal language, its clarity in the representation of reality would convince Muslim and Jewish infidels of the truth of Christianity and effect their conversion. This did not happen; and to the extent one can discover expressions among humans on planet Earth that approach the common and universal, as these varied local iterations of a cosmological formula do, they tend to describe concepts that do not have necessarily to do with the exclusive claims of a particular dogmatic faith. And only a few faiths, including Llull's, advance exclusive doctrines in any case: those of pre-Christian Armenia and Rapa Nui do not. The third expression of this same cosmological formula that I would present was intended by its author to be, not a record of the past, but a poetics of the future. In May 1872 Arthur Rimbaud wrote,

*Elle est retrouvée.
Quoi? L'Éternité.
C'est la mer allée
Avec le soleil.*

She has been found again.
What? Eternity.
It is the sea, departed
With the sun.³⁶

But later the poet, musing on the lines, altered them significantly in his *Alchimie du Verbe* in the cycle *Une saison en enfer, Délires II*:

*Elle est retrouvée.
Quoi? L'Éternité.
C'est la mer mêlée
Au soleil.*

"She has been found again.
What? Eternity.
It is the sea, **joined together**
To the sun."

³⁵ Horley and Lee 2012, 17-18. I am grateful to Dr. Susan Haskell of the Peabody Museum for this reference, a copy of the article, and her generous and gracious time and effort guiding me through the museum's extraordinarily rich and exquisite Rapa Nui collection on 29th August 2012.

³⁶ Starkie 1961, 202.

In the visionary alchemy the poet sought to work through the force of his words alone, the eternal force of life is generated, then, when the great earthly embodiments of the elements of water and fire meet in coitus together.

6. THE ARSACIDS MEET THE RAPANUI

One cannot sail past, in approaching the end of our essay, a serendipitous correspondence— and even the former word is curiously suitable. For it derives from Sarandip, as Near Eastern voyagers called the tropical paradise in the Indian Ocean, Sri Lanka, that is halfway from Armenia to Rapanui, a distant island yet still part of the Classical world. Readers of Vladimir Nabokov's complex and magical novel *Pale Fire* will be familiar with the invented mirror-world of Zembla, whose name is a Westernized rendering of Russian *zemlya*, "land". The writer discovered to his delight that the real Arctic Nova Zembla has a river named Nabokov after an ancestor. I could not help but feel a somewhat similar tingle coming upon the 102nd chapter of Herman Melville's *Moby Dick* (1851). The narrator, Ishmael, visits his royal friend Tranquo; and the latter brings him to "a grand temple of lordly palms" sheltering the skeleton of a sperm whale, whose "vertebrae were carved with Arsacidean annals, in strange hieroglyphics."³⁷ The incident and its details are wholly fictional; but there is a Cape of the Arsacids in Malaita province of the Solomon Islands of the South Pacific, which received its (unjust) name because of the (equally unjust) reputation of the indigenous people as assassins. The Arsacids were of course the Parthian dynasty in Armenia, one of whose last kings, Vramšapuh (whose name means Vram, i.e., Wahrām, in Arm., Vahagn, son of the king), was the patron of Maštoc'. One of Melville's characters is a Parsi Zoroastrian, and at various points in the novel the author evinces knowledge of Near Eastern antiquity, even some familiarity with Armenia. He was of course quite knowledgeable about the Pacific and its local cultures as well. RR was the only native writing system of Polynesia; so there is a happy, strange, and singular coincidence in the American novel that in *Bend Sinister* Nabokov had correctly divined was not at all prose but a great epic poem.

³⁷ Melville 1964, 444.

7. LANDING ON ARARAT

Armenia, endowed with a durable script and literature, was a mountain-island, perhaps, from the beginning; but as the ages passed the sea around it grew wider. Iran, Syria, Anatolia, Egypt, Atropatene all embraced Islam, Crusaders came and went, the tsunamis of the Mongols, Tamerlane, the Ottomans, and the Safavids washed over the island, and in 1915, nine-tenths of historical Armenia was lost in the new inundation of Genocide. The last remnants of the nation stood at the foot of Ararat, although the mountain was in enemy hands, although the sliver of Armenia shared the difficult fate of the Soviet Union. But the script of Maštoc' endured, and on the steps of the Matenadaran, the institute of ancient manuscripts at Erevan, the saint with his alphabet on a tablet like that of Moses gazes out over the survivor country. In 1962, Armenia celebrated his 1600th birthday, and the Soviet Armenian poet Paruyr Sevak (1924-1971) marked the occasion with the long poem *Ayr mi Maštoc' anum* "A man, Maštoc' by name". According to the testimony of Agathangelos and other sources, the Zoroastrian *yazata* Tīr, with the cult epithet *erazamoyñ*, meaning perhaps "dream-interpreter", had been the scribal god and psychopompos of pre-Christian Armenia. His role passed in Christian folk belief to the angel Gabriel, called the *groč*, "writer", who comes with his list of names to a man when his time is up. Sevak contrasts the saint to the unnamed Tīr:

A god there was, but no literature.
He, faithful to his own new creed,
Chased out our false divinity of writing
And himself remained in that one's stead.
But while our ancient scribal god
Continually performed a single task alone,
Taking men's souls and bearing them off,
He came that he might endow us with a soul!

Astvac kar, sakayn dprut'yun č'kar.
Na— havatavorn ir nor havati,
Dprut'yan mer sut ascun vñdec'
Ev ink'ě mnac' nra p'oxanak.
Bayc' minč' dprut'yan hin astvacě mer
Šarunak miayn mi gorc ēr anum:
Mardkanc' hogin ēr aṛnum u tanum—
*Sa ekav, or mez hogi pargevi!*³⁸

³⁸ Sevak 1973, 257.

The poet sees the advent of Maštoc' as the fulfillment of a kind of historical imperative:

Their birth always seems, even now, unexpected,
And for centuries after leaves men constantly amazed,
Yet in life yet they are ever born for only this reason:
Beyond all measure people have awaited them.

Nranc' cnundě mišt ēl t'vum ē anspaseli
Ev heto mardkanc' darer šarunak zarmank' ē patčařum,
Bayc' nrank' kyank'um mišt ēl cnvum en lok ayn patčařov,
*Or anč'ap' šat en spasel nranc'.*³⁹

Paruyr Sevak, it was noted above, evoked Armenia as a mountain-island. His *magnum opus* is an epic poem, *Anlřeli zangakatun* ("The bell tower that cannot be silenced", 1959), written in commemoration of the birth of the composer and ethnomusicologist, Komitas *vardapet*, who went mad in the Genocide, died in a Paris asylum twenty years later in 1935, and was re-interred at Erevan the following year. The poetic mentor of Sevak was the Soviet Armenian poet Eliše Č'arenc' (Yeghishe Charents). In 1936 Charents wrote a poetic *Requiem aeternam* to the memory of the composer. Charents himself was arrested and murdered by the Soviet secret police in 1937, during the Great Terror. In the 41st stanza of the poem, Charents evokes the sliver of Armenia shielded by Russia from the Genocide but ravaged in the wake of World War I by civil war, famine, and epidemics. It is an island.

Only at the end of the land,
On the last rock left of home,
Planted like an island burning
In an ocean of blood:
On that final rock
Still escaping inundation
Despairing raved,
Still alive, our nation...

Verjřin hoři vra lok,
Verjřin k'arin hayreni,
C'c'vac křzu nman řog:
Ŗvkianum aryuni,
Verjřin k'ari vra ayd,
Deř mnac'ac anořoř,
Zařanc'um ēř husahat
*Mer řotovurdě— deř ořj...*⁴⁰

³⁹ Sevak 1973, 255.

⁴⁰ Č'arenc' 1969, para. XLI.

And so one seems to stand, figuratively, on Ararat, the lone earth-island in the midst of the deluge.

In this study one has compared the fortunes of two isolated and challenged peoples and the way their two writing systems contributed to their cultural, even physical survival. My purpose has been to compare the paradigms of response to the convulsion of the collapse of multiple aspects of the social and spiritual world of a people, the invention of a script as a response, the creation of schools, and the rescue in literature of a cultural inheritance in Armenia, to the far less amply documented dossier of Rapa Nui. One stresses there is no relationship here, *per se*; rather, a model that may help us to understand Easter Island somewhat better than other models might do. There are, to be sure, other and durable models of the experience of Rapa Nui. The standard paradigm that comes to mind is the Cargo cult of the late-19th-century to post-World War II South Pacific: much as a Melanesian islander might construct a model of an airplane, hoping by sympathetic magic to bring back an American flier with his gifts of tinned meat and chocolate bars, the Rapanui could have invented RR to attract the mana of the Spaniards, with their ships, their wealth, and their power. There are certainly other Cargo phenomena on the island; and at many points the methodology and parameters of the Cargo cult are relevant and useful. But a characterization of this sole phenomenon of Polynesian writing *only* in the terms of the Cargo cult would miss the point, perhaps as surely as would the dismissal of Movsēs Xorenac'i, with his rich store of native genealogy and mythography, as an erudite but historically unreliable synthesizer.⁴¹ RR was more sophisticated than simple magic emulation, nor was it so much an outward-directed act of sympathetic magic as an artistic, spiritual, and scholarly project whose purpose was the preservation and perpetuation, against impossible odds, in a time of severe social dislocation, of a whole culture. The Armenian model would seem a useful additional one, to help us to understand the sophistication, magnitude, and genius (and tragedy) of RR on Rapa Nui.⁴²

⁴¹ See the important new preface by Prof. Robert Thomson to the revised reprint of his epochal English translation, Thomson 2006b, ix-xvii.

⁴² Thomas Merton, the great American Catholic monk, mystic, theologian, and poet, died in 1968 in Thailand during a trip to South and Southeast Asia. His spiritual journey in the path of Our Lord Jesus Christ had taken him far from the parochialism of the Western Church and the conservatism of dogma, to learn about Buddhism, to bear witness to the evils of racism at home and colonialism abroad, to listen to indigenous voices. He

I began this research by merely intending to look at the Armenian MS “hieroglyphs” and RR and set the issue to rest. But research cannot follow a predetermined course: not only must the evidence shape our conclusions, but our very argument sometimes will follow a road less taken. So I learned that RR was more than a corpus of strange symbols on inanimate boards: it was the embodiment also of the brave and ingenious attempts of the vivid, ever-versatile Rapanui in the wake of oblivion and destruction to create books in which they clung to the beautiful shapes of the RR glyphs. It is poignant that they could not even read these any longer, and had to resort to photographs of boards and lists by foreign savants. But they added to the books Latinized hymns and lists in their language, too— perhaps seeking thereby to unite the living voices of the texts they believed to have been recorded once in RR script, to the now mute glyphs. And as one examined the record, the energetic, tragic figure of the chief and teacher Nga'ara emerged; and there was the true heart of my story. Not a moai, but a man. He was so like my own Maštoc', whose fate could so easily have been like his; and then one saw the

began a cycle of poems, *The Geography of Lograire*, the first volume of which was published posthumously. The mythical, global, imaginal realm was not culled from Arthurian epic but constructed from the real surname, Des Loges, of the medieval French vagabond poet François Villon. The *loges* were to evoke the lonely, simple huts of foresters. Lograire embraces Melanesia and there are poems about Miklukho-Maklai in the cycle and Biblical paraphrases in the language of the Cargo cult, which Merton explained in a letter to a friend dated 27 February 1968— shortly before his untimely death. It is worth quoting here at length: “A Cargo movement is a messianic or apocalyptic cult movement which confronts a crisis of cultural change by certain magic and religious ways of acting out what seems to be the situation and trying to get with it, controlling the course of change in one's own favor (group) or in the line of some interpretation of how things ought to be. In some sense Marxism is a kind of Cargo cult. But strictly speaking, Cargo cults are means by which primitive and underprivileged people believe they can obtain manufactured goods by an appeal to supernatural powers (ancestors, spirits, etc.) and by following a certain constant type of pattern which involves a) a complete rejection and destruction of the old culture with its goods and values b) adoption of a new attitude and hope of immediate Cargo, as a result of and reward for the rejection of the old. This always centers around some prophetic personage who brings the word, tells what is to be done, and organizes the movement. Though all this may seem naïve and absurd to western ‘civilized’ people, I, in common with some of the anthropologists, try to spell out a deeper meaning. Cargo is relevant to everyone in a way. It is a way in which primitive people not only attempt by magic to obtain the goods they feel to be unjustly denied them, but also and more importantly a way of spelling out their conception of the injustice, their sense that basic human relationships are being ignored, and their hope of restoring the right order of things. If they want Cargo it is not only because they need material things but because Cargo will establish them as equal to the white man and give them an identity as respectable as his. But if they believe in Cargo it is because they believe in their own fundamental human worth and believe it can be shown this way” (Merton 1969, 148-149).

project, and the genius, of Maštoc' as it were with new eyes, taking nothing for granted and imagining how he performed his task, how he created a school, and what the writers of the Golden Age set down for posterity. And without him the dark waters might have risen over the snowy crown of Ararat and there would have been no Armenian book printed in 1512, or 2012. But there is, there is Sevak and Charents, and we look forward to another five hundred years of printed books, digital books, unimaginable media of the future but in a familiar alphabet that has been our ark and our time machine for sixteen centuries. And Rapa Nui ceased to be an impossibly remote, grassy, windswept hill where vast statues like denizens of another world stare into emptiness. It became a place I came to know, to love in its incomparable beauty and strangeness, of massacre and starvation, of near extinction, of human creativity, versatility, and resurrection, of a culture returning to and rejoicing in life. It became us: for *no* man is an island, whether in the mountains or on the sea; all are a single Rapanui *tainā*, an Armenian *ětanik'*, a human family.

Երկաթե Երկին
 Երկաթե Երկիր
 Երկաթե Եր Ծովն Ծիրանի
 Երկին Ի Ծովն Ռեւեր ու Երկին ... Եր
 Եր ԶԿԱՐԱՐԻԿԱՆ ԵԶԵՔՆԻԿ
 ԸՆԴ ԵԶԵՔԱՆ ՓՈՂ ԾՈՒԽ ԵԿԱՆԵՐ
 ԸՆԴ ԵԶԵՔԱՆ ՓՈՂ ԲՈՑ ԵԿԱՆԵՐ
 Եր Ի ԲՈՑՈՅՆ ՎԱԶԵՐ
 ԽԱՐՏԵԱՅ ՊԱՏԱՆԵԿԻԿ
 ՆԱ ՀՈՒՐ ՀԵՐ ՌԵՎԵՐ
 ԲՈՑ ՌԵՎԵՐ ՄԱՐՈՒԽ
 Եր ԱԶԿՈՒՆԲՆ ԷԻՆ ԱՐԵՔԱԿՈՒՆԲ:

name Կարթագը
 possibly encoded
 acrophonically

42 words; 26 repeated.

'Labored heaven
 Labored earth
 Labored too the sea *golden
 The labor in the sea had
 Also the little red reed
 Along the reed's shaft smoke rose
 Along the reed's shaft flame rose
 And out of the flame ran
 A blond little youth
 He fire hair did have
 Flame had he a beard
 And his little eyes were little suns.'

Colors:

Ըրանի	*golden
կարմիր	light red
(box, hur)	(fire, flame)
առեան	blond
(aregahn)	(sun-erb)
(cux)	(smoke)

Moses Xorenac'i, History of the Armenians (Պատմութիւն Հայոց)
 Hymn of the birth of the god Vahagn (Վր. Վառժապառ)

Rapanni colors: 'blue' meuna (lit. 'sea'); crimson mea mea (lit. 'fish gills');
 'grey' 'shu' shu (lit. 'mist'); 'pink' henga henga (lit. 'bright sky');
 'red' ura ura (lit. 'flame'); yellow tona mamari (lit. 'egg yolk')

Iranian in the *Hekhalot*

JAMES R. RUSSELL

Harvard University and the Hebrew University of Jerusalem, Israel

It is a truth universally acknowledged, that Zoroastrian Iran exerted a considerable influence upon the formation of Judaism, from the time of the first encounters between the Israelites and the Iranians till the end of the Sasanian period.¹ This note deals with a designation

¹ The *Cambridge History of Judaism* reasonably assigns to these relations as a *terminus post quem* the accession to power of Cyrus the Great in 559 BCE. However it is over a century since Moulton in his *Early Zoroastrianism* postulated a Median tale as the *Vorlage* of the admittedly much later tale of Tobit, which might push the date back a good century. (For some reflections on Iranica in the text see Russell, 2001, reprinted in Russell, 2004.) In a paper forthcoming in "Iran and the Caucasus", *Deuteronomy and the Medes*, I have further advanced the modest proposal that the fifth of the *Five Books of Moses*, with its prophetic and eloquent central character, its strong moral dualism, and its appeal to free choice, bears the strong imprint of Median Zoroastrianism. The scroll of *Devarim* was ostensibly rediscovered in the Jerusalem Temple in 622 BCE, exactly a decade before the Median conquest and destruction of Nineveh, the capital of the hated Assyrian oppressor (cf. Jonah and of course Tobit). Somewhat ironically the great Russian Orientalist Igor Diakonoff in his *Istoriia Midii* suggested a scenario that is in some ways the other way around: that one consider Josiah's presentation of the Levites' scroll to the thunderstruck multitude as a fair analogue to the scene of the acceptance of Zoroastrianism from the Magi by the court of the Medes at Ecbatana. We have no Median texts, only *Nebenüberlieferungen* in Old Persian that are either Median or *Gemeiniranisch*; and, with the possible exception of the structure plausibly identified by Prof. David Stronach as a fire altar at Tepe Nush-e Jan, there are no known religious monuments of the Median period either. What we do have, though, is the huge Middle Iranian religious (and other) loaned vocabulary of Armenian, much of which the late Prof. Anahit Perikhanian called, with reason, Middle Median. And the first known transcription of Kurdish, in a seventeenth-

of Heaven in the *Ma'aseh Merkabah*, the body of late antique Jewish texts that describe a *Himmelsreise der Seele*² that is termed “descent” (*yeridah*) to the Divine chariot.³ The descriptions of the tremendous distances from one palace to another, the staggering dimensions of the angels, the rivers of fire, the *hashmal*⁴ – all are intended to overawe the reader preparing to undergo the ritual of spirit travel.

century Armenian ms, is identified by the copyist as *marerēn*, “Median”. It is, fittingly for the present discussion, a translation, presumably from Armenian, of the Trisagion, possibly for use by Christian proselytes. (See Russell, 1994, repr. in AIS.) For a survey of the Iranian component in Jewish Scripture see Winston, 1966 (for the reference to which I am indebted to my colleague at the Hebrew University and good friend Prof. Michael Stone); since then, the great Iranist Prof. Shaul Shaked of the Hebrew University has shepherded into print the numerous volumes of the *Irano-Judaica* series; and the Israeli scholar Prof. Geoffrey Herman has written many illuminating studies of *Irano-Talmudica*.

² Davila (2001) compares the practitioners of Hekhalot mysticism, including R. Akiva, to the shamans of Siberia and East Asia. They practice prayer, fasting, and seclusion. They often encounter fearsome obstacles – supernatural creatures of various kinds – on their dizzying journey. They pause in the course of their narratives to describe the marvels and dangers of the upper worlds. I have suggested typological comparisons to shamanism of the spirit journeys of numerous Iranian religious figures, from the prophet Zarathustra himself to Arda Viraz, the Sasanian high priest Kartir, and the heretic Mani: see Russell, 1991, repr. in AIS. Again, the Armenian dossier is helpful: see Russell, 1984, repr. in AIS. Just as shamans carry all sorts of talismans and recite magic formulas to protect them on the spirit-road, so the Zoroastrians employed at every stage of their own trips the Avestan mantra *humata hukhta hvarshsta* «good thoughts, good words, good deeds» (see Russell, 2010). *Mutatis mutandis*, descenders to the Chariot employ as a talisman against the angels of violence the *mezuzah* (Davila, 2001, p. 175). This is the text of the credo from *Deuteronomy*, the *Shema*’ («Hear O Israel, the Lord is our God, the Lord is One only!»), that is placed in a case with the Divine name *Shaddai* (“the Almighty”) and nailed to one’s doorpost. The same text is contained in the head and arm boxes of the *tefillin* (see below). Such usage might derive from alien shamanic or magical practices, or represent a parallel, internal development.

³ See Russell, 1997, repr. in AIS, on the idea of “descent” here.

⁴ Amber or electrum – basically, a solid substance that is, paradoxically for earth but not so for heaven, also fire. There are walls of *shayish tavor* (“pure marble”)

Shamans generally undertake their dangerous mission in order to heal a person of a physical ailment or a psychological malady (“soul loss”), or to obtain mantic information for the community or affirmation that their faith and practice are true.⁵ The main purpose of the journey is to pray with the angelic host in the presence of God: the liturgy is *grosso modo* the same as that of the *Qedushah*, “Sanctus”, that is sung in synagogues on earth. This is a hymn, derived from the visions of the Prophets Ezekiel and Isaiah, of praise. Even the ritual garb of the participants is the same as that of observant Jews down here.⁶ Another purpose of the journey was to seek the assistance of

that crash like mountainous waves, but one is cautioned not to offend by one’s ignorance and unpreparedness the hosts of heaven by exclaiming «Water, water!» Delving too deeply into such mysteries can lead to madness or worse: the Babylonian Talmud on *Hagigah* 13b describes how a student of Talmud who attempted «to expound the *hashmal*» was consumed by heavenly fire (Morrays-Jones, 2002, pp. 59-60).

- ⁵ Social and existential crisis for the Iranian people in wartime, when their fundamental beliefs are under threat, is thus the motivating situation and narrative context for the journeys of Vishtaspa, and of Arda Viraz, who takes the “*mang* (hallucinogenic drug) of Vishtaspa” to take his own trip. See Russell, 1996.
- ⁶ Thus, the Lord wears phylacteries (*tefillin*), just as we do (except on Shabbat and festivals of course). (See Swartz, 1992, p. 69 & n. 4 and 92: Sandalphon ties them for the Almighty.) Such anthropomorphic details are not unusual in the Hekhalot visions and related literature such as the *Shi’ur Qomah* (a treatise on the dimensions of the Divine body), though they are anomalous to the aniconic spirit of mainstream Judaism. *En lo demut ha-guf ve-eino guf*, «He has no semblance of the body and He is not a body», the standard prayer *Yigdal* insists, echoing the thirteen articles of faith enunciated by Maimonides. For Zoroastrians, even though the supreme God Ahura Mazda is *pad menogan menog*, «a spirit [even] among spirits», that is, transcendent, He is shown in some representations wearing the ritual girdle, the *kusti(g)*, bound with the telltale reef knot. (On the use of this girdle in Armenian see Russell, 1981, repr. in AIS.) In the Hekhalot texts the crowns in heaven have “bindings” (*qishrei ketarim*) (Davila, 2001, p. 62). This detail reminds one again of an Armeno-Iranian practice: the *pativ* (lit. “honor, dignity”) tied – again with a reef knot behind (the Armenian loan-word for this, *ashkharavand*, may be the term now

the angel Yofiel in learning and, most important, remembering *Torah*. Such a mission might seem to have something of the smell of the lucubrations of a Yeshiva student; but one must remember that in the Jewish community it was once believed that an ignorant person cannot be truly pious. God made the *Torah* two millennia before the rest of Creation, so that He might have some time to play with it; and He studies it one quarter of every day. Study is, then, no trivial pursuit.⁷

The material of the Jewish texts on ascent to Heaven has antecedents in the canonical visions of the Prophets, and in Enoch and other apocryphal literature of the inter-testamental period, and draws from Jewish liturgical prayers of the late Second Temple period and after. As we shall see presently, Middle Iranian loan-words are used for a number of key concepts and terms: these come most likely from the time after the destruction of the Temple and in no way before the first century CE. There is a brief passage, most likely from a text of the late first century, that may suggest that Jewish mystics had plotted out

lost in Iranian itself) – around the royal crown. Without it the wearer of the crown did not possess legitimacy. Davila notes that heavenly travelers had up to four crowns, which they had to display to the angelic guardians of the seventh and final palace to gain passage. Why four crowns? These can perhaps represent the four directions or the four letters of the *Tétragrammaton*; cf. the four *tsitsit* (“fringes”) of the *tallit* (“prayer shawl”), the four boxes of the head *tefillin*, and the four-armed form of the Hebrew letter *shin* often inscribed on the latter.

⁷ When I was a postgraduate student at SOAS I had a friend named David, an immensely learned and pious but quite destitute and homeless Orthodox Jew. David had keys to many London synagogues where he was welcome to kip; and mine was one of the many homes where he always found a welcome and a meal. We sometimes discoursed upon *Torah* all night – though we had no disciples, as the Sages did in the Passover *Haggadah*, to come in and tell us it was time for the morning prayer. David once wished to travel to Antwerp to discuss a point of *Torah*: cheap travel was available through the National Union of Students of the UK, but one had to be at some institution of learning to get an ID card. David went to do the needful and later showed me his document with a flourish: it recorded him as a student at the *Yeshivah shel Ma'alah*, the Academy On High. He enjoyed his trip to Belgium; perhaps he has since visited the Hekhalot as well.

a kind of road map of the ritual of ascension to the celestial palaces and the chariot. A number of early Christian authors cite fragments of the *Gospel of the Hebrews*. This is a text, now long lost, that was used, as its name suggests, by Jewish Christians such as the Ebionites⁸ and Nazoraeans who followed Jesus (though some thought him a human prophet, not a divine being). They preserved Sabbath observance and other *mitzvot* including the dietary laws of *kashrut*, and continued to venerate both the Temple itself and the city of Jerusalem by name (not the de-Judaizing euphemism “the holy city”), unlike gentile proselytes who came to deviate from that path and follow what quickly became an irreconcilably different and mostly hostile religion. The original was most likely in Hebrew or Aramaic, and it continued to be known (and deprecated by Pauline Christians) down to the end of the first millennium. Clement of Alexandria (*Stromata* v xiv 96 3) cites this passage from it: «*Ison gar toutois ekeina dynatai: ou pausetai ho zētōn, heōs an eurēi: eurōn de thambēthēsetai, thambētheis de basileusei, basileusas de epanapausetai.*» («For equal to these, those he can do: the seeker will not cease till he finds. Finding, then, he will marvel; having marvelled, he will reign as a king; having reigned, he will rest.») A. F. J. Klijn, who studied minutely this and parallel passages, notes that its rhetorical structure is that of a *skhēma lexeōs* (*figura elocutionis*) or *klīmax* (*gradatio*).⁹ I would suggest that the very literary terminology gives away the practical side of the passage: it is

⁸ This means probably “the poor”, to whom Jesus in his Sermon on the Mount in Matthew (following Psalm 37) promises the inheritance of the world, rather than the followers of a man named Evyon, cf. the designation by Zarathustra of his followers as *dregu-*, “poor (in spirit)”: the Sasanian high priest was *driyōšān jādagōw*, “advocate [= *paraclete*!] of the poor” (i.e., the believers); and as Prof. Nina Garsoian pointed out, the designation by P’awstos of the fourth-century Armenian Christian patriarch as *jadagov zrkeloc*, “advocate of the deprived” is a calque upon the Sasanian title. Muslim Persian *darvīš* is a later reflex of the term, acquiring new, Sufi associations with its Arabic parallel *faqīr*, a term dignified in the Qur’an with its Abrahamic and Iranian precursors.

⁹ Klijn, 1992, p. 5 and pp. 47-51.

a schema, a map – and a ladder to climb with its rungs the stages of the praxis of ascent (cf. the Hebrew and Arabic usages of *sullam*, and of Arabic *mi'rāj*, the latter drawn perhaps from Christian Ethiopic mystical literature). The seeker, be he a student or a seasoned mystical sage, expends effort without rest in prayer and *ascesis*, and finds – that is, he is successful in performing the heavenly journey. Upon arrival above he experiences wonder at the vision of the otherworld, with its awesome gulfs, magnificent chambers that seem to be both stone and water at once, the rivers of fire, the winged beings, the vast spans of the bridges. Then, upon arrival in the seventh palace, the traveller is crowned (cf. Greek *basileuō*, “reign as king”). There, too, in that seventh, Sabbatical chamber, he descends to the Chariot, and is granted rest. So it is possible tentatively to suggest that the Jewish Jesus presented in this text might have been an early adept of the practice that the Rabbinic texts of the *Hekhalot* and *Ma'aseh Merkabah* elaborate. He seems further to assert that others can perform the ascent, too.

The overall praxis of the journey, to the stages of which the passage cited from the *Gospel of the Hebrews* may laconically (and perhaps cryptically) allude, is called by the Iranian loan *raz*, lit. “secret” (the Hebrew for a secret is *sod*);¹⁰ the traveller's goal in heaven is called overall the *pardes*, “Paradise”, also an Iranian loan, here perhaps another term for *gan 'eden*, “the Garden of Eden”, which is a common Jewish designation of the afterlife. God himself sits behind a curtain called *pargod*,¹¹ also an Iranian loan (the veil of the earthy Temple

¹⁰ On *raz* and its use with respect in particular to dream visions (cf. Arm. *eraz*), see Russell, 1992; on the Iranian parallels of Arm. dream visions see Russell, 1988-89, both repr. in *AIS*.

¹¹ The common Armenian word for a curtain, *varagoyr*, derives from the same or a closely similar term in Middle Iranian that gives us the loan *pargod* in Hebrew. The late tenth-century Armenian mystical theologian St. Gregory of Narek composed a cycle of 95 devotional and meditational prayers, the *Matean olbergut'ean* (Book of Lamentation) that can be divided into three parts: successive portions of the liturgy or procession through the chambers of a church to the altar – a kind of Christianized Merkabah journey. The 33rd

is called by the Hebrew term *parokhet*).¹² Why should Iranian loan-words replace well-known ones in Hebrew – the *lashon qodesh* (“sacred tongue”)! – in the terminology of the Merkabah vision? One possible reason is that the Merkabah texts were composed at a time, and in a milieu, when and where Jews used Iranian terminology often and abundantly, in magic and lore even as in law and learning. This would be the Talmudic era, especially in Parthian and Sasanian Babylonia but in the Land of Israel, too. Might we then also find some significant *calques* of Iranian terms in the Merkabah literature? I would suggest there is one such possible case, of some interest.

In *Ma'aseh Merkabah* (para. 551 in Schäfer 1981), R. Akiva beholds the knot of the *tefillin* of the Almighty and recites a hymn of thanksgiving for his safe journey. It is a version of the well-known daily Jewish prayer *'Alenu*, «It is [incumbent] upon us [to praise the Lord of all]». Where the canonical prayer begins in the first person plural, R. Akiva makes it starkly singular, perhaps to underscore his

chapter is to be recited by the celebrant of the Divine Liturgy, an ancient note to the text instructs, till he perceives a visible light streaming down to him. In the text we read: «*nax k'an zkaruc'anel zloycd macuac verjnum varagurid yawrinec'er, karot tirapēs, zbovandak bnut'iwns amenic' bnawic' boloric' goyic' amenayn ēic' yanēic'.*», «before constructing the liquid congealed to your final curtain you fashioned, capable in lordly fashion, the entirety of the natures of every thing that can be, the whole of existent things, of all that are from those that are not.» The liquid-solid should be the wall of the Hekhal about which one is not to exclaim *Mayyim, mayyim!*; the *varagoyr*, the *pargod*. The alliterative pair */luts-mats/* clearly plays with intention on the paradox of liquid reconciled with solid in one substance. The liturgical position of the prayer leaves little doubt that it is a heavenly vision: the light coming down is heaven meeting earth, which is needful for the celebration of the mystery of the mass itself. Armenians had access to an abundance of apocryphal literature, including *the books of Enoch* that underlie in part the *Merkabah* corpus. But the poet and mystic seems to add something personal, linguistically creative, and maybe experiential, to his text. See Russell, 1996-1997.

¹² For the difference between celestial and earthly curtains, see Orlov, 2004 (I am indebted to my colleague and friend, the great Israeli scholar of Kabbalah Prof. Moshe Idel, for this reference) and Morray-Jones, 2002, pp. 163-165.

uniquely successful position in the little band who undertook the journey says instead *‘Alai* – It is upon me! The prayer thanks God for not making us like the nations of the lands or placing us like the families of the earth, but the *‘Alai* version thanks the Lord, more pointedly and vengefully, for not making us «like the ways of the wicked» and not putting us down “like the ways of falsehood». The Iranians call non-Zoroastrians *ak-den*, “of wicked religion” or *druwand* “followers of the lie”, among other complimentary terms – the usage of the hymn, then, transcends Israelite exceptionalism to echo on a vaster scale the moral and cosmic dualism of the Mazdeans, and, indeed, of some of the apocalyptic texts found at Qumran. But wait, there’s more! as American television advertisers are wont breathlessly to exclaim. For after the completion of his altered version of the *‘Alenu*, R. Akiva adds this most unusual and original blessing: «*B’a’y’ ’dyr bħdry šyrh* (*Barukh Ata Adoshem, adir be-ħadrei shirah*)», «Blessed are You, O Lord, resplendent in the chambers of song.»¹³

The designation of heaven as “the chambers of song” in R. Akiva’s concluding blessing is unique in Jewish usage to this block of text in the Hekhalot corpus. It is not found elsewhere, to the best of my knowledge and that of the savants who answered one’s queries on the matter; nor has it a known antecedent expression in the tradition. But Gathic Avestan *garō.dəmāna-*, Younger Avestan *garō.nmāna-*, Zoroastrian Book Pahlavi *rōšn* (“luminous”) *garōdmān*, traditionally believed to mean “house of (welcoming) song”, has been the standard, common Zoroastrian term for the abode of Ahura Mazda in heaven since the beginning of the faith till now. It has a parallel in the earliest and kindred stratum of Indic tradition: Zaehner noted that in the Rig Veda, the king of the Otherworld, Yama, lives in his *māna-* of the *devas* surrounded by *gīr-*, “song”.¹⁴ So the concept of the afterlife as

¹³ Swartz, 1992, pp. 118-125. The blessing with *ħadrei shirah* is found also in para. 549, but not elsewhere.

¹⁴ Zaehner, 1961, pp. 132. One is tempted to derive from Garodman, whether as a proper name (cf. the derivation of Azarbaijan from one Adurbad, though

a place of song might well have pre-dated the Prophet Zarathustra. In the *Gathas* and later texts the term is found most frequently in the proximity of terms that mean “praise” or the like (*stūtō*, *vahmāng*, etc.). So it is reasonable to suppose that from early times Iranians imagined heaven as a place where the angelic hosts and the souls of the righteous sang songs, particularly hymns of praise to Ahura Mazda.¹⁵

I know of no Iranian in history named Gar(o)dman) or an appreciation by a Persian of the heavenly beauty of the place, the Armenian toponym of mid-late Sasanian times Gardman, Gardmanik, Gardmank', etc., cf. Turco-Pers. Gardīman *çay* (river) in the northeastern region of Utik'. *Kird-pān, “protector of the city” or the like, given the location of the place near the barbarian frontier of the Caucasus, might be a more down to earth explanation, since there are Georgian forms with final *-ban* instead of *-man*. But the Arm. attestations and forms are numerous and without such variation, which could be a regular internal development.

- ¹⁵ My friend, colleague, and former pupil Prof. Jennifer Rose alerted me to the recent tendency of some scholars to translate the term instead as “house of welcome”. The suggestion seems to have belonged originally to Prof. Karl Hoffmann, from whom Prof. Jean Kellens adopted it, adding, «Ce sens est beaucoup plus explicite et permet de rompre avec celui de ‘demeure du chant’, qui anticipe dangereusement sur des conceptions religieuses plus récentes selon lesquelles le paradis est l’endroit par excellence où l’on célèbre la divinité» (Kellens, 1974, p. 28 and n. 3). The Greek underworld of Alkestis and Admetos, of Hades and Persephone, takes in all, swallowing them greedily; and Armenians thought the earth-goddess Sandaramet the *pandoki* (i.e., Greek *pandokheion*, “receiver of all” – in later centuries and less sinisterly, the hospitable terrestrial inn, from Iranian into Arabic and all the way to Spanish *fonda*). The Middle Iranian of the House of Song becomes in Armenian, darkly, the loan *gerezman*, “tomb”. So King Tiridates, not yet converted, sarcastically asks his prisoner St. Gregory, soon to be the Illuminator of the nation, whether Christ is some *šahapet*, “tutelary spirit” of the tombs (*gerezmanac*). Why yes, He is, the saint retorts gamely, launching into another homiletic assault on the royal ears. (On these chthonic spirits see Russell, 2014-2015.) But one sees nothing in the *Gathas*, *Yasna Haptanghaiti*, or the later *Avesta* to suggest that singing, and specifically praise singing, in the Zoroastrian heaven was any sort of novelty. No danger at all there, one would think; and whose and what exactly are these undefined «more recent religious conceptions?» Prof. Kellens’ linguistic analysis and argument may be entirely correct, yet still have no direct bearing on our discussion in any case, considering that the Hekhalot texts

It was not the only activity there but given our designation of heaven it is reasonable to suppose it was the most important one.

It is only in the last three decades or so that we have had pictorial representations of that Zoroastrian heaven. They support our conviction that believers in the Good Religion conceived of Garodman as a place of song, at least in the early to mid-first millennium CE. For in the late twentieth century archaeologists began to discover Central Asian ossuaries, then funerary bas-reliefs, mainly of Sogdians, from China that portrayed Zoroastrian funerary rites, the crossing of the bridge of the separator (*Chinvat pul*) to the afterlife, scenes of that otherworld, and portrayals of Zoroastrian divinities and supernatural beings. Prof. Frantz Grenet, followed by Dr. Judith Lerner, were the pioneers in bringing these discoveries, many of which were made by Soviet researchers, to the attention of western savants. (The late Prof. Boris Marshak of the State Hermitage in Leningrad, with his studies of Sogdian frescoes from Penjikent and elsewhere, had already been enlarging our understanding of cultural complexity and cosmopolitanism in eastern Iranian culture.) These finds have changed our conception of Zoroastrianism considerably. Although the Sasanians depicted some *yazatas* in bas-relief, the more zealous priests destroyed temples with images in the round, preferring to found fire temples. Overall the religion of the Persians seemed averse to art – so much so that it was sometimes proposed that Iranian religious ideas influenced the Byzantine iconoclastic movement, perhaps through Armenia. But the Sogdian monuments, of one of which this writer was one of the early interpreters,¹⁶ present a Zoroastrian artistic culture that was rich

come from a period at least a millennium after Zarathustra, when Garodman meant for those who used the term “house of song”, even if the domicile had a welcome mat at the door.

¹⁶ I studied in 1992 the panels at an American gallery that later became holdings of a Japanese family, finally to be housed in the Miho museum (see *Chinese Archaic Bronzes, Sculptures, and Works of Art, June 2 to June 27, 1992*, J.J. Lally & Co., Oriental Art, New York 1992; *Ancient Art from the Shumei Family Collection*, Metropolitan Museum of Art, New York 1997.) and delivered a

and diverse in the forms it employed and the depictions of sacred beings with a standard iconography that found a place in its canons. For the present purpose, the importance of these monuments is in their portrayal of heaven, and that is without doubt shown as a house of song. One might be able to portray a man or woman singing in bas-relief, but the inherent difficulty is that a person with her mouth wide open and hands spread, might easily be misunderstood by the viewer as a damsel in distress summoning aid, not a diva. The easier shorthand, as legible to the viewer now as it was then, is to carve a musical instrument in the performer's grip. Thus we have a winged *apsara* strumming a lute while flying through an exotic and supernal ether teeming with puffy clouds, gods seated on lotuses, and gambolling *simurghs* and other fabulous beings.¹⁷ Stationary divine beings, too, play music instruments: we know they are supernatural because they stand on lotuses – another handy and easily understood symbol of divinity borrowed from India (and used by the Sasanians, too, in the depiction of the god Mithra at Taq-e Bostan; Christians of the Far East situated the Cross on a lotus, using the same symbolic

lecture, "Zoroastrianism and the Northern Qi Panels," at Harvard in March 1994; and at the University of California, Berkeley, a month later. The lecture was published in the *zs* (= *Zoroastrian Studies*) *Newsletter*, Vol. xvii No. 4, Dec. 1996-Vol. xviii No. 1, Mar. 1997, Bombay (Mumbai). At Harvard, Wheeler Thackston observed that the general composition of some of the scenes suspiciously resembled the miniatures in Islamic Persian manuscripts, to which one replied that the latter did not arise by parthenogenesis, given the rather limited artistic endowments of the conquering Arabs. At Berkeley, Prof. David Stronach declared that the panels were fakes – too good to be true – and that I had been the innocent dupe of an unscrupulous dealer in antiques. But he later accepted in a gracious personal letter that I had been right all along, and apologized for any offense he might have caused. At this remove I can only look back with warmth and gratitude at having had the opportunity to know both those giants of scholarship.

¹⁷ On the east side of the Wirkak sarcophagus, for instance, a winged divinity in the sky of Heaven (on the far side, that is, of Chinvat bridge) is playing a lute: see Shenkar, 2014, p. 348, pl. 162.

language¹⁸). To flip around the Hermetic dictum, As below, so above: on the right half of a double panel from the Miho funereal couch reliefs, a four-armed goddess, probably the Sogdian Nana, looks down at two *bodhisattva*-like beings who are playing musical instruments; and below them are musicians and a female dancer.¹⁹

But given the limitations of pictorial art, how do we know there was singing involved, not just instrumental music? Traditionally, there had to be; and there is no reason to think that the joys of the Mazdean heaven were more restricted than, or appreciably different from, the ones of a happy life below. At the princely and royal courts of ancient Iran and Armenia, the ubiquitous minstrel (*gōsān*, Arm. L-w *gusan*) both played a stringed instrument and also sang to its accompaniment everything from artful praises of his noble employer (if he meant to keep his job) to romances and epics. His patron and the latter's guests sat on their couches, propped up by stacks of pillows, and feasted, and lovely dancers in revealingly diaphanous silken robes often entertained them, too. If *razm*, war, was one half of a ruler's life, then *bazm*, feasting, was the other. I like to hear Greek while I eat, burps the *nouveau riche*, manumitted slave Trimalchio in the *Satyricon*. Manners were probably more decorous on the far side of the Euphrates frontier, but there still had to be lyrics to the music.

The soul of a deceased Zoroastrian chants the *Gathas* for three days before rising to judgment: the cheerful *Ushta* hymn if he has been good; or, if he was wicked, the plaintive *Kam nemoi zam*, a sort of Iranian precursor to the American spiritual «O sinner man, where you gonna run to?» It is likely mortal travellers to the otherworld chanted the mantric *Humata*, *hukhta*, *hvarshata* to power their way. Songs of a sort, then, with lyrics. But although it seems beyond doubt that heavenly minstrels up there sing praise songs and strum lutes, we do not know what tunes exactly were being sung in the Luminous House of

¹⁸ On this image of Mithra and its adoption as that of the Prophet Zarathustra in later tradition, see Russell, 2016.

¹⁹ Juliano and Lerner, 2001, p. 309 and fig. J.

Song, and we have no words. In this respect we are more fortunate in the neighbouring Chambers of Song of Israel, where the angelic chorus, led by Metatron, intone the *Qedushah*. There are musical instruments, too: in 2 *Enoch* 18.8-9, the celestial Watchers (*Egregoroi*, *Trin*) are bidden to perform the liturgy before God, and «four trumpets trumpeted in unison with a great sound, and the Watchers burst into singing in unison. And their voice rose in front of the Lord, piteously and touchingly.»²⁰ Alas, we know all too well what the trumpets probably looked like, too: long, slender, golden – they are shown ahead of the great Temple menorah as part of the plunder of Jerusalem, in the bas-relief on the infamous Arch of Titus.²¹ There were harps and other instruments played in the Temple; and choruses of Levites daily sang the Psalms. The Zoroastrian heaven, then, might have mirrored the usages of the royal court; the Jewish one definitely reflected those of the Temple.

So is the term *ḥadrei shirah* a calque on *Garodman*? A case can be made, when one considers how common is the latter; how rare, the former expression. It is a sound working principle in determining vectors of cultural influence to assign priority to a phenomenon that is commonplace in one tradition, but unusual, in another. The culture where it is commonplace is the transmitter; the one where it is unusual, the receiver. But there is no need of a baldly essentialist assertion of one-way transmission, either; and such a simplistic picture would in any case most likely be misleading, since no culture is

²⁰ Orlov, 2004, p. 21.

²¹ It is a monument to barbarism, a model for the later art (as it were) of fascism. After Israel lost the war of 66-74 CE, the Romans dispersed Jewish prisoners to various cities to be thrown to wild beasts or be forced to fight each other as gladiators. *Ou thriambēsomai*, «I will not be marched in a triumph», Cleopatra said, knowing the humiliations that lurked ahead of Actium, as she committed suicide rather than be taken prisoner; many of our ancestors, on Masada, chose to die as free men rather than live as Roman slaves. A stubborn lot, the Jews. May the Temple be rebuilt, speedily and in our days. Masada shall not fall again.

a *tabula rasa*. It is evident besides that the Hekhalot were conceived of houses of song from the start and R. Akiva did not need to know Parthian to describe them thus, to give them such a name. But in the Land of Israel, where tradition tells us that if you saw an Arsacid cavalry mount hitched to a post, you were to look with eager hope for the footsteps of the Messiah, Iranian ideas were in the air. And farther east, in Dura-Europos, Iranian images were on the very walls of the synagogue. Iranian words sounded good to the ear; and awareness of the term Garodman might have served as a helpful nudge towards the coining of a term for which there was already internal justification aplenty.

And then there is the matter of the architecture of heaven. There are roads, rivers of fire, and bridges. Often the paths of heaven (*shvilei shamayim*) and the bridges are confused.²² It is as though they were a new element superimposed on the earlier landscape, but without a clear idea of their function. Angels stand on them, or on roads, and challenge wayfarers. All this sounds very much like the Zoroastrian *Chinvat pul*, where if you are accounted righteous (as Kartir was, so he even depicted it in bas-relief), you meet your *Daēnā*, the lovely maiden who is the embodiment of your religious virtues in life. If you have been a sinner, the bridge narrows, a horrid hag clutches you in her withered arms, and down you plunge to the pit of hell, there to be mocked and abused by the evil spirit Ahreman and his pandemonium. The Zoroastrian bridge is an integral and logical part of the whole scheme of transit to the afterlife; while for Enoch, the Midrash *Mishle*, but especially the Hekhalot texts, the bridges are perhaps not so much afterlife as afterthought. Perhaps somebody heard about the Mazdean span of the separator and liked the idea; so, a borrowing again?

I do not know. One simple explanation of these bridges might be that Second Temple Jerusalem – then as now a hilly place – had them, in particular the famous one that spanned the valley between

²² Swartz, 1992, p. 71.

the western wall of the Temple Mount and the district where the high priests lived (now the Jewish and Armenian Quarters). Archaeology and other antiquarian pursuits are extremely important; but for a continuously living religion that addresses the entirety of real life, as Judaism does, they are secondary. In the early nineteenth century the Hasidic master R. Nachman of Breslov did something else, then, with these bridges. He inverted them: he took the celestial bridge and brought it solidly down to earth, making of it a lucid metaphor of man's life span. Then he changed it from a visionary image of shock and awe to be negotiated by an adept, into an existential condition for the *shtetl* Jew to encounter and make his way across in piety and joy. Rav Nachman's bridge is to be crossed, not in a state of trance buttressed by esoteric learning and magical preparation, but with faith and trust. He bade his followers: «*Kol ha-'olam kullo gesher tsar me'od, ve-ha-'iqqar lo le-hitpahed klal*», «All the world in its entirety is a very narrow bridge, and the point is not to be afraid at all». Enough of the noumenous – *don't* be afraid! His words have become a *niggun*, a Hasidic song, that is popular in Israel and the diaspora. This injunction not to fear really is the main point. The Jew is to venture boldly where angels fear to tread, but it makes of him not a fool, but a saint.

A little over century later, in 1927, the *Friediker Rebbe* of Chabad Lubavitch, R. Yosef Yitzchak Schneersohn of blessed memory, emerged from his exile by the Soviet regime in Kostroma, and composed a Russian mantra: «*He боюсь я никого, и не верю никому, только Богу одному. Нет, нет никого кроме Него одного!*», «I do not fear anyone, and I do not believe anyone, only God alone. No! No! There is no one at all but Him!». And these verses of defiant rejection of fear, but of love and praise, too, and the profession of the absolute oneness of God that harks back to the *Shema* as well (it also encodes Kabbalistic ontology), became a *niggun*, set to a vigorous old Russian tune. Thousands sing it now, and one hopes all the good souls of Creation will join in its happy chorus someday, here on earth in the kingdom of Moshiach, and before the Master of the Universe, in the luminous chambers of song.

FROM PARTHIA TO ROBIN HOOD:
THE EPIC OF THE BLIND MAN'S SON.

James R. Russell
Harvard University and the Hebrew University of Jerusalem

לכבוד הרב מיכאל סטון מורי וידיד נפשי

Nearly a quarter century ago, as we sat by his stove on a cold Jerusalem winter night sipping arak and nibbling sunflower seeds, Prof. Michael Stone declared that it was time I began a new large project, on epic. Since then one has researched Armenian epic literature, from the fragments of the great cycles of the pre-Christian Artaxiads and early Christian Arsacids to the mediaeval and modern folk epics of Sasun and Kašt. Most of these researches have been published and reprinted (*An Armenian Epic: The Heroes of Kasht*, Ann Arbor: Caravan, 2000; and *Armenian and Iranian Studies*, Cambridge, MA: Harvard Armenian Texts and Studies, 2004). This essay considers the ramifications (that pun will become apparent presently) of another; and it is a pleasure and honor to dedicate it to a great scholar and lifelong friend.

The epic of the Blind Man's Son (*Köroğlu*) has long been popular among Armenians, and several versions in Armenian are known— both transcriptions from oral recitations in dialect and renderings into the standard modern literary language. But all the characters are Muslims and by far the greatest number of versions of the epic are in Turkic languages, from Central Asia through Iran into Azerbaijan and Turkey. However one must agree with some other scholars that the early form of the epic probably took shape in Arsacid Armenia, with its roots in Iranian types that are older still. The dossier of Armenian epic is thus incomplete without consideration of it; and it is of additional interest in that, unlike the dynastic cycles, it deals with bandits and men of the lower and oppressed classes, rather like

other narratives elsewhere of the Robin Hood type. Its study calls for different methods and other paradigms than those used to interpret the standard epic hero and his martial deeds. The latter's tragic flaw is often his overweening pride, Greek *hubris*; whilst in the bandit epic the Greek derivative verb in its passive voice, *hubrizomai*, to be the humiliated victim of another's pride and violence, supplies the key motif and structural turning point of the plot.

There is a fairly concise but very interesting version of the epic of Kōroğlu in eastern Armenian here that was produced at the turn of the 20th century by an *ashugh* ("minstrel") who worked from both printed Turkish editions and familiar oral recitations by fellow masters of his craft.¹ He intended it for the edification of a community midway between rural mediaeval tradition and urban modernity, between the cultures of orality and print. Though his text was composed in a newly standardized literary language and was set in type at a modern press, it was intended to be enjoyed by an audience used to hearing it spoken and chanted aloud. Such a nexus of cultures, of technologies, is not unique for a people whose history stretches unbroken across cataclysms and ruptures that have brought an end to the career of some nations and thrown up others. Another example of a story with venerable pedigree in Armenian and roots to the east that began its career orally and then found its way into written and then printed literature is the "Tale of the City of Brass (or Bronze)" (Arm. *Patmut'iw n pñjē k'alak'i*) from the collection *Thousand Nights and a Night*, the story most likely going back itself still farther, in my view, to the tale of the Phantom City in the *Saddharmapundarikasutra* ("Lotus Sutra of the Good Law"), a monument of Mahayana Buddhism crafted most likely among speakers of Eastern Iranian languages along the trading roads of Central Asia.²

¹ Mkrtič' Taleanc' (Ashəg [Ashugh] Jamali), tr. from Tk. to Arm., *K'ōrōllu hek'iat'ə Gzir ōllui ew Pōli bēki het patahac anc'k'erə*, Part I, Tiflis: Tparan Movsēs Vardaneanc'i, 1897, repr. in Rāzmik Sołomonyan, ed., *Aṣuṭ Łarib, K'yor-Ōlli, Amrah ev Salvi, Alvan ev Ōsan*, Erevan: Zart'onk'-90, 1992.

When one speaks in Armenia today of heroic epic, it is the great saga in four branches (*čiwł*) of *Sasna crer*, “The Wild Men of Sasun”, also known by the name of its most prominent character as “David of Sasun” (*Sasunc’i Dawit’*). That epic, first set down in writing by Garegin Sruanjteanc’ from an oral reciter and published in 1874— and since then transcribed in scores of variants— has taken pride of place as the “national” epic of Armenia.³ But long before the epic of Sasun became widely known to the reading public, there was another that already enjoyed great popularity and wide diffusion among Armenians from Constantinople to Astrakhan, and from the 17th century well into the 20th. Soviet Armenians were to renew their acquaintance with it *via* a famous opera and from Russian translations; and Armenians in Turkey and Azerbaijan were familiar with it because of its great popularity and “national” status in those countries. But few surmised that its roots are in part in the culture of ancient Armenia itself. That is understandable, since its main characters are all Muslims, mainly Shi’i, with Persian and Turkic names; and most of the variants are in Turkic languages, principally Azeri and Turkmen, and as far east as Kirghiz, though there are Kurmanci Kurdish, Persian, Georgian, and Armenian variants, with recitations also in Modern Greek. The roots of the epic are in eastern Anatolia, but its diffusion is so general that it was for some centuries a *Gemeinsage* of common folk of the Near East and Central Asia. The political divides in recent times between the various peoples inhabiting the region have become so

³ I will attempt to demonstrate that the epic of Köroğlu has its roots in the pre-Christian culture of what might be called “Greater Iran”: Arsacid Northern Mesopotamia, Armenia, and Parthia, and Scythia beyond. In a series of studies I have explored aspects of the antiquity of the epic of Sasun: “On the Armeno-Iranian Roots of Mithraism”, “Revelations of Darkness: Medieval Armenian Apocalyptic in the Epic of Sasun and the Visions of Yovhannēs Kozern,” “Iran and Israel in the Epic of Sasun”, “The *Šāh-nāme* in Armenian Oral Epic”, “The *Šaraf-nāme* and Armenia: Some Mythological Themes”, “Epic in the Irano-Armenian Marchlands”, and several other articles, reprinted in J.R. Russell, *Armenian and Iranian Studies*, Harvard Armenian Texts and Studies 9, Cambridge, MA, 2004. See also “Argawan: The Indo-European Memory of the Caucasus,” *JArmenSt* VIII.2, Fall 2006 [2007], pp. 110-147; “The Shrine Beneath the Waves,” *RES* 51, Cambridge, MA, Spring 2007, pp. 136-156 (Russian tr. in *Rossiia XXI*, Moscow, 2007, pp. 10-43); “The Epic of Sasun: Armenian Apocalypse,” in press in the *Proceedings*, ed. by S. La Porta, of “After the Apocalypse: The *Nachleben* of Apocalyptic Literature in the Armenian Tradition,” The Center for Literary Studies, The Hebrew University of Jerusalem, Israel, 4 June 2007.

acute that the idea of such a widely shared literary work, expressive of shared cultural values and themes, is no longer intuitive.

Despite its strong association with Turkic cultures one proposes that the epic of Köroğlu (or, in Azeri, Koroğly, henceforth K), “The Blind Man’s Son”, has its origins in the world of pre-Islamic Iran and of the Parthian Arsacids in particular, its themes and symbols informing a tale of Mesopotamian Jewry in the *Jewish Antiquities* of Josephus, first century CE, in the *Iranica* of the Babylonian Talmud some two to three centuries later, and in the epic of the Arsacid king Aršak II in the fifth-century *Buzandaran* of P’awstos. The subject matter of these early testimonies was and remained popular because it endowed with heroic characteristics and dimensions a particular kind of hero appreciably different from the regal Agamemnon or Arthur. Ours is not a haughty nobleman but the brave and cheerful bandit who rebels against unjust authority, robs the rich, and gives to the poor. A versatile fellow, he knows how to get by as an itinerant bard, a glib trickster. He doesn’t brood like Achilles. Like so many of us in the real world, he has to hustle. In the West the English Robin Hood with his band of merry men in Sherwood Forest is so much an exemplar of the type that his name is often used simply to define it. But these epics are rolling stones that as they tumble through history gather moss. As will be seen to have been the case with K, the historical Robin Hood of the 14th century seems to have inherited in the legends that crystallized around him the ready-made heroic exploits and characteristics of the hero of a folk epic tradition perhaps five centuries older.

K is not just an interesting Oriental text, an *oikotype* of the Robin Hood theme. It is a classic of its genre, fit to be studied and enjoyed as literature for its own sake; and once a work is thus defined it is licit to study it in translation, since its value is no longer simply philological. A student asked to read a book without immediate utility, if it does not belong to a branch of specialized scholarship in which he is acquiring mastery, is justly entitled to require an answer to the question “So what?” about it. So one will also discuss why this epic and other ballads and

sagas about robbers and bandits are important to the world's spiritual culture, to our understanding of how men through the ages have sought answers to the seemingly permanent problem of human inequality and injustice, much as they have invented sacred scriptures to grapple with the perennial conundrum of theodicy. One will also endeavor to propose how the method of the study of this type of epic can help one to understand some other signal events in remote and recent history that have crystallized into legend.

K can be divided variously; but it is common to break it up into more or less thirty episodes, sometimes called "branches" (Turkmen *şaxá*, from Pers. *šāx*; compare the Arm. *čiwł* "branch", used of the four parts of the Sasun epic) as though the different episodes stemmed from one great and hoary tree trunk, a sort of *Ur*-epic. In this way its reciters, called in Pers. *Kūroylū-xwān* ("K-reader/chanter") analogously to the recounters of Ferdousi's *Book of Kings*, who are dignified by the appellation *Šāh-nāme-xwān*, can work through the whole Muslim month of fasting, Ramadan, reciting each evening for an hour or so the prose sections called in Ar. *qişsa* interspersed with poems sung to the accompaniment of the *saz*, a stringed instrument like a lute. Iranian reciters of the *Book of Kings* often work in coffee houses whose walls are adorned with frescoes of different episodes and characters that they gesture to during their performances, which often include improvisatory passages mentioning and praising the evening's company. Most of the rural reciters of the K epic are poor and perform in barns or other impromptu places: some in modern southeastern Turkey are sharecroppers who augment their meager income by their art. Such was the case with the Armenian reciters of the Epic of Sasun. In the years before the Turks destroyed in the 1915 Genocide the millennial civilization of the Armenians in most of their land, reciters of the Sasun epic would perform for some thirty listeners gathered for warmth on winter nights in the barns where animals sheltered. They, too, both spoke and chanted, and played the same stringed instrument. The reciters of K, like those of the Sasun cycle, tend to have mastered a varied repertory of epics, romances, and ballads; and, like the Armenians again, some but not all know K by heart in its entirety.

First, then, the bare bones of the story: there is a man, the royal stable master. He has various names in the versions of the epic, but 'Alī, the name that marks eastern, Iranian Islam, is common. A magic stallion, the famous *asp-e bahrī* "horse of the sea" of Iranian folklore, comes out of the waves and impregnates one of the royal mares. Ali duly informs the king— usually this is the great late 16th-early 17th century Safavid Šāh 'Abbās, though again there are others in variants of the epic— that the colt to be born of this union will be the greatest horse in the world, and the king enthusiastically awaits it. The foal Ali presents to his liege lord is ugly, though; so the monarch orders it destroyed; and, enraged at having been embarrassed by the lowest servant of the royal entourage, blinds the stable master. Ali, his sight darkened, still saves and hides the horse, instructing his only son, Rōšan, whose Persian name means rather ironically in the context of his father's sudden darkness "bright, shining, clear", to keep the colt in a lightless stable for a specified time, such as forty days. The boy either inadvertently or through impatience lets a glimmer of light in. The horse will still be strong; but, had he obeyed his father to the letter, it would also have sprouted wings. This interruption of a magical process that would have brought perfection will be recognized as an old folklore type. Some versions add that Ali instructs Rushan to bring him a special milky foam from a spring: again, the boy brings the liquid but cannot resist eating all the tasty foam on the way. Ali says sadly that the foam would have restored his sight; but at least it will make Rushan an invincible warrior. In yet another version, Rushan is instructed in a dream to taste foam of three colors on the river, which will endow him with three skills.

The horse, meanwhile, has grown big and strong; and is named *Kīr-at* (Arm. *Ł(ə)rat'*, pron. /Gherát/), lit. "dappled gray horse" (tr. thus in Arm. as *Pisak*, also) after its color. It is an unremarkable name; but then the name of the steed of Rustam, the great hero of the *Book of Kings*, Raxš, just means "reddish brown"; and Alexander's Bucephalus was, well, blunt-nosed like an ox. Rushan takes Kirat out to ride. The youth is instructed by his father to fill a furrow with water over and over

for three days and then ride Kirat there till his hooves get through the mud and kick up the dry earth below. As we have it, this is a strength exercise; but I think it is a late rationalization of an earlier motif whose supernatural symbolism had been forgotten. In the fourth and final branch of the epic of Sasun, the last of the heroes, *P'ok'r Mher*, i.e., Mithra the Younger, finds that the earth has become too soft to support the hooves of the magic steed of his line, *K'urkik Jalali*, "Mighty Little Colt" (the diminutive suffix *-ik* in Arm. usage can be used of respectful affection; the horse is a giant). This is a sign that the world is too evil for the heroes to inhabit any longer; and Mher is to go with the horse into Ravens' Rock at Van— a blind portal inscribed with invocations to the Urartean gods— to wait for the end of days, when a grain of wheat will be the size of a hop and the ground will be hard. As it is, the king sees the splendid Kirat and demands him for the royal stable. Rushan, staring down proudly from the saddle, insultingly refuses, declaring himself for the first time Son of the Blind Man. K and his father escape from Iran into Turkey; and thereafter Ali leaves the story.

K founds a fortress at a place called *Çamlıbel*, "Misty Mountain" (but Tolkien probably did not hear of it: the geographical sources of Middle Earth are northern European), at a spot where the caravans traveling to and from Baghdad, Constantinople, Tabriz, and Isfahan must pass. This crossroads of the Ottoman and Safavid empires is in Armenia; and tradition generally locates it at Sivas (Arm. Sebastia): most of the action of the non-Central Asian versions epic takes place in Western and Persian Armenia, the vicinity of Kars, Erzurum (Arm. Karin), and Salmast. K assembles about him a colorful cast of brigands and outlaws, some of whom bear the epithet *dali*, "crazy" (Tk. *delli*, cf. Arm. *cuṛ*).⁴ Some are as strong and brave as he, and join him after a contest or confrontation: though he is leader, the sense is not of yet another feudal order but of a band of free men who follow their

⁴ In the Oğuz epic *Dede Korkut*, which incorporated numerous Armenian and ancient Anatolian themes the Turkic invaders of Anatolia encountered, there is a character called *Delli Dumrul* who seems to be based upon the same Polyphemus-like ogre as the Armenian Tork' Angel: see J.R. Russell, "Polyphemus Armenios," *REArm* 26, 1996-1997, pp. 25-38.

leader out of respect. Though K's men abduct for him the lovely princess Nigâr *xānom* (Pers., "Picture", cf. Arm. l-w *nkar*, as in "pretty as a..."— and the old *topos* of falling in love because of a picture one has seen figures in some versions) and he bears a son, there is no foundation of a dynasty to rival those of the Persians and Turks. The person closest to K seems to be the kidnapped, beautiful youth Ayyvaz, who fights alongside him and waits upon him, whom he dotes on and grooms as his heir. It is not clear what else the hero does with this Ganymede; but in any case K's only true mate is neither fellow robber nor noble princess nor even handsome boy. It is his horse, Kirat— just as with Rostam and Rakhsh.

The bulk of the tales are self-contained narratives of adventures, mostly raids, in which K robs the rich and gives to the poor. He is an *aşık*, a minstrel (cf. Arm. l-w *aşut*; the word is Ar. '*aşūq*, "lover", the minstrels of pre-Islamic times having been called Mlr. *gōsān*, Arm. l-w *gusan*, "singer"): often he sings to his friends and foes rather than speaking to them, but sometimes— as when he is captured— he sings of the exploits of K while pretending to be somebody else. K is thus a witty trickster and romantic lover, very different indeed from, for instance, pious Aeneas with his Dido-denying *gravitas*. The manner of K's end differs from one version to another of the epic: he is killed, or Kirat is killed. Or he dies peacefully, making Ayyvaz his heir, and puts down his sword. Another ending is supernatural, and recalls the apocalyptic ending of the epic of Sasun, in which the last of the heroes, *P'ok'r* Mher, Mithra the Younger, is occulted into a cave till the end of days: K simply vanishes, or else goes to join the forty immortal saints of the mythology of the mystical Shi'a Bektashi sect. An apocalyptic dénouement is interesting: as we shall see, bandit rebellions frequently compensate for their lack of a coherent social program or ideology with inchoate visions of a violent end to this unjust world, believing also that their leaders can die only by treachery, if at all.

The earliest dated recorded version of K is the *Kūrōyli-nāma*, written in Pers. in the Tabriz area in the 1840's at the request of the Orientalist Alexander Chodzko, who soon afterwards published a much embellished and somewhat bowdlerized

English translation.⁵ As already noted, there are versions from as far west as Greece and as far east as Turkmenistan, Tajikistan, and Kirghizia: in general, the farther east one goes, the more K is cast as a ruler rather than a robber.⁶ There are at least two published Arm. versions of the K epic. One, printed at Tiflis in 1897, is a rendering into a fairly standard Eastern Armenian from Tatar (as Azeri Turkish was then called) prose and verse by Mkrtič' Taleanc', whose name as a minstrel, was Ashugh Jamali. G. T'arverdyan in 1941 published a long versified text transcribed in dialect from recitations by *ashughs* repatriated to Russian Armenia from Persarmenia (Khoy and Salmast) and the Vaspurakan region of Western Armenia (Van, Başkale, Moks). The latter area was a center also of recitation of the Sasun epic, much of whose action takes place in the vicinity; and Moks (Clas. Arm. Mokk') was the home of the famous heroic ballad Mokac' Mirza (i.e., Mirza of Moks) and of the epic *Kašti k'aĵer*, "The heroes of [the village of] Kasht".⁷ So the epic of K would have been part of a rich oral culture and an extensive repertory: the traces of one tale in another bear witness to a natural reciprocity— an inter-textuality of the spoken word— in the learning, transmission, and reception of these works.

And there is ample evidence that the epic was known and popular long before the modern period. Late in the 17th century the historian Arak'el of Tabrīz (Arm. Dawrižec'i), in his account of the reign of Shah Abbas, lists the names of the bandit-leaders of the Jelali uprising, about which we will have more to say presently. One of these is K: *Ays ayn K'ōrōġlin ē, or bazum xaġ ē asac'eal: zor ayžm ašāġnern eġanaken* "This is that Kōroġli [thus, with the Azeri ending -i instead of -u] who recited many songs that *ashughs* perform now." Not long after, in 1721, Elías Astuacatur Mušeġeanc', a rather colorful individual from Erzurum who made his

⁵ The book is extremely useful and its annotations are enlightening and informed by direct experience. It has become common for students of the East to deride the work of the Victorians. That is unfortunate; but intelligent readers of Russian literature are beginning to turn from inferior recent translations back to another Eminent Victorian, Constance Garnett.

⁶ See Judith M. Wilk, "The Persianization of Koroġlu: Banditry and Royalty in Three Versions of the Koroġlu 'Destan'," *Asian Folklore Studies*, Nanzan University, Vol. 60, No. 2, 2001, pp. 305-318.

⁷ See J.R. Russell, *The Heroes of Kasht: An Armenian Epic*, Ann Arbor, MI: Caravan Books Armenian and Caucasian Series, 2000.

living as a merchant and was arrested at Astrakhan' by the Russians as a Persian spy, compiled, and I quote, "A book of songs of music, composed by diverse men and having relation to obscure matters, that is, conceived by poetic men. For that reason, here, I wanted to inscribe something of the sayings those men fashioned, which is pleasure of the body for our brethren. I consider it better thus to bring enjoyment, than to engage in slanderous speech about other people... The sayings concerning K. This K was an Ottoman Turk by race: they say he was from the land of Bayazet. He dwelt in the mountains and forests of the land of the Ottomans, and with many horsemen guarded the passes and the roads. Sometimes he robbed merchants, and sometimes he accepted donations that were freely offered. His actual dwelling was between the cities of Kars and Karin. There is a great wood now named Soğanlı [i.e., "Onionful"]. There he erected a fortress that is called Kôr Oğlı *kalesi* ["fortress"]; and he has fortresses in other places. This was in the time of the king of the Persians Shah Abbas and during the reign of Sultan Murat of the Turks. It was his custom to make merry and to savor the pleasures of the mountains and the forests. Because of his merrymaking his voice resounded through the mountains and the flowering plains of the region. He rebelled against the king. His history is lengthy; but this is not the place to write it. He also captured every beautiful boy and absconded from the city, on account of which many praises are sung. We will write down here, to the best of our ability, what we have heard."⁸

The stories of K remained popular in the early 19th century. Xač'atur Abovean, whose *Vērēk' Hayastani* ("The Wounds of Armenia") is considered the first modern Armenian novel, thought the bandit-minstrel a member of his own nation. He wrote: "So what, at last, was one to do, that both our own hearts and other nations might understand, even praise us, and love our tongue? I remained mired in doubt. I knew how many notable, wise, talented men there had been in the lands of the Ottomans and the *Kızılbaş* [Tk. "Red Hats", i.e., Shi'a Iran], minstrels loved at the court of Khan, Shah, and Sultan, fine singers of lays and shapers of verses— and

⁸ See X. Samvelyan, intro. to G. T'arverdyan, ed., *K'yoř-ōhli žołovrdakan vipasanut'yun*, Erevan: Armfan, 1941.

many were Armenians. Keşiş oğlu and Kör oğlu are sufficient for my words not to ring false.” And a century before, Joseph Emin had rendered into Armenian a quatrain by K recited to him by Muḥammad Ḥasan Xān of Ganja: *Barik’i dēm, barik’/ Amēn mardu gorc ē;/ Č’arik’i dēm, č’arik’—/ Ktrič mardu gorc ē* “Rendering good for good/ Is the work of every man;/ But repaying evil with evil/ Is the business of the brave.” The late 18th-century Armenian bard of Tiflis, Sayat’ Nova, composed his lyrics in several languages; but the primary tongue of the *ashugh*— understood, therefore, by most listeners of any nationality or confession in the Transcaucasus— was “Tatar”, the regional Azeri Turkish. So it may be supposed that Armenians knew the K epic in that language. Still, Emin’s citation shows that rendering it into Armenian was an option, with a precedent. Later in the 19th century the writer, poet, and revolutionary Ėrap’ayēl Patkanean began an Armenian version of his own of K that was to remain unfinished. He wrote of it, “My K is an Armenian, but for a reason understandable to me he rejects the Armenian faith. I intend to quicken in him, in my own fashion, the last embers of Armenian independence... My hero, for the sake of the idea to which he has dedicated himself, sacrifices the most precious and sacred treasure a man has— his religion. I want to unite in him two elements: his God-given talent and lofty soul, and his subtle patriotism...” In this case, the hero’s Islamic faith is an intentional and painful rejection of Armenian Christianity: many reformists believed that the subjugated condition of the Armenians was to be blamed on the emasculating injunction of Christian morality to turn the other cheek. So some sought a revival of an imagined paganism; others maintained that the militant ethos of Islam had encouraged and preserved the virility of the Turks and Kurds.

After Patkanean another Eastern Armenian writer, Łazaros Ałayeanç’, rendered into Armenian a quatrain recited by the hero during one of his exploits incognito as a minstrel this way: *Es mi Jalali em, anuns Ėrušan,/ Hōrs anunn ē Xor; mōrs, Xorišan./ Arhestov ašut em, inč’pēs tesnum ēk’:/ Or es K’yor’ ōllin č’em, aha jez nšan* “I am a Jelali; my name, Rushan./ May father’s name is Xor; my mother’s, Xorišan./ By trade I am an *ashugh*, just as you see,/ And here’s a sure sign that K

ain't me." What is interesting here is the mention of an apparent variant of the hero's name, *Xor oğlu*. In Turkmen, with the pronunciation of K as *Gör-oghli*, tradition explains that Rushan was born miraculously of a dead mother, in the dark of the grave (from the Pers. l-w *gūr*). In the Sasun epic, both the young David and his horse are immured in lightless chambers. David's relatives do this, not as a kind of incubation to nurture their strength, as in the case of Kirat above, but to prevent hero and steed from emerging and raising a rebellion against the Arab tyrant Msramelik'. The Arm. for "deep" is *xor*, a loan from Mlr. and a good paronomastic stand-in for *gur*. In some versions of the Sasun epic there is even a peripheral figure, somewhat supernatural, who makes brief appearances as *Xor manuk*, "Deep child", *manuk* being the Arm. equivalent of *oğul*, "boy, child".⁹ So it is possible that a type of the figure of K has made its shadowy way into the epic that was itself to overshadow K's story in Armenian literature.

The epic of Sasun in its essence is of very great antiquity: the magic, foaming milk of which the heroes are engendered, the unequal founding twins Sanasar and Bałdasar, the magic horse from the sea, battles with dragons, the two heroes who bear the name of the Zoroastrian divinity Mithra, as Mher— are all pre-Christian mythological *topoi* in a cycle of narratives that crystallized in its present form around the events of the ninth-century freedom struggle of the Armenians, begun in Sasun, against the oppression of the Caliphate. That uprising was a signal event in the formation of the Armenian Arcruni and Bagratuni kingdoms.¹⁰ An analogous process may have led to the shaping of the K epic: that is to say, much older epic motifs and themes, including the name and childhood history of the principal character, K himself, crystallized around the epochal events of the Jalali rebellions.

⁹ This character may be related to the *T'ux Manuk* "Black Child" of Armenian mythology. See J.R. Russell, "The Armenian Shrines of the Black Youth (*t'ux manuk*)," *Le Muséon* 111, fasc. 3-4, 1998, pp. 319-343.

¹⁰ It is not coincidental that two of the five principal heroes of the Sasun cycle bear the name Mher (i.e., Mihr, Mithra— the Zoroastrian divinity associated among other things with the Apocalypse). The Armenian revolts were the westernmost of a chain of contemporary uprisings across the Iranian north against Arab rule: in some eastern regions the image and inspiration of the rebellion was the Buddha of the future, Maitreya, whose popularity among Iranian adherents of the Mahayana school may have to do with his linguistic and typology relationship to Mithra.

The famous Russian scholar of Islam, I.P. Petrushevsky, writes, “Most likely one of the leaders of the Jalali movement adopted the name K, which had become popular thanks to a legend that had taken shape in earlier centuries.” So the historical bandit might have taken his name from a legendary predecessor; and his deeds were then recast in archaic legend as the epic grew around him, rather as with the Sasun epic in the same region, or with another bandit epic, Robin Hood, in faraway Britain.

Let us consider briefly, then, the Jalali movement— the great upheaval in which the historical K of the epic took part. With the rise to power of the Shi’i dynasty of the Safavids around 1590 and the consolidation of the Iranian state as a major Near Eastern imperial power after a hiatus of centuries, hostilities began with the rival neighboring power, the Sunni Ottoman Empire of the Turks. The two Muslim states collided on the Armenian plateau, the devastation lasting over a century. In the lawless conditions of a power vacuum the Shi’i armed bandits called Jalali after one of their leaders ravaged the Armenian communities, and scribes writing in the colophons of their manuscripts in the period speak with one voice, decrying them as “the bloodthirsty beast” (*ariwnarbu gazan*) and “the evil dragon” (*č’arn višap*, a designation of the Antichrist). Employing an ancient genre to bewail an all-too-familiar kind of disaster, Azaria of Sasun wrote a “Lament on the blows delivered to the eastern provinces and the realm of Armenia by the Jalalis” (*Ołb i veray haruacoc’ arewelean gawařac’ ew ašxarhin Hayoc’ i jeřac’ Jalaleanc’*). An important source already mentioned is the *History* of Arakel of Tabriz, who studied and worked at Echmiadzin in the mid-17th century and compiled his chronicle at the suggestion of Catholicos P’ilipos, on the basis of both colophons and eyewitness accounts of events. He completed his book in 1662 and died eight years later. As we have seen, Arakel observes that K’s songs, composed during the reign of Shah Abbas, that is, *ca.* 1600, were popular with the minstrels of his day. K’s is one of a number of names in a list, of whom Arakel writes, “All of these are Jalalis, who refused to submit to the king. They did not dwell in any one place, but were destroyers and despoilers of the earth; and wherever they heard word of prosperity, thither did they hasten, pillaging, robbing, setting fire to buildings and burning them to the

ground.” He adds that they attracted followers from among the Armenian community: “But from amongst the Christian folk some men who had no fear of God in them, when they saw what the Muslims [*aylazgik*’, lit. “those of another nation, gentiles”, the disparaging designation frequently employed for Muslims] were doing, began to do likewise. For their hands were eager to do what their eyes beheld (*vasn zi ač’ōk’ tesin ew srtiw yōžarec’an*)— whether it was rape in plain sight or theft in secret, that is what they did. For the land was without a ruler (*antēr*) and barren of strong masters to control the realm; so every man satisfied the inclinations of his desire.”¹¹ The traveler Eremia Çelebi Kōmürçiyān calls the Jalalis “a motley crew of barbarians (*xaṛničatanč gundk’ xuzadužk*)” who terrified those who saw them. They dragged off women with their children into captivity and surrounded themselves with them.” Nigar and Ayvaz in the epic of K would have been among these unfortunates.

So it would seem that some Jalalis were Armenians, possibly apostates from Christianity like the legendary Fr. (*Tēr*) Simon who became an Alevi Shi’a to save his flock from massacre, after whom the region of Dersim (Tk. “Tunceli”) supposedly got its name. Doubtless even more of the hapless victims of Jalali kidnappings were Armenians as well. The names of Jalali bandits (*awazakk*’) provided by Eremia and Arakel give one a colorful picture of their piratical character: *Küçük Ahmet* (“Little Ahmed”), *T’awil pičn erkaraygi* (“Dirty Long Tail”), *K’esek’es* (“Cut and Cut Again!”), *Kör kaya* (“Blind as a Rock”), *Qalenter oğli* (“Son of the Mad Dervish”), *Abu Hancar* (“Father of Dagger”), *Kara sâ’at* (“Black Hour”, meaning the time that has tolled for you if you meet him), *Tengri tanımaz* (“He recognizes **no** God”), and *Siki büyük anpatkar* (“Shameless Big Dick”).¹² The chaos in which these bands arose, and to which they contributed, lasted nearly a century and a half, affecting every ancient center of Armenian life from the outskirts of Constantinople in the west to Tabriz in the east. Conditions were so desperate that many were driven to cannibalism, and

¹¹ See Aṛak’el Dawrižec’i, *Girk’ patmut’eanc’*, tr. L.A. Khanlaryan, Arakel Davrizhetsi, *Kniga istorii*, Moscow: Nauka, 1973, ch. 7 (p. 89 f.).

¹² See M.K. Zulalyan, *Jalalineri šaržum ev hay žolovrdi vičakā ōsmanyān kaysrut’yan meġ*, Erevan: Arm. Acad. Sci., 1966, p. 165.

spurred an exodus that may be seen as the first wave of the modern Armenian diaspora. So the period is certainly significant enough for an ancient epic to have assumed a contemporary shape around it.

The motivations of the bandits were varied: political and economic chaos allowed charismatic leaders to come to the fore. Shi'a religious faith, with its strong millenarian aspect, inspired many who felt the end of days was imminent. Though the Jalalis acted with barbarity and excess, many felt also that they were fighting for freedom and justice. In an Arm. version of the K epic, the hero *Zalāmin kačartēr, axktin kāsirēr, / Zankinic' kaṛnēr, fukarin katar* "Slew the oppressor and loved the destitute, / Took from the rich and gave to the poor;" and his men boast, *Menk' ašxarhi ēn t'ayfan enk', or lci tak č'enk' māneli* "We are that race of the world that will not remain under the yoke." Since this Robin Hood-like legacy has persisted, let us look at the bandits then, not from the standpoint of outraged scribes, but from the perspective of social history.

The leftist British historian Eric Hobsbawm, in his landmark study *Bandits*,¹³ drawing mainly from examples in Europe and South America of the past two centuries, finds that the ones around whom legends typically grow begin their careers, not as criminals, but as avenging victims of an outrageous, humiliating act of injustice or aggrieved status of subservience. They flourish in regions without the strong control of a central government, but tend to fight local oppressors, for the most part, rather than opposing a distant reigning monarch. Almost invulnerable, the noble bandit can be killed only by an act of betrayal. The average bandit band operates for two to three years and has about twenty members. (In the epic, with its typical hyperbole, K enjoys from 365 to 777 confederates, and his exploits last a lifetime.) The members of Hobsbawm's model gang are called "bent" or "crooked"—as in the K and Sasun epics—because of their apartness from law-abiding "straight" society. On bandit violence, Hobsbawm remarks, "A wild and indiscriminate

¹³ Eric Hobsbawm, *Bandits*, London: Weidenfeld & Nicholson, 2000.

retaliation: yes, but perhaps also, and especially among the weak, the permanent victims who have no hope of real victory even in their dreams, a more general 'revolution of destruction' which tumbles the whole world in ruins, since no 'good' world seems possible."¹⁴ Thus the apocalyptic violence of our Shi'a revolutionaries in eastern Anatolia.

Bandits often rise up against foreign oppression, and oppose to tyranny, even in rigidly class-bound societies, a remarkably egalitarian system of self-regulation. The bandit ethos thus combines a kind of chivalry with religious conviction: "We were... knightly, though also spiritual" (*caballeresco pero espiritual*), recalled a Spanish Anarchist; and Anatoly Lunacharsky, the first minister of culture of the Soviet Union, called Communism "the last religion". The Communist League founded by Karl Marx himself was at first named the League of the Outlaws; so the relationship of bandits to revolutionary movements has a semantic and ideological reciprocity. Each inspires the other. One of the archetypal bandit-revolutionary heroes of the Communist movement in the Russian Empire was Semyon Arshakovich Ter-Petrosyan (1882-1922), the legendary Kamo, an Armenian who robbed banks to finance the revolution. Though the Tiflis heist he pulled off in 1907 netted 200,000 rubles, Kamo lived like an ascetic devotee of the cause, never spending more than fifty kopeks a day for his own needs. Kamo's patronymic, "son of Arshak", introduces a pleasing symmetry: as we shall see presently, the epic legend of a fourth-century Armenian king, Aršak II, is cast in the same mold that centuries later was to give shape to the K epic in its present, recognizable form, in the same lands where Kamo and his comrades were later still to fight to bring down the old world and make a new one. (In the words of the hymn of the world Communist movement, The Internationale, *Весь мир насилия мы разрушим до основания и затем/ Мы наш, мы новый мир построим: кто был ничем, тот*

¹⁴ *Ibid.*, p. 70.

станет всем. "We will destroy to its foundations the whole world of violence and then/ We will build our own new world, and who was nought, he shall be all.")¹⁵

We have seen that K was a minstrel. This too, is typical of some famed bandits, rebels, and outcasts. In 14th-century France, the greatest of the balladeers was the vagabond criminal François Villon. And bandits have often been the heroes of folk ballads, from Jesse James in 19th-century America to the Anarchist bandits of Benamerj in Andalusia celebrated in the *Gypsy Romances* of the early-20th-century poet Federico García Lorca.¹⁶ Russians still sing songs like *Ой да не вечер* and *Из за острова на стрежень* that honor and mourn the bandit rebel Sten'ka Razin: this writer grew up in red diapers, listening to and singing Shostakovich's cantata based on Yevtushenko's poem about him. The genre endures: William S. Burroughs' *Western Lands* trilogy, an apocalyptic celebration of revolutionary banditry, interweaves pirate utopias (an entire separate topic but along much the same lines: bandit society at sea) with Western tales of the fellowship of honest thieves of the American hinterland, the so-called "Johnson family". In his monograph *Der Räuber Nikola Schuhaj*, 1953, the East German scholar Ivan Olbracht sums up the essence of the strivings of these rebels: "Man has an insatiable longing for justice. In his soul he rebels against a social order which denies it to him, and whatever the world he lives in, he accuses either that social order or the entire material universe of injustice. Man is filled with a strange, stubborn urge to remember, to think things out and to change things; and in addition he carries within himself the wish to have what he cannot have— if only in the form of a fairy tale. That is perhaps the basis for the heroic sagas of all ages, all religions, all peoples, and all classes."

Thus the popularity of the archetype of K. But where does the archetype come from, in the region of eastern Anatolia and the Transcaucasus— the Armenian

¹⁵ The romantic aura of revolutionary movements is especially seductive to intellectuals with the good fortune to live far away from the sanguinary horrors they bring in reality to the unfortunates under their sway. See Jamie Glazov, *United In Hate: The Left's Romance With Tyranny and Terror*, Los Angeles, CA: WND Books, 2009.

¹⁶ See Eric Hobsbawm, *Primitive Rebels: Studies in Archaic Forms of Social Movements in the 19th and 20th Centuries*, New York: Norton, 1965, p. 78.

highland? Georges Dumézil traced it to a legend about the Scythians in the *Histories* of Herodotus (5th cent. BC), IV.1-4:¹⁷ the Scythians, he writes, *blind* all their slaves (*tous de doulous... tuphlousi*) by reason of the milk they drink (*tou galaktos heineken tou pinousi*). Some of these slaves married Scythian women; and their children rose in rebellion but were put down in a curiously humiliating way— the Scythians advanced on them with horsewhips instead of swords or arrows, reminding them thereby that they were slaves. This psychological tactic broke their morale, and they capitulated. An aspect of the episode has mystified scholars: it is easy to understand the sons of blind men rising up against those who had blinded their fathers, and Dumézil may be right in seeing the kernel of the K epic here. But what of the milk— mares' milk, actually? In the K epic Rushan is instructed by Ali, as we have seen, to bring his father foam from a spring, and he drinks it off instead. It would have cured Ali's blindness, but at least it makes K strong. This magical milk seems to be the same kind of potation as the seminal fluid of the *kat'nalbiwr*, the "milky spring" of Armenian epic. Covinar, whose name probably means something like "Lady of the Sea", drinks one-and-a-half handfuls from a rock phallus spurting the stuff that stiffens out of the waters of lake Van, and in nine months' time bears the unequal twins Sanasar and Baḏasar, the first generation of heroes of the Sasun epic. In the analogous episode of the Ossetic *Nartæ*, it is a shepherd's semen rocketing across the river Terek and impregnating the rock behind which the lady Satana hides, that does the job. In the epic of the heroes of Kasht, the village men drink from a *kat'nalbiwr* that makes them both "bent" and strong. So perhaps in an earlier variant of the Scythian tale, the son of a blinded servant drank magic milk, acquired valor and strength, and rebelled against those who humiliated and flogged him.

The Armenologist Haïg Berberian, in a book-length review of Dumézil's study, finds elements that were later to appear in the K epic, in the legends that accumulated around the Armenian Arsacid kings of the fourth century AD. According to both the *Buzandaran* of P'awstos and the *History* of Movsēs Xorenac'i,

¹⁷ Georges Dumézil, "Le legends de 'Fils d'aveuglés' au Caucase et autour du Caucase," *Revue de l'histoire des religions* 117, 1938, pp. 50-74.

the violent and impious king Tiran is captured and blinded by the Persian Shah; Tiran's successor, Arshak II, receives from Tiran's chamberlain, P'isak ("Dappled"), a request from the Sasanian governor of Atrpatakan, i.e., Azarbaijan, for the splendid roan and dappled (*čarpuk čančkēn*) mount of the Armenian king. The latter sends one that is alike but not as good, and the treacherous courtier not only points out the deception, but lets the Persian know that his own masters plan to revolt and restore their deposed Arsacid kin to the Iranian throne. Blindness, horse, deception, rebellion: the elements, only slightly differently distributed, are wholly familiar. And to this dossier one might add two additional testimonies from other sources in the Parthian world.

The historian Josephus, writing shortly after the disastrous revolt of the Jews of Israel in the first century AD against Roman dominion, recounts in his *Jewish Antiquities* XVIII.314 in terms steeped in Iranian epic imagery and theme the tale of two unequal brothers with twin-like, rhyming names, Anilaeus and Asinaeus, sons of a widow in Nehardea, a Jewish town of Parthian Mesopotamia. Apprenticed to a weaver and flogged with stripes (*plēgais*) for some infraction, they react to the indignity (*hubris*) by revolting. Styling themselves generals, they gather around them other young men of the lowest social orders (*tōn neōn hoi aporōtatoi*), build a citadel (*akropolin*), and live by robbery. They defeat the army of a satrap sent to deal with them; and Asinaeus is invited by the admiring Arsacid king Ardavān III to attend at the royal court. When the courtiers mock the Jewish hero-bandit for his diminutive stature, the king retorts that Asinaeus has a soul greater in stature than his small body (*hōs meizona en tēi parathesei parekhoito tēn psukhēn tou sōmatos*). Geoffrey Herman, in a brilliant study of this episode,¹⁸ notes that it has a parallel in the epic cycle of Arshak in the *Buzandaran*, where the defeated Armenian commander Vasak Mamikonean is derided by the Sasanian king Šābuhr (Shapur) II as a crafty little fox. Vasak retorts, employing an intricate hypogrammatic strategy,

¹⁸ Geoffrey Herman, "The Story of Rav Kahana (BT Baba Qamma 117a-b) in Light of Armeno-Persian Sources," in Shaul Shaked and Amnon Netzer, eds., *Irano-Judaica VI*, Jerusalem: Ben-Zvi Institute, 2008, pp. 53-86.

that Shapur has seen only half of him— half his name. Now he is a fox, *aluēs*, but when he was a full Vasak, he was also a *skay*, a giant.¹⁹ The brave Asinaeus is killed by treachery— poisoned by the Parthian wife of his weak-willed brother, Anilaeus. Only thus, by treason, can a true bandit hero die. In Josephus' narrative, chronologically midway between Herodotus' Scythians and the Armenian Arsacid court of the *Buzandaran* of P'awstos, we encounter a true bandit epic, just south of the Armenian mountains.

The tale of Anilaeus and Asinaeus makes no mention of a wonderful horse; but another Jewish source from Parthian and Sasanian Mesopotamia, also mined by Prof. Herman for its Iranian content, supplies interesting additional equine material. This is the Talmud. We have seen that K's father Ali was the royal stable master. This office is convenient thematically: Ali is best placed to recognize the worth of Kirat. But it is also symbolic, or was so, in ancient Iran, where the *āxwarrbed*, "stable master", was part of the court hierarchy but also the lowliest courtier. Of Rabbi Yehuda I the *Bavli* says, *Ahōrērē dā-Rabbī 'atīr mi-Šābūr mālākā*, "The Rabbi's stable-master [using a Pers. l-w] was richer than king Shapur."²⁰ Ali's office is thus a marked term whose meaning is best understood in its Parthian and early Sasanian context.

... impiis inuidebam, prosperitatem peccatorum observans,... in aerumnis mortalium non versantur, et cum hominibus non flagellantur. Ideo cingit eos, ut torques, superbia, et violentia, ut vestis, operit eos. Psalm 72.

Certain of the themes and images reviewed above merit an excursus. The horsewhip figures prominently in the narrative of Herodotus on the servile

¹⁹ For a discussion of the word game in this passage with relation to Armenian oral poetics and ancient mythological themes, see J.R. Russell, "Magic Mountains, Milky Seas, Dragon Slayers, and Other Zoroastrian Archetypes," Ratanbai Katrak Lecture, University of Oxford, 3 November 2009 (in publication in the *Proceedings*, ed. Elizabeth Tucker).

²⁰ See Geoffrey Herman, "Ahasuerus, the Former Stable-Master of Belshazzar, and the Wicked Alexander of Macedon: the Parallels between the Babylonian Talmud and Persian Sources," *AJS Review* 29.2 (2005), pp. 283-297.

rebellion: the mere sight of the instrument is sufficient to quell the uprising. In the *Anabasis* of Alexander of Arrian, Hermolaus, one of the noble Macedonian youths serving as a page in the entourage of the Macedonian king, insults the latter on the royal hunt by riding in and spearing a boar before Alexander can. For this act of *lèse majesté* he is whipped in front of the other boys and his horse is taken away from him. Enraged by this insult— the Greek word *hubris* is used— he and his lover vow to murder Alexander. In the *Kārnāmag* (“*Res Gestae*”) of Ardešīr, son of Pāpak, the young Persian, this time in the service of the last Parthian king rather than the last Mede, likewise forestalls him at the hunt and is punished by being sent to work *in the royal stables* and having his horse taken away from him. In the *Histories* of Herodotus, the young Cyrus plays king in a game and has one of the other children, the son of a Median noble, flogged. The father of the boy is so outraged by his son’s humiliation— the passive denominative verb *hubrizomai* is used!— that he complains to king Astyages himself. In the *Frogs* of Aristophanes, Dionysus and his servant go down to Hades to select the best poet to save Athens, and in the course of their adventures undergo a sort of flogging competition on their bare bottoms. The comedian here is patently disarming a potent and keen taboo: the free man, much less the god, is immune from the humiliation against the most private parts of the person exemplified by the application of the whip applied in punishment to the naked body of a slave, particularly his nether parts. Greek *eis to sōma hubrithai* “to be ‘hubrised’ on the body” signifies a physical outrage against the body such as mutilation. Additionally the long, springy, punishing horsewhip is *pars pro toto* of the horse, a symbol not only of noble privilege— cf. the Roman *eques*— but of genital prowess and penetration, and, because of the way one rides, of the anal parts as well. It combines aspects of both social and sexual potency, the reversal of which, by the use of a horsewhip on a noble youth’s backside, seems to me a switching point in the narrative where the potential epic hero is so radically dehumanized and degraded that he must become an outlaw, a bandit. Note that the narratives concerning the future kings Cyrus and Ardeshir utilize the *topos* only in part: the actual persons of the two are not violated, but the *hubris* of their Median and Parthian overlords is sufficient to doom the latter. In the case of K, the physical

violence of blinding is visited upon the stablemaster Ali; so K's revenge is to take the very best horse—the one Shah Abbas rejected—and begin a life of brigandage against Sultan and Shah alike.

These ancient sources provide a host of both large themes and plots and small but intensely significant symbols and details that are to be encountered in the K epic of later ages. The roots of the epic are in the legends of the Iranian peoples and those culturally and politically kindred to them; and the epic grew on their lands. It is thus the monument of a developing regional culture founded in antiquity, shaped by a turbulent history, and perennially animated by hopes, sufferings, and strivings that engender balladry and epic wherever there is destitution and oppression and the stubborn resilience, the will to resist, of the human spirit. The study of the bandit epic type provides a way to understand in a new light other important historical narratives that memory has retained as legend. There are three examples to be adduced: the first, the Sasun epic itself. We have seen how its heroes are called “bent”, how the first generation of them is a pair of unequal twins born to a princess about to be sent away as a hostage to a foreign tyrant. She drinks of a magical, milky spring and her strong, brave sons are born. The heroes acquire a magic horse and found a fortress, Sasun, from which they, in the company of vividly-named fellow braves like *Dzenov Hovan*, “John of the Booming Voice”, sally forth to fight against oppression. The greatest of them, David, is immured by cowards, as is his steed, the second part of whose very name, Kurkik Jelali, has a special resonance to the student of K and his times. David dies by treachery, the only way a hero can, and his son Little Mher provides the apocalyptic dénouement, entering a cave at Van to remain till the end of days. Then he will come forth to save or destroy the world: the ambivalence of this point may have to do with the Christian faith of the reciters or the inchoate violence of bandit eschatology, or maybe a bit of both. Even the way Kurkik Jelali will tread solid ground then has an echo, as we have seen, in the epic of K and its description of the training of Kîrat in a water-filled furrow of the field. The heroes of Sasun became in legend a titan race, different from smaller, weaker from “straight” folk, called in the epic “Armenians”; but the latter-day *jan-fedayis*, the

guerrillas of Sasun, Zeitun, and elsewhere in Armenia had the appearance, and enjoyed the popular repute, of the bandits of legend.

The second case comes from the Parthian era and the homeland of Josephus and involves a young man whose mother, according to tradition, was supernaturally inseminated. Though of the royal Davidic line, he grew up in obscurity as a carpenter, then collected a ragged crew of fishermen and other lower-class types, with whom he traveled around preaching against the tyranny of the rich and the oppression of the poor, and asserting that his kingdom— of justice and kindness— is not this one. He was arrested as a rebel against the alien Roman occupier and was forced to endure the humiliation of being stripped naked and flogged. The four standard accounts of His life all record that He was crucified between two other men, one to His right and one to His left. Both were bandits, one of whom who mocked him, apparently for His belief that some good might come of this tortuous, humiliating execution. In the early narrative of one of His followers, Mark, He died with a despairing complaint from the Psalms on His lips: “My God, why did you abandon me?” According to other Gospel accounts, though, Jesus Christ, the Jewish rebel hero, gave up the ghost with a calmer affirmation culled from the Jewish evening prayer, “Father, into your hands I commend my spirit.” This version, Luke’s, which is most likely closer than others to a Hebrew Gospel (often attributed by the Church Fathers to Matthew), makes the bandit on the right a righteous man; the one on the left, a blasphemer. By the 5th century AD these two have names, Dysmas and Gestas; and an apocryphal text, *The Story of Joseph of Arimathea*, embroiders the legend this way: “The first, Gestas, used to strip and murder wayfarers, hang up women by the feet and cut off their breasts, drink the blood of babes; he knew not nor obeyed any law, but was violent from the beginning.” But “the other, Demas [i.e., Dysmas], was a Galilean who kept an inn; he despoiled the rich but did good to the poor, even burying them, like Tobit. He had committed robberies on the Jews, for he stole the Law itself at Jerusalem, and stripped the daughter of Caiaphas, who was a priestess [!] of the sanctuary, and he took away even the mystic deposit of Solomon

which had been deposited in the place." That is, Gestas is a reprobate murderer; Dysmas, a Robin Hood-like bandit hero, and an anti-Semite besides.

For Gestas goes on to declare that had he only know Jesus was king, he would have killed Him, too; while Dysmas asks Jesus to protect him from the devil and looks forward to the punishment of all twelve tribes of Israel. Christ grants him a place in Paradise and assures him that "the children of Abraham, Isaac, and Jacob, and Moses shall be cast out into the outer darkness." When Joseph of Arimathea arrives later on to recover the bodies for burial, those of Jesus and Dysmas are gone; but the corpse of Gestas lies there, monstrous, "like that of a dragon". He has been dehumanized to a reptile, to the snake that deceived the father and mother of mankind. In subsequent depictions of the Crucifixion, the two thieves are shown contorted with their arms and legs gashed and broken, while Christ is whole. This detail of the thieves refers to the medieval practice of breaking criminals on the wheel and then exposing them to a slow and hideous death. Gestas is shown, as one would expect, writhing in agony and deformed and hideous to behold, while Dysmas receives Christ's benevolent gaze and sometimes has his mouth open to receive a spray of the salvific blood of the Savior.²¹

The message of this developed narrative is plain: Christ is not to be confused with rebels or bandits, even though he shares their company and their punishment. Moreover, the idealized thief receives Christ as king, and not as king of the Jews but as their enemy. Christ has been transmuted into Caesar as surely as the poor thief Gestas is metamorphosed into a reptile. Such malign inversion is not unusual in the process whereby nascent Gentile Christianity sought to distance itself from its origins, gradually demonizing the latter. If one looks beyond this perverse corruption, with its malign, degenerate, anti-Semitic intent, one may attempt to reclaim and restore a semblance of the original. A poor man raised without a father gathers a band of young men like himself and travels around his home territory,

²¹ See Mitchell B. Merback, *The Thief, the Cross, and the Wheel: Pain and the Spectacle of Punishment in Medieval and Renaissance Europe*, Chicago: University of Chicago Press, 1999.

never traveling far in his mission, and offends the rich and powerful while feeding and healing the poor. He can be captured and killed only by treachery and betrayal. He dies at the hands of a foreign tyrant in the company of a pair of bandits, one perhaps braver and more likeable than the other. His is an otherworldly kingdom; their manner of rebellion is more earthly and violent.

Two millennia pass. David of Sasun fights the Arabs, Robin Hood fights the Sheriff of Nottingham, the heroes of Kasht fight Tamerlane, K fights Shah and Sultan, the revolutionaries of 1789 rise up, then the Communards of 1871, the Armenian *fedayin* resist the Ottomans, in 1917 the Winter Palace falls, the workers of Vienna, then the Spanish Anarchists and Communists fight fascism, armed with a newer, wider, more articulate plan for the liberation of the world. But the plan itself drowns in the blood of the Cheka's camps and torture chambers. A deeper darkness falls: it is 1941, and we are in Belorussia. The Nazis begin their planned extermination of the Jews: nobody, says Hitler, remembers the genocide of the Armenians a generation ago. Who will stop him now?²² (The Germans and their many enthusiastic Ukrainian, Latvian, and Lithuanian henchmen killed about a million Soviet Jews with ordinary bullets, a year before the first gas chambers went into operation.) In the village of Stankiewiczze there is a farming family. One of their twelve children, Tuvia, b. 1906, is a rebellious tough, a good rider, a trained soldier. He has a brother who is a little less heroic and charismatic. But the two Bielskis—the Sanasar and Baghdasar!—establish a stronghold in Nalibocka forest, robbing the Germans and their collaborators. Subservient to none, they rescue every Jew, young or old, who will join them, and run their partisan unit on the basis of labor democracy. The people who see Tuvia on his white horse, in his leather jacket, with his tommy gun in hand, acclaim him as a latter-day Judas Maccabeus. At the end of the war, the Bielskis have saved some 1500 people. Tuvia moves to New York, gets

²² I propose in my recent study "From Musa Dagh to the Warsaw Ghetto: Armenian and Jewish Armed Resistance to Genocide" (in publication, *Judaica Petropolitana*, St. Petersburg) that Hitler's remark was intended ironically. In fact everybody remembered the Armenians, and Franz Werfel's book about the Genocide was an international bestseller. The point was, rather, that nobody *cared*.

married, lives a simple life, and passes away in his old age.²³ The Nazis called the partisans bandits; the French collaborationist authorities, too, derided the Manouchian group— Jews and Republican Spaniards, led by an Armenian— of the Maquis as “L’Armée du Crime”.

Bandit epics matter because imagination empowers reality and the theme of these epics is, however ancient in its literary and mythological roots, also current events. Fighting for authentic freedom is possible, it is right, and it is necessary in most every generation. It has happened before, and, human affairs being what they are, it will happen again. We might as well be ready and retell the story, and enjoy it in the retelling.

The Armenian Magical Scroll and Outsider Art

James R. Russell

Harvard University

Abstract

Unordained clergy make Armenian prayer scrolls, which go back to the amulets against the Child-stealing Witch. They are analogous to the MSS of Ethiopian Christians, made often by charismatic and socially marginal figures. This art found a niche in East Christian society; but none was provided for the appropriately named “outsider” art and the art of the insane in the West, which often expresses religious visions and sentiments that the artistic and mental health establishments—rather than an ecclesiastical order this time!—have forced to the margin of society or beyond it.

Despite the early efforts of Frederic Macler, though Armenian magical and talismanic texts have been edited and published there has been little study of the art as such of the manuscripts that contain them. Perhaps because of their greater flamboyance and their situation partially in an African context, it is the analogous material of the Ethiopian Christian tradition that has received art historical attention. And modern avowedly religious art of almost any kind in the West became so generally marginalised in criticism that much of it, including the art of people labelled insane, has come to be studied, if at all, under the rubric of *art brut* or outsider art. Since the makers of folk-religious-magical art in Armenia (the *tirac’u*) and in Ethiopia (the *debtera*) are sometimes marginal figures like outsider artists, I have attempted in this essay to initiate an approach to Armenian magical and talismanic art that employs the comparative method and takes advantage of the insights of studies of outsider art, the art of the psychologically abnormal, and the art of self-taught religious visionaries.

In May of 1949 a 16-year-old freshman at the University of California, Berkeley, went to hear a lecture by George Boas, a visiting professor, on “Meaning in the Arts”. Though she found the presentation “entertain-

ingly glib” overall, the speaker’s discussion “of the evolution of art in terms of a fluctuation between *ritual* and *improvisation*” interested her, though she dismissed it, too, as “a nice-sounding restatement of the overworked Classic vs. Romantic antithesis” (Rieff 2008: 21). The insight is testimony, not only to the frightening precocity of the future critic Susan Sontag, but to a dichotomy that cuts through the perception and reception of our modes of thinking about the unseen and phenomenal worlds through religion and philosophy, and our representation of them in the visual arts and music—a dichotomy, the conscious appreciation of which in recent times goes back to its re-formulation by Nietzsche. On one side is the Apollonian stability and harmony of form; on the other, the Dionysian spontaneity and creative chaos of force. The first upholds the dogmas and ethics of society rooted in tradition; the second champions individual vision, freedom, and spontaneity: Qumran vs. Temple, lawgivers and priests vs. shamans and prophets, Sir Joshua Reynolds vs. William Blake, Mozart vs. jazz. Like most neat dualities, this one is useful, more for the opposing tensions within a single art or belief or person that it suggests, than as a description of actually antithetical things. For those are probably few.

So it is with a sense of ritual and improvisation conjoined while in potential conflict, rather than suggesting that either exists independently of the other, that we may approach a phenomenon in art, and specifically, in the art of Armenian magical manuscripts, particularly the scrolls called *hmayil* that are employed for defense against demons, particularly the ancient Child-stealing Witch, called in Armenian *Al* or *T’pl-ha* (= *thagha*) (Plates 1 and 2) These scrolls contain a number of prayers culled from Scripture, Christian hagiography, and the writings of Armenian theologians and mystic, as well as incantations that are fairly standard from one scroll to another; and these texts generally follow a prescribed order. They are divided by pictures of Christ, of saints, and of demons, again in the same order. All this is ritualistic: though the content and iconography of the scrolls are freer than the programme of a Gospel manuscript, and the performance of magic does not have the same sanction as the liturgy—indeed more often than not the Church condemns all forms of it—still the artist-scribe worked in compliance with a fixed tradition. Indeed, the texts and traditions having to do with the Child-stealing Witch in their origins antedate by many centuries the canonical text of the Bible. However, the maker of a magical scroll most often lacked training as an artist; and though his work reflects the themes and styles of the iconography of the Church, it almost always looks primitive, even childlike, in its lack of technical sophistication;

and beside the gold leaf, lapis lazuli, and embossed silver of fine manuscripts, the *hmayils* seem an art of poverty. The art of the scrolls can also be bold and uncanny in a way Gospel book illumination is not, including fanciful symbols and strange patterns; and when these depart widely from recognised, canonical forms, one can discern the mark of individuality, of improvisation.

The principal aim of these scrolls always was to protect women in childbirth. To a reader in the early years of the 21st century that may seem an obscure or esoteric purpose; but in Armenia marriage and childbirth were issues of tremendous social tension. On the eve of the feast of Ascension (Arm. *Hambarjum*) girls performed an elaborate ritual and told fortunes about marriage; and on the feast of St. Sergius (Arm. *Sargis*) in January a girl would eat a salty cake baked by an old woman and then dream of her future husband. Her whole sense of identity and her metaphysical world were fixed on the single issue of her future marriage. Once wed, a young bride was kept mute (Arm. *munč pahel*) and was allowed to talk back to the household in which she lived—her husband's and mother-in-law's—only after she had given birth to a son. If she bore a daughter, she might be kept bound to silence several years longer. And a childless woman was an object of pity and derision. Given the high rate of infant mortality, the fear of losing a newborn, particularly a boy, was terribly keen. So even if the longed-for marriage was consummated and the desired male child was born, the anxieties of the mother did not end. One might then dedicate a son to the Virgin Mary for further protection: a silver ring was hung on his left ear, a *hmayil* was left under his pillow, and his hair was not cut till age seven (see Lind-Sinianian 2003: 34, 54).¹ As for barren women, they might visit a spring called a *kat'nalbiur*, "milky source",² or rub against or crawl beneath a phallic *portak'ar* "omphalos-stone", in the hope of magically becoming fertile.

The Armenian texts have their closest analogues in the Christian magical manuscripts of other contiguous or Orthodox Christian cultures: Byzantium, Christian Syria, and, most interestingly, Ethiopia. But the Jewish childbed talismanic texts against Lilith, and the ancient Mesopotamian ones against Lamashtum, prove that the Armenian and

¹ This useful manual also situates the *hmayils* within the larger context of Armenian magical texts and practices, such as talismans against the evil eye, books on astrological magic (the Arm. *Alawit*, Arabic *Ghayat al-Hakim*, Latin *Picatrix*), etc.

² The white or milky spring represents seminal fluid and figures in both Armenian epic and Yezidi cosmological hymnology; farther afield, in Syriac spiritual poetry and Indian mythology, it is also the milk of God (see Russell 2000: 43–48).

other Christian works belong to a wider and older tradition. In Armenian Christian literature, from its beginnings down to recent times without interruption, theologians and clerics have devoted detailed, impassioned sermons to the condemnation of the kind of magic the scrolls represent: testimony to their early presence and long continuity in the culture. Thus however far removed a maker of scrolls was from a monastic scriptorium, and however idiosyncratic his gift might be, he inherited a settled tradition of great antiquity in which he was expected to operate, both by his instructors in the magical art, and by the clients for whom he produced his talismans. Unfortunately we know very little about the Armenian artists who made these scrolls: what inspired them to take up such work, how they were trained, how they were regarded by others in the community, what their working days and inner lives were like. It would seem, though, that most of them had the title *tirac'u* (= *tiratsu*), that is, a man not ordained as a priest but permitted to perform some sacerdotal functions.

Among the Syrian Christians, or "Assyrians" (Arm. *Asori*), who employ the Syriac dialect of Aramaic in their literature and everyday speech, the makers of scrolls were (and are) likewise associated with the church but not fully ordained clergymen. They evidently are believed to possess magical powers; and they are trained to make talismanic texts and to place themselves in special psychological and physical states when producing them. There is something of the outsider to them, too. Nicholas Al-Jeloo, a young scholar of Assyrian ethnicity from Sydney, Australia, relates: "Growing up in Australia I knew of Rabi Yosip of Tkhuma (a reader in the church), Shamasha Warda Adam of Tiyyari (a deacon in the church), and maybe one or two others in Sydney, and another in Melbourne who were involved in the church somehow and had this as sort of a business on the side. They jealously guard their base texts, which have been handed down to them from their fathers, etc. and I guess are training their children in the art. As a child my mother gave me one, which I was to sew into my clothes, keep in my pocket, put in my wallet, or keep under my pillow. It was a little 'prayer bundle' which had been folded multiple times and sewn into a piece of cloth over and over again so that it could not be opened and read. I lost it unfortunately and never had another one written. Rabi Yosip died a few years ago but Shamasha Warda is still alive... and he also is said to have a room in his house where he writes these things that his wife wouldn't dare to enter even to clean. He asked my father once, years ago to get him a crow—he obviously wanted to use it for some sort of ritual. When they write these talismans they are supposed to fast for a certain period

and observe certain practices, use certain types of ink, paper, etc. They did these for protection from the evil eye, demons or evil spirits, and especially to unbind men from their wives (if they have been magically bound by jealous people who oppose the marriage, and thus prevented from its consummation). There is black magic in Syriac, but the texts are hard to find or have never been studied. My father remembered, when growing up in Habbaniya on the Middle Euphrates, an Assyrian man with a magic book who could make sandals dance and grain 'walk' up a wall. A friend from Mosul now in Australia told me her father, a priest called Zaya Bobo (born in the Hakkari region of Tiari and died in a village near Urmia), had such a magic book and could practice magic with repetition of certain psalms. She also told me of a magical manuscript that exists in Syriac called *Semon Kharrasha* (Simon Magus)".³

The position of the Armenian *tirac'u* is analogous to that of the present-day Ethiopian *debtera*, as well; and the detailed, recent studies of the latter by ethnographers and philologists may help one to construct a hypothetical picture of the *tirac'u*-magician. The *debtera* in turn has attracted the attention of art historians interested in the genre defined in English as Outsider Art, in French as *Art brut*. Though such art has existed as long as other kinds of art have, the definition of the genre, and the methods of its study, are relatively new and mark a break with conventional and canon-oriented approaches both to artists themselves in society and to their work. Though the genre covers a wide range of kinds and media of artistic production, one may attempt a general definition, or, better, a characterisation of Outsider Art. The outsider artist, man or woman, typically has not received formal training in painting or sculpture; and even if he or she has studied formal techniques, they have made a decision to break with them in some radical manner. So, the first thing the outsider artist is outside of, is the scriptorium, or, in modern times, the salon, academy, and gallery. Sometimes that is as far as it goes; and we have the innocuous Folk Art of Grandma Moses and hundreds of others. But the genre was not defined simply to encompass *naïveté*; it addresses far more troubling subjects and deeper kinds of alienation. An outsider artist can also be a person who as the result of a powerful dream, or waking hallucination (as the psychologised society now calls prophetic vision), or trauma (as it calls the experience of the tragic aspect of existence), is impelled to paint or sculpt, and to do so prodigiously, with extreme effort. Such art, given its inspiration, is of-

³ E-mail letter of 16 December 2008. I am most grateful to my friend and colleague for his extremely interesting and detailed reminiscence.

ten of religio-magical content; and although it partakes of the imagery, subjects, and nomenclature of one or more known religions, it also expresses an urgent, idiosyncratic, private cosmology. Many outsider artists, then, produced their work in mental asylums—institutions in which many prophets and most shamans would have found themselves imprisoned, too, had they the misfortune to live in modern Europe and America. Until the 1920's the drawings and paintings of the insane were not recognised as art and were at best tolerated as a kind of therapy and sometimes preserved in medical records. But even as the definition of art has widened, so has the social field in which one situates the artist. And we shall see that Armenian magical art and Outsider Art have very strong affinities.

Let us look first at the sources of the Armenian *hmayil* and its typical content. Its main feature is an invocation against the Al, or Child-stealing Witch. Belief in this demonic being is ancient and widespread in the Near and Middle East. Lamashtu, the Child-stealing Witch of ancient Mesopotamia, rides an ass. She is a fearsome lion-headed monster, with a woman's body and a bird's claw-like feet, grasping a serpent in each hand; at her breasts, she suckles a black dog and a pig. This demoness hates mortal women, and it is her particular function to kill their babies. On a talismanic tablet she appears with the demon of an evil wind, Pazuzu. The tablet depicts also a patient attended by doctors. The latter wear robes designed to resemble fish—the perennial symbol of immortality (Plate 3). There are three more relevant Mesopotamian demons—all of storm winds: *lilu*, *lilitu*, and (*w*)*ardat lili*—the last two being female. The latter fly through the air and find men whom they seduce. But their relations with a man are not of the kind he has with his wife, for they have no babies, and give no milk. They are unfulfilled, and bitter, and, taking on the role of the first demon mentioned, Lamashtu, they attack women in childbirth. So, this is the origin of the famous demoness of later Jewish and Christian lore, Lilith (Hutter 1995: 974-975; Eilers 1979). From Mesopotamia, she makes her way to the culture of the Phoenicians and Canaanites. An incantation in Aramaic script from Arslan Tash against the “Flyers” and “Stranglers” is given as belonging to *ssm bn pdr*, “Sasom son of Pidar” (Sperling 1982). This enemy of the Child-stealing Witch will hound her across countries and ages and down to our time. In the magical texts of Hellenistic Egypt, as Prof. Martin Schwartz of the University of California at Berkeley has now elucidated in a series of articles, Sasom's name becomes the Perso-Aramaic-sounding Sesengen bar Pharanges, and, later on, our “Open Sesame!” This fusion with things Persian is not at all unusual, particularly when

one considers that Persia was not only a great power, but the home of the Zoroastrian priesthood, the Magi, after whom magic got its name. The Talmudic tractate *Baba Bathra* 73a, blending Jewish and Persian themes, thus makes Lilith herself the mother of the archfiend of Zoroastrianism, Ahreman; and the demon of Wrath of the Zoroastrian Avesta, Aeshma, appears in the Biblical book of Tobit as Ashmedai, English Asmodeus.⁴ Later still, Sasom is reincarnated as a Manichaeon, then Byzantine Christian saint, Sisinnios. From there, he enters Jewish magical lore as Sasanoy. Lilith appears in a number of Aramaic incantation texts; and in the Biblical book of Isaiah, 34.14, it is prophesied that various demons and inauspicious creatures, including hyenas, tawny owls, vultures, and Lilith, will dwell in the ruins of the enemy-land of Edom. The Septuagint translates Lilith as *onokentauros*, literally, “ass-centaur”, perhaps partly in reference to the donkey Lamashtu rode. But the word can also have the connotation of a Siren,⁵ so the nuance of Lilith as a temptress of men may be there in the Greek, too. Amongst the texts found at Qumran, on the Dead Sea, from around the time of Christ, there is a scroll with an incantation against “the punishment of child-bearers, an evil visitant, a de[mon]” (Penney/Wise 1994). The peoples of the Near East lived in a magical universe fraught with demonic perils against which magical practices, it was believed, were of effect; and there is a vast literature of spells and incantations in which the gods and demons of many nations rub shoulders.⁶ Only theologians—and not

⁴ “I saw Ahriman the son of Lilith”, says Rabba, “jumping so swiftly from battlement to battlement on the walls of the town Mafoze that a man riding on horseback could not keep pace with him” (see Rappoport 1937: 49). The evil of the 11th-century Crusaders seems to have been too great even for the demon Ashmedai: when they massacred the Jews of Mainz, he intervened and fought them, dying with the holy people of Israel; and his green blood mingled with their red blood in the streets (see Scholem 1977: 161) (I thank Prof. Joseph Dan of the Hebrew University of Jerusalem for this reference). But since Ashmedai was, according to the Apocrypha of the Bible, an avid student of Torah, attending daily the Academies on high and below, this Jewish incarnation of the Avestan archdemon of Wrath, *Aēšma daēva*, was a strange and ambiguous person whose character merits closer investigation.

⁵ The enchanting singer, not the car alarm. Since it is her songs—something verbal—that men hear, after which they err; and because of the onocentaur’s asinine quality, the Siren becomes the demoness of false and stupid belief, i.e., heresy (see Russell 1993).

⁶ The field of magic in the Hellenistic period and Late Antiquity is enormous, and with the encouragement of modern interest in transgressive religion, very many studies and collections of texts have appeared in recent years. A very few of these may be listed here: Faraone/Obbink 1991; Luck 1985; Betz 1986; Naveh/Shaked 1985/1993; Gager 1992; Meyer/Smith 1994.

all of them—saw any contradiction in simultaneous belief in an omnipotent, omniscient, wholly good God and in a plethora of evil spirits acting with virtual independence. And the believer pleaded for aid against them to ancient gods or, indeed, other demons, and to the saints and angels of Judaism and Christianity familiar to us even now. He did not see in this any compromise of God's power: for the Jew or Christian, a prophet or warrior-saint might be understood to represent the Divine host.

In Jewish folklore, Lilith is believed to have been not a supernatural being at first, but the first wife of Adam, made from earth as he was, and not from his rib, either—more an equal than a helpmate. Once, the first human couple quarreled: Lilith pronounced the ineffable Name of God, the Tetragrammaton, and was instantly spirited into the air. She flew away. Adam complained of his loneliness to God, who dispatched three angels to find Lilith. These become the triumvirate of saints commonly encountered in Christian spells. They caught up with her at the Red Sea, where she declared she was determined to kill any children Adam might father on a second wife. They wanted to drown her then, but Lilith begged mercy, and they struck a deal: they would protect from her any child born in a home where their names were invoked. The three are named Sinoi, Sasanoy, and Samangluf (Plate 4), and are invoked in various texts, including the magical “Book of the Angel of Secrets”, the *Sefer Raziel*. Why *three* rhyming angels? Perhaps because originally Lilith had had the two companions whose names rhyme with her own; and the invocation of a trinity is potent by itself. In Jewish homes it became commonplace to put such a talisman near a woman abed with child. In Yiddish, this was called a *Kimpetsettl*, from German *Kindbettzettel*, “Childbed Label”, or, in Ashkenazic Hebrew, a *Shir ha-Ma'alos*, “Song of Degrees”—after Psalm 121, which is often recited as a defense against evil influences. One of these bears the title *Shemira la-bayit ve-la-yoledet*, “Protection for the house and the woman in childbirth”, with the Psalm at the centre. At the bottom is the Western Wall, with the Dome of the Rock, cypresses, and Al Aqsa mosque rising gracefully above. Another *Kindbettzettel* against Liliths and other evil spirits depicts a many-armed magical bird with the old Hellenistic magical name AGLA, the Tetragrammaton in plain and “angelic” Hebrew script (with astral circles linked by straight lines—a variant of the magical scripts called in German *Brillenbuchstaben*, literally “eyeglass-letters”), the Hand of God, instructions at the bottom on where in the house to hang it, and the Imprimatur of the Imperial Russian censor at Warsaw, 1867 (Plates 5 and 6). Lilith herself appears in a Jewish talisman reproduced in Fred Get-

tings' useful *Dictionary of Demons*; and there is a prayer for pregnant women, largely of canonical character but containing one esoteric, angelic name, to be recited by a husband: there is a place for insertion of his wife's name, and the page seems to have been used as a *Kindbettzettl*, even though it belonged apparently to a bound book. So Lilith appears as the succubus who flies to sleeping men for spectral and barren intercourse, and, in her boundless bitterness against the fertile daughters of Eve, acts as the murderous Child-stealing Witch.⁷ The talismanic texts of the Syrian Christians, in Syriac, are strikingly similar to the ones found in Armenia, except that the name Lilith is prominent, as in a magical book written by one Daniel, son of the priest (*qashisha*) Kushaba of Alqush: *wd'rb' qryn llyt' wmlwy't w'm' hnwt' dtly'* "the fourth they call Lilita and Malwita and the mother strangler of children" (Gollancz 1912).⁸

Although the Lilith comes from the Semitic world, these talismans made a detour through Byzantium before arriving from the Near East in the mediaeval Jewish community of Europe: Jewish talismans against her thus contain the Greek names of the child-stealing Harpies *Okypode* and *Aello*, from the *Theogony* of Hesiod, 267; and the magical name *Strina*, which is a distortion, by reason of the similar appearance of the letters *nun* and *gimel*, of the accusative *striga* of the Greek word *strix*, the demonic screech owl (from which we get modern Italian *strega*, "witch"). The charm against the Child-stealing Witch even finds its way into Shakespeare's *King Lear*, act 3, scene iv: "St. Withold footed thrice the (w)old;/ He met the night-mare and her nine-fold;/ Bid her alight/ And her troth plight;/ And aroint thee, witch, aroint thee!"⁹ Here, the Lilith, or night-mare succubus, has children; and her murderous forays seem to be as much for the purpose of feeding them, as for vengeance against mortal, child-bearing women. We can infer this from an Armenian tale,

⁷ This text and the other Hebrew *Kindbettzettln* here illustrated come from the collection of Dr. Marcus Moseley, Professor of Hebrew and Yiddish at Northwestern University, who was given it by his father-in-law, a noted Yiddishist who acquired it in Vilna, Lithuania, before the Nazi Holocaust. I am most grateful to my colleague and friend for lending me this and several other treasures and permitting their reproduction.

⁸ The illustrations in the book depict a saint on horseback confronting a blotchy, primitive-looking black demon with disshevelled hair who is perched in a tree—substantially like the Armenian portrayals of the scene.

⁹ See Gaster 1980: 18 ff.; and a letter to the author of the late Prof. Gaster of 30 March 1982.

in which the Child-stealing Witch is called Al, from Iranian *āl*, “scarlet”, referring to the puerperal fever with which she strikes women.¹⁰

Armenian tradition calls a fiery being named Al the first wife of Adam, too; so there is no doubt she is the same being called Lilith, or Night-mare, elsewhere. In the Armenian tale, the Al, called in the dialect of Kharberd, Turkish Harput, Elk’ (with the Classical plural, *k’*, as *pluralis tantum*), takes a young mother’s liver, but cannot eat it unless she dips it first in water—perhaps a recollection of Lilith’s flight to the Red Sea. She is caught with a metal pin stuck into her clothes, for iron pins or scissors are a common charm against these monsters; and, once she is captured, we learn she has many children herself, and has stolen the liver in order to feed them. She returns the human mother’s liver to her, and becomes her servant. Eventually the Elk’ is freed, after promising not to harm seven generations of the family, only making their wooden spoons break easily. Maybe this proviso has to do with the relative potency of iron.¹¹ The Al is shown in Armenian talismanic scrolls as a long-clawed, horned, bearded, tailed, club-footed monster, pitch-black, holding the innards of some victim, as in the folk tale from Kharberd (Ališan 1910: 239). It resembles typical depictions of the demons that we find in the margins of mediaeval Armenian manuscripts, one of which depicts Jesus healing a man stricken blind and dumb by demonic possession, in Matthew 12.22.¹² In another illustration, where Sts. Sisianos and Peter are shown confronting Als, the demon facing the viewer looks rather owlish—perhaps it is a *Strega!* (Wingate 1930). The Armenian talismans against the Al invoke three saints, Siovn (i.e., Zion), Sisi (perhaps from Sis, the capital of Cilician Armenia), and Sisiane (i.e., the Greek vocative of Sisianos): the same triad, and same story, as in the Jewish magical texts—and both in their present form derive from a Byzantine Greek prototype, as Gaster pointed out long ago.¹³

In Armenian folk belief, metal objects—scissors, spades, swords, pins, even guns—are considered to possess power against the Al; and in Akn on Good Friday, the time of the darkening (Arm. *xawarum*) of the

¹⁰ On the Al and other demonic beings in Armenian pre-Christian religion and later folk belief, see Ch. 15 of Russell 1987; Macler 1929; Macler 1928; and Feydit 1986. The Persians call their demon also *mādar-e āl*, “mother of the Āl”, and the Armenian demones feeding blood to her children explains why.

¹¹ This tale was told by Marian Serabian, a native of Xarberd (Harput), Western Armenia, to Hoogasian Villa (1966: 352–354).

¹² British Museum MS Or. 14161, fol. 56a, A.D. 1695, in Nersessian 1987: fig. 25.

¹³ *Vasn t’playi ew Ali*, in *Eminskij étnografičeskij sbornik*, I, Moskva-Alexandropol, 1901: 224–229.

church in mourning for the crucified Lord, blacksmiths hammered out steel crosses for the protection of women in childbirth. In the same town a member of the K'eč'ian clan was believed to have encountered and fought an Al on a mountain once: thereafter members of the family were believed to be able to defeat the demoness even as the saints of the talismans do. It was also thought that planting a metal object like a spade in the earth when an Al was passing would make the being visible—at which point it was subject to human control and could even be helpful around the house.¹⁴ The *hmayil* itself, like a rare *Narek* or Gospel book, was carefully preserved in the family shrine, wrapped in a cloth. It was considered a *tan surb*, “saint of the house”: in the 19th century, a priest would perform a ritual of healing by standing on a carpet—a delineated sacred space—with the patient at home. The priest held the sacred book, the *tan surb*, in one hand; a cross, in the other—and would recite a text containing the names of demons, urging the afflicted person to name the demon responsible for his ailment and thereby be cured. The priest-healer then put the cross to his patient's mouth and read from the book a curse against the demon named. As we shall see presently, Ethiopian healers perform analogous rituals; and they attribute to Solomon a catalogue of demons that exists in Armenian MSS also. As for the household MSS, emissaries of the Matenadaran in Yerevan tried to collect *tan srber* in the 1960's but quickly discovered that Arme-

¹⁴ See Harut'yunyan 2006: 302 ff. This massive collection of spells and folk prayers, many from hitherto unpublished records in the ethnographic archive of the Myasnikyan library, is an indispensable source for future study in the subject: the texts under No. 1(159) deal with the Al and T'p'a. There is an excellent glossary; and the explanatory notes, based largely on the earlier studies by Lalayan, Abeghyan, Achar'yan, and others in *Azgagrakan Handēs*, *Biurakn*, and the other journals of a century ago are also superb. The work suffers from the author's probably deliberate failure to consult good Western scholarship on Armenian magic and folklore, with the result that the material is presented as virtually *sui generis* and without a comparative Byzantine, Antique, or Near Eastern context. Just as Soviet Armenian scholarship in the field was extremely useful for the edition and systematic presentation of folk texts, but occasionally suffered from the weakness of an ideologically driven analysis, so a kind of new xenophobia bedevils some scholarly work of the post-Soviet era. The excellent MA thesis submitted by Yoav E. Loeff to the Hebrew University of Jerusalem, 2002, “Four Texts from the Oldest Known Armenian Amulet Scroll: Matenadaran 116(1428)”, should be consulted in any future study of this genre of Armenian magical texts. In 2002 the Matenadaran at Erevan printed a facsimile scroll of a *hmayil*, MS 312, 15th century: the accompanying booklet contains a fine introductory scholarly essay by Lilith Zakaryan, entitled *Armenian Talisman*. I am most grateful to my colleague Dr. Khachik Gevorgyan for procuring for me a copy.

nian families generally refused to surrender them. Their wishes were respected; but some scrolls did find their way to the library and thereafter people paid reverential pilgrimages to them (Abrahamian/Sweezy 2001: 58-59). In the unsettled conditions of the early 1990's, Georgian bandits stole *hmayils* from Armenians; two of these criminals tried to sell me one in Jerusalem in the autumn of 1992.

A printed scroll in the collection of the Armenian Library and Museum of America (95-77), based upon a MS dated 1 November 1717 is typical of the Armenian *hmayil* and contains the following texts: 1. Scenes of Christ's life; 2. The credal poem *Hawatov khostovanim* ("I confess in faith") of the 11th-century Catholicos St. Nerses Shnorhali; 3. Prayer for intercession for the owner of the scroll by Mary, God, the twelve Apostles, the Lamb of God, and the Offering of Christ; 4. Prayer to the Holy Sepulchre; 5. The Paternoster; 6. The Trisagion; 7. The Transfiguration; 8. Prayer to the Crucifixion; 9. Prayer for the binding of witches and heretics; for the success of a judgment at law, and for the sweetness of good fortune (*T'agawor yzor apawēn...*) ("King, mighty refuge..."); 10. Prayer to Mary (*Astuacacin amen orhneal...*) ("All Blessed Mother of God..."); 11. Prayer to St. John the Baptist, lit. Forerunner (i.e., Arm. *Surb Karapet*); 12. Prayer to St. Stephen the Protomartyr; 13. Prayer to the patron saint who converted the Armenians, St. Gregory the Illuminator; 14. Prayer of protection (*Hayr surb srbea zis...*) ("Holy Father, purify me..."); 15. Prayer of protection (*Tēr Yisus ognakan im...*) ("Lord Jesus, my helper..."); 16. Prayer for Angelic protection; 17. Names of Angels; 18. Prayer for headaches and eye-aches (*Gayr getn i Yordanan...*) ("He came to the river Jordan..."); 19. Prayer against the evil eye and evil tongue (*Hraniwt' Hrap'ael...*) ("Raphael, of fiery element..."); 20. Prayer for travellers (*Kenamanuel...*) ("*I abide/Emmanuel?..."); 21. Cruciform texts of the binding of Isaac and invocation of the Cross and Crosses; 22. Prayer of the 10th-century mystical theologian St. Gregory of Narek (*Ordi Astucoy kendarwoy orhneal yamenayni...*) ("Son of the living God, blessed in everything...", Ch. 41 of the *Matean olbergut'ean*, the *Book of Lamentation*); 23. Prayer of St. Gregory of Narek (*Enkal k'alc'rut'eamb...*) ("Receive in sweetness...", Ch. 12.3 of the *Book of Lamentation*, used as a talismanic prayer against nocturnal terrors; 24. Prayer to St. George; 25. Prayer to St. Sergius; 26. Prayer for intercession by the holy kings; 27. Selections from the Gospels according to Matthew, Mark, Luke, and John; 28. Prayer to bear a child; 29. Prayer for the binding of demons and *Als* (*Solomon imastunn etes zišxann diwac'...*) ("Solomon the Wise beheld the prince of the demons..."); 30. Prayer against the *T'pla* and *Al* (*Surb Siovn surb Sisi ew surbn Sisiane...*) ("St. Zion, St. Sis, and St. Sisiane...").

nos..."); 31. Prayer for business (*vačari*) and the star of good fortune (*t'aleh*, *st'aray*); 32. Colophon (rhymed). The 21st item, a list of holy Crosses and other sacred shrines of Armenia, such as the *T'ukh Manuk*, or "Black Youth" of folklore (Russell 1998: 319-343), is vividly produced in scrolls as a text itself cross-hatched to produce innumerable crosses, in the manner also of the magic squares filled with numbers and symbols that also abound in Armenian and other magical books; and we shall presently observe analogues in Outsider Art. Some examples may be adduced from a *hmayil* at the Zohrab Center of the Armenian Diocese, New York: the *Al* (Plate 7); Christ and the Cross with astrological and other symbols (Plate 8); Adam and Eve (Plate 9); a saint vanquishing a dragon (Plate 10); a magic square with mystical, asemic symbols (Plate 11); and multiple cross-hatched crosses (Plate 12). In the 19th century, scrolls were printed, too, with more conventionally Mephistophelian demons (Plate 13). It would seem, indeed, that in the modern period any ecclesiastical opposition there might once have been to prayer scrolls against the *Al* simply evaporated. For instance, one illustrated *Girk' alot'ic'*, "Book of Prayers", ca. 1800, which contains prayer-spells against the evil eye, the evil tongue, the *Al*, and the *T'pła*, as well as *Anuank' s[ur]b nšanac'n ork'en barexos vasn mer* "Names of holy signs [i.e., crosses] that are intercessors on our behalf"—everything a typical *hmayil* has—boasts on its title page that it was printed *Hramanaw Teārn Danieli čšmartaser Patriargi [sic!] Kostandnupolsoy* "By the command of Lord Daniel the truth-loving Patriarch of Constantinople" (Oskanyan/Korkotyan/Savalyan 1988: 747, no. 975.). However, Gary Lind-Sinanian of ALMA reports that the recent souvenir publication of a *hmayil* by the Matenadaran in Erevan aroused condemnation by the church hierarchy in Echmiadzin, perhaps because the mode of its presentation made light of its subject.

But before discussing the genre of Outsider Art in relation to the Armenian material, let us look at two of the more important elements of Armenian magic: the spells against the *Al*, which are the main purpose of the magician's work; and a text that is often used in magical prayers and sometimes found in scrolls, the Conversion of Cyprian of Antioch. A typical invocation against the *Al* from an Armenian scroll reads as follows:

Prayer for the binding of demons and als.

Solomon the Wise saw the prince of the demons of darkness, who roared like a cloud and screeched like a dragon. Solomon says: O foul and accursed one, what are you? The demon says: I am the prince of the demons and mother of all evils and sins. I am the one who kindles enmity between brothers, contention and quarrel and disturbance and fornication. I enter into the hearts of men, bringing and sowing the seed of wicked desire. Solomon says: Arise,

that I may see you. And he arose, greater than a mountain, and wished to fall upon him. Solomon says: Become small! And he became smaller than a mustard seed. And Solomon trapped him, and put him in a ring on his right hand, and put a piece of the tablets of Sinai on top, with a piece also of Noah's Ark, and of Jacob's Ladder, and of Aaron's staff: and by the prayers of Kononos may all evil demons and wicked satanic contrivances be banished and frustrated, may they be released and cast out afar for this servant of God (N. N.)

Lord, show me your ways, and teach me your paths.

Prayer of the t'pla and al.

Holy Siovn holy Sisi and holy Sisiane and holy Noviel and holy Taghiel, angels are they, by Christ's command. They went out hunting and heard a child's cry. They went and saw the Al in her wickedness, and seized and held fast and bound the Al on the rock of Al. The mother of the Al came, and says: What might this be? They say: What is this, that you go in, to a mother's womb, and eat her child's flesh, drink the blood, and darken the light of its eyes? The mother of the Al says: spare my son, and we will not go near to that house where they recall your names, to the servant of God (N. N.): in the name of the Father and Son and Holy Spirit, now and forever, and unto ages of ages, Amen".¹⁵

Armenian protective charms are sometimes leaves of sacred texts folded into triangles or diamonds and kept on one's person. For example, the passage beginning *Pahapan amenayni K'ristos*, "Christ, protector of all", from the long credal prayer *Hawatov xostovanim*, "I confess in faith", by St. Nerses Shnorhali ("the Graceful", d. 1173), which is recited at the end of the Divine Liturgy of the Armenian Church during Lent, is folded into a triangle, with the recipient's name written on the outside,

¹⁵ Printed scroll, from a (MS?) version dated 1 November 1717: cat. no. 95-77, collection of the Armenian Library and Museum of America, Watertown, Massachusetts: I thank Gary Lind-Sinanian of the Museum for very generously providing photocopies of their collection of Armenian talismanic scrolls. On Solomon's seal and ring, see Perdrizet 1903. The legend that Solomon had imprisoned the demons gave rise to an interesting, complex story in the *Thousand and One Nights*, in which the Caliph orders his men to go find them, and they visit the fabled City of Brass at the ends of earth (see Russell 1984). Some versions of the text describe (and, in MSS, portray) the Al as a wingless bird perched in the middle of the universe on a leafless tree. I have proposed a source for this in the Indian Garuda, with a separate development from the same source resulting in the Russian ballad (*bylina*) about the conquest by the epic hero Il'ya Muromets of the Nightingale-Robber (Rus. *solovei razboinik*) (see Russell 2005).

and carried as a talisman.¹⁶ The word *pahapan* is critical: it is roughly equivalent to Greek *phylakterion*, the word the Byzantines used for an amulet; another Armenian term for an amulet, *gir*, “writing”, would correspond to Byzantine Greek *kharti(on)*.¹⁷ Pages from the prayer book *Matean olbergut‘ean*, “Book of Lamentation”, of St. Gregory of Narek, serve the same purpose as the leaves of Shnorhali. But scrolls are the most common shape a protective text generally takes, in Armenia. There are a number of possible reasons for this, each sufficient in itself, but none fully provable.

First, the scroll has the prestige of antiquity. It predates the sewn quires of the codex by millennia. Greek *biblion* means a roll of papyrus; and *ta biblia*, “the scrolls” *par excellence*, are the Bible. We still use the word volume, from Latin *volumen*, which means “a thing rolled up”; and the standard formula at the end of a *volumen*, *explicitus est liber*, “the book is unrolled”, gives us our word “explicit”. In Armenian, the word *magalat‘*, “parchment”, actually comes from the Syriac for a scroll, the idea of parchment for Armenians having evidently been linked originally to an inscribed scroll; cf. Hebrew *megillah*, “scroll”. (The latter word as a loan in American English has come to mean “a long, drawn-out story”, from the Yiddish expression *a gantse megillah*, “a whole scroll”).¹⁸ The Torah is still used by Jews for liturgical purposes only in scroll form; and the Byzantines made both Biblical and liturgical rolls. These scrolls are very long and large: the average papyrus roll in Roman times was sold as a unit on average 15 feet long; but these were glued together very often to make a longer book, and there is an ancient Egyptian papyrus text a full 133 feet in length. A very big scroll is more public, it has been suggested, than a codex, simply because it requires several people to unroll and read it; so it has about it the power of social ceremony, of ritual (Kazhdan/Epstein 1985: 5). A scroll of very small size is as private as a large one is public, and it is easy to carry on one’s person: the Byzantine phylactery was typically a thin sheet or lamella of silver or gold, inscribed with a magical text and cryptic symbols, rolled

¹⁶ At Cambridge on 18 March 1997 Mrs. Shushan Teager of Belmont, MA, born in Beirut, showed me one that had belonged to her grandmother, Mrs. Zarman Nazaret‘ian, born in Aintab (modern Gaziantep), Turkey.

¹⁷ On the Byzantine terms, see Greenfield 1995: 120.

¹⁸ See Philologos [H. Halkin], “White House Megillah”, in the *Forward* English-language weekly, New York, 21 March 1997: 10. Prof. Martin Schwartz of Berkeley objects that I must transliterate the Yiddish for the Hebrew word for a scroll with a short -e-, as *megilleh*. But in Americanised Yiddish, where we encounter, long before Sesame Street flickered onto the screen with its (now very multicultural) Cookie Monsters and friends, one Megilla Gorilla, fixing the -a- in pronunciation.

up and sealed in a tube with two pierced lugs for a chain.¹⁹ One model for this may well have been the Jewish *mezuzah*, a little scroll put in a case and affixed to the door-frame, to protect the home against, amongst other things, the Angel of Death; and Jews also wear during prayer boxes containing tiny scrolls inscribed with sacred texts, called *tefillin*.

Though the earliest datable Armenian magical scrolls preserved come from the 15th century, it is likely that protective texts began to be translated from Greek and Syriac, with native compositions added thereto, fairly soon after St. Mesrop Mashtots' invented the Armenian alphabet, early in the 5th century. The Armenians live, after all, in a part of the world where amulets against the Child-stealing Witch had been common for millennia, as we have seen, in the languages of Syria and Mesopotamia from Akkadian down to Christian Syriac, in Aramaic, in Pahlavi, in Hebrew, and in Greek.²⁰ The Armenian cleric Yovhan Mayravanec'i/Mayragomec'i (fl. ca. 575-640), who wrote numerous sermons excoriating his flock for their drinking, theater-going, and other lapses, has an oration *Vasn č'ar sovorut'ean erdman*, "On the evil custom of oath-taking", in which he alludes specifically to swearing by saints and the Cross—commonplace in talismanic scrolls—and a *T'ult' vasn hmayic' diwt'akanac' ew anawrēn yur't'olac'*, "Epistle concerning bewitching spells and impious makers of charms".²¹ The phenomenon must be present for one to sermonise against it. But the same motives that impelled Yovhan to publish his denunciations would have led the keepers of monastic libraries to destroy such texts, or at least not to collect them until recent centuries; so talismanic scrolls made of perishable parchment stood little chance of survival over the ages.

Most *hmayils* contain an Armenian translation from Greek of the shorter version of the legend of the Repentance (or Conversion) of Cyprian of Antioch; the Armenian version of a longer recension may date from as early as the 5th century. The short form of the narrative is the one used for magic, though. It is found in the first Armenian printed book, *Urbat'agirk'* ("Friday Book", so called because of the potency of magic on that day), which Yakob *melapart* ("the sinner") produced at

Venice, A.D. 1512. The *Kiprianos* has gone through innumerable printings since then, down to the present day: most of the recent editions, from Jerusalem, Beirut, and now, also, post-Soviet Erevan, are tiny prayer books in 16-*mo*, to fit any pocket with ease, and containing various protective texts, such as the credo *Hawatov xostovanim* mentioned above.²² Cyprian was a sorcerer who could bind heaven and earth by his magical powers, but was unable to work a love charm on behalf of a young client upon a young woman, Justina, because of her strong Christian faith. A demon then told Cyprian of the mysteries of the Bible and Christ. The sorcerer, realising the greater power of the Cross, a picture of which is boldly printed at this point in the text (Plate 14), was promptly baptised. Thereafter he employed his prayers to release men from the bonds of black magic, employing, among other things, the ring of Solomon and the “bonds of bronze” with which the ancient king of Israel confined the demons. He remained, that is, a magician. The tale of Cyprian thus ties into the magical texts against the AI; and the early-20th-century American Armenologist Jane Wingate was undoubtedly right in relating this text to the scrolls, as part of a single strand of Armenian magical literature.²³ The legend of Cyprian of Antioch is more than a curiosity of magical literature; for it is generally recognised as a forerunner of the legend of Dr. Faustus in the West. In Armenia it remains much as it was originally intended to be: a text of admonition, though one in which Cyprian does not give up magic, he just becomes a Christian magician, more powerful than he had been as a pagan. In the West, though, the story develops into Goethe’s poignant drama of the aging, lonely scholar, jealous of young love and disillusioned with alchemical retorts and tomes, whose creative encounter with Mephistopheles enables him to renew his powers.

But Goethe’s insights do exist in embryo, still, one thinks, in the theme of the myth of the AI, too. It is barrenness, the anguish of imprisonment in the pride of self and the agony of Adam’s love denied, that drives the primordial Lilith, the Child-stealing Witch. There is in her, surely, a passionate emotion that makes her closer to our human state, our own perennial predicament, than God’s triumvirate of angelic hit men. And as we have seen, tradition could not always maintain the myth of Lilith in this starkly tragic and isolated form: Lilith, or AI, be-

²² On this prayer, see Russell 2005.

²³ Wingate, *art. cit.*, with translation; see discussion by Russell 1994. For an edition of the long recension of the life of Cyprian in Armenian, see Akinean 1961. Akinean believes the Armenian text to be a 5th-century translation from the Greek of Eusebius of Emesa.

comes the *mother* of Als, with little children of her own: her depredations, originally driven by a Medea-like jealousy, are now also the expression of maternal instinct. Even the demons must nurture someone, must love. This change in the tale seems to me to be of some importance, for true magic must be manipulative, a strict imposition of one's will upon the universe and other people, irrespective of their own needs and strivings, their own happiness—it can only operate, thus, by the deliberate suppression of compassion. It is materialist, and cruel. Religion, by contrast, must involve the deliberate submission of one's own will to that of a higher power; and this creates a relationship, requires the acknowledgement of the real existence of another, with another's sphere of being. It cannot but introduce, in whatever measure, both humility and compassion. The Christianity of Armenian magical scrolls perhaps mitigates somewhat their magical essence: the poignancy of the tragedy of Lilith forces the hand of folk religion. She must have children, too; and the magic worked against her, therefore, acquires a good reason to remain provisional, to work only unto the seventh generation, or only in a house where the requisite talismanic scroll is hung up high, to trail down to the floor of the pregnant woman's bedroom.

The legend of Cyprian is interesting in another way, too: as a magical text about a magician, it is as close as we come in the primary magical literature itself to authorial autobiography. Its salient feature is a career cut in half by failure and then galvanised by a vision and subsequent conversion; and in its barest essentials this describes the trajectory of many outsider artists. Let us consider first the evidence of the Ethiopian *debtera*, as closest in religion and culture to Armenia.²⁴ The *debtera*—the word comes from a Greek term for “parchment”—is, like the Armenian *tirac'u*, an unordained Christian religious practitioner; and it is *debteras* who make magical scrolls (Plate 15). He is considered a holy man in his community, but he can also inspire fear as someone abnormal. One *debtera*, a man named Asres, had an initiatory dream in which a luminous being commanded him to eat the thigh of an impure animal, the hyena: he did this with pleasure, understanding thereby that God purifies the impure. There are several features of interest here: the 18th-century Armenian minstrel (*ašut*) of Tiflis, Sayat' Nova, had an initiatory dream in which St. John the Baptist, the equivalent of the Muslim Khidr, taught him how to play musical instruments; and in the mediaeval period the poet Kostandin Erznkac'i had a vision of a luminous being that

²⁴ The Ethiopian evidence in the discussion comes principally from Mercier 1997.

initiated him into poetic vision and composition.²⁵ Thus there is ample precedent in Armenia for initiatory dreaming, though I know of no case for the *tirac'u* who made scrolls. However, there may be an overlap in the case of the modern Armenian *nayol*, or “seer” of the Otherworld. He is usually chosen by a traumatic illness or other experience and is subsequently guided by dreams and other visions: he practices divination (by pouring melted wax into water, or throwing beans, etc.) and healing. He develops his own prayers and rituals, without undergoing apprenticeship; but resistance to the calling can cause blindness, for his primary sight is now of the next world (Lind-Sinianian 2003: 57). As for the Ethiopian initiatory dream, the command to Asres to eat something long, thick, and impure is obviously sexual and represents a traumatic experience transformed into a positive one; and one is reminded forcefully of the precedents of the Hebrew prophets forced by God in a vision to eat a scroll. Asres’ communication with the Otherworld seems to have continued over time: he made a point of celebrating the feast of the angel Gabriel, who, he believed, had once intervened to rescue him from misfortune. Tradition attributes to *debteras* other supernatural experiences in connection with their acquisition of magical knowledge: Tewany, a 17th-century liturgical poet and master of the occult, used to feast with invisible demons, and was lifted up in the air by unseen women and carried to lake Tana, where he learnt folk remedies. He made a talisman that kept the Angel of Death away from his house for a full seven years. In Armenia, Gabriel is the *groł*, the “writer” of destinies who comes as the Angel of Death to take the soul; and there is a ballad, kindred to the Greek myth of Alcestis, in which a princely hero named Aslan (“Lion”) fights Gabriel. But it is his wife’s devotion, not his physical or magical prowess, that persuades God to lengthen Aslan’s and her own life (Russell 1998a). As for flight through the air, this is the signature experience of the witch or the shaman the world over. Ethiopian Christian holy men can also be possessed, as are shamans elsewhere, by spirits who “ride” them like horses: such a belief in possession is general in the Muslim and Jewish communities of the country as well.

In Ethiopia a master of talisman making trains acolytes for seven years before they get a notebook of their own. It can be a demanding job to be a *debtera* and teacher: Asres always wanted to study liturgical poetry, for example, but never had time. The scrolls themselves are strikingly similar to the Armenian *hmayils*, down to the cross-hatched pat-

²⁵ See J. R. Russell, tr., intro., and comm., Derenik Demirjian, *The Book of Flowers* (*Girk' calkanc'*), Belmont, MA, 2003, esp.: 11-19.

tern in invocations of the Holy Cross and other crosses (Plate 16). The scroll's length conforms to the height of the client's body (Plate 17), all of which it is intended to protect and heal; but a scroll that had belonged to a deceased relative can be re-used with the old name scratched out and that of the new owner inserted. Scrolls are rolled up and kept in a case under one's pillow or near an afflicted limb of the body; or they can be hung vertically over one's sickbed. A priest visiting an ailing parishioner might read such a scroll hanging over the person's bed: a jug of water is placed nearby, and the priest will dip the Cross in it while reading out a prayer, then blow on the water (perhaps in imitation of the spirit of God hovering over the face of the waters in Genesis!) and sprinkle it over the patient. These fascinating practices might have had parallels in Armenia, though testimony is lacking. With the modernisation of Ethiopian society, the traditional role of the *debtera* has begun to disintegrate; but one traditional maker of talismans, Gedewon (1939-2000), befriended by the scholar Jacques Mercier, began to work more freely as a creative artist, utilising the themes and skills of his sacred craft and exhibiting his work in Paris. His paintings, removed from their traditional context, are now studied under the rubric of Outsider Art, where they find affinities with the canvases of other visionaries practicing outside the formal art world (Mercier 2003).

What is certain is the similarity of subject matter. Like Armenians, Ethiopian Christians consider Friday a day of special danger: the "Outsider Artist"/*debtera* Gedewon painted a special talisman for the day (Plate 18). Like Armenians they regard the Cross as a sign of victory, not a reminder of Christ's suffering; and tend not to portray His crucified body thereon. They call it typically "the Cross, conqueror of enemies", and use it abundantly in talismanic scrolls. This view of the Cross recalls the *xač' patrazin* ("Cross of war/victory", the second word probably from Arm. *paterazmin*, "of war", but maybe also Middle Iranian *pērōzēn*, "victorious") the heroes of the Sasun epic wear on their arms as part of their battle equipment. And the talisman with which Cyprian releases the virgin Justina is a great cruciform figure in Ethiopian MSS, just like the Cross shown in Armenian texts of the *Kiprianos* (Plate 19): the story of the reformed magician is equally prominent in both cultures. Like the Armenians, Ethiopians cultivated legends about the two kings of old who possessed magical powers: Solomon and Alexander. Ethiopian magical texts include talismans against Gog and Magog (Plate 20), whom Alexander is said to have confined behind bronze walls at the ends of the earth. The gates are guarded by automatons that play music since the ophidian peoples fear it: one is reminded of the Story of the City of

Bronze (*Patmut'iwn phnje k'alak'i*), a tale translated into Armenian from Arabic that features similar automata. The prayer of "Solomon's Net" (Plate 21) describes how the ancient monarch was trapped by blacksmiths but vanquished them by invoking God's name. Solomon also drew portraits of demons in a book: demons are curious to see themselves, but when they view Solomon's pictures they vanish in a puff of smoke! The book—a pseudepigraphon, of course—exists in Armenian, and the MS was published by the French Armenologist Frédéric Macler²⁶ (Plate 22). As for the blacksmiths, one recalls that in Armenia they used to strike their anvils thrice at the beginning of the working week to strengthen the chains of Artawazd, the demonic king imprisoned in Mt. Ararat (Azat Masik') by the giants called *k'ajk'*. There are spells of protection against the latter in Armenian magical MSS; and scissors or other iron objects are believed to be powerful against the Child-stealing Witch and other evil powers. So perhaps the blacksmiths originally figured in the prototype of the Ethiopian tale as positive figures, and the confusion of roles arose because of Solomon's converse with evil demons.

The magical scrolls and other texts and paintings of Christian Ethiopia are so very close in subject and style to those of Armenia that they may fairly be said to belong to a single, common East Christian tradition of folk religion. So, although the social and historical context of the East African *debtera* is in many respects radically different from that of the *tirac'u* in the Ottoman Empire and the Transcaucasus, it would not be unreasonable to infer at least some similarities between the two classes of magician-artists. These might include a powerful, even traumatic, initiatory dream or other vision followed by apprenticeship and the production at graduation of one's own magical notebook; the experience of possession by a spirit or saint; ancillary mastery of healing arts, particularly herbal ones; making scrolls and other talismans to order for afflicted clients; an uneasy symbiosis with the established Church; and a position in the community of mixed reverence and fear. In both nations, a sanctioned niche is thus found for individuals who might be stigmatised as marginal or abnormal elsewhere: a feature of traditional societies innocent of the blessings or curses of psychiatry and its attendant world view. Let us now consider the outsider artist in Western society and his affinity to these Eastern Orthodox magicians.

The definition of the outsider artist has to be fairly broad, and to involve social polarities. At one extreme are people who are criminals by

²⁶ Venice, Marciana MS 210, published by Macler 1928.

any definition, such as murderers or child-molesters, or who are unable to function in everyday life, such as schizophrenics, other delusional types: these create art in mental asylums. One famous example is Adolf Wölfli (d. 1930), a Swiss mental patient whose intricate paintings teem with winged beings both angelic and demonic, crosses, multiple eyes, geometric patterns, and dense streams of text. (Plate 23) Wölfli's paintings, which are strikingly similar to Ethiopian religious ones in their hieratic and diagrammatic character, reflect a complex private cosmology peopled by saints with invented names, in which the artist himself figures as a heroic and persecuted figure.²⁷ The eerie avian trinities of another outsider artist, Johann Knüpfer, remind one of the three saints who pursue Lilith—but in his work they are themselves pursued by an evil hunter armed with a gun. (Plates 24 and 25) In the opinion of Greg Bottoms, outsider art is fuelled “by passion, troubled psychology, extreme ideology, faith, despair, and the desperate need to be heard and seen that comes with cultural marginalisation and mental unease”. Outsider artists need not be inmates of asylums, and at the other end of the continuum they can be moderately well-adjusted housewives, businessmen, and the like; but just as often they are disenfranchised people who wake up one day to find all hope finally lost, and in an act of heroic resistance to their social dysfunctionality throw themselves into the great task of creating a body of artistic work (Bottoms 2007: 9, 53). They are, it would seem, creating a cosmology that provides a context in which they can invest their fragmented lives with meaning and achieve a feeling of wholeness, of integrity. Such an artistic release, one notes, most often has a magico-religious aspect, the expression of a vision. The vision can be highly structured and its artistic and verbal expression extremely sophisticated while remaining idiosyncratic: the English poet and artist William Blake might be adduced as an example. Or it can be at the fringe of mainstream religion or beyond; and part of the reason for this, one suggests, is that just as Western society tends to marginalise the religious visionary, the mainstream Western art world correspondingly marginalises the expression of sincere religious experience unmediated by irony. So, an artist who is not yet an outsider runs the risk of finding himself isolated and marginalised if his art is unabashedly religious in content and sentiment.²⁸ It was an innovative artist impatient

²⁷ The principal study of this extreme of outsider art is the study by MacGregor (1989); the monograph by Walter Morgenthaler, *Ein Geisteskranker als Künstler: Adolf Wölfli*, 1921, was translated into English by Aaron H. Esman as *Madness and Art*, Lincoln, 1992; and, most recently, see Spoerri/Baumann 2003.

²⁸ On this predicament see Elkins 2004.

with the establishment, Jean Dubuffet (1901-1985), who coined the term *Art Brut*, collecting outsider art and eventually establishing a museum for it in Lausanne and making it a subject for study by art historians, as well as psychiatrists and criminologists (Rhodes 2000: 7-8).

Here are the experiences of some other outsider artists. August Neter, born in 1868, beheld a vision in the sky of a screen across which a torrent of images passed: God, then the witch who created the world, wars, monuments, castles— some ten thousand objects in the course of a hallucination that lasted only half an hour, which he took over the rest of his life to set down in drawings (Cardinal 1972: 94). In Neter's vision, the world is the creation of an evil being, rather than of the good God, who seems to hover somewhere outside the universe. Thus his cosmology is substantially the same as that of the cosmogonic vision described at the beginning of the Hermetic text *Poimandres*; and it is even closer to the ideas propounded by the prophet Mani in third century Sasanian Iran after a series of visions and visitations by his spirit-twin. These became the basis not only of a world religion of Late Antiquity, Manichaeism, but also of a vast painting, the *Ardahang*, that Mani executed himself and that is remembered as the *Aržang* in classical Persian poetry. Mani was also a calligrapher; and fashioned out of Aramaic a new phonetic alphabet in which to transmit his teachings.²⁹ This combination of talents recalls the skills of the maker of magical scrolls, joined perhaps to the visionary powers of the similarly antinomian William Blake. But in the context of his age Mani was a prophet, not a madman or social outcast.

Another modern outsider artist, Madge Gill, discovered her gift through the intervention of her spirit guide, whom she named Myrminerest and associated with the planet Mars. In a painting of Mars (Plate 26), she produces a pattern of squares filled with mystical, asemic letters or symbols very like the magic diagrams of Armenian and Ethiopian manuscripts, and her written invocations include both *voces mysticae*, or potent, glossolalic nonsense words (again typical of magical texts) and references to new technologies: "Myrminerest Mars/ Mars canals/ Vedi/ dai/ My all/ Jupiter luminary planet/ Through wireless master mind/ Saturn... communication" (Cardinal 1972: 30, 141). Laura Pigeon, d. 1965, after the trauma of divorcing her husband took up spiritualism, astrology, and drawing; and produced some five hundred mediumistic texts and pictures under the guidance of a spirit guide (Cardinal 1972: 91-93).

²⁹ On the cultural and psychological role of invented scripts, see James R. Russell, "The Script of the Dove: An Armenian Hetaerogram", forthcoming in *JArmenSt*.

These two women outsider artists display a significant feature in common that relates to the craft of the artist-magician of the Christian East: they both undergo a kind of spirit possession, but instead of being prophets or shamans they conform to a type of the experience validated by the society in which they live, for their gender—they become mediums, spiritualists. But although the experience is spiritual, it has a planetary, astrological aspect. And this deserves closer examination.

In the late 19th century, the astronomer Schiaparelli professed to have seen what looked like canals on the surface of Mars, and Camille Flammarion wrote a novel about extra terrestrials. European writers and thinkers seem to have displaced onto the red planet, at once so alien and so close, the kind of hopes and fears that had once been expressed in the terms of a more abstract heaven or otherworld peopled by angels or devils.³⁰ Thus, H. G. Wells' novel *War of the Worlds* imagines an apocalyptic invasion by terrifying Martians—octopi the size of grizzly bears encased in invincible death-ray machines that punish human hubris and restore to our race a numinous awe. Nathaniel Hawthorne's son-in-law, George Lathrop, published a similar tale on this side of the Atlantic in 1895. By contrast, the interplanetary being in George du Maurier's novel, *The Martian* (1896), is a gentle, protective creature, an innocent vegetarian endowed with synaesthetic imaginative and extra-sensory powers bringing love and companionship to lonely earthlings. Madge Gill mentions the wireless radio in her poem or prayer to her Martian spirit-guide: the inventor of alternating current, Nikola Tesla, who firmly believed he could invent a death ray as well, believed there were intelligent beings on Mars and thought he had communicated with them by wireless (see Seifer 1996: 220ff.). The most interesting example of this cultural fixation, perhaps, is the case of Hélène Smith, a working medium who not only communicated astrally with a Martian named As-tané, but did so in the Martian language—which syntactically and morphologically very closely resembles her native French. It is a euphonic language; and the characters of the Martian alphabet that she wrote in trance, which sometimes obtruded into her waking writing, resemble somewhat the shapes of Sanskrit characters (Plate 27). This is reasonable, since the deliberate exoticism of her inventions seems to be based upon what she had read of India. Her paintings of Mars resemble in

³⁰ It is the near alien that inspires the greatest fear; thus, Armenians were to the Greeks of Byzantium both Christians and foreigners. So, a woman possessed by a demon babbled in Armenian; and Armenian magical texts have their demons speak a pseudo-Arabic (See J. R. Russell, "A Scholium on Coleridge and an Armenian Demon", *JSAS* 10 (1998, 1999 [2000]): 63-71).

their dense detail and syncretism (Plate 28) of styles the sculptural and architectural inventions of outsider artists such as Ferdinand Cheval (d. 1924) (Cardinal 1972: 146)³¹ (Plate 29). And the strange language and its arcane alphabet seem to be an attempt to ennoble oneself, to endow oneself with a special glamour lacking in mundane life.³² The psychologist who studied her Martian “romance” writes of Hélène’s “homesickness for an unknown country” and her instinctive inner revolt against the limitations of her station in society and her sex: in this case, the possessed visionary and outsider artist has a respectable job but is also the subject of a psychological case study of 1899 that is still both interesting and poignant. *Ané éni ké éréduť cé ilassuné té imâ nibétiné chée du-rée*, “C’est ici que, solitaire, je m’approche du ciel et regards la terre”, explains her Martian friend and spirit-guide Astané, expressing both the alienation and the romantic dignity of this outsider artist, visionary, magician, who, in a world without a sacred language to elevate her imaginative power to the level of magic or sacredness, must invent one for herself.³³

In this survey one has sought first to describe the contents and styles of the Armenian magical scrolls and their sources; then to construct a hypothetical schema of the personality, experience, and training of the artist on the basis of what is known of the makers of the very similar magical scrolls of Ethiopia; and finally, combining salient features of magical art and the particulars of the people who make it, to relate the East Christian genre to that of Outsider Art and outsider artists in the West, with particular attention to the contrasting evaluations of religious experience and practice in the two kinds of society. In traditional Ethiopia and Armenia, the visionary who dreams, keeps company with angels, and speaks in tongues, is afforded a social purpose. In the West, where heaven and hell are displaced by an unhappy and anxious materialism onto Mars and cosmological visions, euphonious invented languages, and the like are the object of studies of neurosis, the only place for the kinsman or kinswoman of the *tirac’u* and *debtera* is the

³¹ Numerous outsider artists have created complexes of buildings or sculpture parks to express a religious message or personal imaginative vision and to surround themselves with a preferable sphere of entity (see Umberger 2007).

³² Societies such as professional guilds within linguistic and ethnic groups often create sub-languages and ciphers, not just to conceal their knowledge from the uninitiated and unprepared, but also to ennoble themselves with a sense of separateness, of being special (see Russell 2011).

³³ See Théodore Flournoy, *From India to the Planet Mars: A Case of Multiple Personality with Imaginary Languages*, 1899, English tr. reprinted Princeton, 1994.

hospital, the prison, or the art market, in which a special niche—more an annex or garage, actually—has been built.

Both kinds of society: the traditional and the industrial—seem to feel the same need, however, for transcendence and imagination, for a spontaneity that paradoxically has its roots in the deepest archetypes of our cultural forms. Yet both treat the individuals who because of crisis or compulsion pursue magical creation as transgressors against reality, as marginal and dangerous. Even when given a place, they stand a little bit outside and at an angle to conventional sanity; even when seen, they are canonically apart. One wonders what it is that frightens us so about them. It seems to me it is a protest that, were one not to isolate or sublimate it, would force us to transform the world, to make life the home of insider artists. One concludes with the words of the greatest visionary of all: “Religious distress is at the same time the expression of real distress and the protest against real distress. Religion is the sigh of the oppressed creature, the heart of a heartless world, just as it is the spirit of a spiritless situation. It is the opium of the people. The abolition of religion as the illusory happiness of the people is required for their real happiness. The demand to give up the illusion about its condition is the demand to give up a condition, which needs illusions” (Karl Marx, *Critique of Hegel's Philosophy of Right*).

Argawan: The Indo-European Memory of the Caucasus

James R. Russell

Preface

This essay examines an episode in the fragments of the oral epic cycle of King Artasēs I (Gk. Artaxias; from an Old Persian form *Artaxšassa, Old Iranian *Arta-xšathra-, “Whose rule is through right/order [Aša]”) and his Alan bride Sat’enik. Artasēs was the eponymous founder of the Armenian Artaxiad dynasty, which came into being in the early second century B.C. as Seleucid rule receded from Anatolia; it endured down to the dawn of the Christian era, when a branch of the Parthian Arsacid dynasty established itself in the country. A major figure in the Artaxiad cycle is the crown-prince, Artawazd: his character has been telescoped, however, into that of a much later monarch, Artawazd II (r. 55-34 B.C.), who came to the throne after the death of the only Armenian ruler who ever played a significant role in Roman and Near Eastern history, Tigran II (“the Great,” r. 95-56 B.C.). Of particular interest to this study is a Median nobleman living in Armenia, Argawan.

The primary source for all this material is the *History of the Armenians* (Arm. *Patmut’iwn Hayoc’*) of Movsēs Xorenac’i. The work is rich in genealogical, mythological, and epic lore; so in Armenian tradition Xorenac’i has acquired the status of a Herodotus, as the *Patmahayr*, “Father of History,” of the nation. His dates are accordingly assigned to the so-called *oskedar*, “golden age” of Armenian literature—the period in the fifth century immediately following the invention by St. Mesrop Maštoc’ of the Armenian alphabet. Much in the *History* is demonstrably derived or patterned upon earlier or non-Armenian works (Lazar P’arpec’i, Josephus, the *Alexander Romance*), or is anachronistic; and it is likely therefore that Xorenac’i lived later, perhaps as late as the eighth century. However there is no reason to doubt his assertion that he heard with his own ears the

minstrels (Arm. *gusan* < Pth. *gōsān*)¹ recite the epic songs to the accompaniment of a stringed instrument: Xorenac'i's renderings are in all respects careful transcriptions of a primary, oral source.

The Armenians lived for centuries in close proximity to the Alans—speakers of a North Iranian language, a branch of the Scythians. The modern Ossetes are direct descendants of the ancient Alans, with the same language and culture; and in the republic of Georgia Ossetic- and Armenian-speaking communities are still contiguous. The Armenian oral epic *Sasna c'ier*, "The Wild Men of Sasun," first transcribed in 1874 in the region around Lake Van, has very ancient Anatolian and Iranian strata: a lady of the lake, a sword cast in water; and rock-births, and other evidence of proto-Mithraism. This combination of Old Anatolian and Iranian themes can be observed farther to the north in the Ossetic oral epic, the sagas of the *Nartae* (pl. of *nart*, "hero, manly man"); so it is probable that the Armenian epic tradition served as a conduit for such material, perhaps as long as two millennia ago, if one gives credence to the hypothesis that Alan lore was the source of these themes in Arthurian legend. There are thematic parallels in Armenian and Alan epic; so in addition to borrowing from Armenia it would seem there was much cross-fertilization as well. This is what one might expect: cultural influences between close neighbors over a long period are generally not a one-way affair.

The Ossetic Nart sagas are recited, in various versions, by other peoples of the Northwest Caucasus such as the Abkhaz and Adygei (Cherkess, Circassians). A narrative of the Narts in Adygei contains a version of the story of the marriage of Artašēs to Sat'enik and the intervention of Artawazd. These three characters have different, Ossetic, names; but a fourth player, Argwana, is plainly the Median Argawan of Movsēs Xorenac'i. This character is not mentioned in the Ossetic versions themselves; so it is probable that the Adygei story reflects an older Alan narrative that is now lost in its original—Argwana is a *Nebenüberlieferung* then—testimony for a name that undoubtedly existed once in the Ossetic *Nartae* proper. By any historical and textual standard of priority this name and character came from the Armenian epic transcribed by Movsēs Xorenac'i at least a millennium before any Nart saga was transcribed. The Adygei Nart tale provides proof of a borrowing from ancient Armenian oral literature; it is also the first independent attestation of the material in the epic cycle of Artašēs quoted in Movsēs Xorenac'i's narrative outside Armenian—nay, outside his own book.² It provides a

¹ In later times, the term *gōsān* was replaced, for reciters of lyric and romantic verses and cycles, by *ašut* / *ashugh* /, a loan from Arabic 'ašiq, "lover;" those who recited and chanted the heroic epic of Sasun were called *asac'oł*, "sayer, reciter" (cf. the mediaeval usage *asotik*).

² There is an elegy of the dying Artašēs, probably from the same cycle, in the *Letters* of Grigor Magistros Pahlawuni: see J.R. Russell, "Some Iranian Images of Kingship in the Armenian Artaxiad Epic," *REArm* 20, 1986-

strong argument, if any still be needed, for the antiquity and authenticity of his narrative concerning Artašēs.

The Kartvelologist Georges Charachidze published in 1987 a short, elegant book, *La mémoire indo-européenne du Caucase* (Paris: Hachette) in which he suggests that the oral Nart sagas, originating in Ossetic and widely diffused amongst non-Indo-European speakers in the Western and Northwestern Caucasus, enshrine Indo-European institutions, beliefs, and values that had become essential to social and personal life but were not—or could not be—overtly expressed in the canonical religions of the Ossetes and their neighbors. The title of this essay is offered in homage to his insight. That Indo-European memory is not only Ossetic, but Armenian, since Armenia is a major source for the Narts; and partly because oral epic in Armenian society in Anatolia and the Transcaucasus occupied a niche analogous to that of the Narts farther north, as a kind of Indo-European secular scripture.

The relevant Armenian passages are cited in the original, with my translation; and the other texts considered, systematically summarized—in the final section of the essay, with important terms explicated in the footnotes thereto.

Actualité

When one studies an epic there is a tacit sense one deals with archaic culture (Homer), with alien or primitive ways of life, or with a highly self-conscious re-employment within the West of a form that is acknowledged to be obsolete in any living context of serious literature since the Romantic period. Indeed, several of the epics of that latest age in which the genre seems to have thrived as a serious high literary form, are inauthentic: they are not just the products of self-conscious, individual artifice (no one would condemn Milton's *Paradise Lost* on these grounds), but forgery. Macpherson's *Ossian*, though it inspired or interested a number of creative artists, from Felix Mendelssohn to Vladimir Nabokov and Osip Mandelstam, is, strictly speaking, a fake; and a heated argument rages around the theory that the great epic of the East Slavs, *The Lay of Igor's Campaign*, with all its poetic brilliance and haunting imagery, was not composed soon after a war that took place in A.D. 1185, but is in fact the work of the late-eighteenth-century Slavist Josef Dombrovsky.³ The passion that

1987, esp. p. 259, reprinted in J. R. Russell, *Armenian and Iranian Studies*, Harvard Armenian Texts and Studies 9, Cambridge, MA, 2004 (=AIS). But the Circassian version of the Narts *repeats* a detail from Xorenac'i.

³ On the reception of Ossian in Russia, see Yu.D. Levin, ed., James Macpherson, *Poemy Ossiana*, Series Akademiya Nauk SSSR: Literaturnye Pamyatniki, Leningrad: Nauka, 1983, esp. pp. 277-458, with texts of over thirty writers, from Pushkin to Mandelstam, that deal with Ossian. On Igor see, most recently, Edward L. Keenan, *Josef Dobrovsky and the Origins of the Igor Tale* (Harvard Series in Ukrainian Studies,

informed both forgers and debaters was often nationalistic: the neo-paganism of the Renaissance and the secular philosophy of the Enlightenment, supporting the methods and findings of the new discipline of comparative philology, rejected the universal authority of the Bible and cast into doubt its authenticity as a genealogical document. It was left to individual peoples to discover the texts that cast light on their own antiquity. Many of these texts were epics; and those like the *Nibelungenlied* were believed to express the mores and spirituality of an ethnic group—often heroic values at variance with the teachings of the Christian Church. In Germany, epic has been a tool used to extol chauvinism and cruelty.⁴ In the Soviet Union, as will be seen presently, epic was to become a weapon in the class struggle.

The first recitations of the Armenian epic of Sasun were discovered and recorded in 1874, though oblique references to the epic in Armenian tradition and the testimony of visitors to the country go back to at least half a millennium earlier; and it was only in the 1780s that Movsēs Xorenac'i's text began to be studied as a source of national and epic tradition. The Armenians thus caught the wave of nationalism in their treatment of their epic. Study of the Nart sagas is much more recent; but both the *Nartae* and the Sasun epic were manipulated by the Stalinist regime in the Soviet Union in the cultural campaign to exalt what was supposed the unmediated genius of the Folk over the art-for-art's sake work of "Formalists." As writers, poets, and theatrical directors were being shot *en masse*, bewildered *ashugh*s were hauled before applauding audiences to demonstrate the "people's art." Thus, 1939 was chosen, rather artificially, as the one thousandth anniversary of the Sasun epic, and sumptuous editions the size and shape of Bibles were printed. Fortunately for scholarship, the

Cambridge, MA, 2003).

Vladimir Nabokov, who translated the Igor Tale, was cryptically inconclusive as to its authenticity in his commentary on the text. He enjoyed the intricate aesthetic possibilities of this very ambiguity, as can be seen from his own novel of epic poem and commentary, *Pale Fire*, where names appear as their own mirror-images, and, sure enough, one Con-mal, the inverted Malcolm of *Ossian*, appears as the translator of Shakespeare into Nabokov's invented Zemblan language. (But there is a real Novaya "Zembla" with a Nabokov river!) The pure intellectual playfulness of Nabokov's literary art, a kind of verbal equivalent of his fellow émigré Pavel Tchelitchew's (Chelishchev) famous painting "Hide and Seek," raises the entire issue above the vulgarity of falsification and nationalism.

⁴ There is nothing of Russian playfulness and dreamlike invention in the history of the Germans and their epic. Wagner's self-important operas, his own racial anti-Semitism, the proto-fascist pageantry of the Wagner-fests at Bayreuth, and Hitler's espousal of the "Nordic" ideology of the Ring cycle, form a straight line to the crematorium.

Soviet state also supported the serious ethnographic study of epic, in the Caucasus and elsewhere; so the picture is not entirely depressing. Given the use and misuse of epic by nationalist, fascist, and totalitarian ideologists, though, it is not surprising that the genre has now gone underground, as it were. It is not favored in sophisticated literature; but in shadowy, powerful ways, epic is present still in the cultural products of the present age. I wish to argue and emphasize this, in order to impress upon the reader that the cultural and spiritual role of the *Nartae* and the Armenian epics in the Caucasus of the present day is neither a quaint archaism to be examined by Orientalists at a fastidious distance, nor is it the artificial outcome of cultural policies imposed from above. Once one accepts that these epic songs are intellectually and aesthetically intricate and actual in themselves, it becomes possible fruitfully to explore their depths of meaning, as living literature. The reader is invited to a brief digression into the actuality of epic in present-day Anglo-American culture—to see, as it were, the workings of epic within his own cultural consciousness.

Iranists deal familiarly with the enduring presence of the *Šāh-nāme* in the context of a living and extremely sophisticated poetic tradition subordinate to none; so there is perhaps less cultural prejudice in this branch of Oriental studies than elsewhere. However I should like to argue briefly that the epic genre exists and thrives in contemporary Western culture, even when driven underground, as it were, since it addresses actual and relevant issues in the most effective way. The epic form is often excluded from contemporary literature, so it re-emerges in the lower realms of popular culture. One finds it in Westerns and in fantasy novels; and where it does appear in good literature, it is barely noticed. Here are some examples of epic low and high. When I first presented my findings on the sources of the Armenian epic of Sasun to an interested audience in a lecture at the Armenian Library and Museum of America, almost a decade ago, I had just watched the movie *Legends of the Fall*, which is all about the concept of the hero and his place in an unrecoverable past. Shortly before beginning this essay, I joined the crowds at the Boston Common cinema and watched part three of the epic *Lord of the Rings* on a big screen: the hero Frodo made it to Mt. Doom and threw the malign Ring of Power into the fire, accomplishing his great task. It is all gray and downhill for the enervated hero thereafter, which is as it should be, despite the requirement of happy endings in the movie business. Tolkien's invented epic has been around for half a century;⁵ and the dénouement recalled the structure of a recent novel, Jonathan Lethem's *The Fortress of Solitude*. The reviewers

⁵ See my discussion of it, and of the uses of epic in religious proselytization in ancient Armenia, in the art. "The Epic of the Pearl," *Revue des Études Arméniennes* 28, 2002, reprinted in AIS.

have failed to notice that the book is an epic, half-Biblical, half-Tolkienish. The hero is a Jewish boy named Dylan Ebdus who grows up in a bad neighborhood of Brooklyn where he is mistreated and robbed by some Gentile Blacks but also initiated by others—a homeless man, a close friend and his father—into a realm of wonderful language and music. He is given a magic ring that enables him to fly, and, later, to become invisible (the latter power is the same as Frodo's, in Tolkien). His name is typical of that of *digenes*, “twy-born,” heroes (cf. the Greek Akritic cycle) and reflects both halves of his epic childhood: his first name is mantic/artistic, and conjures up Dylan Thomas (poetry) and Bob Dylan (music), in that order. Lethem's hero in an earlier novel, *Motherless Brooklyn*, is a boy whose family name is Essrog, the Ashkenazic (i.e., Eastern European Jewish, but on the Armenian reflex of Askenaz, “Scythian,” see below!) pronunciation of the Hebrew word *ethrog*, “citron.” So Ebdus just might be Lethem's idea of the Ashkenazic /*avdus*/ for ‘*avdūth*, “slavery”: God took the Israelites out of Egypt, *mē-’avdūt b-hērūt*, “from slavery to freedom”—and Dylan does cross the East River/Red Sea to Manhattan's Stuyvesant High School and beyond.

The issue of a dual identity is significant in the Armenian epic episode we are shortly to consider: Artawazd is the son of an Alan mother, but it is unclear whether his father is an Armenian (Artasēs, the king), a Mede (Argawan), or a demon (Arm. *dew*—when he is accused of being a changeling). The situation expresses the ambiguous position of a dramatic character: Telemachus tells Athena he is assured he is the son of Odysseus, but then he adds, ruefully, that he doesn't know, for “No man knows his own father.” The extreme treatment of this epic—and very human—situation is the murder by Oedipus of his father, Laius, and his marriage to his mother, Iocasta. The Armenian epic treats this paradigm of the family triangle with only slightly less violence. First, the character's origins are established, with programmatic treatment of their inherent problems. But then the epic character must grow into manhood; so we return to the novel and its middle passage.

After high school, Lethem's Dylan makes a mess of the middle period of his story, at a New England college for which his previous life has not prepared him. For this hard middle passage of the epic hero, in which he is an alien and a wanderer, compare the ambiguous, hard time of Tolkien's middle book, *The Two Towers*; or the episode of Mec Mher in the second *čiwł* (“branch,” i.e., chapter/song) of the Armenian epic of Sasun, for that matter. It is *de rigueur*, the long journey. As an adult in Berkeley, California, he becomes a music critic obsessed with what he now correctly discerns as his epic childhood, in a future world that seems thin and without substance. The ring can do only evil now: though he uses it, and loses it, in destroying his archetypal enemy (not Sauron's great Eye, but a mean mugger who has

plagued him since the first pages of the novel), he is spent. A major epic hero often has one best friend, practically a lover, who is sacrificed for him: Achilles had and lost his *therapon* Patroclus; Frodo had his trusty Sam Gamgee;⁶ and Dylan has Mingus (named after the famous jazz musician), who ends up in prison. All that is left is to write down the story: one recalls the tablets mentioned at the end of the Epic of Gilgamesh. Exodus, loss, and enervation provide an epic patterning to Biblical narrative, too: after the crossing of the Red Sea and the encounter on Sinai, Moses is a different man, so shaken that his face remains veiled for the rest of his life after his encounter with God. Deuteronomy is one great dictation of what happened; and Moses makes one last, great, unheroic plea for life before God takes him into an obscure occultation not unlike the end of Little Mher in the epic of Sasun. Moses and Ebdus/ *'avdūth*, rings and Hobbits, all came together as one read Lethem's novel.

It is probable that the average reader entering the fortress of solitude of Lethem's tiny hero will not be aware that the strong aesthetic satisfaction and deep emotional truth of the book derives in large measure from the way it draws subtly upon epic themes and symmetries. The large armature of epic is often a tripartite structure, consisting of a problem, the struggle to solve it, and the resolution and after-effects. The structure can be developed in various ways, from strong and overt plots to more delicate, emotional, even introverted types. The strongest presentation of the problem is war; the mythological reflex of it, the *Drachenkampf*, or dragon-fight. The most delicate expression of the same tripartite problem-pursuit-resolution is a plot centered on love: here is the ambiguous nexus between the epic genre and that of romance. In the epic fragment on Artašēs, we are to observe the playing out of parallel themes of love and war, with all their subtleties, ambiguities, and problems. Such is the essential structure of many a folk-tale, too. The person who deals with the problem is a hero—larger than life, and therefore legendary—but still possible and therefore not mythological, even if he walks in a world of mythological phenomena and possibilities. Tolkien and Lethem both invented their epic worlds, though the sources are real and painful: England in the Great War, a Brooklyn ghetto boyhood. But most epics are not really the inventions of one man, even a genius like Homer. They are shaped out of the collective experience, tradition, feeling, values, and accumulated wisdom of a whole community; and to that extent an epic is organic rather than artificial. The idea that something is organic is dangerous if misused—to promote some

⁶ When Tolkien was recovering in an English hospital from a case of trench fever he caught during the frightful battle of the Somme, he was treated by a doctor named Gamgee who was related to the inventor of a kind of surgical bandage which bore his name. So the role of the side-kick who takes care of the hero could not be more literal.

intangible, archetypal national essence, as fascists did with Nordic epic; or to wage a campaign of folk culture against the practice of art for art's sake derided as "formalism," as Stalinists did with Armenian and other epics. In fact epics move freely from orality to writing and back (as is the case with the Kurdish *Mam u Zin*)⁷ and from one nation to another. For high culture is as "organic" as any other kind: all are human.

That does not mean, of course, that all manifestations of culture are of equal aesthetic or intellectual merit, or should be regarded as such for fear of causing offense; and still less should they be treated by scholars with uniform seriousness of method or on the same level. I have alluded above to *The Lord of the Rings*. Tolkien's epic is popular because it answers a need, and that is an interesting fact to observe. But Tolkien's characters are without subtlety and his writing is stilted. So a diet of Tolkien alone is junk food. But if reading Tolkien leads one then to read *Beowulf* and Homer, one will be intellectually nourished. Jonathan Lethem's novel is a good, ephemeral book; it will not enter the American literary canon. In citing Tolkien and Lethem I do not mean to imply that either of them is as good as a Classical epic poet, only to suggest that epic form is of relevance still to the everyday lives of Americans, and to affirm that it exists in the liveliest domains of Western culture.

The features of epic I have outlined above are deeply embedded in the Biblical (Moses), Greco-Roman (Homer), and Germanic (the *Nibelungenlied*, courtesy of J.R.R. Tolkien) literary cultures: these form, in various combinations and proportions, a large part of our spiritual and cultural inheritance in this country. They affect the way we organize the raw material of life into meaningful patterns. The *Epic of Sasun* in Armenia, the *Mahabharata* in India, the *Šāhnāme* in Iran, and the *Nartae* in the Caucasus perform analogous social, artistic, and spiritual functions and are often more consciously valued in those more traditional societies for the character of their role and message. As long as people speak and write artistically of their own high aspirations and tragic failures, of war and the enigma of life's transience, and of meaningful love, there will be epic.

Scythians, Sarmatians, Alans, and Ossetes.

The ancient North Iranian peoples of the Eurasian steppes—Scythians, Sarmatians, Alans—are vividly described for us by the "Father of History," Herodotus, and by subsequent Classical authors.⁸ The way of life best suited to the Scythians was not one of ar-

⁷ The oral and written versions of this Kurmanci epic romance reciprocally influenced each other over time. On this case, and on an analogous Armenian text, with some discussion of the politics of epic, see James R. Russell, intro. and tr., Karapet Sital, *An Armenian Epic: The Heroes of Kasht (Kašti k'qjer)*, Ann Arbor, MI: Caravan Books, 2000, p. 28 and n. 34.

⁸ The literature on the Scythians, especially in the area of art and archaeology, is vast. The best recent survey is Renate Rolle, *The World of the*

chitecture or road-building; but this does not mean they were technologically or ecologically primitive by comparison with their more sedentary neighbors along the Black Sea littoral and in warmer climes. They perfected the technology of horseback-riding and horse warfare, inventing such useful items as the stirrup and trousers; they were masters in the production of felt, which is warm and waterproof and relatively light. The artistic forms that adorned their everyday objects were pleasing and enduring: the designs on the felt saddle-cloths and horse-trappings preserved by permafrost for twenty-five centuries in the Scythian kurgan (burial mound) of Pazyryk, in the Altai mountains of Siberia, are similar to those on the felt equipment of Central Asian horsemen today. The famous “animal style” of visual art portrayed flying and running beasts and swirling water and clouds: perhaps it may be seen as a celebration of life as motion, vitality, and change.

The Scythian peoples did not embrace Zoroastrianism; and the fear and hatred peaceful Mazdaeans felt towards the marauding *mairyas* (the Avestan term carries with it the implication of violence; but cf. also Phl. *mērag*, just a young man) creates a mental dichotomy between these North Iranians and their Eastern and Southern Iranian cousins who chose another religion and way of life. But the division need not be seen as quite so stark. The view of the living world adumbrated in Scythian art may indeed exist as well in the usages of the Zoroastrian faith—which originated amongst nomadic pastoralists, in Central Asia—where the Avestan word *yaozđāthra*-, rendered imperfectly in English as “purification,” actually means “making lively, stirring up” (cf. the Arm. l-w *yoyž*, adv., “stirringly” > “very, powerfully”); and the epithets for “holy,” Av. *spənta*- and Phl. *abzōnīg*, mean, respectively, “bounteous” and “incremental,” i.e., productive of burgeoning life. Horses were central to Scythian culture; and Zarathustra also employed the terminology of the horse race in his vision of the progress and resolution of time. (The image of the Bridge of the Separator, elaborated in Zoroastrian eschatology, may have existed in Scythian shamanism, too, as I will suggest shortly in a discussion of the magic powers of the musical instrument of Alan epic bards.) Speakers of Avestan, like Scythian artists, envisaged peace and repose in terms of the image of a horse unharnessed and hitched after a long ride. The Scythian animal style lent inspiration to the art of the Celts, who inhabited Eastern and Central Europe in antiquity and were thus contiguous to the westernmost Scythians; and the fanciful, intricate menageries in the miniatures of the mediaeval manuscripts of Ireland and northern

Scythians, Berkeley and Los Angeles: University of California Press, 1989. On art, see Esther Jacobson, *The Art of the Scythians: The Interpenetration of Cultures at the Edge of the Hellenistic World*, Handbuch der Orientalistik S.2, Leiden: Brill, 1995.

Britain—the best-known examples are the Book of Kells and the Lindisfarne Gospels—in many respects echo, and not very distantly at that, Scythian art. The Scythians drank fermented mare's milk, as Central Asian and Mongolian nomads still do; and they inhaled hemp-smoke in psychedelic steam-baths. Their religious institutions included shamanistic practices;⁹ and they believed in a pantheon of goddesses and gods.

On the territory of modern Ukraine, and especially on its Black Sea littoral, the Scythian peoples came into close contact with Greek settlers and interacted with them for well over half a millennium. Hellenic goldsmiths—or local artisans trained in Greek workshops—vividly portrayed Scythians and their style of life in magnificent sumptuary objects of gold and silver. These were found in Scythian burial-mounds, the *kurgans* that dot the Ukrainian and South Russian steppe; most of these luxury items, along with more perishable objects of wood and felt preserved by the permafrost of the Altai, have been excavated by Russians, from the time of Peter the Great onwards. Accordingly, they have found a new home in the collections of the Hermitage museum at St. Petersburg. The “Royal Scythians,” as we know from Greek texts, were called *Paralatai*—cf. Av. *paradhāta*, “made foremost,” which we find in the form *Pēšdād* in the Persian national epic, the “Book of Kings” of Ferdosi, as the name of Iran's first royal dynasty. The North Iranian peoples inhabited an area stretching from Eastern and Central Europe to the borders of China: around the jade-rich oasis of Khotan, in what is now the province of Xinjiang—Chinese Turkestan—the sophisticated Buddhist culture of the Sakas (their name is a form of the same word “Scythian”) flourished till around the year 1000. (Turkic and Islamic invasions gradually doomed the multicultural civilization of the Silk Road.)

Some of the heraldic symbols of the Sarmatians, an Iranian

⁹ The Scythian shamans were initiated by being tied down on horses and run bareback till their testicles were crushed and they were either killed or left alive but unmanned. These no longer natural men were thus called *enarees* or *anarieis*, in Greek transcription; and this is the same Iranian word as Armenian *anari*, meaning “monstrous,” and probably comes from “*a-narya-*,” “un-manly” or, literally, “unmanned.” Sexual reversal or ambiguity is a salient feature of the shaman's identity in a number of cultures, notably the case of the “berdaches” of Native American culture, who served as seers and sometimes had relationships with the super-masculine warriors (see Walter L. Williams, *The Spirit and the Flesh: Sexual Diversity in American Indian Culture*, Boston: Beacon, 1986). The Alan martial epic heroes are “*nar-thrya-*,” “manly,” men *par excellence*, the *Narts*. (Another praiseworthy quality was what is called in Pahlavi *ērīh*, “Iranian-ness,” a concept combining the virtues of moral and physical strength. It derives from the much-abused adjective *arya-*, “noble,” and is reflected in the character in the *Narts*, prince Aleg, whose name Colarusso derives from **arya-ka-*).

people related to the Scythians, were used by Polish noblemen, leading to the rather Romantic claim of Polish nationalists that their nobility were descendants of the Sarmatians.¹⁰ Russians and Ukrainians, likewise imbued with a nationalistic fervor impelling them to seek ancient and romantic forebears, have claimed Scythian origins at various times: a typical example is Alexander Blok's revolutionary poem *Skify*, "The Scythians," which exploits the image of the Scythian as Noble Savage.¹¹ It is true that the Eastern Slavs live on the same land that was Scythia once; and there are important Irano-Slavic linguistic and other connections. But the last descendants of the Scythian Alans are the Ossetes (properly, Os: the Georgian toponymical suffix *-eti*, cf., e.g., Geor. Javakheti, Arm. Javakhk', has been absorbed into their name, Rus. *osetin*, *Osetiya*) and they survive in the Caucasus to the present day.

These peoples—the Yas/Ass/Os/Ossetes in particular—were related to Armenians through intermittent invasion, dynastic intermarriage, and long cultural contact, from the eighth century B.C. down to the Middle Ages. Because of old invasion and more recent Biblical anthropology, Armenians have long called themselves Ask'anaz, the Biblical word for a Scythian. There is a district northeast of present-day Armenia called Šakašēn, i.e., "Scyth's Home," known in Strabo by the Greek form *Sakasēnē*. The ancient Iranian province of Drangiana, Avestan Zranka, was invaded by Sakas and acquired its present name, Sistan, from Middle Iranian Sagastān, "Scythian country." The epic hero Rostam, whose name means "he who possesses the strength of a river" (<OIr. **rautas-taxma-*), came from there: thanks to the testimony of Movsēs Xorenac'i, we know that tales about Rostam *sač'ik*, "the Saka," were popular in Armenia long before he became the principal hero of Ferdosi's great poem.¹² Subsidiary epic narratives,

¹⁰ In the summer of 2000 I visited the mausoleum of the Persian epic poet Ferdōsī at Tus near Mashhad. The short-lived, neo-Achaemenian Pah-lavi dynasty of the twentieth century built the wonderful edifice, decorating the interior with bas-reliefs reminiscent of the friezes of the Parthenon. There is also an ethnographic museum there, with the gifts of various visitors on display, notably a plaque dedicated by Polish airmen in World War II—who describe themselves as Sarmatians paying homage to their Iranian brethren!

¹¹ Russian and Ukrainian scholars have also been at the forefront of research: one might mention, amongst the earlier writers, such titans as Mikhail Rostovtzeff (*Iranians and Greeks in South Russia*, 1922, repr. New York: Russell & Russell, 1969) and Yulian Andreevich Kulakovskii (see most recently S.M. Perevalov, ed., Yu. A. Kulakovskii, *Izbrannye trudy po istorii Alanov i Sarmatii*, Series *Vizantiiskaya Biblioteka*, St. Petersburg: Aleteiya, 2000).

¹² See J.R. Russell, "The *Šāh-nāmē* in Armenian Oral Epic," reprinted in *AIS*, pp. 1063-1072.

Pers. *dāstāns*, about Rostam were still related orally in Armenia down to the early years of the twentieth century, in various local dialects.

As is well known, a large proportion of the vocabulary of Armenian derives from Northwestern Middle Iranian speech of the Parthian period. The Armenians lived under the rule of the successive dynasties of pre-Islamic Iran: Achaemenians, Parthians, and Sasanians. Even after the last Armenian Arsacids forsook Zoroastrianism and embraced Christianity, and the nation consciously chose a Western orientation, the relationship to Iran remained close. When we speak of Iranica with respect to Armenia, it is therefore the country corresponding more or less to the republic of Iran today that we have in mind. Since all that is left of the once-vast North Iranian domain is Ossetia, historical myopia tends to reduce the role of the Scythian peoples, of the “Other Iran,” to near insignificance. However when one considers that Perso-Scythian wars were important enough to the Achaemenids for a festival called Sakaia to be instituted;¹³ that Scythian masters taught the Achaemenian princes how to ride; that Rostam was a Saka, that Sakas ruled India and created a Buddhist civilization on the Silk Road; that the Alans play a role in the legend of the Apostolic foundations of the Armenian Church—the Other Iran is no small player, it is not even Other. There was a time when the Ossetes, now a small people, were very widespread indeed. One way of tracing them is to note the places where useful phrases of their language are recorded. The common Alan and modern Ossetic greeting is *Da bon xorz*, “Y’all have a nice day” (the word *xorz* is from the same Iranian root as Armenian *axoržak*, “appetite”):¹⁴ in the Middle Ages, a Byzantine scholar heard the greeting in the streets of Constantinople and recorded it in a list of phrases from

¹³ Two Achaemenian bullae of the 5th–4th cent. B.C. were excavated in 1979 at the site of the Armenian Artaxiad and early Arsacid capital, Artaxat (Gk. Artaxata), which depict six captives with their hands tied behind them, standing one behind the other and facing right (see Jacques Santrot et al., eds, *Arménie: Tresors de l’Arménie ancienne*, Paris: Somogy/ Editions de l’Art, 1996, pp. 222–223, pis. 210 a–b). The composition of the scene is that of the triumphal relief of Darius I at Behistun, except that in the latter only one captive is a Scythian (added on later, it seems, with tall, pointed *tigraxauda*-hat and all). On the bullae from Artaxat, though, all six captives are Scythians: perhaps this reflects the actual political concerns of the time, when that northern neighbor of the satrapy of Armenia loomed so large.

¹⁴ Upon entering a host’s premises, Ossetes politely wish *Farn atsy khadzary*, “Happiness upon this house!” The expression is common in various Caucasian cultures, notably Georgia. *Farn* is Old Iranian *farnah*-, Avestan *khwarenah*-, Sogdian *farn*, and Armenian loan *p’ark’* “glory.”

that polyglottic metropolis, and somebody else scribbled it on the back of a Latin deed in Hungary. And long before then, Marcus Aurelius—the same Roman emperor who penned the Stoic *Meditations*—who had defeated the Alans in Germany, drafted some into his cavalry and sent them to Roman garrisons in Western Europe—from France all the way to north Wales.¹⁵

Rostam is not the only—not even the most important—Scythian in ancient Armenian literary tradition. The epic fragments about king Artaxias I (Arm. Artasēs) and his Alan bride Sat'enik (her native Alan name would be Satana, unrelated to the Hebrew term for the Adversary at the Divine court from which we get Satan, despite Nicholas Marr's unfounded hypothesis) and her descendants appear in the *History* of Movsēs Xorenac'i, and in the complex Apostolic legends of the Oskean and Suk'iasean martyrs.¹⁶ The modern Ossetes are the descendants of the ancient Alans (whose name in turn is perhaps a form of the same word as Iran), and now live mainly in the central region of the north Caucasus, divided between the post-Soviet Russian Federation (North Ossetia, capital Ordzhonikidze) and the republic of Georgia (South Ossetia, capital Tskhinvali). But these political boundaries are somewhat deceptive, as Armenian- and Ossetic-speaking populations are still just barely contiguous, meeting at a midpoint in the republic of Georgia; and in ancient times, too, they were neighbors: Artasēs met them on the banks of the Kura.

Georgian literature might be considered as one vector whereby Armenian traditions spread to the north, since St. Mesrop Maštoc' invented the Georgian alphabet and Georgian Christian architecture derives its basic forms from Armenian models. There are numerous Armenian loan-words in Georgian, as well. The Georgian chronicle *K'art'lis c'xovreba*¹⁷ mentions Artasēs, corrupting his name to Artasān, in the presentation of a version of the narrative known in Movsēs Xorenac'i, and knows also of his tutor Smbat. The text mentions numerous Alan-Georgian alliances against the Armenians;

¹⁵ A Latin inscription found at Artasat—where also the bullae with Scythian captives come from!—was dedicated to Marcus Aurelius by the Legion XV Apollinaris.

¹⁶ See J.R. Russell, "Scythians and Avesta in a Mediaeval Armenian Vernacular Paternoster, and a Zok Paternoster," *Le Museon* 110.1-2, 1997, pp. 91-114, repr. in AIS. Tork' Dalalyan's brilliant doctoral thesis, *Hay-Osakan lezvamšakut'ayin ar'nc'ut'yunner* ("Armeno-Ossetic linguistic and cultural relations"), Institute of Linguistics, Erevan State University, 2002, supervised by Professor Garnik Asatrian, analyzes the numerous features of interaction between the two peoples.

¹⁷ See R.W. Thomson, *Rewriting Caucasian History: The Medieval Armenian Adaptation of the Georgian Chronicles*, Oxford: Clarendon Press, 1996, pp. 53-54. In this text, Artasēs I, early second century B.C., has been conflated with his Armenian Arsacid namesake of the late first century A.D.

however, neither the name of Argawan nor the incident concerning him and Artašēs to be considered presently, appears in the Georgian sources. So in the area of epic literature, direct contacts between Armenians and Alans, which were frequent and easy, seem to have been the most likely route of transmission.

Nartae

The Ossetes still sing a cycle of heroic songs about the clan of the *Nartae*, literally, “manly ones,” the descendants of the lady Satana.¹⁸ The bards use the twelve-stringed *faendyr*, cf. the *p’andin* of the Armenian *gusans* that Movsēs Xorenac’i heard (both words are probably loans from an ancient Lydian original, meaning “lyre”). The Alan lyre was used first by the water-born Nart Syrdon; and the *xidgās*, “bridge-guard” has one. (Oss. *xid*, “bridge”; cf. Av. *haētu-*, “idem,” in the river-name Haētumant, modern Hilmand.) In Zoroastrian literature, the souls of the departed must cross the *činvatō pərətū*, “Bridge of the Separator” into the next world. The third-century Sasanian high priest Kartīr describes in his inscription a visionary trip into the next world where, thanks to his spiritual powers, he succeeds in opening passage of the bridge for his royal patron. Overcoming obstacles and transporting souls is a shaman’s job; so the complex of functions of the bardic lyre of the Ossetes can be seen to include shamanistic features, with the employment of old Iranian symbolism. The Ossetic word for an epic song is *kadāg*; the word, passing into Georgian as a loan, *kadagi*, means “foreteller”: this suggests that the Ossetic bard had some mantic power; and indeed the *faendyr* is spoken of a horse one can ride, like the horse-headed fiddle that becomes the “mount” of Turco-Mongolian shamans. The recitation of the Nart sagas occupies the niche filled in antiquity by both bards and shamans.¹⁹

¹⁸ There is a French translation by Georges Dumézil in the UNESCO series (*Le livre des héros: Légendes sur les Nartes*, Paris: Gallimard, 1965); and his *Romans de Scythie et d’alentour* (Paris: Editions Payot, 1978) is still the best overall study of the epic and its ancient sources. The authoritative scholar of Ossetic, V.I. Abaev, chaired the editorial committee that published the Russian translation of the epic: *Narty: Epos osetin-skogo naroda*, Moscow: Academy of Sciences of the USSR, 1957.

¹⁹ See K.K. Kochiev, “Syrdonova arfa,” in G. Gnoli, ed., *Studia Iranica et Alanica* (Festschrift Vasilii Ivanovich Abaev), Rome: Istituto Italiano per l’Africa e l’Oriente, 1998, pp. 221-240; and J.R. Russell, “Kartīr and Māni: a Shamanistic Model of Their Conflict,” in *Iranica Varia: Papers in Honor of Professor Ehsan Yarshater*, Acta Iranica 30, Leiden: Brill, 1990, pp. 180-193, repr. AIS. I have argued that the *ēwēn mahr* “ritual mantra” Kartīr used was the Avestan formula *humata huxta hvaršta*, “good thoughts, good words, good deeds” (J.R. Russell, “A Parthian *Bhagavad Gita* and its Echoes,” in J.-P. Mahe, R.W. Thomson, eds., *From Byzantium to Iran: In Honour of Nina Garsoian*, Atlanta: Scholars

Profs. Scott Littleton and Linda Melcor published ten years ago an audacious and fascinating book, *From Scythia to Camelot*, in which they advanced the hypothesis that certain episodes in Arthurian epic that are evidently alien to wider Celtic tradition might have been borrowings: the ancient Celts heard Alans in Western Europe (some of them, presumably, the descendants of the cavalymen settled there by Marcus Aurelius) chant songs related to the modern *Narts*, where these aspects are present. Some of them are: the rock-birth of the heroes (of Sanasar and Baldasar in the Armenian epic of Sasun), their sea-goddess mother (cf. Armenian Covinar, lit. “Lady of the Lake,” parallel to Satana), and the casting of the heroes’ magic sword back into the water it came from at the end of the epic (in a legend about P’ok’r Mher from the Šāhbāyī district of Van)²⁰—appear as integral features of the Armenian Epic of Sasun. What is more important, they are attested also in Armenian sources relating to the period of the beginnings of Armenian Christianity (that is, they are pre-Christian images and tales used to shape the national legendry surrounding the birth of the new faith on Armenian soil) or in foreign writings of the pre-Christian era whose locus is Armenia and whose ultimate source is ancient Anatolian mythology (the *De fluviis* of Ps.-Plutarch, on Mithra and *petrogenesis* on the banks of the Araxes; cf. *Mec* and P’ok’r Mher, i.e., Mithra, in the Sasun epic: Trubetskoy studied the Old Anatolian material to explain the *De fluviis*, but missed the Armenian connection). On the basis of the chronological priority of the old Anatolian and Armenian sources and the thematic integrity of the Sasun narrative as a single and unified epic poem, I propose that, unless and until evidence to the

Press, 1996, pp. 24-25, repr. in *AIS*). H.S. Nyberg in his *Die Religionen des Alien Iran*, 1938, used the ethnographic data on shamanism to explain aspects of the activity of Zarathustra. The Nazis considered shamanism a religious complex of “primitive” peoples and derided such treatment of an “Aryan” prophet. Some of this attitude shadows the later writings of W.B. Henning and others; but there is no *a priori* reason to consign shamanism to pre-literate peoples and to reject it in complex societies. The Jewish mystics who composed the pre-Kabbalistic Hekhalot texts, for instance, who emerged within the most intellectually sophisticated religious tradition in human history, can best be studied as shamans: see James R. Davila, *Descenders to the Chariot: The People behind the Hekhalot Literature*, Leiden: Brill, 2001, esp. chs. 2-7.

²⁰ The Armenian epic of Sasun mentions rock-birth, magic sword, and so on, but does not relate the subsequent of the fate of the sword, so important to the Arthurian and Nart cycles. This writer discovered them in other folk texts and in one oral narrative: on Armenian legends of the hero’s sword cast back into the lake, or of its protrusion from a stone—both having undergone heavy secondary Christianization—see J.R. Russell, “The Scepter of Tiridates,” *Le Muséon* 114.1-2, 2001, pp. 187-215, repr. in *AIS*.

contrary can be produced, we are compelled to accept that Armenian Anatolia was the *primary* source, of which the Alan epic of the Caucasus was but a *secondary* recipient, of the materials that Littleton and Melcor term Alan/Old Ossetic in the Arthurian cycle.

The Narts may be considered, then, the principal surviving literary monument of the North Iranian culture of the early Alans, shaped some two millennia ago under the partial influence of the earlier oral literary culture of ancient Armenia. The Nart sagas and their reciters occupied the privileged niche in Alan spiritual culture that had belonged to the bards and shamans of earlier Scythian society. This cycle of epic songs or sagas was received and elaborated by the various indigenous minority peoples of the Caucasus, whose secondary elaborations of the tales are the subject of a new book: Prof. John Colarusso, *Nart Sagas from the Caucasus: Myths and Legends from the Circassians, Abazas, Abkhaz, and Ubykhs*, Princeton, NJ: Princeton University Press, 2002. Later arrivals in the area—Turkic tribes like the Balkars—also have versions of the *Narts*. Colarusso and several colleagues have produced an English translation of the Ossetic *Narts* (Madison, WI: Turko-Tatar Press, in publication). The present volume, under a Princeton imprint, will see very much wider distribution in the English-speaking world than that of Dumézil's earlier French translation, so it is regrettable that the author, bafflingly, underplays and sometimes even undermines the North Iranian (which he often calls, imprecisely, Indo-Iranian) origin and essence of this epic cycle. He does this to such a degree that the overall presentation should mislead the uninitiated reader to suppose these secondary versions to be the primary sources.

In fact it is the North Iranian Ossetic tradition that is the *fons et origo* of all the others—Abkhaz, Adygei (i.e. Cherkess, Circassian), etc. The great Ossetian scholar Abaev was right to stress this: it is manifestly wrong to suggest otherwise. The *Narts* are the only surviving *native* voice of the literary culture of once-vast Scythia. (The large corpus of written literature of Khotan Saka is overwhelmingly Buddhist.) Prof. Colarusso does acknowledge the true provenance of the Nart tradition in his voluminous, learned footnotes, where Iranian etymologies predominate. So perhaps his intention in stressing the non-Iranian narratives is to preempt and counteract a presumed Iranist chauvinism, and to argue, reasonably, that the recipients of another tradition can be seen to have dealt with it so creatively that it has become fully their own. There is certainly nothing superficial or parasitical about the role of the Narts among the non-Iranians of the Caucasus. The appropriation of Christianity from Semitic-language traditions into the Indo-European world is a fair example of such full and deep absorption of a tradition whose origins are in another culture and language-family, though the example points up the stresses and distortions that can occur in such a transfer. There are no such major distortions in the sharing of the *Narts*, though: the way of

life of the Ossetes is not appreciably different from that of their various neighbors. The rival nationalisms of the Caucasus are a poisonous brew and Colarusso's humanistic bid for pluralism is decent, even if perhaps he exaggerates his case at the expense of strict accuracy.²¹

The tales about the Narts are related to each other, and the chronicle of the clan (there are usually 101 Nart-men) has a clear beginning and end: both are features identical to those of the Armenian Sasun epic. But the numerous separate episodes are independent enough from one another for scholars to have described them as "sagas"; and Colarusso has judiciously adopted this term for his material. (The four principal "branches," or chapters, of the Armenian epic of Sasun form one coherent narrative. But there are independent episodes within; and many recitations contain additional, unrelated narratives, called by the Persian

²¹ The Caucasus, a turbulent region throughout history, is wracked by unprecedented conflict today. The Ossetes, many of whom are Orthodox Christians (see Kulakovskii, *supra*, on the conversion of the Alans to Christianity), are overtly sympathetic to Russia, and have suffered for their loyalty: the terrorist massacre of schoolchildren in Beslan, North Ossetia, in September 2004 was aimed as much at the Ossetes as at the Russians. Prof. Colarusso's political sympathies seem to lean away from the Russians. This writer's point of view is rather different. For the Christian Armenians, and even for most Georgians, the Russians were welcomed as liberators. But to the Muslims of the Caucasus, the Tsarist Russian takeover in the 19th century was seen as an imperialist conquest: many Circassians fled to Turkey, Syria, and Jordan; whilst numerous Ottoman Armenians migrated to the Russian-ruled Transcaucasus. The mass deportations of Chechens and others during World War II by the Soviet government was a savage policy one cannot justify. But the post-Soviet government of Russia signed a peace treaty with an autonomous Chechen authority that the latter immediately violated by invading neighboring Daghestan and by sponsoring terrorist attacks against Russian civilians. The sad history of the past cannot be invoked to justify the actions of a Chechen resistance that is not nationalist, but jihadist in its ideology and aggressive aims. In the Fall of 2003 a Chechen physician named Khassan Baiev came to Harvard Book Store to promote his memoir of the war. It began with a slide presentation of the Caucasian range, which "divides the Christian north from the Muslim south"—as though Armenia and Georgia simply did not exist! But this was merely the prelude to an excursion into the realm of malign fantasy. He informed his polite audience of Cantabrigian liberals that there are no Wahhabites, no foreign terrorists, and no fundamentalist repressions in Chechnya. So the veiled women and other suicide bombers in a Russian theater or hospital or commuter train, the slave-traders, the hostage-takers, the lawless mutilations and murders carried out under the draconian interpretations of the *Sari'a* law are all figments of one's imagination. It was appalling that a respected journalist, Nicholas Daniloff, participated in this farce, which the audience greeted with murmurs of sympathy.

term *dāstān*.) The late Professor Ilya Gershevitch, a scholar of Ossetic, argued that there was “a Saka epic cycle centered around a predatory tribe called the Nart,” and that “the originality of the main motifs of the cycle, combined with the straight line which linguistically connects the present-day Ossetes with Sarmato-Alanic tribes of the beginning of our era, encourages the view that we are basically dealing with ancient Saka ‘oral-literary’ material.”²²

The Narts were born of divine twins, Āxsärtäg and Āxsärt, whose names contain the pan-Iranian term for kingship, *xšathra*. They kill each other, after which their mother, the lady Satana, gives birth to further progeny. According to one variant, she is naked in the river Terek, washing clothes and drying them on a rock. A shepherd on the opposite bank is so aroused by the sight of her beauty that he ejaculates powerfully. She flees behind the rock; but his semen flies across the river, striking the rock, and a son is born of it. In the Armenian Sasun epic, Satana’s equivalent, Covinar, declares she is thirsty, at which point a stone spurting a milky liquid rears up out of the waters of Lake Van. She wades in, drinks one-and-a-half handfuls, and gives birth after nine months to twins, one of whom is half the size of the other. But note that in Movsēs Xorenac’i’s narrative Artasēs takes Sat’enik—i.e., Satana with a diminutive suffix—to wife by casting a red leather strap across the Kura river and lassoing her around the waist. This is clearly a variant of the original from which the less aristocratic Nart story of shepherd and ejaculation emerged. On the SW face of Zimzimdagh, Van, near the spot where Covinar went into the lake for her drink, there is a carved blind portal, an Urartean “gate of the god”: the Armenians call it *Mheri duin*, “the Gate of Mher/Mithra” (Tk. *Meher kapisı*), and the last of the heroes of Sasun, P’ok’r Mher, waits behind it till Doomsday. And that narrative might in turn have had a religio-mythological basis. A cuneiform inscription of kings Išpuini and Menua on the portal invokes the divinities of the Urartean kingdom, including one *su-i-ni-na-u-e DINGIR*, the Sea God (from the Urartean word *sue*, pronounced *l’tsue*/ comes Armenian *cov*, “sea, lake”).²³ The Armenian and Ossetic incipits to epic are perhaps variants of an older type of a *hieros gamos*, in which a sea god captures and weds a woman who becomes the sea goddess. (In Scythian art, this is perhaps Argimpasa, who may be the divine being represented as a Siren-like woman above the waist; a Hydra-like congeries of writhing snakes, below.)²⁴

²⁴ See Yulia Ustinova, *The Supreme Gods of the Bosporan Kingdom: Ce-*

The semi-divine Narts wander about, hunting and feasting and fighting against enemies and, occasionally, each other. They foregather in a kind of mead-hall, the *nixās*, where they drink deep of the intoxicant potation *rong* from a magic grail-like cup, the *nartamonga*, which never empties and allows no coward to sip from itself. There is an echo here of Herodotus' account (*Histories*, 4.66) of the bowl of wine the Scythians gave to the brave as a reward but withheld from cowards. The *nixas* contains also a stone slab: when one lies upon it, one forgets all sorrow. The Narts fight various monsters (this writer's favorite is the *uayg*, a chthonic thing that grabs at your ankles and drags you down to be smothered in dirt) and ride around on miraculous and ordinary horses, occasionally shooting their arrows at angelic beings, the *watsillas* (from *vaxš* "spirit, saint" Elijah) and *wastyrjis* (St. George). (The Ossetes dedicate shrines called *dzuar*, from Georgian *jvari*, "the Cross," at places where such spirits are believed to dwell.) Whenever God (Oss. *Khutsau*, cf. Persian *Xodā*, "Lord") has had enough of Nart hubris for the time being, He throws the *tsalkh* ("wheel," cf. Persian *čarx*) Välsäy at their knees, which kills them. (In Indo-European the word for knee [Gk. *gonu*, Arm. *cunr*, Rus. *koleno* meaning both "knee" and "generation"; etc.] is considered a genital organ, etymologically, socially, and symbolically: the Narts preserve this feature.) The metaphorical *čarx-e falak*, the Zodiacal wheel of fate of the Persians, is in Ossetia a literal discus. The epic of the Narts is all a ripping good read, without the artificiality and preciousness that mar J.R.R. Tolkien's rather pre-Raphaelite characters and landscapes of faërie (if you please). The Caucasians are interesting, full-blooded people who like strong drink, mettlesome horses, and honor.²⁵ Prof. Colarusso is a magnificent writer and story-teller, and he and his Caucasian informants and assistants have given us a wonderful book.

A large part of the volume is devoted to discussion of northwest Caucasian linguistics and to the morphological and grammatical analysis of terms and passages in the several languages of the texts. In a work meant to introduce the learned but

lestial Aphrodite and the Most High God, Series Religions in the Graeco-Roman World 135, Leiden: Brill, 1999, and esp. pl. 6.

²⁵ The appropriate offering at a *dzuar* is an **empty** vodka bottle. My friend, the great St. Petersburg scholar of ancient Mesopotamia, Prof. Mukhammad Abdelkadyrovich Dandamayev (his Ossetic surname, with the Russian -ev ending, means "subduer of rivers"), is a native speaker of Lak, a language of Dagestan. When he first visited me in America, he accepted a glass of vodka, which, unlike wine, is not mentioned—and, therefore, not prohibited—in the *Qur'ān*. This is the traditional and flexible Muslim society of the Caucasus that the imported Saudi preachers of Wahhabite extremism are undermining and destroying in Chechnya and elsewhere.

general reader to the material, this might seem distracting and somewhat self-indulgent. A student of Caucasian languages might benefit from these parts of the work, but then—mused a Persianist friend about the book when I showed it to him—would a student of Persian reading a book in English of *dāstāns* from the *Šāh-nāme* epic benefit from a breakdown of the phrase *kār hamī konīd*, for instance, into “work (indef., acc.) [marker of continuous vb.] do (pres. 2 pers. pl.)”? Not much, but then Persian is easier and more accessible than, say, Svan. And if one can wade through Tolkien’s appendices on his invented Quenya language (or put up with the actor Viggo Mortensen on the silver screen making subtitled comments in it, which sound more like lilting, cloying Irish than the intended Finnish, for that matter), then notes on Caucasian will have to do.

There is still much from an Iranist point of view to question. On p. 16, Colarusso wonders whether Ossetic *don* might perhaps be a North Caucasian borrowing. This suggestion is wrong: see Olr. *dānu-*, modern Oss. *don* (as in Mikhail Sholokhov’s *Quiet Flows the Don*—and the Dnepr, Dnestr, and Danube, all Alan riparian names). The Arm. river H(u)razdan, whose name comes ultimately from Frāzdānu, a lake mentioned in the sacred history in the Avesta of Zarathushtra’s missionary career, also contains this base. The river, called the Zangu by the Tatars, flows in a deep gorge through modern Erevan.

Colarusso says Vedic *Tvashtar*, the name of a creator-god, comes from a term meaning “two stars”: this is most unlikely. On p. 195, Ved. *vrtra-* means not “strangling” but “opposition.” The Middle Iranian form of the divine name *Vərəθrəyna-* is not Baram but Bahrām; and if the name Barambox is Iranian, as seems certain, then it should derive from Bahrām-boxt “granted (or saved) by Bahrām” (p. 195). Colarusso offers a convoluted explanation of the name Wardana on pp. 136–137, mentioning Odin and Ved. *vrddhana-* “giver of booty,” without noticing that it is simply Parthian-in-Armenian Vardan, a very popular name of the great Mamikonean *naxarar*-clan,²⁶ whose native appanages in Tao-Klarjeti

²⁶ Arm. *naxarar* (<Olr. **naxwa-dāra-*, “holder of primacy”) is the title of a landed hereditary dynast: most nakharardoms occupied hereditary positions at the Arsacid court. The Mamikoneans held the office of *sparapetut’iwn*, “commanders-in-chief” (<Olr. **spadha-pati-*, cf. Phi. and Pers. *spāhbad*), under the Arsacids: St. Vardan Mamikonean commanded the Armenian armies on the field at Avarayr, in Persarmenia, in the spring of 451. Though he and many of his men suffered martyrdom, the desperate Armenian resistance put an end to the campaign of Yazdagard II to return Armenia to the Zoroastrian fold. Vardan is still celebrated as a hero of the Church and nation. The father of St. Mešrop Mastoc’, inventor of the Armenian, Georgian, and Caucasian Albanian (Ałuan) alphabets, was named Vardan also. Few names could be more famous or common in the country.

included Georgian-and Caucasian-speaking lands. The name means “growing, flourishing,” and derives from the Middle Iranian act. part, *vardān*. There is a Mid. Pers. reflex of the name, Valān: cf. Arm. Varazvaṇan with the latter form. He suggests the name Batraz is from Turco-Mongolian *baatyr*, the latter Indo-European because of Rus. *bogatyr*, Pers. *bahādur*. This explanation is, I think, wrong on all counts: Batraz is not from *baatyr*, and the Russians and Persians got the latter word from the Mongols, not the other way around. These assertions, presented often as statements of accepted fact, somewhat undermine one’s confidence in Prof. Colarusso’s care in the consideration of things Iranian, and in his overall methodology. They do not detract, however, from the value and importance of the texts themselves, about which he always has illuminating things to say in his brilliant and important book.

A Noble Swineherd, or the Road to Eumaios: Argawan and Argwana

Movsēs Xorenac’i (*History of the Armenians* 2.44–51) relates that Argam, a prince of the Murac’ean clan and a descendant of Aždahak (here Astyages the Mede, whom Cyrus overthrew), fought for the Armenian king Eruand (Orontes) against Artasēs (Artaxias I). Some Medes had been settled around Mt. Ararat; so Argam had not come from afar. Artasēs, counselled by his wise tutor Smbat,²⁷ persuaded Argam to change sides, and, after victory, rewarded him richly and gave him second rank in the kingdom. (If Arm. *bdeašx*, Gk. *pitiāxēs*, etc., is to be explained as from OIr. **duvitya-xšaya-*, “ruling second,” then that may have been the office promised Argam. But another possible derivation is **pati-axša-* “over-seer,” with no implication of a dual monarchy or even acknowledged second position.) After these events, Artasēs confronted the Alans at the Kura river and abducted Sat’enik, who became queen. She bore him a son, Artawazd. The latter came to be jealous of old Argam, and incited a quarrel between him and the king at Argam’s banquet, fabricating the rumor of a plot.²⁸ Artasēs

²⁷ Movsēs wrote for a noble patron, Sahak Bagratuni. The Bagratids, whose Iranian name comes from *baga-dāta-*, “God-given/made,” held the hereditary office of coronant under the Arsacids; and the god from whom they initially had claimed descent was the ancient Anatolian divinity Tork’-Tarkhundas-, equated with Heraklēs-Nergal. But in Christian Armenia they invented a Davidic genealogy through a Jew named Šambat’ (“Sabbath”: the form is good Aramaic, for the name Shabbetai) supposedly martyred in “pagan” Armenia—and this Šambat’ was equated with the Iranian name Smbat. So Movsēs introduces shadowy proto-Bagratids into his narrative wherever feasible.

²⁸ In “Two Notes on Biblical Tradition and Native Epic in the ‘Book of Lamentation’ of St. Grigor Narekac’i,” *Revue des Études Arméniennes* 22, 1990–1991, pp. 135–145, repr. in *AIS*, I have called attention to the

confiscated Argam's possessions thereafter; and the prince, Artawazd, gained the coveted second rank of the realm. Sat'enik's role in the stratagem against Argam is ambiguous: Movsēs alludes to the epic songs sung in Golt'n (a district in modern Naxijewan) about the ostensible passion of the queen for the descendants of Aždahak who later were slaughtered—that is, presumably, for Argam himself.

Xorenac'i explains, believably, that Argam is the same person as the Argawan of the epic songs;²⁹ and an epic fragment cited earlier in the *History* (1.30) containing a number of enigmatic terms suggests Sat'enik desired passionately a crown or wedding veil³⁰ to be woven from certain herbs from Argawan's pillow or banquetting-cushion (abl. pl. *barjic'*). That is, she might have slept with the man whom Artawazd contrived to show was a rival to his father Artasēs. And if she was made pregnant by him, then Artawazd might have been his son, rather than the true crown prince and heir of Artasēs. Certainly Artawazd later betrays some anxiety about his inheritance: much later, when Artasēs is dying, Artawazd objects, greedily and impiously, to the destruction accompanying the rites of mourning.³¹ His father pronounces the curse that Artawazd be seized by the *k'aḵ'*, the mountain giants who dwell within Azat Masik' (Mt. Ararat). When Artawazd goes hunting, they seize him; and he is imprisoned in the mountain till the end of time.

The episode of father-son conflict followed by a curse and suspended animation till an apocalyptic *dénouement* finds a late echo in the Sasun epic (whose legendary-historical setting crystallized around the events of the Armenian rebellion of 851 against the Arab Caliphate). Artawazd is to remain imprisoned in Mt. Ararat, rather like Aždahāg in Damāvand, till the end of time, when he will emerge to ravage the world. P'ok'r Mher, cursed by his dead father, Davit', is imprisoned behind the blind portal at Van that bears the Urartean inscription mentioned above: it is believed to open yearly on Ascension Eve; but only at the end of time will

expressive and archaic epithet *setananeng*, "deceiving at table," which the tenth-century Christian saint employs in his mystical meditations, echoing perhaps the epic tale.

²⁹ Such an abbreviated form might be compared to Arm. Aršēz=Artasēs; or Argam may derive from a voc. sg. form of *argāwan-*, **argāum*.

³⁰ What she wants is an *artaxoyr xawarci*. The first word clearly contains *xoyr*, a NWMr. l-w, deriving ultimately from Olr. **xauda-*, "tiara." The prefix could mean "outer"; or it might also be a Mlr. l-w, as suggested by Perikhanian, cf. Sgd. *rēt*, "face," which would then mean a veil.

³¹ The Arm. *sug* "mourning (rite)" (<Mlr., Pers. *sūg*) involved self-mutilation and the deliberate destruction of furniture and so on, as elsewhere in greater Iran.

Mher emerge. In the interim he is covered with hair, like the abominable snowman type of Caucasian legend. He holds the *čarx-i falak*, the Zodiacal wheel (cf. the Zodiacal arch above the tauroctony scene in Roman mithraea, and of course the divine discus of fate in the *Nartae*) and rides his faithful magic horse. At the beginning of the Sasun epic, also, there are two Sat'enik-like figures, Covinar ("Lady of the Lake") and *K'ārasun Deļjun Cam* ("Forty Golden Locks"). The former provides the rock-birth of the founding twins; the latter is a sorceress who has to be won from her city that is difficult of access. One is progenetrix; the other, a sort of magician like the scheming Sat'enik of Movsēs' narrative.

Thus the theme and structure—the ancient inner armature—of the Sasun epic can be seen to reflect the old Artaxiad cycle. Several narratives of the *Narts* mention the black³² hero Warzamaeg's³³ courtship of Satana, who lives in a labyrinthine city and has a magical table. She will not marry him; so he sends an Armenian (*ermol*)³⁴ trader to fetch Argwana the Ugly, the Lord of the Pigs. He arrives mounted on his "boar-saddle"—that is, either a saddle fit for a wild boar or one made of boar leather—conquers the city, seizes Satana and her table, and carries them off. The maiden cries out in disgust that she will marry Warzamaeg if only the Narts will save her from the swineherd. They do; but later Argwana returns, finds her bathing in a stream, and rapes her. When Warzamaeg finds out what has happened, he makes war on Argwana and kills him (Colarusso, Saga 4 "Setenaya and Argwana," pp. 34-48: an amalgam of four saga-variants).

The Argawan of Movsēs Xorenac'i is not a keeper of pigs and does not ride on a boar-saddle. Argwana of the Narts does; so it is important to examine the function of the sign of swine in the structure of the tale. Let us consider the play of these functional sym-

³² His page is called *šawa*, which if it is Iranian (Avestan *syāva*, Ossetic *sau*, Arm. loan-word *seaw* and modern *seu*) means black, too. The Black Youth (on whom see J.R. Russell, "The Armenian Shrines of the Black Youth (*t'ux manuk*)" *Le Muséon* 111.3-4, 1998, pp. 319-343, repr. in *AIS*), is an Indo-European type of the powerful lover on the boundaries of society, associated with the watercourses. Cf. the Ossetic *sawj dzuar*, lit. "Black Cross"—a Black Youth spirit with a traditional sanctuary. Colarusso does not recognize the figure and consequently finds blackness in the text perplexing.

³³ The name is Ossetic in origin and may contain the base *varz*, "miraculous," which is found in Armenian in various contexts of myth and epic legend also: see my articles on Narekats'i's term *šaržvarženi* and P'awstos' *varženak*: "A Poem of Grigor Narekac'i," *REArm* 19, 1985, pp. 435-439, and "Problematic Snake Children of Armenia," *REArm* 25, 1994-1995, pp. 77-96, both repr. in *AIS*.

³⁴ Cf. the honorary surname of the conqueror/liberator of the Caucasus, General Ermolov!

bols—pig, banquet, bed—in another epic tale better known to the Western reader. It is the one involving the “glorious” swineherd of Ithaka, Eumaios. The latter, whose name is clearly marked to stress his positive role in the epic—it means “striver after good” or “kindly one”—is of noble blood: the son of a *basileus*, “king,” he was kidnapped in childhood and reduced to slavery (*Odysseia* 15.413-414). He welcomes Odysseus with a feast of pork before the hero, disguised as a beggar, goes down into town and wages the *selananeng* (“deceit at the table”) battle of all time. The suitors of Odysseus’ wife, Penelope, have been feasting in his own house—continuously, it would seem—since the hero’s departure for the war against Troy. They have thus violated the sacred law of hospitality, *philoxenia*, and of social restraint in every way, specifically against Odysseus’ family (his wife), his home (his table), and his kingdom. Elsewhere in the *Odyssey* the metamorphosis of Odysseus’ companions into swine provides a dramatic foreshadowing of the danger of the loss of human social identity that attends violation and excess. The suitors’ behavior is itself swinish: they wallow in the hall of the king enjoying themselves and indulging their gluttony.

Odysseus, demonstrating once more the qualities of his frequent epithets *ekhephron* “keeping his mind under control” and *polytropos* “versatile in his ways” employs the boundary between human and swine at the point of the *nostos*, instead of falling victim to it. He disguises himself as a beggar, and, with the help of the swineherd Eumaios, effects entrance into his palace, bearing the taunts and abuses of the suitors. There he traps and destroys them, regains Penelope, and recovers his kingdom. The later fortune of Odysseus is somewhat mysterious, involving places as uncannily alien as those he visited on his way home from Ilium: it is prophesied that death will come to him from the sea in some wholly ordinary way, but only after travel to climes so distant that their denizens will not recognize an oar but think it a winnowing fan. Presumably, Telemachus will rule as king, but this is never related. Moreover, when the goddess Athena comes early in the poem to Ithaka disguised as an old family friend and questions Telemachus about his absent father, the boy replies ruefully that he has heard he is Odysseus’ son, but nobody knows his own father. We know from the framing story of the Homeric epics that Telemachus is Odysseus’ legitimate son, but the long absence of the king has introduced a dramatic uncertainty. This is something a Greek reader would have stopped to think about: after all, the fateful triangle of Oedipus, Laius, and Jocasta is central to the Hellenic tradition. The *topos* of a royal couple, interloper, and son of ambiguous origin is durable in later Greek literature, too: in the *Alexander Romance*, Alexander is the son of an Egyptian priest, Nectanebos, who comes in the guise of the god Zeus Ammon to Olympia, a woman in the harem of king Philip of Macedon. There is a battle later on at a banquet, where Alexander is accused of being a bastard—and Movsēs Xorenac’i, in turn, drew upon this scene

for a description of a brawl involving an Armenian Bagratid prince!³⁵

In the *Odyssey*, then, the disposition of characters in the drama is: Odysseus, the dispossessed king seeking to restore his lands; Telemachus, the son anxious to restore his father's position and his own, but not quite sure of his own identity; Penelope, a *regina otiosa* weaving and unravelling, as though she were a remote goddess of fate; the helpful swineherd Eumaios; and the swinish suitors who seek to gain Penelope and supplant Odysseus. In the Artaxiad epic, as we have seen, Artašēs, Artawazd, and Sat'ēnik play out their analogous roles; but in the place of the multiple, swinish suitors there is the single Median nobleman Argam/Argawan. The latter is not marked by association with pigs; but the Argwana of the Nart saga is.

In the notes to this essay I have cited a study on a figure called in Armenia the Black Youth, in which I employed a method analogous to triangulation, considering Greek and Indian phenomena in their context at western and eastern poles from Armenia in order precisely to define an Indo-European prototype and then to explain its particular local development and permutation in Armenia. It is possible to employ the same method in the present instance, since there is Indian attestation of the *topos* of royalty and interloper, as well as a cultural dichotomy of boars *vs.* pigs: Prof. Stephanie Jamison has pointed out that ancient Indian legal texts deal with the issue of how long a woman need wait for an absent husband, how her suitors must act, who is entitled to give

³⁵ See J.R. Russell, "The Mother of All Heresies: A Late Mediaeval Armenian Text on the *Yuškaparik*," *REArm* 24, 1993, pp. 273-293, repr. in *AIS*. Xorenac'i, in turn, inspired another great creative writer, the Armenian Romantic poet Bedros Tourian (1851-1872), to revise a poem of dull despair, changing it into what was for him a most unusual celebration of requited love. He composed and produced a play about king Artaxias, also. Perhaps the most modern echo of the banquet-fight in the *Alexander Romance* is Kafka's: *Heute—das kann niemand leugnen—gibt es keinen grossen Alexander. Zu morden verstehen zwar manche; auch an der Geschicklichkeit, mit der Lanze über den Bankettisch hinweg den Freund zutreffen, fehlt es nicht...* ("Today—nobody can deny it—there is no Alexander the Great. Many, to be sure, know how to murder; also there is no lack of skill in hitting your friend with a lance from across the banquet table...") (Franz Kafka, "Der neue Advokat," *Parables*, New York: Schocken, 1947, p. 28.) Kafka elsewhere reduces the god Poseidon to a bookkeeper who may get a chance to see the seven seas just before the world's end—apocalypse becomes a long work week. And in this case the modernist of Prague declares the heroic type of Alexander extinct—deeds rendered base by being shorn of their epic context remain, though, base and absurd. Alexander has, like Mher and Artawazd, apocalyptic overtones: Greek fishermen when they see a mermaid are supposed to say *O Meghaleksandhros zi ke vasilēvi!* ("Alexander the Great lives and reigns!")

her away to a groom, and what the instruments emblematic of assumption of authority are to be (bows and arrows: Odysseus' chosen weapons).³⁶ The suitors are, in her view, not without a case; so what Odysseus accomplishes is therefore a kind of lawful abduction. She regards the episode of Eumaios the swineherd as "a subtle underlining of the kingship theme," with the pigs foreshadowing, as it were, the great recognition scene when the nurse Eurycleia recognizes Odysseus by the scar given by a boar during a hunt long ago. That scene of recognition, so masterfully analyzed in Erich Auerbach's *Mimesis*, restores everything to the long-gone, nearly nameless Odysseus at once: his maternal grandfather Autolykos ("Lone Wolf," so like him!) with whom he was hunting, who had named him from the word *odyssamenos*, "causer of pain," and the boar-symbol of his kingship.

Argwana, Lord of the Pigs, is not just a swineherd, else how could he share the noble company of the Nart heroes? He must have a *boar* saddle, too: this second kind of pig is a royal, even divine, totem. The dangerous boar is particularly appropriate to the Persian royal hunt, and the boar (Av. *varāza*, Arm. 1-w *varaz*) is in the Avesta a totem of the god Vərəthraŋna; it served as the emblem of the Armenian Arsacid dynasty. But the domestic pig is not so noble; and Dionysius bar Salibi, a Syrian Christian writer who lived at close quarters with Armenians at Melitene, took advantage in his anti-Armenian polemic of the kinship of boars and pigs to declaim, "Your head [not a king!- J.R.R.] Tiridates was a pig [not a *varaz*!- J.R.R.] and so are you."³⁷ As Prof. Nina Garsoian noted long ago,³⁸ the myth in the *History* of the conversion of the Armenians of Agathangelos of the transformation of King Tiridates IV the Great, persecutor of St. Gregory, specifically into a boar— on the Biblical model of Nebuchadnezzar's metamorphosis into an ox, modified by local, Iranian symbolism— served to invert the Arsacid image. The divine boar became a sign of disgrace rather than nobility. In the Nart tale of Argwana, the same dichotomy may be employed to the opposite ef-

³⁶ See her pathbreaking study "Penelope and the Pigs: Indie Perspectives on the *Odyssey*," *Classical Antiquity*, Los Angeles: UCLA, 18.2, Oct. 1999, pp. 227-272.

³⁷ See my articles "The Armenians, the Holy Cross, and Dionysius Barsalibi" (*St. Nersess Theological Review* 8, 2003, pp. 1-12) and "The Scepter of Tiridates" (cited above), both repr. in *AIS*. The virulence of the hatred and the foulness of the language of Dionysius towards the Armenians—his fellow Christians—may astonish one; but as Wilken notes in his study of John Chrysostom (see n. *infra*), such rhetoric in antiquity was considered to be within the bounds of propriety.

³⁸ See N.G. Garsoian, "The Iranian Substratum of the 'Agat'angelos' Cycle," in N.G. Garsoian et al., eds., *Ease of Byzantium*, Washington, D.C.: Dumbarton Oaks, 1982, pp. 151-174, repr. in *Armenia between Byzantium and the Sasanians*, London: Variorum, 1985, art. no. XII.

fect, without depriving the story, at the same time, of the special symbolism of pigs. For there is a vulgar and deprecatory sexual over-tone attaching to pigs: cf. Boccaccio's "order of the Porcellana" in the *Decameron*, a jocular euphemism for clerical sodomy; and the modern American slang usage "porking," used of intercourse generally. This is perhaps because these intelligent and inoffensive creatures, so close socially³⁹ and physiologically to human beings, perform without inhibition acts such as eating (in English a person without table manners or restraint "eats like a pig") and copulating that human society surrounds with taboos of propriety and privacy.

I would suggest that the function of the pig or swineherd at the point of sexual conquest (of Sat'ēnik/Satana, by Artašēs or Warzamaeg) or re-conquest (of Penelope, by Odysseus) in an epic narrative is to signal the use of a force that is natural and violent but immediately contiguous to the social sphere and thus meaningful to its functions, of the necessary sweeping-away of social inhibitions that have become obstacles. Pigs are the perfect symbol of the marginal wild animal. They are not so domesticated as to live in the very same room as their masters, as cats and dogs do; yet they live often under the same roof. Pigs eat, pigs copulate, not in faraway fields, but often within the same buildings humans inhabit. Swineherds take pigs out to graze on acorns, yet to the mediaeval commentator the accepted symbolism was so potent that the scene was interpreted as emblematic of gluttony and sexual excess, as well as the barrenness of unnatural intercourse.⁴⁰ Violate the rules of the table or the

³⁹ I do not mean only that pigs often act as humans do. I mean that we have lived from earliest times in closer proximity to pigs than to most other creatures. Pig bones are those most often found in the excavation of ancient Armenian houses. Sogdian borrowed as *x'* from Chinese the word *kia*, "family," which is represented by the character depicting a pig beneath a roof (see N. Sims-Williams and J. Hamilton, *Documents turco-sogdiens du IXe-Xe siècle de Touen-houang*, *Corpus Inscriptionum Iranicarum* 2.3.3, London: SOAS, 1990, p. 27).

⁴⁰ See Michael Camille, *Mirror in Parchment: The Luttrell Psalter and the Making of Medieval England*, Chicago: Univ. of Chicago Press, 1998, pp. 336-338 and pl. 151. In mediaeval Christian Europe, Jews—who, it has often been observed, occupied the difficult position of the closest foreigner, the domestic alien—were explicitly associated with pigs and were killed in the same manner as homicidal pigs, by being hanged upside-down (see Mitchell B. Merback, *The Thief, the Cross and the Wheel: Pain and the Spectacle of Punishment in Medieval and Renaissance Europe*, Chicago: Univ. of Chicago Press, 1999, pp. 188-190 and pl. 80). The *locus classicus* for this demonization is the Gospel according to John, followed by the latter's namesake St. John Chrysostom, who in his invectives compared Jews to pigs, gluttonous dogs, vicious hyenas, and demons, and claimed that synagogues attracted "effeminate men" (see Robert L. Wilken, *John Chrysostom and the Jews: Rhetoric and Reality in the Late 4th Century*, Berkeley: Univ. of California Press, 1983, esp. pp. 121-122). So the imputation of abnormal sexuality adheres to the complex, porcine image: a

marital bed, and you risk becoming a pig— or having the wronged party in an epic tale sweep custom away and use the direct force of swine against you. The suitors insist on manipulating the propriety of the table? asks Odysseus. I will show you how to play dinner politics! You are too fastidious to accept my suit, Satana, and hide in your labyrinth? asks Warzamaeg. I will let Argwana kidnap you, then! The outrage of the rape here, subsequent to the abduction, seems also to be a kind of breaking-in of a recalcitrant bride: one recalls that in the Ossetic Nart sagas Satana is naked in the river Terek when a shepherd on the opposite bank sees her, is aroused, and ejaculates. She hides behind a rock, but it is impregnated and her son, the first Nart, is born. So hesitancy, necessity, and result all find the locus of a river, as in the incident with Argwana: the setting mitigates or shades the meaning of the rape, perhaps. And one notices how in both the Armenian and Nart epics— as in the *Odyssey* and *Alexander Romance*— the banquet plays a role, as a human institution that has been violated.

The late Prof. C.J.F. Dowsett, who studied the Armenian material,⁴¹ points out an incident in the Ossetic *Narts* parallel to the episode in Movsēs Xorenac'i involving Artašēs, Argawan, and Sat'enik: the Boratae family of Narts seek to kill Satana's husband Uryzmaeg (=Warzamaeg) by ambushing him at a banquet in the Narts' hall, the *nixās*. Satana and the hero Batraz thwart the plot. Dowsett suggested that Argawan is Sat'enik's Alan father and not the same person as Argam even if Movses claims he is. Though I do not agree with the latter division of the two, Dowsett was surely on the right track in other respects, not only in citing the Nart parallel, but also in stressing that the "Armenian" Sat'enik of Movsēs Xorenac'i is older and nobler than the character Satana in the recently-recorded Nart sagas. He did not have access to the variants (presumably Ossetic at first, and perhaps also older than the existing Ossetic story Dowsett cites, but now attested only in extra-Ossetic *Nebenüberlieferungen*) that include the name Argwana, though. In these, it is Argwana's son, Shebatinuquo,⁴² who replaces Batraz/Pataraz and, with Satana,

particularly absurd charge, given the Levitical strictures against sodomy that separated the Jews of antiquity so decisively from their Hellenistic neighbors! John was equally scathing about Manichaeans and other enemies.

⁴¹ See his article, "Little Satana's Wedding Breakfast," in D. Kouymjian, ed., *In Memoriam Haig Berbérian*, Lisbon, 1986, p. 248.

⁴² If Shebatin is a form of the Iranian name Smbat, Hebraized by Movsēs to Šambat' (from Shabbetai or a similar name) to justify the claim of his Bagratid patrons Davidic ancestry, then we have here the name of Artašēs' *dayeak* (tutor, surrogate father, nurse) in Movsēs' narrative.

saves his father from an attempt by the Narts to poison him at the banquet-hall (Colanisso, Saga 10). So the role of the swineherd in the thwarting of the scheming banqueters is present, though displaced by one generation. And Colarusso, who seems to be unaware of Dowsett's and others' studies of the Armenian epic sources, consequently fails to notice that the Nart tale is simply an intriguing retelling of a legend attested first in the ancient Armenian Artaxiad cycle. Not even the odd cameo appearance of an anachronous Armenian merchant sparked his curiosity, though it indicates to me that the tellers of the tale associated it still, obscurely, with the traditions of their southern neighbor.⁴³

In the tale collated by Prof. Colarusso, Sat'énik, a magic table, Argawan, sexual misconduct, and the killing all occur more or less in their right order. Instead of acting as the turncoat whose betrayal of Eruand secures Artasēs' victory, though, Argawan here is the conqueror for Warzamaeg of Satana—a telescoping of the two stories of war and abduction. The sexual betrayal and punishment follow. Colarusso, not recognizing the Armeno-Iranian name, speculates about the etymology of Argwana, which he thinks an "extraordinary" name "clearly" linked with Greek *Gorgon*. But Argawan/Argwana and the Gorgons really have nothing in common. Nor is Colarusso's ingenious etymology from Ubykh yielding the picturesque and functional *"vagina-crammer" likely to be accurate, when the source of the tale is—as I have shown here—a historical episode of the pre-Christian period cast in epic, involving an Armenian nobleman of Median descent with a respectable and straightforward Iranian name, rather than an archetypal saga with a villain named Rapist. It has over centuries of retelling gradually been absorbed, rather, into the milieu such a tale, with the enrichment of the dynamic symbol of the swine—a feature whose function in epic narrative I think one can now define by recourse to the parallel case of the Homeric poem.⁴⁴

The etymology of the name Argawan is straightforward. It means "Valuable" or "Precious" (as the wistful Sméagol, back in J.R.R. Tolkien's Middle Earth, calls the Ring), or, more precisely perhaps as the appellation of an ancient *naxarar*, "Noble." It is, as one would hope and expect, a Northwestern Middle Iranian name—suitable for an Armenian of the second century B.C. or later, or a descendant of speakers of "Middle Median." The late Prof. D. N. MacKenzie observed that **rg'w* "noble" in the Parthian documents from Turfan derives from **argāwan*, cf. Ossetic *āry*, "worth."⁴⁵

⁴³ Colarusso mentions modestly in his Preface that he "looked at" Armenian when he was a graduate student at Harvard.

⁴⁴ If Argawan was indeed a "Grabber," then one might suggest an etymology, with metathesis of the consonantal cluster, from the Iranian base *grab-* "seize," as in Ossetic Digoron dialect *aryāunā*, Iron *ārghāc'k*, meaning "pin-cers." But this is just unnecessary.

⁴⁵ Review of M. Back, *Die sassanidischen Staatsinschriften*, in *Indoger-*

Hrač'ey Ačařean in his *Dictionary of Armenian Proper Names*, vol. 1, pp. 271, 301, regards both Argawan and Argam as variants of each other (Argam < Argaw?) and considers them related to the name Arjewan, which we find attested in Armenian: Arjewan was a scholarly companion of Koriwn (the disciple and hagiographer of St. Mesrop Mařtoc', 5th cent. A.D.) who travelled with him to Jerusalem. This form, Arjewan, is well known and very old: it appears in the Avesta as the name of a Zoroastrian believer, Arəjavan (Vast 13.117; and see M. Mayrhofer, *Iranisches Personennamenbuch*, vol. 1, 1.23 s.v.). His name means "possessing worth" (Av. *arəjah-*), and is analogous to and synonymous with Argawan. The Armenian usage of the name Arjewan would seem to have been a conscious Avesticism of pious Zoroastrians at some point. Another Zoroastrian name in the same list in the *Fravardīn yašt*, Arəjānghant, means the same thing. The verbal base *arg-* means "to be worth," and is very productive, both in Iranian, and in Armenian loans such as *y-argem*, "I esteem," *argoy* "precious, honorable," *an-argem* "I dishonor," etc.⁴⁶ Argawan, "Noble," is not an Avesticism, just a suitable and normal appellation of a *naxarar*.

There remains to be considered the route of transmission of the Argawan episode. The first consideration of the data must be chronological priority. In this regard there is no doubt that Armenia is the source of the episode of Argwana in the Nartae, as the tale is first attested in the *History* of Movsēs, centuries before the first written record of the Ossetic epic—never mind the transmission and translations of the latter into Northwest Caucasian languages. However the clear rules of filiation of written texts cannot with equal certainty be applied to the development of oral literature; so a recently-transcribed oral text may well be as old, or older, than one that has been set down anteriorly in writing. And while it is the case that Movsēs himself insists that the entire tale is an oral epic he is transcribing from a recitation he has heard with his own ears, it is still possible that the parts of the story that he retells, rather than transmitting them in poetic form, and are, therefore, his own words rather than words he has heard, have been subjected to recasting. After all, Movsēs was no stranger to the *Alexander Romance* and other Hellenistic literature. Given his fondness for the devices of Euhemerus—the rationalization of ancient myths as human, earthly events—it is possible that Movsēs took an Ossetic figure of legend, a swineherd Argawan, stripped that character of all refer-

manische Forschungen 87, 1982, p. 283, repr. in C. Cereti and L. Paul, eds., *Iranica Diversa*, I, Roma: IsIAO, 1999, p. 162. From an OP. form may be derived the Akkadian 1-w *argamannu*, "purple" (scil., *royal* purple, cf. *porphyrogenitus*, etc.), and Heb. *argawan/argaman*, "purple."

⁴⁶ See A. Meillet, *Études de linguistique et de philologie arméniennes, I: Recherches sur la syntaxe comparée de l'arménien*, ser. Bibl. Arm. de la Fond. C. Gulbenkian, Lisbon: Imprensa Nacional, 1962, p. 119.

ences to boars and pigs, and made of him another kind of animal, a *politikon zōon*, a Median nobleman moved more by affairs of state than by lower passions. Such a change might have made sense to Movsēs as a clarification of the historical record, rather than a distortion of an epic text with mythological elements. The Armenians' rivalry with the Medes is a leitmotif that pervades the various epic fragments relating to the Achaemenian and Artaxiad periods. The epic of Tigran II ("the Great," r. 95-56 B.C.) is the best and most obvious example. Tigran's first problems and triumphs were both to the southeast of *Mec Hayk'*, "Greater Armenia," in Media Atropatēnē. It was simple enough to make of Ast-yages/*Rštivaiga (lit. "spear-caster") both a political opponent and a mythical Avestan dragon-man (Aži Dahāka > Aždahak). The *Drachenkampf* has till recent times been durable political propaganda.⁴⁷ Against the argument that Argawan was first proto-Nart swineherd and only later a Median nobleman in a rationalized Armenian historical text, one can note that the "Median," pig-less component of Movsēs' *History* exists, in respect of Argawan, in both the metric and prose passages; so there is no good reason to suggest that Argawan-the-Mede was Movsēs' own innovation and was not known that way to the oral bards to whose songs Movsēs listened. The innovation, if there was one, might have been theirs, but guessing at a stage remotely previous to the evidence would seem a febrile undertaking. It should scarcely be worth mention, save for other aspects of the tale where the Armenian bards might possibly have resorted themselves to euphemism—though the euphemism is mythological, not real-world political—to escape calling a king a bastard. They sang that the progeny of the dragon (Arm. *višapazunk'*, i.e., the brood of Aždahak—the Medes!) stole the infant Artawazd and put a demon (*dew*) in his place. The narrative in the Nart epic makes it plain that the character parallel to Artawazd is not a changeling, but an illegitimate son. On the level of the logic of storytelling, that circumstance explains his later, anxious efforts to dispose of embarrassing witness better than his simply being a demon-child might do. Not that demonic children are alien to Armenian epic narrative: Pap, son of the fourth-century king Arsak II in the *Buzandaran*, has snakes writhing round his bedposts. And demons are as bad as pigs—maybe worse, if the demons are Medes besides.

The basic Indo-European *topos* of the episode is of a king, his abducted queen-bride, their son, and an interloper of noble birth or nature (a prince, son of a *basileus*, association with the sacred *varāz*-animal) compromised by station (slavery) or degrading associations (Median birth, common swine). In the *Odyssey*,

⁴⁷ In the First World War, both England and Russia used the icon of St. George fighting the dragon as a symbol of their resistance to German aggression.

the function of the interloper is displaced onto the suitors, but the trace of an older pattern remains in the swineherd Eumaios, whose character is manipulated in such a way as to play out the tricky versatility of Odysseus. In Vedic India, the *topos* becomes the occasion for the discussion of legitimate claims in marriage. In Armenia, the role of the interloper is absorbed into the large theme of Armenian struggle against the Medes, in the narrative of Movsēs Xorenac'i. The recurrence of the tale in a Circassian narrative deriving from a lost version of the episode in the Ossetic *Nartae* shows a borrowing from Armenian through the presence of a character named Argwana (i.e., Argawan); but the latter's association with **pigs**, and the recollection of his compromised nobility by mention of a **boar**, would indicate a *secondary archaization*—the reapplication of an older set of images to a narrative that might have been pre-existing but that was reinforced by borrowing from Armenian oral epic narrative. Such recrudescence of archaic material in the Caucasus of the Golden Fleece, Prometheus, and a local legend of a Cyclops, is unremarkable. But the discovery of an independent witness of Armenia's Father of Histories after over a millennium is worth these remarks.

A nobleman founds a dynasty, or a king returns home to reconquer his kingdom. He must acquire, or recover, a wife. The woman is mysterious and obscure—maybe a witch, or a goddess, certainly an autonomous sexual being. Her husband can never entirely conquer or know her. Just beyond the boundary of sight, or social station, or civilized propriety, is an ambiguous figure who is both needed and threatening—a source of both powerful help and of violence and lust. The issue of the royal couple, or of the tense triangle, is a son. The latter is anxious to establish his own position against his father, and he is not really certain who his father is, or who besides his supposed, legal father has diverted the passions of his mother. So he resorts to stealth and violence himself, ironically reinforcing by the character of his methods the ambiguity in his situation that he seeks so urgently to overcome. This Indo-European *topos* is played out in the armature of epic; and the plot retains its actuality, its relevance. It will be of perennial interest to any person interested in the nexus of family relations, political power, and human ignorance. And it is not unknown in the more dramatic moments of English literature: "... The base / Shall top th' legitimate. I grow, I prosper. / Now gods, stand up for bastards."⁴⁸ But that is another—though related—story.

Texts and summaries

1. *Movsēs Xorenac'i: the Artaxiad epic cycle.*

⁴⁸ William Shakespeare, *King Lear*, I.ii.20-22: Edmund, *solus*, with a letter.

(M. Abelean, S. Yarut'ıwnean, eds., Movsēs Xorenac'i, *Patmut'ıwn Hayoc'*, Tiflis, 1913: all translations my own.)

1. 11.44-46. Artasēs (Artaxias I) rebels against the king of Armenia, Eruand (Orontes). Argam, a nobleman of the Muracean clan, of Median descent, is persuaded by an emissary of Artasēs to switch sides, with the promise that he will be given second rank in Artasēs' kingdom as a reward.

2.11.50 Later, Artasēs has captured an Alan prince: the latter's sister Sat'enik comes to the opposite bank of the river and pleads for his release.

Բեզ ասեմ, ալը բաշ Արտաշէս, որ յաղթեցեր բաշ ազգին Ալանաց. եկ Հասանայ՝ քանից
աշազեզոյ դստերս Ալանաց՝ տալ զպատանիդ. դի վասն միտ, քիտու ոչ է աւրն
դի ցազանց՝ զայլոց դի ցազանց դարմից բառնալ զկենդանու թիւն, կամ
ժառանգութեանդ ի ստրկաց կարգի պահել, և թշնամու թիւն յախտենալան ի մէջ
երկրցունց ազգաց բաշաց Հաստատել:

"I tell you, brave (*k'aj*) man Artasēs, who have conquered the brave nation of the Alans, come and agree to the words of the lovely-eyed daughter of the Alans and give back the youth. For it is not the custom (*awrēn*) of heroes (*diwuc'azanc*)⁴⁹ to deprive of their life other races of heroes, nor yet to keep them in the rank of slaves by subjugating them to servitude and establishing thereby an eternal enmity between the two nations."

3. Artasēs then desires Sat'enik (Ossetic, Satana) and sends to the Alan king asking for her hand in marriage, but he replies that she is too precious.

Եւ տասի՝ տալիս բաշն Արտաշէս Հազարս ի Հազարաց և քիւրս ի քիւրոց ընդ քաշապզոյ
կոյս աւրիւղդիս Ալանաց:

"And from where will brave Artasēs give thousands of thousands and myriads of myriads in exchange for this virgin maiden of heroic race (*k'ajazgwoy*) of the Alans?"

⁴⁹ Arm. *diwuc'azn* "hero" literally "noble progeny" (Arm. *azn* < NWMir., cf. Av. *āsna*-; cf. Arm. *azn-iw* "noble" with inst., *aznawor* "idem") of the gods, *di(w)c'*, nom. *di-k'*. This reflects the common idea that kings and heroes were of divine origin, cf. the MPers. formula used of the Sasanian kings, *ke cīhr az yazdān* "whose seed is from the gods."

4. So Artašēs abducts her.

Հենաւ արի Արտաշէս ի սեան զեղեցիկ, և հանեալ զոսկէսոյ շիկափոկ պարանն՝ և
անցեալ որպէս զարծու ի սրաթն ընդ զհտն, և ձգեալ զոսկէսոյ շիկափոկ պարանն՝ ընկէջ
ի մէջք աւրիւրդին Ալանաց, և շատ ցաւեցոյց զմէջք փափուկ աւրիւրդին, արագ
հասուցանելով ի բանակն իւր:

“The noble (*ar*) Artašēs mounted a beautiful black [steed], and, taking out the red leather lasso adorned with gold rings, and crossing the river like a swift-winged eagle, and casting the red leather lasso adorned with gold rings, he cinched it round the waist of the maiden of the Alans, and he caused much hurt to the waist of the delicate maiden, speedily bringing her to his encampment (*banakn*).”⁵⁰

5. The wedding of Artašēs and Sat’ēnik.

Տեղ ոսկի տեղալլ ի փնաւոր թեանն Արտաշէսի, տեղալլ մարգարիտ ի հարսնութեանն
Սաթինիկանն:

“Rain of gold rained when Artašēs was groom; pearls rained when Sat’ēnik was bride.

6. Sat’ēnik’s mysterious passion and the reappearance of Argam/Argawan.

Այլ և տենչալ, ստեն, Սաթինիկ տիկինն տենչանա՝ զարտախալ ի խաւարս և զտից
խաւարի ի թաթիկցն Արգաւանայ:

“But they say Sat’ēnik also desired a strong desire, for a *tiara/veil (*artaxur*, var. *artaxoyr*) of greens (?) and shoots of straw (?) from the banquetting-pillows (*barjic’ē*)⁵¹ of Argawan.”

⁵⁰ Arm. *banak* “camp,” from Mlr.: the Iranian and Armenian kings of old preferred the martial and outdoor life, so the proper locus for Artašēs’ wedding is the *banak ark’uni*, the “royal encampment.”

⁵¹ Arm. *barj* “pillow” cf. Av. *barziš*, etc. The Pers. for “feast” is preserved in Arm. *bazmem*, “sit down (to dinner)”. In Armenia and Iran one reclined on a couch at a feast, resting on a stack of pillows.

7. 11.61 Artawazd is born: but is he the son of Artašēs or of the “dragon” (i.e., the Mede— Argam/Argawan)?

Եւ զայս ետին երգիչքն յառասպելին ասեն ախպէս. եթէ Վիշապազունք զողացան զմանուկն Արտաւազդ. և դն Վոխանակ եղին:

“And the singers tell this same thing in the bardic tale (*yačaspelin*) thus: The progeny of the dragon (*višapaxunkʹ*) stole the child Artawazd, and put a demon (*dew*) in his place.”

8. 1.30 Argawan plots against Artašēs.

Այլ և ճաշ ասեն զործեալ Արգաւանայ ի պատիւ Արտաշիսի. և խաբարտանակ լեալ եմին ի տաճարին Վիշապազ:

“But they also say Argawan made a feast (*čaš*) in honor of Artašēs, and plotted treachery against him in the palace (*tačarin*)⁵² of the dragons (*višapacʹ*).”

[In 11.51, Movsēs claims Artawazd, son of Artašēs, was jealous of Argam’s second rank in the realm and falsely accused him at the feast of plotting against the king. Artašēs kills him.

Movsēs further explains:

Այս Արգամ է, որ յառասպելին Արգաւանն անուանի.

“This is Argam, who is called Argawan in the bardic tale (*yačaspelin*).”]

9. The elegy of the dying Artašēs (cited by Grigor Magistros Pahlawuni, d. 1058, *Letter* 33).

Ո՞ր տալց ինձ, ասէր, զժուր ժխանի և զառուստն Նաւասարդի, զվազին եղանց և զվազին եղչեալուաց: Մեք փոյ Հալուաք և Թմրկի Հարճանէաք, որպէս արլենն է Թաղաւ որաց:

“Who would give me— said he— the smoke of the smoke-hole and

⁵² Arm. *tačar* “palace” (only later, “cathedral” or “temple,” thus rendered anachronistically by Thomson in his tr. of Movsēs), from OP. *tačāra*, cf. MP. *tāzār*. The Arm. *tačar mayri* of P’awstos is the palace hunting preserve.

the morning of Nawasard,⁵³ the running of hinds and the galloping of stags? We blew the horn and struck the drum, as is the way (*awrēn*)⁵⁴ of kings.”

[Cf. the Middle English elegy of the Wanderer: “Were is that lawhing and that song,/ That trayling and that proude gong,/ Tho havekes and the houndes?/ Al that is joye is went away,/ That wele is comen to weylaway,/ To many harde stoundes.”]

10.11.61 The funeral of Artasēs: Artawazd complains to his father about the destruction of property by the mourners.

Մինչ դու գնացեր, և գերկիրս ամենայն ընդ քեզ տալար, ես աւերակացս ո՞ւմ
թաղաւորեմ:

“Now that you have gone and taken the whole land with you, to what purpose shall I reign over these ruins?”

11. Artasēs then curses him, and the epic cycle reaches its apocalyptic dénouement.

Եթէ դու յորս Հեծցիս յԱզատն ի վեր ի Մասիս, գրեզ կապցին քաշք, տարցին իԱզատն ի
վեր ի Մասիս, անդ կալցես, և զյորս մի տեսցես: Զրուցեն զամանէ և պատառունք, եթէ
արգելեալ կայ յայրի միում, կապեալ երկաթի շղթայիս ք. և երկու շունք Հանապազ
կըծ ելով զշղթայան՝ Հանայ ելանել և առնել վախճանն աշխարհի. այլ ի ձայնէ

“If you ride to the hunt on Greater Ararat (*uAzat... Masis*), may the titans (*k’ajk’*)⁵⁵ seize you and take you up on Greater Ararat: there

⁵³ *Nawasard* “New Year,” from OP. *nava-sarda*–“idem” (cf. NP. *sāl*): the name of the first month of the ancient Armenian calendar, corresponding by accepted reckoning to late August, though in antiquity the Zoroastrian vernal New Year’s feast, *Nō Rōz*, celebrated in late March, could have been called also *Nawasard* in Armenia.

⁵⁴ *Azat Masik* “Greater Ararat,” the larger of the twin peaks of Armenia’s national mountain. The epithet means literally “free, noble” (< Av. *āzāta*-); *masi-k’* may derive from OIr. **masyah*–“largest,” in the sense of a very big mountain, since Mt. Sip’an, N of L. Van, was anciently called *Nex Masik’*, “First(? cf. *nax*, from OIr. *naxva*–) Big Mountain.”

⁵⁵ *K’aj*: “hero, titan.” The word may be of Ir. origin, cf. Sgd. *krz*; in Arm. it is used both as an epithet of kings and heroes, and as the designation of a race of supernatural titanic beings, the *k’ajk’* (cf. Geor. *k’aj*, a loan from Arm.) who dwell in the mountains and lead a regal and otiose life, riding, hunting, and feasting.

may you stay, and may you not see the light!’ Old women (*paṛawunk*)⁵⁶ tell about him the tale that he stays imprisoned in a cave, bound with iron chains; and as two dogs daily gnaw at the chains, he tries to get out and make an end of the world. But, they say, from the sound of the smiths striking their anvils, his chains are strengthened. For this reason even in our time many smiths, following the bardic tale (*aṛaspelin*), on the first day of the week strike their anvil three or four times, so that, they say, the chains of Artawazd may be strengthened.”

[NB. This must be the **ghost** of Artasēs speaking; so the parallel to the Sasun epic is exact: the **dead** Dawit⁵ curses his son P’ok’r Mher (Mithra the Younger) with immortal confinement in Agrawuc’ K’ar, Ravens’ Rock, at Van till the end of time.]

II. The Circassian Version of the Narts: The Saga of Setenaya and Argwana.

(John Colarusso, tr., *Nart Sagas from the Caucasus: Myths and Legends from the Circassians, Abazas, Abkhaz, and Ubykhs*, Princeton: Princeton Univ. Press, 2002.)

1. Saga 4. The widowed Nart Warzameg⁵⁷ desires to marry Setenaya [i.e., Satana, Sat’enik], who has a magical table that brings food whenever one wants it. But she refuses him, so he decides to conquer her city, Ghund-Ghund, and abduct her.

2. The city cannot be conquered without the help of the *swineherd* Argwana, so an Armenian (*yarmal*) trader goes to get him.

3. Argwana is mounted on a boar-saddle. He leads the Narts and captures the city, abducting Setenaya.

⁵⁶ Arm. *paṛaw* “old woman,” as in ancient Greece the keeper of old tales. The word can in some dialects mean also an old man; and I derive it from Av. *paṛnayu-*, “adult,” lit. “full of years.” In old Mod. Arm. journals folkloric columns were called *paṛawašunc’*, “old women’s breath” (cf. the designation of the Bible, *Astuacašunc’*, “breath of God”!).

⁵⁷ Warzameg: the Nart hero of Ossetic epic who corresponds in the Circassian narrative to Artasēs. His name is of uncertain etymology: one notes Abaev’s suggestion of a relation to Arm. Varazman (the name of a Mihranid noble, grandson of St. Vardan Mamikonean). The name may contain the element Av. *varəcah-*, Mlr. *warz-* “magic, wonder,” Arm. l-w *varž-*, cf. the apocalyptic hero Bahrām i Warzāwand; one Varž son of Dat figures as the tutor in the arts of war of Tigran, son of Artasēs. His descendants are the Varažnuni *naxarars*.

4. Argwana relinquishes Setenaya to Warzameg but comes back secretly and ravishes her: she will give birth to a son from him, Shebatinuquo.

5. When Warzameg undresses Setenaya on their wedding night, he sees her bruises and she explains her rape by Argwana. Warzameg has him killed.

6. Saga 10. Setenaya and Shebatinuquo save Warzameg from an attempt by the other Narts to poison him in the banquetting-hall.

III. The Odyssey of Homer.

1. While Odysseus is away fighting at Troy, the young noblemen of Ithaka try to force his wife, Penelope, to remarry. They take over Odysseus' palace and consume his possessions.

2. Odysseus' son Telemakhos ("fighter from faraway") tries to defend Penelope against the suitors' encroachments. Athena visits him and he avers that though he has been told Odysseus is his father he does not really know.

3. Odysseus returns secretly to Ithaka: the *swineherd* Eumaios ("Well-intentioned"), who is the son of a king and was abducted as a boy into slavery, receives him and helps him to return to his palace masquerading as a beggar.

4. The nurse Eurykleia ("Wide-Famed") washes the beggar's feet and recognizes him as Odysseus by the scar left by a wound from a wild *boar* when he went hunting as a boy with his grandfather Autolykos ("Lone Wolf"), who had named him (from *odyssamenos*, "causer of pain").

5. Odysseus and Telemakhos ambush the suitors in the banquetting-hall of the palace and kill them all.

6. Odysseus regains his kingdom.

THE MEMORY PALACE OF ST. GRIGOR NAREKAC'Ī.

James R. Russell,
Harvard University,
Cambridge, MA

“A sense of unspeakable security is in me at this moment on account of your having understood the book... By what right do you drink from my flagon of life? And when I put it to my lips they are yours, not mine. I feel that the Godhead is broken up like the bread at the Supper, and that we are the pieces. Hence this infinite fraternity of feeling.”¹

The pioneering work of the late Frances Yates, developed and refined by Mary Carruthers and an increasing number of other scholars, has shown how important a role the *ars memorativa*, the art of memory of Classical Antiquity, played in the intellectual and spiritual life, both of European mediaeval Christendom and of the Renaissance. I would like to explore its use in the work of St. Gregory of Narek, Arm. Grigor Narekac'Ī. Aristotle, though not the first Greek to employ mnemonic techniques, was the first who articulated the theory on which the art was to be founded: the presence of an image, *phantasma*, is necessary, he suggested, to the function of *mneme*, memory. Order and regularity then facilitate recollection, *anamnesis*. Sensation and the more voluntary exercise of imagination (he calls the latter *phantasia aisthetike*, evocation of a felt image, as it were) are linked to memory; and he adds that memory seems to proceed from *topoi*,

1- Herman Melville, letter to Nathaniel Hawthorne, upon receipt of a letter from the latter, to whom he had dedicated *Moby Dick*, praising the novel. Cited by HARDWICK 2000, p. 66.

places.² Cicero describes anecdotally how the Greek poet Simonides employed the art of memory; and the Latin texts *Ad Herennium*, generally attributed to Cicero, and Quintillian's *De institutione oratoria*, following Aristotle's principles, teach the art systematically. It was a very practical skill. A Roman lawyer or politician did not deliver a speech from a written text: had he done so, his argument would have lost its force in the reception of his hearers. He orated from memory; and the technique suggested was to memorize one's planned speech while walking through the furnished rooms of a deserted house, associating the progression of ideas with the harmonious elements of the three-dimensional picture through which one moved. This was not the rote memorization that Erasmus and Montaigne, at the far end the mediaeval period, were to deplore as an impediment to the exercise of an active intelligence: in the proper exercise of the art, linkages of active and flexible reasoning and feeling went together with precise recollection of the factual details and rhetorical armature— aesthetic fantasy indeed.

This exercise required of the practitioner a deliberate cast of mind, *intentio*, which Carruthers explains as a creative tension that makes the mind taut, prepared to engrave a new memory or to recover a stored one. This mental attitude is not value-free: it has certain moral overtones, reminding one of Jewish *kavvanah* and Buddhist Mindfulness, and I will come to these presently— but there were purely practical considerations that made the art important, before its religious possibilities. I have already noted the social factor: an audience lost its respect for an orator reading from a written text, much as we might today disdain an actor who cannot remember his lines. (Americans long ago gave up expecting our politicians to be masters of rhetoric: most of our leaders these days cannot manage complex, coherent sentences in English.) There are other aspects as well that made memory important in ways one must make a conscious effort now to appreciate. There were in antiquity few inexpensive or durable recording media or means of transmission and dissemination of information, and the average human life span was very brief; so the work of acquisition of knowledge and its transmission from one generation to the next, without which the maintenance of civilization should have been impossible, required efforts of Herculean prowess. It is not surprising, then, either that classical mnemonics long persisted, or that the mediaeval culture that inherited the art was itself memorial in character; for the material condition of culture had not changed appreciably from antiquity. Christianity added to the practice of mnemonics an explicitly moral dimension that is not stressed by the ancients— not so much because morality was absent from their conception of life as that paganism was innocent of the dogmatism that imposes its morality explicitly and universally. The new forms of the art might have acquired this moral facet, then, from Athens; but the propensity to articulate it came forth with the Law from Jerusalem.

Ancient Judaism valued mnemonics: the faith was from early times as much an

2- ROSSI 2000, p. 7.

intellectual system of books and of learning requiring powers of acquisition as it was a spiritual discipline of faith and practice. The two purposes were not really separable, either. Memory, Hebrew *zikaron*, is a moral imperative as well: the act of remembering Creation, the Exodus, the Covenant at Sinai, and other events is an essential aspect of the celebration of all festivals, from the weekly Sabbath to the high holidays of the New Year. This memory infuses the believer with consciousness of the grace of God towards the cosmos, mankind, and His chosen people. The flux of history in the light of patterned religious memory is seen thus as the growth of a relationship, the refinement of the soul, and the strengthening of the ties of responsibility and care that bind the worshipper to his God and the members of the community to each other. Each ritual act also is made by memory to enter the numinous realm, *in illo tempore*: the ruinous, separating aspect of time is erased. We shall see presently how the Christian theory and practice of memory deal similarly with the burden of time passing.³

Though one ought to speak properly of Judaism in the present tense as a religion that has continued to grow over millennia, mostly without theological reference to its younger siblings, Christianity and Islam, Israel became in the Christian cosmology a fixed substrate of vital relevance only to the past: Christians, creating for themselves the appellation of the New Israel in an act of appropriation, absorbed the morally tinged charge to remember of the Old, whilst categorizing the various events of the Old Testament as a fixed set of symbolic, almost code-like prefigurings upon which the parallel chain of events in the New Testament might be superimposed as perfections and fulfillments. These events concern the incarnation of God Himself and His self-sacrifice for us. The large themes of Divine love and care adumbrated by the Hebrew Bible in chronological progression, for the large universe first, for all mankind next, and then more specifically for Abraham and his legal progeny—Israel—continue in Christian symbolism to narrow, as it were, to the irreducibly specific point and emotional climax of the life of the single God-man. With Him, the focus widens again to the entire cosmos, the Covenant limited no longer to any particular nation. Armenian Christians have often perceived themselves as new Maccabees and a new Israel, not in a universal sense, but in a very special, national, particular way. I will return to this point below; for now it is important simply to stress that in Armenian writings the

3- In the thirty-third prose poem of *Le Spleen de Paris*, Charles Baudelaire prescribes oblivion, not memory, against the pain of time's passage: *Il faut être toujours ivre. Tout est là: c'est l'unique question. Pour ne pas sentir l'horrible fardeau de Temps qui brise vos épaules et vous penche vers la terre...* In the novel *To the Lighthouse*, Virginia Woolf's heroine mends the terrible rent of the chapter "Time Passes" by completing a painting which seeks and recaptures the past, and which is also the perfection of a vision. The work of art freezes time, as religious sensibility strives to do. But carnal, realistic memory cannot perform this mental trick, and stares into the face only of the deleterious power of time—the only salvation from horror in such a case is then either compassion for the universal suffering intrinsic to the human state, or else the cold courage of the existentialist's acceptance (the former option, which has much in common with Buddhist philosophy, takes courage also). The memorious archaeology of looking up a lover of one's youth who has since aged and changed, is the kind of real and personal ritual recollection that stands in contrast to the mythological mnemonics of the Abrahamic religions: see, for instance, the novel by Mark Merlis, *Man about Town*, New York: Fourth Estate, 2003; and, on the level of literary history, Gilbert Adair, *The Real Tazio*, New York: Carroll and Graf, 2003.

issue of memory is pulled in two directions: there is Armenian national memory, in which the history of St. Gregory the Illuminator, artificially elevated to the rank of an Apostle, the revelation of the Armenian script to St. Mesrop Mashtots, and the martyrdom of Sts. Ghewond and Vardan and their companions, are equated with— and often elevated above— Old Testament (and, sometimes, even New Testament!) paradigms. The second is general, Biblical, Christian; and when employed with political purposes it represents the striving of the Armenians, often an embattled and isolated Christian island in an Iranian or Moslem sea, to gain recognition by others as a part of Christendom and of Western civilization. This aspect stresses Armenia's belonging, rather than its separateness.

There is also a third aspect of the treatment of memory, conditioned by the Iranian, Zoroastrian cultural substrate in Armenia that includes stress upon the significance of religious memory. The Gospels themselves are called in Armenian *awetaran*, for which an etymology from Middle Iranian meaning “a collection of memorials” has been reasonably suggested by Prof. C. de Lamberterie. This would correspond, not only to a known— if somewhat rare— Greek designation of the Gospels, but also to the pre-Islamic Iranian practice of entitling epic narratives about legendary heroes of Zoroastrian sacred tradition as memorials, *ayadgar-an* (with the same etymon, Phl. *ayed*, as seems to be reflected in an earlier form in the Armenian *awet*—). If the word *awetaran* waited long for this proposed etymology from Iranian,⁴ the common Armenian base *yush*— “remember” (*yishel*, *yishatak*), at least, has long been recognized as a Middle Iranian loan. So Armenian tradition focusses doubly, from the Iranian substrate and from Christian learning, on the aspect of memorial in Scripture. The Christian theologian is then charged to extract from the Gospels' four-fold narrative of a precious single life all its cosmic meaning, in all its divine symmetry. Associated to the *ars memorativa* of the orator now is a kind of subset of it, the homiletic craft, the *ars predicandi*, which pursued the “practical aims of rhetorical persuasion, and need to construct images able to provoke controllable emotions.”⁵ Forgetfulness, by contrast, is for Christians not just disadvantageous but morally perilous, and *lethe* is the vile sleep that makes for perdition. The various philosophical cults characterized as Gnostic, to a greater or lesser degree Platonic in their disposition and intersecting more or less thoroughly with the diverse types of nascent Christianity or Iranian dualism, agreed

4- A problem of the suggestion, DE LAMBERTERIE 1996, is that the very common Arm. *awetik* means “good tidings” and is semantically connected to the idea of memory only through the sense of a “happy reminder” or the like. It may be that this is a wholly secondary meaning, affected by the understanding of the Greek name of the Gospels, *Euangelion*. But if that is not the case, then one might propose, very hesitantly, a pre-Arsacid borrowing, with a devoicing in speech of the intervocalic -d-, from Iranian **a-vaed-aya*-, “to proclaim forth”, yielding Arm. *aweti(k)*, probably in the Achaemenian period— though the evidence for treatment of -d->-r- in Arm. certainly predates the loans from Middle Iranian. And in Clas. Arm. this putative form would rub shoulders, of course, with the religiously potent (and regularly formed) loan *nuer* “consecration”, cf. Av. *ni-vaed-aya*- in Yasna 1.1! We encounter in Arm. the same form from different periods: cf. Arm. Spandaramet, “Dionysos”, from NWMlr., vs. *sandarametk*, “chthonic demons”, from OP.; or *pashtpan*, “defender” from NWMlr., vs. *pushtipan*, “bodyguard”, from MP.

5- ROSSI 2000, p. 14.

that the tragedy that lies at the base of the human predicament is not so much primordial sin and its effects as ignorance of what happened to get us where we are— Wordsworth’s “a sleep and a forgetting”. Gnosis is a martial reconquest of usurped memory. Here one can compare the Christian ascetic and saint, whose vigilance and wakefulness— strivings not to sleep, not to forget— are so often evoked in athletic and military terms. St. Gregory of Narek knew well the Greek meaning and sense of his name, *gregoros*, “awake, alert” (Arm. *artun*, *hskogh*: in Arm., accordingly, the *Zuartunk* are the watchful angels, Gk. *Egregoroi*): this understanding combines with the fact that it was also the Christian name bestowed upon the Arsacid prince who became the Illuminator of Armenia, to whom Narekac’i dedicated hymns, and who was for him so much the exemplar of the holy champion and priest, and theologian.

It is of passing interest that it is only in these and a very few other liturgical poems and orations that Narekac’i uses the terms “Armenia” and “Armenian” (*Hayastan*, *Hayk*, *Askanaz*, *Torgom*, etc., the latter two being of course Biblical Ashkenaz— the Scythians— and Togarmah).⁶ There are oblique allusions in his major work, the *Matean oghbergutean*, “Book of Lamentation”, to the local lore of the region of Lake Van. He describes a typical Armenian house. One prayer is patterned upon the form of a *gaylakap*, a folk spell against wolves. He mentions Ararat— but it is a Biblical mountain, as well as an Armenian one. The name of his people and country never appears there at all. The *Narek* has been praised as an Armenian *Divine Comedy*; its author, as an Armenian Dante, or even a Dostoyevsky. Such comparisons are so wide of the mark that they distort more than illuminate: Narekac’i’s language in the *Matean* (the *taghs* can be more idiomatic) is as pure a *grabar* as his age allows; Dante departed from Latin to write *The Divine Comedy* in Italian, with much loving specificity about Italians. St. Gregory of Narek has none of this.⁷ His focus is inwardly personal and vastly cosmic: the world that we inhabit in between the two extremes is of interest to him only insofar as monastic establishments (*vank*, *krawnastan*) or images useful to personal reflection and salvation are concerned. In the *Matean*, ch. 72.4, he declares: “I was called Awake at the baptismal font, and I fell asleep in death’s slumber; on the day of salvation I was proclaimed Vigilant, but I shut my eyes fast

6- An example is Narekac’i’s oration on the Cross of Aparan in Mokka, the mountainous district south of Narek and the Van district, where the Armenians are called the progeny of Ashkenaz (Gen. 10.3): see TASNAPEAN 1999, p. 10.

7- Prof. J.-P. Mahé has written judiciously of Narekac’i and Augustine. Comparisons may be made, but the danger is that people eager to praise the Armenian saint by comparing him to any world-famous Western classic will not be likewise judicious. So let it be said here that the differences between the Roman of Thagaste of the fourth century and the Armenian of the tenth are incommensurably greater than the similarities: Augustine’s *Confessions* are the first realistic autobiography in Christendom, the work of a man who lived pagan and classical life to the fullest and could be descriptive and candid and fell about the physical minutiae of his existence. Nobody till Montaigne did that again, or could do it, in the lands beneath the shadow of Cross or Crescent. If you read the *Matean*, you will never discover such things as the theft of pears by boys on a lark, the flapping of a curtain during a lesson on literature at school, or a youth’s embarrassment at his first erection when he is at the *thermae* with his pleased father. There is no house shared by eager young professionals, no garden, not even an angelic voice bidding the author “Take it and read.”

against sobriety.” The passage renders two terms, Gregory and *egregoros*, variously into Armenian; and the linkage of the underlying Greek words heightens the sub-text: neither as a baptized man, Gregory, nor as a consecrated priest elevated to the company of the Illuminator, even to the angelic orders, *egregoros*, is the lamenting petitioner capable of that memory without which alertness is of no use. Memory within religious practice is so critical that it cannot be merely factual, but must have a determining moral content. What is it, in the *Narek*? It is in its way like that of the Gnostic: my failure is on the same scale as the primordial cosmic tragedy. They are one. The difference is that for the Gnostic, to hell with the cosmos; for the Christian, the cosmos is my personal responsibility and guilt. But neither has time for what is in between my microcosm and the universal macrocosm—the sounds of vendors in the morning on a street in fourth-century Alexandria, for the Gnostic, perhaps, or, for St. Gregory, the plowman and his oxen, just below the monastery hill in tenth-century Vaspurakan.⁸

In a recent monograph, *The Ethics of Memory*, the philosopher Avishai Margalit suggests that most specific remembrance is ethical and has to do with those near and dear to us— what he calls “thick relations”— while less of our memory, both as to content and precision, is moral, and has to do with “thin relations”— that is, humanity in general, people we do not know. Margalit suggests the Christian project is to make **all** relations “thick”, to make the sphere of meaningful and intense memory include every being.⁹ It would seem to be a romantic intention, more emotionally appealing than practicable; but it would appear that Narekac’i’s method of effecting it is to telescope Biblical allusions and the varieties of actual imagery (his vices as swarms of vermin and bugs; his spiritual crisis, as a shipwreck) into himself and, by extension, into the imagination of the reader, the drama of damnation or salvation of this soul then becoming the entire concern of Heaven. In Ch. 3 he addresses his words to all classes and people at all times and in all countries. This implication is all there is of the middle between individual and universe: exclusion

8- The choice between foci of memory is similar to the ethical decision anyone committed to a great cause must make about the degree to which she will allow abstract principles to impinge on the importance she accords to the small things of her own home, to the local, even the national. This is the dilemma the philosopher Richard Rorty takes on in his famous essay, “Wild Orchids and Trotsky”. Faust’s great, world-denying macrocosmic effusions deny the local, and they are hypocrisy— he wants this world and its love. So the little demons cry in gentle mockery, *Weh, weh, du hast sie zerstört, die schöne Welt*. Reflections on Faust long ago, and on Rorty, later, owe much to conversations with my friend Robert Briscoe.

9- MARGALIT 2002. In the Preface, on p. viii, the author recalls his parents in Israel during World War II debating what life was to be like after the extinction of the European Jews. His mother thought it right to do nothing more with life save dwell on their memory, as the Armenians had been doing— she asserted— since their genocide a generation before. His father disagreed, asserting one must carry on in the future, even if that requires a certain amount of intentional forgetting. Margalit began to wonder after that conversation how much and in what contexts it is proper for people to remember. It is an interesting, if painful, jumping off point: for Jews and Armenians at the time of this writing, detailed memory of one’s murdered people has become a sacral imperative. In a sense, Narekac’i enjoyed the luxury to ignore being Armenian in the *Matean*, and focus upon his soul: his Armenia was a given— vast, secure in its sophisticated culture, seemingly eternal, unshadowed by any horror approaching that of the twentieth century.

of any more specific mention of that middle— as Armenia, or whatever— makes all cosmic ties “thick”; detailed evocation of the middle would “thin” them. Mention of Armenia would make the *Matean* national, self-involved, exclusionary, defeating its purpose and ill serving the readers of Armenian. The morality of memory in the *Narek* precludes dwelling upon the actuality of the tenth century or the author’s native land. That is how all relations become thick.¹⁰

For the patterning required by a memorative, homiletical art, it is the architectural and geometrical metaphors Cicero and Quintilian preferred, that still offered to Christians the most effective system of images; except that instead of a quiet villa off the Via Appia, with its rooms as paragraphs and chairs and tables as individual rhetorical points, the practitioners of the *ars predicandi* employed bigger structures: the hierachically-ordered cosmos of Ps.-Dionysius the Areopagite, with the hosts and circles of the angelic orders; the Garden of Eden, its four rivers, and the dimensions of the body of the primordial Adam (explored in the Hebrew *Shiur Qomah*); the levels and measurements of the Ark of Noah (with the dimensions of Christ’s body superimposed upon it); the holy Tabernacle and the tablets and other sacred objects it contained; the Temple of Solomon and its decorations, images, and furniture; Ezekiel’s vision of the Divine Throne, with its divine figure, the four holy animals, and the divine Chariot (cf. the sophisticated Jewish mysticism of the *Merkavah*); and Christ Himself, His Cross, and His tomb. Paul’s metaphor is the Christian *locus classicus*: he is a master builder, and man is the Temple of God, in which his spirit dwells (I Cor. 3.10-17). Carruthers comments that architectural patterns, thus employed, then become “dispositive heuristics”— devices for discovering further meanings.¹¹ That is, the images have their own intrinsic complexity and can be understood as more than one-on-one representations of the ideas they represent, leading the suitably prepared imager to envisage further symmetries and deeper symbolisms. The letter killeth, as it were, but the picture giveth life. In a way, it is alive itself. One speaks of the suitably prepared examiner and memorizer, since it is quite possible to possess an astonishingly sophisticated capacity to memorize a chain of data of any length, employing an array of synaesthetic mechanisms whereby a sound becomes a light, color, taste, tactile experience or object, distributed along a given imagined space— all without ever once having any of those elements lead to a second level of elaboration of reflection. Such is the case of the famous patient, known to us only as S., of the Soviet psychiatrist Alexander Romanovich Luria. According to the latter’s case histories, compiled over decades, this man could memorize a list of nonsense syllables of almost any length, distributing the sequence of associated synaesthetic phenomena along familiar Moscow streets in the guise of various

10- In recent years, Armenian literature and journalism have often been absorbed in a narcissistic omphaloskepsis, pondering the identity and fate of Armenia and Armenians, to the exclusion of other topics; but before modern times, Armenian writers tended more to write about human concerns, just doing so in a particular language and from the midst of a particular culture. So one may recall that in authentic Armenian homes, if there were books, they were, first the Gospel, the Psalter, and the *Narek*— none of which focusses on an Armenian theme.

11- CARRUTHERS 2000, p. 18.

things, colors, and sounds, and then retrieve them many years later, in order and with perfect exactitude. It was a monstrously enlarged rote of the sort Erasmus might abominate, without that free play of thought whereby man raises his mind from the mechanical to the artistic.¹²

Twelfth-century Europe provides several striking examples of the use of architectural symbolism in tracts of mnemonic-homiletic type. Hugh of St. Victor's *De arca Noe mystica* provides detailed instructions for the mental construction of a model of the tripartite Ark of Noah, which is itself likened to Tabernacle and Temple. The schema includes lists of Old Testament figures, Biblical books, the stations of the Israelites in the desert, the angelic orders, the Tree of Paradise, the four directions of the compass (which the letters of Adam's name spell out in Greek; so he is here the Primal Man), ladders of ascent, and Christ Himself at the center. The exercise has been likened to the Indian and later Tibetan Buddhist practice of visualizing a *mandala*, a circle with gates at the four cardinal points and many other details, to which it is strikingly similar. The psychiatrist C.G. Jung found that patients drew such complex mandalas without prior training or knowledge and derived therapeutic benefit from them. Characteristically he sought an explanation in the theory of archetypes; but one might reasonably argue that the circle as a symbol of perfection (or a halo) is sensibly ingrained in European imagination; as are, of course, the various quaternities of directions and the Cross. The store of geometric figures available to human meditation is generally rather limited. Another brother of Hugh's monastery prepared a similar mnemonic treatise in which the object of mnemonic visualization is the divine Throne in the vision of the prophet Ezekiel; and Alan of Lille focussed upon one of the Seraphim in a work which employs a mnemonic based upon the six wings of the heavenly being to list the stages of penance. Alan was a poet; so the terms in his lists are also chosen so as to be alliterative in sound, allowing an aesthetic and emotional affect to facilitate further the process of memorization.¹³

We can observe some similarities in the great monument of Armenian spirituality, the *Matean oghbergutean* ("Book of Lamentation") of the tenth-century mystical poet and theologian, St. Gregory of Narek, and in some other, shorter works of his. It has long been recognized that the overall structure of the *Matean* corresponds to the three parts of a church— porch, nave, and altar— and, simultaneously, to the three stages of the Divine Liturgy; so that the worshipper employing the prayers of the book proceeds in his imagination spatially, temporally, and imaginally through the perfecting stages of the Christian mystery. Since this progress is an ascent, one is reminded also of the three levels of the Ark of Noah; and of earth, the middle air of the sky (Arm. *anjrpēt*),

12- See LURIA 1968. What is most striking about his famous study is its deep humanism and compassion, which remind one of the great American neurologist and writer, Oliver Sacks. The question arises, What makes the book so heartbreaking, why is Luria's capacity for pity so apposite? It is perhaps because the capacity of S. might have become art, had he possessed the greater freedom to enter those mental Moscow streets and dream and play. Instead the talent, monstrously, possessed him— so one sees a human being from whom the good of the intelligence has been cruelly torn.

13- CARRUTHERS & ZIOLKOWSKI 2002, pp. 42-47, 50, 69, 84.

and heaven. Litanies of alliterative images superimposed upon each other produce the emotional, cathartic abreaction of tears sought by Christian mystics, and in Armenian tradition particularly known through the writings of St. Ephrem Syrus; whilst the author refers obliquely or by chapter and verse to Biblical passages and characters. It is possible either to pass over these strings of references or thoroughly to research each; and if one takes the latter option, it quickly becomes clear that the meanings of the Biblical texts, or of the Scriptural images evoked, comment upon each other, creating a second level of complexity, of a textual, rather than pictorial, “dispositive heuristics”. It is thus possible to employ most of the *Matean* as a book of prayer alone, or as a theological work as well: Gregory at the outset declares that his work is intended for all classes and stations of believers in the world. The qualification “most” is necessary, because the great theological meditations on the Nicene Creed and on the Holy Chrism in the culminating third of the book are perhaps less accessible than shorter chapters to the untrained.¹⁴

Memory and architectural metaphor frequently go together in the *Matean*: Narekac’i speaks of his book as a (*mah*)*ardzan*, literally, “(death) monument”—to a resident of New England this evokes the rather dismal image of a thin, small tablet of slate emblazoned with a skull and crossbones or winged hourglass; but in Armenia the object is more often a lofty stele with scenes in relief of Biblical and local sacred history, or else the noble *khachkar*, a Cross-stone. The latter is often a cosmogram: the Cross, blossoming as a Tree of Life, surmounts the cosmic symbols of a stepped mountain and a disk inscribed with radiating spirals. And in any case the term *mahardzan* in Arm. lost early its exclusive association with death, coming to mean any towering monument or even decoration.

If, however, we consider Narekac’i’s use of *mahardzan* in its literal sense, the association with death raises some interesting aspects that are relevant to this exploration of his use of memory. A number of mediaeval European sarcophagi are constructed as *simulacra* (the same word employed for images in the *ars memorativa*) of houses, sometimes with scenes in bas relief separated by arcades—enabling the viewer to proceed from one scene to the next as though progressing through a house used for the mnemonic art. The Armenian monumental steles have separate scenes in bas relief, divided vertically, of sacred history; and there are a number of tombs, belonging to a school that flourished, notably, in the regions of Zangezur and Artsakh, with horizontal scenes of the life of the departed. The imagery of these is sometimes very archaic, suggesting a longer tradition than the relatively late date of the ones studied might otherwise imply.¹⁵ The tomb of

14- For discussion of these themes, see RUSSELL 1996-1997. The long chapters, especially no. 75, on the Creed, differ from other prayers in the Book sufficiently for one to suggest that Narekac’i did not so much compose the whole in later life as arrange, and edit diverse meditations composed over the years, adding within them the occasional mention of “this book” (*aysr mateni*, etc.) to pull the chapters together, much as a scholar now might make a book of studies written at different times, inserting cross references in the course of her editing. For why else would it have been necessary for Narekac’i’s brother to work on the Book with him? Gregory perhaps read from a previous text, making oral insertions his brother duly took down as he recopied.

15- See RUSSELL 2001.

a saint might be screened, in the manner of the Catholic *fenestella confessionis*— and this raises the association, frequent in the *Matean*, of recollection with *khostovanutiwn*, confession. The *Subvenite* hymn of the Catholic funeral service asks angels and saints to raise (*suscipere*) the soul: the verb is the same the Romans used for a father raising a newborn child from the ground to acknowledge it.¹⁶ In the Armenian case, Narekac'i prays thus to be raised up at death: "If I direct my gaze upwards onto the all-seizing and frightful path, may your angel of peace meet me in sweetness. Show me, O Lord, on the day of departure, the release of my breath, a spirit of purity arisen in light from amongst the blessed heavenly ones, coming and arriving with the gifts of your love" (*Matean*, 2.2). The common Armenian belief is that the angel Gabriel, armed, with the written decree of death, comes and removes the soul, which is in the form of a swaddled baby (cf. the Latin association with a newborn child). The epithet *amenagraw* is used by Narekac'i in Ch. 8.1 of *Tartarus*; and this characterization of Hell, literally the hollow place under the earth, into which all is taken, is probably of common Indo-European antiquity, though the Arm. adjective includes a Mlr. loan, from *grab*— "seize" (cf. NP. *gereftan*). The old Armenian ballad of prince Aslan and Gabriel, the angel of death, is a local treatment of the mythologem of Alcestis; and in Greek both her name ("seizing") and that of her husband, Admetus ("indomitable"), are good epithets for Hades (as indeed is the name of Eurydice, lit. "of wide-spreading justice", in the related mythological complex of Orpheus).¹⁷ Narekac'i's use of the epithet thus introduces a subtle contradiction, or perhaps conflation of two contradictory realities: when he looks up to heaven, he sees a path that will lead sinners down to hell. It is possible here too to imagine the archaic conception of the night sky as a dark, inverted world: how else, indeed, can the angel, the light spirit rise (*ambarnam* > *ambardzeal*) to descend to Gregory to take his soul at the "release of the breath" (literally *nirvana*!)? The word *ardzakman*, gen. sg. of *ardzakumn*, from Mlr. *harz*— "release" (cf. also the Arm. loan *apaharzan*, "divorce"), in the second strophe may encode *ardzan*, "monument", to which it is probably etymologically related as well; and the visual aspect is stressed by the preceding imper. 2 sg. *tsoys*, "show!" It is true Gregory wishes his soul to see the angel; but there is another implied beholder— the reader— of the truly monumental scene. The image of the grave monument for Narekac'i is thus one of memory for the beholder, and of the reminding of future events for him— and this memory-in-reverse is apposite, since the Cross of the grave-stone becomes, literally, the Gate (Arm. *drunk*, see below) into the otherworld that reverses and inverts this one. "The things of this world must be looked at in reverse, to be seen the right way round."¹⁸

The *Matean* itself begins, appropriately, with a preface, or Theses (*Drutiwnk*), or Doors (*Drunk*, as the title is also frequently given in MSS.), into which the image of the Cross is verbally encoded, the literal or symbolic attributes of Christ's body and the Cross upon

16- See VALDEZ DEL ALAMO 2000, esp. pp. 4, 22-23, 46, 53.

17- See RUSSELL 2002, esp. p. 170 and n. 27.

18- Balthasar Gracian, cited by Bernard-Henri Lévy, *Who killed Daniel Pearl?* Hoboken, NJ: Melville, 2003, p. 11.

which He is splayed mentioned exactly at the points on the page where they might be, had one drawn a picture: a textual *khachkar* and *mahardzan*.¹⁹ And the Cross, with its complex symbolism and centrality²⁰ to Armenian Christianity, is not only the gate of passage, outward into the otherworld and inward into the heart at prayer from which the words of the Narek emanate. It becomes also an object of memorious contemplation throughout the book: in Ch. 90, for instance, Narekac'i prays, "Let all these gifts of grace come for the sake of your tree of the blessing of life, upon which you, unencompassable God, were tied down, by the memory of the nails by which you, Creator of heaven and earth, were fastened in the work of death, by your dominical blood, by which you fashioned a hook and hunted the great dragon..." In the passage Christ bleeding on the Cross becomes bait on a hook to snare the sea-monster in whose hellish maw the dead languish. Narekac'i has the reader use the nails to remember the Biblical text, where God challenges Job to catch Leviathan with a hook. That memory links one to another watery scene: that of the Baptism, where Christ in the Jordan treads Leviathan underfoot; or the evocation in Ezekiel 29 of Pharaoh as a fat crocodile lolling in the Nile, caught by God's hook and tossed into the desert to rot.²¹

In Ch. 28, Narekac'i enumerates the sufferings of Christ on the *ashtarak* "tower" of the Cross: by the *yishatak*, recollection, of each Satan is to suffer pain and be driven out of the *shinuatsoy khoran*, the edifice of the tabernacle of God's dwelling— "And may [the devil] remember the incurable blow, by which the resistance of the dragon's poisons died." Here is a mental picture of the Cross as the towering tree of life and the center— Jerusalem— of the tabernacle of the edifice of the cosmos. It employs the conceit of impressing Biblical realities upon one through the reversal of images: the blow that killed Christ (whose right hand in the verbal icon of the *Drutiwnk* is labelled "healing")— what could be more "incurable"— was in fact the cure, specifically the antidote to the dragon's poison,²² which is of course death itself. But the reversal has an aim beyond that of instruction of believing men: it is Satan himself, in this passage who is to undertake the exercise of memory, from cosmic edifice to tabernacle to Cross to wounds. And now the expulsion of the archdemon from the imagined building at the start of the string of images makes sense: it is a reversal of the expulsion from Eden, of which he had been the cause. And the human reader, following Satan's act of memory, is accordingly to regard the

19- See RUSSELL 2000-2001, esp. pp. 32-33.

20- The Armenian veneration of the Cross was so extreme, by comparison to the reverence accorded the Holy Sign by other, neighboring Christian communities, that it was condemned as akin to idolatry by the Syrian divine of Melitene, Dionysius Bar Salibi: see J.R. Russell, "The Armenians, the Holy Cross, and Dionysius Bar Salibi," Symposium on the 1700th Anniversary of Armenian Christianity, St. Vartan Cathedral, NYC, Dec. 2001 (in publication, *St. Nersess Theological Journal*).

21- On portrayals of a *vishap*-monster in the Jordan in Arm. MSS miniatures of the Baptism of Christ, see RUSSELL 1998. On the Armenian version of the passage in Job and its interpretation, see RUSSELL 1996.

22- The association of the dragon with poison can have entirely Christian associations; but etymologically the word *vishap* itself, an Iranian loan, "poisonous water (creature)".

khoran, the Tabernacle, as the Church: an Eden re-entered and a world restored. None of this is particularly original: the progress of restorative time and the remedy of the vices of the fall of man through mystical ascent, all portrayed symbolically, is standard Dionysian theology.²³ It is the *koine* of Christian mysticism generally. St. Gregory, with his poetic and linguistic intricacy and intellectual mastery, expresses these verities nobly. It was not originality he strove for.

Let us return to the metaphor discussed earlier, of *mahardzan*, of monument and death: in his meditation on the Christ, Narekac'i inverts time (and, thus, frustrates death), making Jacob's prototype an object present in the memory of the future: "He constructed the monument, anointing it, his aim a demonstration for the memory of those to come" (Buenos Aires ed., p. 252, section 5). Jacob foreshadows the *Narek* itself, whose author prays: "... make me become strong by the frequent repetition of the aroma of confession of this book, having an influence upon many, in the form of a house that spreads all over, extends everywhere, and fills the world, according to the example, by comparison, of their own memory" (Ch. 33.1). Narekac'i's book becomes a house of all the nations and a universal memorial, extending spatially and temporally, pervaded by the sweet savor of incense that serves as the synaesthetic representation of the soul engaged in the work of perfection within. The smell of incense should remind one of the first chapter of the *Narek*, in which the author introduces the complex image of burnt offering and of incense in a censer, whose several parts adumbrate the structure of the book as a staged progression through the actions of the Divine Liturgy, the theme of ascent, and the contradictory senses of burning and refinement the soul is to undergo.²⁴

A further conceit of reversal of direction introduces the important theme of crying at prayer that, as was mentioned earlier, pervades the *Matean*: it is tears falling, not smoke rising, that will incline God, one hopes, to lift the soul. (Cf. Ch. 4.3, where Narekac'i cites Isaiah, "for I will mercy, and not a sacrifice", and adds, "Therefore ascend now, offered incense anew, through the memorial of this.") The image, common enough in its context to be gracefully harmonious rather than awkwardly outlandish—as a more artificial word-picture might have been—is fertile, a true *aisthetike phantasia*, itself inspiring further consideration and remembrance of liturgical symbolism.²⁵ Narekac'i often calls his work

23- See, for instance, ZINN 1975.

24- The Armenian *burva* ʿrr censer, has a bowl which contains the coal and incense, and a perforated lid, often made in the shape of the dome of a church. The two parts are connected to each other and suspended by three chains (NERSOYAN 1950, p. 246). The church is censured before a ritual (ORMANIAN, pp. 47-48); so the metaphor has also a temporal symbolism. See also CENSING 1991.

25- The image comes naturally to the makers of mnemonic Christian emblemata at the far end of Europe, in space, and of the mediaeval period, in time: the late-16th-cent. English *Basilikon Doron* of Henry Peacham, an emblem book, has as one of its pictures a domed well and a bucket on a rope. The Latin motto *Ascendo ut descendat*, "I rise so that it [i.e., grace] may descend," is elucidated by a further epigram, translated: "While you may see a fountain raised out of Parian marble, here an urn signifies prayers that burn for Christ. Let sighs rise, and grace will descend from heaven. In vain, let Arabian incense [try to] move God." All Narek's verbal mnemonic symbol is here, in an explicitly drawn one. See YOUNG 1998, p. 5.

a *khostovanutiwn*, “confession”; and it is worth noting that St. Nerses Shnorhali (“the Graceful”), the twelfth-century poet and patriarch whose compositions may be viewed as a continuation— and, stylistically, a simplification— of the tradition of Narek in the changed circumstances of Cilician Armenian culture, is rightly best remembered for his great credal poem, beginning precisely with the words *Hawatov khostovanim*, “In faith I confess...” Keeping in mind that “confession” is a marker of the Narek, we note the request of Grigor in Ch. 72.1 that his brethren of the clergy accept his *awandutiwn khostovanutean*, “bequest of confession”, “into the edifice of the salvation of souls”— a complex architectonic image incorporating memory and memorial (it is a bequest) and evoking both the Church itself as a heavenly Temple not built by hands and its corpus of literature. But they are to receive the offering of the book also into themselves, since they are themselves the Temple of the Lord: in the second chapter of the *Narek* we read of the Scriptural inner room into which one should retreat for prayer, this room standing for the solitude of the monk and the inwardness of the heart at once (on which the Armenian version of the *Commentary* on Matthew of St. John Chrysostom discourses: Narekac’i probably read the translation).²⁶ Indeed, every chapter of the Narek begins with the title, “Speech with God from the depths of the heart(s).” From the image of the heart as the inner room within every man Narekac’i moves gradually to the concept of the special and sacred being who is entirely esoteric, the *nerkin mard*, the “inner man”, who becomes visible in the forms of the saints.²⁷ In Ch. 71.1 he calls the saints, thus, *andams Kristosi*, “limbs of Christ”, “as it were, inns of the Holy Spirit”, whose *kerparans* “(bodily) forms” and *yishataks* “memories” are to be invoked. (Compare Ch. 5, where the postlapsarian human visage is yet that damaged and distorted sign, *nshanak aghartac’eal*, that sees in a glass darkly and is itself obscured from its pristine original nature.)

The closing section of Ch. 12, so explicitly vivid in its imagery that it is employed by the Armenian Church and the lay faithful as a prayer for protection of the home at night, speaks both of the actual house and of the body itself as a house, forcing the reader

26- *Matean*, Ch. 2; and cf. CHRYSOSTOM 1849, p. 249: “Enter your room. Now they will say, How is this? Is it not necessary to pray in church? It is indeed so, but in every place with such will, since God searches one’s thoughts. For if you enter your room and close also its doors, it is still possible to display oneself praying to people, and then closing the doors avails naught. See how precisely he qualifies it here: For they will appear, he says, to people. For this is the correctitude he wishes first to establish: before shutting the doors, first close those of one’s thoughts, so that one may reject entirely the diversion of vainglory. It is well everywhere to distance oneself from that vice, especially at prayer.” The passage not only illuminates Narekac’i’s allusion to the Gospel, but also focusses upon the architectonic metaphor, adding allegorical doors to it— and this at the gateway and moment of preparation for prayer, of the *Matean* itself!

27- See TAMRAZYAN 1998. In Ch. 46 of the *Matean*, Gregory envisions head as a lamp upon a candlestick and speaks of the body’s 360 parts: this is a symbolic and idealized type, with the perfect number that of the perfect year (the numbers 365 and 366 are also common in Armenian as expressions of entirety— the total number of diseases in the world, etc.). One recalls that the ancient Iranian world-mountain Terag has 360 windows, which are the days through which the Sun shines over the year. Narekac’i’s idealized vision of Adam has him, thus, as a pillar at the world’s center (with the four letters of his name interpreted early as symbolic of the Greek words for the directions of the compass; the quaternity itself is expressive of the four elements and of the Cross). On eyes and windows, see the passage of Ch. 12 cited here.

imaginally to connect macro- and micro-cosm, enabling him to remind himself through the living interplay of the images that both are mutually reinforcing symbols recalling spiritual realities. In the passage, the parts of the house receive, as one would expect, metaphorical meanings, as for instance: “Surround and enclose the window of the visions afforded by my senses of intelligible things, by placing them, defended from harm by the memory of your hope, beyond the terror of troubles’ agitation, the cares of everyday life, dreams in slumber, and senseless fantasies.”²⁸ The window²⁹ of a house should thus remind the reciter of the meditation of one’s eyes; and their vision of temporal things is then to remind one of the vision of imaginal things: the chains of images of reveries and daydreams to which the anxieties and concerns of life give birth, as well as the dream-images that come in sleep. The mindful, associative memory of window as eye as inner eye of thought receives its specific moral power through the associated operation of memory of the hope of salvation that comes from the Scriptures.

The twelfth chapter of the *Narek* discussed above follows Paul and evokes a mass of Biblical imagery behind him, in calling the metaphorical house also a *tachar*, meaning both a Christian sanctuary and the prototypical Jerusalem Temple. Having noted above the importance of the metaphor of sacred architecture in the theology of Christian mysticism, and its use for mnemonic purposes within the *ars predicandi*, we may consider it now in two hymns composed by Narekac’i, with a prefatory comment. The ninety-five prayers of the *Book of Lamentation*, whether employed privately by a celebrant of the Divine Liturgy for purposes of internal purification and illumination, chanted in the context of the liturgy itself, or used in the devotions of lay people, are in essence penitential. Intense remorse and guilt pervade every chapter; and if tears do not well from the worshipper’s eyes at some point in his recitation, he is accursed, obtuse, or insincere. However this work does not stand alone as the sole expression of Narekac’i’s theology or mysticism: many of the hymns he composed for festivals of the Church are ecstatic and joyful, evoking the wonder of the chariot of Ezekiel’s vision, the beauty of the Tabernacle, and the serene joy of the Nativity;³⁰ far from bewailing alienation, they celebrate the glory and luminosity of the divine presence. In this respect, his mysticism belongs to the same stream as that of Vardan of Ani, whose commentary on Ezekiel’s vision was published by Mnac’akanyan.³¹ The frequent portrayal of St. Gregory as a lachrymose, tortured soul merely is surely as misleading as the facile comparison to Dante. Let us consider here two

28- See RUSSELL 1994 on Ch. 12 of the *Narek* and folk prayers for protection of the home at night in general; and now also LA PORTA 2001-2002, esp. pp. 189-190.

29- The word used is *patuhan*, literally, a hole let into a wall. This becomes the common Western Arm. for “window”. In the same passage Narekac’i uses also *lusanc’oyc’*, literally a passage for light (cf. Mod. E. Arm. *lusamut*, window, lit. “light-entrance”), making it plain that the latter is the smoke-hole in the ceiling of the traditional Armenian *glkhatun*, where four pillars around the hearth support a conical dome of squinch construction, with a smoke-hole on top.

30- See Narekac’i’s “Song of the Nativity” (*Tagh Cnndean*), for instance, in RUSSELL 1987.

31- See MNAC’AKANYAN 1971.

hymns attributed to Narekac'i that employ images familiar from the *Matean*, presented in familiar configurations, yet suffused, not by penitence, but by the sense of triumph and glory, ecstasy even. Both are dedicated to the Church; and that physical and supernatural reality binds the successive architectural metaphors together. The theology is that of Ps.-Dionysius the Areopagite—divine thrones, hierarchies, extravagant and verbose evocations of luminescence. The Armenian version of Dionysius would have been easily available to Narekac'i: there is no indication that he relied upon the Greek original.³² The translations that follow are based upon the text published by Kyoshkeryan: the first is attested in a sole manuscript.³³

HOMILY³⁴ OF THE CHURCH AND THE ARK OF THE LORD, OF GREGORY OF NAREK.

We who are all gathered into the holy, universal, and Apostolic church,
Sing in it, we in the earthly circle in glorification, with many choruses,
In spiritual multitudes, by miraculous birth
Conjoined to the rings of the races aglow like the sunlit sky.
(5) We bless the coming into you,
Most holy Trinity, we do beseech.

You who are upraised in the arches of the watchtower of the four-faced cherubim
And receive proskynesis by all the circles and the races wondrous in aspect,
Three-fold reality,
(10) You willed through the holy Apostles to establish this rock,
City undefeated, by miracles performed at will,
Four-fold, in the midst of the cosmos:
You made it resplendent upon foundations that scatter rays
Commingled with heat and dazzling with light,
(15) And you ordained this noble queen into being, splendidly adorned and glorious in
comeliness,
Daughter of the heavenly Zion,
From whose midst the cohorts in many voices that are in her
Acclaim loud their superiors in heaven.
We bless...

32- See THOMSON 1987.

33- KYOSHKERYAN 1981, pp. 184-188. I have followed her versification, though Abraham Terian (remarks at the Narek Conference, 11 Oct. 2003) is certainly right in his observation that Narekac'i was writing metric prose, not blank verse.

34- Arm. *karo*, Syriac *karoza*. This has become the designation of a genre of Armenian hymnography, so my rendering is somewhat arbitrary.

Tabernacle built by the one without beginning, universal, holy,
 Who wast founded in the cosmos on this day, holy Church,
 In example of the paradise made by the Creator, lovely in appearance,
 Planted in Eden, place of delight,
 (25) Which the Seraphim and Cherubim, by the command of the Uncreate,
 Surrounded, guarding the ways to the tree of knowledge.
 Opened are the joys of the great and strongly-hidden paradise,
 And we, with boldness aglow in joy, in the earthly circle,
 Joined to the ring of the Seraphim aglow like the sunlit sky,
 (30) Bless...

Ineffable tabernacle, in this wondrously bright illumination
 Thou wast established in the midst of the cosmos this day, holy Church,
 Exemplar of the high-domed Ark
 (35) Which the patriarch Noah, by the command of the Creator,
 Founded of unputrefying wood
 And built, the Ark for the salvation of the many throngs of animals,
 To rescue in life those who sought refuge
 From the sweeping billows of the waves of the waters of wrath.
 (40) Today, brought into being by Him who creates the sunlit sky,
 Instead of the Ark there was revealed to us holy Zion—
 To us, the nation of rational sheep,
 Stair of miracles aglow with light. Ranks united in glorification,
 We bless...

Tabernacle aglow like the sunlit sky, torch set ablaze with the wondrous beams of the solar
 orb,
 This day, holy Church, in the midst of the cosmos:
 Exemplar of the banquet-tent of Abraham the patriarch
 Seated at the threshold of heaven's gates,
 Seeing into heaven and into earth:
 From there the Lord appeared with *egregoroi* twain,
 Came, attained the shady tree,
 Repaying his lovèd ones the recompense of good—
 At which Abraham came running,
 (55) Nursing calves and three loaves
 He proffered in sacrificial offering to the Lord God.
 This day, itself, holy Zion, comes, God, unto thee:
 Heaven-like place of the sinners' atonement,
 Suckling thy children at the waters of repose,
 (60) From which the generations of the font
 And the principalities in Seraphim abounding, of the wonders on high

Are joined together in the circle.

We bless...

(65) Four-cornered temple, surpassingly wondrous at its dawning,

Ablaze with interpenetrating light,

Holy Church, this day in the midst of the cosmos,

Art exemplar of the Ark that Moses made

Amongst the congregation of Israel's host,

(70) Placing within the incense-burner with gold pillars shining all around,

Which exhaled the perfume of frankincense within;

The golden vessel full of manna;

With the stone tablets of the Commandments.

And the flowering staff therein

(75) Today by the hand of Melchizedek's priest

Appears in you always, instead of the tablets that the Lord inscribed.

The Table, shining like the sun's orb, upraiser of the offering sweet to savor,

Is transferred and established in thee, holy Zion, mother church,

In which the ranks of earthborn living creatures

(80) And the hosts of the lofty, rich in Seraphim, are joined together in the circle.

We bless...

Temple of four torches

Illuminated in the midst of the cosmos by miraculous, supernal rays, holy church,

(85) Example of the wondrous globes and halls light-bedecked and censed, of molten gold,

Which Solomon the wise

Taking cedar wood and juniper

Shaped into the Temple, glowing with gold,

All dazzling in appearance, with candelabra of seven lamps,

(90) And wonders lovely roundabout, in the shape of lilies made,

The gilded Seraphim:

And he establishes them in God's house.

We bless...

(95) Stronghold for the fleeing, domicile and home,

City of refuge and house of atonement,

We beseech the heavenly king, who in unsundered unity within thee dwells,

To grant us peace: heavenly, spiritual, and intelligible,

Protecting us now

(100) From them that war against us: visible and invisible opposing powers—

And at the dawning of the glory of great power on the day that will have no night,

In the company of those raised, holy, in light, may we be glad in unconditional rejoicing.

Now may you remember and have mercy on the departed,
In hope of resurrection, we pray.

(105) And moreover
Grant us exhortation to love and good deeds, we pray.

And let us dedicate ourselves and each other
To the omnipotent Lord God, we pray.

By the intercession of the all-blessed lady Theotokos
(110) And forever Virgin, Mary;
By the petitions of the great prophet, John the Prodromos;
By the prayers of the sharer of Thy Cross and torments,
Stephen, Thy Protomartyr;
By the requests of Thy confessor
(115) St. Gregory, faithful archpriest;
By the general plea of them who love Thee,
Apostles and Prophets:
And have mercy on us now, O Lord our God,
In accord with your great mercy.

The final list of invocations and intercessions seems to me most likely Narekacæi's, though abbreviated from similar lists elsewhere; and the rest is still more probably his own composition, since many of the same words, in a somewhat different order but still forming a hierarchical progression of pictures together, can be found, for example, in Ch. 29.1 of the *Matean*:— powerful **stronghold**; **gate** of loftiness for me in my waverings; **stairs** of blessedness for me, the wretched; **way** of roads, forgiving **king**. The hymn combines Dionysian imagery of the heavenly orders and of light with evocations of the great and powerful buildings, both physical and imagined, that were the hallmark of mystical vision, even power, of old, and which still have a sense of mystery and wonder: Noah's Ark, Abraham's tent and the visit of the three angels, the Ark of the Covenant, the Temple of Solomon. All these symbols occur in other hymns of his, too.³⁵ Each is a forerunner of the Church; so Narekac'i wherever possible stresses quaternities. Each is a sign of the reconciliation of all earthly creatures with all the denizens of heaven; and Narekacæi uses the circle or ring to express this *pleroma*. The circle may imply also the sense of the dance, which seems to me justified by the more explicit image of the dance in other, shorter songs of the saint (the *tagh* of the Nativity, for instance), and by the celebratory character of the hymn. Cross and circle: mandala, spiritual wholeness and perfection. The luxuriantly alliterative compound adjectives for light, *arpiapayl* and the like, that Armenian is so good at— and at which Narekac'i especially excelled— are intended to induce a sense of

35- E.g., KYOSHKERYAN 1981, p. 165, lines 41-45, lines 50-53.

ecstasy as well; whilst the facts of the descriptions and their Biblical allusions challenge and the intellect. The three orders of perception and being line 98, *erknayin*, *hogewor*, and *imanali*— heavenly, spiritual, and intelligible— are thus engaged simultaneously: the most favorable state for operation of the *artes memorativa et predicandi*.

Here is a similar, longer hymn to the Church, this one more amply attested in several MSS.³⁶

HOMILY OF THE CHURCH, SAID BY GRIGOR NAREKAC'I.

Desirable treasure³⁷ of great good, found and concealed:

Pleroma without deficiency, bringer of all; and you yourself are within the entirety—

Which not even highest heaven could bear,

Your atopic canopy³⁸ is the unattainable aether.

(5) You were shown defined, the non-intermediate space³⁹ of the races of fiery nature beneath you.

Image unquantifiable of providential loving care,

On the throne of glory the king of the heights, above and beyond the mind,

Might you receive now supplications of prayers compounded with incense

In this consecrated place, holy Church, we pray.

(10) Splendid feast and intimate summons,

Delectable voice, unencompassable,

Which on the light wings of the windy air⁴⁰

By surest helmsmanship, enthroned in lordly fashion,

You have cast forth your throne in mystic parables of the completion of the outcome of good tidings.⁴¹

36- See the ed. of KYOSHKERYAN 1981, pp. 162-172.

37- Arm. *gandz*, a Mlr. loan, "treasure", means here the long form of a spiritual song, of which the more abbreviated and lyrical type is the *tagh*.

38- Arm. *khoran*, a loan from the Parthian for a banquetting tent, is intensely polyvalent, so any single alien equivalent must render it pallid: for it is at once the celestial *chahartaq* dome, revealed in light, of the Illuminator's vision, the similarly-constructed stone dome above the high altar in an Armenian church, as well as the supra-celestial palace of the heavenly bridegroom of the *unio mystica*.

39- Var. *ananjrpēt*, "without intermediate space". I prefer this reading, since the heavenly beings do not dwell in that separate, dividing space that keeps this world from heaven and subject to demons. See also Narekac'i's use of *ananjrpēt* in line 130 of this hymn.

40- Arm. *or i tewes tetews hoghmayin awdov*: this onomatopoetic evocation of the wings of the Seraphim raising aloft the divine Throne recalls also Narekacæi's invented compound to describe the same vision, *tewatrohatew*, "wing beating wing" (see RUSSELL 1994(a), p. 138. In the present case, note also the alliteration of the round o-sound of the howling whirlwind in the last two words of the strophe.

41- This strophe would seem to suggest that the tetramorphic scheme of the Throne vision embraces the four directions of the created universe, the four elements of which it is compounded, the four symbolic letters

You who guide the determined manner to its perfection,
 Regarding the place of your dwelling,
 Eternally sky and always in our souls:
 A certain one, throne; the other, footstool—⁴²
 Place of elemental light, of all the races.
 (20) Might you...

Maker of wisdom, creator without mistake,
 Fashioner in fitting construction of all,⁴³
 Who was pleased to be first the inhabitant of this form of the matter miraculously adorned,
 First made with hands, constructed before, and then, the one enthroned.⁴⁴
 You have stretched forth the heavens, and there, the heavenly ones:
 You established Eden, and, thereafter, Adam;
 The structure of the ark, and in it, those who lived;
 The Tabernacle of the primordial hospitality of Abraham,
 (30) Anointed stele⁴⁵ and house of God,
 The ladder of our ascent and the trace of your descent
 And the tent of Aaron's service;
 The testament of the book, the judge of the speakers of high Gerizim, [place] of election.⁴⁶
 Light-bearing Temple of the great Solomon,
 Mountain of the Lord and house of God,
 Sign raised aloft to distant peoples,
 Trumpet call summoning the world:
 Your ineffable mystery, according to its seers.
 Might you...

Tower erected in excellent beauty,

of Adam's name, the harmonization of Adam, the elements, and all the world in the Cross, and the Cross also of the Parousia and the end.

42- That is, the Church is of both heaven and earth, while heaven is God's throne; man, His footstool, cf. Ps. 104.

43- Though the line may do no more than praise the Creator, if one considers that Narekac'i both preached against heresy and himself weathered an accusation of it, it may be that the statement is a refutation also of the idea, common to Marcionites and Manichaeans, of an imperfect Demiurge and of a material Creation flawed *ab initio*.

44- Since the Ancient of Days who sits upon the Throne is anthropomorphic, the two strophes may suggest that God the transcendent, in Whose nature Christ is pre-eternally present, is first the dweller (*bnakn*) in the throne's abstract shape, then incarnating as the human form enthroned (*zbazmealn*) upon it.

45- This is the pillar of Beth El, in Genesis.

46- In Deuteronomy, Mt. Gerizim at Shechem (modern "Nablus", from the late Greek name of the place, Neapolis) is a place of blessing; Mt. Ebal, of curses, for the Israelites entering the Land promised by God to His Chosen People.

Indestructible⁴⁷ pillar of iron and strong bulwark made of brass,
 Tower of light, cast of gold,
 Island surrounded by fortress-like breakers,
 According to Ezekiel's second vision:
 Come with a new summoning out of Tyre,⁴⁸
 In search of wisdom coming out of Sheba,
 From Canaan's races of alien seed,⁴⁹
 Hastening eagerly from Babylon
 (50) Wounded to the quick for love of the Bridegroom.
 Gate hewn of cedar planks,
 Stones of crystal with rubies,
 Orbs sun-inscribed on steles⁵⁰ of silver,
 Living city built of God,
 (55) By the impulse of the Spirit; by Jesus, spoken:
 Mountain of fatness, with holiness slathered,
 Might you...

Rejoice, O queen, glorious bride,⁵¹
 (60) Woman of great wonder diademmed:
 Rejoicing in many children whilst retaining your virginity,
 As you were traced there at the beginning,
 Now in this new time you are clothed in splendid being shining with gold:
 In the manner of the call of Hagar,
 (65) Serving woman taken from Sinai to Salem
 As the Father's first-born came Himself,
 He takes you in place of the rejected race of Jacob,
 Making your foundations the worshipful assemblies of the Apostles,
 Beautifying you with illumination by the stars' light,

47- Arm. *ankorcaneli*: Kyoshkeryan prefers the reading *ankarceli*, "unthinkable", which makes nearly as little sense as the other variant, *ankarcveli*, "non-hardening" (which even the most bleary-eyed copyist could scarcely have found a desirable quality for an iron pillar— unthinkable!).

48- Ezekiel 26 is a prophecy of the doom of Phoenician Tyre, then Sidon. In the *Matean*, whose primary tone is of introspective contrition rather than of exultation in the Church victorious, Grigor uses the image but decries his own sins and iniquities as worse than those of Tyre and Sidon.

49- The Queen of Sheba, whose nation, according to the reckoning of Genesis, were the of the race of Canaan, from the progeny of Ham, came to learn wisdom of Solomon. He shamed her ignorance by sitting on a throne on a floor of glass over water: she was afraid to advance. The passage is related to the things of marble in the divine *Hekhalot* that seem to the unworthy be water, in the *Himmelsreise* of R. Akiva in *Hagigah*, which reappear in the transitional, visionary chapter 33 of the *Matean* as the *loycn macuac* of the "final veil".

50- Arm. *mahardzanawk*.

51- Arm. *dshxoy*, by which is meant the Church: the image is repeated, and evolved in detail, in the Narek ch. 75.1, 8; where she is also *iskuhi*, "female Being", Gk. *ousa*.

(70) Making you splendid in a veil of dazzling fire.
 Clean in womb and without vice in birth
 Whence you bring forth in labor God's heirs,
 This is the very example to hand of hopeful expectation
 That verily found its peace.
 (75) Might you...

Lord of light, mighty king, celestial bridegroom,
 In ineffable mystery at the festive gathering encircling
 Ordained unchanging canons for you:
 (80) And example in diverse particulars of the forms
 Of the same scheme of all existence,
 In myriad kinds for the universal Church's construction.
 The statures of diverse races are humbled in a single assembly,
 House and place and hidden chamber
 (85) That is a remedy from the burning heat, the rock of aid to us traced into bodies by
 the Spirit.
 You who make God familiar to mankind,
 Hope for the atonement of the condemned for all races gathered of like name,
 The bold emerging first,
 The band of perfected souls.
 (90) Might you...

Dwelling-place of the Father's wisdom,
 Built upon the pillars of the seven stars,
 In which the blessed One is offered in sacrifice on the altar of will for the taste of bread—
 (95) On the palanquin of the holy table—
 Manna of life and celestial Lamb,
 Who removes sin from the living and those gone to sleep:
 He Himself is all, and the sacrifice in all is greater than Abel's—
 He gathers in His economy the dispersed
 (100) In uncompelled arrival to the embrace at His bosom,
 Summoning with His hand in sweet love, to the unapproachable fortress.
 He is refuge to the fleeing, in the high palace-hall borne by Spirit
 Where He inscribed in wonder the Disciples,
 And where the the enthroned elders in authority will be ranged in power,
 (105) Rejoicing in honor of this, your day,
 Who turn in the circles of the pure:
 Our lord Patriarch [name],
 With bishops, elders and deacons,
 Teachers of the schools and all servants of the Church,
 (110) Our king with his progeny,

And those who are rulers and princes under arms at his command,
 Blessed by all with your own sacred love.
 Remember now and have mercy upon the souls of the departed,
 We pray, in hope of resurrection.
 (115) And also we ask there be granted us
 Exhortation to love and to good works.
 We ask for those rejected by you to be gathered in again
 By the intercession of the one who sits with you.
 {Var.] The Holy Mother of God found the precious jewel, the pearl
 (120) By ineffable energy in the sea of this world—
 Daughter of light, mother of Zion,
 Faith's foundation not built by hands, true eidolon,
 By whose name in this type you were anointed and sealed.
 Bridal-chamber of the sole incarnated God from you,
 (125) Accept your intercession for the reconciliation of us, the condemned,
 The scion of immortal life, the Forerunner of the calling of the Saints
 And crown of Martyrs, with the Apostles and Prophets
 And him who is our Illuminator,
 With the ascetic hermits who are God's heirs,
 (130) Those born into adoption by your holy font, with membership in spiritual kinship
 unseparated by space,⁵²
 In which again you will behold the renewal of the small
 Into the wideness of enlargement of glory in uncontainable expansion,
 Mother with children pure,
 Marriage-crowned with the covenant in that celestial chamber
 (135) On the day of your awful appearance, great God.
 And our Lord God have mercy upon us,
 As befits your great compassion.

The study of the art of memory invites one to consider a possible solution to a problem of the image of St. Gregory of Narek within Armenian tradition: the aura of heresy, even sorcery, that clings to this holiest of Armenian divines. The theological density of the

52- Arm. ...*surb awazanawd ananjrpēt hogetohmteamb*. This complex image relies upon the symbolism of water: the *awazan*, "font", contains Iranian *ab*, "water". One is totally immersed in it, so indeed there is no hiatus or space, *anjrpēt*, which means literally "domain without water" (the air that separates the world from the upper waters of Heaven). This space-realm is also that of the evil spirits of the air; so it separates the world from God in more than a spatial way. Baptism is release from this lesser dominion above us and membership in a spiritual clan (*tohm*) by an adoption which is, as Narekac'i stresses, entire and as immediate as sonship by birth. So one recalls that the word *tohm* is a loan from Iranian, where it means "progeny, semen". The ancients regarded the father's watery seed alone as parentage, the womb being merely a place where it grew. But the Church, the *harsnaran*, is more than this earthly motherhood: above, it is she who has found the pearl of great price, the divine semen-drop, in the midst of a different kind of liquid—the dark and vexed world-ocean of oblivion and perdition, and has brought it forth. (On this symbolism of the quest for the Pearl and the sea, see RUSSELL 2001-2002.)

Matean makes it, *inter alia*, a massive Scriptural mnemonic, on the scope of Raymond Lull's schemata for the acquisition of universal knowledge. Narekac'i's use of the Throne Vision and related material links him to those seen to have gained access to direct knowledge of divine mysteries veiled from the unworthy and uninitiated. One may note here that at the mention of Lull we touch upon the *ars notoria*, a slightly disreputable relative of the *ars memorativa*. Practitioners of the former often created their systems of symbols with the purpose of facilitating, not pious learning, but the all-encompassing and therefore necessarily amoral knowledge of universal reality. The *ars notoria* then became a tool of occultists seeking power by acquiring intelligence beyond man's proper ken altogether. This aspect may help to explain why the vast, potent, eloquent *Matean* in Armenian popular religion came to be regarded as a magical book: the belief was that to master one's fate, one must trace a circle, stand within, and recite forty chapters of the Narek in a row (folkloric shorthand for "a lot") without stopping or heeding the demons who will gather just beyond the charmed perimeter and try to distract one from the task; for if one yields to them, one is damned.⁵³ There is a ballad, too, in which two inquisitors from Sis come, rather anachronistically, to investigate Narekac'i for heresy. He makes fire burn in water, resurrects from the dead a skewer of roasted pigeons, and curses a dying man, telling him the earth will not accept his corpse. It doesn't; later the revenant repents and the saint lifts the curse. Armenian folk prayers, many of which really qualify as magical spells, often include a Cross and Seraphic choir, or the Throne Vision of Ezekiel itself.⁵⁴ Such symbols of power, of which the latter was regarded already in Jewish tradition with an ambiguous unease, are common in Gregory's writings, too, as we have seen. His own prayers find their way into talismanic scrolls, Arm. *hmayil*, a few centuries after his death. The usual explanation for the tradition is that Narekac'i was considered a *cayt*—that is, a Chalcedonian, a sympathizer with the Byzantine Church. But that explanation, while not at all beyond the realm of possibility, when one considers the wild excesses of fantasy that the least suspicion of heresy might provoke, still seems scarcely sufficient to justify his reputation, which is that of a magician. No other Armenian saint shares it. I think the image comes from the sheer prodigiousness of the *Matean*, the vastness and depth of his knowledge, his familiarity with the angelic world.

So we have observed the great work of a penitent, a visionary, a prodigious intellectual and master of the art of teaching and of memory, an ecstatic poet, of such spirit and gifts that to tradition he was not merely a saint: in a culture where the small books containing the story of the conversion of the magician Cyprian of Antioch are still bestsellers— and yes, Dr. Faustus seems to come from Gregory's vicinity— it is perhaps inevitable that Gregory is seen also as a magician. I think the idea that great sages were instructed by supernatural beings contributed strongly to the aura of awe with which tradition surrounded them. In the Talmudic period and probably earlier (since earlier Greek magical texts which bear

53- RUSSELL 1981, p. xiii.

54- See RUSSELL 1998, p. 153.

the marks of Jewish influence offer their testimony), Jewish sages adjured an angel they sometimes called *Sar ha-Torah*, Master of the Law, to come and assist them in the labor of learning and memorizing. This being bore also the name Yofiel, which appears to combine the Hebrew word for beauty with the customary divine suffix. He it at all events always described as brightly shining, young, and handsome: in some texts he is the brilliant archangel Metatron. In the high and late Middle Ages (with even swift Metatron perhaps too busy to attend to a growing clientele), rabbis are often visited by preternatural but less beautiful *maggidim*, angelic narrators of information.

Something similar happens in Armenia. In the seventh century, the Armenian scientist Anania of Shirak fell asleep one morning in a chapel at Trebizond (he had come to the seaport to study the profane sciences with a Greek, Teukhikos), and had a vision of the Sun descending as a radiant, beautiful youth: he asked whether there were inhabitants of the Antipodes. The boy informed him that there were not, and quoted God (from the book of Job) to the effect that waves crash on uninhabited shores. The citation from Scripture seems a mild rebuke to Anania for his inquisitive audacity, and it also suggests that the creature was either an angel or a piously Christian planetary being. No matter: Teukhikos strongly advised Anania not to discuss his experience, as though, one thinks, a stigma of sorcery attached to it. He had a point, for Anania was to gain an uncanny reputation in posterity: the *Vec' hazareak*, a mathematical table he compiled based on the eschatologically important number 6000, later gave its name to the most dreaded manual of Armenian magic. Over half a millennium later, Kostandin of Erznka describes in an unusual lyric poem such a vision of a sun-like, angelic youth: this one gave him his poetic gift. He goes on to lament the hatred, fear, and envy his talent provoked amongst monastics. Ominously, that poem is unfinished. In the eighteenth century, the great bard of Tiflis, Sayat Nova, records that St. John the Prodromos came to him in an initiatory dream and taught him to play musical instruments. (This was standard practice: Muslim *ashiqs* ["lovers", i.e., minstrels] in training waited for a vision of Khidr: for Armenians, *Surb Karapet* is the patron, not only of poets and musicians, but of tightrope walkers and entertainers generally.) Sayat Nova's dream-vision, which he records in his own hand, proudly, in his divan, was considered proper and necessary, and he got into quite another sort of trouble later in life— he had an affair with the queen of Georgia, after which the penitential prayers of St. Gregory came to his help and consolation: before his death, Sayat Nova copied the *Narek* at Sanahin monastery, to whose precincts the *ashugh* had been confined.⁵⁵

The most famous short hymn, or *tagh*, of Narekacæi is the Song of the Resurrection, which describes an ox-drawn cart, upon which stands a throne. These mystical images, of God's throne and *merkavah*,⁵⁶ are drawn from Habbakuk, Ezekiel, and Isaiah, and they haunt even mediaeval Armenian doodlers in model-books;⁵⁷ and in the concluding

55- For a translation of Kostandin's poem and references to the visions of Anania and others, see RUSSELL 2001-2002.

stanzas the poet explains their Christian metaphorical meaning. But the cart is still, till its charioteer makes its oxen move. This is a powerful, radiant youth described by Narekac'i as *khartishagegh*, having beautiful blond tresses: in the explanatory stanza, he is revealed as *Surb Karapet*, St. John the Prodromos. The epithet *kharteash* belongs to the hymn preserved by Movses Khorenac'i on the birth of the old Zoroastrian divinity Vahagn (Avestan Verethraghna), who had reluctantly surrendered his shrine at Ashtishat, near Mush—perhaps two hard days on horseback from Narek— and his attributes to *Surb Karapet* in the fourth century. But perhaps it is for Narekac'i foremost in the tradition that the ancient solar *angelus interprans* is specifically St. John, and, presumably, Gregory's teacher. Now, Prof. Abraham Terian once advanced what I will call the principle that "Sacred events either take place first and best in Armenia or else repeat themselves there better than they were the first time around elsewhere in the Bible and the world." We can see it at work in Koriwn's *Life of Mashtoc*, where the saint who invents the Armenian script produces heavenly letters better than those Daniel saw, and brings them on a tablet more propitious than those that Moses bore down the slopes of mount Sinai to an ungrateful mob. I've applied it in a study of the story of St. Gregory the Illuminator and its iconography: Armenia's patron saint spends a longer time in his pit, and with more dragons, than did Jesus Christ in Hell before His Resurrection.⁵⁸ But the song continues and the cart is moving. What is its itinerary? The divine Throne on its wheeled Chariot, descending first out of heaven, creaks down the right flank of *Ararat*, and only thereafter proceeds, from Armenia, that is, to the other holy mountain— Zion— at Jerusalem. The theophanic vision of Throne and Chariot thus comes to the mystic hymnologist St. Gregory, as it were, and to Armenia, even before it is vouchsafed to th prophet Ezekiel.

(Vanice, Mekhitharist MS. 1434), fig. 260, fol. 44r— a cart; and fol. 46r— the Throne. The other drawings include scenes from Jonah (esp. fig. 261, fol. 45r), a text popular in Armenia also, esp. in the Van area: aspects seem localized to the lake, on the Aghtamar reliefs. There is also a tenebrous *vayri mard*, "wild man" (fig. 263, fol. 30r). Fig. 264, fol. 39r has a nicely-drawn Chinese dragon and a few lines of fake Persian. Interest in mystical things seems often to be related to interest in the exotic and the outré generally: one may recall that the only thing Anania of Shirak asked of his angel was whether there were creatures in the Antipodes. Not a very pious question, and more the sort of thing an avid reader of the Alexander Romance might have wanted to know. I have discussed Armenian Wild Men in RUSSELL 2003; and the question of transmission of Chinese, Mongol, and Islamic material is addressed by Priscilla Soucek in an art. in the vol. containing Russell 1998 and in my article "Frik: The Bridge of Poetry," forthcoming in R. Hovannisian, ed., *Proceedings* of the UCLA Conference on Cilicia. Arthur Machen, in his story "The White People", suggests saints desire to know what once man properly knew before the Fall, and are patient in learning it; whilst the evil (and here include magicians and heretics) try, impatiently, to know what the angels do— and what was never intended for us and is therefore unnatural. It is, of course, a fine line to cross, and one that is correspondingly hard to draw when observing another.

58- This is an article (forthcoming in R. Hovannisian, ed., *Proceedings* of the Conference on Kars and Ani, UCLA, Nov. 2001) on the Church of the Holy Apostles erected at Kars by king Abas Bagratuni. One of the figure in bas relief on the drum has snakes to either side of him. I have argued— not for the first time, but offering the nuance of the Iranian substrate and some supporting data from similar figures in mediaeval Christian art— that this is St. Gregory the Illuminator, who, as Prof. Terian has noted brilliantly at the 2003 Narek Conference at Harvard, is celebrated as both Apostle and martyr, though he was born centuries after the former and did not die like the latter. The ingenuity of his elevation in status testifies to the active operation of the "better than" principle— and complements as well the literal elevation of his image on the church building.

(And presumably Grigor Narekac'i has also in mind the vision of Christ by his namesake, Gregory the Illuminator, in Vagharshapat, at the foot of Ararat— hence the present name of the town, Ejmiacin, the place where God's sole-begotten Son descended.) Such usurpation by a sacred mountain of the Armenian highland of a lofty Biblical *locus classicus* has a parallel, though not, chronologically, a precedent, in a mediaeval Armenian prayer which combines lines of the Paternoster and Psalm 133. The latter evokes the dew from heaven that falls on Mt. Hermon, in Israel, and the oil of the flowers that grow there is used to anoint the high priests, sons of Aaron, at the holy Temple. In the Armenian poem, this dew comes to the Armenian mountain Sukawet first, where Alano-Armenian disciples of St. Thaddeus— the Oskeank and Sukiaseank— were martyred; and from their blood grows the magic *hamaspiwr* flower of Armenian mythology, a native complement to Hermon's blossoms and a nod to the particular composition of the Armenian *miwron*, "chrism", which, indeed, Narekac'i praises in the long 93rd chapter of the *Matean*. The mountain's name is itself theophoric: and Avestan Saoka (> Arm. *Soyk) happens to be precisely the divinity through whom, according to the Zoroastrian Pahlavi *Bundahishn*, heavenly blessings are channeled down to earth. Though the prayer is in late middle Armenian, and cannot therefore formally be a precursor to St. Gregory of Narek's own hymn, it contains material unquestionably anterior to him, from both pre-Christian past and the legendry of the Apostolic tradition.⁵⁹ And Narekac'i's present example of the usurped *locus classicus* is, albeit in encoded form, a proud *exegi monumentum*; and it reminds one that, however absorbed was Narekac'i in the art of remembering the intimate and the cosmic, that he was an Armenian, of the race of golden-haired Vahagn and of king Artawazd imprisoned in Ararat and of the Illuminator who saw the temple of light at Ararat's base, he did not forget.

א לשון פֿאַר שפּרינצעלע (*A loshn far Shprintzele*)

James R. Russell,
Harvard University and California State University at Fresno.

This essay, whose Yiddish title might be translated as “A language for little miss Hope”,¹ considers and compares some aspects of the social, ideological, and spiritual background and purpose common to two languages, Esperanto and Modern Hebrew. The latter can be classified without question as a “Jewish language”; the former, with equal certainty, as an “invented language”. I will argue that Esperanto is also to some degree a Jewish language; and Modern Hebrew, also to some degree, an invented one. Their respective creators, Dr. Ludvik Zamenhof and Eliezer ben Yehuda, were both Russian Jews, close contemporaries, born not far away from each other. Despite obvious differences, both languages display the aspect, to lesser or greater degree, of a *Plansprache* (“planned language”: the German expression embraces both *a priori* and *a posteriori* inventions such as lesser-known Near

1- If that is indeed what the name means. Zachary Baker, a prominent Yiddishist, formerly of YIVO and the Montreal Public Library and now Emeritus Librarian of the Judaica collection at Stanford University Library, Palo Alto, CA, informed me (personal communication, Jan. 2019) that Shprintsele is a diminutive of Shprintse: Alexander Beider, in his *Dictionary of Ashkenazic Given Names*, 2001, s.v., considers Shprintse (his spelling) to be of uncertain origin. He offers two possible etymologies: *Sprinze*, Middle High German for (female) sparrow hawk; and *Speranza*, the Italian form of the name *Esperanza*, meaning hope. “If the second hypothesis is valid, the transformation of *sperantsa* (the phonetic form of *speranza*) to *shprintse* is unlikely to occur within the Jewish community. Salfeld states that German Christians used *Sprinze* as the pet form for the name of the saint (E)sperentia...” He cites evidence of the name *Sprinza* going back to 12th-century Austria, in non-Jewish sources, so “it is most likely that the persons named *Sprinza* were non-Jewish... As a result, it is likely that the name was not created by Jews, but instead borrowed from their Gentile neighbors. Ashkenazic Jews were likely to acquire this name in southeastern German-speaking provinces. Due to migrations from that area, it became widespread in the Frankfurt area and in Slavic countries.”

Eastern inventions including Seh-lerai and Rushtuni,² and the more familiar European Volapük, Esperanto, the latter's offshoot Ido, Interlingua, etc.) The German term seems less radical than "invented language", for even an existing language can be subjected to considerable revision according to a plan. Even though it is also true that Modern Hebrew is the revived, resurrected form of a natural language, it has many of the features of a *Plansprache*. Esperanto is unquestionably an invented language, but I shall argue that, somewhat like Modern Hebrew, it shares features of a Jewish language too— though not of course in the disparaging sense that its detractors (Hitler being the most notorious of them) have intended.

In 1919, two years after the passing of L.L. Zamenhof and three before the death of Ben Yehuda, the American Marxist philosopher Thorstein Veblen (1857-1929) published an essay, "The Intellectual Preeminence of Jews in Modern Europe."³ Though he mentions

2- Seh-lerai is an *a priori* invention intended as a universal language, invented by a colorful early-mid-19th century Armenian Catholic eccentric from Constantinople named Bedros Tenger who had studied in Vienna. Amongst the hundreds of *Plansprachen* hatched over the optimistic nineteenth century, his seems to be the only one from the Near East, though it would seem he was also its only speaker: it is a very complicated system, on present evidence it does not seem he worked it all out, and he endowed it also with a difficult and unwieldy script. Tenger, a reclusive vegetarian misogynist, entertained male friends in his handsomely appointed *Ayzeratand* (in Seh-lerai, "Temple of Wisdom"— perhaps after Mozart's *Weisheitstempel*— one recalls he had lived in Vienna at the turn of the 19th century!) and read them Seh-lerai poems, of which he thoughtfully provided French translations. The invented language Rushtuni takes its name from the argot of Armenian traveling businessmen whose ancestors were apparently from the region of Rshtunik⁴, south of Lake Van: it is another *a priori* language, apparently invented by a lone Armenian in Caucasian Georgia in the late 18th century, not as an international language but, as it would seem, a plaything for his own amusement. It is attested in only one manuscript, which contains also a substitution cipher he designed for it, based on the Armenian alphabet with the letter shapes inspired by *mkhedruli* Georgian. He used the cipher mainly to inscribe magical spells and charms, however. See Russell 2012 and 2013 on these two languages. Relevant to the present study is the fact that the only detailed study of Seh-lerai before my own, except for scattered brief references in works on Armenian literature and history, was an article in a Greek Esperantist journal, *Bizantio*, published in Constantinople in 1921. The preceding sentence is marbled with ironies. The erstwhile metropolis of Eastern Christendom was soon to be renamed officially Istanbul; its already much reduced Greek and Armenian populations, to be decimated by persecution. And in September of the following year the forces of Mustafa Kemal (the later "Atatürk") were to enact the last physical act of the Armenian Genocide with the destruction of Smyrna, where Tenger spent most of his life, and the massacre and expulsion of its Christian population. See Ureneck 2015, with a Preface by this writer. Esperanto was the invention of a Jew, Zamenhof; it is of interest that Tenger, the inventor of Seh-lerai was an Armenian who shared the same lofty aspirations. The Armenians of the Near East shared many of the social and cultural markers that distinguished the Jews of Europe: they were an ancient, close-knit people with a distinct heritage and identity, economically enterprising, cosmopolitan, and progressive, politically engaged but lacking military power or a sovereign state. They constituted a mobile, communications-oriented social element that like Jews, Overseas Chinese, and some others is termed "Mercurian" by the historian Yuri Slezkine. He calls the landed aristocracy, with its conservatism, parochialism, and military values "Apollonian": the *Lumpenproletariat* and peasantry would tend to aspire to the Apollonian and to mistrust and dislike the Mercurian.

3- The essay was printed in the *Political Science Quarterly* 34, March 1919, pp. 33-42, repr. Veblen 1993, pp. 285-292. Veblen uniquely foresaw through his theory of the leisure class and his analysis of consumerism and planned obsolescence how capitalism might prolong its existence despite internal contradictions and flaws that ought otherwise to have ensured its doom. The Russian Marxists, who lacked an intimate, reflective experience of developed capitalism in the USA, tended not to appreciate these insights adequately. This writer's grandfather Sidney A. Russell (born in New York in 1901 as Asher →

neither Zamenhof nor Ben Yehuda, he might well have had in mind both men when he suggested that Jewish achievement in science and scholarship in Europe came about through on the one hand in a state of alienation from the most traditional forms of Judaism; and on the other, in a condition of insecurity and distance with respect to gentile society. This outsider status freed Jewish intellectuals from attachment to conventional views of any kind and enabled them to regard reality with what Veblen called *Unbefangenheit*, a “release from the dead hand of conventional finality”. Although the untrammelled creative urge benefited from these insecurities, the precarious political, even physical, predicament of the Jews engaged both Zamenhof and Ben Yehuda. Both, although they came to diametrically opposed conclusions, interested themselves in Zionism, and the so-called Jewish Question was at the heart of their linguistic projects. Veblen addressed the dilemma of Zionism and Diaspora also in his aforementioned article, arriving at this grim conclusion: if Zionism succeeds, “There should be some loss to Christendom at large, and there might be some gain to the repatriated Children of Israel. It is a sufficiently difficult choice between a life of complacent futility at home and a thankless quest of unprofitable knowledge abroad.” Israel turned out to be better than futile; exile, to be worse than thankless.

The two languages that the two Russian Jews fashioned, in the context of their engagement with 19th-century European civilization as well as their own tradition, are indisputable examples of the preeminence Veblen praised, particularly if one considers the success of Esperanto and Modern Hebrew in comparison to analogous other projects. For out of the hundreds of *Plansprachen* devised in the 19th century alone, Esperanto is the only invented universal language that survives with a significant number of speakers today, even if it has not achieved the high goals its early devotees set for it. And Modern Hebrew, as the official language of the reborn State of Israel, similarly is the only truly successful revived language in the world. (Although various Celtic languages have enjoyed a revival in modern times, English dominates most of the societies where they are spoken.) The proclaimed ideologies of both feature the word for “hope”— Hebrew *tiqvah*, as in the national anthem of Israel, *Hatikvah*; and the word Esperanto itself as well as the hymn of the movement, *La Espero*. This shared hopefulness, animated by more than a tinge of spirituality, can help to explain some of the similarities of these two languages, which as we shall see, are often compared to each other. That aspect of hopefulness is a part of the

→ Zelig Rubinzahl, z”l, of Jewish immigrants from Gliniany and Brody in the Lemberg/Lvov region of Austro-Hungarian Galicia) left high school after two years in order to work full time to help support his family. Some years thereafter he was accepted into Veblen’s seminar at the New School for Social Research in New York City— this would have been just after the Revolution and the end of World War I, around the time the philosopher was writing the abovementioned essay. A few years before, my grandfather had also listened to talks over a glass of tea down on the Bowery by a Russian Jewish revolutionary named Lev Bronstein (*nom de guerre*, Leon Trotsky) who derided the American Socialist party as a tame assemblage of “accountants and dentists”— people, that is, who had undergone Veblenian “co-optation” into the prevailing system. Trotsky was staying in the Bronx, earning a living as a house painter: he went home to found the Red Army. Grandpa became one of the younger founding members of the new Communist Party of the USA and went on to establish Russell & Russell, a venerable scholarly publishing house. He was to his dying day in 1991 a friend of the Soviet Union.

reason why one can consider both as “Jewish languages” as well— the situation of the Jews has perennially been one that we may but hope will improve.

A modern Genesis: Doctor Hopeful.

Leyzer [i.e., Hebrew Eliezer] Levi Zamenhof (1859-1917), *la kreinto de la internacia lingvo Esperanto* (“the person who created the international language Hopeful”), was born into a Jewish family in Belostok, then a provincial city in the Russian Empire, now Białystok, Poland. Roughly two-thirds of its inhabitants were Jews: most of the rest were Poles, Ukrainians, Belorussians, Russians, and Germans. He was sympathetic in his youth to Zionism *avant la lettre* (the term was coined seven years before Theodor Herzl officially founded in 1897 the Zionist movement), opening in 1882 a local, Warsaw, chapter of *Hovevei Tsiyyon* (“Lovers of Zion”) in the wake of the pogroms that swept the Russian Empire. He met his future wife, Klara Silbernik, at a clandestine meeting of the group.⁴ This was a proto-Zionist organization that advocated settlement in the Land of Israel and sponsored the first BILU pioneers. In an article published in January 1882, “What Finally Is To Be Done?” (whose title doubtless echoes intentionally that of the Russian reformer Nikolay Chernyshevsky’s novel of 1863, *Что делать?*), Zamenhof warned that the project of the settlement of Palestine might founder because the secular pioneers would be tyrannized by the religious Jews already living in Jerusalem, who would burden them with demands for the rebuilding of the Temple and even the restoration of animal sacrifices. A Jewish national home on American territory, he argued, would have a freer hand in determining its own destiny. But if the Palestine plan went ahead anyhow, Zamenhof conceded, there were still enough Jews in the world to populate two national homes. The article seems prescient, when one considers the present rise of religious nationalism in Israel (which is, one hastens to add, not necessarily detrimental); but the idea of two Jewish states seems muddled.⁵ Though in his later years Zamenhof ceased actively to champion

4- Masson 2014, p. 34. In an interview with the *Jewish Chronicle*, London, 6 September 1907, Zamenhof said, ... *mi fondis inter la hebrea junularo en Varsovio la unuan societon de Ĥibat-Cion. Mi ellaboris la statutojn, hektografis kaj disdonis ilin, aranĝis kunvenojn, koncertojn kaj balojn, varbis adeptojn kaj starigis patriotan judan bibliotekon. Filioj de nia ĉeforganizaĵo ekkreskis en multaj urboj de Polujo kaj okcidenta Rusujo, kaj de tiuj ĉi filioj mi kolektadis monatajn kotizojn por la koloniigo de Palestino... Kiam nia societo de junuloj suffice fortikiĝis, ni etendis nian agadon al pliaĝuloj kaj sugestis, ke ili starigu en Varsovio societon pli grandan de Ĥibat-Cion. Tia societo estis fondita, kun la advokato Jasinovski kiel prezidanto kaj la verkisto Rabinovicz (Ŝefer) kiel sekretario, dum mi mem estis ĉefo de la plenumkomitato.* “... I founded among the Hebrew youth in Warsaw the first Ĥibat-Tsiyyon group. I worked out the by-laws, made multiple copies and distributed them, arranged meetings, concerts, and balls, enlisted members and established a patriotic Jewish library. Branches of our chief organization grew in many cities of Poland and western Russia, and from these branches I would collect monetary subscriptions for the colonization of Palestine... When our group of young people became strong, we extended our activity to the elders and suggested they establish in Warsaw a group larger than Ĥibat-Tsiyyon. That group was founded with the lawyer Jasinovski as president and the author Rabinowicz (Shefer) as secretary, while I myself was the head of the plenary committee.” (Maimon 1978, p. 81.) Shaul Pinkhes Rabinowitz (1845-1910), who used the pseudonyms Shefer and Aaron Ginzberg, was a writer, Hebrew translator, and leader of Hovevei-Tsiyyon.

5- See Frankel 1981, p. 88.

Zionism, he never actively opposed it. Rather, like many other European Jews in the years before the unimaginable horrors of Nazism, Zamenhof thought quite reasonably that life in the European Diaspora, though very challenging, was ultimately viable. Europe was then the center of the world's progress in science, in culture and learning, and in political reform; and the connection to that continent of the Jewish people, so deeply rooted and so actively involved in and committed to all the facets of its civilization, was surely so vital—as it seemed then—as to be irrevocable. It is difficult in the wake of the Holocaust, and at a time moreover when the small remnant of the Jewish communities left in Europe are subjected to resurgent anti-Semitism, not to regard the Diasporism⁶ of Zamenhof and others as pathetically naïve.

But hindsight warps history, and one must therefore make the necessary effort to recall, for instance, the visible pre-eminence of the Jews in most professions, such as medicine and law, in late-19th-century capitals such as Berlin, Vienna, or Budapest, in spite of virulent popular and official bias. Even as keen an observer as Veblen, though he saw this preeminence as thankless, did not foresee mass murder. Zamenhof was more than aware of the animus against his community—it was the pogroms of 1881-1882, after all, that forced him to interrupt his medical studies in Moscow. Such perennial hardship was seen as a fact of life to be overcome by progress; human atrocity was familiar and the American republic and European empires were practicing genocide against native peoples. But the word genocide itself had not yet been coined and few could have imagined that mass murder might become the policy of a civilized country in Europe against its own citizens.⁷ Accordingly, Zamenhof shared with most of his contemporaries the rational belief that the European scenario was the more practicable and likely one for Jewish life in the future.

6- The term cannot be used any longer without irony, but cf. the First and Second Diasporist Manifestoes of the American Jewish painter Robert B. Kitaj (1932-2007). Kitaj spent most of his creative life in England and is recognized to have been the founder and guiding spirit of the postwar “London” school of painters that also included, among others, Lucian Freud and David Hockney. Kitaj, at the organizers’ invitation, wrote lengthy captions that were hung next to his canvases at a retrospective exhibition of his work at the Tate Gallery in 1994: the British art-critical establishment savaged his work in all but openly anti-Semitic tones, sneeringly calling the learned little essays that were posted to the side of each painting over-intellectual. Kitaj’s wife Sandra died soon after, and Kitaj rightly considered the critics to be her murderers. He took his family out of the UK forever, settling not in Israel but in the Westwood neighborhood of Los Angeles, California—a friendly Diaspora for the time being, in his view—where he continued to paint on Jewish themes and to study Jewish texts with the guidance and moral support of the great writer and thinker Leon Wieseltier, whom this writer is proud to claim as a good friend. Diaspora was for Kitaj a stimulus to creativity, but also a personal tragedy.

7- One stresses here the extermination of people hitherto recognized legally as fellow citizens. The 19th-century European colonists did not consider the Easter Islanders, Tasmanians, Native Americans, and others to be fully human. The next step was to dehumanize citizens—the Jews. Thus, the mass killings of the American Indians by the white settlers of the American West (notably California, Kitaj’s friendly diasporic haven till his suicide) served as a useful model for the Nazis’ “Final Solution”, together with the Armenian Genocide. Raphael Lemkin, a Jewish lawyer from Poland living in the United States, coined the term genocide during World War II to enlarge the terminology of law to encompass what had been done to the Armenians and what was being done to the Jews. It is now employed more generally to include colonial massacres and the enslavement of African-Americans and other people of color.

Bialystok, like many other larger towns in the Tsarist Pale of Settlement, provided a multilingual environment. Zamenhof's educated, secularist family spoke Russian at home, but were also intimately familiar with Yiddish, the language that most Ashkenazi Jews spoke on a daily basis—it was, according to one turn-of-the-century statistic, the native tongue of 96% of the Jews in the Russian Empire. The men of the family were literate also in the sacred tongues, Hebrew and Aramaic, of the Bible, of prayer, and of Talmudic study. Zamenhof's father Marcus, although a *maskil* (secular or “enlightened” Jew), served as a *ba'al qore* (reader of the Torah scroll during services) of the Choral Synagogue in Bialystok, and after the family moved from there to the capital of Russian Poland, the elder Zamenhof worked in Warsaw as an Imperial censor of Hebrew and Yiddish books and periodicals. Leyzer's father thus had a solid grounding in Jewish practice and ritual, and the thorough knowledge of the sacred tongue that reading the unvocalized text of the Torah scroll requires. The Zamenhofs knew also Polish, the native language of most of the gentile population, and German, then the speech of science and progress, of *Denker und Dichter*; and the children learned French and English at school.

Such polyglottism was not unusual among Jews, and, as we shall see in greater detail presently, each language these polyglots controlled occupied a particular rung on the ladder of social hierarchy and had a particular function. By the late 19th century, which we now look back to as an age of optimism, political activism and the belief in social and ethical progress were commonplace in the Jewish community as well. What may seem particularly strange or even absurd to many now, though, is the attachment of ideas precisely about *language* to schemes for social *progress*. Many polyglot idealists in the 19th century proposed that an invented language shared by people across borders would be the key factor in the promotion of other ideals of social reform and international peace. Like the belief most Jews still held of a viable Diaspora, this conviction was not at all unusual for the time, and it seemed eminently practical as well. If only people could understand each other, the line of reasoning went, and not believe their own native language to be intrinsically superior to that of others, reason would triumph over enmity; fraternity, over chauvinism. The idea that a common language resolves differences seems hopelessly naïve now: one can understand one's fellow perfectly and still despise him or even want to kill him.

Language carried a special weight in the age of romantic nationalism that it is fair to say it no longer does: the national language, and the cultural, collective memory it enshrined in sacred texts, and in secondarily sacralized epics, histories, and collections of folklore, were held to be as much the markers of nationality as territorial boundaries. Perhaps because the language battles have been fought to a conclusion in one way or another over much of the world's surface, that is no longer as much the case. In the 19th century, though, an official language was a foundation of national identity, together with a native land and, if possible, a sovereign state. Indeed, for Poles and other national minorities deprived by aggressive imperialism of independent statehood on their native soil, language assumed still greater importance as the bearer of identity. The script in which one's language was

written was of great symbolic importance as well.⁸ By the same token, conflicts between ethnic populations frequently manifested themselves in the form of linguistic clashes. These conflicts were particularly common in the Tsarist Empire, which revolutionaries derided as “the prison of peoples”—and however intensely each minority group, or gang of convicts in the prison yard, as it were, might detest another, they could all agree in a common hatred of the Jews.⁹ Thus in Zamenhof’s childhood and youth, Bialystok was more like Matthew Arnold’s “darkling plain... where ignorant armies clash by night,” amidst the ruins of the tower of Babel, than a bright mosaic of diversity. It is not surprising that language, which was so much at the core of constructions of identity in 19th-century Europe, became the basis for the expression of Zamenhof’s much wider ideals and the arena of his life’s *work* (though he eked out a meager *living* as an oculist). Given the precarious predicament of the Jews, his thoughts about language must of necessity and centrally address also the solution of what was called the Jewish question. The fruit of that noble labor was the invention that has made him immortal—the international language named Esperanto after the modest *nom de plume* of its creator.

Language was to be the vehicle of international understanding and reconciliation, of universal peace and brotherhood. But which of the many tongues spoken or written by the Jews of the Russian Empire was to be harnessed to his chariot of fire? The future father of Esperanto experimented. At first the young Zamenhof aspired to adopt the imperial tongue and become a Russian poet, but gave up his dream because of the pervasive anti-Semitism of the empire. He then turned his efforts inward and toyed for a time with reforming Hebrew, but rejected that, too, as impractical. He worked on a grammar with the aim of regularizing and reforming Yiddish, the spoken language of most Eastern European Jews. But he abandoned this effort, too: fluid, lively Yiddish simply would not bend to his iron grammarian’s will. Besides, no matter what he did with Yiddish, it would be a hard sell for poor Jews interested in breaking out of their physical and linguistic ghetto—the *shtetl* or *мечетько* that later generations were to romanticize—not staying in it. We shall consider presently the anomalous social position of Yiddish, which both surrounding non-Jewish populations and many Yiddish-speakers themselves derided (the former, with contempt; the latter, sometimes with an embarrassment verging on self-loathing) as a *jargon*, an unseemly, slangy, patchwork dialect or patois. The derogatory term has more to do with the lack of official status of Yiddish and the powerlessness of its speakers than with neutral, objective linguistic criteria. Indeed, when the Czernowitz [Черновцы] conference of 1908 indignantly abolished the offending term and pronounced Yiddish “a Jewish national language”, it was the assertion of nationhood that mattered, not some

8- In Ottoman Turkey there were many Armenian communities whose ancestors had been forced to abandon their native spoken tongue for Turkish. But they wrote and printed Armeno-Turkish in Armenian script, much as speakers of Judeo-German/Spanish/Persian/Arabic used variations of square-character Hebrew. Joseph Skibell in his novel *A Curable Romantic* (2010) plays with this alphabet-politics—see *infra*.

9- Readers of my generation will recall the American satirist Tom Lehrer’s sardonic song of the mid-1960s, “National Brotherhood Week”.

redefinition of what constitutes a language.¹⁰

But what use is a sterile objectivity in matters that go to the heart of human life? Zamenhof, although he was a Jew who loved his people, worried about our future, and was sympathetic to Zionism, was not a nationalist *per se*. He stressed the apolitical character of his aspirations, arguing that he was committed to ideals of human equality and social justice that transcended partisan politics. It can be argued that we are political animals whether we wish to be or not, so this assertion of an apolitical stance was as unrealistic as his quixotic dreams themselves, and perhaps even slightly disingenuous. For even though Zamenhof saw himself as soaring over the roadblocks, customs houses, and border fences that divide states—a new kind of airborne *luftmensh* (I spell this deliberately in Yiddish, not German) on the Jewish scene for Marc Chagall to paint—and although Esperanto has no earthly locus other than where a speaker of it hangs his hat, the ideas that inform Esperanto still do have a precise location on the intellectual map of Eastern European Jewry of the period, and the imagined country would lied decidedly to the Left on that map. And many Jews, then as now, particularly those not wedded to Zionism, tended to the progressivist band on the political spectrum.¹¹

10- Harshav 1990, p. 86. And so it was: the Soviet Union recognized Yiddish as the language of the Jewish nationality of the country (thereby detaching the Jews from identification as a religion); and the Moscow literary journal *Sovetish Heymland* was published in the language. Yiddish is still an official language of Birobidzhan, the Jewish Autonomous Region of the (former) RSFSR. Very few native speakers live in that remote Siberian region straddling the fastnesses of Mongolia, but it is enthusiastically studied by some young people there, and the Russian Jewish heritage is cherished—though perhaps more as an antiquarian interest than a living culture. The Soviet choice of Yiddish was dictated by both practical and political considerations. Communists opposed nationalism, and Hebrew was the chosen language of Zionism, the Jewish national liberation movement. Even that aspect of national liberation might have been kosher, had the territory of Palestine not lain outside the frontiers of the Soviet homeland of the Russian Jews, and had the Zionists not worked, in the official Soviet view, with foreign imperialist powers as well. The USSR supported the Arab uprising of 1929 as a manifestation of national liberation, but to most of the *Yishuv* in Palestine it seemed more a classical pogrom. Many Yiddish writers broke with the Party line that year; more and worse was to follow, of course. Hebrew is also bound indissolubly to the Bible and religion, which the official *laïcité* of the USSR discouraged. However in the wake of the Holocaust the USSR strongly supported, diplomatically and militarily, the establishment of the State of Israel. After the period of Stalinist anti-Semitism and Soviet backing of the Arabs, the Russian Federation and Israel are now friends with close and good relations. Jewish life, faith, and learning in Russia face no restrictions of any kind, and anti-Semitic incidents are rarer there than in “pro-Western” Europe.

11- This is not the place to treat the vexed question of the Jews and the left, which involves deconstructing one of many anti-Semitic tropes: the interested reader may consult the recent monograph, *A Specter Haunting Europe: The Myth of Judeo-Bolshevism* (Hanebrink 2018). However the association of Esperanto with left-wing ideas and the Judaism of its inventor were sufficient for Hitler to condemn it in *Mein Kampf* as an instrument of the Judeo-Bolshevik world conspiracy. Nazi Esperantists tried for a time to use the language to spread Hitlerian ideology but their association was closed down. *La interna ideo vinkis*: closet Esperantist soldiers in the Wehrmacht tried, albeit in vain, to render assistance to the Zamenhofs imprisoned in the Warsaw Ghetto. Hitler and his ilk had a point, though it is to the credit of the Jews, of course, not our detriment: it can be recorded with pride that of the 35,000-odd volunteers from 52 countries who fought for the Spanish Republic against Franco, Hitler, and Mussolini, fully over a quarter were Jews (Horvitz 2012, p. 33). Indeed, most of the veterans of the Abraham Lincoln Brigade interviewed by the American Jewish journalist Studs Terkel in his moving documentary of the war, *The Good Fight*, were Jews.

Esperantoland on our imagined chart of the intellect is a left-leaning clime to be situated close to the Bundist and Socialist districts, with their Yiddish and Slavic speech and their cities and towns full of Jews earnestly forging a viable, modern life in the snowy latitudes of Poland, the Ukraine, and Russia. The proponents of Hebrew eschewed class struggle as a central aspect of their program, but the first Esperanto magazine by and for workers was founded in 1906. And in 1910 Zamenhof welcomed an Esperanto Socialist magazine in Germany, declaring that the working class would understand better than others the essence and idea of the international language. In a letter of 1914, turning down an invitation to address a Jewish nationalist group in Paris, he averred that although the nationalism of the oppressed was more pardonable than that of the strong, he still wanted no part of it. Esperantoland was thus far indeed¹² from the warmer, southeastern Zionist paradise of desert vistas, date palms, the sound of Hebrew, the honey-colored stones of Jerusalem, rather more brotherly love, and rather less of a stress on class warfare, economic determinism, and the advance of the internationalist masses. The Zionists, who founded collectivist communities (the *kibbutzim*) and were to be sure no foes of socialism in practice, not to mention liberty, equality, or fraternity, were still convinced that the high aims of Jewish idealists, no matter the ultimate social target, were unattainable without what Americans call the nitty-gritty: securing and defending by force of arms an independent Jewish homeland first. Nationalism came before socialism on their agenda: what mattered above all else was a piece of land. Uganda, the Land of Israel, Madagascar, even a corner of the southern United States—the one place it could not be was in Europe.¹³ Zamenhof's followers, then, were for staying put and making a go of it; Zionism's, for just preparing to go.

Zamenhof invented his new universal language twice. His father found and burnt the first manuscript when the youth was away in Moscow at university. We have but one poem in this precursor to Esperanto; its predictable theme, kindness, fraternity, and romantic striving. Esperantists thus have a small fragment of a proto-language, just enough to be certain that the later invention proceeded from it, as well as so little as to leave room for wondering speculation about what else there may have been in those early writings that were consigned to the flames and irrevocably lost. There is a mystique about loss: it underscores the unrecoverability of the past, and that is part of how memory constructs the image of a golden age. Esperanto as an invented language has no pre-existence, no antiquity *ipso facto*; so its creator's first attempt is the subject of fascinated study, a bit like mystical speculation about the ages that preceded Genesis. We shall see presently how Esperantist spiritualist mediums have conjured a hoary, sacral antiquity and glorious,

12- Masson 2014, pp. 34-36.

13- The Hebrew writer Mordekhai Ze'ev Feiberger (1874-1899) published in his short life a few stories and one novella, *Le-'An*, "Whither?" in which a tortured young Jew tries to escape or remedy the predicament of exile by finding a home in Torah, then in European secular culture. These do not work, the Diaspora is hopeless and the West is degenerate. "Eastward! Eastward!" he cries— but the little Zionist group in his town is disbanded, emigration is forgotten, the man grows old and the divine fire in his heart dims, and death releases him from his sorrow (see Feiberger 1959, pp. 125-126).

otherworldly dignity for the International Language.

On 26 July 1887 Zamenhof published in Russian at Warsaw *La Unua Libro*, the First Book of his fully-formed second try (the Russian title was *Международный язык*), signing it Doktoro Esperanto. The language has a core lexicon based mainly on Latin roots, but it is not an ersatz Romance language, an impoverished or barbarized Latin, at all—for the roots Zamenhof ingeniously selected were specifically those that are more or less readily recognizable to speakers not only of the living Romance languages such as French, Italian, and Spanish, but also to speakers of a spectrum of Germanic and Slavic ones. These would be mainly German, English, Russian, and Polish—and Yiddish. We shall have more to say presently about Zamenhof's lexicon, but for now one may observe that by using common Latinate words the inventor sought to ensure a linguistic equality and neutrality, whereby speakers of different national languages might meet on a level playing field, employing for mutual communication a language supported not by governmental domination, economic hegemony, or military force, but by a humanistic ideal that takes precedence over political power and territorial control. This is *la interna ideo*: when Esperantists salute each other at the end of a letter with the adverb *samideane*, “sharing the same idea(!)”, that is what they have in mind. A person absorbs his mother tongue, no matter what his fully-formed opinions will be. But Esperanto is a choice, and one scholar asserts that almost all Esperantists have learned the language “as the result of an ideological commitment.”¹⁴ The level playing field of Zamenhof's *a posteriori Plansprache* is practical and ingenious, and also political.

In considering the fairly limited sources from which Zamenhof drew his lexicon, some have objected that Esperanto is Euro-centric, with precious few loan-words from other world language families spoken predominantly outside Western and Central Europe and European Russia (other Indo-European languages like Iranian or Indo-Aryan,¹⁵ and Uralo-Altaic, Finno-Ugric, Afro-Asiatic, Sino-Tibetan, etc.). But assembling a global lexicon would be the same in practicality as creating an *a priori* language of extreme difficulty for which most every learner would have to memorize most every single word afresh. The pre-eminence of Europe in world affairs in the centuries before World War I was an established and obvious fact, so those speakers of Chinese, Arabic, Turkish, or Hindustani (as Hindi-Urdu was called then) who were interested in international communication and had the resources and leisure time to learn a new language were likely already to have encountered and learned one or another of the languages of the European imperial powers, and thus to be equal players on the field. For speakers of Polish, Finnish, Hungarian and other European languages that were either very isolated or without the support of state authority, Esperanto had no taint of empire. The attraction of Esperanto for such people was (and for many people still is), then, language *neutrality*; while in Europe (and on

14- Berdichevsky 1988, p. 40.

15- It is an accepted practice of some present-day scholars of the Semitic languages and others to shun the term “Aryan”, which has become irredeemably entangled with racist ideology and stained by criminality and murder; the more innocuous word Arian is thus not a typographical error but a replacement.

other continents where European languages had become predominant or widely used) the very familiarity of much of the vocabulary and the ease of the simple, regular grammar afforded the language a jump start in acquiring a large number of adherents. But Esperanto neither acquired nor aspired to state power.

The great Yiddishist Max Weinreich once ironically defined language as “a dialect with an army and navy”, as opposed, by implication, to a “jargon”. Isaac Bashevis Singer, who escaped from Poland shortly before the Nazi *Blitzkrieg*, had no great love of armed force, and echoed Weinreich’s sentiment in his speech upon receiving the Nobel Prize for Literature: *Der groyser koved vos di shvedishe akademie hot mir aneton iz oykh an anerkenung fun Idish—a shprakh fun golus, on a land, on grentsn, nisht untergeshtist fun keyn shum regirung, a shprakh vos farmogt kimat nisht keyn verter far vofen...* “The great honor that the Swedish Academy has given me is also a recognition of Yiddish: a language of exile, without a country, without borders, unsupported by any government at all, a language that possesses almost no words for weapons...” As Prof. Ruth Wisse, who is both a Yiddishist and Jewish political activist, has pointed out in her monograph *Jews and Power*, a work that is a timely coda after a century to Theodor Herzl’s *The Jewish State*, Jews over the long centuries of exile developed strategies to cope with the predicament of powerlessness, insecurity, and vulnerability. One coping mechanism has been an understandable psychological tendency to make a virtue of these deficiencies.¹⁶ Though this was a way of surviving the Diaspora, one may argue that celebrating powerlessness and homelessness has become a detriment to Jewish political consciousness since the rebirth of Israel. Esperanto, though without any malice, did something like this, by promoting the ideals of peace and cosmopolitanism over self-defense and land.

Zamenhof in his public speeches referred often to *Esperantujo*, adding a geographical suffix to the name of the language, but he probably had in mind the temporary, peripatetic proto-hyperspace of fellow-feeling of attendees at regular congresses and the many bridges of fraternal communication in between—not a plot of land in Uganda or somewhere with the *verda stelo* (“green star”) banner floating over it.¹⁷ These meetings of devotees of the

16- Singer 1978, p. 26. On language and power, see also the remark of the 15th-century Spanish grammarian A. de Nebrija, *infra*.

17- Typically, some Esperantists came to see even the symbol of the green star as somehow excessively militant or quasi-nationalistic and sought to replace it with what they perceived as a more eirenic one: the so-called “jubilee symbol” invented in 1987 by a Brazilian Esperantist that portrays one green E facing another (backward) one. The American Jewish writer Michael Chabon invokes Esperanto and Zamenhof in his counterfactual novel *The Yiddish Policemen’s Union*, which we will discuss in greater detail below, together with Joseph Skibell’s *A Curable Romantic*. Chabon’s novel imagines a Yiddish-speaking temporary Jewish “homeland” in Sitka, Alaska. In an essay entitled “Imaginary Homelands”, Chabon writes that part of the inspiration for his novel came from Beatrice and Uriel Weinreich’s “phrase book for travelers” *Say It In Yiddish*. The book was published in 1958, nearly a generation after the Nazis had wiped from the earth Yiddish as the living, everyday language of a large community. And even when Yiddish was still fully alive, there was no place on earth, no “Yiddishland” where you could buy stamps at a government post office that functioned in Yiddish. Just as there is no “Esperantoland”. (See Chabon 2008, pp. 175-181.) As to the Green Star and Jubilee Symbol, a Hebrew medal struck by the State of Israel to honor Esperanto self-confidently portrays both: the medal is discussed at the end of this essay.

language meant considerably more than the sort of convivial professional conventions on which academics, computer salesmen, or gun enthusiasts converge: Zamenhof went so far as to compare Esperanto congresses to the three obligatory festivals of pilgrimage to the Temple of Jerusalem in ancient Israel, the *Shalosh regalim*!¹⁸ The virtual Esperantoland in his vision became no less than the Holy City, too.

The geographical trajectory of Zamenhof's life matched the Diasporist aspect of his universalist convictions: he traveled within Europe to congresses, but never set foot in the Land of Israel. Indeed, he never lived permanently very far from his birthplace, spending much of his youth and all his adult life in the poverty-stricken Jewish neighborhood of Warsaw where his parents had moved the family in his boyhood. His oculist medical practice, in keeping with his humanitarian ideals, served the community while barely supporting his own family: he charged his patients the nominal sum of 20 kopeks a visit. Like another Eliezer— Ben Yehuda!— he received some financial aid from his father-in-law to augment the meager income with which he provided for his wife and three children. Much of the expense of printing and mailing Esperanto periodicals and other publications came out of his own pocket. This coincidence is perhaps not as striking as it might seem: in the Jewish communities of that place and time (and among the ultra-orthodox still today), it was the accepted practice for the well-to-do father of the bride to support a young groom pursuing his study of Torah at a *yeshiva*. If the young man was an *ilui*, a Torah genius, he was often sought as a match by wealthy families even in distant towns.¹⁹ It was not uncommon for a wife to run a business and support the family so her husband could spend his days in the *beys midrash*, the house of study, discussing the Talmud with other men. Though Jewish love of money is a perennial anti-Semitic trope, wealth among the People of the Book, few of whom were wealthy, was a means to a higher end. Zamenhof's three children, Adam, Sofia, and Lidia, were devoted to their father's cause, even as Ben Yehuda's son Itamar Ben Avi would be to Modern Hebrew, and continued his mission to spread his language after his death in 1917. His gravestone, a handsome monument of gray Aberdeen marble, is still standing in the Warsaw Jewish cemetery. The Zamenhofs continued to live in the same neighborhood. Ben Yehuda had moved to Jerusalem in 1882 and his son Itamar lived and died there, safe from Hitler. But Doctor Hopeful had placed his confidence in the lands of exile, and his children paid the ultimate price for that decision.

One daughter, Lidia (b. 1904), embraced the universalist Baha'i faith, a creed proclaimed by Baha'ullah, an Iranian mystic of the mid-19th century whom his fellow Muslims executed as a heretic. The religion, a sort of Islamic Mormonism with mystical leanings, was popular among Iranian Jews and was favored by the Pahlavi dynasty, but is outlawed by the Iranian clerical regime of the present day. The Baha'i leadership looked favorably on Esperanto: the leader 'Abd al-Baha encouraged it and Mirza Muhammad

18- Forster 1982, p. 99.

19- Harshav 1990, p. 12.

Labib taught it in Iran to Baha'is.²⁰ Lidia traveled to America in 1938 to propagate the new religion and teach Esperanto. Despite the events of *Kristallnacht* in November of that year and the swiftly worsening plight of the Jews in Europe, the American government turned down her petition for an extension of her visa, claiming that her work as a teacher had violated its conditions. The Baha'i leader Shoghi Effendi, her spiritual guide and close friend refused politely, and inexplicably, to help her to find refuge in British-mandate Palestine, where the religion still has its center, a golden-domed building surrounded by Persian gardens overlooking Haifa; so she returned in November 1938 to Poland.²¹

The end came soon. In September 1939 the Germans destroyed the Zamenhof house and its priceless Esperanto archive in their terror bombing of the Polish capital. The family moved to an older home, within the area soon to be demarcated as the Warsaw Ghetto. Zamenhof's son Adam was killed in prison by the Germans as a hostage in the early days of the occupation, and the Nazis murdered both daughters in the death camp at Treblinka later on, during the liquidation of the Warsaw Ghetto in 1942—their house was right next to the *Umschlagplatz*, the space into which the Jews were herded before boarding the trains for deportation, mainly to the Treblinka death camp. The fate of the international language under fascism was grim: as we noted, Hitler in *Mein Kampf* condemned Esperanto as part of the Jewish world conspiracy, and the regime outlawed the international language in Germany. To the east, the situation was little better: Esperanto had flourished in the young Soviet Union, where it was seen as a means of getting the workers of the world to unite. But there too the Stalin regime, suspicious of its cosmopolitanism and the contacts it facilitated between Soviet citizens and foreigners, banned it and executed numerous Esperantists. But the movement and many of its adherents survived the dark years. Esperantists planted a green flag in 1946 after the liberation, on the mound of rubble where Dr. Zamenhof's home had stood.²² His new language survived and survives still—

20- Heller 1985, p. 38.

21- Heller 1985 somewhat glosses over the callous behavior of the Baha'i leader Shoghi Effendi, out of politeness or deference; Schor 2016, to her credit, tells the story with unwavering clarity: Lidia was abandoned, betrayed by those she trusted and hoped in. The Baha'is could easily have arranged safe passage and sanctuary for Lidia Zamenhof to Haifa but evidently cared so little about her very life that despite her long and zealous commitment to the newfangled sect, and its own championing of Esperanto, her desperate pleas were simply brushed aside. As though to add insult to injury, after her murder by the Nazis the Baha'i movement refused to confer upon Lidia the status of a martyr. She is however a martyr to her *own* people, with its *genuine* faith: every Jew killed in the Second World War because of his or her identity is considered Halachically to have died '*al qiddush Hashem*, in sanctification of God's Name.

22- In present-day Warsaw, Zamenhof St. intersects with Mordechai Anielewicz St. The latter was the young leader of the Ghetto uprising that began on Erev Pesach (the beginning of Passover), 19 April 1943, when the Germans and their henchmen stormed the Ghetto. The next day was the birthday of Adolf Hitler, and the final eradication of the remnant of the Jewish community of Warsaw that remained after the *Grossaktion* of 1942 was intended as a present for him. The nationalist Home Army of the gentile Poles did not render effective assistance to the Ghetto fighters, and some Varsovians paraded in Easter bonnets and rode amusement park carousels while the Ghetto burned. After the war, there were scattered pogroms against Jewish survivors returning home; and in 1968, Poland forced most of the Jews who still lived in the country to emigrate. *Po lin*— "Rest here"— the gentle Hebrew *Volksetymologie* for a land many, including Zamenhof, called home, now seems more the evocation of a graveyard. But the →

out of the hundreds invented in the optimistic 19th century it is indeed the only one that has endured. Though there is no physical *Esperantujo*, the Internet (*Esperanto, reto*) has enhanced Zamenhof's vision of a linguistic community with a home in the noosphere: the digital age has provided it in hyperspace.

The high ideals of Dr. Esperanto are as far from more general realization, though, as ever. The only genuine international language of importance at the time of this writing is English. But it cannot be said to be neutral, as it was *ab initio* compromised by the British colonialism that facilitated its diffusion; and it may now fairly be considered a vector of the capitalistic, globalist economic system, and of the consumer culture of Britain's imperial successor, the United States.²³ But there is another, perhaps equally potent factor in the internationalization of English that is not compromised by elitism and imperialism. As Benjamin Harshav pointed out, both Yiddish and English are "languages of fusion"²⁴—that is, they have been open in the course of their development to the reception of abundant lexical, idiomatic, and morphological material from heterogeneous sources. Unlike French, English has no recognized central authority, no academic Cerberus to bar the introduction of foreign loans. (French has resisted "computer" with *ordinateur*, for instance, but has not managed to abolish *le weekend*. Apparently not even General De Gaulle could prevent the Almighty from resting on the seventh day.) In that sense, at least American English, if not the Queen's with its RP ("received pronunciation", the mark of the aristocracy) is a democratic language, a leveler of national and social differences. Zamenhof never gave a name to his new language, perhaps because names help to reify things, to create boundaries and exclusive identities—the very ills he wanted to avoid, transcend, and remedy. He termed his invention simply an *internacia lingvo* and as we have seen modestly employed as a *nom de plume* in his manual of the language the present participle singular *Esperanto*, which means in it "One who hopes". As noted above, that first edition of the manual, the *Unua Libro*, was published in Russian, though translations into other languages swiftly followed—and indeed for the first two decades or so of the existence of Esperanto, about nine tenths of the movement's subscribers and supporters were subjects of the Russian Empire. A majority of those were Jews as well, and though

→ Esperanto heritage is celebrated in present-day Poland by friends of the international language, and one member of the family, Steve Zamenhof, was not trapped by the Germans. Safe in America, he became a prominent scientist. My mother Prof. Dr. Charlotte Russell, a biochemist who is 92 at this writing (she is herself a kind of symbol of progress, having been the first woman chemist to be granted tenure at the City College of New York), knew him well when they were young.

23- This is the point at which one might be mistaken as sounding like an aggrieved defender of the language English knocked down from the saddle—French. But it is to be remembered that when the Persian delegation to the League of Nations proposed that Esperanto receive official status, it was France that vetoed the suggestion, considering Zamenhof's invention an upstart bastard child of the Romance brood. It was a French Esperantist, too, Prof. Couturat, who broke early with the movement, promoting a reformed variety of Esperanto called Ido ("offspring"). When he asked the British philosopher Bertrand Russell to think of a proper self-designation for the Idoj, the philosopher, who evidently disapproved of this deviation from the Esperanto movement, offered the suggestion that they call themselves Idiots.

24- Harshav 1990, p. 26 f.

statistics are hard to come by, it might be fair to estimate that perhaps as much as a quarter of the present Esperantist community is Jewish.

Esperanto, then, emerged in the conditions of the Jewish Diaspora, addressed its concerns, was suffused with its hopes, and was shaped by its linguistic environment. It attracted a disproportionately large number of Jewish adherents and its enemies attacked it as a Jewish language. In many ways, it was.

The past of languages of the future.

No new invented languages to rival Esperanto's scale and cosmopolitan reach are emerging, but even if the idea of an auxiliary *Plansprache* may have an uncertain future, it has a venerable past. For the idea of a universal, perfect language is very old indeed. One might cite as an early expression the vision of Zephaniah 3:9. *Ki az ehpkh el-'amim, safah verurah, li-qro' khulam be-shem YHWH, le-'avdo shekhem ehad* "For then will I turn to the people a pure language, that they may all call upon the name of the Lord, to serve him with one consent" (KJV). The verb *hpk-* used in "turn" here is a potent one, often meaning in Biblical Hebrew to overturn things in the sense of a revolution,²⁵ so the prophet seems to have in mind a real Babel-reversing transformation, an Esperanto with Divine sanction that will bring about worldwide spiritual unity. But the word *śafāh* can be the lip of one's mouth as well as "language", even as *lāšōn* can be both "language" and one's physical tongue. Given the propensity of the Lord to scour clean by fire and other painful means the bodies of His prophets, the verse may refer to the physical thing that speaks, or to speech that is not deceitful or wicked though in a natural tongue— and not necessarily to a linguistic system or brand-new lexicon *per se*. If it were a language suitable to Divine worship, then one imagines it would be related to Heaven rather than to some natural earthly idiom. A candidate for such a language might be Hebrew itself, a tongue that endured in large measure because of a collection of holy texts in it that is of importance to the three so-called "Abrahamic" religions: it is the language of the Book of the People of the Same. There are other sacred books in languages thought by other faith traditions to be divine that have not survived quite as robustly— the Old Avestan of the *Gāthās* ("Hymns") of Zarathustra, for instance. The three pre-Islamic Iranian empires championed Zoroastrianism, so we find paraphrases of the Gathas in both the Old Persian inscriptions of the Achaemenids and in Deutero-Isaiah. They are the "Theogony" Herodotus mentions in Greek; and they may underlie the cosmogonic opening scene of the Gnostic *Poimandres*. But the Zoroastrians are now a small and insular community; and the experts on the Gathas, much of whose language is now obscure, are scholars outside the faith. Nobody speaks Avestan, or writes commentaries or poetry in it; and there has been no attempt to revive it. One factor that helped Hebrew, by contrast, to gain and maintain its status was also the sheer number of people who revere the Bible. And added to this might be the peculiar tenacity in adversity of the Jews themselves, and the dedication of the Jewish community to scholarship. The mighty intellectual tradition of

25- See Russell 2017.

the imperial faith of the Iranians withered by the medieval period; Jewish learning, by contrast, endured and expanded.

One may consider as an additional factor in its endurance and vigor also the belief that Hebrew was not just the medium of the Holy Scriptures but the very blueprint of Creation in and of itself, a key to the structure and meaning of the cosmos: God created the world by speaking and writing. Part of the attraction of Hebrew for Christian Hebraists of the Renaissance was this belief in its primordial and primal antiquity: it was thought to be the language not only of the first revelation, and thus as *prisca theologia* the common, pristine ancestor of all the varied teachings to follow, but also of all humanity before the tower of Babel, its fall, and the ensuing confusion of tongues. It would have been the language in which Adam gave the animals their right names while God looked on approvingly, and that means Hebrew was closer than any other subsequent human tongue to bridging the gulf between signifier and signified. By this reckoning it would also have to be true that Hebrew was the conversational speech of the first human couple as they transgressed and were expelled from the Garden of Eden, and what Cain was speaking as he slew his brother Abel not soon after. And some Jewish traditions maintain anyway that the language of the Garden was not Hebrew at all, but its close relative, Aramaic.²⁶

But Jewish speculation about language had gone well beyond any sublunar sort of Hebrew before Christians began to think about the problem. In around the third century CE, most likely, an unknown Jewish philosopher wrote the very short text *Sefer Yetsirah*, the “Book of Creation.” It suggests that the world was constructed (and endures) through 32 paths consisting of the 22 letters of the Hebrew alphabet and the ten *Sefirot*, a term evidently invented by the author, probably on the basis of the root *spr*- “count”. These ten represent the ten directions: up and down; north, south, east, and west; the beginning and the end (i.e., time); and good and evil.²⁷ The primary roots of language are described as biliteral (and not triliteral, as is the general rule in Semitic grammatical study, though there seems to have been an old pattern of proto-Semitic biliteral roots), generated by two wheels, each containing the 22 letters, that throw them off to join in their 231 possible connections. This theory suggests that the author saw the universe as a binary system— up

26- There is a curious Jewish belief, perhaps associated with this, that certain prayers are in Aramaic rather than Hebrew because the angels do not understand Aramaic and cannot impede the progress of a petition directly to God’s ear. Most Jewish prayers, including the credal *Shema* (“Hear O Israel, the Lord is our God, the Lord is One only!”), can be recited in any language. Compare the belief of the Russian Orthodox proponents of *Imiaslavie*, “Glorification of the Name”, that *any* name can be God’s true Name.

27- The reduction of good and evil to mere directions is chilling, as though there were no certain moral absolute. But if one regards the question through the prism of Jewish, and especially Hasidic, theology it is easier to resolve. The permutation of the Hebrew word *nega*’, “harm” famously results in a transformation— *oneg*, “delight”. *Sheqer*, the “lie” that undermines all, can be made into *qeresh*, the sustaining plank of the Tabernacle. And letter mystics assert that the characters of שֶׁקֶר *sheqer* come to a point at the bottom (*shin* does this in certain calligraphic styles) or have but one leg, so the lie totters and cannot endure. But the letters of אֱמֶת *emet*, truth, stand on two legs or on a firm base. The task of life is to transform darkness to light, to find the spark of good in the worst evil and fan and nurture it so that the light of love triumphs and the shadow of hatred simply dissolves, to take this created physical world and by dint of the great work lift it up to Heaven.

and down, left and right, present and future, good and evil, male and female, Israel and the gentiles, this world and Heaven, and, to bring the picture up to date, the electronic binary pattern that governs the operation of the computer— zero and one, no signal and signal on.²⁸ Another book, the *Alef-Bet of R. Akiva*, indeed considers the second letter of the alphabet, *Bet*, to have been the letter of Creation because it expresses duality.²⁹ As Joseph Dan has observed, *Sefer Yetsirah* is the first Jewish text to suggest that the Divine language is one governed by rules. That language is independent of human use, need, or purpose, and is arbitrary, *a priori*, releasing one from the problem of the relationship of signifier and signified.³⁰ The letters are significant by reason of their sounds, so the *shin* of *ēsh*, “fire”, hisses and crackles the *shhhhh* of fire; *mmmmm* is the watery sound of the *mem* in *mayim*; and “air”, *awīr*, is *alef*’s light *aaaaa*. Although the origins of *Sefer Yetsirah* are nearly as mysterious and uncanny as that other literary enigma, the still-undeciphered Voynich Manuscript with its unique cipher, its impact was anything but isolated or obscure. There are many medieval Jewish commentaries on it; and the effect of the text on the developing system of Kabbalah is of incalculable significance. Thus, Jews by the time of Zamenhof had known for centuries of a celestial language that was universal and was potent by virtue of itself, one that was generated by rules that do not have exceptions. These are the features with which Zamenhof sought to endow his terrestrial Esperanto.

Zamenhof was not alone in the Eastern European Jewish world, either, in his meditations upon language: he existed in a culture that was rich in such lively reflections, and aware of their antiquity in the tradition. One might note, for instance, the work of a younger Russian Jew, Prof. Roman Jakobson (1896-1982), who conceived structuralism in linguistics.³¹ But

28- Nöldeke 1910 seems to have been the first scholar systematically to investigate a proto-Semitic pattern of biconsonantal roots.

29- Medieval Hebrew alphabetically-arranged books seem to have been a vehicle for the expression of unconventional or parodic ideas. On the *Alphabet of Ben Sira*, for instance, see Russell 2019. The first word of the Bible, בְּרֵאשִׁית *Bereshit*, “In the beginning”, begins with *bet*, too. According to the *Zohar*, *alef* in its turn, as the first letter in the alphabet, became that of unity, as the beginning of the designation of the One God at the beginning of the Ten Commandments: the pronoun אנכי *Anokhi*, “I”. Prof. Jack Zeldis of California State University, Fresno, has pointed out a tradition according to which one may divide the first verse of Genesis in two to discover an esoteric meaning: בְּרֵאשִׁית בָּרָא אֱלֹהִים *Bereshit bara Elohim et*: “In the beginning God created *alef-tav*,” reading the accusative marker *et* as an abbreviation for the alphabet.

30- See Dan 1998, esp. p. 144.

31- Gentle reader, *en fait de souvenirs d'enfance* this writer attended at Oxford in 1975 or thereabouts an eagerly awaited lecture on Mallarmé by Prof. Jakobson that proved to be a paralyzingly dull statistical analysis of the use of conjunctions. My poor, much shaggier and younger head nodded, and soon I was blissfully asleep in the warm lap of the elderly gentleman seated to my left. It was that utter repose, free of all care, that is particular to the lecture hall and classroom. Startled awake by the applause at the end of the lecture an hour later, I sat upright and alert, pretending of course that I had given the learned disquisition my keenest attention. The audience, evidently annoyed and disappointed by the tediously technical presentation, demonstrated its displeasure by refusing to ask any questions; the moderator turned to the kindly old man I had been using as a pillow... and begged the Master of the college, Sir Isaiah Berlin, to say something. I was prepared to drop through the floor into Hades or disappear into antimatter. But the great author of “Two Concepts of Liberty” half-turned to me with a wink and a smile, and then declared, “No, I’m afraid I slept through the whole thing.”

one may discuss here a poem that illustrates this linguistic engagement and is of interest also in the context of Esperanto. A(ron) Leyeles (Glanz, 1889-1966) was born in Wloclawek, Russian Poland, and wrote poetry first in Russian—as did Zamenhof. He belonged to the Socialist-Territorialist party, which worked towards the establishment of a Jewish state outside the Land of Israel: their program places them on the left, near Zamenhof, and in partial sympathy with Zionist aims, again like Zamenhof. Leyeles moved to New York in 1909, and chose his native Yiddish as the language of his mature poetry. In one poem, “Symmetry”, we read: *Simetriye—/ Gimatria fun misteriyeh/ Misteriyeh fun ritm/ Oyfyener zayt zoym/ Fun tsayt un roym*. “Symmetry:/ Gematria of mystery/ Mystery of rhythm/ On the other side of the seam/ Of time and space.” One notes the alliterative figures that link the parallel phrases: *zayt/tsayt, zoym/roym*—this play of sound underscores the preponderance of monosyllabic words that enforce the sense of primordial units, atoms, even *Sefirot*-quanta. The poem goes on to speak of the cleaving into a binary pair of the primordial unity of male and female, and concludes, *Sod fun sod un yesod./ Freyd fun shed un fun Got./ Blits fun shpiz. Meshugos./ Zelikeyt. Has./ Ekstaz./ Ekhod!* “Secret of secret and foundation./ Joy of demon and of God./ Lightning bolt of dart. Madness./ Holiness. Hate./ Ecstasy./ One!”³² In the first stanza, Leyeles introduces the theme of unity and balanced duality with four Greek loan-words, three of which are universal to the European languages but were acquired in Yiddish *via* Russian: symmetry, Gematria, mystery, and rhythm. Gematria is one of the thousand or so Greek lexical items attested in Mishnaic Hebrew: it defines the practice of associating otherwise unrelated letters by establishing that the numerical values of the letters that spell them add up to the same sum. Here the “gematria” of *simetriye* and *misteriyeh* is anagrammatic also—transpose the letters of one and you have the other. The fourth loan word, “rhythm”, may allude to the *mysterium coniunctionis* of male and female in coitus, but the locus outside space and time suggests also a cosmological event, perhaps that of the generation of language in *Sefer Yetsirah*—another poem by Leyeles to be mentioned presently seems to allude directly to it.

The final stanza replaces the “mystery” of the opening lines with the equivalent Hebrew word *sōd*, “secret”, and rhymes it with *yesōd*, the ninth of the ten *Sefirot*. *Sod* refers also to the mystical, Kabbalistic level of interpretation of the Torah in the famous acronym *PaRDeS* (lit., “Paradise”): *peshat* (“plain, literal interpretation”), *remez* (“allusion”), *derash* (“homiletic”), and *sod*. The phrase “Mystery of mystery” can allude to the *sod she-be sod*, “the secret that is in the secret” in Hasidic philosophy, which in fact has to do with the *unio mystica* of the soul with Divinity, the very oneness with which this poem ends;³³ but it also invites one to consider the parallel construction, *Song of Songs* (Hebrew *Shir ha-shirim*), the Biblical erotic poem of the love of a boy and girl that is also interpreted in a mystical manner by both Christians and Jews as an allegory of Divine love. Leyeles then links by rhyme *freyd* “joy” with Hebrew *shēd* “demon”; God shares this joy and finds

32- Text in Harshav 1986, pp. 130-133; for a discussion of the poem see also Harshav 1990, p. 68.

33- See Wolfson 2009, p. 38 f.

His rhyming partner in His lower emanation, *Yesód*. The poem ends with a staccato hail of images: the lightning-flash of the infusion of Divine energy into the space of Creation in the Kabbalistic *tsimsum*, “contraction”, and the transcendent balance in *ekstáz* (“ecstasy”, from Greek *via* Russian again) of holiness with the rhyming pair of insanity (Hebrew-in-Yiddish, *meshugás*) and hate (Germanic, *has*). This succession of terms accented on the ultima, which are anomalous in the general stress-pattern of Yiddish, foregrounds the final word of the poem, *Echód!* (“One!”) which is so situated both to bring the opposites together and to remind the reader of its position also as the final, strongly pronounced word of the Jewish declaration of faith, the *Shema*.³⁴

Creation, erotic energy, duality and unity, are not merely described through language in the poem: the tradition from which the poem emerged presupposes that language itself is those things, it is how they come to be. And language in the poem functions on several different levels or registers that its own forms define, and that the reader by reason of his cultural background will intuit. The cosmopolitan lexicon of the early lines was born Greek, and that pedigree confers upon it its antiquity and nobility. It has another kind of value through its present status: it belongs both to the language of the imperium, Russian, and to the languages of European culture. But Leyeles adds the word *gematria*— it may seem at first like a throwaway joke or clever figure, yet the use of *gematria* adds a mystical dimension to the way the other Greek terms are associated, and that function derives specifically from Judaism. “Time and space,” for which the poet uses Germanic

34- Zamenhof seems to have followed the rhythms of the Hebrew and Yiddish of his time: all Esperanto words are stressed on the penultima, as is the general pattern also in Ashkenazic Hebrew. (Sephardic Hebrew stresses, by contrast, the ultima, so Israeli schoolchildren reciting the verses of the Russian Jewish poets Bialik or Chernikhovsky seldom use the meters their authors intended.) The stress on the ultima in the final strophe of Leyeles’ poem may therefore underscore the dramatic conclusion. Interestingly, though not surprisingly, Leyeles’ formulation, with its initial duality, or, better, binary quality, resolving into a final unity echoes one manuscript of the *Sefer yetsirah*. A Franco-German MS of the text in the British Library dated provisionally to the 14th century, with “old, interesting, and quite important readings”, begins, ‘*Eser Sefirot belimah mispar ‘eser etsba ‘ot, hamesh ke-neged hamesh, u-brit yihud mekavvenet be-emptsa*’, “Ten Sefirot of voidness, in number [like] ten fingers, five opposite five; and the covenant of unity tends in between” (Gruenwald 1971, pp. 135, 141). But one need not travel as far as London to find an illustration of the binary pattern and unitary resolution of Leyeles’ poem. The Hebrew-Aramaic invocation in the prayer book that precedes the blessings for the wearing of the hand and head *tefillin*, and the drawing together of the four *tsitsit* (fringes), two on each side of the body, evokes the same image of the reunification of the sundered male and female principles and would have been known to the Yiddish poet from early childhood: *Le-Shem yihud Qudsha Berikh Hu, u-Shekhinteh, bi-dhilu u-rhimu le-yahed Y”H be-W”H bi-yhuda shelim, be-shem kol Yisrael*, “In the Name of the unity of the Holy One, Blessed be He, and His Presence, in fear and love to unify the YH with the WH in perfect unity, in the name of all Israel.” In a general sense, the statement in the *Sefer yetsirah*, this prayer, and Leyeles’ poem exemplify the sundering of primary unity in the primordial catastrophe of *Shevirat ha-kelim*, the “shattering of the vessels” in the Kabbalistic cosmogony, and the act(s) of *tiqqun*, the final repairing and reunification. It is a powerfully dramatic image that has travelled far beyond the boundaries of Judaism. Tragic breakage and eschatological restoration are encoded into the 20th-century American writer Philip K. Dick’s novel, *The Galactic Pot-Healer*: the author had a profound interest in Jewish history and mysticism. One might note also that the encoded phrase inscribed on the mezuzah parchment, *Kozo bemukhsaz kozo* (=Hebrew *Hashem Eloheinu Hashem*, with the Tetragrammaton, “The Lord our God is the Lord!”), employs a cipher in which each letter is replaced by the one following it: *alef*, by *bet*, etc.— again a binary combinatory system!

terms, seems to allude to the ideas of the fourth dimension he found in his reading of the occultist Ouspensky; but the Hebraisms of the concluding lines suggest an additional Kabbalistic nuance. Moreover, if the Hellenic terms represent the high register of secular and international language, then the Hebrew ones belong to the sacral level— the Torah and Zohar, the Hebrew and Aramaic of the *beys midrash* and of Hasidism. What we have before us in this poem, then, is not only active engagement with language as the ground of existence, but the very same socio-linguistic array of lexicons and registers that Zamenhof controlled as he conceived his international language. I shall consider the question of polyglossia in more detail presently.

Leyeles published in 1947, thirty years after Zamenhof's passing, *Der Got fun Yisroel*, "The God of Israel", in which he declares that *Der Yidisher muzéy*, the Jewish museum, has very little by way of art to see. There are ritual objects— a Menorah, a spice-box for *Havdalah*, a *tefillin* bag, a *yad* ("hand") pointer for reading the Torah, a curtain for the Ark— but mostly lots of manuscripts (the poet begins with using Hebrew *ksav-yad*, then changes to *manuskript* and stays there). "Once upon a time" He threw (*gevórfn*) two handfuls, the 22 letters (Heb. *'otiyot*): they sparkled with speech and sayings, and now we seek to explain them all. There is no solution, but they remain, *óysiyes in óysiyes farlibt*, "letters in love with letters".³⁵ The two hands of God don't merely toss the letters down. The letters cleave to each other with the energy of a mutual attraction, and for the next three millennia an entire people is entranced by their living words. There is the *Sefer Yetsirah*, there are the two wheels spinning off biliteral roots, there is language as the relic greater and more powerful than any work of plastic, representational art, there is focus, source, tradition— Zamenhof's values, the *longue durée* of his people's culture, his framework of concepts, and not in a treatise he might have read in some imperial language, but in the mother tongue, the speech of the streets of Bialystok, the speech of the shoemakers and peddlers whose eyes he examined in his modest Warsaw surgery— Yiddish. It is not at all difficult to imagine Zamenhof as a habitué of Leyeles' imaginal museum, with its displays of the riches of language in all its versatility and power, its sacrality and homeliness.

It is thus scarcely surprising that Hebrew retained its prestige as the first truly international language, with its aura of divinity and perfection: Jews never ceased to ponder it. In the gentile arena, Thomas More invented the first European literary *Plansprache*, for his *Utopia* (1516: but he wrote the book in the international language of the day, Latin). René Descartes (1596-1650), Gottfried Wilhelm Leibniz (1646-1716) and Comenius (1592-1670) all tried their hand at it, and by the nineteenth century there were hundreds of invented international languages, both *a priori* creations and others based upon existing linguistic lexicons and morphologies. The overwhelming majority originated in Europe, as did the age of exploration and the mercantile and industrial revolutions. Language was yet

35- Again, Leyeles' imaginative vision reflects ideas that go back to the foundations of Rabbinic Judaism. In the *Midrash Tehillim*, for instance, the Rabbis when pondering Ps. 9:3, *Esmehah ve-e'eltsah vakh*, "I will rejoice and exult in You," thought it most significant that the gematria of "in You", Heb. *bet + kaph*, equals 22, the number of the letters of the alphabet— that is, the Torah. God is understood as His Book, in fact as the very letters that are combined to form the Book. See Braude 1959, vol. 1, p. xix.

another engine of progress. Very few invented languages gained purchase, though. At the time when Esperanto came into being, Volapük, the very complex and rather cacophonous creation of a German pastor, enjoyed wide popularity. It is nearly forgotten today save in Esperanto slang, where the word *volapukaĵo* means, scornfully, “gobbledygook” (which sounds a bit like poor Volapük anyhow). *Vae victis*— but Esperanto does not have an equivalent term for *Schadenfreude*, and the early rival of Esperanto might be wholly unknown, were it not for the fact that some Esperanto on-line booksellers still stock texts in Volapük.³⁶

People invent languages for reasons other than cosmopolitan idealism: J.R.R. Tolkien, a Germanist who enjoyed making up languages in his youth (interestingly, he coyly likens it by the title of his essay on the subject, “A Secret Vice,” to autoeroticism, see Tolkien 1984), loved both Norse mythology (he was a Germanist) and the sound of the unrelated Finnish language. *The Lord of the Rings*, a heroic fantasy epic, grew up around the crypto-Finnish euphony of Elvish and Tolkien’s other invented tongues, not vice-versa.³⁷ Even the present-day media culture of America has produced some invented languages, e.g., the Klingon of *Star Trek* and Dothraki in *A Game of Thrones*. These languages afford people of the digital age an opportunity to find community: Trekkies expend considerable effort learning Klingon and meeting at conventions to practice it; and here in California the toasts at a wedding a few years ago were in Dothraki.³⁸ Tolkienian role playing in congenial

36- For a general survey of invented languages see Yaguello 1991 and Adams 2011.

37- There is a sinister side to Tolkien’s fantasy: the Hobbits are more or less English and the Elves are pleasantly Scandinavian; but their enemies, the monstrous, sub-human Orcs and their ilk, serve the dark lord of Mordor, whose language is made to sound decidedly pseudo-Turco-Persian (*nazg durbatulûk, ash nazg gimbatul, ash nazg thrakatulûk agh burzum-ishi krimpatul*, for instance, inscribed on the Ring of Power). Tolkien’s friend, C.S. Lewis, similarly created a race of quasi-Muslim enemies in the Narnia books: the people of Calormen (=hot-blooded, lustful, cf. *calor*) worship an idol called Tash (Turkish for “stone”: medieval Christians believed the Muslims worshipped little golden idols called mawmets!) and do business with coins called crescents (the symbol of Islam; cf. the history of the tasty croissant, which commemorates Christian Hungary’s victory over the Turks). Jew and Turk are intimately associated in English lore as two types of the same infidel foe; and in Lewis’ fantasy the Christ-like lion Aslan (with his Turkish name, yet) is brutally murdered on the stone tablet of the Law— one could scarcely find a more insidious anti-Semitic trope to poison the young mind of a reader.

38- Reported in *The New York Times*, 11 December 2011. The article also states, “There have been many attempts to create languages, often for specific political effect. In the 1870s, a Polish doctor invented Esperanto, meant to be a simplified international language that would bring world peace.” The date is wrong of course, and Zamenhof was not exactly “Polish” either. There was an Esperantist congress held at Kraków in 1912: a Jewish delegation was denied official accreditation on the grounds that there is no “Jewish” language, and Zamenhof, whom the Polish delegates were delightedly acclaiming as a Pole, refused to intervene. This incident drew a scathing attack by the Zionist activist Dov Ber Borochov on the hypocrisy of the procedure. It concluded (in Esperanto translation), *Jen, tia estas la sorto de judo. Dudek kvin seninterrompajn jarojn penadis la homo kaj enmetis la animon en la ideon, kaj kiam fortiĝis la amata filo kaj estiĝis sendependa, devigata estas la juda patro forlasi, ĉar eĉ se la patro kiom ajn granda homo li eble estas— malgraŭ tio, eterna estas nenio pli ol judo*. “Behold, such is a Jew’s lot. The man labored for twenty-five years without cease and poured his soul into the idea, and when his beloved son grew strong and became independent, the Jewish father is compelled to let him go, because no matter how great a person he might be, despite that he is always nothing more than a Jew.” Zamenhof was stung by this poignant criticism, responded with wounded dignity, and the two subsequently engaged in a duel of letters in the Jewish press. See Kolker 2004.

groups and the serious study of Elvish languages such as Sindarin flourish in present-day Russia, too: one has enjoyed watching grown people in chain-mail and helmets disporting themselves in Udel'nyi park, St. Petersburg of a pleasant afternoon as though they were in Middle Earth fighting for possession of the Ring of Power. "The more languages a man speaks, the more people he is," exclaims an Armenian proverb. Language is fun and can augment one's sense of self-worth, as well as of belonging. But then, is that not in a way part of the ideal of Esperanto, with its clubs and gatherings and websites, as well?

The manipulation of language and language reform by totalitarian and fascist regimes in the 20th century for the purpose of propaganda and indoctrination has affected adversely the idea of an invented or reformed human tongue.³⁹ The young Eric Blair—later to become George Orwell—stayed in Paris in the 1930s with an aunt who was living with another man who had a *nom de plume*, Lanti (French *l'anti*, "the man against [everything]"), Eugène Adam (1879-1947), founder of the Esperantist *Sennacieca Asocio Tutmonda*, "Worldwide Non-nationalist Association". The USSR, which at first championed the "Latin of the working class", issued a stamp in honor of it in 1926 (and another the next year honoring the 40th birthday of Esperanto, with a portrait of Zamenhof). But Stalin, as noted earlier, suppressed the *Esperanta Movado*—thousands of advocates of an international language such as the great Esperantist and Bolshevik revolutionary Ernest Drezen (1892-1937) fell victim to the purges—and Lanti turned bitterly on the Workers' Paradise. George Orwell, who was appalled by the Moscow Trials, still fought in the Spanish Civil War, during which the Republican side used Esperanto as a propaganda tool to garner international support.⁴⁰ Orwell came to associate Esperanto, perhaps rather unfairly, with totalitarian cant and it clearly served as the morphological model for Newspeak in his dystopian novel *1984* (for similarity of word formation, compare for instance the words meaning "very bad"—Newspeak *doubleplusungood* to Esperanto *malbonega*), the other, lexical, model being Basic English with its radically reduced vocabulary of some 850 words. A limited vocabulary can be used to reduce the range of thought as well, as Newspeak in the novel is intended to do: Bernard Avishai has warned that "political freedom, freedom as a way of life, is of use only to people who... have complex thoughts which they can articulate."⁴¹ Zamenhof himself could not have been less totalitarian in his outlook: in a speech at Geneva in August 1906 he made clear that although his invention was motivated by a high ideal, the language now exists and belongs, not to any central ideology or authority, but to every Esperantist, who is free to use the language for any purpose he wants.⁴²

39- See Berdichevsky 1988.

40- See Horvitz 2012. A coin was counter-stamped "Esperanto Si" (which is all very well, but shouldn't it have been "Jes"?) by the republicans, who printed Esperanto-language posters calling for the international movement to join the struggle. The fascist régime executed the republican Cayetano Redondo Acena on 21 May 1940: among his capital offenses was the advocacy of Esperanto. But attitudes changed; and in 1968 Generalissimo Franco himself became a patron of the language.

41- Berdichevsky 1988, p. 37.

42- Forster 1982, p. 95 f. One perceives in Zamenhof's intellectual open-mindedness an echo of the ethos of Jewish learning: for Talmudists, the Biblical *text* is canonized, but not its *meanings*.

Hebrew is risen: Eliezer ben Yehuda.

Another Eliezer, Eliezer ben Yehuda (born Eliezer Yitshak Perlman in Luzhki, present-day Belarus, 1858-1922), did not share the optimism of his contemporary and coreligionist Eliezer (Leyzer) Zamenhof about the long-term viability of Jewish life in Europe. Rejecting both Yiddish and the idea of an auxiliary language with a cosmopolitan base, he focused on shaping a spoken Hebrew for everyday secular use in the historical homeland of the Jewish people. Ben Yehuda moved his family in 1881 to Jerusalem, then in Ottoman-ruled Palestine, where he raised his children in a Modern Hebrew that he himself revived, and in some ways created. His son Itamar Ben-Avi (the surname means “Son of my Father”, which sounds decidedly Christ-like, given the language and the quasi-religious ideological impetus), whose ideas, as we shall see presently, were to converge somewhat with Esperanto, was thus the first native speaker of Hebrew as a living, fully everyday language in nearly two millennia.

Like Zamenhof, Ben Yehuda, too, was concerned about the official and pervasive folk anti-Semitism in Eastern Europe, which for the 19th century peaked with the terrible pogroms that swept the Russian Empire in 1881.⁴³ He came around to his project in an interesting way. The British writer George Eliot (1819-1880) was actually a woman, but she used a man’s name because of the social barriers that impeded a woman from embarking on a male-dominated career. Eliot apparently felt the injustice against women so deeply that she could not directly address it in her writing, so chose instead to write about the archetypally persecuted nation instead—the Jews. Although the late 19th century was a time of relative emancipation for Jews in Western Europe, prejudices still ran (and run) deep. In the Middle Ages, Jews and women had even been associated in popular superstition—Jewish men were believed to menstruate. The hero of Eliot’s last novel, *Daniel Deronda* (1876), is a Jewish boy unaware of his origins who is raised by a gentile, aristocratic English family. But he learns of his true nature, and boldly determines not only not to conceal it and assimilate, but to embrace it and to go one step further—Daniel declares that he intends to revive the Hebrew language as an everyday tongue and to emigrate to the Land of Israel. Ben Yehuda, who was fully at home in Russian language and culture, as indeed was Zamenhof, read the novel in a serialized Russian translation. Ironically, it was not any act by one of his own such as the famous return to Israel of the medieval Spanish Hebrew poet Yehuda ha-Levi, that inspired him, but a novel by an English gentile woman, in Russian translation, that gave him his great idea.⁴⁴ In 1879 he

43- Worse was yet to come, with the Kishinev pogrom of 1903, the massacres of Jews in the Ukraine and Poland during the civil war that followed the Great October Socialist Revolution, and of course the Holocaust itself. But the 1881 pogroms were still a watershed, provoking both the mass migration of Ashkenazi Jews to America and the beginning of serious, large-scale repatriation (*‘aliyah*) to the Land of Israel.

44- Part of the great idea—the turning point—was a change of consciousness. Hitherto Jews had been largely passive, responding of necessity to the Gentile world, but had not sought to exercise their own initiative, to conceive of independent agency rather than reaction to, or reliance upon, stimuli from a gentile power. A transformation of attitude from an internalized sense of inferiority to self-affirmation and valorization was required for this to happen; and George Eliot’s boldly creative insight was part of the impetus to it. (On her intensive study of Jewish history see Himmelfarb 2009.) A decade ago the →

published an article in the journal *Ha-Shahar* (“The Dawn”, an expectable title but one still perhaps modeled on Russian *pacceem*) on reviving Hebrew as a spoken language—two years later, as the pogroms raged across the Russian Empire, he settled in Jerusalem.

Ben Yehuda assembled a lexicon culled mainly from the various stages of Hebrew literature from periods both before and after the exile—Biblical, Mishnaic, medieval, and so on—and imposed upon these a regular grammar and syntax. The latter systems sometimes depart from the earlier forms of the language, whilst the idiomatic character of Modern Hebrew is in some instances radically different, and scholars have proposed a Russian or Yiddish basis for this divergence. The linguist Suzanne Romaine describes the process with fairness: “Modern Hebrew did not evolve naturally over generations in a continuous chain of native speakers, but is the product of deliberate efforts undertaken by individuals and groups. Its revival can be considered a kind of language planning.”⁴⁵ Hagège estimates that Ben Yehuda created about 300 new words for Modern Hebrew, of which 90 or so have endured in living speech. An example is *zehut*, “identity”, from *zeh* “this”, modeled on Arabic *huwiyya*, “*idem*”, from *huwa*, “he”. Some of the terms created or promoted by Ben Yehuda replaced stilted expressions employed by the Maskilim, so *mis'adah* “restaurant” for *bet okhel*, *milon* “dictionary” for *sefer milim*, and *hayyal* “soldier” for *ish tsava*.⁴⁶ Modern Hebrew has also calqued expressions from other languages: Yiddish of course, but also Russian. An Israeli ladybug is *parat Moshe rabbenu*, “the cow of our teacher Moses”, probably an adaptation, as a direct rendering of the Russian for the tiny, pretty insect, *Божья коровка*, “God’s little cow”, might sound blasphemous to a devout Jew.⁴⁷ In the case of Esperanto, even more frequently, scholars detect a very strong Russian influence; that of Yiddish is less clearly definable.⁴⁸ Bankrolled by a generous father-in-

→ noted American writer Edmund White came to give a talk on his new novel *Hotel De Dream* (White 2007) at the Brattle Theater, Harvard Square, Cambridge, MA. The novel deals with the dying days of the American writer Stephen Crane, who has determined to write a last book, about a young male prostitute. What fascinates Crane about the boy, whom he has encountered by chance in the street, is not an interest in sexual deviance *per se* but the fact that the youth is unashamed of his homosexuality, which was a revolutionary attitude towards a serious social stigma. Joseph Conrad remonstrates with Crane, convincing him that publishing such a book will destroy his reputation. The Cantabrigian audience were sympathetic to this imagined, literary precursor to gay liberation. When I rose during the discussion after the lecture to suggest to White that he had written a parallel work to *Daniel Deronda*, the audience were visibly disturbed. But when he replied affirmatively that this indeed had been his aim, that he had in fact written the Introduction to the latest edition of Eliot’s novel, and that he viewed gay liberation and Zionism as much the same thing, a ripple of revulsion swept the hall. It has evidently become *de rigueur* in the orthodoxy of American political correctness to support every kind of human liberation except that of the Jews.

45- Suzanne Romaine, “Revitalized Languages as Invented Languages,” pp. 185-225, esp. p. 186, in Adams 2011.

46- Hagège 2009, p. 283.

47- Hagège 2009, p. 304. But as Zachary Baker points out, the term more likely came to Hebrew *via* Yiddish *משה רבנוס קיעלע Moshe rabbenus kiyele*, “the little cow of our teacher Moses”; another Yiddish term for “ladybug” is *משיחל meshikhl*, “little Messiah”!

48- On the definite and important input and influence of Russian in Esperanto see Колкер 1985; on the more tenuous linguistic connection of Hebrew and Yiddish to Esperanto see Gold 1980. It is true that Esperanto morphology is to some extent agglutinative and non-Indo-European; but aspects of it, in particular verbal prefixes, are likely to have been inspired by Russian—Zamenhof’s mother tongue.

law, Ben Yehuda moved his family to Ottoman-ruled “Palestine”, settled in Jerusalem, and he and his long-suffering spouse, like Mrs. Zamenhof a true *eshet hayyil* (“woman of valor”) if not an armed *hayyal*, raised their children as native Hebrew speakers.

Ottoman Turkish had been written in a complex Arabic orthography that impeded literacy: one of the notable acts of Mustafa Kemal Atatürk was to decree that Turkish be written in a modified form of the Latin alphabet. The Soviets instituted similar reforms for the same reason, changing the script of various minority languages from Arabic or Mongolian characters (but not Armenian or Georgian, for whose speakers their scripts were too much an element of national identity to part with⁴⁹) to Latin, then Cyrillic—and creating also Latin and Cyrillic writing systems for pre-literate languages. The orthography of Russian, Armenian, and Yiddish was changed and simplified also in the USSR, both to aid literacy and to sever the ties of the speakers of these languages to their older religious traditions. Modern Hebrew, of course, retains the Hebrew alphabet. Though many words are written with *scripta plena*, the semi-vocalic consonantal characters facilitating the reading of vowels (as indeed was common in the Second Temple period, as we know from the Qumran documents), most Modern Hebrew texts are unvocalized, except for poetry and books for children and learners of the language. Ben-Yehuda’s son Itamar Ben-Avi (1882-1943), not so much a harmless eccentric as a creature of his time,⁵⁰ thought that Modern Hebrew should be written in Latin characters, so as to spare people the labor of reading a script without vowels, and published in Jerusalem a short-lived newspaper, *ha Šavuja ha Palestini*, “The Palestinian Week” (with *j* representing the Hebrew ‘*ayin*). The headline for 29 Tevet 5689 (11 January 1929, or XII I. *Balfur* according to Ben-Avi’s reckoning that the Balfour Declaration of 1917, which somewhat vaguely affirmed British support for a Jewish “national home” in the land, marked Year One) ironically reads: *Sefatenu— Esperanto ha Yahadut ha Yolamit, Raq ha Otiyot ha Latiniyot te’afsherna*

49- Armenians traditionally believe that the inventor of their alphabet, St. Mesrop Mashtots’, created it partly through divine inspiration. The laudatory imagery in the hagiography of Mashtots’ by the fifth-century writer Koriun presents the saint, bearing his “tablets”, as it were, of the Armenian alphabet to king and people, as superior to Biblical prototypes such as Moses, who smashed his, and Daniel, who read writing on the wall that portended evil tidings, not good ones. On the steps one ascends to the Matenadaran, the palace-like institute of ancient manuscripts in Erevan, there is a huge statue of Mashtots’ with his alphabet engraved on a tablet, very like the Ten Commandments and intentionally so. See Russell 1994.

50- As Harshav 1990, p. 52 points out, the son of Ben Yehuda was not the only early Zionist to propose the Latinization of Hebrew. Vladimir Jabotinsky (1880-1940), the founder of Revisionist Zionism, advocated the same reform. It is of interest, when one recalls that the young Zamenhof had hoped someday to become a Russian poet, to note that Jabotinsky was a well-known Russian writer before he threw all of his energies into the Jewish national cause. The prominent writers Alexander Kuprin and Leonid Andreyev bemoaned the loss to Russian literature, as though it were a jilted bride. Zamenhof describes his early ambition from the receiving end, as though he were a spurned lover: “I greatly loved that language in which I was educated, that is, Russian. I studied it with the utmost pleasure. I dreamed of becoming someday a great Russian poet... In my childhood I loved the Russian language and all the Russian Empire with a passion; but I soon became convinced that my love was repaid with hatred, that people who saw in me only a disenfranchised alien— despite the fact that I, my grandparents, and my great-grandparents had been born and had worked in this land— styled themselves the sole masters of that language and country. They all hated, despised, and persecuted my brothers.” (Cited by Kiselman 2010, pp. 41-42; the translation from the original Esperanto is mine.)

Hhalom yafeh zeh, “Our language is the Esperanto of World Jewry, Only the Latin Letters will make possible this beautiful Dream.” This rather explicit association of Hebrew with Esperanto is interesting: Hebrew had a past as a natural language; Esperanto, as a recent invention, had never possessed any such natural status. Yet this seems to have been for Ben-Avi less important than the political ideals and corresponding socio-linguistic factors that made the two languages alike.

Modern Hebrew was mentioned in the context of Esperanto pejoratively, too. It was not only devout Jews who objected to the vulgarization and coarsening of the sacred tongue of Israel in its employment towards secular purposes: three years before Ben-Avi’s headline, in December 1926, the scholar of Kabbalah Prof. Gershom Scholem, a secular Jew from Germany who was to become one of the intellectual pillars of the new Hebrew University of Jerusalem, wrote to Franz Rosenzweig decrying the Modern Hebrew of the Zionists as a “faceless lingo” and “ghastly gibberish”. He continued, “Nobody with clear foresight would have mustered the demonic courage to try to utilize the language in a situation in which only an Esperanto could have been created.”⁵¹ The rather idiosyncratic work of Paul Wexler represents the extreme of the view that Modern Hebrew is entirely a *Plansprache*— a Slavic language with a Semitic lexicon. Interestingly, he mentions Esperanto several times in his argument: he proposes that it performs a partial shift from a Yiddish lexicon (!) to a “deformed Latin” while preserving Yiddish syntax and phonology, and is therefore to be considered Slavic. He cites approvingly Hillel Halkin’s remark that Modern Hebrew is “a kind of Semiticized Esperanto” and notes that Kutscher asked whether Modern Hebrew was still Hebrew indeed, or whether it might be best to consider it “entirely unnatural and artificial like Esperanto”.⁵²

Modern Hebrew is, to be sure, a revived language as well as a planned or artificial one. In either case its success is completely unparalleled: it is now the official language of the reborn Jewish state in the Land of Israel, with nearly nine million native speakers. Unlike Esperanto, it is the everyday language of every aspect of life. It is also the language of a people who can now defend themselves against an age-old hatred with armed force, rather than only arguments and appeals to man’s better nature. Because of where they were, thanks to the choice their father had made, the Ben Yehuda children were not murdered by the Nazis. Zamenhof’s were. In that sense, one must agree with Wexler: “The failure of Esperanto highlights the importance of territoriality and nationalism— two factors present in the Modern Hebrew experience.”⁵³ Hebrew is a living language, used for every purpose and field of human endeavor, both private and public: Esperanto is not. The enterprise of Zionism gave Hebrew-speaking Jews the refuge of a state and the protection of an army, which Esperanto could never even aspire to do.

51- Mendes-Flohr 1993, p. 232.

52- Wexler 1990, pp. 11-12, 121 n. 52; Kutscher 1982, p. 296.

53- Wexler 1990, p. 123. It is an insightful, if not original, observation: after the fall of the last Moorish emirate in Spain, Granada, A. de Nebrija wrote in his *Castilian Grammar*, “always, language accompanies power”.

In the jargon of present-day anti-Semitism “Israel” and “Zionism” have largely replaced “Jew”; and some anti-Zionist Jews have accordingly rejected Hebrew, embracing in opposition to it an ostensibly progressive and cosmopolitan Yiddish that, so they claim, is unsullied by nationalism. The animus against Hebrew is not new; it just took other forms in the past. The European fascination with the language of Scripture was more than balanced by gentile enmity towards the nation of Israel; so for anti-Semites Hebrew was a language of witches, and the sigils of grimoires are replete with crudely drawn Hebrew *nomina sacra*. Medieval Christians also maintained the superstitious fear that among the hordes of Gog and Magog that were to fall upon Christendom during the Apocalypse there would be ruddy-featured Jews, *Rotjuden*,⁵⁴ descendants of the Ten Lost Tribes, led by the Queen of the Amazons⁵⁵ and lusting for vengeance against the nations that had been mistreating their coreligionists over the long centuries. According to this eschatological fantasy, present-day Jews learned Hebrew, not only to read their books and chant their prayers, but also so that when the time came the invading *Rotjuden*, who had never given up their native tongue, would recognize it among the people of conquered realms and would spare their own. Hebrew was to be the smeared blood on the doorpost, warding off the Angel of Death, as it were, in this recapitulation of the Tenth Plague— with the Ten Tribes the strong hand and the mighty arm of the Almighty. There are various interesting facets of this story: for instance, the fearful expectation of vengeance betrays a guilty conscience. People knew it was wrong for them to persecute the Jews. Another is the seemingly incurable male fear of powerful women. And yet another is redness: the Book of Samuel describes King David as ruddy, but we do not know whether the *Rotjuden* were supposed to have his beautiful eyes, too. One rather thinks that they did not. Red hair has often been regarded as the sign of an oversexed and duplicitous character.⁵⁶ But the most interesting aspect of the complex legend for our present purpose is the suggestion that Hebrew somewhere remained a living language, by which one means the common everyday parlance of a population in all functions of existence— home, street, field, market, workshop, and, in varying degrees, government as well. In the real-life Diaspora, Hebrew was used frequently in writing and sometimes in speech, and it did develop, but it was not living in the fullest sense. The belief that the Ten Lost Tribes still lived somewhere and spoke Hebrew apparently existed among Jews as well: it would explain the great excitement that attended the appearance of the mysterious Eldad the Danite, emissary of a Jewish king of the south, who used an unfamiliar kind of Hebrew (it now appears it was laced with words from Yemenite Arabic;⁵⁷ and there had indeed been a Jewish kingdom in South Arabia, that of Ḥimyar— pilgrims from there to the Land of Israel had their own

57- For instance, he called Heb. *yōnāh*, “dove”, *tīntarā*: see Schloessinger 1908, p. 44. The romance of this lone traveler from the remote clime of free Jews inspired the *nom de guerre* of Israel Eldad, after whom the town of Kfar Eldad is named in modern Israel.

crypt in the necropolis of Bet She‘arim, where they left South Arabian inscriptions), and the mission of David Reubeni some centuries later.⁵⁸ Some Christians believed Hebrew was still a spoken language, and they feared the idea; some Jews believed it was, and the idea filled them with hope and joy.

The roots of Esperanto: di-, tri-, and polyglossia.

Although *la aŭtoro de Esperanto* and some of his disciples nurtured deep down the eschatological hope that Esperanto might one day be the sole language of a united and harmonious human race—the menacing tower of Babel transformed into a luminous Pharos (an artistic vision of precisely this image was to be employed on a medal of the State of Israel honoring Zamenhof, to be considered presently)—it was not created so much to supplant existing languages as to be an auxiliary language, one that might serve well purposes for which a given local language was not equipped. To Americans, Australians, even Canadians (despite the official status of French, it is used mainly in Quebec, outside of which it is often useless) accustomed to using English for all purposes, and expecting foreigners to accommodate them, the idea of an auxiliary language is perhaps hard to grasp. It is easier for a Finn or a Hungarian, who does not expect that anyone elsewhere, except for expatriates, will understand his language: he will automatically have recourse to an auxiliary language such as English, and is often likely to have a vocabulary suited only to the limited purposes of the business he must conduct in it. And for a Russian Jew of the Pale the idea of an auxiliary language to be used for some purposes but not others was natural, since he spoke multiple languages, each with a particular sphere of use, and a defined social status as well.

For everyday purposes in the home, most Russian Jews spoke Yiddish. This is a Middle High German dialect with an additional Romance substratum of late Latin and Old French that its earliest speakers inherited from their forebears in northern Italy and Gaul. It is suffused with the Hebrew and Aramaic of Jewish ritual, learning, and lore. As Yiddish came to be spoken to the east of its cradle in the Rhineland, it acquired loans from various Slavic languages as well as Hungarian and other tongues. Its very status invited one to question the bounds of the definition of a language: in Zamenhof’s time and for long thereafter it was called, deprecatingly, a kind of low slang (the Russian loan *жаргон* is

58- See the exhaustive surveys of the state of research in Robin 2015. Bowersock 2013 provides a lucid and learned overview of the larger subject, placing the Jewish Himyaritic kingdom, which lasted from about 380 to 525, and the other states and peoples of Ethiopia, Yemen, and contiguous regions, in the context of Byzantine-Sasanian politics and the globally important rise of Islam. He perhaps tends slightly to exaggerate negatively the massacre of Christians in Najran; but even so his work is immeasurably superior to Phillips 1955, whose book on South Arabian archaeology does not say a single word about the Jewish kingdom of Himyar—presumably out of deference to the Saudi hosts of the excavations, and perhaps with some authorial bias as well. The story of David Reubeni and his devoted follower Solomon Molkho still excites the Jewish imagination: see the novel by Simonhoff 1964. Indeed the legendary name of king Joseph of Chaibar might be the historical Joseph of Himyar, by scribal error (in Arabic transmission, where medial letters can easily be distorted) or by the common phonological confusion of b and m, and by additional contamination with the name of the Jewish tribe of Khaybar that figures in Qur’anic and later accounts of the struggles of the prophet Muhammad.

used for this); more affectionately, *mameloshn*, “mother tongue”. It is an astonishingly rich, versatile, expressive language, and although in the Pale of Settlement it had a defined place, it also was a language resisting imprisonment in a particular socio-linguistic niche, having shifting boundaries and functions. It could serve as an international tongue, a common speech for Jews from different countries meeting each other, corresponding, or reading a newspaper.⁵⁹ It was (and for many Orthodox Jews still is) an auxiliary language of religious scholarship, used for both discussion of and writing about sacred texts in the Scriptural languages, Hebrew and Aramaic. Many of the discourses Lubavitcher Hasidim print and study now were composed in an “elevated” Yiddish rich in Hebrew and Aramaic. The plethora of loans from both ancient languages in Yiddish helped as a kind of an interlocking mechanism, indeed, for such auxiliary use, additionally and crucially endowing Yiddish with a nobility and dignity.⁶⁰ Despite this dignity, Yiddish was intrinsically an open language of flux and development, resisting a fixed morpho-grammatical system. Zamenhof famously wracked his brains working on such a canonical grammar for Yiddish, but finally abandoned the project.⁶¹ But Yiddish probably inspired him to create a language that would not supplant a natural language, but exercise rather

59- When I was a boy I heard the joke about the congress of Esperantists at which delegate after delegate, from every country on earth, gets up and delivers a polished, eloquent speech in *la internacia lingvo*. During the coffee break they all gather in the vestibule and talk in Yiddish. The joke is about both the pretensions of Esperanto and the idealism of the Jews, who when we discuss world peace, love, and understanding usually end up just arguing with one another. *Imru la-Shem*, “Profess ye unto the Lord,” as the Yiddish expression goes... and talk to the wall! From an inner-Esperanto perspective, the joke describes also the tendency of some Esperantists *krokodili*, i.e., to speak one’s native tongue in a setting where it would be appropriate to speak Esperanto.

60- R. Mendel Zirkind of Chabad of the Central Valley, Fresno, California, a native speaker of Yiddish, in a conversation in January 2019 maintained that Yiddish when properly spoken is polite, and therefore although not precisely a holy tongue is still less profane than English— his second language and of course the dominant one in the outer world. For a language to be fully natural and normal it has to be able to express everything that everyday life involves, and this includes swear words and profanity. Yiddish has these of course but the pious communities who are now the last speakers tend to avoid them. In the case of Esperanto, which its creator saw fit not to endow with obscenities, a brilliant Hungarian poet, Kálmán Kalocsay (1891-1976), writing under the *nom de plume* Peter Peneter, composed in his erotic cycle *Sekretaj sonetoj* (1932) a poem describing the sexual act and consisting entirely of words and expressions meaning “to fuck”. One is reminded of the Zionist definition of normality: a Jewish cop arresting a Jewish hooker.

61- In his *Hilelismo*, 1901, Zamenhof wrote, “The reader should not think we belong to the enemies of jargon [i.e., Yiddish— JRR]. On the contrary: while our intelligentsia almost without exception— not excepting even the writers in jargon— relate to jargon with the greatest disrespect and consider it something barbarous, we always related and relate even now to it with love and we see in this so-called jargon a language like all others. 20-25 years ago we worked arduously and passionately for a long time on this language, and were then convinced that it had not only a richness of forms but also the most systematic and rigorous grammar, in many respects original and remarkable. We systematically worked on this grammar and were already prepared to publish it, dreaming of founding a pure and civilized neo-Jewish literature in place of the present error-ridden and feeble one. But subsequently we came to the conclusion that this would be a matter without any aim and future, that, being itself purely a local and provisional dialect, jargon has no relation of any kind to Jewishness and that by its cultivation we would not be contributing to Jewishness any kind of favor.” This was written originally in Russian; I have translated from the Esperanto rendering of Kiselman 2010, p. 42.

an auxiliary function: as Harshav observed, "... Yiddish was merely part— albeit an indispensable part— of an interconnected cultural polysystem, and fulfilled only some of the functions of a 'normal' language."⁶² In the same context, significantly, Harshav further noted that "internationalisms"— that is, words from French, Latin, and Greek accepted into the standard lexicon of most modern languages, such as Russian, Polish, German, and English— made their way into Yiddish from these languages. Thus both the idea of a language with a limited, auxiliary social function, and the idea of forming a lexicon based upon already-known "internationalisms", could easily have come to Zamenhof (and, indeed, to Ben Yehuda as well) precisely from the language that was already in its way an auxiliary speech for Jews from different European states with different official languages— Yiddish.

Natural diglossia is a phenomenon remote from the consciousness of the native speakers of imperial languages such as American English or the Russian of the empire and subsequent Soviet Union: they were confident that one language alone sufficed for all purposes and there was no need to learn another. An old joke from the days of the British Raj sums up the attitude: if an Indian native pretends not to understand English, rephrase your comment in the form of an order. If he persists in his obstinacy, repeat the command loudly! But diglossia exists in societies that from the formal designation of their official and spoken language one might think to be monolingual. Arabic speakers are diglossic: there is a standard form of the language that is written and used for official purposes, and it is employed alongside regional dialects of Arabic that are only spoken and are often mutually unintelligible. To take a simple example, in "higher" Arabic the verb "to see" is *ra'ā*, the same as the standard Hebrew word; in "lower", the unrelated *shāf*. "Bread" in Egyptian Arabic is *'aish*; in Palestinian, *khubz*. (But in Hebrew the word for a large, flat bread into which falafels are rolled, as opposed to the smaller, cheaper pocket pita, comes from Jerusalemite Arabic: *ashtanura*, literally, "bread from the earth oven". So even this simple example has its complications.)

Hebrew and Aramaic were the sacred tongues, grammatically defined, until recently with a closed sacred canon. Actually by Zamenhof's time this canon was not entirely closed, since before Ben Yehuda's work there existed the thriving and abundant Hebrew literature of the *Haskalah*, the Jewish Enlightenment. But here there is a problem: since Hebrew had not been repurposed to meet the demands of a spoken, secular language, its style and content were still reliant upon the fixed written canon. Thus the literature of the *Haskalah* was embellished by a preponderance of quotations, or, depending on one's point of view weighted down with them.⁶³ This style was called *melitzah*, "embellishment"— a kind of mosaic (I mean the little stones of different colors put together to make a picture, not the polite way of referring to Jews *via* the name of our Teacher Moses) of phrases lifted whole out of context and juxtaposed with yet others to say something new, maybe

62- Harshav 1986, pp. 10-11.

63- See Reshef 2011, p. 547.

wholly unintended by the original author, human or Divine, of the Hebrew quotation.⁶⁴ This preponderance of the quotational style raises the question of whether Hebrew and its literature before Ben Yehuda had a *langue* in the sense of the term as Saussure used it, other than that of the Bible. Glinert has suggested an analogy with the formal standard Arabic of the media, official functions and correspondence and even most literature, *fushḥā*, which is not Qur'anic but is distinct from the often mutually unintelligible varieties of spoken Arabic.⁶⁵ Yet just as the practitioners of the *melitzah* style larded their writings with Biblical and Mishnaic Hebrew (and Aramaic) phrases and sentences, it has been estimated that up to one fifth of the proverbs employed in the active vocabulary of Arab villagers is in the “higher” *fushḥā*.⁶⁶ As to whether there was a pre-Ben Yehuda Hebrew *parole*, Morag and others have cited the use of Hebrew by Yemenite Jews as a spoken idiom, albeit in connection with sacred subjects and in the synagogue, a kind of ethical *melitzah* in living practice: this example of the use of the language had a great impact upon Ashkenazic Jews of the *Yishuv* considering the viability of a revived Hebrew as a national language.⁶⁷ The Yemenite case of a limited spoken Hebrew offered another powerful attraction: it came from the romanticized, sunlit Middle Eastern ancestral home region, not the hard, dark Eastern European Diaspora. Modern Hebrew was to adopt, accordingly, “Sephardic” rather than Ashkenazic pronunciation, even though the latter has some archaisms that the former has lost.

Diglossia is not necessarily a marker of language in flux: it can be a stable situation for a millennium.⁶⁸ One anchor of that stability could be the fixed character of the “higher” language: in the case of Arabic, the *Qur'an* and its language are regarded by Muslims—the majority of Arabic-speakers, though there are Christian Arabs and there is a Judeo-Arabic—as outside space and time. The Hebrew and Aramaic canon imposes a like stability on Hebrew: for Ben Yehuda, then, the challenge was not to ennoble the language he was resurrecting for daily use—it was already sacred—but to render it more adaptive, flexible, and versatile. Zamenhof faced the opposite challenge: although Esperanto assumed from the beginning, through its lexicon and much of its morphology, the mantle of a high language, Latin,⁶⁹ it had no sacred scripture behind it, no historical anchor. This had to be invented, and Zamenhof thus assembled a book of Esperanto proverbs (cf. the stable

64- See Pelli 1993. Skibell parodies this style, hilariously, in *A Curable Romantic*: see *infra*.

68- Ferguson 1959, p. 332.

69- The importance of Latin cannot be overemphasized. To the Poles, whose West Slavic language has a great many Latin loan-words, Latin was a marker, not only of their Catholic faith, but of their tenuous claim to membership in the mainstream civilization of Western Europe despite their subjugation to the Russian Empire. Till recent days, at least one Polish scholarly journal of classical studies was published in Latin so as to be accessible to an international audience. Zamenhof would also have appreciated from the terminology of his profession, medicine, the importance of Latin as a world language— a recent book on Latin (Leonhardt 2013) calls it exactly that.

presence in spoken Arabic of proverbs in the literary, Qur'anic language, noted above) and, most importantly, compiled his *Fundamenta Krestomatio*, a collection of translations from classics of European literature, to serve as a model of literary style and usage. The book was first published at Warsaw in 1903; my copy is a 1969 *foto-represo* from Britain of the *17a eldono* of 1954. Most of the *fabeloj kaj legendoj*, *anekdotoj*, *rakontoj*, and *poezio* that comprise the volume have, with the exception of Lermontov, Puŝkin, Heine, and a few others, aged badly and are the work of contemporary forgotten and forgettable Russian and Eastern European writers and poets. It is unlikely the chrestomathy, for all its limpid style (though there are already archaisms in it), would excite an aspiring young Esperantist writer now.

Zamenhof translated also parts of the Hebrew Bible into Esperanto; and later writers have translated the Christian Gospels, so there is now a full Esperanto Bible, for anyone wishing to adorn their *verkoj* with *melica*. Yet despite the inadequacy of Zamenhof's book, the language itself was so well-made and pleasant that, with the exception of Ido, no fragmentation of the language occurred. Thus the inventor of Esperanto equipped it with both a solid, logical armature and a lucid, familiar lexicon that fit well into the polyglossic mind of a late-19th-century European and particularly an Eastern European Jew. The Hebrew of the Haskalah served another kind of polyglossic function, one without a spoken and idiomatic component: this is what Ben Yehuda sought to change. His project required a territory, on which Modern Hebrew was to occupy the sociolinguistic niche of a state language, the Jews moving from di-, tri-, and polyglossia to the monoglossia of a Frenchman, Englishman, or Russian. Zamenhof had no such need or ambition, but his invention lacked a crucial component: an antiquity, and with that a mythology, a spiritual aspect.

The spirituality of an invented language.

Hebrew possesses the advantage that it has been a language steeped in spirituality since the memory of man runneth not to the contrary: the task of the Haskalah and later of Ben Yehuda was, if anything, to secularize it. But it may equally be argued that the very sanctity of Hebrew endowed it with the charisma and the special place in the heart that made it the best candidate for the Zionist project. Esperanto was conceived from the first as an auxiliary language in the secular realm, but if that were all there was to it, it is hard to see how it could have ignited a warm enthusiasm in the human heart, that impetus to offer oneself to an ideal without which such a project might easily founder—it might well have become no more than a sort of glorified Morse code.⁷⁰ has two sacralizing features

70- Not to belittle Morse code: Prof. David Wunsch, a professor of mathematics at the University of Massachusetts at Lowell and a versatile historian of radio and other technologies who offered many lively guest lectures over the years to my Harvard classes (he is also an enthusiast of diasporist Yiddish, which made for lively political discussions), made me appreciate how the telegraph transformed the society and economy of the world in the nineteenth century, how it was truly the Internet of that era. Zamenhof might well have seen Esperanto as a technological phenomenon and contribution to progress precisely in the context of the steam engine, the railroad, and, indeed, Morse code.

we have already observed that helped it to gain adherents. First, its core vocabulary was based on the lexicon of the sacred language of European civilization, Latin. And it was the genius of Zamenhof that he selected mainly those Latin roots that are common also to non-Romance languages, principally of the Germanic and Slavic families. Second, Zamenhof endowed Esperanto with *la interna ideo*, and this activating principle became inseparable from the study and use of the language itself: the language has a soul. But we may note a third, striking aspect that it is safe to say Zamenhof could not possibly have foreseen: its adoption and sacralization by people associated with the Spiritualist movement in Brazil— a vast country where Esperanto has flourished. Most Europeans and North Americans do not think of Brazil in the course of a day, or pay much attention to the few news reports that emanate from it. Few learn its pleasantly euphonious language, Portuguese, the sound of which I once heard likened to a large number of brightly-plumed parrots speaking Russian. But it has given us the happy, vivid, strange gift of a prophetic vision of Esperanto in the astral world: the narrative of Atanagildo and Ramatis.

Spiritualism: the belief in a variety of occult ideas such as reincarnation, the existence of invisible levels of existence including an astral plane, and the possibility of communicating with supernatural beings and spirits of the dead— is very popular in Latin America, particularly in the Cuban Santería and Brazilian Candomblé. These are closely related Afro-Hispanic syncretic religions in which divinities (*orishas*) of West Africa, particularly of the Congo and the Yoruba region of Nigeria, are fused with saints (*santos*) of the Catholic church. Possession by the particular god of the pantheon to whom the worshipper is chiefly devoted, and into whose rites he has been initiated, is probably the most important experience of a *santero*; and this shamanistic practice serves as the crucial point of contact with spiritualism, in which mediumistic practice and experience, which are akin to the experience of possession, are likewise central. A Brazilian writer and medium, Hercílio Maes, channels the revelations of a spirit named Ramatis, a name explained as those of the loving, tragically parted divine couple of ancient Indian epic, Rama and Sita, spelled forward and backward so as to achieve union at the middle (a resolution of the binary pair into *Echad*, One, again, that Aron Leyeles might have enjoyed). Ramatis, who lived through many reincarnations, one of them in tenth-century Indochina, works to unite the philosophical schools of East and West. (Perhaps the 17th-century Mughal prince Dara Shikoh, who penned *Majmu‘ al-bahrain*, “The meeting of the two seas”, i.e., of East and West, and Goethe, with his *West-östliche Divan*, were his disciples at one time.) In *La Misio de Esperanto*, a section of *La Pretervivado de la Spirito*, Ramatis teaches (I translate from the Esperanto), “To believe or not to believe? This is the dilemma of the modern, pragmatic human being. But every true Esperantist feels intuitively that Esperanto has roots not only in the material world, that its spread does not follow rational logic, that the persecutions and schisms did not succeed in killing it. Could it be perhaps because of some sort of supernatural intervention?”⁷¹ It could be a believing Jew talking

71- Ramatis 2000, p. 9.

about the holy language and the survival of Israel.

The medium goes on to relate that there are institutions in the otherworld dedicated to the study of Esperanto and to the mission of its diffusion in the physical plane. The Esperanto Academy is in the part of the astral plane called the Great Heart. The Academy operates *antaŭvidante ĉiujn estontajn rezultojnde la natura progreso de la lingvo*, “foreseeing all future results of the natural progress of the language”. Zamenhof studied there before his incarnation in Poland, having assembled material for his language from Hebrews and Greek savants in previous lives.⁷² Esperanto is thus not merely a sacred language protected by Providence but one with a venerable, fabulous past in which the sages of East and West met in unity. The Academy itself is described in detail, as an edifice in the style of Periclean Athens appearing from above as a star with seven radiating, gently rounded fingers—wings of the building with alabastrine walls and high windows. The central tower rises some 200 feet and is tiled with a luminous astral material that emits sometimes an azure-lily light. The building stands in a setting of green grass, exotic blooms, and forest glades that glow like the rosy dawn. Much space is given to the description of the luxuriant flowers; but the medium returns to the business of the Academy: there are departments of history, phonetics, word formation, psychophysics, classics, interchange and diffusion, observation and protection. Instruction is offered in various languages including Sanskrit and Greek but also the tongues of Lemuria and Atlantis; and here Zamenhof was inspired to base his language upon Latin roots. I do not know the precise nature of some of the interesting disciplines of this curriculum; and wish Zamenhof had included some lexical items from Atlantean in Esperanto. Prof. Esther Schor heard of Ramatis when living in a Brazilian Esperanto-speaking village, and it is quite easy to find the complete revelation on line in either Esperanto translation or Maes’ original Portuguese. Although there is no indication that this richly imaginative mythography has caught on amongst the sober Esperantists of the “first world”, it is somehow poignant that thousands of miles from Poland, on a fabulous continent so removed from the mainstream of the history of the Jews, Zamenhof has become an avatar, the bringer of a sacred tongue under the protection of the hosts of heaven. And the Academy hovering in the ether over Brazil, its domes glinting, its gardens diffusing their heady perfume, seems a tropical Esperantist’s dream of the Temple of Jerusalem, or its heavenly counterpart, complete with its own *yeshivah shel Ma’alah*, its Heavenly Academy.

The striking case of Ramatis demonstrates that the association of an international or planned language with the matters of the spirit can act as the fulfillment of an emotional need to secure that tongue a dignified place in the structure of the cosmos. It need not be arbitrary or a mere self-conscious strategy to capture interest and commitment. A linguistic project must have a social component, and religious feeling can be and often is paramount. Language and spirituality are indissolubly connected in the speculation over centuries on the *Sefer Yetzirah* that we have shown to possess continued vitality in, for instance,

72- Ramatis 2000, p. 10.

the modern Yiddish poem “Symmetry”. One can go farther, thematically and spatially: since the launch of the Soviet satellite Sputnik in 1957 and the first manned mission into space four years later of the cosmonaut Yuri Gagarin, the perennial human questions about meaning, identity, and communication have made the crossing from the hitherto exclusive domain of religion to science and science-fiction, have come to embrace the altered, modern experience of the cosmos. Invented languages pervade science fiction, in literature and film. The ostensibly non-human Klingon language, already mentioned, emerged from the American television and movie science-fiction series *Star Trek*, but its concerns are narrowly military and aggressive. Of much greater profundity is the science-fiction novel *Solaris* by Stanislaw Lem, a writer in Socialist Poland, made into a film in 1971 by the Soviet director Andrei Tarkovsky. There, a planet consisting of a mind-ocean communicates with human beings by addressing our conscience and emotions through plasmatic embodiments of people we have loved and lost, in a pan-chronic or a-chronic manner that revives memory, enhances present experience, and enables precognition. Much of the film takes place in long reveries: remembered childhood scenes, water burbling over the nodding and dancing of underwater plants, the animation of wintry landscapes in Netherlandish paintings, the music of Johann Sebastian Bach.⁷³ The language of *Solaris* is a closing of the circle of time, of deep loss restored, of love renewed between man and wife, parent and child. It is a very *interna ideo* indeed, and very religious.

Several years ago an American science-fiction writer, Ted Chiang, published a novella, “The Story of Your Life”, which was soon after made into a movie, *Arrival*.⁷⁴ In the film, aliens arrive on earth in vast disc-shaped ships with dark, rough surfaces that remind one more of the naturally-shaped river stones East Asian scholars use for meditation, or of Indian *svayambhuti lingams*, than of the shiny, metallic flying saucers of popular culture and UFO sightings. They are depicted as large but graceful creatures, moving through the mist of their inner atmosphere a bit like both elephants and octopi, and their audible speech resembles the song of humpbacked whales. The authorities draft a university linguist who has recently lost her daughter to a rare disease (and has lost her husband, too, in the wake of the bereavement) to attempt communication with them. This is accomplished by means of writing: the aliens project, rather like squid expelling ink, blot-like, roughly contoured circles of different kinds. These characters, which are not the same as the spoken language, have a roughly circular shape because they express an understanding of non-linear time, of a vision of life that is not determined not by its quantitative temporal beginning or end but is defined qualitatively by its meaning and has no beginning or end. The circle or

73- When I was a student in London in the late 1970s, my classmate Alan Williams (now Professor of Persian at the University of Manchester) and I used to go to midnight showings of *Solaris* at Notting Hill Gate cinema and then talk about it over tea till dawn—like the Rabbis in the Passover Haggadah who forgot the time in their discussion of the Exodus and had to be reminded by their pupils that it was time for the morning *Shema*! These were among the points of spiritual intensity of one’s life on earth; and they were a facet also of one’s appreciation of the immense sanctity and truth-telling power of another language, the великий и могучий Russian language.

74- Chiang 2002 [2016], pp. 91-145. The film is to Esperanto what “The Matrix” was to Gnosticism.

sphere best expresses geometrically and symbolically that view: one recalls the Indian *mandala* or Kabbalistic *sefirah*. But what comes closest perhaps is the Japanese Zen Buddhist painting of *ensō*, a circle swiftly and unevenly drawn with a brush. Such a circle painting is meant to express the inexpressible, to illustrate Buddhist insight into *śūnyatā* (“voidness”), and is sometimes accompanied by the brief saying, “No birth, no death.”⁷⁵

The aliens’ gift to mankind is not their technology, but their language: the linguist who worked with the aliens publishes at the end of the film a book, *The Universal Language*, which army generals and heads of state read. It brings about mutual human understanding and world peace, and the linguist reflects that this is but the beginning of the story. *La Unua Libro* indeed, writ very large. The novella by Ted Chiang offers no such celebratory, quasi-religious happy ending of a successful intergalactic Esperanto, but it is interesting in other ways. The alien heptapods have eyes on all sides of their bodies, so anywhere is “forward”. Accordingly their semasiographic written language is shaped, not in unidirectional sentences but in giant conglomerative “nests” of symbols connected by a single stroke that express a thought as a whole without beginning or end. Interestingly, another of Chiang’s stories, “Seventy-two Letters”,⁷⁶ mentions *Sefer Yetzirah*, *golems*, and *ba’alei Shem* (“Masters of the Name [of God]”), the wonder workers and exorcists of Ashkenazi Jewry from whose ranks emerged R. Israel b. Eliezer, the Ba’al Shem Tov or Besht—the founder of modern Hasidism): in the fictional world of the author tables of letters of the Hebrew alphabet are used to animate robots and homunculi, and this becomes the basis for a technological revolution—a retrospective meditation, perhaps, on an early adumbration of genetic codes and computer language. The Harshav’s lavish edition of the poems by A. Leyeles discussed earlier features prints of the Hebrew alphabet by Ben Shahn (from his “Alphabet of Creation”, the illustrated retelling of a legend from the *Zohar*) and Louis Lozowick in which the letters are grouped into a cluster or conglomerative array, an arrangement Chiang’s extraterrestrial heptapods might appreciate. The threads that connect different aspects of thought here, as one considers speculation on language and form from early Rabbinic Judaism to modern science fiction, form a pattern themselves. They seem to shape, to exist in, a single noosphere—or better, perhaps, a web, as the word for a tractate, *massekhet*, of the Oral Torah, actually means, and what is Gemara, the intellectual foundation of Judaism, if not a primordial world-wide *web*, a hypertext?

The astral plane, mediums, visits by aliens who understand the coming together of past and future through a kind of non-linear script—the cluster of ideas here points towards art. And there was a prolific, visionary artist, a medium who practiced spiritualism. She was a near contemporary of Zamenhof and lived not that far away from him, in Sweden. They never met, but the work of Hilma af Klint (1862-1944) illustrates, literally, some of the themes we have discussed. She claimed to have received transmissions from a number of spirits, the five High Masters, who are named—one has the angelic-sounding name

75- Shimano and Tani 1992, pp. 16-17.

76- Chiang 2002 [2016], pp. 147-203.

Amaliel, with its good Hebrew theophoric suffix. In 1906 she began her Temple series, painting 193 canvases over nine years. The Temple was to be round, a spiraling tower: one recalls the form of the tower of Babel, and her vision indeed has an uncanny resonance with that Tower as it was to be depicted on the medal struck by the State of Israel in 2007 to honor Zamenhof, to be discussed at the end of this essay.⁷⁷ The Star of David was an important symbol for her: she interpreted it as the ascent and descent of the spirit. Af Klint believed she was painting for the future, much as Zamenhof and Ben Yehuda looked into a hoped-for, almost mythical time. She banned any showing of her paintings therefore for twenty years. Like Zamenhof, she loved the color green: it represented to her the union of yellow, which in her synaesthetic consciousness she believed to be male, and blue, which was female. Hilma af Klint after the completion of the Temple series ceased to operate as a medium, preferring to heed an “inner voice”.⁷⁸ Had af Klint and Zamenhof met, perhaps Esperanto might have acquired an iconography, an art form.

A language for the future, an art for the future. Long before, in the ruins of the Paris Commune, in 1871, the gay teenager Arthur Rimbaud declared he was writing for the future. In the 1890s, the French Nabi school (the name was taken from Hebrew נביא *navi*, “prophet”) began to employ crosses, triangles, squares, circles, and esoteric elements of sign language in their art, finally deciding upon pure geometric constructions. They seemed to be groping towards an international, maybe even cosmically universal written language, a *Plansprache* both invented and primordial. They pored over spiritualist writings, and believed in a primal universal religion.⁷⁹ Their group’s name suggests they believed themselves to foresee things to come. These artists and artistic movements have a connection to certain Jewish symbols, to be sure; but it is perhaps potentially more interesting to observe rather the context of prophetic idealism, concepts of unity and of universal communication, and of the very nature of language in creative thought outside the ghetto, and to regard Zamenhof both as a Jew with specific concerns and as a not-so-atypical visionary of one time and place: Europe, at the very end of the age of progress and enlightenment, before the descent into the darkness of fascism and genocide.

***Hatikvish*— a language for Shprintzeleh.**

*Sub la sankta signo de espero
Kolektiĝas pacaj batalantoj,
Kaj rapide kreskos la afero*

77- Such a tower seems to be demonstrable part of the *Zeitgeist* of artists and visionaries gripped by a yearning for the future. For the Russian reader, hearing in his mind *Время, вперед!* The vision, too, is conjured up of Vladimir Tatlin’s monument of 1920 to the Third International. It is a spiraling construction with a shaft at the center: time resolved from both circle and arrow into a steel scaffold, a machine of progress towards peace, love, and understanding: Communism, Esperanto, the Messiah. See Lynton 2009.

78- See Bashkoff 2018.

79- Tuchman 1986, pp. 63-64.

Per laboro de la esperantoj.

“Under the sacred sign of hope
Gather the peaceful warriors,
And rapidly the cause will grow
By the labor of the hopeful.”

(L.L. Zamenhof, “La Espero”, the hymn of the Esperanto movement; third stanza)

“And He said to me, Son of man, these bones are all the house of Israel, and they say, our bones have dried up, and our hope is lost (*ve-avdah tiqvatenu*), we are clean cut off.” (Ezekiel 37:14)

“Hope (*qavveh*) in the Lord; let your heart be strong and courageous— and hope in the Lord.” (Psalm 27:14)

‘Od lo avdah tiqvatenu. “Our hope is not yet lost.” (Naftali Herz Imber, “Hatikvah”,⁸⁰ 1878; adopted by the First Zionist Congress, 1897; national anthem of the State of Israel)

The Apostle Paul praised the Divine virtues of faith, hope, and charity, noting that faith ends with knowledge; and hope, with fulfillment— but charity, the ultimate Christian virtue, is eternal.⁸¹ Hope is more a Jewish value, perhaps, than a Christian one, for even though it is not lost, neither has it yet been fulfilled. In Spain after the expulsion of the Sephardim and during the relentless persecution of the “New” Christians, “Old” Christians who could boast of *limpieza de sangre*, “purity of blood”, mocked the *esperanza* of the Marranos. Hope indeed became a kind of derisory code word for them, and in Cervantes’ *Don Quixote*, a novel replete with overt and veiled references to the authentically multicultural life that thrived before 1492, the Marrano-like *esperanza* of Sancho Panza for *la prometida insula*, the Promised Island (cf. the Promised Land, i.e., Israel), is at last fulfilled.⁸² It is no coincidence, one thinks, that the Zionist and Esperantist movements,

80- In spoken Hebrew, the name of the song is pronounced with the original Ashkenazic stress on the penultima, so *Hatqvah*; while *ha-tiqvâh* means “the hope” as a common noun. See Hagège 2009, p. 303. But the common noun, too, with its stress on the ultima, can have the charged meaning of the title of the anthem. This is clearly the case in Naomi Shemer’s song of 1980 על כל אלה *‘Al kol eileh* (“(Watch) over all these”), with its multiple citations of Jewish prayer: *אֵל נָא תַעֲקֹר נְטוּעַ אֵל תִּשְׁכַּח אֶת הַתְּקוּוּהָ הַשִּׁיבֵנִי וְאַשׁוּבָה* *Al na ta’aqôr natû’a, al tishkâh et ha-tiqvâh*: *Hashivêni ve-ashivah el ha-ârets ha-tovâh* “Please do not uproot that which has been planted; forget not the hope: Return me and I shall return to the good land.” (I have supplied the Modern Hebrew stresses.)

81- As to Christian charity, the Jews of Europe might echo the sentiment of Mohandas Gandhi when he was asked what he thought of Western civilization. The Mahatma replied, “It would be a good idea.”

82- Yovel 2009, pp. 84, 233, 279, 282.

with their two “Jewish” *Plansprachen*, both uphold hope as their standard and watchword.

The hymn of the Esperanto movement became and remains a poem Zamenhof composed, *La Espero*, “The Hope”, echoing the sentiments of *la kreinto kaj aŭtoro*. It is often sung ceremonially at congresses and other gatherings. Zamenhof’s rallying cry to his *samideanoj* was *Ni laboru kaj esperu!* “Let us labor and hope!”⁸³ Some estimates optimistically place the number of people familiar to some degree with the language we now call Esperanto at nearly two million, and it is now among the languages taught on the popular website Duolingo. But there are only perhaps some ten thousand fully fluent speakers. There are also a small number of native speakers of Esperanto (*Esp. denaskoj*, “from-birth(er)s”)— people who learned it from parents who used both it and a native natural language, such as Finnish, at home. And there is at present to this writer’s knowledge one second-generation native speaker of Esperanto. To a degree, Esperanto has become a natural, rather than an auxiliary, language with the idioms of everyday life. Perhaps the best known of these is the verb *krokodili*, meaning to speak one’s native tongue in a setting where it would be appropriate to speak Esperanto— as in the Yiddish joke cited above.⁸⁴ But what is it Esperantists are now hoping for?

The Zionists employed *tiqvah*, at least at first, in the limited sense of regaining the national homeland and achieving sovereignty; *ge’ulah*, “redemption”, meant to the secularists who dominated the movement not only the negation of the exile and all its detrimental effects on life, but liberation also from the restrictions of Orthodox Jewish law and observance. This set the Zionists at odds with believers for whom the meaning of *tiqvah* was anchored in Scripture and developed in fuller conceptions of Rabbinic and Hasidic messianism. The idea of harnessing hope to the rejection of religion was blasphemous.⁸⁵ Now that the State of Israel exists and Hebrew lives again, what is it that the national anthem hopes for? The ingathering of the last exiles from the four corners of the earth, perhaps. But it is reasonable to suggest that with the renewed respectability of authentic Torah Judaism in Israeli society and government, the word has re-acquired some of its supernatural, eschatological connotation as well. The synagogue prayer for the State of Israel reflects this in calling the country *reshit tsmihat ge’ulatenu*, “the beginning of the flowering of our redemption”— the process is still unfolding and hope has not yet been entirely fulfilled.

In 2007 the American Jewish writer Michael Chabon published a counter-factual historical novel, *The Yiddish Policemen’s Union*. It is both a parody of a gritty, noir

83- Garvía 2015, p. 70.

84- Other idioms include *kabei*, “to leave the Esperanto movement”, from the initials of Kazimierz Bein (1872-1959), who suddenly abandoned the *movado* in 1911; *mojosa*, “cool, hip”, from *moderna juna stila*, i.e., *Jugendstil*; and *melki*, “to masturbate”, of uncertain etymology but probably connected with milking.

85- R. Maimon b. Joseph wrote in his *Iggeret ha-nehamah*, “Epistle of consolation” to his son that we are drowning, but the rope of Torah is suspended from Heaven and he who holds onto it has hope. If he lets go, he loses union with God and sinks. This was the attitude of many Hasidim during the Holocaust: see Greenberg 2013, pp. 363-364 and n. 39.

detective story and a meditation on Jewish history that is of interest to us because three languages— Esperanto, Yiddish, and Hebrew— serve as symbols of divergent possible realities, of hope and hopelessness, a national home, and homelessness. In the story, the plan put forward by Roosevelt's Secretary of the Interior, Harold Ickes, to offer Jews fleeing the Nazis a temporary refuge has been adopted (in reality, Congress turned it down), and a Yiddish-speaking polity has grown and flourished in Sitka, to revert to the control of the state of Alaska, though, within months of the narrative present— at which time the Jews will have to find somewhere else to go. The nascent State of Israel lost its War of Independence to the Arabs in 1948, and in Sitka the only Hebrew speakers are aged survivors who meet for reunions in drafty rooms— an ironic reversal of the actual situation of Yiddish. As for hope, this is how it manifests, at the funeral for Mendel Shpilman, who just might have been the *tsaddik ha-dor*— the messianic righteous man of his generation. He is the murdered gay junkie son of a Hasidic rebbe. The hero, Detective Meyer Landsman, has parked near the cemetery “in a cul-de-sac some developer laid out, paved, then saddled with the name of Tikvah Street, the Hebrew word denoting hope and connoting to the Yiddish ear on this grim afternoon at the end of time seventeen flavors of irony.”⁸⁶

There are other Hebrew-speakers in the novel: a paramilitary band of cold-blooded young “modern” Orthodox American Jews involved in a plot masterminded by Christian fundamentalists in the CIA to dynamite the Dome of the Rock and retake Jerusalem. It is they who have killed poor Mendel when he refused to co-operate with their eschatological scheme. The hero connects the dots, confronts them, and just before he passes out from the injection of a sedative after a sound beating, hears them: “They are talking, those Jews on the other side of the door, about roses and frankincense. They are standing in a desert wind under the date palms, and Landsman is there, in flowing robes that keep out the biblical sun, speaking Hebrew, and they are all friends and brothers together, and the mountains skip like rams, and the hills like little lambs.”⁸⁷ Despite the irony of the setting, it is impossible entirely to impute sarcasm to the intense nostalgia of this passage, which engages nearly all the senses at once. And there is not only an overt reference to Scripture but a direct citation of Psalm 114:6. That joyous song is part of the *Hallel* of festival liturgies, and its first verse deals, precisely, with language: *Be-tse'it Yisrael mi-Mitsrayim; bet Ya'aqov me-'am lo'ez*, “When Israel went out of Egypt; the house of Jacob, from a people of alien tongue...” It is exodus and return, both from slavery and oppression in exile to Israel, the promised homeland, and from foreign speech to one's own language, to the holy language of Israel, which is Hebrew, only Hebrew, nothing else but Hebrew. As a public figure living in left-liberal Berkeley, California, Michael Chabon is a strenuous critic of Israel; and in a recent commencement address to the graduates of Hebrew Union College in Los Angeles he went so far as to advocate the deliberate demolition of the

86- Chabon 2007, p. 198.

87- Chabon 2007, p. 263.

Jewish family through intermarriage. But if it was the author's intention to deride Zionism he has failed, brilliantly, much as the prophet Balaam did when he tried to curse the Children of Israel and blessed us instead. If anything, his grim novel underscores how beautiful and astonishing the warm reality of Israel is outside the freezing pages of an evanescent refuge in the far north, how fragile, how never to be taken for granted.

The hero's name, Landsman—Yiddish for “compatriot”, and in America and elsewhere the survivors of exterminated cities and *shtetlakh* formed *landsmanshaftn*— compounds the irony. Landsman was born in Sitka but is not a US citizen: upon Reversion the police department he works for will cease to exist and he may have to find a new place to live. The very first line of the book has this “compatriot” with no *patria* living alone in transient accommodations— temporary dwelling upon temporary dwelling, “flopping at the Hotel Zamenhof”! When it was built, half a century before, when the Yiddish-speakers of Sitka were more hopeful, all the nice, brass signs for the *elevatoro* and so on were in Esperanto. Most have since been stolen, and now the place is a flophouse.⁸⁸ It might as well be the Warsaw Ghetto, the reader thinks, and within a few pages Landsman is in fact investigating tunnels opening from the hotel's basement that were constructed by survivors of the wartime uprising just in case of the need for another Jewish guerrilla war of self-defense. Esperanto as a symbol in the novel, then, represents a meta-homelessness, a dilapidated ghetto within what is already exile, and is overshadowed by the specter of physical extermination— the farthest possible remove from hope.

Another contemporary American Jewish writer, Joseph Skibell, has also rehearsed themes in Jewish history through the symbolism of language. In the novel *A Curable Romantic* (2010) we meet the hapless, picaresque hero-narrator, Sammelsohn, a Jew from Galicia whose father, a kind of walking, talking parody of the Haskalah, has given up Yiddish and all other living tongues and speaks only in quotations from the Written and Oral Torah. In an utterly hilarious passage, the obligatory lecture on the birds and the bees is delivered to the boy in pure *melitzah*, the incongruously ribald topic rendered still more farcical through the didactic insertion in parentheses of the Scriptural reference after every hoary phrase.⁸⁹ Sometime after this the father appears in dreams to the narrator's mother, throwing cookies in the shapes of Hebrew letters in the air to form sentences. This detail recalls shades of *Sefer yetsirah* and Aron Leyeles, as well as the old custom of receiving a child into *cheder* with cakes and with Hebrew letters coated with honey. She remembers one sentence, which reads: *היי, קיין ווי פֿאַראַס, דעשיפֿראַנטע טשי תיאוין פֿראַזוין? רעבענו אַל לאַ*

88- Chabon 2007, pp. 1, 3.

89- Skibell 2010, p. 55f. This wonderful silliness reflects also yeshiva humor. A pious friend used to joke to me that the Divine attribute in Psalm 145, *somekh noflim*, “Who upholdest the falling”, is Biblical Hebrew for a bra! As we were passing a spectacularly ugly house on a Shabbat walk to the ultra-Orthodox neighborhood of Stamford Hill, London, my friend quipped that “they should put a sign *Ashrei yoshvey veytekha*” in the front window— that is, “Happy are they who dwell in Thy [the passerby's!] house” (Psalm 84:5, which is also the first verse of the florilegium prayer containing Psalm 145, the venerable and mighty *Ashrei*, which if said thrice daily, the Gemara assures us, guarantees the worshipper a part in the World to Come).

אָל לאַ ליבראַ! This is Esperanto written in Yiddish, and it addresses the reader who has taken the effort to figure it out: *Ho, kion vi faras, deĉifrance ĉi tiujn frazojn? Revenu al la rakonto, al la libro!* “Hey, what are you doing deciphering these phrases? Return to the story, to the book!”⁹⁰ Later on the hero moves to Vienna and meets Sigmund Freud, then L.L. Zamenhof—he marries a disciple of the latter. Later on, Theodor Herzl and Zionism appear also.

The young couple go to Paris for a conference on *la internacia lingvo* and he proposes they return to their hotel to make a little *ido*,⁹¹ “and we’ll raise the little prince speaking only Esperanto, keeping him away from the harsh world of multiple international languages, as though he were the Buddha himself.”⁹² This is a reference to the life of the Buddha Sakyamuni, whom his parents confined to a pleasure garden so that he might not come to know of disease, old age, and death. He escaped, confronted reality, and went on to enlightenment. There is thus something of the implication that Esperanto is inherently unreal. But Skibell and his character might have in mind also the project of Eliezer Ben Yehuda, who raised his children to speak only his partially-invented language, Modern Hebrew. Towards the end of the book (and, it is implied, of European Jewry itself), the hero finds himself immured in the Warsaw Ghetto, where he meets yet another important personage of modern Jewish thought, his cousin R. Kalonymus Kalmish Shapira, the Piaseczner Rebbe. The latter inquires as to the welfare of the surviving Zamenhofs and their departed father’s *nariškajtismo* (here, Skibell employs Yiddish in Esperanto orthography rather than vice-versa as above: the word is *narishkayt*, “foolishness”),⁹³ and hires Sammelsohn as his secretary.⁹⁴

90- Skibell 2010, p. 74.

91- An intentional irony, for this is in Esperanto “offspring”— the name also of the breakaway language, which is hatched at the conference they have come to attend.

92- Skibell 2010, p. 472.

93- Skibell 2010, p. 523. Amusingly, Gold 1980, p. 324, had proposed (unconvincingly, in my view) that the Esperanto idiom *paroli sensecaĵon*, “to talk nonsense”, was a calque on Yiddish נאַרישקייטן *redn narishkeytn*, “to speak childish things”.

94- The Piaseczner, who was a relative on my father’s side of the family, was a descendant of R. Kalonymus Kalman Epstein, author of the celebrated Hasidic commentary on the Pentateuch, the *Ma’or va-Shemesh*. A secretary did indeed help the Rebbe to write his last book, now entitled *Esh Qodesh* (“Holy Fire”; the other title is *Torah in the Years of Fury*) which was hidden from the Nazis, buried with Ringelblum’s Oyneg Shabbes archive, and discovered and published after the war. Skibell duly mentions the Rebbe’s *Se’udah shlishis* discourses at the end of the Sabbath and Ringelblum’s milk can. Skibell 2010, pp. 520, 523, 591. Although *Esh Qodesh* is the most famous of the writings of the Piaseczner; and the story of its survival, the most dramatic—he wrote several other important treatises that have come down to us. These deal mainly with the importance of education and with the imperative to treat one’s students with care and respect and to awaken in them a passion for Torah. The Piaseczner was the founder and principal of Warsaw’s largest interwar Yeshiva, Da’at Mosheh, and his pedagogical ideas were revolutionary for the Orthodox and Hasidic world. Hasidism has a strong messianic aspect, a hope and longing for redemption in many ways cognate to that of Zamenhof and Zionism. A small work by the Piaseczner, originally distributed in a handful of copies but now widely studied, is the *Bnei maḥshavah tovah*, “Sons of the Good Mind”, which is intended to do no less than revive that highest rung of human endeavor, the art of prophecy (*nevi’ut*), albeit in its aspect of *hadrahah*, moral and social guidance rather than foretelling.

In a hallucinatory concluding section, Sammelsohn meets three angels of destruction, including one Samangluf, who explain to him that the Evil One provoke the invention of Ido to derail the Esperanto movement, which, had it succeeded with its lofty ideals, would have forced the hand of the Messiah.⁹⁵ Thus Esperanto seems to have been the greatest hope for the human race as a whole, but one that either had to fail, or that demonic intervention obstructed. The angels then convey him on Jacob's Ladder from the midst of the living hell of the Warsaw Ghetto to a subdued Heaven, where the archangel Metatron explains that the Holy One, Blessed be He, has entered occultation (*nistarim*) to lament the Holocaust;⁹⁶ returned to this world, Sammelsohn is smuggled out of the ghetto and sets out for the Land of Israel, the only place where a Jew can live in freedom. Chabon and Skibell both regard Esperanto as a failed dream, but there the similarity between their writings end. Chabon, a Balaam, or perhaps the wicked son at the Passover seder table, imagines a Yiddish polity but it crumbles into grotesquery, into a cruel parody of the ghetto. He tries and fails to reject Zionism and the Hebrew language: it emerges unscathed from the welter of grotesque, classically anti-Semitic stereotypes of his black comedy.

For Skibell, by contrast, Esperanto is an object of genuine fascination; the Zamenhofs, friends and fellow Jews in whose life and fate the hero participates with humor, to be sure, but also with genuine anguish. The final message of his novel, then, is that the brilliant efforts of Jewish universalists and idealists—Marx, Freud, Zamenhof, Einstein, perhaps one might add Jesus to the list—were so many visionary, insubstantial towers of Prospero's magic. They have vanished into thin air in the wake of genocide; it is time for the Jews to stop trying to save the rest of humanity from itself. Whatever ideals of a tribe of inveterate dreamers remain, there is nothing we can do to fulfill them if we are dead; we must first save ourselves. The only way to do this is to start walking towards the east. Zionism, and, by implication, the adoption of Modern Hebrew despite its inherent parochialism, is the option, rather than cosmopolitanism and the International Language. At best, those can come later. But Esperanto is still part of our inheritance, of the treasures of the spirit to be borne out of captivity.

95- Skibell 2010, p. 548. Samangluf is the third of the triad whose two other members are Sinoi and Sansanoi, the angelic pursuers of the child-stealing witch Lilith in the *Sefer Raziel* and on Jewish childbed talismans (*kindbettsettlakh*).

96- Skibell focuses on the theme of the Holocaust in an earlier novel, *A Blessing on the Moon* (Skibell 1997), in which a Jew rises from the mass grave of his murdered village and begins wandering with other decaying, bullet-riddled ghosts through a world in which the Moon has fallen from the sky. With the help of the Rebbe, whose spirit takes the form of a tattered raven, they raise the luminary in a powerful ceremony of the *Birkhat ha-Levanah*, and the narrator's soul achieves release: the history of the broken world fades away, he forgets all, and the Moon is all he sees. This novel, at turns lyrical and bitter, seems in my view to have been inspired in part by the long Yiddish poem of H. Leyvik (Leyvik Halpern, 1888-1962), *Der Volf* ("The Wolf", 1920, in Harshav 1986, pp. 698-727): a Rabbi rises alone in a ruined city whose Jews have been massacred, and the stars, all except one, tear loose from their places and go out. He forgets how to recite lamentations and the daily prayers, and by the time he finds Jewish survivors and a shul, he has been transformed into a wolf. The terrified congregation beat him, and as he dies he becomes human again, *a Yid in a rabanishn shtreym*, "a Jew in a Rabbinical fur hat." With his last breath he tells the Jews that now he feels good, and they should not cry.

In 2007 the Coins and Medals Corporation of the State of Israel struck a handsome medal in gold, silver, and bronze issues to commemorate the publication of Zamenhof's book, the *Unua Libro*. It is a generous tribute by the victorious Zionist project, with its invented language, to an alternative vision, with its language, that through no fault of its own did not attain its high goals, even though as an international language Esperanto is alive and that is a success. I have the bronze medal, which is the largest in size of the series, before me as I write these lines describing it. It is a handsome object. The medal is a dignified tribute to a beloved son of the Jewish people, to his genius, his noble, self-sacrificing ideal and invention; the design breathes the artist's respect and affection for his subject. On the obverse is a frontal portrait of the gentle, bushy-bearded Zamenhof, his spectacles perched on his nose. He has on a bow tie, pleated dress shirt and three-piece suit (there is just the hint of a waistcoat below his right lapel), and above his heart the five-pointed green star is inset in enamel on his left lapel: he's all ready to address a *kongreso* somewhere in Europe, sometime in the halcyon years before the Great War. To the right of his head, though, the inscription is in Hebrew: יוצר השפה הבין-לאומית אספרנטו א"ל *Yotser ha-safah ha-beyn-le'umit Esperanto* ["Creator of the international language Esperanto"] *A"l Zamenhof* (L.L. Zamenhof is added in Latin characters), 1859-1917. Below this is a rendering of his signature, almost as though to say, I may have invented Esperanto, but I wrote the above statement in Hebrew myself (as indeed he was capable of doing).

The reverse shows a stylized, ziggurat-like tower of Babel with an ascending spiral path leading up to the new reversed-and-joined-E symbol of the Esperanto movement, and along the rim (and without citation, the tower should be clue enough) is the Biblical verse partially in Esperanto and fully in Hebrew, *Va-yehi kol ha-arets safah ahat u-devarim aħadim/ Unu lingvo kaj unu parolmaniero*—“(And all the earth was of) one language and one manner of speech” (Genesis 11:1). At the base of the tower is the word Esperanto in Latin script, flanked by little male and female silhouettes holding hands. Letters of many languages, including Chinese, Greek, Sanskrit (Devanagari), Latin, and Russian, are worked in delicate relief on the surface of the tower. The Hebrew words אחד *Echad* (“One”, with a modern bold Israeli typeface for the *alef* and the Ashkenazic style of the calligraphic Torah book hand for the next two letters, *het* and *dalet*) and שלום *shalom* (“peace”) stand out, the latter echoed by the equivalent Esperanto *paco* and Russian *mir*. It may be the tower of Babel, but its symbolism reverses that of the Biblical text of Genesis, expressing better, perhaps, the hopeful prophecy of Zephaniah: the jumble of letters seems to reflect the confusion of tongues that came in Scripture only after the destruction of Babel—and the emblem of Esperanto just above the tower's summit attests to the nobility of human striving and art to resolve the disunity. One thinks of the other visions of towers of Zamenhof's optimistic age, from the spiritualist, mediumistic Temple paintings of Hilma af Klint to Vladimir Tatlin's tower-monument to the Third Communist International; and from there one recalls the Esperanto stamps of the young Soviet Union and the Esperanto Academy of Ramatis in the ether above Brazil... “The cloud-capp'd towers, the gorgeous palaces, The solemn temples, the great globe itself, Yea, all which it

inherit, shall dissolve, And, like this insubstantial pageant faded, Leave not a rack behind: We are such stuff As dreams are made on, and our little life Is rounded with a sleep.” (Prospero to Ferdinand, in *The Tempest* of Shakespeare, Act IV, Scene i.)

I look more intently at the Israeli medal, at the artist’s encoded symmetry. The initial letter *shin* of *shalom* stands out most boldly, right at the center of the broad third of the seven courses of the tower as it diminishes upwards, like the *shin* on the *mezuzah*-case one kisses upon entering a home. right between the dates 1887 and 2007. And there it is. Just above it, delicate and faint, but unmistakable in its script and message, is the word התקווה *Hatikvah*— the name of the national anthem of the only true home the Zamenhofs, Ben Yehudas, and the rest of us will ever have, in *the* Jewish language, Hebrew. שפרינצעלע, ווי האַפּאַס לייגנבאַן.

THE BLACK DERVISH OF ARMENIAN FUTURISM

James R. Russell

Harvard University and California State University, Fresno

© Kara Darvish, 1910. © H. Genjyan, 1910.

Abstract

The article portrays the life and work of the Tiflis Armenian Futurist Kara Darvish, against the background of the development of Futurism in the world generally and in Russia in particular. It analyzes the linguistic and graphic features of his verses, and provides the testimonies of his contemporaries about him and his circle, about the historical and literary character of the city of Tiflis before and after the Great October Socialist Revolution, and on the fate of the poet and the Futurist movement in the Transcaucasus. The Appendices offer the reader translations of the poet's works, with detailed commentary.

Keywords: Kara Darvish (*Hakob Genjyan*), *Kostan Zarian*, *Arthur Rimbaud*, *Velimir Khlebnikov*, *Shreshthar*, *Vasily Kamensky*, *The Fantastic Little Tavern*, *Futurism*, *Tiflis*

Аннотация

Статья представляет жизнь и творчество тбилисского армянского будетлянина Кара Дарвиша (Акопа Генджяна) на фоне развития мирового и русского футуризма. В исследовании анализируются языковые и графические особенности стихов Кара Дарвиша, приводятся свидетельства современников о нем самом и его окружении, об историческом и литературном облике Тифлиса до и после Великой Октябрьской Социалистической Революции, а также о судьбе поэта и футуристского движения в Закавказье. В приложениях представлены переводы произведений поэта с подробными примечаниями.

Ключевые слова: Кара Дарвиш (*Акоп Генджян*), *Костан Зарян*, *Артур Рембо*, *футуризм*, *Велимир Хлебников*, *Шреш-блур*, *Василий Каменский*, *футуризм*, *Тифлис*

There is an Armenian saying that one must turn a library inside out to write a single book. One might adapt an English adage, too, to this just reflection on the process of scholarship: No work of research is an island. (And there is no library worth turning inside out without a librarian to help.) I was not aware of the work of the poet studied here till Michael Grossman, the cataloguer of Georgian and Armenian books, showed me a reprint of the volume dedicated to Sofia Mel'nikova with the poems of Kara Darviš in it. Shortly thereafter, Marc Mamigonian of the National Association for Armenian Studies and Research unearthed copies of the poet's manifesto and two novels that had been bound with other pamphlets of the era in hardcover miscellanies donated to the NAASR library in

Belmont, MA.¹ And another friend mentioned Krikor Beledian's superb work on the Armenian Futurists to me around the same time. It has proven very useful in this study, though my approach and method are quite different.

One had the pleasure to present preliminary work on Kara Darviš as a lecture to the Armenian Studies program at California State University, Fresno, on 20 March 2014, by invitation of its directors, Profs. Barlow Der Mugrdchian and Sergio La Porta. I am grateful to them and to my host in Fresno, Larry Balakian.

Samuel Taylor Coleridge wrote, as we can tell from his manuscript, a complete and fully formed poem called *Kubla Khan*. But he claimed in his published prologue that the poem, which he was capturing on paper from the fast fading memory of a dream vision, was interrupted in the course of his work on it and was to have been much longer. The unexpected visit of a tradesman from the nearby town of Porlock interrupted the magic and the poet forgot the rest of what he had intended to describe. The man from Porlock has become a metaphorical figure, the *coitus interruptus* of the creative process; Stevie Smith has a poem that wonders playfully about him. Perhaps Coleridge was inducing the reader herself to feel the keen delicacy of a vanishing reverie, the poignancy of its loss. Armenian culture has endured millennially in spite of loss: the fall and desolation of the city of Ani, the collapse of the Cilician kingdom. But the suddenness of 20th century catastrophes is the dire man from Porlock for real. These calamities leave one with the sense, not only of the loss of monuments of culture brought to completion and perfection, but of interruption— of creation cut off in the midst of the act, leaving one to wonder what the ripened fruit of the endeavor might have been. On the eve of the First World War, Daniel Varuzhan and his associates on the board of the magazine *Mehean* intended to re-infuse their language with the abundant lexical material and idiom of the numerous Armenian dialects of the native Anatolian highlands that had been obscured by the strictly controlled rules and lexicon of Classical Armenian (*grabar*) on the one hand and the normative, standardized literary Western Armenian of the urban centers (*aṣṣarhabar*) on the other. (There was also, of course, equally standardized and canonized Eastern Armenian *aṣṣarhabar* of the Russian Empire.) So, had mass murder not intervened, we might today have a Third Armenian, an unknown, rich, flexible tongue for a people still standing on a verdant earth.² Perhaps Indra's

¹ Two novels and a manifesto of Kara Darviš were found in two different hardbound miscellanies of pamphlets and soft-cover Armenian publications, from the collection of Harry and Araxie Kolligian, donated to NAASR in 2001. I list the contents of each, as they may afford a glimpse into the reading habits of educated American Armenians in the mid-20th century. Contents of the first volume: 1. *Hatantir ant'erc'uack' azgayin ew ötar matenagimereḡ k'aluac antameac' ew dproc'ac' hamar* ("Select readings excerpted from national [i.e., Armenian] and foreign writers, for families and schools"), author given as MBak ("Cultivator") (MBak 1880); 2. E(ḡia) Tēmircipaṣean (Yeghia Demirjibashian), *Nor keank', A: Azgayin lezu* (Tēmircipaṣean 1879); 3. Kara-Darwiš, *Im' ē fur'utizmo?* ["What is Futurism?"], with the stamp of the *Zardarian granon* ["Librairie Zartarian"] (Kara-Darwiš 1914) (see plate appended to this study); 4. Kara-Darwiš, *Keank' ē fur'uto* ["The Violin of Life"] (Kara-Darwiš 1917). Contents of the second volume: 1. E. Vöyniḡ, *Bor, nēp eresnakn i'wert italakan jekap'ona'ean örerik* (Vöyniḡ 1906); 2. Kara-Darwiš, *Erwand Göḡ* (Kara-Darwiš 1911). The back cover of the latter advertises literary works translated from Russian to Armenian by Akop Gendzhian and available for sale.

² See the excellent new study by Nicheanian, (2014: 124–127) to which the American labor organizers might have replied with their intrepid slogan, "Don't mourn, organize".

novel *Neraḵcarh* ("The Inner World") was the first and only book in this Third Armenian, a tongue worthy of the dream of Kubla Khan.

The vibrant literary culture of Armenian Constantinople in the late Ottoman period ended suddenly with the murders of its young poets at the outset of the general slaughter of 1915. What might have come from the pens of Varuzhan, Siamant'o, Sevag, Indra, had they lived on, to be old men? What music might have reached our ears, had the composer Komitas not been driven mad by the horrors he saw? The Stalinist purges of 1937 swept away Charents, Aksel Bakunts, Zabel Esayan, and hundreds of others: what if they had lived? Socialist Realism imposed a deadening puritanism on the arts: what if culture in Erevan had been allowed to develop in conditions of liberty? As the centenary of the 1915 Genocide approaches, it seems as much a moral duty as well as a worthwhile scholarly task to offer to the English reader some of the treasures finished before the man from Porlock darkened the door and interrupted the dream. Just as Armenian culture was becoming avant-garde, Futurist, countercultural, it was lost, and most of its contribution to the progress of the free arts and letters of humanity was forgotten. Nobody has the right to forget, any more than to deny.

• • •

This is not the first introduction in English to the Armenian poet who styled himself Kara Darviṣ, the Black Dervish, but it is the longest; and it offers texts, both by the poet and of supplementary interest, that have not been translated hitherto but are of some importance to

the history of the Futurist movement. This material augments our understanding of modern Armenian literature, and situates it in the context of both world culture and the artistic scene of the early 20th century in the last years of the Russian *ancien régime* and the early history of the Soviet Union. Our poet lived and worked in the Georgian capital, Tiflis, during the tumultuous years of the First World War and the Russian Revolution—roughly two decades in all, from 1910 to 1930. These events destroyed and transformed much of the world, and had a particularly devastating impact upon Armenians. He lived, though, not only in that historical maelstrom but also at what he and his friends believed was the dawn of a new culture. He was more than a time traveler; he was a denizen of the times to come.

For Kara Darviš was a Futurist, excavating the foundations of his native tongue, the Armenian language, with the aim of creating new sounds and visual patterns for a poetic language and method of graphic art of that a different kind of man, freer, healthier, honest, unconstrained by tradition, was to speak, write, and paint tomorrow. The Futurists in their new literature experimented with the shape of words,

the look and size of typefaces and the direction and orientation of texts, their words bursting off the line, running up and down the page, dashing in circles, leaping skywards. Their paintings and sculptures sought to depict the stages of motion, not still lives; so the metal statue of a man scalloped the successive movements of his muscles over time, and the same part of a horse repeated itself in freeze frames across the canvas, embracing its gallop. Their aim was not so much to change what we see and hear but to release the senses from the stereotypes of conventional art and literature in order better to express and depict what is really there—and what is there right now, too. Not a classical landscape standing stock still, but a city of clean-lined skyscrapers and streamlined stations and airports teeming with cars, factories, airplanes. Words are not monotonous, linear phenomena crawling in straight lines across a page. There are different sounds all around and above and below us, with different accents and pitches. The operations of the mind are not limited to the limited scope of conscious awareness, but embrace also the irrational and the subconscious. So why not write in different directions, with letters of different sizes, using not just the words that are part of everyday speech, but nonsense words, or magic spells—the sounds of dreams, of childhood, of nature, of machines? Airplanes were taking men into the sky and radios were conveying speech invisibly across great distances at speed: why should art and literature crawl slowly on the ground?³

Kara Darviš was born Hakob Genjian in the north Caucasus, in the twilight decades of the Russian Empire. Like many Armenians in the Empire, he was deeply connected to Russian culture and the Russian language, which he spoke with native fluency, peppering his Armenian prose very liberally with Russian words that would have been utterly incomprehensible to an Armenian living not all that far away, in Ottoman Turkey. (In this he was no different from other educated Armenians in Russia; and Western Armenian writers, to a greater or lesser degree, flavored their work with Turkish, Persian, and Arabic words.) He was married to a Russian woman, and most of his fellow Futurists at the various cafés he

³ One of the best surveys of the art of the movement remains the monograph and exhibition catalogue by Taylor (1962).

frequented in Tiflis were Russians. But he moved in Armenian circles just as intensely—he worked as a correspondent for several Armenian papers, and mixed with the Armenian literati, befriending the novelist Kostan Zarian and the young revolutionary poet Yeghishe Charents. In the company of nonconformist artists, he still stood out as an original, true to his cognomen of dervish. He was an eccentric who dressed oddly, behaved scandalously, detested economic inequality, liked a drink, and believed in the centrality of eroticism to life, in free love. He was proud of his nation and its ancient culture; but this feeling was not shaded by the racist and chauvinist bigotry of writers like Zarian. He proclaimed himself the brother of all men and a citizen of the world, a cosmopolitan. His poetic manifestoes echo Walt Whitman and William Blake; and they foreshadow the American Beat poet Allen Ginsberg.

Kara Darviš is noteworthy for the wider field of Futurism for occupying a particular place in it. There were several Armenian Futurists; but the others simply joined a larger movement whose center was in Europe. Kara Darviš was consciously a man of the (Near)East who appreciated the language and culture of the streets of Tiflis and Baku, and addressed his criticisms of conservatism and repression not only to mainstream culture in general but to the particular tendency of Armenians, Iranians, and others to denigrate their own culture and to imitate everything western. That imitation, often slavish and superficial, led more often to alienation from oneself than to authentic partnership with the rest of world culture; and it reaffirmed imperial politics by deifying the ways of colonial rulers. By focusing on this inferiority complex as a cultural phenomenon, and calling on Armenians and their neighbors to respect and value their own everyday culture, and, thereby, themselves as human beings worthy of full social and political equality with all other men, he anticipated later studies of what has come to be called Orientalism. He, and his friend Charents in the decade following his eclipse, were indeed the heralds of an authentic and authentically Armenian counterculture.

Until the early decades of the 20th century, Armenians were, and had been for centuries, a stateless people. As a Christian minority in the Muslim world they were barred from the traditional social positions that secured power: land ownership, the military, and government. In the coastal cities of Turkey in particular, they gained wealth and prominence through trade, industry, and communication—all of these skills demanding a cosmopolitan outlook and receptivity to progress and change. The Armenians living in the interior of Anatolia likewise developed modern schools and businesses in the cities, but villagers and farmers labored under oppressive conditions, paying tribute to Ottoman officials and Kurdish tribal gangs. In the Russian Empire the position of the Armenians

was considerably more secure; and after Russia's liberation of Erevan in 1828 many thousands of Armenians emigrated from Turkey and Iran to rebuild their lives under the protection of the Christian tsar. But they were still not members of the dominant nationality, whose official policy was Russification, and the Armenian Church was not recognized as Orthodox—so to a great extent the same cosmopolitan model of world view, economic activity, and urban development applied. This is perhaps one reason why Armenians did innovative things common in the west but unknown in the east. An eccentric Armenian of Smyrna named Bedros Tenger, not a Turk, Arab, or Persian, strove to transcend the boundaries of ethnicity and religion, laboring in hope for a new world where those limitations might no longer cripple human endeavor, and invented the only artificial language ever to come out of the Near East whose express purpose was to promote universal human solidarity. The West, by contrast, produced about 500 of them in the 19th and 20th centuries, though only Esperanto has endured (Russell 2012-2013). And another Armenian, the subject of our present study, invented a specifically Near Eastern Futurism.

But it is indicative of the very precariousness of the situation of the Armenian people that neither *Seh-lerai*—the Armenian “Esperanto”—nor the Futurist language and poetry of Kara Darviš, found receptivity in the lands of their birth and survived. Far from surviving, neither is even remembered by any but a very few specialists. In the wake of the 1915 Genocide, the formation of the Soviet Union in 1922, and the imposition of the deadening official dogma of Socialist Realism about a decade later under Stalinism—as we have noted above—Armenians were made subject to restraints beyond their control and were necessarily preoccupied with vital concerns of survival in the here and now, rather than an imagined tomorrow. Still a minority culture in the USSR, and entirely a diaspora culture outside the latter, Armenians clung to their ancient foundations as limpets do to a rock battered by the breakers of a stormy sea. These were anything but avant-garde or countercultural: an established church upholding accepted morals, and a canonical literature of traditional forms, underscoring these. Those were the very institutions and forms Kara Darviš found intolerably stifling and hoped to demolish. It would seem he had labored in vain. But this is not entirely so. Kara Darviš and his comrades had still contributed vitally to a humanistic and revolutionary Futurism, and its kindred movements, the streams nourished by it—Cubism, Surrealism, Dada, and the rest—did not disappear. They gained strength wherever life allowed, and became a vital motive force in the growth of the movements that spearheaded cultural, philosophical, even scientific change in the 20th century, that championed human rights, diversity, and liberation in all its forms, and thereby created much of the future, the future in which we live now. Kara Darviš is a part of that countercultural inheritance, the blessed dissident, eccentric force of the 20th century. Remembering him, one resists the genocidal tide of oblivion. Translating him, one re-inscribes his work in the annals of world culture: the dervish is no longer alone.

But for literary scholarship, which requires that one probe the sources of a work as part of understanding its meaning, even a movement with the name Futurism still must have a discoverable past. It begins, I think, with another war, another revolution, another young, rebellious, eccentric genius, in another country. This other poet, a very young man, first

sounded articulately the themes of changed consciousness and depiction of reality, the transformation of language, universalism, the magic of words. Like Voltaire, like the citizens-in-the-making storming of the Bastille, like the band of black and white artists playing the Marseillaise in Monsieur Rick's nightclub, he was French.

In 1911-1914, the *Nouvelle Revue Française* published the letters of the poet Arthur Rimbaud (1854-1891). Rimbaud sought to transform the physical world through his poems, which he began writing in earnest at seventeen, and gave up writing at the age of twenty-one when he thought he had not. But ironically, he created more than he could possibly imagine, since consciousness and thought are what lead us to change the world around us in fact. So he transformed the world more profoundly than any alchemical operation might essay to do. He made modern poetry. His visions transformed all the arts, and Futurism, Surrealism, and the cultural movements of the Beats and their successors— everything from Picasso to punk rock, not to mention Zdanovich, Larionov, Kamensky, Goncharova, Mayakovsky, Robakidze, Kara Darviš, and Charents— can in a way be traced to him. He came to the French capital, to scandalize its literary circles and to piss on its pedestrians from a great height, in the wake of the Franco-Prussian War and the fall of the revolutionary Paris Commune. His *Lettre de voyant* ("Letter of a seer"), dated 15 May 1871, is his most famous, a kind of manifesto and guide.⁴

"I say that one must be a *seer*, make oneself a *seer*."

The poet becomes a *seer* through a long, immense, and reasoned *derangement of all the senses*. All shapes of love, suffering, madness. He searches himself, he exhausts all poisons in himself, to keep only the quintessences. Ineffable torture where he needs all his faith, all his superhuman strength, where he becomes among all men the great patient, the great criminal, the great accursed one— and the supreme Scholar! For he reaches the *unknown*! Since he cultivated his soul, rich already, more than anyone else! He reaches the unknown, and when, demented, he would end by losing the intelligence of his visions, he has seen them! Let him die in his leaps among unheard-of and unnamable things; other horrible workers will come: they will begin from the horizons where the other one has collapsed!

⁴ From the translation in Jean (ed.) (1980: 11-15). On the circumstances of the letter, see Robb's (2000: 85-88) acerbic, funny, learned biography.

... So the poet is actually a thief of fire.³

He is responsible for humanity, even for animals. He must see to it that his inventions can be smelled, felt, heard. If what he brings back from *yonder* has shape, he gives shape; is it shapeless, he gives shapelessness. To find a language. Moreover, speech being thought, the time for a universal language will come! Only an academician, deadlier than a fossil, could complete a dictionary, in any tongue; weak people, who might begin to *think* about the first letter of the alphabet, and would soon jump into madness!

This language will be soul for the soul, summing up everything, perfumes, sounds, colors; thought hooking thought and pulling. The poet would define the amount of unknown awakening in his time in universal thought; he would give more than the formula of his thought, than the measurements of *his march toward Progress!* An enormity becoming a norm, absorbed by everyone, he would truly be a *multiplier of Progress!*

This future will be materialistic, as you see. Always filled with *Number* and *Harmony*, these poems will be made to stay. Basically, it would still be Greek poetry somehow.

Eternal art would have its functions, in the same manner as poets who are also citizens. Poetry will no longer give rhythm to action; *it will be in front...*

Meanwhile, let us ask *novelty* from the *poet*— ideas and shapes".

The challenge to innovation, derangement of the senses, love, progress, a new art, and a completely new kind of language, had been flung down. Among those who were to answer the call was Hakob Genjean (Genjian). He was born at Stavropol in the north Caucasus in 1872, duly entered the Armenian seminary at Nor Naxijewan (Nakhichevan)— Rostov-on-the-Don— but left in 1893 without taking holy orders. Then he taught at the Geworgean college in Ejmiacin (Echmiadzin, the holy see of the Armenian Church, near Erevan) in 1906–1907, and wrote poems of a neo-pagan, decadent, mildly erotic, mildly Symbolist sort. He adopted the pen name Kara Darviš⁴ with the publication of his short story *Leran*

³ That is, he is Prometheus, who rebelled against the hegemony of the other Olympian gods by giving fire to man and then suffering unending torture for it (on a mountaintop, as it happens, in the Caucasus).

⁴ *Kara* is Turkish for "black". In compound expressions it is often a term of endearment; *kara oğlan* (or Arm. *manuk*) "black boy" has the implication of beauty, even valor. The New Persian word *darvīš* means, literally, a poor man. It derives ultimately from the Avesta: *dragu-* (later Middle Iranian *drjōš*, from which the modern Persian form comes) was the designation of a follower of the Prophet Zarathuštra, who saw

astuacuhin, "The goddess of the mountain", in the Tiflis journal *Msiak* ("The Cultivator") No. 205, 1909. This was the comfortably liberal paper of record for the Russian Armenian community and intelligentsia, centered in the Georgian and viceregal capital—Erevan was then still a sleepy provincial town. In 1910 he settled permanently in Tiflis, working as a journalist for *Msiak*, *Surhandak* ("Express Messenger"), and *Kayser* ("Sparks"). He and his Russian wife Ol'ga translated and offered for sale recent and avant-garde Russian literary works (Leonid Andreyev, Fedor Sologub, A. Kuprin, and others) in Armenian translation, at prices ranging from three to eight kopeks—but the market proved disappointing. He also translated into Russian the works of the Armenian writers Avetis Aharonian and Levon

himself as in need of the gift (*magu-*) of the revelation of Ahura Mazda, the Lord Wisdom. From this first insight, which did not imply material destitution, only the consciousness of spiritual need, came the ritualized practice in Iranian Islam of a material asceticism by mystics who were itinerant loners wandering about draped in scarves, with a begging bowl and an ax for cutting wood. Dervishes also joined fraternal orders, employing techniques of ecstatic prayer, music, and dance to seek God through love (Arabic *'aṣiq*, hence *'aṣīq*, "lover", Arm. *ashugh*, a wandering minstrel). The Arabic translation of *darvīsh*, *faqīr* "poor man", is another designation of the Sufi. *Faqīr fakhīr*, "My poverty is my pride" is a slogan attributed to Mohammed. A balance, even a symbiosis, gradually obtained between Sufism and the communal structure of normative Islam with its strict laws and morals; but for the eccentric or the free spirit suffocating in society, the way of the dervish was an escape hatch. At the turn of the century the image of the dervish was, understandably, popular with Armenian writers, including some more conformist than Hakob Genjian. Even the thoroughly mainstream Western Armenian writer, scholar, educator, and communal leader Aršak Č'obanian (Chobanian 1872-1954) used the pen name *Devriş* on occasion. Another writer, considerably obscurer, styled himself *Devriş* (with metathesis of the consonantal cluster); and the cover of one of his books is illustrated here to afford an idea of the image of the dervish in Armenian. I summarize and annotate this communication of Marc Mamigonian, NAASR, Belmont, MA, 24 March 2014, about him: Krikor Arakel Keljik (1883-1963) published poems and novels under the name "Devriş" (author's spelling; Arm. *Tēvriš*). Like his elder brother Bedros Arakel Keljik, Krikor was a writer and activist, an Oriental rug merchant and a founder of the Twin Cities (i.e., Minneapolis and St. Paul, MN) Armenian community. They contrasted, however, in their political and literary leanings: Bedros, a former *Hm'ak* (Arm. "Bell", after Alexander Herzen's Russian *Kokokol*: a progressive democratic party), was a local-color realist with a slightly cynical edge, whereas Krikor, a staunch *Dalnak*, remained a romantic through and through. Both brothers were maternal uncles of the writer Vahan Totovents (1889-1938), who worked in the Keljiks' St. Paul rug business between semesters at the University of Wisconsin-Madison. A 1922 profile in the *St. Paul Pioneer Press* says that Krikor was a frequent contributor of poems and short stories to the Armenian-language American press, both newspapers and magazines. He contributed to the Boston Armenian-language *Dalnak* paper *Hayrenik* as "Devriş". The books printed with the author's name as "Devriş" or "K. Devriş", with some description of their content courtesy of Lou Ann Matossian:

1. *Tēvrišin K'ēskiwrā*, Boston: Hayrenik' Press, 1930. The author's first book. Contains a short novel, *Bakhefujin* ("The Fortune-teller") and a novella, *Nowakham* ("The Locket"). Both works incorporate poems and songs.

2. *Murmurs of [the] Muse*, St. Paul: Devriş Press, 1941; 2nd edition, 1949. Verse in English, dedicated to the author's daughter, Sossy Armenia Keljik, who died young. Self-published, with typography, printing and binding all done by the author's hand.

3. *Žayterni Sarang* ("Heir of the Rocks"), *Tēvrišin tpanan* ("Devriş Press), 1947.

The cover page of "A Dervish's Begging Bowl", illustrated here, affords a sense, both of the romantic image of the mystical mendicant, and of his embodiment of a longed-for *convivencia* of Christians and Muslims—a notion as wistfully fanciful as the picture of Muslim, Christian, and Jewish harmony in Spain before 1492 for which the term was coined. Behind the dervish in a romantically half-wild, half-paradisiacal landscape rise the pointed, cross-topped domes of Armenian churches, one of which is inspired by the 10th-century island church of the Holy Cross on Alt'amar (Aghtamar) in lake Van.

Shant and the dramatist Shirvanzade. All this so far is a standard literary trajectory for the time and place.

But by this time, he had also begun innovative experiments in writing: in 1911 he was woodenly attacked for what the critics perceived as his misuse of Armenian grammar, morphology, and syntax in his novel *Erwand Gōš*. He offered a spirited reply: "It is my conviction that every new writer, if he is entering the literary arena with a calling, must bring new literary forms with him, and is not to masticate and employ only that which the generations before him masticated and used". We should recall at this point that at the other pole of the Armenian world, Constantinople, the writer and poet Tiran Črak'ean (Chrakian), writing under the pen name Indra,⁷ had also published a novel, *Nerašxarh* ("The Inner World") full of neologisms and linguistic experiments—and had weathered exactly the same sort of criticism. The Black Dervish had become a Futurist.

The movement was new. Filippo Tommaso Marinetti (1876-1944) had published the first Futurist manifesto, in Italian, in 1909 (translated in Apollonio (ed.) (1973: 19-24), and his movement spread very quickly across Europe and to Russia, where in December 1912 the first Futurist anthology, *Poshchēchina obshchestvennomu vkusu* ("A slap in the face to public taste") was published, with contributions by Khlebnikov, Mayakovsky, David Burluk, and others. It was a resounding slap, encouraging the young "to throw Pushkin, Dostoyevsky, Tolstoy, etc., etc., from the steamship of the contemporary (*sovremennost'*)". In the summer, local Futurists painted their faces and paraded through St. Petersburg and Moscow, scandalizing the public. Futurism in the Russian Empire grew quickly to such importance that Marinetti himself lectured in Moscow in 1914 and lectured there. Kara Darviš summarized his remarks in a manifesto of his own, *Inc'v Fut'urizm?* ("What is Futurism?"), published the very same year. (It is translated in its entirety in an appendix here.) It is astonishing how Armenians in Tiflis, nearly a century before the Internet, stayed abreast of cultural trends in other countries this way. And there is an interesting Armenian connection to mainstream Futurism anyway. One may justly call Velimir Khlebnikov (1885-1922) the intellectual leader of the evolving movement in Russia, at least as far as its language is concerned; and he wrote in an autobiographical note, *V moikh zhilakh est' armyanskaya krov' (Alabovy) i krov' zaporozhtsev (Verbitskie)... prinalozhu k mestu Vstrechi Volgi i Kaspiya morya (Sigai)* "In my veins there is Armenian blood (the Alabovs) and the blood of the Zaporozhian [Cossacks] (the Verbitskys) ... I belong to the place where the Volga meets the Caspian Sea (Sigai)" (Xardžiev 1940: 352).

⁷ The name is an anagram in Western Armenian of his first name; but as a word on its own it is also the name of a dragon-slaying (*vrātrahmān*) Hindu god of lightning, who was akin to the Zoroastrian Varathraghna (the Iranian equivalent of Indra's Vedic epithet), ancient Armenian Vahagn. We know of the later from an epic fragment about his birth preserved by the classical historian Movṣēs Xorenac'i; Kara Darviš was also to use this source for the ancient and mythological material in his Futurist verses. He and Indra reflect a widespread interest at the time in the nation's primordial, pre-Christian culture and way of life.

He endowed the followers of the movement with the more Slavic name *Budetshyane*, “What-will-be’ers”, had studied Sanskrit and other eastern languages at St. Petersburg University, and would have been, like many educated Russians, fairly knowledgeable about things Armenian, even aside from his background. But what is important as regards the work of Kara Darviš is that Khlebnikov, in collaboration with Roman Jakobson (who emigrated and in his later years worked as a Slavist and linguist at Harvard) devised what they named *zaum*’, or “transrational” language. *Zaum*’ borrowed and played with folk spells, sectarian glossolalic incantations, and secret argots, as well as street sounds and nonsense syllables. A famous example is his song of the *Rusalki*, or undines, illustrated here. This derangement of linear, canonical language was accompanied by innovations in typography and graphic design: the Futurist movement coincided with the Cubism of Picasso and Braque, and with the *Calligrammes* of Apollinaire.⁸ The latter’s poems were placed on the page in order to echo their subject as images, as drawings inseparable from poems. The poem was no longer only articulate speech, but enfranchised sound; the text itself was no longer a conventional page of horizontal, orthographic lines, but part of the art that illustrated it, even an object the reader had to manipulate in order fully to appreciate—a kinetic experiment.⁹

⁸ The Futurist artists drew not only on local antiquity but also on the “primitive” art of distant regions. This was a period of intense scholarly interest in the monolithic *moai* and the still undeciphered Rongorongo script of Rapa Nui (Easter Island). Gauguin used Rongorongo in his painting, especially in the famous portrait of his young lover, *Merahi meua no Tehamana* (Tahitian, “Ancestral Guardians of Tehamana”), 1893 (see Greub (2011: 221 pl. 205, discussion on pp. 166–168); and Vasilii Kandinsky experimented with it to the end of his life: lines of his own kind of Rongorongo appear in his final, unfinished watercolor (illustrated here, from Weiss (1995: 209, pl. 202) as a kind of post-Futurist meta-text. The painter sought “an art in which a direct equivalence between sign and referent could exist, one that he believed would, in effect, be a non-discursive and universal language” (Morley 2003: 35). The Futurist Il’ya Zdanevich wrote a play, *Outraf Paskhi* (in phoneticized Russian, translatable, if one wants to keep the intertextual misspelling, as something like “Easter Eyeland”), one of whose main characters is a sculptor (see Compton 1978: 62).

⁹ See the excursus here on visual language and Armenian magical manuscripts as a source for the design and intended kinetic qualities of Futurist texts.

Kara Darviš was quickly to adapt *zawm*¹⁰ to Armenian, using native sources and references and the urban sounds of polyglottic, exotic Tiflis, invoking also musical instruments and chords to imply an additional dimension to the sound of his poems. His poems play with different typefaces, sizes, and orientations of Armenian letters, inviting the reader to see them as pictures; the reciter, perhaps to attempt a chanted, musically experimental rendition. His poems are self-described incantations, too; and in Armenian magical texts words of known semantic value and *voces mysticae*—mantric “nonsense” words—are often written in different directions and patterns and in association with other

graphic designs (cf. the sigils of western grimoires—that is, the ritual books of practicing witches). One recalls that Rimbaud was so disappointed that his poems did not exercise visible, *magical* power that he gave up writing and left France to become a gun runner and slave trader in Abyssinia. Another resident of Tiflis at the time, though, did employ both painted shapes and mystical, chanted words—some of them, Armenian—for the purpose of psychological growth and transformation, the making of a new and enlightened man. This was George Gurdjieff (1866–1949), born at Alexandropol (later Leninakan, now Kumayri, in the Republic of Armenia), ran his mystical school for a time in the city before decamping to Paris after the establishment of Soviet rule. Gurdjieff (the name is Persian for “Georgian”, with a Russified ending) was completely fluent in Armenian, though his ethnicity is often given as Greek.¹⁰

¹⁰ In his autobiographical *Meetings with Remarkable Men*, Gurdjieff claims his father Adash was an *ashugh* (musician and bard) who sang at Van and Kars, and in Karabagh, and kept alive an oral tradition of the stories of Gilgamesh. He worked for a time on the Kars-Karakilise-Tiflis railway, and claimed to have found books in the ancient and incomprehensible Armenian of Father Telvant and the Sarmoune Brotherhood: these were hidden in a cave blocked with stones in the ruins of the medieval Armenian metropolis of Ani. Elsewhere he refers to a book called *Merharvat*, i.e., Arm. *mer harvat*(k’), “our faith” (cf. perhaps the Clas. Arm. *Knik’ harvatoy*, “Seal of faith”); and Armenians of this kind abound in his huge tome, *Beetsebab’s Tales to his Grandson*. There he mentions a religious festival called *Zadik*, i.e., Arm. *Zatik*, “Easter” (Voltaire had liked the Armenian word, too, cf. his *Zadig*); and the real name of the planet Mars is *Mdnel-outianlink*, with Arm. *mnel* “to enter” and the abstract nominal ending in the genitive, -*ur’eant*. These are just examples drawn at random. Gurdjieff claimed to have seen the writings of the pythonesses of the *Imasturs* (cf. Arm. *imastur*, “wise”), which could be in four directions on a page, depending on the direction from which they were receiving a communication—this could be a reference to a multi-directional Armenian magical text. Few of the flamboyant mystic-writer-painter-musician-adventurer’s claims can be verified, though; and Gurdjieff enjoyed playing games of mystification: see Wilson C. (1971: 385). One way to contextualize Gurdjieff, perhaps, is to compare his wild tales, extravagant cosmologies, and polyglottic inventions to those of Ali Mirdrekvandi, whose long novels, with their mixtures of Persian, Kurdish, and possibly Mithraic and Zurvanite mythology, baffled and entranced the great Iranist R.C. Zaehner. The latter wrote a Foreword to one, *No Heaven for Gunga Din* (1965); many others languish unpublished at Oxford.

The Moscow Futurists visited Tiflis in 1914— Kara Darviš, as noted above, wrote and published as a pamphlet *Ինժ' և futurizm*, "What is

Futurism?" the same year. This was not just a summary of Marinetti's views, or those of the Russians, but a manifesto of his own, Armenian Futurism. Its combative, scandal-mongering style was doubtless intended to attract attention outside the official press; and it is a provocative attack on Armenian traditional culture, values, and morality that singles out for ridicule the beloved elder of Armenian letters, Yovhannēs T'umanean (Hovhannes Tumanian) and derides the popularity of *ashugh* poetry—the songs of bards such as Tiflis' son, the great Sayat' Nova. He was himself to assume that bardic mantle, declaring himself an *ashugh* and the authentic and unmediated voice of the Armenian people; but then, consistency is the bugbear of small minds. If the purpose was to start a fight with the establishment, it was a success. The great literary historian Garegin Lewonean (Levonian), whose works on the *ashugh* genre are of fundamental importance, found these assaults both trivial and offensive. He excoriated the activity of the Futurists as *ōyınbazut' iwn gelaruesti tačarum* ("tomfoolery in the temple of fine art") and fumed in russified Armenian at their *šarlatanut' iwn, šantiaž* ("charlatanry and blackmail") in an article in *Gelaruest* ("Fine Art") in 1916 that Beledian has cited. The official doctrine of Socialist Realism, with its stress on clarity and realism, and its contempt for "formalism" (art for art's sake, as it were), was to embrace Levonian and Tumanian, not by any fault of their own, and to celebrate the epic and balladic recitations of unlettered bards "from the people". And Stalinism consigned Kara Darviš and his circle to the dustbin of history— some of them, to the literal concentration camp dust (Rus. *lagernaya pyl'*) of the Gulag.

Kara Darviš wrote his Futurist poem *Šrēs-blur* ("Asphodel Hill") in 1914: it is translated and annotated here as an appendix here, and the text is provided in the illustrations. His novel *Keank' i futak* ("The Violin of Life"), 1917, which is in a conventional Eastern Armenian, attracted no attention (perhaps not surprising, considering recent events, including a world war, two revolutions in Russia, and the Armenian Genocide two years before the latter). It deals with a lonely, middle-aged Armenian broken by family bereavement and leading a weary life, whose spirits and neglected, decrepit body revive when he meets a beautiful Russian woman. Free love was very much a part of the Futurist program; but Beledian is probably right in his assertion that the Armenian writer here was inspired more by Mikhail Artsybashev's softly pornographic novel *Sanin* (1907)— the *Fanny Hill* or *Lady Chatterley's Lover* of its day— than by more sophisticated avant-garde works.¹¹ Kara Darviš welcomed the Russian Revolution for its erotic as well as social and economic possibilities,

¹¹ This is not to downplay the nearly forgotten Russian sexual revolution of the time (overshadowed by subsequent Stalinist puritanism), that gave us Mikhail Kuzmin's gay novel *Kryl'ja* ("Wings"), Nabokov *père's* legislative project to decriminalize homosexuality, and Nijinsky.

thinking it was to lead the ship of humanity (on which, you recall, we had just made 19th-century Russian literature walk the plank) to dock at a *siroy nawahangist*, a "safe haven of love". In a lecture of 1918 or 1919 entitled "Prologue", he writes, "A great energy is acting, a great forward push is emerging and the new man, the man of the great force of thought and struggle, is being born. I side with the conviction that futurism is advancing and expanding among oppressed peoples, be that oppression moral or economic".

Georgia did not unite, though, in a happy conjugal embrace with Soviet Russia, at least not at first. It declared independence as a socialist/nationalist republic ruled by the Mensheviks, ideological opponents of Lenin; so for a time Tiflis became a safe haven indeed for writers and artists who found Lenin's red terror something less than a love-fest. Kara Darviš was a habitu  of the short-lived Fantastic Little Tavern, where he recited his poems and mixed with Futurists and other artists, socialites, and eccentrics, most of whom had fled the Bolsheviks. The poet wrote declamatory verses at once boastful and meek—he was, after all, a *dervish*—and these typify his recitations at the crowded tavern, to a friendly and appreciative audience. In his poem of 14 May 1921 "Who is the hero?" Kara Darviš declares, "The hero is the one who shatters human law and tramples it underfoot, who converses with the stars and champions their law; who goes out into the street naked and crazy and outside the crowd, treading underfoot the clothing of law and order men have worn for a thousand years. The anarchic, lawless, mad man: that is the hero".

There is something of Nietzsche's *Übermensch*, his Superman Zarathustra, in this, though Kara Darviš was emphatically not a Nietzschean; but what matters much more, what

by *zawm*, the “transrational” language of Khlebnikov and other poets and writers. The latter drew upon the fanciful sound combinations, glossolalia, folk spells against mermaids (*rusalki*), and the secret language of sectarians such as the Flagellants. Accordingly, Kara Darviš tapped the sources and resources of his own, ancient language— of Armenian mythology and oral epic preserved in the writings of the Classical historian Movsēs Xorenac'i, and the cadences, images, and sound patterns of Armenian incantations. He also drank of the neo-pagan springs of contemporary Western Armenian literature, especially the *Het'anos erger* (“Heathen Songs”) of Daniel Varuzhan, who was murdered in 1915 by the Turks. His work inspired, in turn, the younger Soviet Armenian poet Yeghishe Charents, who became acquainted with him in Tiflis.

Kara Darviš was not content merely to write poems in non-traditional form; he altered to his vision of a future art their type of production and distribution, printing them on postcards and selling them in front of the cinema and opera houses of Tiflis. The poet's friend Kostan Zarian describes the spectacle in his novel *Anc'orda ew ir ĉamban* (“The passerby and his road”): “Kara Darviš is selling his poems and postcards¹³ outside the doors of a big movie theater. Kara [*sic*! The word is an epithet, not a first name] is a unique phenomenon in our literature: a hero, and in any case a kind of rebel. He is a man standing outside the realm of social prejudice, devoid neither of talent nor of general education. The Armenian merchant, the fossilized Armenian schoolmaster, and the Armenian literati of the Caucasus, slithering from table to table in clubs and salivating, look upon him with scorn and ridicule. But he is the hero. He is the real successor to the dervishes and bards. He preserves the honor of a poet. He is our conscience.”¹⁴

After the October Revolution many Russian avant-garde writers and painters emigrated, some settling for a time in Tiflis. I have noted the debt of Armenians to the Russian avant-garde, but the Russians in the Transcaucasus learned something from their hosts, too. Vasilii Kamensky's Futurist sketch map of the city, which he styles a “poem in reinforced concrete” (his famous sketch of the Sun, discussed in the Excursus on visual language here, bears the same title), notes the location of favorite hangouts, and at the foot

¹³ Literally, *bac' nowakner* “open letters”, a calque on the Russian *otkrytoye pis'mo*; the latter is abbreviated with a diminutive ending to *otkrytka*, and Arm. follows suit with *bac'ik*.

¹⁴ *Erker* (“Works”), *Ant'ilias* (Antelias, Lebanon), 1975: 94), cit. by Beledian (2009: 196, 273). One might adumbrate here a vexing question. A man proclaimed the conscience of Armenian literature might have been expected to speak, no, scream, about the genocidal murder of the Armenians of the Ottoman Empire, taking place just across the border. The massacres of 1894-1896 were alive in memory and might have alerted public attention to this second, incomparably greater disaster. The events of 1915 and after were well known: the mass killings and deportations were the subject of British parliamentary inquiries and made the front pages of the world's papers, including *The New York Times* and *The Boston Globe*. Kara Darviš not only read the poems of Daniel Varuzhan— one of the first victims— he even used Western Armenian in writing a line in homage to him. Armenians had organized a volunteer corps in the Russian army to assist their compatriots; and refugees from Van and elsewhere were flooding into Russian Armenia. Even so, why did not the Armenian writers of Tiflis and elsewhere in the Russian Empire react and respond commensurately to the greatest catastrophe in Armenian history? Surely they had enough to occupy their attention; perhaps, too, their minds simply could not comprehend the scale of events that were still unfolding. Did the more banal human qualities of indifference to the suffering of others, a lack of empathy, play a part?

of the drawing is a transliteration into Russian of the Armenian word *erjankat'wn*, "happiness".¹⁵ So Russians and Armenian mixed and there seems to have been some linguistic interchange— not just Caucasian peoples learning and using the language of the Imperial ruler, but Russians taking a keen interest in the ancient cultures of their hosts.¹⁶ The Russian friends of Kara Darviš published an anthology of his lyric poems and short stories in Russian translation, *Pesni buntuyushchago tela* ("Songs of a rebellious body") at Tiflis in 1918. (No Futurist compositions are included.) The book is a paperback brochure of mimeographed typescript: the typeset cover has a cameo photograph of the poet. It bears no fewer than four prefaces by the poet himself:

"(1) TO MAN. With a torch kindled in my soul and a smile of love on my lips I come to thee, a poor, broken, spat-upon man.

KARA-DARVISH, June 1918.

(2) TO THE PRESENT ANTHOLOGY.

The present anthology has been translated with my assistance in the form of a literal rendering into Russian of my novellas/songs. My translator-friends have expended every effort to depict the visage of the poet in its full convexity, warming their labor with great love and tenderness. It remains to me only to thank them from my soul, from my burning heart, for the opportunity to make my few works accessible to the wide Russian reading public. In the near future I hope to publish in Russian translation my longer works, as well.

KARA-DARVISH, May 1918.

(3) DEDICATED

¹⁵ The map/poem is illustrated here, and see Rowell/Wye (eds.) (2002: 108 pl). The four inscriptions read: *Gruzija= Salami artvepe/ Armeniya= ěndzhankat'wn/ Persiya= Ay choban koyun/ Rossiya= Saryn' na kitku* "Georgia= greetings (next word unintelligible)/Armenia= happiness/ Persia= Hey, shepherd, sheep!/ Russia= Crew to the prow" (a rallying cry of river bandits on the Volga).

¹⁶ The itinerary of emigration ultimately took many from there to the Georgian port of Batumi(i), thence to Turkey or Greece and the penury and insecurity of exile in Europe and the Americas. The hero of the novel *Nawa leran way* ("The Ship upon the Mountain") by the Armenian writer Kostan Zarian, a friend of Kara Darviš, is Herian, a sea captain based in Batumi. Chapter Nine of the novel is dedicated to Kara Darviš, his café, and his friends: it is translated as an appendix here. The author evokes the dire conditions of the refugees from civil war and Red terror. One of the more curious personalities and odder literary figures to pass through Batumi at the time was the Russian-Jewish writer Lev Nussimbaum, born to a rich family of Baku oilmen in 1905. His family reached the port, which his biographer calls "a kind of Czarist Casablanca— the bottleneck for all those fleeing west", in 1920 and were able to purchase Georgian passports and depart for Constantinople (see Reiss 2005: 100.) Nussimbaum converted to Islam and under the pseudonym Kurban Said published in German *Ali and Nino*, the love story of an aristocratic Azeri boy and a tender Georgian maiden caught up in the whirlwinds of war and relentlessly pursued by an evil, lascivious old Armenian named Nakhararian with a big black powerful car. (*Naxarur*, the ancient Parthian term for a local hereditary dynast, now means "government minister".) Under the pen name Essad Bey, Nussimbaum authored a pioneering biography of Stalin. Though pursued by Azeri Nazi sympathizers anxious to expose him as Jew, he managed to die peacefully in wartime Fascist Italy. In his anxiety to conceal his origins, Nussimbaum can be compared in some ways to the Armenian Imaginist Alexander Kasikov.

to the friend about whom I dreamed and in whom I was ever disillusioned.

If the entire world takes up arms against my words, thoughts, and feelings, you, my friend, will be standing to the side, you will understand me, you will come up to me, and will give me your hand.

KARA-DARVISH.

(4) Whom I love.

I love those whose soul is like a shoreless sea and whose conscience rings like a silver bell.

KARA-DARVISH".

The poems in the book deal with themes of voluptuousness and love, for the most part, in a not particularly enviable style one might characterize as *fin de siècle* Orientalizing Symbolist-lite. For instance, on p. 48: "I became weak, and wordless, and without a moan/ I instantly awoke. The silence, pitch black./That spellbinding lass from the land of the Pharaohs/ Veiled herself with murk from stares..." No luck for peeping toms in the land of the Pyramids. On p. 55, a lily-bodied hetaira sprawls invitingly on a Khorasan carpet: one prefers the iterations of Varuzhan and Medzarents, where she is at least dancing. The prose pieces are eminently forgettable as well: One story introduces a forest nymph who strips down for a dip in the sea in the buff. Then she dries herself off, heads back to the woods, and the sun smiles at her. In another, a man wandering in the desert dreams, plausibly, of water, then he sees a goddess standing on a mountain and acknowledges her as his Ideal. He continues on his thirsty way. A third opens on the disturbing scene of people hauling crosses up to Golgotha; but the reader's anxiety is assuaged by the assurance that they are all brothers, helping each other. (But then, to do what?) The book does contain translations, by Tatiana Vechorka, of the important poems "Who I Am" and "The Cup of Life"; mostly it testifies to the esteem of the poet's Russian-speaking friends and their readiness to help his poems reach an audience beyond readers of Armenian.

These included the Russian Futurist Alexei Kruchenykh (1886-1968), who lived from early 1918 to the end of 1919 at Tiflis in the family home of his fellow Futurist Il'ya Zdanevich (1894-1975), a permanent denizen of the city. Together with the writer Igor' Terent'ev they opened in Nov. 1918 the *Fantasticheskii kabachek* ("Fantastic Little Tavern"), which became a meeting place for the Russian, Georgian, and Armenian "Syndicate of Futurists", of which Kara Darviš was a founding member, till it closed its doors in July of the following year. Kara Darviš published his cycle *Yurut'k' Ulunk'* "Incantation Beads", including the earlier *Šreš blur* "Asphodel Hill", in an anthology dedicated by the habitués of the tavern to the beautiful dancer Sofia Georgievna Mel'nikova (1890-1980), the charmed center of their circle. It includes poems by Vechorka, one of the

translators in *Songs of a Rebellious Body*.¹⁷ The Georgian poet Grigorii Robakidze, whose poems appear in the anthology, described the place: (Compton 1992: 44).

"Tiflis has become a fantastic city. A fantastic city needed a fantastic corner, and on one fine day, at No. 12 Rustaveli, in the courtyard, poets and artists opened a Fantastic Tavern which consisted of a small room, meant for ten to fifteen, but which, by some miracle, had about fifty people in it, more women than men. Phantasmagorias decorated the walls of the room. Virtually every evening the tavern was open, and poets and artists read their poems and lectures".

One visitor to the tavern, for instance, was the famed hostess and socialite Vera Sudeikina-Stravinskaya, whose family arrived in Tiflis in April 1919 and stayed there six months. Her album includes entries by numerous painters and writers including Il'ya Zdanevich and the poet Osip Mandelstam, who translated a poem by Kara Darviš (dedicated to Robakidze) into Russian (Bowlit 1995: xix-xxi). The writer Konstantin Paustovsky (1892-1968) met the Zdanevich family during his stay in Tiflis, in 1923, and mentions in his memoirs a book they had entitled *Tsveti, poeziya sukina doch'* (perhaps best rendered now, with apologies to the gentle reader, as "Flower, O poetry, you fuckin' bitch"). It was printed in various typesfaces, and "between individual words were inserted various lines, rows of dots, clefs, letters from the Armenian, Georgian, and Arabic alphabets, musical notes..."¹⁸ It seems likely Kara Darviš had a hand in preparation of the text. It is noteworthy that there is an element of musical notation: the variations in size and position of letters in Futurist publications suggest a musical score, so that one might attempt a tonal performance of them; and Kara Darviš refers often in his poems to music.¹⁹

The greatest and most important of the Armenian poets Kara Darviš knew in Tiflis was, as noted, the great Yeghishe Charents (1897-1937). The latter was a protean figure who, it can fairly be said, mastered and perfected every poetic style known in Armenian. He wrote poems in the styles of Symbolism and decadence in his early years, then turning to the stridently proletarian verse of the great bard of the Revolution, Mayakovsky (who was born in Georgia, and who in 1914 sketched a portrait of Kara Darviš, illustrated here). In 1920, in the midst of revolution and chaos, Charents wrote his *Talaran* ("Song book"), a cycle of

¹⁷ The volume, entitled *Sofia Georgievna Mel'nikova, Fantasticheskiĭ khabachek, Tiflis, 1917 1918 1919* ("To Sofia Georgievna Mel'nikova, Fantastic Little Tavern, Tiflis, 1917 1918 1919"), was published in Sept. 1919 in an edition of 180 copies and included poems by Russian, Armenian, and Georgian Futurists and illustrations by Natalia Goncharova, Alexander Bazhbeuk-Melikov, Lado Gudiashvili, and others. It was reprinted in 2012 by the Georgii Leonidze State Museum of Georgian Literature, Tbilisi. All the poems by Kara Darviš printed in the volume are illustrated, translated, and annotated here.

¹⁸ *Poves' o žizni* ("A tale about life"), cited by Janecek (1984: 183).

¹⁹ The Russian Constructivist A. Chicherin (Zelinskij/Čičerin 1924) in his "Mena vsex" ("Change of All"), introduces a novel form of musical notation that breaks with unidirectional straight lines (see Janecek 1984: 197 fig. 160). It is noteworthy that there is an Armenian connection to later experiments of this kind in the west. "Aria", written by John Cage in 1960 for a singer named Ms. Berberian, has a score consisting of drawings of lines in black ink, accompanied by blotches of various colors and the words HAMPART-ZOUM (W. Arm. for *Hambarjunt*, "Ascension", used as a man's name), DIROUHI (W. Arm. for *Tiruhi*, the fem. of *Tēr* "Lord", used as a woman's name), DI QUESTA TERRA (Italian, "of this earth"), NAPRASNO (Russian, "in vain"), CONSCIENCE ET (French, "conscience and"), and A-RISE! (English); see Sauer (2009: 44).

lyrics in the style of Sayat' Nova, in a very clear and limpid Eastern Armenian. For a time he associated with the Imaginist school in Moscow, that included the great Sergei Esenin—the Rimbaud-like bad boy of Russian poetic legend—and the curiously furtive, russified Armenian poet, Alexander Kusikov.²⁰ Charents was to experiment with, then disavow Futurism when it fell out of favor, as he became a leading figure of the new Soviet Armenian literary establishment. But he mentions in a letter of 18 March 1934, three years before his arrest and death, that he had met Vahan Terean (Terian), the Armenian Symbolist poet, at the *Chashka chayi* (“Cup of Tea”) in Tiflis, back in the days of the Revolution. Kara Darviš, whom he calls “the only Armenian writer whom I knew personally at that time”, was there. Since there were plenty of others, the comment suggests that the Futurist poet stood out among them and that Charents sought his company and held him in high esteem, even though he was to condemn him a few years later (Čarenc’ 1967: vol. 6: 480).

In 1921, with the Communist annexation of Georgia, Kara Darviš gamely attempted to adapt to the new order, hoping to find a niche of acceptance. He began writing on literature and theater for the paper *Karmir Astl* (“Red Star”); Osip Mandelstam, who was passing through Tiflis, translated his poem *Para leran vray* (“The Dance on the Mountain”) into Russian that year. The Soviet Union was established in 1922; and in 1923, as a Soviet literary and cultural policy began to take shape, the Soviet Armenian press commenced attacks on the Futurists. On 15 November the Armenian House of Culture at Tiflis held a full-court “literary trial” of Kara Darviš, who was condemned in a seven-point verdict. Charents, Gevorg Abov, and Azat Vshtuni, a self-appointed triumvirate of official taste, declared that Futurism had no place in Armenian culture. But by the late 1930s, it was to have no place for them, either. In the twilight years of his life, Kara Darviš wrote occasionally for *Mardakoc’* (“The Call to Battle”, Tiflis) and *Hayastan* (“Armenia”, Erevan) till 1927. In his last months he was shuttling back and forth between Erevan and Tiflis in an unresolved dispute about his pension. One of his last poems is the wistful gaze of an old man back into the past, not forward. He saw only death ahead, and perhaps he understood also that Armenia had been robbed of its future. “Again my heart thirsts/ For its vernal spate of health;/ Again summer’s the embrace/ Of the giving body of a girl./ Come come do not forget/ That in Apollo’s might arms/ Great power from the past is yet./ My heart pounds again/ Like the hammer on the anvil/ And garlands of sparks/ Light up the black of night./ ... Steamy summer heat/ Comes like a faraway cry/ And with a fevered heart/ I just want tea with lemon” (Palotean 2009: 268).

He died 16 December 1930 and was buried in the Armenian cemetery of Xojavank*. Two lines from his poem *Ov em es*, “Who am I” are engraved on his tombstone: *Es hamarharhayin k’olak’ac’i em/ Astarhn ē im hayrenik’o* (“I am a cosmopolitan citizen/ And the world is my fatherland”) (Beledian 1992: 39-53)²¹

²⁰ On Kusikov, see Russell (2014).

²¹ On the response to the criticism of *Erwand Göß* see Beledian (2009: 200); on “Who is the hero?” (200: 251). Beledian is the principal scholar, theorist, and critic of Armenian literature, particularly of the modern period, in France; and the groundbreaking archival work on Kara Darviš is his. I have widened the scope of analysis somewhat to understand the poet’s work in a philological manner, examining his use of language

So, Kara Darviš was the great Armenian Futurist. His career is testimony to the tragic oblivion to which historical circumstances have condemned Armenian innovators in art and thought whose contributions might otherwise have nourished the Near East and the world and advanced human progress. Had the Genocide not happened, had the October Revolution not degenerated into a sanguinary tyranny, there might have been a Europe without Hitler and a Near East without Hezbollah and Hamas. Instead, the cultures of the East might have joined as equals, not as antiquarian curiosities, the great stream of world thought. But the life of Kara Darviš is testimony, too, to the speed at which world culture reached distant Armenia in times when to be a Futurist meant to be hopeful rather than apprehensive, and to the astonishing receptivity of Armenians to innovation when their conditions permitted. One might add to the valediction of his epitaph the letter, cited in an appendix here, that another great Armenian eccentric, William Saroyan, addressed posthumously to Charents. In the end, Charents and Kara Darviš alike said no to power and did not betray their muse and their inner liberty.

In his 1939 obituary article on Khodasevich, Vladimir Nabokov wrote that the personal loss was unendurable, so let us turn to the poems. Let us turn here to the texts of the manifestos, the literary evocations of that nearly forgotten time, and listen to their lost hopes, evanescent dreams, and their resurrected music.

APPENDICES

1. Kara Darviš, *Bac'ikner ew antipner, aforizmner* ("Postcards and unpublished [poems], aphorisms", *Kam, handēs verluçakan* ("Kam, an analytical journal") 6, Los Angeles, 2005, pp. 209-234. The aphorisms were selected by the editors from a total of 800; I have made a further selection here.

(210) *Ov em es, "Who am I?" from the cycle "Towards new heights".*

I am a crazy-minded dreamer—the stars and the moon are my dream.

I am a solid man of the earth—the earth and nature are my roots.

I am a wakeful guardian—the alert observer of all values.

I am a cosmopolitan citizen—the world is my fatherland.

I am a man, and Man is my comrade and compatriot.

I am a satrap and tyrant—the executioner of all impostors and Pharisees.

and of ancient Armenian sources; and I have expanded the multi-cultural and historical context considerably. None of the poet's work itself has been translated into English hitherto; so I have endeavored to present a representative sample.

I am a slave, a lamb, a dove, and a child—

I am the servant of all the righteous and the truth-sayers, the doer of their will.

I am a fierce, proud Scythian²²— I am the first Armenian who loves the Armenian people as forty thousand brave and manly brothers.²³

I am a Bolshevik— I am a democrat, a socialist, to the tips of the hairs on my head.

I am an anarchist— to everything petrified I am death, thunder, and lightning.

I am a maximalist— I break, tear up by the root all that is rotten, old, and stale.

I am a Futurist— fiercely proud smasher of idols, the vandal who topples venerable statues from their heavy pedestals and shatters them.

I am a mad lover— I place the stamp of fiery kisses on a lovely woman's bosom and with wild arms grip her strongly in my stormy and lustful embrace.

I am everything and nothing.

I am Kara Darwiš.

* * *

The Cup of Life [Kenac' bažakə]

Let the dead bury the dead.

—The Gospel

²² The word used here is *ask'amaz*, from Biblical Hebrew *Aškenaz*, the name of one of the sons of Japheth in Genesis. The -n- might have been an early scribal error for -u-, from a form like *iğwaz*, i.e., Scythian. The Armenians numbered among their ancestors *Paroyt Skayordi*, i.e., *Partatua* the son of the Scythian, mentioned by *Movsēs Xorenac'i* in his genealogy of the nation; and in heroic epic legend king *Artakēs* (*Artaxias*) married the Alan princess *Sat'inik*, i.e., *Satana*, the mythical progenitrix of the Narts (see J.R. Russell, "Argawan: The Indo-European Memory of the Caucasus", *Journal of Armenian Studies* VIII.2, Fall 2006 [2007], pp. 110-147). These were the epic heroes of the Ossetes, or Alans, a North Iranian people related to the Scythians. Alexander Blok thought his fellow Russians *Šitfy*, Scythians; and the Polish nobility also laid romantic claims to descent from the Sarmatians, also related to the Scythians. The locus classicus for the Scythians is the *Histories* of Herodotus; and it is no mystery why poets advocating atavism and a return to "nature" would have sought origins for their nations in the hard-riding tribes of the Eurasian steppes. A modern British poet put it best in his quatrain "Hedonism": "After the Scythians, how advance/ In the pursuit of happiness?/ They went around in leather pants,/ And every night smoked cannabis" (Gunn 2000: 42).

²³ Beledian (2009: 277), notes that the original version read, *Es dāznak'akan em*, "I am a Dashnak". The Armenian Revolutionary Federation (*Hay hełap'axakan dāznak'ut'ien*) is a nationalist political party that dominated the first Republic of Armenia but was driven into exile after the Comenianist takeover; despite its socialist beginnings it subsequently adopted a stridently anti-Soviet line and in the 1930s and 40s some of its members, particularly in Europe, were associated with fascism and nazism.

I am a hero at the wedding feast of life.

I am a deserter from the war waged by barbaric, patriotic bandits.

I am a citizen of the democracy of the spirit [ogu hasarakapetut'ean].

The demonic cackle of ridicule on my quivering lips is for you, you citizens fattened on law and order.

And I pass through the dark, cloudy tumult of the avenues of great cities, fully armed with the shield of the spirit.

Let the sky thunder— let fire and lightning flash and crash down on my bare head. Let the naked sword glint over my breast.

Let the slippery noose of the gallows loop and tighten at my throat— my body is weak, my spirit is strong, free, bold, soaring over the plains of an untimely death.²⁴

My spirit is an eagle's strong pinions soaring, coursing high above stupefied, slaughtered skulls.

Howl of hatred and scorn— and a leap, a mighty leap up the dizzying mountain of skulls,

The goblet for a toast to life in my hand— dedication, song, and dance, demonic wedding...

Sing, poet! The world is a graveyard.

And let the crystalline tears of repentance stream down and pour from sockets of the skulls of the stupefied victims.

That is one peaceful cemetery, that world.

It is night. The giant sphere of the Moon swims across the sky, its silver layers gleaming down upon me, the mad lover, standing over the vast grave pit of skulls with the cup of life foaming in my hand.

That is the monument to the dawning future [fut'ur]²⁵ life.

It is the road to new ascents to new heights.

²⁴ This line anticipates, and probably partly inspired, the poem by Eghishe Charents, *Mahvan testil*, "Vision of death" (1920), in which the poet sees a gallows in Erevan, describes with horror the noose, and asks to be hanged as the ransom for his people. Charents met and conversed with Kara Darwiš in Tiflis, his memoir of the encounter is cited here.

²⁵ Although Russians and Armenians borrowed from Marinetti's Italian the name of their movement as *Futurizm*, Russians invented for themselves also a Slavic designation *будетъеизм*, "it-will-be-ers", and Armenian scholarship calls Futurism *գոգոյաբանութիւն*, lit. "worship of what comes after", Kara Darwiš here seems to emphasize that the movement with the name Futurism is the future itself.

And howl, and cymbal and castanet,²⁶ and violin, and lyre, and drum, and celebration, and feast...

Gods, hear my prayer—the melody of my lips. Receive my offering, and from bygone centuries, from beneath ruins, raise the golden sunbursts of your heads.

I come from the pagan temples, and Nisibis is my fatherland.²⁷

Sound the trumpets, strike drums and shake the castanets: life's bridegroom comes, holding the bride of the new life by her hands—the mad lover comes, with the cup of life in his hands.

The road!

The hero of the new life comes, riding his victory chariot, bearing an invitation to the new life.

Sound the trumpets, blast the horns.

Roses, flowers, laurels: scatter them, and plant them.

The conquering hero comes.

Sound the trumpets, strike the strings of the lyre!

10 May 1918

Tiflis

²⁶ *Ev mrmurj, ev cncloy, ev hambir, ev jut'ak...* Kara Darviš stresses variously the musical signature of his poetry and his vision. The poem "Incantation Beads" plays upon the alliterative quality of Arm. *tsntsgħa*, "cymbal"; and the poet's novel about a desiccated man's awakening to sexual passion and health is entitled *Keank'i jut'akā*, "The Violin of Life". And at the beginning of the poem "Vision of death" by Charents noted above, which these verses might have inspired, the poet's vexed heart is described as the strained chord of a *t'ayjauk*, a viola. In Kara Darviš' story *P'otofoṃac jut'akā* ("The dust-caked violin"), published in *Sarḥandak*, Tiflis, 25 March 1912, a mysterious violinist named Kara from the legendary medieval metropolis of Ani travels to Crimea (whither many Armenians had fled following the fall of the city to the Seljuk Turks in the 11th century) and gives his instrument to a youth who endows it with new life.

²⁷ *Baginmeru mejēn ku gam—Mchian ē hayrenik's*. The line is, markedly, in Western Armenian, and refers to the cycle *Heṭ'amos erger* ("Heathen songs") and the long poem *Harčā* ("The Concubine"), by the W. Arm. poet Daniel Varuzhan, whose work Kara Darviš esteemed. Nisibis (present-day Nusaybin) was an ancient center of Syriac Christianity on the southern borders of historical Armenia. Kara Darviš wrote of Varuzhan, "And when your monument is erected on the future plaza of Armenian creative thought, I, standing in the front ranks, will lag on my shoulders your bronze statue towards the Nisibis of the heathen world that you sang of and loved" (cited by Beledian 2009: 280-281).

Untitled

Where are you, O man? I celebrate you.

I see a king, a nobleman, a soldier, a worker.

I don't see you, O man—you're hidden away in the darkness, extinguished and unseen.

You are a burnt out candle, a dying fire, a wilted flower.

I pass through the misty, beclouded streets wrapped in dark fog:

You stare, emaciated, draped in rags, forgotten by all,

And lament your lot, lamenting and cursing the infidel world.

I approach you and clasp your chilled and desiccated hand

And with fiery lips and hot breath I kiss your bony hand.

I hear your strangled cry—it is your soul, shattered and broken, ringing.

*That is a man speaking, protesting, and opposite him tramp soldiers with bayonets shining
at their shoulders,*

Singing a song of pride and brotherhood, fiery-red banners snapping,

But you, O man, where are you, I'm searching for you.

*You're in tatters, you're under the bayonets, you're under the imperial purple, you're a
worker, you're a nobleman.*

I'm looking for you, O man—you're not there.

*I looked for you and found you murdered, shattered, wasted, frozen, fallen before the powers
that rule this world, your hand stretched out.*

*I have no money or wealth—I have nothing—I have a warm kiss, brotherly, fiery—I give
you that.*

*Don't despair, you're not alone, I'm a man, I'm with you, let that kiss enflame the dying fire
of your heart and inspire you with hope.*

Do not despair!

(n.d.)

* * *

(227 f.) **Selected aphorisms:**

Everything (*Amēn ban*)

1. *People, I want very little from you. Just a little bit of freedom.*
2. *I'm weak because I don't understand you; I'm strong because you don't understand me.*
3. *Children are wise; big people are stupid, and those who strive to follow and resemble them are stupider still.*
4. *Everything that comes out of me is valuable and true; everything that comes, not from me, but from others, is false and fake.*
5. *You want happiness for man? Strip him naked and let him loose on the earth.*
6. *Look at life with the eyes of Adam and let your sole property be the fig leaf, and you'll be happy.*
7. *The freest man is the one who has nothing and knows nothing.*
8. *Even the lion lowers his head before the sun.*
9. *The world was created for me and I am lord in it.*
10. *Revolution at its high point of fever is a prayer for the pure and the noble, but sexual sadism is for lewd and repulsive cowards.*
11. *Go, don't stand still, even if you are about to make a mistake.*
12. *The strong one gets up last; the weak one's the first to jump.*
13. *Real creativity justifies everyone; king, slave, pauper, rich man, martyr, criminal, the talented and the dullard, everyone.*
14. *Be awake, that you be a keen sword.*
15. *Write in such a way that your every line is worth a chunk of your life.*
16. *Ink is the sea out of which, like nymphs, my thoughts are born and emerge.*
17. *If even a drop of ink remain at the tip of your pen, don't let it dry up— write! So that the reader may bless and remember you.*
18. *Stay awake, so that life around you will not slumber.*

* * *

2. Kara Darwiš, *Arewelk'a ibrew albiwr nor gelaruesti ew stelcagorcūt'ean* (*Hin goymers nor p'ayli tak*) ("The East as a source of new fine art and creativity— Old colors with a new shine"), reprinted in *Kayk'* Literary yearbook 3, Paris, 1993, pp. 113-120.

Creation is life's greatest joy. Just as day wakes with the early morning, the dawning of the sun, so can the life of a man, an individual, a whole people, awaken, open its eyes from slumber, when it begins to create— that is, when all the strings in the soul of a man or an entire people begin to sound with a single powerful harmony, to act— in other

words, for its mind and soul to live with a strong rhythm. Mankind, you would think, has begun to wake up from its deep slumber. A new morn is dawning for mankind, when the golden rays of the rising sun illuminate the world. It is necessary to create in order to live and wake, to resound with all the strings of the soul.

Futurism has been the first and greatest stimulus of the present age: it has come to tell us that you, all of you, are poets, you are geniuses, all of you are endowed with the same energy, the same heavenly spark, and you must believe that you are the chosen of heaven—if only the conviction rest firm and steady in your hearts that you are creators of life. So, here are three men for you, sitting around and talking—and behold, they are creating a piece of life. The nations are creating big chunks of life. We too as a people are creating a big piece of life. But that piece is only one slice of the life of mankind. If you create a bad, crude, uncultivated piece, then you spoil the whole splendid edifice of man—his piece of life. Here's a building, a beautiful building, and, all of a sudden, it has shattered windows and broken ornaments. We Armenians are an ornament of the edifice of the world also. Come, let us give a marvelous shape to that ornament. Let those who view it be amazed. But to fashion this ornament, we have to do creative work. We have to start the new morn of our life with faith and hope. The individual is powerful in his creativity only when his environment is creating, when the environment in which the individual is living awakes. (114) The individual must sense the life that surrounds him and comprehend its intimacy to him so that he may do creative work, so that he may attach a new ornament to the edifice of the world, to build it higher, or to open a new window and gaze boldly through it at the new horizons unfolding before him.

The only ones who are afraid of every open window or aperture are those who are petrified on the finished and accepted edifice of the past—lest the blast of the icy wind chill and blow away their senile flesh. New, fresh thinking emerges out of new, fresh feelings and impressions; is it not the case that thought is condensed emotion? The more the feelings and impressions you carry within you are compressed, the more purely and powerfully crystalline your thought will become. Healthy thought is healthy feeling; and healthy feelings arise from healthy impressions, when you do not constrict them with your decayed conceptions, your backward and ossified traditions. Creativity cannot tolerate petrified ways of thinking or slavish subjection to ancient traditions. Futurism is the powerful force that is to whip and flog our mental life, to stir and disturb the world concealed within us, so that we can start moving, and advance. We write the way we feel and understand; and we say what is pleasant and comprehensible to us, because we ourselves in the first instance derive a great sense of fulfillment from creating rather than apishly imitating. And creativity is the greatest joy of life.

Rejoice that you may create; and create, that you may be happy, say I. And for that purpose, one must free the mind, the brain, from the iron cage of "This is impossible" and "This is unacceptable".

*Karabalakh dzan blan
Dublakh-dublakh.*

This is ridiculous to you, but I receive and feel pleasure from (115) the new feelings and emotions that speak powerfully within me. Perhaps that dublakh is obscure and unclear even to me, but the passion for searching, for creativity, and the refusal to submit to your slogan "This is impossible", conveys me, opens me, to new creative worlds. Our brilliant Futurist poet Kornak Yovsaržean has trodden this path, writing in his wonderful poem²⁸ "Birth pangs" [Erkunk'], Hē, ui, ut, ayē.²⁹

But in order to create one must tread known, felt, experienced paths. One's feeling of racial identity [c'elakan ink'nazgac'um]³⁰ must take first place. I am deeply convinced that when I pronounce the word dublakh, which has never appeared in any Armenian dictionary, I place within myself a comprehension of my race, the "voice" of the blood, the "call" of the blood. I am persuaded that all my meaningless words are not to be found in any Anglo-Saxon or Latinate tongue, but perhaps my dublakh could have been a word possessing "meaning" in the mouths of Seljuks or Mongols, or of an Urartean.³¹ That is the feeling of racial identity and the familiar path of creativity. The Armenian painter has to draw his lines and daub his colors in an Armenian fashion, so that his picture will be intimately familiar; and the source of his creativity, unblemished. No Frenchman could ever paint an Armenian family, or the portrait of a woman from Akhaltsikhe,³² with the kind of taste, the way of an Armenian painter. That is because the subject the Armenian painter has selected for himself is a familiar one, and his creativity is set on a known path. The same Armenian painter, who spent his childhood in some Oshakan or Khotortjur,³³ is unable to convey the peasant of Champagne in a talented and intimate manner. Only the Frenchman can do that. Why is it that Repin and Makovsky draw their most intimate material from the life of Russia's present or its historic past? And why is it that our Proshian or Abovian will be of no less interest to us than the cool Ibsen or the lively Rostand?³⁴ Proshian captures the

²⁸ The Russian poem suggests a work longer than a lyric poem or ballad and shorter than an epic, but with something of the high seriousness of the latter.

²⁹ The famous ancient Armenian poem preserved by Movsēs Xorenac'i on the birth of the god Vahagn contains numerous complex plays on *erka*, "labor", and one name of his temple at Aštisat, Vahevahean, suggests his worshipper might have used a ritual exclamation something like the Diormysian *evohē*, formed from a diminutive of his name. This may have inspired in part the composition of *Erkunk'*.

³⁰ Such sentiments and terms, which are properly deeply offensive to civilized people today, were part of Armenian discourse as elsewhere. In the USA the nationalist Dashnak party controlled a C'elakrōn (pron. Tsaghagron), "Race Worship" society through the 1930s. Sometimes the intention of such terms was not racist or fascist, but often enough it was.

³¹ Akkadian *Urartu*, Hebrew *Ararat*: the name of the kingdom in the Armenian highlands whose non-Indo-European language predates the attestation of Armenian (an individual branch of Indo-European related to proto-Greek and Phrygian) in the region. The Seljuk Turks conquered most of Armenia late in the 11th century; the Mongols, early in the 13th century.

³² This is the name of an Armenian-speaking district now in the Republic of Georgia.

³³ The town of Oshakan, in the Republic of Armenia, is the burial place of St. Mesrop Mashtoc', who invented the Armenian alphabet at the beginning of the fifth century. Khotortjur, a mountainous region in Western Armenia south of Pontus, was mainly Catholic before the 1915 Genocide eradicated its native population.

³⁴ Il'ya Repin (1844-1930), a Russian painter in the Romantic-realist style; the canvases of Vladimir Makovsky (1846-1920) are similar. Perē Proshian (b. Yovhannēs Tēr Arak'elean, 1837-1907) was a realist Eastern Armenian prose writer, Xal'atur Abovian (1809-1848(?)), wrote in Eastern Armenian the first vernacular novel in the language, *Vērēk' Hayastani*, "The Wounds of Armenia". Edmond Rostand (1868-1918) was a French neo-Romantic poet and playwright.

scent of the flowers of the familiar plain and wood, their aroma. And my loquacious Proshian is a thousand times more precious to me than the lofty Western idealist Ibsen or the genius Shakespeare.

This is where I offer my most conservative slogan. Fine art must grow and develop in a free and open context, free of absolutely all sectarian concepts and modes of understanding, and, without question, on its own native soil. It is accepted to divide and recognize men according to the label stuck on their foreheads. Once upon a time (116) Grigor Artseruni saw the salvation of the Armenian people in his journal *Mshak*,³⁵ and anybody who didn't have its label glued to his forehead was no Armenian, maybe not even a human being. The same label exists now as well. You would think people were being saved by a label, like the pairs of animals on Noah's ark, from life's universal deluge. I know some wonderfully corrupt Armenians called intellectuals who have boarded Noah's ark with a shiny brand name affixed to their foreheads and have entered the ranks of good men or holy cows. And I know wonderful, lofty men whose brows are clear as the blue sky, their hearts as open as the broad sea— but since their foreheads don't have the soap wrappers of the Baudelot or Ralle companies,³⁶ or the label of a tin sardine can, plastered to them, they have not gained admission to Noah's ark and are floundering in the worldwide flood of human stupidity and ignorance. And we, the new men, arrive like the Napoleons or Vahagns³⁷ of Armenian thought to rip those labels to shreds and to strip the confining labels from the brows of men called [illegible word in the original text], and to reveal the genuine, pure, soapy foam. Talented men cannot be confined within the limits of politics and sectarianism. They make their own talents and they discover their own world, so that we may stand, our brows unclouded, facing the dawning of the morning sun waking our consciousness. Life will be the cause of our joys, will inspire the consciousness of the fact that it is we who are called on to enjoy this world, to become intoxicated on the gifts of the bounty of the earth and the universe. And if we want to lead healthy and happy lives, then it is necessarily by taking from the earth that which is essential to us, to all men generally, and even at the moment of death to raise the cup of life in our hands and cry out as we die the salutation "Live long!"

For all of us, for man, good and healthy nourishment is a necessity, so that we, as human beings, may be healthy and beautiful in soul and body. When healthy food enters our stomachs and we are standing close to nature we are fortunate— since we grow, since our stature is not arrested but increases, waxes greater and stronger. Our thought must grow and strengthen in the same way; our emotions, too, cannot lag behind. For thought is condensed feeling, and thought is healthy when our nerves, our feelings, are freshened by familiar, pleasant, and cheering impressions and moods. For that reason it is necessary for us, the universal masses, to have accessible and digestible fine arts and literature. That art

³⁵ The left-liberal Armenian newspaper *Afak* ("The Cultivator") was published at Tiflis, 1872-1921, with Grigor Artseruni (1845-1892) its founding editor.

³⁶ Both are illustrated here; for a general discussion of Tsarist Russia's exquisite soap wrappers in Art Nouveau and other styles, see Anikst/Chernevich (1990: 40-43).

³⁷ Vahagn was the Armenian equivalent of Herakles in the pre-Christian era; see the note on *Erkawk'* above.

and literature which is accessible only to the chosen few (117) is private property, like a palace in the midst of myriad hovels. The masses have to turn from their huts to the palace of thought, and to do that one has to have accessible literature and art. But accessible, digestible art and literature can be achieved only in an environment that is familiar and intimate. For me, *Pepo*³⁸ is worth a thousand times more than the famous *Hamlet* or *Doctor Stockmann*.³⁹ *Pepo* is ours, it is related to us, and we understand and love it, while *Hamlet* and *Doctor Stockmann* are foreign, alien to us. The clouds massing in the mountains of Scandinavia will never be able to irrigate our plains. We are men of the East and we are accustomed to the rays of a hot sun. The pale beams of the north cannot warm us. The winds blowing out of the west cannot refresh us unless that wind comes through our familiar mountains and over our plains.

Our Proshian has his taste and aroma—in his writings I sense the taste, the smell of our wonderful grapes and peaches from the plain of Ararat; but what is there for me—and I'm not even speaking about the owner of a stall in the Armenian Bazaar or the Armenian of an Armenian Molladursun⁴⁰—in Rostand's *Chanticleer* or Mirabeau's *Garden of Torment*, where the French soul addresses me in tone alien and incomprehensible. Everything has to be natural. Let crows caw like crows, and nightingales sing their enchantments as nightingales. But woe to us, when we want to sing like nightingales if we are crows, or if we try to force a crow's squawk out of a nightingale.

Russian literature is familiar to us and we are close to Russian life, but can some Armenian Markos from Qishlaq Karapet or Molladursun understand Chekhov's humor or [Saltykov-Shchedrin's satire? No, he cannot, not at all. He will understand Baronian's⁴¹ Baghdasar and laugh, the face of deacon Arut'ik will crease in a smile, and so will that of our stall owner in the Armenian Bazaar and that of the Armenian intellectual in his top hat. Proshians "The Moths" will move the denizen of Oshakan and the Armenian immigrant in Boston, since Armenian speech is transmitted by invisible wires, from every place to Shresh hill and the summit of Aragats, where the unwilting blossom and our familiar mandrake grow.⁴² That which is intimately familiar always smiles at us, while the unfamiliar and strange taxes our minds. Unfortunately, how many men know Ferdousi, the poet of the East, or Varuzhan, mighty and powerful in spirit?⁴³ While of course a great many know Schiller

³⁸ A play on the urban life of middle- and lower-class Tiflis Armenians of the 1870s by Gabriél Sundukean (1825-1912); Hamo Beknazaryan directed a film based on the play in 1935.

³⁹ A character in Ibsen's "Enemy of the People".

⁴⁰ A village in the Ejmiacin district of Armenia, now called Sahumyan after an Armenian hero of the October Revolution.

⁴¹ Yakob Paronean (W. Arm. Hagop Baronian), 1843-1891, an Armenian writer and playwright from Constantinople whose work satirizes the manners and personalities of the Armenians of the Ottoman capital.

⁴² *Šēs Mur* ("Asphodel Hill") is Kara Darvish's most famous Futurist poem; Mt. Aragats is the tallest peak within the present borders of Armenia, in view of the plain of Ararat.

⁴³ Abo'l Qāsem Ferdōsī (940-1020), was the author of the *Šāh-nāme* ("Book of Kings"), the national epic of Iran. Daniel Varuzhan (W. Arm. Taniel Varuzhan, b. Č'puk'k'earean, 1884-1915) was a Western Armenian poet and co-founder with Kostan Zarean (who describes an encounter with Kara Darvish in Ch. 9 of his novel "The Ship on the Mountain", partly translated here) and others of the Constantinople journal *Mehean* ("Temple"), which came out the first seven months of 1914: the outbreak of war put an end to the enterprise. Zarian was the motive force of the journal: his philosophy, an unabashedly fascist refraction of

and Byron. (118) *We always scorn the East. Aren't we always contemptuous of a Persian countryman and his creations when we see him, but even if the voice of a minstrel bard coming from the world of the smoking jacket, tuxedo, and top hat does not ring sweet in our ears, he still dazzles our eyes and our hearing throbs with the drumbeat of his talent. The toy civilization of the West...*

We, the educated, we who are infected with the malarial jaundice of Western civilization, have learned to look with contempt upon our own culture, our art and literature, seeing a halter on the neck of every thing. Even the crow of the west seems a nightingale to us, while our peacock with crow's wings— has it not lost its European feathers? The masses are more sincere, uninfected by that malarial jaundice of European civilization. They walk by the promptings of their innards, their hearts, but for good or ill when they love something, create it, appreciate it, we have words in our dictionaries to evaluate their taste, calling their theater vulgarity,⁴⁴ defining their literature as the "immoral fare of the streets", even though very often we, perched on the heights of our culture, buy tickets to that very vulgar theater and find pleasure and fulfillment in it. Who has not gone to see Arshin Mal Alan⁴⁵, and who has not taken his fill of laughter, drinking of the waters of the heart, with those wonderful Eastern melodies? The educated inrtelligentsia, its face equipped with a pharisaical mask, makes fun of the people and the theater of the masses, deriding it and its beloved Arshin Mal Alan as immoral.

But the blood of the race has something else to say, and it speaks within. The accepted cast of mind condemns because the accepted, lofty, contemporary understanding of the public is that way. But the depths of the heart laugh, delight, and bless the hand of the creative artist. Arshin Mal Alan is that talented written work, that flower of the plains, that fine art accessible and digestible to the understanding of the masses, of the people in common. Doesn't even Kirakos in Molladursun have a demand for art? And are you going to serve up Doctor Stockmann or Wagner to satisfy it? It's just the same as feeding the stomach heavy leather strips cut from old boots and expecting it to digest them. And if Kirakos from Molladursun or that stall owner from the Armenian Bazaar turns in scorn from your Chanticleer or Hamlet, embracing with open arms Vali Ghazo,⁴⁶ don't be surprised. He's known Vali Ghazo for a long time, and Ghazo is a talent he embraces, caresses, and honors. My Ghazo is much more precious to me than the Frenchman's

Nietzschean thinking, is overtly and repulsively racist and anti-Semitic. He believed that the Armenians, an "Aryan" race, share with their blood brothers a genius for mythology, as opposed to the arid prophecy of Jewish religion. Christ supposedly overcame and destroyed the Jew in himself. The journal was dedicated to nativist and innovative currents in Armenian art, literature, and revolutionary thought. Varuzhan was arrested with other Armenian intellectuals of the capital in April 1915 at the start of the Genocide and was deported and murdered with them. Zarian survived and ended his days in Soviet Armenia. On Zarian and Varuzhan see Nichanian: (109f., 203f).

⁴⁴ Kara Darvish uses the word *balagan*, from Persian via Russian, which deprecatingly denotes street theater put on with an open wooden box for the characters, something like a Punch and Judy show.

⁴⁵ A 1913 Azeri comic opera popular with Armenians: the cover of an American-Armenian musical score of the opera published by Prof. James Mosagofian of Astoria, NY, it is reproduced here.

⁴⁶ A character in *Arshin Mal Alan*.

Mouset-Sully⁴⁷ or the German's Possart,⁴⁸ because he grew up in the sun of the East and on the East's soil. (119) Doctor Stockmann, Possart, Mouset-Sully, and Hamlet are all the same to the Armenian Krpo with his tattered trousers and hungry stomach— you might as well drape a sumptuous smoking jacket made by the Sheremetyevs⁴⁹ tailor on his bare back and stuff his starving gut with tasty sweets by Massieux. Krpo's back won't be warmed and his stomach won't be sated. The East, the East, is where the sun warms an oriental, where the breeze refreshes us. Our art and literature must be very profoundly and intimately eastern, for an oriental, so that it may occasion joy for us and be digestible and accessible to our souls and minds.

Then we will grow and flourish on our own soil and beneath the rays of our own sun, and not in a hothouse, the fire of whose furnace is stoked with coal.

3. Kara Darviš, *İnç' ē futurizmā?* ("What is Futurism?"), Tiflis: Tparan "Ēpōxa", Muzeiskii pereul(ok) ("Epoch" Printers, Museum Lane) No. 8, 1914.

From Sayat' Nova towards Futurism.⁵⁰ New ideas, new feelings have come to the fore in all epochs, in all nations, and chiefly in nations that have attained to high culture. The backward nations are always more conservative and are more firmly bound to ancient traditions and customs than the enlightened and civilized nations.

⁴⁷ Jean-Sully Mouset (1841-1916), a famed French actor.

⁴⁸ Ernst von Possart (1841-1921), a German actor and theater director.

⁴⁹ One of the wealthiest families of the pre-Revolutionary Russian nobility.

⁵⁰ The songs of the bard Sayat' Nova, d. 1795, which he recorded in his *davt'ur*, or notebook, in his own hand in Tatar (Azeri Turkish), Armenian, and Georgian, are considered the finest of the works of the Armenian *ashughs*. Since their publication and study by Akhverdian in the mid-19th century the fame of the poet steadily increased. In the late 1950s and early 60s Soviet Armenia celebrated the poet's bicentennial with numerous monographs, editions, and translations of his work. His dramatic life: initiatory dream, victory in competition with other singers, doomed love affair with a Georgian princess, exile to the monastery of Sanahin, and death at the hands of Turkish marauders— became the subject of the avant-garde Soviet Armenian director Sergei Parajanov's famous film *Nyan gnyo* ("The Color of Pomegranate"). The poet Paruyr Sevak (1924-1971) wrote his dissertation on Sayat' Nova. Sevak died in an automobile accident. His son, who survived the crash, has written to me that although the catastrophe was not orchestrated by the authorities, the Soviet regime had bounded the poet to his death. Parajanov was arrested and imprisoned by the Soviets on charges of homosexuality and foreign currency transactions (both criminalized by Stalin). So the 18th-century bard of Tiflis was not just a national icon, but the patron saint of freethinking Eastern Armenian artists as well. That makes the suggestion by Kara Darviš that the cult Sayat' Nova holds back artistic progress all the more delightfully scandalous.

And it is not surprising that the more ignorant, benighted, and backward a nation is, the more ferocious and fanatical it is in its conflict with new ideas, new feelings, and innovations generally.

Change in the philosophical world view of peoples, their taste, and their customary sentiments, is not affected easily: everything that is ancient, wasted, and sapped of its strength gives way in the face of a hard fight, a strenuous contest.

The desire to live and the sense of possessing existence, it would seem, endure even in abstract conceptions— for do they not spring from the realm of a man's feelings and thoughts, while thought itself is nothing if not compressed emotion?

But how impoverished and desolate life would be, were the new thoughts, new feelings from time to time not to form currents, streaming into and refreshing man's life, endowing their experiences with health.

Here are the Asiatic nations for you, immobile, lingering behind the progressive course of life. How monotonous and stagnant their life is!

It is true that amongst those who love color, perhaps, one might still find poetic motifs in a life of that kind; maybe in that sort of life, for the sake of stylization one might find elements for the display, the expression of the visage of a particular culture. But it is questionable how useful to the improvement of human life that culture is, how positive its aim, for all the great ethnographical interest its stylized forms present.

One does not have to be a prophet to resolve that question. Wherever movement and progress are absent, life is never capable of renewal, the conditions of life cannot improve, and the lot of men cannot be bettered.

In order to make the matter clearer, let us turn to examples. The backward nations are opposed to enlightenment, and so, too, to science. By science one means the kind of knowledge that sets life and its social conditions on forward-looking paths leading to progressive renewal. Science is taught in our diocesan and parish schools— but let life itself attest to what kind of science that is. It is a science imbibed by the students who go on to fill the ranks of the intelligentsia of our deacons and seminarians. There could be no better name for this than the one given by one of our newest poets: a "parochial intelligentsia".

Science, by changing the technological, external aspect of human life, transforms men's conceptions also with regard to the life they lead. Paring your fingernails and keeping your hair free of lice is a much more life-giving science than the chemistry and physics taught at an Armenian seminary. But will our educators turn their attention to such minor matters, especially those teachers draped in the toga of a German doctorate?

It is interesting to consider: Where are men more oppressed, enslaved, and subject to worse living conditions, than in the more backward nations and countries? Authentic culture and science serve above all the cause of ensuring human happiness. And all the small and large achievements that science is accomplishing and has made, serve the task and aim of situating human life in better conditions.

Most men react with displeasure or even animosity to every novelty or innovation in any sphere of life. Morality necessarily plays a great role in this.

As is well known, some of the younger representatives of the Russian Futurists, chiefly the painters, paint their own faces. That is, they paint various images (flowers, animals, and so on) on their own faces and foreheads. Youth, in the principles and faith it professes, has always been stormy and unrestrained, and always will be. One can regard this innocent behavior as mere mischief. As, indeed, the noted Futurist scholar Kulbin⁵¹ says in his lectures, that is not in the essence of Futurism and one must adopt an attitude of forgiveness to such manifestations.

But take a closer look: it's not all that true. Archaic morality slithers like a snake through the petrified concepts of mankind. Just such an intellectual and even a famous actress, face reddened by agitation as though she were in the grip of a fever, nerves taut like blue ropes on her face, set out to prove that the behavior of the Futurists—painting their faces—is morality-dissolving stupidity of the highest degree. This is not true fine art, but repulsive charlatanry, shrieked the agitated actress, evidently defending the received, recognized art of her own.

At that moment I was unable to restrain myself and said, quite simply, "So why is your own face painted and powdered?" (The lady had put on mascara.) The woman became slightly agitated, but, restraining herself, she pronounced, That is accepted. Yes. That is the very best answer I could expect: it is our morality, said I. The particular conditions and situation of life create the morality of a particular period, and that becomes the flesh and blood of the inner experiences of men. And that is the reason why when a new shift⁵² comes to the life of men, to propel forward a new movement, people are instantly nervous and are seized by the sentiment of contrariness, fearful lest their situation in life be disturbed, not wanting to turn their carefully ordered existence, customary aesthetic, and sundry other tastes topsy-turvy.

That is the situation of a way of life centuries old, a morality structured over the centuries, that protests against new ideas and innovations, occasioning psychological disturbance and distress. This inner drama tends to be especially powerful in people at a low mental level, in benighted nations at a low cultural level. As an example for you, take the patriarchal family of olden days. The parents. How many dramas do we know from that world, when a son or daughter—the children, in a word—has acted contrary to the old, traditional customs, forms, and rules. There have been tragic consequences when the son or daughter, against their parents' will, went off after a lover. Here is a frightful protest against individuality and a struggle on behalf of individuality.

Individual uniqueness: this is what both individual men and life acquire through great struggle, wresting it away from a fortified, sedentary life. A little brook with its strong push is better than a monotonous, wide-spreading, malodorous swamp. Life is thus: a little healthy, dynamic sliver of it is more life-giving than life's monotonous and wide-spreading sea, which is great in extent but shallow in depth, motionless, and stagnant.

⁵¹ Nikolai Ivanovich Kul'bin (1868-1917), a Russian painter, musician, philosopher, and scholar of the avant-garde and the fine arts.

⁵² After Arm. *bravun*, Kara Darviš has in parentheses Russian *shvig*. This was a watchword of Futurism that Compton (1978: 21) renders as "shift".

Even thus is morality, which has often been the cause of economic and moral collapse, furthering disintegration between two colliding conceptions, world views— old, long accepted and sanctified morality, and a new morality.

In the course of the history of diverse nations, there have been of necessity moments when there has come a mighty flood of new ideas, overcoming the entire inheritance and treasure of the earlier culture, often with the élan of a vandal smashing it to smithereens. Of course, that kind of boisterous current of new ideas can call forth great confusion and dissatisfaction, and reaction amidst the ranks of traditionalists. But the new ideas, the new concepts, as they accomplish their conquest, settle down and solidify in life, becoming the foundation stone of a new morality and a new life. The same historical phenomenon occurs in the realm of art. Innovation, the new schools of art do not easily find a place in our life, and it is only through the dark woods of persecution, under attack, that they make their way, make it through, and force back the artistic forms of an obsolete taste.

New fine art [nřđ-gelarwestā], to which they assign the name Futurism, is engaged in such a battle and is passing through just such a dark wood of persecution. The opinion of the famous Russian critic and scholar of the arts, Alexander Benois,⁵³ about this artistic trend deserve the keenest attention. Here is what he writes: "I am fully convinced that the last genuine Greeks and Romans would have felt the same thing we feel now. They fell into perplexity, seeing how all the world around them was being destroyed, how underground forces were digging a grave for everything that was the most beautiful, the wisest, the most sacred.

Year by year the ardor of their anger towards these vandals waned, and from year to year their fascination with the utterly strange and alien blossoms grew. Of course the Burluiks of those days would say absurd things, but they still directed their gaze to those absurdities, for hidden beneath their surface was a great and immediate, elemental power.

Surely the Burluiks⁵⁴ of those times (the innovators) have been lost without a trace, but did they not bring us to the thing we now call Byzantine art, which it is now customary for us to look at with wonder and admiration? Is it not thanks to them that the face of the world has changed? And even if it has lost its wondrous clarity, still it has become deeper and more meaningful".

One can clearly conclude from these lines that even such a critic and scholar of fine art as A. Benois does not reject the usefulness of innovation, even if it is Russian Futurism, which is still totally disorganized, looking for itself. In another place Benois has some profound comments worth close attention that I consider it particularly important to cite in order to elucidate the matter. Here they are: "I confess I lack the conviction to step forward and angrily declare a crusade against them (the Futurists). Of course they are untutored, they are vandals, but perhaps it is also a good thing that they are untutored vandals. Let them work on their own for everything that exists and stands on the brink of destruction: Ein

⁵³ Alexander Nikolayevich Benois (1870-1960, Rus. Benua), a painter and art historian, one of the principal organizers and ideologues of the "World of Art" (Rus. *Mir iskusstva*) group.

⁵⁴ David Davidovich Burluik (1882-1967), a founder of Russian Futurism.

*neues Leben wird aus den Ruinen blühen—A new life flowers in the midst of ruins.*⁵⁵ I have no personal need of their creative work—to our way of thinking it is crippled and poor. But the excitement they inject into our aesthetic life is useful and in any case it can carry one anywhere, it transports. The whole idea of culture consists in not standing still. One has to advance, not stop. Burlinuk and his like press on. They are restless, excited, they infuse agitation and do not allow stagnation. But they do not really know what it's all for, and neither do we. It is quite possible that individually, in fact, they are not doing anything, but something or other is still being done, accomplished, and that new thing is expressed through strange but inevitable, useful exertions".

So here, too, is a proof spoken by the mouth of A. Benois, that the new, that innovation generally, stirs, moves, and freshens not just our aesthetic lives but even our everyday existence. For does not life, too, change in accordance with our tastes and perceptions?

Here you have three men talking; and now they are creating a piece of life. Life—they themselves, these men, are creators of an atmosphere and the way men are is how the atmosphere now will be. The kind of men they are: that is how the life and atmosphere they shape will be. Innovation in literature and art plays a huge role. Innovation, as we have seen, introduces excitement and disturbance into our intellectual and spiritual world; and accordingly it does not allow the possibility of stasis and stagnation. Futurism, or, properly called, new fine art, has introduced such ferment and disturbance today into Russian literary and artistic life.

And, astonishingly, we too have literature and fine art, as it were, but it has always been guarded by antiquarians and dustmen from external "harmful" influences. Our ignorant, clerical press has played a big role in this, having been always a countervailing force opposing new trends, nipping in the bud every tendril, every flower of any modern literary current or influence, clasping tightly to its breast and elaborating upon the moldy dustcovers of its medieval tomes.

I recall how when eight or ten years ago modernism—Symbolism—was making its way with shaky and uncertain steps into our literature. One of critics cried, "Help! Help! Armenian literature is being corrupted!" And our petit bourgeois,⁵⁶ clerical intelligentsia immediately averted its gaze from the newest "face" of literature, since the representatives of the new literary current did not belong to any of the existing big political parties or work for either of the two major newspapers of the time. Is it not the case that till now among us the stubborn conviction of the common herd⁵⁷ prevails that all "talents" and "developed" men are to be found only at the two existing papers, *Mtsak* and *Horizon*—and those who express themselves elsewhere than in those pages are neither writers nor talents. At the moment only by mixing with the party herd and adopting the art that smiles on the present time is it possible to be acclaimed a talent and to earn the title of a writer. A small price to

⁵⁵ This is a somewhat garbled citation of the verse of Schiller: *Das alter stürzt, es ändert sich die Zeit/ Und neues Leben blüht aus den Ruinen* "The older falls, time changes/ And a new life flowers from the ruins".

⁵⁶ Kara Davit' here uses a loan, *mek'ian*, from Russian *meshchanin*.

⁵⁷ Arm. *sherivakan*, pron. *shariv(v)-akan*, an adjectival formation from Tk. *sarv*, "flock, herd, gang".

pay for tasting the sweeter things of life. Yet however easy that art may be for those who have acquired the facilities of literary tightrope walking and flexibility, literature and fine art for all that have their natural ways and needs, and if in the event one does not satisfy them, both the healthy mind and authentic art will wilt and wither and waste away.

Armenian thought today has wasted away. Armenian art has wilted, because conforming to the psychology of smiling at the times, of following the herd, cannot be adequate to the task of wakening a new and fresh kind of Armenian thought and bringing forth a new Armenian art.

And that is why our life has turned into a stinking, rotten swamp whose surface is covered with a layer of green that appears to one coming from far away, who is not familiar with the situation, as an emerald meadow. But it is sufficient for the naïve stranger to set foot on the deceptive pasture for him to be sucked in, suffocated, and drowned. And the hideous croaking of the aroused frogs, filling the world with their clamor, drowns out the weak cries for help of the stranger.

Understanding this, the stranger coming from modern literature will not be misled by the green "meadow" on the horizon, but will go toward unknown horizons and seek his meadow in other climes, where even if only the first buds are sprouting, they are at least not the green of a reeking swamp. Armenian life is so decayed and stagnant that the Armenian mind has become a dry gum drained of its sap. Talent and original thought are persecuted in the public forum; and banal thoughts and banal feelings have become the by-words of Armenian progressivism. And it is not surprising that it is so, for if even the poet-president of the company of Armenian writers is capable of spending an entire night pondering the question of whether the bard Sayat' Nova was a bishop or just a celibate priest, and then, after wearing himself out at length is still unable accurately to solve that huge literary problem,⁵⁸ then it can never come as a surprise that Armenian literature has become a swamp and needs bold Burluks to come and stir up that stagnant pool, even if the aroma of that particular garden of roses makes them gag.

Over the last two or three years a literary clique that has assumed control of the Armenian literary company has expended trouble and effort to advance the bardic movement in our literature.⁵⁹ And they propose, as the standard of this literature, the essentially lyric poems of the 18th-century bard Sayat' Nova, which with respect to their language and form of versification, can at best be an object of ethnographic and antiquarian interest in the time of their composition but cannot serve as the foundation stone of our literary movement now, at the present day, when the psychology of today's Armenian, particularly the urban Armenian, is entirely different from that of the Armenian or two centuries ago. In this instance it is not at all surprising that today's generation is demanding

⁵⁸ A swipe at the grand old man of Armenian letters in Tiflis, Yovhannēs T'umanean (Hovhannes Tumanian).

⁵⁹ Arm. *afutlukun hosank'*: this "current", going back to ancient oral literature, would include Sayat' Nova but also folk poets of the early 20th century like Jivani, whose song *Jaxord örer* (pron. *Dankord örer*, "Unlucky days") is still popular today.

singers who sing about its own life, desires a literature and art of one's own, and is not carried away by the sing-song⁶⁰ of 18th-century bards.

Urban life has developed most powerfully today; and the overwhelming majority of the Armenian people live in the cities that have seen the great miracles of technology and industry: Tiflis, Baku, Rostov, Moscow, Constantinople, Alexandria, Cairo, the cities of America, etc.⁶¹ Village life, lagging behind that of the great cities, is gradually crumbling as urban industry penetrates there, too. It is clear that for a man of the present moment there is a demand for a different literature, a different kind of art with its corresponding modes of thought, that speak to the soul and mind of modern man, and not a literature specific to Armenians or driven by the winds of Romanticism. The cultivators of literature who lag behind the demands of the life of the present age, and who are powerless to satisfy those demands, are the only ones who profit from the situation.

Life itself possesses the greatest power, and it will scatter to the winds those artificial birth pangs and set literature and art on the paths of authenticity. And the first indications of the trend of such paths are the expressions emerging in our literary life of those particular experiences, the ones that bring a new literature and a new art to the present generation. Questions, questions, and more questions—like the myriad trees of a forest, they crowd around us! But let us turn to our issue, to Futurism, and explain what it is, something our wise literary sages,⁶² uncomprehending, keep on explaining as abnormality, even though nowadays the soundest literary normality will not pass muster with even a healthy fool.

⁶⁰ Arm. *neymnerov*, Tk. *neym*, a deprecatory term somewhat like English *la la la* or Persian *dalang* *dalong*, is one Charents also liked to use in his broadsides against vulgarity in contemporary culture. It mocks the hackneyed and mindless clichés of popular songs—doggerel, three-chord wonders, elevator muzak, and all the rest of the musical and poetic kitsch that is the background noise of life.

⁶¹ A strange and interesting list, demonstrative of the cognitive disconnection one often observes between the Russian and Turkish Armenians. Kara Daviś mentions the comparatively minor north Caucasian city of Rostov (Armenian *Nor Nakhichevan*); but except for Constantinople the Western Armenian cities—Smyrna, Kharpert, Tokat, Gesaria-Kayseri, Sepastia-Sivas, Malatya, Dikranakert-Diyarbakir, Bilein, Mush, Van, etc.—escape his notice entirely. Nor does he seem to be aware (though this may have been only a polemical ploy) that a vast number of Armenians, again in Western Armenia (90% of the historical territory of the country), were rural farmers, not city dwellers. As to America, by 1914 there was a significant working-class urban diaspora in the Northeast—Worcester-Lynn-Boston-Pawtucket-Providence and New York. But again, there was by then a significant Armenian diaspora community of farmers in Fresno, California and environs (the great Armenian conurbations of the Los Angeles basin remained in the distant future).

⁶² Arm. *Xikar imazhamera*. *Xikar*, whose name as a common noun or adjective has connoted a wise man in vernacular Armenian since medieval times (the bard Yovhannēs T'ikuranc'i uses it, for instance), is *Abiqar*, the hero of a late Assyrian wisdom tale in Aramaic that entered the corpus of Biblical apocrypha. The story was popular in the East Christian world generally: *Akir premdryē*, "Abiqar the exceedingly wise", was one of the manuscripts bound in the miscellany that—it is reported, since the precious volume was supposedly consumed in the great Moscow fire of 1812—contained the unique copy of the great Old Russian epic *Slovo o polku Igoreve*, "The Lay of Igor's Campaign". It was first translated into Armenian in the 5th century and remained popular, finding a place in the miscellany of didactic tales of wisdom and adventure called *Patmut'wn Phytē K'alak'i* ("History of the City of Brass"). That is the name of the main story in the collection, which derives from Indian and Iranian cycle of stories gathered together in Arabic as the *Thousand Nights and a Night*. The last edition in Classical Armenian of *Patmut'wn Phytē K'alak'i* was printed at Tiflis in 1865. It was intended for popular entertainment and edification: another case, if one wishes to see it so, as the arbiters of literature clasping dusty medieval tomes to their breasts and forcing

Marinetti in Moscow

When Marinetti was in Moscow his lectures, as we know from the papers, enjoyed thunderous success, even though the Futurists themselves adopted a thoroughly negative attitude towards him. It is sufficient to recall the letter printed in the paper from one of the most typical representatives of the Futurists, the painter Larionov, where he calls Marinetti "tasteless and vulgar"; and the message he preached, "an absurdity". And maybe that was the reason the majority liked him— that he found for himself and his listeners a common language in which to be understood. One can fairly consider this a sign of banality,⁶³ since the apostle of a new art and movement, an innovator, has always historically stirred the taste of the public, its perceptions. It is inevitable for a clash to emerge in the world views of the innovator and the masses; few understand genuine art and it is accessible only to a few. Marinetti in this instance proved more diplomatic. In his lectures he did not issue a clarion call about the cult of war as a soul-fulfilling hygiene for the world, (Marinetti 2014: 61, pl. 26)⁶⁴ nor did he have the temerity to discuss the cowardice of Tolstoy; and, finally, he neglected to express himself on his contempt for women and his fond dream of begetting a "mechanical son".

He spoke of the healthy instincts of peoples that break away and long to press forward against the earth's forces of stasis. He spoke of the values of races, and that carried some notes of bravery yet at the same time was unexpected. He spoke of the slavish, follower, museum mentality, of arid bookishness. Finally, he said that for any tendency to emerge victorious it is necessary to unite forces, rather than split into party factions. In the end, the essence of every trend is not just in its excesses or its strange features. And all this is just as understandable, especially for us, the Russian intelligentsia (and this is to be understood as the Armenian intelligentsia also), for we are eternally, forever arguing, getting twisted in knots, trying to break all records. Look at it: anyone who does not get the last word in, is unable to rest easy afterwards.

Marinetti himself confesses that an ideology of Futurism has not yet been created, that it is a task for subsequent generations, and right now it is necessary to labor just for mental hygiene— the preservation of health. Futurism is an expression of contemporaneity. And one is to express mental health through the cultivation of physical strength— sport— and by boycotting museums and libraries. "Every day an adolescent boy spends in a

them upon the populace— though there is no indication anybody resisted the book, and anyway the living speech of Kara Darviš himself owes something of its rhetorical panache to it!

⁶³ Arm. *k'awahit'ean*, gen. sg., a word whose meaning I cannot find, may be a misprint for **banahit'ean* "of banality", cf. Kara Darviš' use above of *banal* as a loan from Rus. into Arm.

⁶⁴ The essays in this recent exhibition catalogue examine unflinchingly the dehumanism and anti-Christianity of Marinetti in particular. The first Soviet commissar of the arts, Anatolii Lunacharsky, and the great Italian Communist theoretician Antonio Gramsci initially regarded Futurism as revolutionary, but Marinetti turned decisively towards fascism. He disapproved of the Nazi suppression of so-called *entartete Kunst* "degenerate art", but nevertheless followed Mussolini to the bitter end. Emilio Gentile concludes in his essay in the volume that the Futurists "were not precursors but they were prophets" of the Nazi concentration camps (65–75, 172).

library⁶⁵ is a day lost", proclaims Marinetti; and, as an example of an ideal poet, points to a comrade of his who is a Neapolitan sans culotte⁶⁶ who has never heard of Petrarch or even Dante.

And for us, infected by the diseased narcissism of the Oriental, with our slack and sickly nerves, it may be helpful to be infected by Marinetti's adolescent joie de vivre. But that religion of muscle is insufficient for living and believing.

The Aims of the Futurists in Italy

In a relatively short time Futurism has gained numerous adherents, both teachers and students. Futurist pictures, prose, and poetry have appeared. Futurist lectures have started to be read and now Futurist fashion cabarets have sprung up. The public, quite naturally, wants to become acquainted with the essence of a new current in art. Futurism is an artistic current, even though genuine Futurism preaches the renewal of all strata of life.

It is most natural that the voices of that renewal were first heard in a country that is living through the period of its decline, a country that presents the spectacle of a gigantic cemetery, where the creation of new frames of reference for life and art died out long ago. That is Italy.

At the time when the other states of Europe were flowering—at that very time Italy was gradually declining culturally, and in the midst of that process of decline and disintegration it was by historical necessity that new, keen, convulsive forces were born. Futurism manifested as the first such force.

Futurism in Italy is a political and social movement, and is so serious that the Futurist's ringleader, Marinetti, declared his candidacy in the last parliamentary elections in Italy. Although Marinetti did not win a majority of votes, the fairly significant showing of the Futurists indicates that Marinetti's campaign was taken seriously.

The political, or, to put it more precisely, social credo of Futurism is as follows:

- 1. Love for one's country, and, correspondingly, hatred for Austria as Italy's most threatening and powerful neighbor.*
- 2. Spreading urban culture, with its production, factories, and mechanized environment.*
- 3. Militarism, as an indispensable means for a nation to acquire power with relation to other peoples.*
- 4. Doing away with sentimentalism and possessing an iron will, both of which are essential for those creating the country anew.*
- 5. Hatred towards philistinism, because a country needs heroes, and philistines are never capable of being heroes.*

⁶⁵ For "library" Kara Darviš uses the most august and venerable term in the language, *matenadaran*, which is generally reserved for a repository of manuscripts and rare old printed books, rather than *gradarum*, the more quotidian public library.

⁶⁶ Arm. *sankhewot*.

6. *And, finally, hatred of Woman as the single source and cause of weakness, who takes away from males their best years and disposes them to inanity; and this is the case insofar as Woman herself does not evince the strength to be a hero and creative force, and is thus incapable of being the equal of the male.*

This is the political and social program of the Futurists.

The Aims of Italian Futurism in Art

In the sphere of art Italian Futurism expresses itself through the de-divination of old art. It is necessary to cut oneself off from everything old; it is necessary to get far away from museums, and if it is not feasible to do that, then one is obliged to destroy them.

So here Futurism introduces into art a thing completely new: The sermon of motion. Futurism states that life is embodied motion. Life moves forward without cease, and a powerful, ceaseless labor is being accomplished by which the city grows, the culture of the city grows, and the rural and agricultural way of life diminishes and turns to dust. So this is that side of the city: life itself, motion, which the Futurists are working to transfer, to inculcate, into art.

Futurism is an elemental phenomenon. The history of literature is uninterrupted motion and the new generation of poets is never able to rest content and satisfied with the axioms of its predecessors. The young poets instinctively desire in their verses to embody every new thing that has entered the psychology of humanity in the last decade; and for better or worse those poets are seeking to express it.

So that is the historical justification of Futurism, that spread swiftly from Italy and France to Germany and even England, and has reached even us, the Armenians, here in the Caucasus. Here I would like to pause longer than usual on Italian Futurism and chiefly on Marinetti, who is justly called the father of Italian Futurism and is the most powerful chief and leader of the Futurist movement. Futurist philosophy is founded on personal, individualist thinking; and its aesthetic taste, on purely individual feeling. In each and every individual, there is a totally different, distinct, particular expression. From this comes the total absence of a theory, a program of the kind typical of the collectivists, for whom viewpoint and theory take first place; while the Futurist is himself the individual and his unique perception, mode of understanding, and viewpoint constitute theory. Man himself is the center of the universe, to which everything refers, as a focus— that is the entire viewpoint and theory of Futurism.

As many men there are, there are that many centers and focuses, in which every spectator relates to the world in an entirely different way, illuminating it with the beams of his particular colors and inner qualities. So this ultra-individualism impels the Futurists towards personal modes of thinking and creation without any kind of connection to the past. To the contrary, the entire momentum of the Futurists is directed to carving away the thick layer of bark of the past, in other words, to casting off the back of modern man the oppression, the heavy yoke of the past.

The principal goal of Futurism is to sever the tie linking the present to the past. The Italian Futurist sculptor Boccioni says, "The ghost of Michelangelo has entered me and is keeping me from creating. I must at any price free myself of this monstrous specter". Marinetti says, "Italy is oppressed beneath its great and glorious past. That past greatness sits heavy and smothers the present, and buries beneath itself the new sprouts of young geniuses".

In the glare of the past, Italy in its present eclipse looks very trivial. Marinetti does not denigrate the great creations of the past; rather, he is even pained in his very soul that they are so very great and by their greatness have held back young forces, young talents. The man of today, according to Marinetti, thinks and feels in an entirely different way, because the man of the moment, equipped with a "telephone",⁶⁷ has a completely different way of thinking than his forefathers, who had no idea of telephones.

Genuine Futurism is the victory of youth and of healthy and enlightened energies. It is to renew man, instill confidence in youth, and render to our present the style, color, and visage we have lost. To make just that point, Marinetti says, "Twenty-year-old poets have gathered around me: Buzzi, Cavacchioli, Libero Altomare, Armando Mazza, Aldo Palazzeschi—on whom fame is already smiling. Together with me, through their verse and prose compositions they have been unmasking the outrageous situation that our intelligentsia has put us in with its opportunism and mediocrity, and have been calling for the need to elevate national honor, without which literature and art are impossible. One has to be infused with a free and living spirit and to feel oneself the builder of the future, rather than a slave, a worshipper buried in the dust of the past. We declare our aim to be the waging of an impassioned fight to destroy the cult of the past. Have you ever thought of the countless and innumerable dead geniuses, who crowd around and beset from every side and smother the few living ones?

Men are accustomed to think only of dead geniuses, work only on them, trade only them with each other. For them, everything is easy and prepared, the paths are smoothed out and the doors are wide open. They appear ceremoniously everywhere, pass through our cities, enter our houses, and spoil the air of our springtime with the stench of the grave. And people who live by the greatness of the past, for whom the past is one of the chief elements of their inner lives, are called Passéists.⁶⁸

In that way, the creations of past, dead geniuses and talents are bought and sold and used up, but as far as the living are concerned, their lot is just contempt, insult, and abuse. The young—that is whom we are fighting for, because they are the liveliest of the live. The young—whose lot is starvation. One has to say that the money which is spent on art in Italy is being collected in the tightly sewn up pockets of gravediggers. I regard as such the Passéist publishers, professors, scholarly and powerless critics [Arm. kriticosnerin:

⁶⁷ Arm. *telefon*, from Rus., rather than the usual native calques *herazūs* or *herajayw*, later in the essay, in his section on Futurist aesthetics, Kara Darviš uses *telefon* and *herazūs* together as though they were two different instruments.

⁶⁸ This is an Armenized version of the French translation of Italian *passatista*, rendered "traditionalist" in Greene (170).

perhaps a typo—J.R.R.] with their base mercantile spirit and their envious slander, against which we are fighting”.

Isn't the situation with us about the same? Don't we, too, have the crude critic who approaches newly-sprouted, newly-budding Armenian belles lettres and its representatives with his primitive taste and clumsy bricklayer's fingers, especially if they have been cast overboard from the safety of the existing great ships—our newspapers? Aren't all talented and learned people secured like the animals, pair by pair, of the patriarch Noah's ark, in those ships? And on the other side, aren't our publishers the very same *Passéists*? Don't we, too, have all our companies and accumulated funds just to publish nothing but Khorenats'is and Agathangeloses?⁶⁹ And haven't we got so-called scholars working specifically on them, whose entire *métier* and *raison d'être* is to find the tail that fell off a letter at?⁷⁰ We have publishing companies and organizations that are *Passéist* in the broadest possible sense of the word. They consider publishing the writings of a budding writer as throwing their money away down a hole. But they are quite capable of publishing the works of any writer who has accumulated enough dust to be consigned to a museum of antiquities, or a translation of any talent recognized in Europe—all of which become equally tasty food for mice on the dusty shelves of library stacks. For the present generation demands fresh mental nourishment—that is to say, the literature of now, and the singers of life the way it is now.

And in the days of domination by those profiteering from the past, declaims Marinetti, they kill every day any poet of genius, hurling at his head the desiccated mummy of some great poet of five centuries ago. The publishers toss the manuscript of a starving talent into the wastepaper basket and spend their money on the publication of masterpieces that are already well known. More than well known. And already published a hundred times over. America's billionaires, excited by grave-digger ad men, flock to Italy and pay insane sums for any work whose chief value consists in its having been buried in dust and muck that have entombed this precious morsel of past centuries.

The cult of the worship of antiquity has spread universally, even amongst us. For although we don't have billionaires, don't we still collect hundreds of thousands to erect an ethnographical palace where excavated stone vessels and bits of old, rotten wood and rusty nails are to be kept?⁷¹ While our talented artists and writers are perishing of starvation.

⁶⁹ The *Patmut'wn Hayoc'* ("History of the Armenians") of Movs'ēs Xorenac'i, the deeply revered *patmahayr* ("father of history") of the nation, is the classical text in which Kara Derviş himself found most of the epic and mythological material he used in his poems. The great critical edition of Xorenac'i that is still authoritative was published at Tiflis in 1913 by Maruk Abelean and S. Yartut'wnean so the remark is topical (as well as unfair). The *Patmut'wn Hayoc'* attributed to the mysterious "bringer of good tidings" (Gk. Agathangelos, Arm. Agat'angelos) chronicles the conversion by St. Gregory the Illuminator of the Armenians early in the fourth century to Christianity and contains his Teaching (*vazdapat'wn*). The critical edition of that central text of the nation's history, also still the authoritative edition, was likewise published at Tiflis, 1909, by G. Tēr-Mikrē'an and S. Kanayecan'. Both books were printed in the series *Patmagirk' Hayoc'* ("Armenian Historiographers"), edited by the great lexicographer Step'an Malxaseanc'.

⁷⁰ That is, the vowel *ə* in the Armenian alphabet. Kara Derviş' version of the "least jot and tittle".

⁷¹ Having savaged the extraordinary monuments of Armenian philology published at Tiflis at the time, Kara Derviş now takes aim at the study of Armenian folklore and anthropology. Again, the time and place produced the enduring works on the subject, such as the periodical *Azgayrakn handēs* ("Ethnographical review").

*Our poetry is completely unfettered, free and spontaneously flowing as the eruption of a volcano, as fire. One must tear up the rails of verse— of rhyme— and blow up the bridges of the “already said” (Rus. *uch skazannago*) and let loose the locomotive of inspiration to traverse new and unknown plains.⁷² A smash up is better than a familiar, monotonous trip, says Marinetti.*

All freedoms and every kind of progress have to be on a national level. We glorify patriotism. We sing of war, that tremendous conflagration of enthusiasm and greatness of soul, without which the races are fettered, ossified in soporific narcissism and a base, corrupt poverty and stinginess— says Marinetti again.

We scorn and condemn the tyranny of love and of erotic charm— a tribulation that saps the energy among us, the Latin races.

In this respect, we men of the east, one must admit, are not lacking in the qualities of the Latins.

All these burning, moving, dynamic ideas, says Marinetti somewhere else, incite and stir the public. But we are convinced that there is nothing so base and trivial as giving pleasure and satisfaction to the public, as stroking its crude, traditional tastes. That is why we want to please and satisfy only our own, great Futurist ideal; and at the present time we demand nothing of the public, which is hostilely disposed towards us, save jeering whistles.

*And as a counterweight to that whistling, Marinetti, as a Futurist with a profound belief in the “greatness of beauty”, says in his novel *Mafarka the Futurist*:⁷³ “I alone dare to write this masterpiece; and it will die, too, by my hand, when the waxing splendor and magnificence of the world render it superfluous and unnecessary. Whatever the residents of Podagra and Stroke may say, it unfurls with a roar on the highest mountaintop, as the banner of the immortality of human thought, driven by the gale of glory. And my pride, the pride of a creator, is satisfied”. The hero of the novel says at one point, “Our spirit, as the highest expression of ordered, living matter, throughout all its metamorphoses follows that same matter, preserving in its new forms its past emotions, the delicate vibrations of its developed energy. And let the actions of the stormy will of our life be impelled towards splendor and magnificence. From risk to risk, ceaselessly circling death, which with its rough kisses will render all the fragments recalled above immortal, in their entire beauty”.*

A sacrifice! A sacrifice! Cries Marinetti elsewhere. And truly, he says, we desire that the work of art be incinerated together with the corpse of its creator. That which endures after the death of its author infects living geniuses with sorrow, pensiveness, and a treacherous wisdom. Florence is one titanic medieval folio volume that has fallen with a thud upon the happiest place on earth.

⁷² The locomotive, like the steamship, is a potent metaphor of modernity of the time. Nash parovoz vpered' gudi, v kommune ostanovka, exults a song of the Russian Revolution. “Forward, whistle, our locomotive—/ Next stop, the Commune!”

⁷³ Arm. *Fur'arist Makari*.

The Attitude of the Futurists towards War and Women

We affirm as a general principle of Futurism man's unceasing and endless physiological and intellectual progress. We do not accept the friendly integration of nations, and recognize for the world only one form of public hygiene: War— says Marinetti at another point.

Marinetti expresses the hatred and contempt of the Italian Futurists towards Woman this way: "Yes! We despise Woman, that reservoir of love, that instrument of voluptuous passion, Woman the poison, Woman the tragic plaything. We despise that fragile, brittle, intoxicating, lethal Woman— dreamlike Woman, at once aglow and misted in the moonlight, her smothering, fateful voice meandering amidst the trees of the forest. We despise terrible, dangerous Love, which enfeebles the progress of mankind and hinders man from breaking out of his humanity that he might redouble and surpass himself, that he might become what we call multiplied man. We are convinced that Love, emotion, and sensual pleasure are the least natural things in the world. Only the continuation of generations is natural. Love, romantic infatuation, and sensuality are the immediate concoction of poets, bestowed upon mankind. The poets are to take it back from mankind then, too. The tragicomic experience of love is close to its end, because it has never brought any benefit, but to the contrary has visited upon us innumerable evils. Now we Futurists (says Marinetti) are driving love, that literary product, far away. In their effort at emancipation the Suffragettes are our best associates, since the more rights and power a woman acquires, the more rarely will she resort to love and the faster she will give up being sentimental, from being the hearth of the black satisfaction of desire. Especially since that monstrous development of female excess will make Love a slave who will display lesser or greater outbursts of rebellion only beneath the repressive fist of money".

Multiplication Man and the Kingdom of the Machine

The worship of machines has begotten among the Futurists the idea that it is possible to increase and multiply man's energies, to make him a machine.

We preach a great and new idea that exists and is current in contemporary life: that is, the idea of mechanical beauty. We praise love for the machine— says Marinetti.

That love already exists in life. You have certainly chanced to witness the love and tenderness with which the engine driver of a locomotive washes down his machine's giant body. Often you'll hear from the owners of automobiles or the manager of a factory that motors are a riddle. They seem to possess soul and will, and it is necessary to flatter them, to win their love over, to fuss over them and never to mistreat them roughly or fail to care for them. And if you act accordingly with them you'll see right away how much more productive they become, performing two or three times better than before.

It is necessary, the Italian Futurists say, to equate men with machines. Man is to have mechanical intuition and rhythm, instinct and discipline like a machine—qualities unknown at the moment to the majority and understood only by the most penetrating brains.

Receiving Lamarck's hypothesis of transformation in this manner, the Futurists dream of creating an un-human type (this is not Nietzsche's Übermensch).⁷⁴ In it all moral torments will be annihilated, exhausted: goodness, tenderness, love—as they say—all of which poison our inexhaustible life energy and obstruct the mighty physiological electricity within us.

We believe—the Futurists declare—in innumerable transformations of man and proclaim without a smile that wings are slumbering within the human body. The non-human, elemental, mechanical type is to possess the swiftness to reach everywhere; so it is natural that he is to become cruel, all knowing, warlike, combative, and struggling. And in order that we may prepare that non-human, mechanical, multiplication type, the Futurists say, it is necessary to reduce in an extraordinary fashion the feelings that bind and fetter man, but which live still in man's blood.

The Attitude of the Futurists towards the Symbolists

We reject the Symbolists, our teachers, the last lovers of the moon, cry out the Futurists. We sacrificed everything to our Futurist conception of life and that is why you'll easily understand why we now detest our glorious intellectual fathers, whom we used to love beyond measure, those Symbolist talents: Edgar (Allan) Poe, Baudelaire, Mallarmé, and Verlaine.

Now we find them an obstruction because they floated down the current of time's river, constantly craning their heads backward. One of those head turners emerged as our own poet Vahan Terian,⁷⁵ who put on the latest duds and plunged up to the cuff in the dust-choked Armenian catacomb but instead of cleaning out the dusty mummies he started snogging with them. Traditions are still strong, it seems, among these most up to date poets. They turn back towards the distant, deep Wellspring of the past, the skies of yesteryear, where beauty is flowering. For them there is no such thing as poetry without grief, without summoning back past times, without the fog of history and legend.

We hate the Symbolist masters—we who have dared to emerge naked from time's river.

We sing the swelling victory of the machine, which they stupidly hate.

⁷⁴ That is, "Superman", transliterated into Armenian as *Hubermant* and left untranslated. Subsequently however, in his critique of Nietzsche, Kara Darvish translates the term into Arm. with the calque *germand*.

⁷⁵ Vahan Terian (Teryan, Terian), 1885-1920, the most lyrically powerful Eastern Armenian Symbolist, inspired Charents with his vision of a spectrally supernal, ideal, or lost Armenia to which he gave the name of the ancient Urartean kingdoms, Nairi. Charents in the throes of youthful revolutionary fervor sometimes ridiculed the poet, but found the idea of Nairi infinitely fertile in his own writing and returned to Terian's verses with reverence and remorse in maturity.

Our Symbolist fathers are infected with a craving that we consider risible, that is, a desire for eternal things, a striving for the eternal, for that which does not pass away. But we think the contrary: there is nothing lower or more pitiful than to think about immortality. It is necessary to create without prizes, without thinking that one will be rewarded or that one's creation will outlive one as an actual witness. We counter the poetry of wistful expectation with the poetry of ardent expectation. We counter beauty inclining tenderly over tombs with the bold, sharp profiles of pilots and drivers of cars. We counter the conception of the permanent and eternal with the concepts of the transitory, of destruction, of ephemerality in art.

We transform Edgar (Allan) Poe's bitter joy, the nevermore [thus in the text, in English—J.R.R.] by loving and teaching the beauty of feeling and emotion, since those things are unique and are fated ab initio to irrevocable obliteration.

In our eyes history is an inevitable falsifier, or at the least just a collection of postage stamps, medals, and counterfeit coins. The past is baser and of less value than the future. So we are able to recognize amongst our foes that ferociously deceitful and hateful care for the past, as the most dangerous servitude. We sing of the speed of machines, which demolishes the poetry of the distance of wild deserts. And we sing of and praise railway bridges, the huge pipes of turbines, those muscles of the earth, that giant mechanical movement of the earth, for it destroys the earth's diseased sensibilities.

Futurist lyricism is the eternal dynamism of the mind: energy is movement. It is the unending flow of mental pictures and sounds, and it is only Futurist lyricism that can express the inconstant, infirm, and symphonic universe that is being forged with us and in us.

Nietzsche and the Futurists

The Futurists also reject Nietzsche, and the supposition some hold that there are Nietzschean elements in the Futurist world view is mistaken. The English press even terms the Futurists Nietzscheans, while Marinetti in his book protests against this.

But it is sufficient to become acquainted with the body of the work of the great German philosopher to be persuaded that his superman comes out of the cult of Greek tragedy. This introduces the supposition that Nietzsche has a retrograde desire for paganism and mythology. And despite his strivings towards the future Nietzsche remains one of the most ardent defenders of the greatness and beauty of antiquity. His superman is of Hellenic origin and is a fusing-together of three decomposing corpses: Apollo, Mars, and Bacchus. This is a mélange of elegant beauty, warring force, and Dionysian ecstasy, of the sort Classical art displays. We counter this Superman hatched in the dust of Greek libraries with man multiplied upon himself, who is the enemy of the book and the friend of personal experience, a pupil of the machine, ardently exercising his own will, and in the glow of his own inspiration the possessor of a cat's sensitivity, a lightning bolt's comprehension, a wild beast's instinct and intuition, with both craftiness and lack of common sense as well.

And you will wage a desperate fight, say the Futurists, against the three irreconcilable enemies and destroyers of art, which are: imitation, good sense, and money. They bring art and cowardice to the same end point. Cowardice: with respect to remarkable copies and received formulas. Cowardice: when one faces the imperative to be loved and the terror of destitution.

Futurist aesthetics

Futurist aesthetics, too, have been transformed; and in place of the idealized aesthetics of the man of the past, there has come a mechanical, technological, so to speak, aesthetic. That is, an emerging aesthetics of great locomotives, tunnels, battleships, airplanes, automobiles, and other technological wonders. Futurists have created a new aesthetics of speed, practically eradicating the concept of distance and greatly reducing the concept of time. The steam locomotive, the airplane, the telephone, the wireless, and so on now easily perform that function of speed and are transforming the concept of time and space. In this manner multiplication man is being readied everywhere.

Of course enrapture with such a process has also brought forth the principle of cruelty, and here is what Marinetti says: There is no better thing than planks and pillars lying about a house in construction, with their rhythm of cranes and hammers and the occasional cry of a falling worker with great gobbets of blood gushing from him. Be afraid of the decayed past, says Marinetti: In every thing, hope in the future. Have faith in progress, which is always just, even when it errs, for it expresses movement, struggle, and hope. Be careful of being drawn into a conspiracy with progress. Let progress be deceptive, a scoundrel, a thief—it is still just.

This is the cruel paganism that is expressed in the name of progress. Italian Futurism, although it is opposed to Nietzschean philosophy, is still constructing its world view on the foundation of Roman paganism and is wakening from the murk of centuries the ancient, cruel Rome of Nero.

But one of the most striking symbols of Futurism comes from Japan, where the firmest, most potent coal⁷⁸ is being produced from human bones and used in factories to produce the most explosive products. However crude this conception may be, however offensive to one's sensibilities, still it is comprehensible in the name of progress. Particularly where the cult of motion is being promoted and where man as machine is the ideal, existence cannot have any sentimental lyricism, even if your loved one's bones in the form of coal are heating the tea in your samovar.

One must also not forget that Futurism expresses itself in completely idiosyncratic forms among various nations. Thus, Russian Futurism is quite different from the Italian variety. Racial identity plays a great role in this instance.

⁷⁸ Tk. kumar, with Arm. acax added by way of explanation.

Futurist painting

The views and principles espoused by the Italian painters, by which one means, of course, Futurist painters, are interesting with respect to the most recent Futurist art. A growing interest in the truth, they say, can no longer be expressed in form and color the same way as these were understood hitherto. The gesture we want to portray on the canvas can no longer be a fixed photographic moment of cosmic dynamism. And really everything moves, everything runs, everything is being shaped swiftly. Moving subjects multiply, change shape, and continue like a vibration over space. This way, a galloping horse has not four legs but twenty; and their motion is triangular in shape.

Everything in art is conditional, and there is no general rule in painting. That which was true for the painters of yesterday now comes out as an untruth, a lie. For instance the Futurists declare that a picture of something should not resemble it, its nature, that the painter carries landscapes within him that he wishes to photograph onto the canvas.

Just as the individual scrutiny of the human spirit has swept away the static darkness of dogma, in the same manner the life-giving deluge of science will soon liberate painting from academic traditions. Whatever the case, say the Futurists, we desire to return towards life. Science in our day, in its victorious advance, has rejected its past, so that it might be better equipped to answer the material concerns of our time. We desire that art, shunning its past, might at last be able to answer the intellectual demands that excite us. Our renewed science does not permit us to consider man the center of the life of the universe. Human sorrow is about as interesting in our eyes as the sorrow felt by a light bulb.

When a man becomes a machine, when feeling within it changes into a product, when his spiritual attachments are severed and he lives moment to moment, then these are already the characteristics of the future "mechanical son". In order to grasp and understand the beauty of Futurist pictures, the human soul has to be purified, the eye must be freed of its lid of atavism—its primordial type—and of culture; and the sole control is finally to be nature, not the museum.

Futurist music

As we saw, creativity is paramount in Futurist art; and the first condition of creativity is freedom. Futurism is opposed to academism; and for the sake of individual initiative and untrammelled individual expression it dissolves all those rules that are in one way or another present an obstacle, or that fetter free expression.

From here comes free music, which seeks ways now to express voices, sounds that are not in the power of normal music. Thus, for instance, the music of nature: light, lightning, the sound of the wind, noise, the rush of water, and with that also the urban stridor and the din of machinery. All these, as we know, choose their sounds freely. The nightingale sings wonderfully; but not with the notes of contemporary music alone. It sings, rather, with all the sounds that please it. One makes free music by the same laws that govern

the music of nature, indeed all the art of nature. The free musical artist, just like the nightingale, is not confined to tones and half-tones. He can use quarter-tones and eighths and such music as is free for his choosing in its sounds.

As a beginning, quarter-tones are coming into use. These tones still exist in ancient Indian music and are employed by eastern instruments, especially on the *chonguri*.⁷⁷ Thus the advantage of free music consists of the following: the pleasure derived from the new and unprecedented juxtaposition of sounds; new harmonies with new chords; new dissonances with their new solutions; and new melodies.

(73) You petty demon⁷⁹

⁷⁷ Arm. *čumuri*, perhaps a misprint. The *chonguri* (Georgian; Azeri *choghur*) is a long-necked string instrument common throughout the Caucasus. The bard Sayat' Nova played it, though his favorite instrument was the bowed *kamancha*.

⁷⁸ The locus classicus for these words is the famous story of Semiramis and the Armenian king Ara the Beautiful: in Movsēs Xorenac'i 1.18, the Assyrian queen casts her *zywnut'su i cov* "talismans into the sea", which the historian considers the origin of what he calls the common expression *ulunk' Šamiramay i cov*, "the beads of Šamiran [Semiramis] into the sea" (see Russell 1987: 443 with refs.). Xorenac'i explains repeatedly that he learned such myths and poems from listening to the recitations of the *gusank'* (a Parthian loan-word referring to bards and minstrels; it was later largely replaced by an Arabic loan via Turkish, *azul*, pronounced *azhugh*, literally "lover"), to the accompaniment of the *p'andzura*, a stringed instrument. The poem of Kara Darvish is meant to be modeled on spells and folk poetry, as kindred Russian Futurist verses were; and Beledian (2009: 273-274), notes that the poet called the postcards with his translational verses printed on them (*počta-i' ovč'ank'ner*, "[poetic] charms" and reminds us that called himself *hrc'akavor hay-guson-futurist* "the famous Armenian-bard-futurist". (How far is he, really, from the bardic boasts of Allen Ginsberg, a scant two generations on?) The poet appreciated alliteration of the Arm. synonyms in the two Classical expressions as is intrinsically poetic, and with his strong belief in freeing the sexual urge, he would have appreciated the robust passion of the Assyrian queen for the young Armenian, so like Dido's love of Aeneas.

⁷⁹ Cf. the novel *Melkii bes* ("The Petty Demon"), by Fedor Sologub (1863-1927), published in 1905. Kara Darvish, as noted at the beginning of this study, advertised his translations from Russian into Armenian.

These include Sologub's novella entitled "The Golden Stairs" (probably a part of the novel *Slazhche Ada*, "Sweeter than Hell", 1912), price 8 kopeks, available from Akop Gendzhian, Yelizavetinskaya 114, Tiflis.

⁸⁰ *Mar* is the honorific in Syriac of a saint or monk; *Abgar* was the king of the Syriac-speaking city-state of Edessa (modern Urfa), claimed by the Armenians as one of our own. He was in legend the first ruler to accept Christ.

⁸¹ There are two groups of words with alliterative patterns forming the text of this spell. The first and longer is attached to the flute (*string*); the shorter second, to the single voice (*meneng*). A pattern of nonsense words suggesting the ringing of a bell or cymbal follows thereafter. The spell has thus a musical as well as a verbal sound signature.

- I. *Zarandzar, faranar, k'arandzar, far, munufar, arandzar, zarangar*. These contain Persian elements: *zar* "gold", *munufar* "waterlily", and possibly *farr* "glory"; the word *dzar* in Arm. is the hair of the tail or mane of a horse, and is often sworn by in spells invoking the three mounted saints, Sergius, George, and Theodore. These saints' martial aspect recommended them to the Armenians, always fond of heroic epics. They are thus popular and such spells are numerous: see Harut'yunyan (2006: 106, 147-149, 160).
- II. *Lar, mialar, garunlar*. The Arm. word *lar* means a string of an instrument or a note that is played; but as an ending with *garun*, "spring", it looks like the common pl. ending in Turkish. There is also an obvious phonetic and semantic affinity of *dzar*, a horse hair, to *lar*, a musical string.

*ublakh-dublakH*⁸⁹

⁸⁶ The sound *f* exists in Armenian dialects and a letter representing it was introduced into the alphabet in the 12th century; but it is not found in Classical Armenian and has retained a sense of foreignness and exoticism. Thus, when an Armenian in Georgia in the 18th century invented an artificial language, which he called R(ə)štuni—after a region south of Lake Van whose argot was famous—he made it as un-Armenian-sounding as possible by using lots of *f*'s and *ö*'s (see Russell (2012: 602–684).

⁸⁷ Arm. *srēš*, "asphodel" (see Bedevian 1936: 89, no. 529; Ališan 1895: 499, no. 2373–2374; Gabūcean (n. d.: 183, no. 1360), is a loan from Persian *serēš*, with characteristic assimilation of initial *s* to the following *š*, cf. Arm. *šrewāk*, a loan from Iranian **srwākaka*-, "an instrument of discipline"; see Russell (1996: 69). *Šrēš* hill, near Ejmiacin, was excavated in 1913 by Ervand Lalayan and yielded artifacts going back to the bronze age (see Melik'-Palaian/Nazinyan (1983: 27). The place is mentioned in an ancient oral epic passage cited by Movses Xorenac'i, II.65: ... *zormē yaraspelsn asen: Hatusac govac'eal Vardgēs manuln i Tuhac' gawarēn, zK'asal getov, ckeal nstaw zŠrēš blrov, zArtimēd k'alak'aw, zK'asal getov, krel kop'el zshutn Erwanday ark'ayi* "They say about him in the legends: The young boy Vardgēs took off and went from the province of Tuhā, along the river K'asal, came and settled around Šrēš hill, around the city of Artimēd, along the river K'asal, to cut and hew the court of Ervand [Orontes], the king." We have seen that Kara Darviš, a champion of native Armenian antiquity and folk culture as the sources of fresh creativity, took the title of the cycle from epic recorded by the same historian; and here he would have liked the princely name Vardgēs, "Rose-tresses" and the alliterative pair of verbs *krel kop'el* "cut and hew".

⁸⁸ Tk. *karu* "black" is part of the poet's nom de plume; Tk. *bulak* or *mulak* is a buffalo calf. But he probably just liked the sound.

⁸⁹ Kara Darviš wrote that the word is not found in dictionaries, but anybody from Urartu in the remote past to Mongolia in the remote East would sense it had a meaning. Turkish *döbrü döbrü* means "say it country simple" and colloquial Armenian *qəghə qəghə* means "it fits like a glove". So *ublakH* hovers just past the edge of definition, wavers at the corner of the eye, vanishing around the corner, just as the Russian Futurist poet Velimir Khlebnikov's *znaw*, transrational language, ought to do.

He called out again and again from the darkness of the East

Father mine *good

From there you-came

5. In "Letters from 74 rue Taitbout" (New York: World, 1969), William Saroyan (1908-1981) remembers the dead and addresses them. Many are eccentrics, men whose particular character or genius set them apart, left them alone, and sometimes led to a tragic death.

⁹⁰ An old district in Yerevan, the present-day Armenian capital. Its name sounds like *gund*, "ball"—hence its roundness!

There was Professor Kalfayan (p. 49 f.), the composer who had lived in Paris, who dressed like a dandy, and was adrift and insane in Saroyan's sleepy home town: Fresno, CA was the land of opportunity for hardworking Armenian farmers but it was not then a center of high culture. Or there was Doctor Anoushavan Chomp (p. 151 f.), the publisher of Armenian weeklies in Sofia, Bucharest, Cairo, and Paris, also a flamboyant dresser: nobody in Fresno's cafés bought his satirical paper *C'axawel*, "The Broom", and he vanished. In 1935, Saroyan had visited the Soviet Union with a delegation of American writers. There he met the poet Charents, who had experimented with every avant-garde movement that had swept through the dying Russian Empire and the young Soviet Union, a consummate scholar and editor and one-time friend of Kara Darviš, who injected himself with morphine, who got drunk, who had been confined in a mental hospital, who had written lyric, symbolist, bardic, revolutionary, and homoerotic poems. Charents was already in official disfavor and was gradually being ostracized from Soviet Armenian literary and civil life: the KGB arrested him during the great purge of 1937. He died late in November of that year: according to one account, he smashed his head against the wall of his cell during withdrawal from drug addiction. Others assert that he was murdered. His body was dumped in an unmarked mass grave near Erevan and has not been found.⁹¹ If the life and work of Kara Darviš marked the beginning of a new kind of literature and life—a counterculture—in Russian Armenia, then the death of Charents was the end. At their meeting, Charents advised Saroyan when dealing with the authorities, the custodians of propriety and convention, and the rest of them, to say yes and then spit in their eye. Saroyan wrote from his Paris apartment to the dead poet (p. 122):

"Why didn't you say yes? I'll tell you why, Charentz. Because you are more than an Armenian, more even than only another member of the human race. You are a poet, so shocked by the treachery of all men seeking to save their skins at any cost that only with the help of cocaine could you stay among them and pretend to be one of them.

God love them, as every poet is obliged to say, not with contempt but with charity. They all did, they are all doing, only what you advised me to do, which I have never done, which you never did".

6. Osip Mandelstam's translation of Kara Darviš, "Dance on the Mountain", with translation of the Russian by J.R. Russell:

АКОП КАРА-ДЕРВИШ

ПЛЯСКА НА ГОРАХ

Ночной хоровод

⁹¹ On Charents, see Russell (1996-97 (1999)): 17-35; idem (2000); idem (2004: 1365-1432); Astourian 2012.

Посвящ^{ается} Гр^игорию> Робакидзе
Не плач, не рыданье, не воплеиц крик -
Подари мне веселье и пиршества зvon.
Позабыть бы удары и смертный стон,
Катафалков тух и умершей лик,
Пустить по миру тяжёлый дым,
Развезть горечь дымяных туч,
И кто любим, и кто не любим,
И кто повержен, и кто могуч,
Побежденный, победитель - всё прах и дым,
Да пройдут они здесь, - мое сердце там,
Забывать, забыть - уйти далеко
К шарообразным легким мирам,
По новым звездам взвиться легко,
И только с тобой, только с тобой,
Повелительница моей души,
Атом крови моей огневой.
Пойте мне песни, хоровод, пляши,
Тризну на грудах костей соверши.
Пусть бесы топчут и воют глухо -
Я слышу богов чародейный бег,
На вершинах гор рождение духа:
Ночь разрезает человек.
Жизнь вернулась, гроба раскололись,
И славы былой поют руины.

*К нагорной крепн взмыв мощный голос:
 Всѣ забыть и ринуться в звездные пучины!
 Через тучи, туманной поштые прижсей,
 С посяистом адским уйдем на высокые кряжи.
 Всѣ позабудем, забудем, забудем.*

Akop Kara Dervish

Dance on the Mountains

(Nocturnal Choral Round)

Dedicated to Grigori Robakidze

*Neither crying nor sobbing nor cries of professional wailers—
 Let me be merry 'midst the ringing of feasts.
 Forget the blows and dying moan,
 The coffins' trim, the dead girl's face.
 Scatter the heavy smoke through the world,
 Blow away the heavy clouds' grief,
 And he who is loved, and he who is not,
 And he who is conquered, and he who wields power,
 The defeated, the victor, are all smoke and dust,
 And here they will pass, but there is my heart.
 To forget, forget, and go far away
 To the spherical delicate worlds
 And lightly soar past the new stars.
 And only with you, only with you,
 Mistress of my soul,
 Atom of my fiery blood.*

*Sing songs to me, O chorus, and dance
 Your rite on the piles of bones.
 Let demons stomp and hollowly howl;
 I hear the spellbinding onrush of the gods,
 The birth of the spirit on the mountaintops:
 Man cuts to shreds the night,
 Life has returned, the coffins crack and break,
 And the ruins chant their elder fame.
 To the mountain cyries the strong voice ascended:
 Forget all, and plunge into the gulfs of the stars!
 Past these hovels, spun in a web of fog,
 With hellish ululation to the high crags away
 We will go and forget it all, forget, forget.*

* * *

7. Kostan Zarean, *Narwā leran vray* ("The Ship on the Mountain"), Boston: Hayrenik, 1945, a part of Chapter 9 (140-152).

Herian had known Tiflis, the viceregal capital of the Caucasus, in those good days when after returning from a distant journey he and a few mates would come to spend their extra cash and have a good time while the ship was being loaded. Those times were so far away now...

He recalled well those nights he whiled away till dawn in rooms overhanging the Kura river, in wine shops below street level dense with the aroma of shashlik and wine, where in the semi-dark life crept up to the top of the thermometer, its tongue ringing bitter and tinny, and songs rang out in alternating happy and philosophically melancholy tones. The wine flowed and young girls danced, their shapely arms floating in the air, the fire of their great, dark eyes sharing their ardor with his heart.

In those days, Tiflis was the rendezvous of all the peoples of the Caucasus, living on permanent vacation. It was gay, official, carefree; mascaraed, dolled up, light.

The palace rearing high over the broad avenue of the viceroy, motley crowds of soldiers, military parades with their stirring music, splendid, captivating women and the idle populace strolling up and down from morning till late at night, without purpose or care. The Tiflis of lók'ō fish, Kakhetian wine, and lölinal.⁹²

The most beautiful quarter of the city, called Sololak, which Armenians had built, teemed with horses of noble breeds harnessed to magnificent carriages in which magnificent women with great, swooning eyes would glance about with lightning-stricken looks, and then, after their reveries had wafted over the heads of the passers by, would swiftly roll on.

Life rolled on, to the rhythm of the airs of soundless, trilling flutes. Abundant, voluptuous. The sweet shops, teeming with customers, displayed cakes and confections of impossible dimensions. In front of the shops, on the sidewalks, were heaped little hills of cloth and velvet. Groups of women gathered around them and with delicate, sensitive fingers palpated the silks and lazily examined the multicolored fabrics. The rustle of crumpled cloth, merging with the sweet aromas pouring in from every direction, resembled a tipsy breeze stealing over a rose garden. And here, swathed in a tent of particolored silks, her dress shivering with gold coins worked into its hem, went a Turkish lady. You would think a hive of bees was passing. Or here, a stately and supple Circassian maiden⁹³ with the eyes of a gazelle and the gait of an ibex; or a Persian girl sashaying along, her little head nodding, round and musical.

To reach the lower quarter of the town one had to pass through narrow, twisting lanes. Down below was the square the locals called the Mēydan,⁹⁴ which unfolded before your eyes like a Persian miniature sketched by a naïve hand. Camels, lazily seated, thick lipped, heads held high, as though they were grazing on the sun. Goats with bells tinkling, dragging along dried branches by their tips. Eastern types seated with their legs folded beneath them, with dreaming eyes and dazed motions, smoking long pipes.

⁹² Michael Grossman informs me that Georgian gozinaki is a confection of grape syrup hardened around string of walnuts to resemble a sausage; it is also popular in Armenia, where I have heard it called *awd anjux*, lit. "sweet sausage", or *ročik*. The element *guz-* would be from Iranian for walnut, cf. the loans Arm. *avkoyz* and Heb. *egōz*. The *lōko* is a catfish.

⁹³ These picturesque women of the East have not only a reality in Armenian life, but a contextuality in literature. Petros Durean (Bedros Tourian) (1851-1872), the youth who in his brief life singlehandedly invented modern Western Armenian lyric poetry, wrote two poems, startling for the time in their artless, laconic literalness, about a Turkish woman and an Armenian woman he exchanged gazes with in Constantinople (see Russell: 2005). A Circassian maiden dances in the bewitching palace of Dream before the Oriental potentate and narrator of Daniel Varuzhan's poem *He'amosakan* ("The Heathen Poem"), in the cycle *He'amos erger* ("Heathen Songs"): at the end of the poem he takes her in his arms and consummates his passion for her. But perhaps, given the setting, the spasm is only imagined. Like most of Varuzhan's verse, the poem is as extravagant in its rich vocabulary as it is in its imagery and theme. There is little doubt it inspired in part both the subject and the words of the poem *Kaycer* ("Sparks") by Misak' Mecarenc' (Medzarents')(1886-1908), whose great lyric gift and brief life make him the successor to Tourian. In the latter, the poet imagines that he watches the sensuous undulations of an Oriental dancing girl through the night and begs for the vision to linger a bit more, as dawn is breaking. Kara Darvil loved and venerated Varuzhan; and Zarian, too, knew the work of the contemporary Western Armenian poets.

⁹⁴ Persian and Arabic *maydan*, used, famously, also of the main square of Kiev in the Ukraine.

The acrid odor of tar, raisins, heaps of straw. Camel dung. Wretched, indifferent dogs. Hens pecking under the camels' noses, and beggars with ruined eyes and trembling hands. Asia.

On the surface it might be Europe— a Europe reflected in funhouse mirrors, Erevan Square, with its red-painted city hall. The main thoroughfare of the city, the pride of the country: Golovinsky Prospect.⁹⁵ On this avenue, all the peoples of the Caucasus, their tribes and clans, in their Sunday best, rubbed shoulders with each other. They came on holiday, for fun and adventure, and to show off.

Tiflis made its living off the hardworking, productive provinces. They purchased at a high price its carefree style, its dancing, wines, girls. In their dull provincial towns they talked of it in superlatives, salivating, voices rising in lilting tones of praise.

In reality Tiflis was a modest half-European, half-Asiatic city. Climbing rows of flat roofs clung to unimpressive hills that the locals, with their tendency to exaggeration, called mountains. A few decent streets. The Kura, a muddy river dragging its lazy way between sheer banks. A handful of bridges adorned with tasteless monuments to the Russian generals who had conquered the country. And at the center, where the veins of the city swelled, a handful of great buildings erected in pompous, various, undefinable styles. Here and there, the musical contours of Armenian churches gave profundity and nobility to the mixture.

Herian had arrived in town the day before in order to present some applications to the Georgian authorities and put an end to the excess problems in transporting his ship that had arisen thanks to the caprices of petty officials.⁹⁶ He was already seeing everything with different eyes.

Could this be Tiflis? Tired, preoccupied, uneasy, he walked through the deserted streets waiting for the offices of the government ministries to open. It was already past nine in the morning, but the city was not yet awake. Nothing moved. The shops and cafés were shut. Skinny nags harnessed to carriages on empty street corners stamped their hooves and the skin under their bellies shivered. Policemen pounded their beats, feeling the chill. It was cold. "You'd think", Herian mused, "it was the morning after a night-long costume ball". He felt sorry he had come: it would have been better to come to some sort of agreement with the local authorities. The hardest part was already over: his ship was loaded onto freight wagons and would have already been en route, had not some wicked men begun to concoct problems. Everybody wanted a bribe, and he had distributed all the funds he had, sold whatever he owned, and given them all that, too. No, the more he gave, the more they wanted.

The life of the city started up in a strange way. Numerous soldiers and policemen poured out of the city hall, separated into squads, and took charge of the corners of the major arteries. Herian stood still and gazed in astonishment. He had witnessed the same spectacle the day before, at the station. Tight knots of policemen had taken up positions at all the exits. They requested passports, interrogated, and searched people— that is, the

⁹⁵ Now Rustaveli, after the national poet of Georgia.

⁹⁶ Herian, an Armenian sea captain from Batumi(), is the hero of the novel: he wants to transport a ship by rail to Armenia from the Black Sea port. The cover of the novel, reproduced here, illustrates the scene.

Russians and Armenians. "How everything is forgotten", Herian thought to himself. "When a storm overwhelms one's life, the memory of whole peoples is darkened. Black currents, like a hurricane, sweep away their very will, their ability to consider and to choose. The threatening breakers of the stormy sea toss away small and unimportant men. So-called leaders⁹⁷ are created. All the values people fought for and swore by for years are forgotten, and they resort to the same means of brute force under whose yoke they were only lately oppressed. The talk of communism, equality, and justice, but scratch them and out pops the desiccated, jealous chauvinist. Out pops the governor⁹⁸ of some backward Turkish province, the constabulary, the secret police, searches, arrests, prison, exile. Is this Tiflis?"

Here are people, at last. A few sleepy, unhurried shopkeepers open their doors for business. A patch of sky clears. It opens and sparkles on a few windows, then hides immediately and retreats back behind the clouds. It's gray and cloudy.

Where was that "Cup of Tea"⁹⁹ where he used to meet his acquaintances? He kept walking, inquired, found it. The Cup of Tea was open. He stopped at its front door and stared in amazement: a detachment of the police had surrounded the passers by and was searching them. A neatly dressed, bespectacled, elderly man protested angrily. One of the cops, with a pinched muzzle and long arms, went up to him, cursed him loudly, and smacked him in the face. The aged gentleman's eyeglasses shattered, his top hat flew off, and blood trickled down his blanched face. Herian was furious. He flushed and ground his teeth. They had seized the old man contemptuously and were dragging him off.

A gentleman standing next to Herian was looking on with disgust. "It's barbarism", he said. "I don't understand what they want of those people". Herian replied, bemused. "What should they want? They're just looking for an excuse to expropriate their homes and property. They deport them to the provinces as enemies and take advantage of their absence to rob them of everything. They call this the nationalization of the country..."

Herian went inside. A lovely, clean café. Young girls and married ladies of good families worked there for a pittance. There were few customers, but even before they brought the tea and pastries he had ordered, the café filled. It was as though everybody had made appointments with each other for a specified hour. He looked on with interest, quickly gathering that most of the patrons were intellectuals and artists who had fled Russia. It was plain from their faces and movements. Sallow, thin faces, crazed and dishevelled hair, hoarse voices and the strangest outfits imaginable.

There characters, at once comical and pitiful, were talking and arguing nonstop. They all knew each other—only he was by himself, lonely, sad, depressed. The scene at the doorway still weighed on his mind. "Could I have another cup of tea, please, Miss?" "Of course". The waitress had a voice that was sweet and resonant, rising from her bosom. Herian liked it, and felt a little calmer.

⁹⁷ The Armenian word is *lekavur*, lit. "helmsman": this is the title Charents was vainly to bestow upon Stalin in late and fevered poems beseeching the tyrant to spare him.

⁹⁸ Turkish *kaimakam*.

⁹⁹ Rus. *Chashka chayu*, a Futurist haunt in Tiflis frequented by Kara Darvil.

It was a pleasant environment; it seemed more a salon for a reception than a coffee house. The intellectuals there had passed through fire, been crushed, exiled, yet they labored to preserve the outward proprieties of life, those exaggerated forms of civility, that hand-kissing of ladies, the delicate sweet nothings that had been typical of pre-Revolutionary high society. He recalled the perfect manners of the French aristocrats sitting in the carts taking them to the guillotine: "If you please, Marquise, may I kiss your hand?" "Ah. My dear Count, allow me to remove my glove..." These waitresses were the same: you would think they were receiving specially invited guests at home. They drifted from one end of the room to the other, shedding smiles and sweet aromas, displaying the rustling silks of the dresses, and their bared, trembling bosoms, and their well cared for white hands.

He automatically looked down at his own hands, and hid them. But at once he withdrew them again, and laid them down on the table. Why should he feel ashamed? They were the hands of a worker. For the past few weeks these hands, these strong and sturdy hands, had been cleaning and oiling and shining the ship's engines, painting the bridge, scrubbing everything to a state of perfection. No, no reason for him to feel the least shame.

"Hey, what are you pounding your fists on the table for? Spoiling for a fight, eh?" It was Peronian. "My good fellow, you look as if you were about to attack these poor, fragile girls. Yes, all right, all right, don't start with the explanations— but here, meet my friends. Hayk Shushan, professional painter; Kara, the Futurist poet;¹⁰⁰ Sultanian, the literary scholar. In a word, you behold all the Muses". "Very pleased to meet you. Very pleased. Hey, you bastard, I wasn't expecting to see you here. Please have a seat, gentlemen. Please sit down". "My friends need no introduction to you. We've talked... The Admiral of Lake Sevan¹⁰¹ — You're a famous man". "How could it be otherwise", interjected Kara. "We've heard a lot of good things about you, your futuristic spirit, your plan, so daring in the present circumstances..." "Good, good, don't praise him too much", Peronian said, cutting him short. "Don't flatter him. He's a modest man, any more and he'll jump up and run away... Tell me this. What brings you here? We were expecting you in Erevan". "It's a long story. You can imagine the matters I'm dealing with". "Such as?" "I've just run into a lot of difficulties... That's all. You know, I took my ship and even loaded it onto the train". "They were talking about it in Erevan". "In Erevan?" Herian was startled. "How did they find out?" "They find out about everything. And, well..." "Well, the railway authorities began to put all kinds of obstacles in my way. They are doing everything they can to prevent the ship from departing. That's what I've come about. I plan to make some representations. But I'm already discouraged". He related everything he had seen in front of the café. "I want nothing to do with these people". Everybody fell silent.

"The frightful thing is", said Hayk Shushan with gloomy emphasis, "The frightful thing is the way people are trading in the diadems of their own thoughts so easily. Everything that only yesterday was the soul-illuminating ideal of all is now darkness and void. It's a seismic shock, a social convulsion, a catastrophe, and it's rolling everything

¹⁰⁰ This is, of course, Kara Darvîš, though the name is a single phrase, not a name and surname.

¹⁰¹ The lake in Armenia where Herian planned to set sail his ship transported by rail from the Black Sea.

down with it into an abyss of barbarity. Man is reverting to his atavistic instincts and becoming a wolf". "Which just proves", interjected Kara, ever prepared to contradict, "that those old values you're talking about do not correspond to the demands of real life". "Everything can be justified that way". "I'm not justifying it. But neither do I fear the changes taking place. Life presents ever-new demands to us as it changes, and we have to be in a position to respond to those demands. To be capable of change, to be able to fashion and forge new weapons— that's what!" "But my dear fellow, you are speaking about something else entirely..." Hayk Shushan stared from behind his glasses at Kara with a mocking smile.

He couldn't stand Kara. Who was he? The semblance of semblance. Something calling itself a literary movement had been born in Europe that was apparently the product of local conditions. Russian artists, who are great slavish imitators, had picked up the outer forms of this movement, exaggerated those, sewed a harlequin costume, and draped it over their shoulders to conceal their spiritual nakedness and unquiet madness... They daubed the tips of their noses, put on necklaces of carrots, and pinned medals made of cabbage leaves to their breasts. They surprised the bourgeoisie and charmed hysterical young girls. Kara swore by their name. He wore long, colorful tunics, an Afghan headdress, and high boots, and considered himself an apostle heralding a new life. But then, apostles are always slightly ridiculous.

"You're talking about something completely different", repeated Shushan, becoming serious. "What we are seeing and criticizing today is nothing new, just contortions of old mask... scarecrows sticking out of the depths of history". "You forget that we are in the midst of a storm. When the earth is shaken, people lose their heads. They run just where they shouldn't go. They do things that would appear ludicrous in normal times". "Well, that's doubtless true..."

The room kept filling with a throng of newcomers who squeezed in around the already crowded tables, clustering together in big groups and blocking the passages. Smoke. Noise. Herian observed attentively. "A remarkable spectacle", he said. "It seems as though danger has swept over the heads of these people. Frenzied looks, twisted mouths..."

"Russia is passing through a titanic sieve. The heavier grains remain; the rest is scattered to the winds..." "Refugees..."

"If a man thinks well", exclaimed Sultanian, "flight is base. A man ought never to abandon his fatherland, even if his life is in danger. An émigré, in the final analysis, is but half a man". "They've fled hunger, repression, deprivation". "Precisely. They fear deprivation. But see, they are already like dead leaves driven by the wind. There is one thing I don't understand. If millions of people are suffering, why should artists flee that suffering?"

"I agree completely", said Kara. "Completely. One must have the courage to accept reality as it comes and then transform that reality into art, however savage it may be. Song can offer a foundation to everything". "That is irrefutable", Herian agreed. "One must remain, strive, survive. We are all responsible for the events taking place, and we have to have the courage to bear their consequences".

"The spirit is the main thing. Every man must cling to his spiritual center. Events are what surround us; they are not our inner selves. They arrive, the storm breaks, and then they pass— and, in the end, they are subject to the spirit, if the latter is great and radiant. We, the Armenians, have known this for centuries..."

"Those refugees present a very interesting spectacle", said Hayk Shushan again after a brief silence. "I've been observing them ever since they came. This crowd is composed not only of artists and poets. There is every kind of element among them. When they came, they were a pitiful sight: poor, thin, emaciated... But they lost no time. A lot of them, characters with calculating eyes and low, intent brows, took stock of local conditions right away, sniffed out their surroundings and got to work. Lots of shops opened. They bought and sold everything. They changed money and amassed gold, silver, and precious stones. Many ladies appeared as well, soon enough. With sonorous, aristocratic names. Baronesses, countesses, princesses. With great airs, with loving smiles. They assumed the patronage of the artists and writers..." "According to tradition..." "Yes. On that pretext, they opened nightclubs where they welcomed you in the noblest form, with compliments befitting the occasion, with self-deprecating smiles; where you met famous names you'd read about once upon a time in the Petersburg or Moscow papers. They would proffer to you the inevitable cup of tea. One of the ladies would sing sotto voce. They served sweets and cakes. They conversed and disputed about art". "Well, so?... It wasn't a bad thing".

"No. It was very nice. The bad part was that afterwards, they would invite you into the room with the roulette wheel— all for a charitable aim. Naturally you were abashed and accepted the proposal. They relieved you of your last kopek, and, with your face frozen, guilty for not having more money, you got outside somehow and fled."

"So that was the deal". "Now Tiflis lives that life. Nightclubs, beautiful Russian princesses, famous artists. It's surprising how much of the higher strata of the nobility have discovered a profit motive in art... They invite you to a soiree where some famous poet is to read his latest work. A full house. A little stage at the very end of the hall. Enthusiastic applause. The poet comes on stage. Wearing a long, outlandish robe woven of Bukharan silk, the tip of his nose painted, his face bedaubed with antimony like a clown, he starts to declaim in the manner of a third-rate actor, in feeble and faraway voice, unique and incomprehensible words".¹⁰²

"Fortunately", said Peronian, "In that respect our country does not attract anybody. We are poor, and have at least the honor to live alone with our accursed questions and our tragedies. We lead a dangerous life: external foes, malaria, typhus, and hunger within, and our exiles are no princesses... That is how I prefer it. One day we will forge new and beautiful things from our misfortunes. Our own beauty, deep and great, of the kind all things born of suffering are..."

They were silent. Everyone felt himself oppressed by a great burden. They returned in their minds to Armenia. They said not a word.

¹⁰² *Esaki ew anhaskamali bayer*, a reference to the *zamm'* ("transrational") language of Futurist poetry; cf. the recitation at the end of this excerpt.

"But haven't you noticed how pretty that tall young lady is, the one who served us our tea?" asked Shushan, as though waking from a dream. "Really". "She's from a very good family. Well bred, educated, with refined tastes". "She caught my attention the minute I came in", said Herian animatedly. "She has real classical lines, like a Greek statue". "But, well, never mind, better I should not puncture your illusion". "Our illusion? What do you mean? Morality?" "No, no, that's not what I meant. All of you, stop looking her way or she'll realize we're talking about her". "All right, tell us what it's all about". "Look, she's got something thrown over her left shoulder to cover her arm". "Yes indeed". "The reason is that one arm is a lot shorter than the other". "Really? What a pity!" "Brother, what were you about to say?"

"You were the ones who insisted. And besides, I wanted to say that every instance of happiness conceals a wound we can't see. We talk about our country, about our misfortune... I thought, you can't create anything out of mutilated beauty, but one can make a life that has been mutilated, shattered, full of suffering into the noblest treasure..."

"Depending", interrupted Sultanian. "It depends... long drawn out physical torment makes one dull and insensitive. Suffering is beautiful when it nurtures creative forces, flights of the spirit, a plenitude of being, all of which seek the means to express themselves. Dante sticks out, right at the peak of his dark age. He is the echo of one of the most savage epochs of Italy's history. An echo, and a judge".

"Yes, because his particular, powerful, spiritual unity was indivisibly joined to his racial unity. He was a wrathful judge, in the name of the supreme traditions of his race", added Shushan.

Kara leapt up from his chair in protest. "Tradition! Tradition! For the love of the gods, let's leave those antiquated, worn out ideas behind, and put a stop to this feeble old talk of yours. Look around us. Life's rushing headlong, speeding like a bullet bursting from a gun, and you make speeches about tradition... Brother, it's high time to understand that if we're stuck in this predicament today, the reason is that we were educated by a bunch of stupid parish priests, and by some celibate ones no less stupid. Always the same talk: our glorious past, our virtues, our Christianity, Sahak-Mesrop,¹⁰³ the invention of our script, the lamp of the Illuminator,¹⁰⁴ the wisdom of our forefathers, that fig tree growing in our native village, the yogurt grandma used to make... And the results? The results are plain to see: our inability to comprehend the awful events that are crushing us; this century, that has taken up arms against us; history, that is forging unknown shapes for us. Why should I hide it? Our writers are more responsible for this incomprehension than anybody else..."

Sultanian responded, "That's it, you're all heated up again, Kara. Of course you're partly right to blame our educators. We're all in agreement there, I think. To talk about tradition the way those gentlemen do is a sign of mental torpor and retardation, of

¹⁰³ Catholicos Sahak and St. Mesrop Maštoc' invented the Armenian alphabet early in the fifth century.

¹⁰⁴ Although he uses for lamp the word *drag*, Kara Derviş probably has in mind the patriotic poem *Lamp of the Illuminator* by Yovhannēs T'umanean. St. Gregory the Illuminator converted the Armenians to Christianity early in the fourth century AD (the date of 301 has gained official, if not scholarly, acceptance), and Armenia has always regarded itself therefore as the first Christian nation.

mediocrity, a hackneyed way of thinking, and so on..." "That's just the way it is..." "They are small men, not always sincere; and they attempt to cover up their mediocrity behind empty formulas. Doubtless, those ideas played a necessary role once upon a time, creating things whose memory is lost—but they don't mean a thing anymore and I find no echo of them in my own thoughts... It's as plain as day". "Bravo!" "That's how it is. But let's not forget another important factor. Progress in the lives of nations, in their history and thought, is nothing if not a renewed return to the native essence of a race, to that pristine and limpid source from which its cardinal virtues sprang, on which its will to exist is founded, those pure and primordial energies that have nurtured and justified its existence. From that point of view, every genuine revolution is a going back, not to something superficially labeled as tradition, but to that which shaped the spiritual nature of the race, the root cause of its birth".

"Primordial nakedness". "I don't know whether I can explain what I mean... The real revolution is accomplished when a race rediscovers its own eyes, shining, illuminated by innocence—the eyes that can discern what is indispensable in the light of eternity and then fashion that necessary thing into human, purely human, values. Reality exists in epochs. It is a juxtaposition of the past and the present. It is that supreme unity of life that we are cultivating anew, the way a sower's grand, simple gesture by its power cultivates a furrowed field".

This talk reminded Herian of Mark, whom he had met in Armenia. If he were here now, he thought, he'd say his piece, too. "I know. In Armenia..." But he was unable to finish.

For everyone had turned their heads to a nearby table. A squat young man with eyes bulging like a frog's and arms flailing like a windmill, was declaiming something at the top of his lungs in an unknown language. His mouth was twisted strangely, and what emerged sounded like the meowing of a cat. He hissed and roared like the wind, then chirped like some songbird in an unknown tropical forest, clucked like a hen, cackled, growled. He was most animated. He clutched his hands to his breast, rolled his eyes, his body contorted, his lips distended like rubber, expressing some inner agitation or grief in their whistle.

"What's all that about?" exclaimed Herian in astonishment. "Is he sick, or what?"

"No", replied Kara gravely, "He's just a poet who belongs to the literary group called 40 Degrees... That fellow, a friend of mine, is the ingenious inventor of an international phonetic language. He is reciting a great poem entitled 'A mother's lament over the grave of her child'. It is a beautiful and impressive lyric. One has to say that it is a genuine revolution in its manner of form and expression".

"Just the thing", cried Shushan, turning to Sultanian, "Precisely the return you were just preaching", "To the age of the wild beasts!" Everybody laughed. "It just shows", replied Sultanian evenly, "That one can make foolishness of every truth... I was talking about the primordial spirit of a race, the spiritual flight of the epoch of its birth, not about crawling around on all fours..."

"Let's not get started on the same argument again", interrupted Peronian. "Time is passing. We have a thousand and one things to do, and anyhow, we need to get something to eat, right? Come on, let's go..."

Excursus on visual language

The "transrational" (Rus. *zaum'*) language of the Futurists represented an attempt to break or transcend the convention whereby a word is just a signifier and relates in a single and linear way to the signified (the word "chair" points straight to a chair and to nothing else). It proposed an array of possible associations— new meanings for a word and new realities in the field of perception. The way it did so was most often by emphasizing the sound of a word rather than its assigned meaning. In some cases the intention was to dispense with any semantic feature— to produce a text of unfamiliar, archaic words, from magical texts or the like; or words of the kind people in religious ecstatic states use when speaking in tongues (glossolalia); or the onomatopoeia of the sounds of the world around us, whether natural or mechanical; or nonsense words. Rimbaud had called for a derangement of the senses, and one way to achieve this on the level of language was to use sound patterns that were felt to be unusual and exotic with respect to the language of the writer. In the case of Armenian, one might find frequent use of the rare sounds *f* (cf. the crypto-Persianate words invented by Kara Darviš with the syllable *far*) and *ō*. One might use of rhyming, singsong patterns with a high proportion of open vowels, in the manner of children's chants. At other times a new word, by virtue of its formal, phonetic relationship to known words in the reader's language, might call up a few or many diverse subliminal associations. These associations were of necessity to a great extent arbitrary, dependent upon the individual reader's perception— his own stock of imaginative associations, aesthetic sensibilities, aural experiences, life background, and so on. It was left to the reader to decide what the author meant, if indeed the latter intended any particular, definable meaning to start with.

Kara Darviš muses in his manifesto *Arewelk'ō ibrew albiwr nor gelaruesti ew stelcagorcut'ean* (*Hin goymērā nor p'ayli tak*) ("The East as a source of new fine art and creativity— Old colors with a new shine"), translated here, that although his invented word *dublaḵh* does not appear in any dictionary, every Armenian, Tatar, and Mongol reading it will intuitively feel it has a meaning. So the author made up his text and assigned its sounds, perhaps with a personal and unexpressed sense of what it all meant to him. But once the text left the presses, that text became entirely dependent for its semantics, though not its sound, upon each individual reader. In that sense, the reader really did become the author. He was no longer the passive recipient of a message, whether a careful reader or a hasty one. He had to make up the message himself. I stress this because the author transferred thereby to his reader the quality of agency, the responsibility to act.

But there is something else a visual text can do that auditory conventional language and *zaum'* cannot: it can alter its shape, pattern, size, and direction. All spoken language is

linear and temporal: a speech act, no matter how musical in pitch or varied in loudness it may be, has a beginning and an end, and takes time. So, does a substantial 19th-century novel, in one standard typeface with conventional punctuation, the lines marching from left to right and descending the page, moving to the next, and so on till after many a summer dies the reader of War and Peace or Bleak House. A Futurist text does not do this; the sizes and fonts of printed letters change, in defiance of the rules of orthography; and sometimes the letters do somersaults or lie down on their sides.¹⁰⁵ They are not sequential; they are synchronous. Lines break rank; and often an illustration, whether it is a Cubist woodcut or a wallpaper pattern in the background of the page, merges with the text. In 1914-1916, Carlo Carrà and Paolo Buzzi produced centrifugal, sunburst-like texts that compel the reader to turn the page around, to arrange the order of the different words and sentences as he pleases (Greene 162-163). You can interpret a picture but you cannot read it out loud; it imposes a silence. The important point to stress here, then, is that this is the point where the text breaks away from sound altogether, and, in a way, from time also. One might arbitrarily interpret large letters as loud sounds and small letters as fainter ones, making of the text a sort of musical score; and Russian Constructivists began in the 1920s to experiment with alternative forms of musical notation. In the west, John Cage and other composers performed similar graphic experiments.

However purely visual elements such as a picture, a leafy pattern from folk art, an unknown graphic symbol, etc., are scarcely susceptible to such a reading. The phonetic signature of the text becomes, then, silence; or the merging of the clamor of many Futurist voices on the page with the large silence of visual composition.

The Russian and Armenian Futurists, returning to what they saw as pure and atavistic springs of sound and feeling unchained by convention, drew upon folk spells, ancient myths, and magical texts. The sound of these is clear enough; but what of their shape, their silent language? One place to start is non-alphabetic signs such as hieroglyphs. Egyptian, Mayan, and Chinese generally have three components: ideographic, phonetic, and determinative. Although the phonetic aspect is important, the observations of William S. Burroughs in his essay "Hieroglyphic Silence" are still of interest: "No matter what the spoken language may be, you can read hieroglyphs, a picture of a chair or what have you; makes no difference what you call it, right? You don't need subvocal speech to register the meaning of hieroglyphs. Learning a hieroglyphic language is excellent practice in the lost art of inner silence... What keeps you from seeing what is in front of you? Words for what is in front of you, which are not what is there". And he presents an Egyptian hieroglyphic text written in multiple directions on a page broken up by floor plan-like drawings into quadrants (Burroughs/Gysin 1978: 186-187),¹⁰⁶ which can be read, but not sounded. Burroughs and his companion Brion Gysin experimented in their paintings with both grids

¹⁰⁵ Schnapp in his essay in Greene (p. 1566), notes that the first writer to use intentional typographical experimentation of a sort of absurdist, proto-Futurist kind was the English writer Lawrence Sterne in his novel *Tristram Shandy* (1760), which the Italian Futurists esteemed.

¹⁰⁶ Figure on p. 188: illustrated here.

and compositions with lines radiating from a center, usually in the four cardinal directions (Gysin 2010: 126).

William S. Burroughs was interested also in Mayan glyphs. These were sometimes written in patterns where "a centrally embedded perspectival view scans simultaneously in multiple radial directions"—a type that, as we shall see presently, is found in Armenian magical manuscripts, even though the Armenian alphabet script as such does not lend itself to this graphic strategy (Urcid (2011: 115)¹⁰⁷ Close to the end of his life, in 1944, Kandinsky started a watercolor of large, variously distributed and vaguely hieroglyphic shapes; in one corner is a "text" (successive horizontal lines of left-to-right characters) of smaller, similar shapes inspired by Rapanui rongorongo script. The latter has an artistic advantage over Egyptian if one's aim is to release the reader from verbal and phonetic patterns, since it has not been deciphered.

The title of Vasilii Kamensky's *Zheleznobetonnaya poema solntse (lubok)* ("Ferroconcrete poem, the Sun (woodcut)", 1917, makes multiple statements: it is Futuristic, with the industrial, urban reference to reinforced concrete; it is a spatial map, since it is overtly related to his other ferroconcrete poem, *Tiflis*; it claims an old Russian folk pedigree as a *lubok*-woodcut; and it declares itself a poem, a verse composition of significant length and high seriousness of theme. The composition has a radiant sun with an eye at the center (called "the face of the GENIUS"), with a planet, Moon, and star around it. The Russian and *zaum* text meanders around and along the lines of the drawings. The sun has four principal rays in cruciform shape that divide the text/picture into quadrants; and with the natural tendency to read Russian from left to right one starts with the large letter *Yu*, expecting it to stand for *Yug*, "South", with the *Z*, *S*, and *V* of *zapad*, *sever*, and *vostok* to follow; but the other "cardinal directions" are marked with vowels, *A*, *O*, and *E*, forcing the reader to make vocalic sounds instead of reading consonantal abbreviations. The chief effect of this division into four implied directions, together with the circular aspect of the central figure in the poem, is to force the reader/viewer to rotate it in order fully to observe it and read it. That is, he must move the object, or move himself, or maybe both. Movement thus becomes part of the act of reading.

Two Armenian magical manuscript texts from Venice, illustrated here, are arranged in the same way as Kamensky's composition, though both are nearly a century older at the least. In both there is a central, circular portion with various incantatory texts and prayers both surrounding and radiating from it. In the first manuscript,¹⁰⁸ the texts are divided into quadrants, which are subdivided into triangles. In order to read the texts, one must rotate it clockwise, which is also the direction of the writing in the central circle. The texts within each quadrant, however, proceed counter-clockwise. So two opposite rotations are required, in four series—rather like the wheels of the divine throne in the chariot vision of Ezekiel! All the texts in this manuscript are in standard Classical Armenian, and the whole is

¹⁰⁷ Discussion of fig. 6.3.

¹⁰⁸ Published by Feydit (1986: 70). The owner was one *Xaspik'an*, probably a form of the Arabo-Turco-Persian name *Xasbēg*, "Noble lord", which is first attested from the mid-14th century (see Ačarean 1972: 500).

evidently a nocturnal talisman: Ch. 12 of the *Narek*, recited as an evening prayer for protection of the home; Ch. 41 of the *Narek*; the credal prayer "I confess in faith" of St. Nersēs Šnorhali; a prayer of Yovhannēs Garneč'i against nocturnal terrors (i.e., nightmares: *arhawirk' gišeroj*); other prayers to ward off demons; a prayer against headaches; etc.¹⁰⁹

In the second manuscript, an undated and uncatalogued magical compendium at S. Lazzaro, Venice, photographed by Rachel Goshgarian, the texts radiate in scythe-like patterns, recalling the "eternity" symbol employed in Armenian Christian art. This manuscript was made, not for purely orthodox prayer, but for magic: it contains voces mysticae, pseudo-magic squares with both Arabic numbers and other symbols, and a variety of esoteric signs. Some of the latter are astrological, while others do not belong to any known writing system. The composition thereby in various ways anticipates the multiple strategies of writing to be employed by the Futurists. And one recalls here Gurdjieff's claim, noted above, to have seen the four-directional text of the mystical Imasturs!

Kara Darviš used to stand outside the Tiflis cinema with his postcard texts. It is intriguing to consider that a postcard is a text intended to move—to be sent through the mails. It is an open text, too, unlike a letter in a sealed envelope or a book between covers. And inside the building, Kara Darviš' fellow citizens of Tiflis were becoming, whether they were fully aware of it or not, readers of a wholly new kind of text, too: the moving picture. It is the modern, urban environment becoming aware of the possibilities of new technologies and dimensions, the human mind and body learning how to bring dream into consciousness, how to fly...

Excursus: A note on the Beat poets and the Armenians

Jack Kerouac's novel *On the Road* and William S. Burroughs' *Naked Lunch*, together with Allen Ginsberg's poem *Howl*, are the primary classics of the Beats—the social and artistic rebels of the 1950's whose revolutionary innovations were to lay the foundation for the Counterculture of the 1960's in America and maybe around the world. One of the formative events of the Beat movement was the murder in 1944 of a member of the nucleus of their group, David Kammerer, by another, Lucien Carr, in Riverside Park near the Columbia campus in upper Manhattan.¹¹⁰ Carr was a handsome, pale, delicate-featured boy of nineteen; Kammerer, an older gay man and childhood friend of Burroughs

¹⁰⁹ The *Narek* is the name given by Armenians to the *Matean olbergn'ean* ("Book of Lamentation"), a cycle of 95 mystical prayers by St. Grigor Narekac'i, 10th century. On Ch. 12 see Russell (1997: 42). On the credo, see Russell, (2005: 185-236).

¹¹⁰ This event is the subject of the magnificent and intensely moving film "Kill Your Darlings" (2013), directed by John Krokidas. The fictionalized story in color, with period music from the 1940s, ends contrastively with iconic still photographs in black and white of the actual Beats themselves—Burroughs in trench coat and hat, Ginsberg in Varanasi—and the poignant punk anthem "Don't Look Back Into The Sun" by Peter Doherty and The Libertines. The new song in juxtaposition to the pictures from an already distant past is an affirmation that the great chain of rebel artists and visionaries lives on.

who had for several years been a mentor and lover of the youth. Both Burroughs and Kerouac were arrested as accessories to the crime since they had failed to turn in Carr after he told them about the murder; but they were quickly let off. Although Burroughs was gay; and Kerouac, bisexual—both thought it best to try to save their friend Carr from the hot seat by letting the murder be presented as a typical case of a young straight man defending himself against the advances of a predatory older homosexual. The Ivy League murder made headlines for a while, and the archetypal homophobic set piece was just right for a public that liked its scandals served up with a moralizing sauce. We were to live with this till the Stonewall riot of 1969, when the gays finally understood that freedom is something you have to fight for and take. It is never given. But even revolutionary gays often internalized the stereotypes and prejudices of an oppressive system. So one wonders whether Burroughs' assent to the cover story of innocent youth vs. older gay pursuer was not just a tactic but also a symptom of self-hatred: Burroughs, too, had a taste for adolescent boys that he indulged often for most of his life. The writer was to dissect the theme with the same ruthless clarity he applied to junkies and addiction: his early novel *Queer*, which Burroughs published only in 1986, deals with an older gay man—Burroughs' own persona—consumed by self-loathing in his humiliating desire for an indifferent, younger man. It is, in a way, the same passion play, with Burroughs as Kammerer, though there is no murder.

In the end, Carr didn't beat the rap and did some hard time, but he didn't get the chair either, and went on to a successful career as a literary editor in New York. His son Caleb Carr is a well-known novelist. Lucien and the other principal Beat characters lived to the end of the 20th century or beyond. So even though Kerouac and Burroughs collaborated on this roman à clef about the murder, and the lives in Greenwich Village of the early Beat circle—it is their very first novel, and the title comes from an absurd-sounding phrase in a sensational radio story—publication had to wait till everybody concerned was dead. The book appeared in 2008 (Kerouac/Burroughs 2008), and it's a good one, written in the gritty, hard-bitten, black-and-white style of conventional wartime realism, but with lots of tasty hints of the literary transformations to come. An excellent historical and textual essay by James Grauerholz, Burroughs' life partner and literary executor, is appended to the volume. I seek here to illuminate a small but significant detail Grauerholz failed to address or explain in his indispensable afterword.

All the characters of the drama, naturally, are thinly concealed by fictional names: Lucien Carr, the killer, is called Phillip Tourian and is variously described by the authors as a Turk, or as having Greek relatives, or as hailing from Istanbul. The character in the novel is seventeen (Carr was nineteen at the time of the murder) and is swarthy and handsome (Carr was from a well-to-do Anglo family and was blond and blue-eyed). For whatever reason, the fictional character has a very different background and appearance than the historical Carr, so the choice had to be intentional. It is also likely the two authors knew Tourian was an Armenian surname (Turkish and Greek surnames do not end in -yan, though Iranian ones can). William Saroyan, the American Armenian writer cited elsewhere in this study, is mentioned in passing, though without reference to his ancestry. At the time Saroyan was still widely known as a very famous American writer, of course. (No longer: in

an informal recent poll, none of my students at Harvard had ever heard of or read his book *My Name Is Aram*.) The name Tourian is an obscure one outside the American-Armenian community.

It was, as its use in the novel suggests, not yet an obscure name to the general public in the 1940s, though. Only a decade earlier, on Sunday, 25th December 1933, the Primate of the Armenian Church of North America, Archbishop Leon Tourian (Lewond Durean), a native of Constantinople, was murdered as he was celebrating the Divine Liturgy at the Holy Cross Church of Armenia on West 187th Street and St. Nicholas Avenue, just three miles north of the Columbia campus. Several top officials of the New York branch of the Armenian Revolutionary Federation (Arm. *Hay yelap'oxakan dashnak'ut'wn*—Kara Darviš numbers himself among the Dashnaks in one poem) were apprehended at the scene of the crime, tried, and convicted of premeditated murder in the first degree. (All escaped the death sentence.) The crime was front-page news for weeks in the city; and the trial was one of the more sensational courtroom events of the first Great Depression. No specious moralizing was needed to spice up the story: Tourian was stabbed through his gilded vestments, in the nave of a house of God, with a long kitchen knife. He was a tall, imposing man, and his heavy metal crozier buckled as he fell upon it. There was a sickening irony to this murder by fellow Armenians: when in 1922 Mustafa Kemal Atatürk's army burnt down the port city of Smyrna (present-day Izmir) and drove its Christian majority population into the sea, literally, Bishop Tourian had been one of the survivors picked out of the water. He could scarcely have come from a more illustrious or patriotic family: just a few years before his murder his cousin Yeghishe (Eliše) Tourian, an eminent scholar who had served as the abbot of Armush monastery, and then been elected Armenian Patriarch of Jerusalem, passed away in the Holy Land. When Yeghishe, born Mihran, was a boy, he witnessed the slow, agonizing death from consumption of his own elder brother, Bedros (Petros).

Bedros Tourian, who died at Constantinople at twenty-one, early in 1872, was an inspired, grief-stricken romantic: with his small corpus of brilliant lyric poems it is fair to say he created the standard modern literary idiom of Western Armenian. And in his use of startling images like "black milk" he both paralleled the linguistic experiments of his French contemporary, Arthur Rimbaud, whom I have cited as the progenitor of modern poetry and of Futurism; and anticipated the 20th-century German-language poet Paul Celan, whose most famous poem, "Death Fugue", uses the image of black milk to great effect in evoking the anti-life of imprisonment and extermination in a Nazi concentration camp. It is most unlikely the fathers of the Beat movement ever heard of Bedros or Yeghishe, but it would have been hard for them not to know about Leon Tourian. And surely the only reason for the employment of that obscure name in their very first novel would have been the recent and notorious murder of the Archbishop in New York. It is a reference that would have been immediately understood by many Americans—and more New Yorkers—in 1945. But now that nearly a lifetime has passed, only the eyebrows of Armenian readers will travel upwards. For them, the effects of the murder endure.

The circumstances of Tourian's assassination are complex. In 1917, following the Russian Revolution and the collapse of the Tsarist régime, Lenin withdrew his country from

the war and the Russian army decamped from the Caucasian front. Ottoman Turkey had begun systematically to exterminate its civilian Armenian population in 1915, and refugees were fleeing with the retreating Russians from Van and elsewhere to the east. The Dashnaks established an independent republic in Transcaucasian Armenia—the part of the country that had been since 1828 under Russian control—and fought back Turkish and Azeri invading armies. But they lost power to the Communists in 1920 in a coup and were driven into exile in the Middle East and the U.S. The sacred city of Echmiadzin, seat of the Armenian Church since the fourth century, was to remain in Soviet hands thereafter, until 1991. In 1922, as was mentioned earlier, Atatürk's army destroyed Smyrna on the Aegean coast, where Tourian had served as bishop.

Arriving at his new post in America, Archbishop Tourian, either out of personal conviction or in an effort to placate the Russians and thereby protect his Church from reprisal, refused at several Armenian American community functions to allow the Dashnaks' tricolor flag—the flag of the pre-Soviet (and, now, post-Soviet) republic—to be displayed, allowing only the Stars and Stripes. The party's members were incensed by this offense and branded him a traitor; and his subsequent murder split the American Armenian community down the middle. Many remained loyal to the Catholicos, or supreme patriarch, at Soviet-controlled Echmiadzin; others broke away and eventually came to associate their parishes with a rival, Dashnak-dominated Catholicosate established at Antelias, near Beirut, Lebanon. The English-language US Dashnak press in the first decade of the 21st century ran a series of portraits of the various Armenian parishes in America: the article on Manhattan's Holy Cross Church faithfully mentioned every detail of its history except the only one of any historical importance—Tourian's murder. Though the subject still seems too delicate for the party to address with candor, Terry Phillips' book *Murder at the Altar* provides the a detailed, if at times speculative historical account of the Tourian case to date, albeit in semi-fictionalized form.

The resurrected proto-Beat novel turns out to be another, surprising, corrective to historical amnesia. For the very name Tourian evidently summoned such visceral imaginative force that invoking it was enough to convey the tragedy and horror of bloodshed and the derangement of its aftermath. And that experience of dislocation became itself a strong factor propelling both William S. Burroughs and Jack Kerouac towards their mature style, to the writing that jumpstarted the great Counterculture. The poet and scholar Peter Balakian came to Armenian activism in the wake of youthful encounters with the Beat poet Allen Ginsberg; and in *The Burning Tigris* he has argued that organized support for the Armenians at the time of the Genocide was the beginning of the modern movement for human rights. In that sense, the fate of the Armenians and the response of people of conscience to it was part of the political patrimony of the wider counterculture. I became aware of Armenian culture and the Armenian cause in the context of a youthful involvement with Black civil rights, the Left, opposition to the Vietnam War, and, later, gay liberation. It was the Counterculture, with its consciousness-raising and its activism—its sense-deranging and Futuristic drugs and sex and rock and roll—that despite its shortcomings liberated all of us. And in the very first writings of its very first artists we find an Armenian

name whose farther echoes are replete with tragedy and horror, but also with creativity and love.

Index

Achaemenian:

I: 3, 31, 43, 132, 212, 254, 323, 324, 329, 333, 336, 343, 475, 679

II: 756, 767, 1056, 1091, 1094, 1425, 1426, 1445, 1457

Ādurbād ī Amahraspandān:

I: 131-132

II: 760

Agathangelos:

I: 12, 29, 30, 42, 143, 145, 343, 353, 404, 456

II: 762, 1132, 1147, 1258, 1273, 1285, 1317, 1318, 1440

Ahura Mazda:

I: 5, 26, 73, 75, 109, 125, 166, 219, 220, 224, 227, 261, 333, 339, 341, 499, 644, 663

II: 752, 789, 792, 958, 1091, 1093, 1103, 1106, 1120, 1144, 1145, 1149, 1177, 1179, 1180, 1201, 1329, 1334, 1335

Alexander:

I: 3, 13-15, 107, 121, 123, 126, 137, 138, 143, 145, 172, 214, 232, 265, 268, 276, 285, 304-307, 314, 333, 343, 363, 371, 478, 492, 538, 574, 579, 603, 606, 609, 654, 659, 661, 667, 668, 677

II: 747, 750, 769, 770, 772, 794, 804, 805, 952,

955, 960, 1052, 1053, 1060, 1063, 1068, 1069, 1073, 1074, 1087, 1091, 1101, 1131- 1133, 1135, 1142, 1158, 1161, 1188, 1211, 1255, 1270, 1278, 1293, 1295, 1299, 1309, 1314, 1315, 1317, 1320, 1323, 1324, 1350, 1352, 1364, 1365, 1390, 1415, 1425, 1438, 1439, 1442, 1444, 1459, 1478, 1483, 1507, 1531

Ammianus Marcellinus:

II: 1092

Anahit:

I: 4, 6, 36, 74, 81, 333, 334, 341, 350, 351, 356, 460, 528, 543, 602, 607

II: 1132, 1145, 1147, 1327

Anahita:

I: 4, 36, 75, 333, 341, 345, 460

II: 782, 1094, 1145

Aramaic:

I: 2, 4, 5, 11, 13, 15, 23, 30, 31, 34, 39, 40, 45, 71, 110, 149, 152, 143, 157, 206, 214, 267, 293, 293-295, 333, 334, 337, 354, 368, 406, 458, 470, 476, 511, 538, 602

II: 755, 800, 1095, 1179, 1187, 1198, 1208, 1217, 1247, 1248, 1250, 1254, 1299, 1331, 1374, 1376, 1377, 1386, 1393, 1398, 1435, 1488, 1498, 1501, 1502, 1510- 1513

Aramazd:

I: 5, 73, 81, 333, 341, 549, 550

II: 1145, 1307

Ararat:

I: 6, 7, 17, 70, 80, 83, 86, 103, 120, 266, 268, 321, 325, 328, 329, 333, 334, 341, 343, 345, 348, 351, 358, 362, 385-387, 391, 403, 454, 471, 476, 493, 494, 538, 546, 578, 582, 590, 591, 594, 606, 608

II: 806, 951, 1057, 1173, 1224, 1253, 1258, 1260, 1262, 1391, 1435, 1436, 1450, 1457, 1478, 1479

Ardašīr:

I: 73

II: 1092, 1093, 1106

Arewordik:

I: 660

II: 749, 756, 1143, 1144, 1146, 1148, 1151, 1152

Argaeus:

I: 3, 5-8

Ariobarzanes:

I: 4

Arsacid:

I: 12, 14, 28, 29, 32, 38, 43, 73, 81, 82, 135, 140, 238, 246, 247, 293, 294, 296, 331, 336, 337, 342-348, 352, 356, 357, 456, 475, 476, 549, 646

II: 759, 764, 1075, 1089, 1091, 1092, 1094, 1095, 1097, 1102, 1105, 1128, 1132, 1143, 1247, 1248, 1257, 1340, 1345, 1347, 1348, 1362- 1364, 1415, 1426, 1427, 1434, 1435, 1440, 1456, 1457

Arsak II :

I: 12, 165, 238, 346

II: 1132, 1248, 1348, 1360, 1446
